

## the Amazing Son In Law Chapter 6906

By / July 9, 2024

By then, the annual production target will be three million vehicles.

In fact, when most people heard the plan to produce 1.5 million vehicles per year, they felt that AnHomula was a little too confident. The automobile industry is not a fast-moving consumer product like beer and beverages. Since most people will not replace their cars within at least three years after buying them, everyone basically has to carefully consider and decide before buying a car. The production capacity tone is set so high. Once the vehicles do not meet market demand and sales are sluggish, the daily losses will be astronomical.

Back then, Hengtai Automobile had a very large investment scale, and its founder had made a great ambition to become a new upstart and leader in new energy vehicles, but in the end, it was a complete failure.

However, charlie Wade had no doubt about this goal.

There is no doubt about the capital strength behind bruce Automobile, and there is also a talent like hank who has very in-depth research on new energy vehicles as the CEO. More importantly, once the AI model is launched, it will be a great boost to bruce Automobile's car software. Moreover, An Jia and charlie Wade are financially strong. After the model is launched, it is not a problem to make no money or even lose money. It will definitely be rolled out in an all-round way at the fastest speed.

What's more, charlie Wade has so many big enemies overseas like Steve Rothschild. If the vehicles produced by bruce Automobile really can't be sold, he can distribute them one by one at that time, and its export volume will rank first in the country, and this brand will never go downhill.

At this point, Homula continued: "Again, we will launch at least five self-developed new energy vehicle models in the next five years;"

"In addition, we will invest in a self-developed and self-produced power battery production line in Aurous Hill in the second phase, and achieve self-sufficiency in all power batteries within five years;"

This sentence once again caused the whole audience to explode.

AnHomula just said that it aims to achieve an annual production of 1.5 million vehicles within five years, and now it aims to achieve self-sufficiency in all power batteries within five years. This means that the production capacity of this battery production line will reach 1.5 million power batteries per year within five years. This is truly an impressive feat.

Homula added: “Based on the five-year plan I just mentioned, we plan to provide at least 50,000 jobs for Aurous Hill in the next five years;”

“In addition, I would like to announce our supporting investment. We will add an additional 2 billion US dollars to carry out in-depth cooperation with major universities and vocational schools in Aurous Hill, including but not limited to investment, donations, training, scholarships, co-construction of laboratories, co-research of innovative technologies and joint schooling. In the next five years, we plan to provide at least 50% of the jobs to students of partner schools;”

The investment in education alone amounted to 2 billion US dollars, which really shocked the media reporters on the scene speechless.

This money is different from investing in a production line. The money for the production line is invested in themselves, but if Homula said, the investment in education is basically invested in major universities. Such a boldness and generosity are rarely seen in Aurous Hill, let alone the whole country.

Homula also said surprisingly: “bruce Automobile settled in Aurous Hill this time. We have already regarded our development as one with the development of the city of Aurous Hill. In the future, bruce Automobile will be deeply bound with Aurous Hill in all aspects, cooperate for mutual benefit, and go all out to become bigger and stronger! I also hope that in the future bruce Automobile can go beyond China and go to the world together with the city of Aurous Hill!”

By [\\_](#) / July 10, 2024

Homula’s speech made the world aware of bruce Automobile’s ambitions, and the two families’ decision to name the car brand after bruce Wade also showed everyone through practical actions that in this battle, the An and wade families were betting not only their lifelong glory and honor, but also bruce Wade’s.

Then, Hank and Matilda took the stage one after another.

As the CEO and CLO, or chief legal officer, of Bruce Automobile, the two elaborated on their views and determination on the future development of Bruce Automobile from their own professional perspectives.

The appearance of Matilda made everyone realize Bruce Automobile's determination.

Because no automobile company would focus on recruiting a former top lawyer to be the chief legal officer at the beginning of its business. Many companies do not even take legal affairs seriously. They always feel that such positions are not needed when nothing goes wrong and are useless when something goes wrong. As a result, many companies only truly realize the importance of legal affairs after continuously paying huge amounts of money and suffering losses.

The automotive industry, like the Internet industry, is a disaster area for commercial legal disputes. Without the support of an absolutely strong legal team, you will definitely run into pitfalls everywhere. Not only are patent-related intellectual property issues very tricky, but even car models may trigger trademark and patent disputes. Today you are developing a car in China and the model is named 123. Tomorrow you plan to sell this car to the United States. Suddenly, a local American car company may come with a bunch of documents and tell you, sorry, I have the rights to 123 in car naming and you must change the name.

Therefore, Bruce Automobile placed the chief legal officer in a position second only to the chief executive officer right from the start, which showed that it was well prepared.

However, in stark contrast to Matilda who received a lot of praise, Hank, who has a strong bookish air and looks very gentle and elegant, has become the target of public suspicion.

Before the press conference ended, many people on the Internet began to criticize Bruce Automobile's CEO selection as a failure.

Since Hank had been working on Wall Street at the time, he was not well-known in China.

In the eyes of many Chinese people, he is just an amateur who appeared out of nowhere. In addition, he taught at Aurous Hill University of Finance and Economics in the past few years and seemed to have nothing to do with the new energy industry. This made everyone somewhat worried that there might be some problems with Bruce Automobile's selection of a leader.

Even after his resume was released via PPT at the press conference, there was no sign that this person's career had any connection with the automotive industry.

He worked in finance-related jobs on Wall Street, and became a finance professor in Aurous Hill. It seems that the only thing about this person related to the automotive industry is that he probably has a driver's license.

As a result, some keyboard strategists and keyboard financiers immediately jumped out to criticize the company, saying that the two big families gambled everything for Bruce Automobile, and finally pushed a novice to the table to complete the gamble for them, which was destined to be difficult to succeed;

Some people also use the Titanic as an example, saying that the ship was awesome and the people on board were awesome, except that the captain was an ambitious and idiotic person, but the destruction of this giant ship was caused by him.

However, only the parties involved know that Hank's understanding of new energy vehicles cannot be judged simply by a professional perspective.

By / July 10, 2024

Even Claire couldn't help but say to Charlie after watching the press conference: "Husband, that Professor Hank is a university professor. The An family and the Wade family asked him to be in charge of a \$40 billion project. Can he really do it? I just took a look at the comments online, and it seems that everyone is skeptical about him..."

Yohana on the side also said seriously: "I think it's hanging. Sometimes doing things is not about how much money you invest, but whether you use the right method. Otherwise, even if you have more money, you may not be able to do it well. The An family and the Wade family are indeed a bit hasty in selecting coaches. In my opinion, you must recruit people from the industry, and recruit the best people. Go to Tesla, Toyota, and the three new energy brothers.

Take money to attract a group of top talents in various fields, and this thing will be done.”

At this point, Yohana added: “If the company’s series of decisions and investments go down the drain due to a mistake in selecting a head coach, then what will be left for Aurous Hill may not be a \$40 billion enterprise, but a \$40 billion mess. The people of Aurous Hill may be looking forward to Bruce Automobile to boost the economic development of Aurous Hill, but after a lot of trouble, they turn around and leave after discovering that it didn’t work.”

Charlie did not comment on Yohana’s point of view. He knew that everyone has their own basic logic for judging things, and Yohana’s judgment logic is the same as that of most people. They need to see more positive factors before they believe in the future of a project. If they do not see enough positive factors, or only see some key negative factors, they will feel that this matter has no future.

So, Charlie smiled slightly and said firmly: “I personally think that people who understand cars may not be able to make good cars, and people who can make good cars may not be able to sell good cars. So sometimes, to do something, you don’t necessarily have to get some people who look very professional. Look at the most popular car reviewers on the Internet today. Which one has studied car manufacturing? Which one has worked in a car company? Many of them don’t even seem to have been to college, but it doesn’t stop them from making tens of millions or even more a year by talking about cars.”

At this point, Charlie paused and continued: “From this we can see that in this world, once any academic discipline is separated from the academic itself and rises to the business field, it is definitely no longer a simple professional issue, because professionalism has no upper limit. If the world’s top technology is concentrated on a car, not many people may be able to afford it. Instead, it deviates from the basic logic of business itself. It’s like growing vegetables. We all know that organic and pollution-free agricultural products are the best, but if the whole world only grows organic and pollution-free agricultural products, more than half of the world’s people will starve to death.”

Yohana frowned and said, “Although what you said makes sense, I just paid attention to the public opinion on the Internet. It seems that everyone is full of doubts about Professor Hank’s selection as CEO. This may mean that although professionals may not be able to do business well, it will be even more difficult for non-professionals to do this business well.”

charlie smiled and said, "This is just my personal opinion. I think if the opinions of netizens on the Internet represent the probability of business success, then the business model of this world would have collapsed long ago. Nowadays, on the Internet, no less than one million people mock the thin skin and large fillings of ordinary Japanese family cars every day, but it does not prevent Toyota from selling more than 11 million cars worldwide in the past year. If a person can never figure out why Toyota can make so much money, then he will never be able to do well in the automotive industry. Being a spectator may be the best choice;"

## **the Amazing Son In Law Chapter 6909**

By / July 10, 2024

After that, charlie continued, "There are still many brainless boasters who always think that Boss Jia's Faraday Future is the originator of new energy vehicles and hope that he can make a comeback. However, this title of originator has been used for a full ten years. Today, ten years later, the total number of cars delivered by Faraday Future seems to be only twelve, and it is said that all of them were recalled due to certain problems. If these boasters were to make cars, they might not be as good as Boss Jia."

At this point, charlie recalled the hot topic on the Internet some time ago, and said with a smile: "By the way, because the boss of Remi Automobile did not announce the price when he released the car, many friendly companies also reduced their prices at that time to sabotage him. At that time, the whole network was badmouthing Boss Lei, to the point that even the dogs at the village head wanted to shout "Jun'er". At that time, most people thought that he would fight this time, and he would fight a big one. Unexpectedly, the annual production of the car was sold in one day. Those who called him "Jun'er" before immediately swallowed the name and continued to call him President Lei or even Lei Busi with a shameless face, as if the word "Jun'er" had never come out of his mouth in his life."

"So, just from this point alone, we can be sure that a person or thing that everyone is pessimistic about may not necessarily be doomed to fail."

"Because in this world, the truth is always in the hands of only a few people."

"If you want to do something and people around you, whether you know them or not, say that it is impossible, don't be discouraged. If you give it your all, you may be able to achieve something."

“But if everyone says that what you want to do can be done, then you must be very careful and think again and again, because if even the dogs in the village say that you can definitely make money by doing this, then it is highly likely that you will not be the one to make the money.”

charlie’s humor made Yohana couldn’t help laughing out loud. While laughing, she looked at Claire and said seriously: “Claire, your husband is really humorous.”

After that, she asked charlie: “Mr. Wade, I just happened to be writing a report when I go back. Can I quote some of your views just now?”

charlie nodded and said casually, “You can use it as you like, and you can also do secondary creation and processing, but don’t reveal my personal information. I am also an online troll who can only talk but not do anything. Don’t let people know that I said this, otherwise those netizens will definitely criticize me, thinking that I, a loser who has never studied or worked in the automotive industry, am not qualified to talk and speak nonsense about the automotive industry.”

Yohana smiled and said, “You’ve brought Claire and I into this. If we use your point of view just now to judge, we are questioning Professor hank simply because he has never worked in the automotive industry. It’s a bit like a troll.”

charlie waved his hand: “You are different from those real trolls. As for the situation of bruce Automobile and Professor hank, whether online or offline, everyone has the right to comment and express their own opinions. Whether it is pessimistic or optimistic, as long as it is simply expressing one’s own opinions, there is no problem. However, trolls not only express their own opinions, but also attack all those who disagree with their opinions. Explanation and attack are the real trolls.”

After that, charlie continued: “But these don’t really matter. For bruce Automobile, doubts are a good thing. On the one hand, it can spur the team to work harder, and on the other hand, it can rely on doubts to maintain enough popularity. The Internet is like this. If everyone praises you, you can be popular for three days; if everyone scolds you, you can be popular for three years; if some people praise you and some scold you, and the two sides have to fight from time to time, then you can’t be popular for a lifetime!”

## **the Amazing Son In Law Chapter 6910**

By / July 11, 2024

Although the outside world's suspicion of hank is overwhelming, hank himself has never been affected by the outside world's comments.

As soon as the press conference ended, he focused all his energy on the development of bruce Automobile.

He took his newlywed wife to the production base of Gaoheng Automobile without stopping, integrated the team, personnel and hardware there, and formed a human resources team to start recruiting automotive-related talents worldwide.

According to his plan, the current team of Gaoheng Automobile will immediately put aside all Gaoheng's original work and devote themselves to the research and development of new cars.

At the same time, fresh blood will continue to join this team to expand the team and improve the overall level.

He asked the team to come up with a 1.0 version plan for bruce Automobile's first model within three months. Since the Aurous Hill super factory needs nearly a year to build and land, hank decided that once the plan for the first model is determined, he will first use Gaoheng Automobile's production line to produce a batch of prototypes for testing.

After the prototype has been road tested and further tuned and improved, it can be handed over to the Aurous Hill Super Factory for small-scale production. After another round of optimization and improvement, it can be fully mass-produced and put on the market.

hank expects that after the first tuning of the prototype is completed, the news can basically be announced to the outside world. At that time, a new car launch conference will be held to release bruce Automobile's first mass-produced model to the world.

It took Remi almost three years from the launch of the car project to the launch of the first model, but Remi is truly from scratch. Unlike bruce Automobile, which already has the foundation of Gaoheng Automobile at this stage, it saves a lot of time in the early preparation and finding a cooperative OEM factory.

When Hank began to work hard, the Hogwitz father and son, who had been imprisoned in Hongwu's dog farm and drifted on the sea for half a month, finally arrived at the destination of this trip, the Middle East waters.

Taking advantage of the foggy Arabian Sea that day, the father and son were dragged out of the cabin. They stood on the side of the ship, with their backs against the vast expanse of white sea, and in front of them were three cameras set up by the Wanlong Hall soldiers. One of

the three cameras took a close-up shot of Steve Hogwitz's face, one took a shot of his son Walter Hogwitz, and another took a full-body shot of the two, as well as the vast expanse of white sea behind them, making it impossible to tell which was which.

The father and son, with their messy long hair, trembled in fear in front of the camera. One of the Wanlong Hall soldiers said, "Come on, the two of you, the video we are shooting now will be shown to your family after editing, so how to talk later, I believe I don't need to teach you any more, right?" The

father and son shook their heads in unison and said, "No
