

The Amazing Son In Law Chapter 6521

By / February 28, 2024

"AI?!"

The old man has just recovered from a serious illness and doesn't know much about AI. However, Asher and Homula are relatively young and have a very in-depth understanding of the trends in various industries around the world. Li Yalin was born as Inspector Li Yalin and has high-tech knowledge. He has also been exposed to a lot of things, and he also knows something about AI.

When they heard that charlie Wade was planning to use AI technology to screen out the locations of dead soldiers from the Qing Society, the three of them felt that although the direction was feasible, they all felt that it would be very difficult to implement.

Homula, who is familiar with the business landscape of the United States, said subconsciously: "Now this technology is almost entirely concentrated in the hands of American companies. Although other countries also want to catch up, the generation gap is really too big. These countries have I want to build my own AI model, but it is too difficult to actually operate it. Just like the chip industry, it cannot be built by just doing it. Moreover, Anjia's current industrial layout does not cover the AI part. What should we do? What about using AI? We can't inform the AI company of these needs and let them calculate it for us, right?"

charlie Wade smiled and said: "There is one thing that I haven't kept up with you yet. Howard Rothschild has agreed to build a building for the Nordic royal family. A complete set of AI models, and the Nordic royal family only holds them in trust. The real owner of this set of AI models is me. I will inform Helena and ask him to urge the Rothschild family to build the AI models as soon as possible. Once After the construction and debugging is completed, I can train it to do things for me. At that time, I will let it focus all its computing power on this matter."

Li Yalin's eyes were full of excitement, and he couldn't help but said: "Ye Sir, after this AI model is built, please give me a permission and I will try to train it to conduct global screening work!" "

No problem." charlie Wade agreed without hesitation and said : "After returning to Aurous Hill, I asked someone to clear out a vacant room in the

mountainside villa in Champs-Élysées Hot Spring and set up a workstation there. The control of the Nordic AI model fell on this workstation. Detective Li The leader can complete this work there.”

”Great!” Li Yalin was overjoyed and said, “It would be great if Mr. Wade could select some computer engineers from Wanlong Palace. I can build such a huge AI model by myself. I’m afraid it won’t work. If Wanlong Palace can have a group of professionals familiar with me and get along well with each other, maybe Wanlong Palace will be able to cultivate a professional team that understands both AI and criminal investigation in the future!”

charlie Wade listened. He couldn’t help but laugh out loud, took the initiative to shake hands with Li Yalin and said: “What Inspector Li said is exactly what I am thinking! In the future, this set of AI models is planned to be operated and trained by Wanlong Palace, using this top-notch set of The AI model, combined with the communication satellites and encrypted communication technology being developed by Wanlongdian, will definitely be of great use in the future!”

Homula said excitedly: “Great! This is not a sleepy moment. Someone gave me a pillow. I was dozing off, and someone gave me an entire five-star hotel!”

The Amazing Son In Law Chapter 6522

By _ / February 28, 2024

their fortune should have gone down and gradually become passive. This is also a natural law. .”

”Okay, okay!” An Qishan couldn’t hide his excitement and said hello, and then looked at charlie Wade and said: “charlie, grandpa very much agrees with your current thinking. Don’t go to meet the British leader in Poqing too early. And when their elders face each other, they should make good use of their advantage in the dark, first eliminate the opponent’s vitality, and while consuming the opponent, they will strengthen themselves. We must keep in mind the great man’s 16-character tactic, “When the enemy advances, we retreat; when the enemy is stationed, we harass.” “When the enemy is tired, I fight, and when the enemy retreats, I pursue you.” Once the balance of victory begins to tilt towards you, you can throw off your arms and fight them decisively! At that time, Anjia will definitely use all its financial resources and manpower to help you win this battle. !”

After saying that, An Qishan shook his head again and said firmly: "I'm not helping you, I'm helping us, to help us win this battle together!"

Seeing his grandfather's determination, charlie Wade couldn't help but be moved in his heart. He is an octogenarian, but he is still willing to bet everything with him. Naturally, he cannot let him down, let alone let him lose the bet!

So, he said with a resolute expression: "Grandpa, don't worry, I will do my best to eradicate the Poqing Society completely!" ...

After

a conversation, charlie Wade felt excited. Seeing that it was late at night, Grandpa should have been here long ago. Take a rest, so charlie Wade said to a few people: "It's getting late, grandpa, please go to bed early. My uncle, second uncle, and Inspector Li have worked hard to accompany grandpa to implement all the investment matters. I will go back to Aurous Hill first." Now."

An Qishan asked in surprise: "charlie, are you leaving now?"

"Yes." charlie Wade said, "I have a lot of things to do when I go back, so I won't stay here any longer."

An Qishan said, "Trouble. It will take more than ten hours to get back. At least get some sleep before leaving early tomorrow morning."

The Amazing Son In Law Chapter 6523

By _ / February 28, 2024

Helena said hurriedly: "Okay, Mr. Wade, I'll give it to you right away." He made a call."

After saying that, Helena asked again: "Mr. Wade, have you read the technology news? The AI company controlled by the Rothschild family has just completed a new upgrade and is now in the European and American technology circles. It's caused a sensation here!"

"Really?" charlie Wade asked curiously: "What new functions have been upgraded?"

Helena said: "I took a look and the major new function upgraded is video generation. Now they have opened up the computing power to enterprise users. , it already supports the generation of an AI video of about sixty seconds through specified text. Although the video effect is not as fake as real, it is still better than many animation effects that cost a lot of money to use virtual engine 3D modeling. A big chunk, very powerful."

charlie Wade suddenly thought of what Lin Waner (Alani) had just said to him when he was in the United States two days ago.

At that time, this AI model had not been officially upgraded, but Lin Waner (Alani) praised the AI model and predicted that the future advanced functions of this AI model would definitely be pictures and videos. Lin Waner (Alani) even predicted that in the future, as long as With just a script, it can directly generate a video. Just a few days later, the prophecy has come true? /

Thinking of this, charlie Wade quickly asked: "Since it already has the function of generating videos through text, why can it only generate one-minute videos? It stands to reason that it has achieved a leap from nothing to something, even if the duration is extended to One hour, or even several hours, should be no problem, right?"

Helena said: "Well, I think the explanation given by the European and American technology media is that although this AI model has strong computing power, it cannot face hundreds of When there are thousands or even tens of millions of enterprise-level users, the computing power will be greatly dispersed, so they will limit the available computing power for ordinary users when using this AI. It probably means that it is like a nuclear power plant, although the power generation is large. , but once it is used by hundreds of millions of people, the capacity that each person can allocate is limited."

After saying that, Helena added: "However, when the exact same model is built in Northern Europe, All the computing power will serve you alone. By that time, I believe that even generating a hundred hours of video will not be a problem."

charlie Wade sighed with emotion: "I didn't expect that in just one or two years, the development of AI will have already It's faster than you can imagine. If you wait a few more years, you still don't know what level it will advance to."

The Amazing Son In Law Chapter 6524

By / February 28, 2024

After all, his original purpose was just to use the elixir to capture Howard and Steve, the father and son.

As for the money from the sale of the elixir, he just wanted to use it as a favor to Helena. On the one hand, it would be regarded as her reward, and on the other hand, it would be used to help the Nordic royal family improve their own strength.

But looking at it now, this set of unintentional AI models may be my biggest gain from this trip to the United States!

So, charlie Wade immediately said to Helena: "Helena, find a way to urge Howard to speed up. If he can complete this set of AI models in the shortest possible time, I will give him the right to purchase half an additional pill. , as long as the AI model is launched as soon as possible, he can pay at any time and get it at any time."

Hearing this, Helena couldn't help laughing and said: "Mr. Wade, with your words, I guess Howard can also work hard at his age. He will risk his life and do it himself."

charlie Wade smiled and said: "What I want is for him to do it with all his strength, and the faster the better!"

"No problem." Helena said: "Then I will contact him right now."

At this time It's afternoon in Canada.

Helena has concluded her last public event with Canadian officials. After attending the government dinner tonight, she will return to Northern Europe early tomorrow morning.

All told, she still had more than ten hours left in Canada.

After hanging up charlie Wade's call, the first thing Helena did was to call Howard Rothschild immediately.

At the moment, Howard is preparing to convene a conference of unprecedented scale. Not only will all members of the Rothschild family attend

this meeting, but all collateral families related to the Rothschild family have also been notified to attend. .

Howard, who has regained his health, can't wait to show everyone his healthy body, strong energy, and determination to lead the Rothschild family to greater glory, further consolidating his unshakable position as the patriarch of the Rothschild family. .

Shortly before the meeting, Howard received a call from Helena.

He quickly asked his subordinates to inform him to postpone the meeting for ten minutes, then came to the absolutely safe room and answered Helena's phone.

As soon as the phone call came through, he said very respectfully: "Good afternoon, Your Majesty the Queen!"

Helena also smiled and said: "Good afternoon, Mr. Rothschild, I wonder if I am disturbing you by calling now?"

"No!" Howard said politely: "No interruption at all! Her Majesty the Queen, did you call me for any instructions?"

Helena said: "I want to congratulate Mr. Rothschild. The latest upgrade of the AI model has caused a great shock. It seems to have the potential to subvert the current Internet technology landscape! In the future, the Rothschild family will receive very generous profits from both the AI model itself and NVIDIA's stock price. The reward is really gratifying and amazing!"

Howard said with a smile: "Thank you Her Majesty the Queen for your affirmation. I never thought that an AI technology could have such a big influence!"

Helena added: "By the way, Mr. Rothschild, regarding the AI model that has been launched in Northern Europe, I hope that Mr. Rothschild can speed up the process so that this model can be launched in Northern Europe and officially run as soon as possible." Howard

said cheerfully He agreed and said: "Your Majesty, please rest assured. I have been paying close attention to this matter. I have already given instructions for them to start preparing the hardware. The team responsible for building the cloud center is ready to go to Northern Europe to select a

location. Everything is progressing in an orderly manner, so you can rest assured.”

The Amazing Son In Law Chapter 6525

By / February 28, 2024

Helena asked him: “How long does Mr. Rothschild think it will take to get everything done?”

”Well...” Howard said: “I have contacted the person in charge of the AI project. We’ve talked about it, and what he means is that it may take at least two years.”

”Two years?!” Helena was startled, frowned and asked, “Why does it take so long?”

Howard quickly explained: “This time It’s not that long, Your Majesty the Queen. I have already understood it in detail. The reason why it takes so long is because there are many particularly difficult things.” “

For example, our team must first choose a suitable place to establish in Northern Europe. A data center requires a long time to prepare, from site selection to design, to bidding and construction, as well as the purchase, erection, and debugging of cabinet equipment, cooling equipment, power supply equipment, and communication optical cables, which also take a long time to complete piece by piece; “

In addition, I consulted and found that the core hardware for building AI models is Nvidia’s h100 graphics card. This graphics card seems to be specially designed to provide computing power for AI models. Basically all AI models rely on This graphics card provides computing power, so this graphics card is extremely popular now. Not only has the price been skyrocketing, but many companies have been unable to get the goods with large amounts of cash and large price increases, and the futures have been queued up to a few years later;”

”To build this set The AI system requires at least 35,000 graphics cards of this model. Just waiting for these graphics cards may not be able to be completed in two years. I am planning to say hello to NVIDIA and ask them to find a way to jump in the queue for me first. Let’s see if we can shorten the time.”

At this point, Howard said: “Oh, by the way, in addition to these, there is another very troublesome thing, which is the database copy migration of the AI model, because the AI model has learned almost everything. The amount of human knowledge and information is extremely huge. It is said that if it were all stored on a hard disk, the weight of the hard disk would exceed 150 tons; “

Moreover, they said that if this massive data is transmitted through optical cables, with the existing bandwidth, It may not be able to be transferred in place in a few years, so after backing up the data center in Silicon Valley on-site, several trucks specially used for large-scale data migration are used to transport the hard drive weighing more than 100 tons and the data is backed up to Northern Europe. Although this method is much faster than transferring data to Northern Europe, it also requires a lot of work, so overall, two years is already very fast. “

When Helena heard this, she said without hesitation: “Mr. Howard, there are many difficulties in everything, but I believe that any difficulty can be overcome with all your strength. If you can do your best in this matter, , try every way you can to accelerate it. The moment the AI model is put into operation in Northern Europe, I will provide you with the right to purchase half of the elixir. You can buy it immediately and take it immediately, without even a minute. delay. “

The Amazing Son In Law Chapter 6526

By _ / February 28, 2024

“One... one month?!”

Howard gasped, and then subconsciously said: “Your Majesty, one month is simply impossible. As I just told you, one month Time, our data center in Northern Europe may have just completed the site selection and has not yet completed the design. I can’t let them build the hardware of this model directly in the open air, right?”

Helena said: “Rothschild Sir, although I don’t understand these high technologies, I think that if I want to settle in a place, there is no need to choose a site, design and build a new house from scratch, right? Let’s see who is suitable locally and can meet all my needs. Can’t you just buy one if you need it?”

After saying that, Helena added: “It doesn’t matter if you are worried about money, I can pay for it.”

Howard felt nervous and said quickly: "No, no, no, everything about money can be easily solved, I will pay for it! I will ask someone to find out what qualified data processing centers there are in Northern Europe. If there is one, then win it at all costs!"

Helena Said: "By the way, I know that the largest data center in Northern Europe is owned by Microsoft. When this data center was built, my grandma, as the Queen of Northern Europe at the time, attended the completion ceremony. According to some information I got at that time, It should be the largest data center in northwest Europe, and I believe it should meet the needs of the AI model." "

Microsoft's..." Howard breathed a sigh of relief and said with a smile: "Microsoft's is easy to handle, no problem. I will contact them today to communicate. I am very familiar with their founder."

Helena quickly asked: "Then are you sure that he will sell this data center to you? It is so big If they sell their data center to you, it will definitely have a great impact on their own business. Maybe half of Europe's cloud services will be affected." "

Yes." Howard said confidently: "Although I am not Their major shareholder, but their founder has always respected me. Who can not give face to our Rothschild family when making money in the United States? Besides, this little brother also has a lot of pigtales in my hands. As long as I speak, he will never say no."

Helena was slightly startled. She didn't know why Howard was so confident, but she quickly remembered the big news that was constantly being pressed in Europe and the United States some time ago, and she roughly figured out the logic behind it. , so he said with a smile: "Okay, then I will wait for the good news from Mr. Rothschild!"

The Amazing Son In Law Chapter 6527

By _ / February 28, 2024

So, he promised in a respectful and firm tone: "Don't worry, Your Majesty the Queen, I will definitely supervise this matter throughout the process! If the graphics cards NVIDIA has on hand are not enough, I have other options! The person in charge of AI told me that Zuckerberg, who is working on the metaverse, seems to have hundreds of thousands of h100s in his hands. If NVIDIA can't solve so many in three days, then I will personally go to

Zuckerberg for the rest. If Berg wants it, this young man will never dare to refuse me! Helena

was finally completely relieved after hearing this, and said with a smile: “I feel relieved with Mr. Rothschild’s words. Since Zuckerberg has hundreds of thousands of graphics cards, then I suggest Rothschild Mr. De tried his best to get as many as 40,000 graphics cards. After all, your AI model is updated very quickly. Once it is updated and upgraded, the computing power will definitely need to be expanded. The extra 5,000 graphics cards will be used as a backup. “

Howard said cheerfully without hesitation: “Since Her Majesty the Queen has said so, please rest assured Her Majesty, forty thousand, not even one less! “

With that said, Howard added: “Your Majesty the Queen, don’t worry about data migration. I will ask them to copy all the data to special trucks as soon as possible. It is too slow to take a boat from the United States to Northern Europe. I directly arranged for the US military’s C5 transport plane to transport 150 tons of hard drives to Northern Europe in a few hours!

Helena asked in surprise: “Isn’t it a little too conspicuous to use American military transport planes? ” “

”it’s okay no problem. “Howard said nonchalantly: “We are all members of NATO, and there is frequent military cooperation. Military transport planes fly every day. If we fly one or two more sorties, no one will find out, and if we find out, it will not happen again. What can be done? I am going to great lengths to blockade New York. Who dares to say a word? Don’t worry, Her Majesty the Queen, leave everything to me. Helena

smiled and said: “Mr. Rothschild’s attitude is really touching. I, a weak woman, can’t repay you. I can only give you a beautiful blessing, and wish you a long life.”

”Long... long life... a hundred years old? ” ! “

As soon as Howard heard Helena’s words, he knew the profound meaning of his words. He was so happy that he couldn’t help laughing a few times, and then he said excitedly: “Then... then I will borrow the money from Her Majesty the Queen. Good luck! Thank you Her Majesty the Queen for your blessing! “

Helena said: “Mr. Rothschild is too polite. What I said is half a blessing and half a statement. As long as Mr. Rothschild can maintain a close cooperative relationship with us, a long life is what I will give you. promise. “

The Amazing Son In Law Chapter 6528

By / February 28, 2024

Howard was really caught by Helena this time.

He originally thought that getting the second pill within the next three to five years would be the best outcome he could expect.

But who would have thought that a huge opportunity would hit him on the head.

If I take another half of the pill, I won't say whether I can live another two or three years.

The key is that the effect of this pill is immediate. I have now returned to the state I was in a few years ago. If I take half a pill again, wouldn't my physical condition be even better?

Human beings, as long as money is no longer a problem, the only problem is how to live long and live well.

The pill Helena gave him could solve the two pain points of living longer and living well at the same time.

Therefore, he is determined to get this half pill!

So, he hung up the phone on Helena and immediately called the person in charge of Nvidia.

As soon as the phone call came through, the other party asked in surprise: “Mr. Rothschild, why did you call me in person?”

Although these business managers are usually the world's technology trendsetters in the spotlight, almost none of them , can escape the control of Jewish capital. After all, even if a company is in Silicon Valley, the capital behind it is still on Wall Street.

And Howard is definitely the super boss behind the entire Wall Street.

Therefore, it is a great honor for all entrepreneurs who rely on Wall Street to receive his call.

Howard didn't even know the other person's full name. He just smiled and said in an unquestionable tone: "I'm calling you because I need your help with something. The one you produced is used to provide computing power for the AI model. Can you prepare 40,000 graphics cards for me within three days?"

The other party was surprised and asked quickly: "Mr. Rothschild...the graphics card you are talking about...is it h100?"

"That's right!" Howard said immediately: "This is the graphics card, 40,000 copies, we need it within three days, can you solve it?"

The other party said very awkwardly: "Mr. Rothschild, this graphics card is indeed very popular now, our orders have been queued up... "

Stop it." Howard said calmly: "I called you to solve the problem, not to hear you talk about how popular your products and orders are. You only need to tell me, 40,000 pieces in three days, Can it be solved? If it can be solved, I, Howard Rothschild, owe you a favor. If not, then I will stop wasting our time."

After saying that, Howard added: "Of course, if you can solve part of the problem, , then just tell me the numbers, how many can be solved within three days."

The other party did not expect that Howard would be so decisive, leaving no room for him to complain.

However, the figure of 40,000 in three days is indeed too outrageous.

In all walks of life, as long as it is a hot-selling product, it will be difficult to keep it in stock, unless it is deliberately hoarding to raise the price.

This kind of shameless thing is often done by small and medium-sized companies or large companies with no structure, but after all, Nvidia's market value is approaching two trillion US dollars, and it is impossible to engage in such low-level marketing methods at this time.

Therefore, except for the graphics cards that have not yet been produced, Nvidia currently has finished products that are ready for delivery. m..cc

Since the chip of the h100 graphics card is manufactured by TSMC, the chip is shipped from the other side of the world to the United States, and then is repackaged by NVIDIA's own production line before being delivered uniformly by them.

For example, Company A ordered 3,000 graphics cards last year, and these 3,000 graphics cards were delivered in three installments. Now, there may be exactly 1,000 graphics cards that have already arrived, and they are preparing to notify the other party to pick up the goods. Only these 1,000 graphics cards will remain in NVIDIA's hands temporarily.

Normally, according to the current production capacity, the number of graphics cards that can be delivered every day is around four to five thousand.

The key is that many companies have very strong demand for this graphics card, and there is no need to notify them to pick up the goods. They usually go to the delivery center of the assembly plant to pick up the goods two or three days in advance, and some even fly directly to the assembly plant by helicopter. As soon as the graphics card was delivered offline, it was immediately taken to his company by helicopter.

The Amazing Son In Law Chapter 6529

By [_](#) / February 28, 2024

After all, AI is now one of the biggest trends among technology companies in the world. Not to mention the world's top companies, even small and medium-sized enterprises in Silicon Valley have tightened their belts and purchased h100 graphics cards to try to train their own AI models. , some companies have even announced allinai, so the demand for this graphics card has never been stronger.

However, the total number of graphics cards ready to be delivered is only more than 10,000.

He could only grit his teeth and said: "Mr. Rothschild, we here can see the production, packaging and delivery status of all h100 graphics cards in real time. Currently, all the graphics cards that we have not yet delivered to customers, there are only There are more than 11,000 graphics cards. There are almost 13,000 graphics cards that can be offline in the next three days. I can make my own decision and give you all these graphics cards. I will find a

way to appease the customer, but you want 40,000 graphics cards. , I really can't do this..."

Howard didn't hesitate and said directly: "Okay, you can help me collect 25,000 yuan. I will not miss you the money, and I will think of other ways for the rest."

The other party quickly said: "Okay Mr. Rothschild, within three days, twenty-five thousand will be absolutely no problem, I guarantee you!"

Howard said with satisfaction: "Very good, thank you for your hard work, I owe you this. Once again, if you need my help in the future, please call me directly."

The other party quickly expressed his gratitude.

Howard hung up the phone and immediately called Zuckerberg again.

Zuckerberg, who has risen to prominence in just over ten years, is almost like the biological son of the financial giants on Wall Street.

The venture capital fund behind the Rothschild family is itself a shareholder of Zuckerberg. Out of admiration for this young upstart, Howard met with him a few years ago. He was very humble and understanding in front of him. , left a good impression on Howard.

However, even if he got Howard's appreciation, Zuckerberg didn't dare to call Howard casually, so when he suddenly received a call from him, he was very shocked and said very respectfully: "Rothschild Sir, please call me. How can I help you?"

Howard said directly: "Zach, I need fifteen thousand h100 graphics cards. I heard that you have hundreds of thousands of them. Can you help? Can I fix this gap?"

Zuckerberg was a little flattered when he heard Howard call him Zuckerberg. After all, Zuckerberg is his full last name, and calling him Zuckerberg was obviously a bit affectionate. .

But when he heard that Howard wanted to ask him for a graphics card, he suddenly felt a sharp pain in his heart, as if someone had cut off a piece with a knife.

Sometimes, human nature is very contradictory.

When you have no money, you don't feel bad even if you spend all your money at once or even go into debt. But when you have money, you will feel extremely painful even if you only spend a fraction of your total assets.

People are born with the desire to hoard, and the more they hoard, the stingier they become.

This is true whether it is money or things.

Zuckerberg stockpiled hundreds of thousands of graphics cards at one time, and bought them early and at low prices, but he valued these graphics cards more than anything else. He would not sell any of them to anyone who asked him to buy them.

Faced with Howard, a super boss, he instinctively didn't want to give in. Moreover, he really couldn't figure out why Howard, an old man in his eighties, needed so many graphics cards? Isn't the AI they invested in already making a splash? Do you still need to ask for a graphics card yourself?

So, he could only ask vaguely: "Mr. Rothschild... you... what use do you want this graphics card for? Could it be... have you also begun to study the field of AI?"

Howard said straightforwardly: "Zach, don't say any unnecessary polite words. I just want to know now, if you give me 15,000 graphics cards within three days, will it be okay or not."

After that, Howard said again: "Don't worry, I will follow the market. I won't let you give it to me for free."

When Zuckerberg heard this, he knew that the other party would not give him any room for mediation or cheating, so even though he was extremely reluctant to give up, he could only say helplessly: "Since you have spoken, No matter how nervous I am, I will help you prepare it... Don't worry, I will personally deliver 15,000 graphics cards to you within three days!"

The Amazing Son In Law Chapter 6530

By / February 28, 2024

After experiencing the magic of the blood-dispersing and heart-saving elixir, Howard understood the truth behind rare things.

Sometimes, no matter how rich you are, there are some things you can't buy.

This is true for the blood-dispersing and heart-saving elixir, and the same is true for NVIDIA graphics cards.

However, he was overall satisfied with the performance of Nvidia and Zach. Although both of them were a little embarrassed and reluctant to give up, they still gave him the results he wanted.

Forty thousand graphics cards are the highest mountain standing between me and half a pill. If these are solved, Microsoft's data center will not be a problem at all.

So, Howard pursued his victory and made another phone call to one of the founders of Microsoft.

The capital circle has the same strict hierarchy as the mafia.

However, it is difficult for the mafia to choose a truly top godfather, but the capital circle can.

The only godfather in the entire European and American capital circle is Howard. In every listed company here, Rothschild holds a certain proportion of shares through various methods, not to mention those well-known banks and top venture capital.

Therefore, Howard has extraordinary influence on any company in the United States.

The phone rang twice and was connected. On the other side of the phone, a middle-aged and elderly voice came: "Mr. Rothschild, has it been at least ten years since you last called me?"

Howard smiled and said: "Bill, how are you doing?"

Bill on the other end of the phone sneered: "Not bad. You know, after retirement, I just travel around, spend money, give speeches, and do charity."
“

Very good.” Howard He smiled and said: “If you do bad things and do good things at the same time, and the positives and negatives balance out, God will forgive you, don’t you think?” Bill knew that the

other person was making fun of him, so he could only say with a smile: “Charity,... I don’t ask for anything in return.”

After saying that, Bill’s tone gradually became more relaxed, and he said with a smile: “If God really wants to calculate my merits and demerits, I’m afraid it will take a powerful audit team to calculate clearly.”

At this point, Bill asked curiously: “Mr. Rothschild, you didn’t call me today just to tease me, right?”

Howard smiled: “Many years ago, people said, you keep your head down. When you pick up a hundred dollars, you will lose a thousand dollars, so I am like this. Time is precious, especially for people like us who are in our seventies or eighty, time is even more precious.” As he spoke,

Howard’s voice became serious and he said : “Bill, there is something I need you to do a little favor for.”

Bill said without hesitation: “You tell me, there is no need to say more about our relationship. I will help you if I can.”

Howard said: “I heard Microsoft has a data center in Northern Europe, and I want to buy it.”

”Buy it?” Bill was slightly startled, and then said: “Mr. Rothschild, if Microsoft’s cloud service is a Boeing 747, then the Nordic cloud service is a Boeing 747. The data center is one of the four engines of this 747. It is impossible for an airline to remove one of the engines of an operating aircraft and sell it. Once sold, half of Europe’s cloud services will be paralyzed, and the rest will be paralyzed. It is difficult for several data centers to handle such a large demand in a short period of time. We did not leave such a large redundancy in the design.”

”Impossible.” Howard said lightly: “The Boeing 747 first flew more than fifty years ago. At that time, I was one of the invited guests. At that time, you were only a teenager. It is impossible to know the Boeing 747 better than me. Even a twin-engine aircraft can ensure that when one engine fails, the other engine can ensure that the The plane continued to fly for 180 minutes. For a

four-engine aircraft like the Boeing 747, losing one will not have any impact at all. Does your data system leave no design redundancy?"

Bill quickly said: "Rothschild Sir, this is not how we look at it. The current demand for cloud processing is very large, and the storage demand for data on the cloud is also astonishingly large. The redundancy we leave must also leave some margin for the peak period of data processing. If you take out the Nordic data center, half of the European users will be affected."

Howard paused slightly and said seriously: "Bill, I have known your mother for a long time, and we were very close when she was still working at IBM. Familiar, I have watched you grow up to today. Don't forget how much help I have given you during this process, including when you were in trouble. I was the one who helped you. Now I, an old man, need your help. , it's not appropriate for you to have this problem and that trouble for a while, right? Bill

was silent for a moment and said helplessly: "Okay, Mr. Rothschild, give me some time and I'll have someone prepare for data migration. After the migration is completed, this data center will be yours." Howard

was satisfied and said with a smile: "Bill, God bless you, so I do too."
