

The Amazing Son In Law Chapter 5616 -

The surrounding personnel had already been cleared in advance, so that the two sides started the arms deal in broad daylight.

Neither of the two sides spoke. The person in charge of the escort opened the containers of the three cars and asked the three Americans to go up and check them one by one.

After confirming that they were correct, the three jumped out of the container, and one of them waved at the freighter, and the freighter immediately passed a small loader and put down an iron box weighing 600 kilograms.

The person in charge of escorting the car immediately stepped forward, opened the iron box, and found that it was full of golden gold bars, so he winked at the people around him, and several people immediately came over with equipment, took out the gold bars one by one, examined them, weighed them, and then Put it in several packages that you carry.

The iron box contained 500 kilograms of gold. All the gold bars were re-melted before departure and made of flat molds. There was not even a steel seal on the body, so naturally no clues could be found.

After confirming that the 500 kilograms of gold did not have any shortfall, the person in charge came to the three Americans with a smile, and said with a smile, "There is no problem with the 500 kilograms. One point, I will not refund the price difference."

An American said, "No refund, do business with us, you don't need to refund the price difference if the gold price rises, and we will make up the price difference for you if the gold price falls."

The man laughed. "To be honest, I like doing business with your Blackwater company. It's simple, efficient, and fun." One of the

Americans said coldly, "Remember, if you tell anyone the name of the Blackwater company, we will I will never let you go."

"No problem!" The man laughed, and then said with a smile, "I still have a lot of NATO weapons from Western Europe, if you are interested, I can quote you a price."

The American frowned and asked, "When did you start stocking up on NATO weapons?"

"Haha!" The man smiled and said, "Go to Ukraine when you have time, the weapons from NATO are almost out of stock, and the weapons donated by NATO member states

, More than half of it went to the black market, just talk about what you want, there is nothing I can't get!"

The leading American nodded, and said lightly, "I will contact you again if necessary, and we have to prepare to go."

The man hurriedly said, "Okay, I will contact you again if necessary, happy cooperation!"

Soon, the gantry crane took the three The container was loaded onto the ship.

After the three confirmed that they were correct, they also waited for the freighter, and then the freighter set sail overnight and headed for the Suez Canal.

The route of this freighter was from Turkey to South Africa via the Suez Canal, but no one knew that three of the thousands of containers it carried were going to disembark halfway.

The Amazing Son In Law Chapter 5617 -

The straight-line distance from Antalya to Cyprus is only more than two hundred kilometers, and even to the south coast of Cyprus, it is only three to four hundred kilometers.

When the freighter left Turkey and sailed into the vast Black Sea, it was already dark.

A number of sailors disguised as soldiers from Wanlongdian have already begun to process the three containers.

They first opened the container and checked the inside to avoid any tracking and positioning equipment.

After confirming that it was correct, they installed their own positioning equipment in the container, and then began to reinforce the loaded weapons and ammunition. The reinforcement method was to weld many fixing buckles inside the container with an electric welding machine, and then use The thickened sling that bears dozens of tons securely fixes the weapon and ammunition inside the container.

Then, they used waterproof materials to seal the gaps in the container, and then fixed a number of equipment similar to oxygen cylinders around the bottom of the container.

When the freighter was only less than 100 kilometers away from Cyprus, it was already late at night, and a storm suddenly fell on the sea, and the waves on the sea gradually became stronger, so that the visibility on the entire sea was extremely low. Not sure.

At this time, the soldiers of the Wanlong Palace were on the deck, preparing in an orderly manner. Handover of weapons.

They used GPS positioning, and immediately threw the three containers into the vast sea after arriving at the predetermined coordinates.

Miraculously, just a few seconds before the container entered the water, the oxygen cylinder-like equipment around the container suddenly exploded, and then the interior expanded rapidly, turning into multiple huge air bags, holding the container firmly on the water surface superior.

As the three containers entered the water one after another, the freighter continued to sail towards the Suez Canal without stopping.

And these three containers floating on the sea were successfully captured by a light transport ship that had been waiting nearby.

Then, the light transport ship increased its horsepower, galloped towards the port where the copper mine was located, and arrived at the wharf near the copper mine before dawn.

Since the person in charge of the copper mine had already opened up all the relationships, the three containers did not attract anyone's attention. After the containers were unloaded, they were immediately transported to the interior of the copper mine.

At the same time, Abbas had already brought Lang Hongjun along, waiting here early.

Lang Hongjun is proficient in communication technology, and also dabbles in radar and infrared technology. Abbas ordered people to purchase infrared night vision equipment and thermal imaging equipment. The equipment is linked with the near-anti-cannon.

At the three commanding heights of the copper mine, Abbas had already had three inconspicuous glass rooms erected, and the three newly arrived close-in anti-aircraft guns were intended to be placed in these three commanding heights.

These three commanding heights can completely cover the open ground in the copper mine, and form an intersecting firepower network. Once the three close-in defense guns lock the target, they will attack the target from three directions in circles, so as to be at the target position, and within dozens of meters around, a three-dimensional fire coverage area composed of different ballistics is formed.

If any earl who broke the Qing Dynasty came to the door, after the three close-in defense guns greeted him, it would be difficult to leave even DNA...

The Amazing Son In Law Chapter 5618 -

Seeing the three near-anti-aircraft guns being moved out of the container by the soldiers of the Wanlong Palace, Trent was secretly speechless. He also heard from Abbas that he was asked to help with the near-anti-aircraft guns. I don't know anything, but fortunately, I am very experienced in electronic technology-related technologies.

This is the first time for Trent to observe a close-range anti-aircraft gun. He thought it was a large machine gun before, but when it was in front of him, he realized that the size of this thing is so big, especially the Six gun barrels as thick as arms, thick and long, not imposing.

The whole near-defense gun looks like the turret part of a tank. The muzzle can move up and down, and the base of the turret can turn left and right, so the fire coverage is very large.

Trent watched the soldiers of the Wanlong Palace keep assembling, and couldn't help but said to Abbas beside him, "Master Abbas, can you buy such a fierce weapon casually?" Abbas nodded and said

casually "In Eastern Europe, you basically just buy it casually."

Trent asked in surprise, "Is there no one to care about it?"

Abbas shook his head and said with a smile, "No one cares about this kind of thing here, and no one cares about private transactions." , The weapons and equipment used by various armed forces in Africa are basically bought from here."

Trent said, "I can still understand buying an AK47. Is it a bit arrogant to buy a close-in anti-aircraft gun..."

Abbas pointed to one of them The door was close to the anti-aircraft gun, and said with a smile, "This thing is also an AK, but the caliber is a little larger, 30mm."

Abbas smacked his lips and said to Trent , "Brother Trent, I have a question for you. "

Trent hurriedly said," you say."

Abbas opened his mouth and said, "Look, I plan to arrange these three close-in anti-aircraft guns in the glass room at the three commanding heights above. It can be opened, but the installation requirements of this thing are very high. To ensure shooting accuracy and no applause, when using the roadbed, it must be firmly fixed on the reinforced concrete base. It is not difficult to fix, but Mr. Wade hoped that I The three close-in anti-aircraft guns can be quickly withdrawn when they are used up, and the sooner the better, how do you think I can achieve it? I am afraid it will take a long time to manually disassemble and assemble, but once this thing really fires, I will There is not much time to evacuate, is there any way for me to dismantle it within a minute and lift it away with a helicopter?" Trent held his chin and circled the near-defense

gun , opened the mouth and said, “The requirement for the use of this thing is to fix it with heavy-duty bolts below to ensure that it does not shake when shooting, right?” Abbas nodded, “Yes!”

Trent thought for a while, and said, “You guys If you can even buy this thing, it shouldn’t be a big problem to buy a few explosive bolts, right?”

“Explosive bolts?” Abbas asked curiously, “What are they used for?”

Trent said, “For aerospace Yes, you know about multi-stage rockets. To put it bluntly, a three-stage rocket is three rockets connected together. When launching, the first-stage rocket is ignited first. The separation of the second-stage rocket, and then the second-stage rocket quickly ignites and then flies, but the solidity requirements of the rocket connection are also very high, and its rapid separation requirements must be completed in an instant, so aerospace scientists have invented an explosion Bolts, to put it bluntly, are heavy-duty bolts with built-in blasting devices and ignition devices.

The Amazing Son In Law Chapter 5619 -

When needed, as long as the power is turned on, the entire bolt can be directly exploded, and then it can be separated instantly.” Abbas recalled the picture of the rocket launch, and suddenly realized

, He blurted out, “I see, that thing is really fast. Generally speaking, when the booster is separated, it explodes in an instant.”

“Yes!” Trent nodded, and said, “This thing is very accurate, and it can ensure that it only blows up itself and does not damage the equipment connected to it. It is not only used for rockets, but also for the escape seats of fighter pilots. Yes, the hard connection can be released in an instant.”

Then, Trent said again, “You fix the three cannons with explosive bolts, and when necessary, just detonate the bolts, and this thing can be separated from the base. If you want to quickly At one o’clock, the sling is prepared in advance, and when the time comes, the blaster will be disconnected, and the helicopter will hang on the sling and take it away.”

“Good idea!” Abbas clenched his fists excitedly, and blurted out, “Thank you, Brother Lang, I will take you away.” Then arrange for people to go shopping.”

...

At the same time.

Osu City, the Nordic capital.

Jiangong Bo Ou Bojun, who had already parted ways with Nakul Boyun Ruge, was sitting in a bar in Aosu City drinking.

In the past few days, he started from Bergen and investigated all the way, wanting to know where the missing cavalry guards went, but he has not found any clues related to them.

In fact, when he was in Bergen, he thought about two directions.

Since I am on the line of Xiao cavalry (Bickford), on the one hand, I can find out where the Xiao cavalry (Bickford) went after Bergen disappeared, and on the other hand, I can also find out what special circumstances the Xiao cavalry (Bickford) had before they came to Bergen .

Among them, the former is naturally the best choice.

Because only by finding the whereabouts of Xiao Qiwei (Bertrand), can we know who rescued Lin Wan'er (Alani).

As for the latter, we can only hope that there are some shady problems in Xiao Qiwei (Bertrand) himself, otherwise, it is basically a waste of time to check this line forward.

Therefore, Ou Bojun took the lead in choosing the former, and checked in Northern Europe for several days.

I searched all the way to Ausu City, but still haven't found any clues.

When he was depressed, he simply found a bar in Osu City and had a drink.

However, just when he felt a little bit drunk, his mobile phone suddenly received a message from a virtual number, the content of which was only six short words, the meeting will be held in half an hour.

He reluctantly put away his cell phone, took out two banknotes and put them under the wine glass, got up and walked out of the bar.

The Amazing Son In Law Chapter 5620 -

Back at the hotel where he was staying, Ou Bojun washed up and opened a special software on his phone on time.

After opening the software, he first entered and exited the password, and then did facial recognition and voice recognition. After all passed, his account was automatically pulled into the online meeting room by the system.

At this time, on the screen of the mobile phone, there are a total of five screens the size of a matchbox, of which One is in the middle, and the remaining four are distributed in the four corners of the phone screen.

However, three of the five screen frames are completely black, showing that they have not been connected yet, and only two people have connected, namely Oberjun who appears in the upper right corner of the real-time screen, and an old man with white beard in the upper left corner.

Seeing the white-bearded old man, Ou Bojun bowed his hands respectfully, and said with a smile, "Uncle Mason, where is your old man?" "

Eastcliff." Uncle Mason said two words lightly.

Ou Bojun hurriedly asked, "Then did your old man find any clues to Lin Wan'er (Alani)?" "

No." Willie shook his head, still cherishing words like gold.

Ou Bojun stretched his waist, yawned and said, "Oh... this girl is really cunning!"

As he was speaking, the lower left corner showed that someone was connected, and the face of a middle-aged man appeared on the screen.

Ou Bojun stretched out his hand and said hello, "Uncle Sean, isn't life in New York very pleasant?"

The man called Uncle Sean smiled and said, "I'm waiting to come out this time to solve problems for the British Lord. For me, It's the same everywhere." At

this time, the screen in the lower right corner also lit up, and Nakul Boyun Ruge appeared in the screen.

Seeing that she seemed to be sitting alone on a business jet, Ou Bojun asked, "Where are you going, Uncle Nakul?"

Yun Ruge said calmly, "I'll go to the Far East, where the land is sparsely populated, which suits Lin Waner's needs." The conditions required for concealment."

Ou Bojun asked in surprise, "Going to the Far East?! Why didn't you say hello in advance?"

Yun Ruge said casually, "You and I chose different directions, so it doesn't make sense for me to say hello to you."

Ou Bojun Still wanting to say something, the screen in the middle suddenly lit up, and the expressions of the four people were all terrified, and then they all stopped talking immediately.

The picture in the middle changed from pitch black to white light, and no other objects or even outlines could be seen.

Immediately afterwards, I heard a voice processed by a voice changer asking coldly, "How are you all checking?!"
