

The Amazing Son in Law Chapter (Charlie Wade)

Chapter 2646

Hank didn't know Charlie's plan.

When he heard that Charlie planned to use money to unravel the matter, he was a touch relieved.

Originally, he hoped that the U.S. Embassy would be ready to redeem people, but the U.S. Embassy's attitude was very tough and didn't give the opposition any room for negotiation.

now, Charlie is willing to buy the ransom of the US embassy. He feels that when the core demands of the opposition are met, they're going to naturally honor their promises.

So he gratefully said to Charlie: "Charlie, I'm all up to you.

Charlie smiled slightly and said: "Uncle Hank, don't be concerned, the plane is close to begin, so I won't tell you."

Hank quickly said: "Ok, uncle, etc. that you simply will come

to hold up the phone, Charlie has been seated within the Concorde, he and Isaac Cameron under remind the crew, the safety belt on, followed, the aircraft are going to be within the end of the runway sprinted into the air with all its strength.

the most important feature of the Concorde airliner is that it flies fast and high. Its cruising altitude has reached an astonishing 18,000 meters.

After the aircraft climbed to a predetermined altitude in one breath, it began to enter supersonic cruise.

Charlie has been lying leaning against the comfortable first-class seat together with his eyes closed and rested. Isaac Cameron on the side seems a touch excited.

While holding his mobile and using the expensive satellite network to speak with others, he's holding a pen and writing during a small notebook. Constantly write and draw on the location.

Halfway through the voyage, Charlie opened his eyes, checked out him, and asked curiously: "

Isaac, what are you painting there? Isaac Cameron hurriedly said: "Master, master gave me the contact information of the Lebanese docking person,

I communicated with the opposite party and learned some more specific situations. Now I'm checking out the resources we'd like to use.

Charlie asked him: "Is there any new specific information?"

Isaac Cameron said: "Yes, the position of the opposition garrison has been determined. it's during a small mountain town 80 kilometers north of the Syrian capital. The master has opened the border between the 2 countries.

once we arrive in Lebanon, we will directly transfer to the opposition by helicopter. The position of the faction." After

speaking, he said again: "Master, the military capability of the opposition remains very strong. consistent with the news from the Syrian military, they need stationed a minimum of two thousand soldiers during this position. they're all equipped with automatic weapons, and that they also are equipped with quite a dozen tanks and armored vehicles, and 4 armed helicopters.

If we pass helicopter, the opposite party will probably send an armed helicopter on to attack us. i'm afraid that it'll be difficult to urge on the brink of

Charlie for a flash of contemplation. "Then, let Lebanon prepare a fixed-wing aircraft, and therefore the aircraft will take me to the sky above the destination, and that i will parachute down alone .

Isaac Cameron blurted out and asked: "Master, you're getting to

Charlie by yourself and said with a smile: "Of course, can it's the 2 folks who attend

Isaac Cameron busy and said: "Master, I mean, we'd better mobilize a gaggle of aid in Lebanon.

, I even have asked the matchmaker to contact the mercenary resources in Lebanon, and that i am trying to contact as many mercenaries as possible."

Charlie waved his hand: "The opponent has two thousand soldiers and heavy weapons. this is often basically It's a regiment configuration. during this case, it doesn't add up for us to seek out mercenaries.

"If you would like to beat them, a minimum of you've got to possess thousands of well-equipped mercenaries, to not mention that since the opponent is stationed during a village ,

There must be a robust mass base within the local area. If a full-scale war starts, it'd be possible to feature thousands of militiamen with live ammunition. i think that the rationale why the govt forces failed was because they underestimated their military capability and combat potential.

And don't forget, the aim of our visit this point is to save lots of people, to not wipe out these opposition groups for the Syrian government forces. If we actually bring thousand

mercenaries to fight over, this group of individuals won't be ready to kill them. Kill all those hostages, and albeit they're all exhausted then, what can we do?"

When Isaac Cameron heard this, he couldn't help asking: "Master, if you sneak in by yourself,

wouldn't it's more dangerous? Also, albeit you'll sneak in, how are you able to rescue people then?"
