

The Amazing Son In Law Chapter 7011

By / August 30, 2024

At this time, most of the employees in the port railway freight station had already gone off work. Except for the workers working in the loading and unloading yard, there were basically no people in other places.

In the night, Charlie and Li Yalin, led by the person in charge, came to a section of rails not far from the unloading station. Later, after the train from Duke Mining was unhooked, the locomotive would stop nearby for the night.

Charlie planned to wait for the driver to stop the car here, then control the driver, and then get on the car to check the driving record.

Soon, the whistle of the train was heard in the distance, and a few minutes later, a freight train loaded with phosphate slowly entered the station.

The dispatching instructions came from the hand-held radio carried by the person in charge, and then the track automatically changed tracks and led the train to the target platform.

Railway staff and dozens of employees responsible for loading and unloading were already waiting here. The train had just stopped, and the railway staff was responsible for unhooking the locomotive, and the loading and unloading workers had begun to transport the phosphate in the carriage out.

Then, under the guidance of the dispatcher, the locomotive drove the locomotive to the designated parking place.

Charlie had already used his spiritual energy to investigate. There was only one driver on the train. He had no cultivation and was not a warrior. He was probably not a member of the Poqing Society.

When the train stopped and turned off, the driver pushed open the door and backed up carefully from the high ladder.

He

had already stepped on the last step and could get off by jumping to the side. At this moment, he suddenly felt someone patting his trouser legs from behind. He was startled and looked back to see an Asian man looking at him.

He was angry and thought the other party was playing a prank. Just as he was about to speak, he suddenly felt his mind go blank. Then, he saw the Asian man making a climbing gesture to him, and the whole person climbed up uncontrollably.

Li Yalin shouted in French from behind, and the other party immediately reopened the door and entered the train's cab.

charlie and Li Yalin followed and entered the cab. Then Li Yalin ordered him in French to open today's driving record.

The man immediately powered on the locomotive again, clicked on a square LCD screen on the side, and opened all the driving record videos for today.

Li Yalin asked for a moment, then said to charlie: "Mr. charlie, he made a total of four trips today, and the last trip went to Duke Mining. Their Moroccan National Railways provided Duke Mining with a batch of freight cars. Generally, after Duke Mining loaded the goods, they towed the empty cars over and then transported the fully loaded cars away, so that the drivers don't have to wait for loading. He arrived at Duke Mining three hours ago, hooked up the car, confirmed the number of cars and the seals, and left.

The Amazing Son In Law Chapter 7012

By / August 30, 2024

As he said that, he asked the other party to open a video on the screen. After dragging the progress bar, the other party stepped aside and respectfully made a gesture of invitation to Li Yalin.

In the picture, it was the picture of the train about to enter the Duke Mining loading yard.

From a distance, Duke Mining is located in a vast yellow-white plain. Where the train passes, there are Duke Mining's phosphate mining areas on both sides, and a large number of construction machinery are running at high speed in the mining area.

What is a bit strange is that in the large phosphate mining area in the picture, many workers are building and welding iron towers at least 20 to 30 meters high. The overall structure of the iron tower is similar to that of a high-voltage line tower, but a platform for people to stand is welded in the middle and upper position. From the size of the workers in the video, it can be inferred that it can carry at least seven or eight people standing at the same time. At least a dozen iron towers like this have been built in the entire mining area, and several are under construction.

Li Yalin paused the video, pointed at the towers, and said to charlie: "Mr. charlie, these towers should be used for warning. It seems that they are indeed strengthening security now."

charlie nodded and said: "The terrain there is very flat, and it is all phosphate mining area. There are

no high-rise buildings outside. The height of this tower is enough to observe far away. If it is equipped with professional security equipment, it is really not easy to break in.

Moreover, from the video, the mining area is still some distance away from the core location of Duke Mining.”

“Yes.” Li Yalin said, “I checked the information on Skyline. According to the scale, they have pushed the mining area to at least six kilometers in all directions over the years. Because the mining area is getting farther and farther, they have now built several conveyor belts to transport the mined ore to the refinery. If they really penetrate from the periphery, it will be very difficult to penetrate such a long distance.”

charlie nodded slightly and asked Li Yalin to continue playing. The train in the video was getting closer and closer to the refinery. The entire refinery looked like a prison, surrounded by high concrete walls. There were caltrops and high-voltage wires hanging above the walls. Although the rails led directly to the inside of the refinery, there was also a thick iron fence door at the entrance of the rails.

It can be seen from the video that there were many people waiting outside the iron gate. When the train slowly drove to the front, several people did not open the iron gate. Instead, someone boarded the front of the train and talked to the driver for a few words. Then he asked the people below to open the door and ride with the driver into the factory area.

The entire factory area is like a huge T-shaped, with the production area on top and three train tracks and two semi-enclosed platforms for loading goods on the bottom.

Among the three tracks, the main line passes through the middle of the two platforms, and on the other side of the two platforms are two arrival and departure lines.

In the picture, a freight train has been parked on the left arrival and departure line, and the vehicle in the video passes the switch and stops on the right arrival and departure line.

At this time, there are many staff members on the right platform. They are still transporting the produced phosphate to the platform. These goods are waiting for the empty carriages transported by the train. As soon as the train arrives, they will start loading the empty carriages.

However, charlie and Li Yalin can see the purpose of their doing this. These loaders are strong and look like martial artists. They are busy on the platform when the train enters the station. I think the real purpose is to keep an eye on the trains entering the station at all times to prevent enemies from attacking.

After the train in the video came to a complete stop, it uncoupled and began to change direction, and then it towed the fully loaded train from the other side to the departure line. The whole process did not take too long, and there were always nearly a hundred staff members of various kinds on the platforms on both sides of Duke Mining.

The Amazing Son In Law Chapter 7013

By / August 30, 2024

After that, the front of the train completed the direction change through the main line, and after waiting for about ten minutes, it drove out of the factory.

After watching the video, charlie couldn't help but sigh: "This Duke Mining is now as solid as a rock, especially the core factory area, which is built like a prison. There is such an open buffer area outside. It is very difficult to get in quietly. The only chance may be the train."

Li Yalin nodded, asked the driver a few words, and said to charlie: "The driver said that the reason why Duke Mining is as heavily guarded as a prison is mainly because they have had many vicious cases in the past few years. Someone once sneaked into the factory area and killed their two financial personnel and robbed millions of dollars. Someone else sneaked into the factory area and stole precision equipment worth millions of dollars. Phosphates are often stolen. These cases later became unsolved cases. Duke Mining was very dissatisfied with the local police's handling of the case, so it reinforced itself."

charlie smiled and said, "This sounds like a self-written and self-directed self-torture plan. Blind reinforcement will arouse suspicion, but artificially concocting a few serious cases in advance can go with the flow and make the reinforcement defense reasonable and legal."

"Yes." Li Yalin nodded and said, "I also think they are asking for trouble."

Then he said, "Mr. charlie, this place is already impregnable. Now they have expanded the defense to the periphery and will soon install high-tech equipment. Once these things are in place, I am afraid it will be difficult to get in."

charlie touched his chin and thought, "Time is tight. We must get in before their new equipment is put into use."

After that, he pointed at the Duke Mining staff on the platform and said, "Inspector Li, I need a set of work clothes that are exactly the same as theirs. Is there any way to get them? In addition, we need to find a way to delay the delivery time of their batch of goods tomorrow. It is best to wait until the evening before driving. Then I will go in with the delivery train." When

Li Yalin heard that charlie wanted the same work clothes as them, he hurriedly asked, "Mr. charlie, are you planning to hide in the freight car to sneak in?"

"Yes." charlie said, "I will follow the fully loaded train in. Even if they have thermal imaging or life detectors, they can't penetrate the metal carriages and the full load of goods inside. In this way, as long as the door is not opened and people don't come in,

they won't notice my presence. Even if they do, it doesn't matter. There are dozens of them on the platform. Tomorrow's train will have twenty carriages. At that time, only three or four people will come in from each carriage to unload the goods. At that time, I can find the right time to control them, and then blend in and become one of them. By then, everyone will wear the same clothes and be busy with their own things. In addition, it's still late. On the platform, there is one more person like me, so I shouldn't be noticed. "

Li Yalin felt that although the method Charlie said was feasible, the risk factor was not low, so he

quickly asked him: "Mr. Charlie, if you are discovered inside, will it be dangerous?"

Charlie said: "As long as they don't have things like close-in defense guns, no one can stop me. I hid in the train not because I was afraid of them, but I didn't want to be discovered by them in advance. If I was discovered after entering, I could stop the loss immediately and kill a bloody way out at any time. "

Li Yalin was relieved when he heard this and said: "Since Mr. Charlie is sure, I will cooperate with him to the fullest."

After that, he carefully identified the clothes of the workers in the video and said: "These should be ordinary anti-static labor protection clothes, which should be available on the market, but their clothes should be customized, and there are Duke Mining Logos on the front and back of the clothes. This may not be easy to solve. "

"It doesn't matter. "Charlie said: "Just find me the same clothes and shoes, and I will find someone to change a set as soon as possible.

The Amazing Son In Law Chapter 7014

By / August 31, 2024

At this moment, in the freight yard specially used to load goods for trains, dozens of workers are working in full swing.

Charlie and Li Yalin came to the freight yard under the leadership of the person in charge. Before entering the door, Charlie used his spiritual energy to check and confirmed that the people inside had no cultivation, no martial arts foundation, and no toxins used by the Po Qing Society to control members. Among

the members of the Po Qing Society that Charlie had come into contact with so far, no matter how high their level was, they all had the strange poison left by Sara in their bodies, and even the four earls were no exception. Although Charlie did not know whether the three elders had the same poison as the four earls, at least he could be sure that the three elders were now looking for opportunities to ambush him in Nigeria and could not appear here.

Therefore, charlie could also be sure that there were no members of the Po Qing Society among these loading workers.

Therefore, charlie and Li Yalin asked the person in charge to take them into the freight yard. On the platform, there were a lot of tightly packed and even wooden-framed goods stacked. Workers were using small forklifts and bulldozers to transport the goods into different carriages.

Seeing the person in charge bringing two people in, the workers looked a little surprised, but no one dared to greet him, but just worked harder.

After Li Yalin asked the person in charge, he whispered to charlie: "Mr. charlie, the loaders here work in 12-hour shifts and two shifts, loading the goods to be shipped in the freight yard 24 hours a day. According to regulations, they must load all the goods as required within the specified time. The yard will hand over the loading list to the person in charge. It does not include the train number and marshaling information, only the number of the goods and the number of the carriage to be loaded. These loaders and unloaders only know which batch of goods will be loaded into which carriages. As for what the goods are, which carriages will form a train, and where they will be sent after forming a train, they don't know." After

a pause, Li Yalin continued: "The foreman led the workers to People load all the carriages as required, count and confirm, and then seal the closed doors once, and then they can wait for transportation. The consignee must check the seals after receiving the goods, and then open and count the goods after confirming that they are correct. "

charlie nodded. There were many closed carriages with codes sprayed on the tracks on both sides of the platform. A rough look showed that there were at least sixty or seventy carriages, so he asked Li Yalin: "Which of these are Duke Mining's goods?"

Li Yalin took out tomorrow's transportation plan, found Duke Mining's train information, and said to charlie: "The information of Duke Mining's twenty carriages is all here, we can check them one by one."

charlie nodded, and together with Li Yalin and the person in charge, they began to check the carriage numbers, and soon found several carriages that were being loaded.

With the person in charge beside them, charlie and Li Yalin walked in with a swagger and took a look. The carriages were about half full, and most of the goods were packed in cartons that took up an area of about one square meter and were about two meters high. There were special wooden frames outside the cartons for protection. Li Yalin recognized the logo on the packaging at a glance and said to charlie, "These are from Philil, an American company specializing in the production of thermal imaging equipment. It is considered a global leader, and their equipment is not only thermal imaging, but also various night vision devices and drones."

charlie glanced at it and saw that there were more than a dozen boxes with the Philil logo printed on them. He couldn't help asking, "Do you need so many night vision and infrared devices?"

The Amazing Son In Law Chapter 7015

By / August 31, 2024

Li Yalin said, "Duke Mining covers such a large area. If you really want to achieve infrared and thermal imaging monitoring without blind spots, you may really need so many devices. Moreover, building a huge security system is not like buying a few wireless cameras at home and connecting them to the power supply. Wireless network is enough. Security system cannot only have front-end equipment. Back-end equipment is a bigger project. Generally, there are hundreds of surveillance probes in a building. To maintain these hundreds of cameras, an independent machine room is needed. Each camera needs an average of hundreds of meters of lines to connect to the machine room. Various switching equipment needs to be built to connect them. Then, with the control system and storage system, the volume will be very amazing. "

As he said, he saw another batch of goods waiting to be loaded, and said to charlie: "Mr. charlie, this batch is Seagate's goods. Seagate is also an American company. It mainly produces storage devices. There are tons of storage devices here alone. There is also Panduit, which is also an American network cable brand. It seems that this carriage is full of network cables. The area within a radius of several kilometers, the wiring alone is unimaginable. "

Afterwards, Li Yalin and charlie also scanned the goods in other carriages. Basically, they were all major brands in the security field.

After scanning it, charlie could basically conclude that Duke Mining had not yet established a strong monitoring system. However, this batch of equipment was a huge investment. Once this batch of equipment arrived and began to be put into use, within a few kilometers of Duke Mining, a sparrow flying by would be discovered by the equipment.

So charlie said to Li Yalin: "Inspector Li, let the AI retrieve the transaction details between Moore Trade and the Philier Group to see if the equipment list can be found."

Li Yalin said: "It should be no problem, please wait, I will do it."

For Ai, hacking into a system is not difficult. It can find all the loopholes of a website or a server in the shortest time, and then quickly find the data that the user wants.

Soon, the Ai system has a harvest. It obtained the transaction details of the trade between Philier and Moore through a small loophole in Philier's server.

In the details, there are thousands of fixed-installed thermal imaging and night vision equipment. In addition, there are a thousand sets of single-person handheld devices. Even their most advanced living early warning radar is on the purchase list. This should be the most powerful equipment in the civilian field at present, and they purchased six sets at once.

After Charlie finished reading the list, he said to Li Yalin, "It seems that we have arrived at the right time. Duke Mining's security system has not been built yet. Taking advantage of this opportunity, I will infiltrate through the railway tomorrow, and then find a way to break through from within them after entering."

Li Yalin said, "Mr. Charlie, the two of us have no help in the whole Casablanca. It is already very difficult for you to deal with such a large base of dead soldiers alone. If there is no help, the subsequent large-scale transfer will probably be very difficult."

Charlie said, "We can't rush into large-scale transfers. I want to go and see what the specific situation is first. If I can control the situation, I can slowly think of a solution based on the actual situation."

Having said that, Charlie said, "In fact, these days, Yisu Shipping has been having ships in and out of the port of Casablanca, but Duke Mining is too far away from the port, and I checked that it seems that some warships of the Moroccan military are also docked at the port of Casablanca. It is difficult to transfer thousands of people out of the country under the eyes of the army. If we really want to withdraw the people from Duke Mining, the sea route is estimated to be difficult, and we have to find another way out."

Li Yalin asked him: "What if you can't control the situation after you arrive at Duke Mining?"

Charlie said: "It's hard to control the situation, it's nothing more than the people inside don't cooperate. Logically, they have been enslaved by the Qing Dynasty for generations, and they shouldn't not cooperate, but if someone really doesn't cooperate, then the other party is clearly standing on the opposite side of me, then I can only treat them as enemies."

After that, Charlie pointed to the person in charge and said to Li Yalin: "Inspector Li, ask that guy where the distribution cabinet of the freight station is. I will destroy the circuit here first. Once the circuit is destroyed, it will be impossible to work all night tonight. The task of loading and unloading will naturally be delayed until tomorrow morning. In this way, all freight trains tomorrow may be affected, at least delayed for six or seven hours, and then let the person in charge adjust the priority and delay the Duke Mining batch of goods until tomorrow afternoon after four o'clock."
