

At The Top 2481

Life at the Top Chapter 2481-“What are you trying to say then?”

Snow looked at Assange’s curious face and smiled confidently as he said, “Of course, I will continue to lurk in the intelligence agency and get more information about this plan. After that, we will wait for the opportunity...”

“You don’t really think that just based on the few videos we have now, we can accuse the intelligence agency of anything, right?”

“Hell, I still don’t know the name of this surveillance plan... Without details of the complete plan, the intelligence agency can blame this on the individual members. In that case, we will not be able to achieve our goals at all. Either we don’t do it or we uproot this damn plan.”

Jasper listened to Snow’s impassioned speech and silently praised it. He was worthy of being called the ruthless man who would almost single-handedly confront the entire United States intelligence agency in the future.

He could see the big picture indeed.

Assange fell silent after hearing Snow’s speech. He seemed to have something to say.

Assange thought for a while but was still a little unwilling to be suppressed by Snow, so he continued to ask, not content with having a more subservient role, “Then what does this have to do with us not releasing these videos? It’s good to cause them a little pain.”

Snow looked at him like he was looking at an idiot and said coldly, “Are you sure that we won’t be alerting others by publishing these videos now?”

“Not only will your actions not cause a direct loss to the agency, it will even allow them to strengthen the security of the entire plan. This plan is so tight now that I can’t find much information. If you do this and they strengthen the entire protection and confidentiality measures, it will take months or even years for me to find out the information about this plan!”

Snow was so domineering now that he made Assange, who was originally arrogant and proud, look like an elementary school student being scolded.

“Then, what should we do with the secret keys and videos we have?”

Snow laughed and said, “We’ll release them, of course.”

Hearing this, Assange was dumbfounded.

After a pause he asked, “Didn’t you just say we have to keep these a secret so we don’t alert the others?”

Snow smiled and said, “I’m not asking you to release them all. Just release a few. Although I’m sure we’re clean, I don’t know if they have any back-ups. Furthermore, a counter-surveillance plan is currently underway. They will be even more suspicious if they don’t get anything from Qari...”

“So, we might as well release these a little earlier, and at the same time, we can also provide some cover for Laine... While we’re at it, we can make some extra money.”

When Snow said the last sentence, a smile appeared on his face before added, “We can’t get nothing after working hard for a long time, right? It will be such a loss.”

Assange also said excitedly, “Yes, we still have to take the opportunity to make some money. My visits to my decryption website has increased significantly recently, so it is time to add more servers... With this money, I can make a big upgrade to the website.”

“Decryption website?” Snow’s interest was piqued.

He had just listened to Assange talking about how he cracked various government databases as easy as pie. At that time, he was curious about how Assange would deal with this information in the future.

Now, it seemed that he had put them all on the decryption website.

Assange had the opportunity to show off in front of others, so he naturally would not let it pass easily. Therefore, he started talking about it.

Snow would nod frequently as Assange talked, obviously also very interested.

In the end, Assange conveyed, albeit incompletely, “Regrettably, our financial resources are limited, and we are reliant on donations to sustain our income. Consequently, we cannot expand our operations at this time...”

Jagoan, who had been silent until now, suddenly said, “Actually, I have a plan that can solve your financial problem...”

Life at the Top Chapter 2482-Once he heard that Jasper had a way to solve his financial problem, Assange, who was initially a little hesitant to mention his pain, instantly perked up.

“Mr. Laine, please tell me... We’ve been worrying about this for a while now...”

“The problem now is not only that we lack funds to expand services. What’s even worse is that, because of the exposure of remittance addresses, many of our people have been controlled... You know, although we are still pretty small-scale now, we have definitely offended a lot of governments. We need more money to expand services and more money to protect our people.”

Jasper knew that the ‘protection’ Assange mentioned meant that he needed money to bribe those Western officials in exchange for a certain level of protection.

Jasper smiled and said, “Don’t worry, my method will not only help you solve the financial problem but it will also save you from having to seek the same protection methods you used before.”

Assange’s eyes immediately lit up after hearing this, “Mr. Laine, please tell me. I’m becoming more and more curious now because that is exactly what we need urgently.”

In fact, Assange had wanted to talk to Jagoan just now.

Although they were separated by a screen, he was still acutely aware that Jagoan, who didn’t stand out at all, was the leader of the group. Besides Snow, who had just demonstrated his extraordinary skills, the

burly man standing behind Jagoan exuded an aura of lethality, making it evident that he was far from ordinary.

So, how could someone who can assemble such exceptional individuals as his subordinates be considered ordinary?

Because of preconceptions, Assange had assumed that Snow was one of Jagoan's people.

Jagoan looked at Assange's anxious face and smiled. "The reason you are worried about the security of your funds is because your existing payment methods are very dependent on banks... As long as the government controls the banks, all your payment routes are visible to them..."

"In fact, even in the West, where private property enjoys freedom, supposedly neutral private banks must still yield to the authority of the state. Even Swiss Banks in a neutral country are no exception. Although their banks use the safety of funds as a selling point to attract global funds, they will still have to hand over all their financial information to the United States if the United States asks them to."

Jagoan's words were not groundless.

In the future where he originally lived, such things have happened again and again, which fully proves the ridiculousness and absurdity of the West's claims of neutrality.

Seeing that Assange still looked unconvinced, Snow echoed, "Assange, Laine is right... Our intelligence agency can indeed obtain Swiss Bank's information, and their reliability is very questionable."

"Then, what should we do?" Assange looked a little panicked at this time. "My original plan was to deposit the money in a Swiss Bank, but now it seems that this plan is obviously not feasible."

Jagoan's words were not groundless.

In the future where he originally lived, such things have happened again and again, which fully proves the ridiculousness and absurdity of the West's claims of neutrality.

Seeing that Assange still looked unconvinced, Snow echoed, "Assange, Laine is right. Our intelligence agency can indeed obtain Swiss Bank's information, and their reliability is very questionable."

"Then, what should we do?" Assange looked a little panicked at this time. "My original plan was to deposit the money in a Swiss Bank, but now it seems that this plan is obviously not feasible."

Jagoan smiled and said, "Since we will be subject to state-level attacks if banks are involved, why don't we skip the banks in the payment process? For example, distributed peer-to-peer payments?"

In later generations, there was indeed a payment method called distributed peer-to-peer payment.

This payment method would use a new digital currency called Bitcoin.

Life at the Top Chapter 2483-"Peer-to-peer payment?" Assange lowered his head and mumbled.

"Theoretically, this is indeed feasible, but how should we do this? At the end of the day, all payment methods require something for credit endorsement. If we skip the bank, then What should we use for credit endorsement?"

Snow keenly saw the flaws in Jasper's plan and raised the question.

Jasper was not surprised when he heard Snow's question.

In fact, this has been debated over the years since Bitcoin emerged. However, ten years later, Bitcoin had finally dispelled this doubt with its actions. A digital currency was completely feasible. Even in the future, Somerland would become the first country to try to use digital currency as a legal tender.

Jasper knew that if he wanted Bitcoin to appear in the world ahead of schedule, the two people in front of him would be the key. So, he must first convince them of the feasibility of Bitcoin.

He was confident of this because he clearly remembered that, in the information disclosed in the future, Assange would be one of the main developers involved in Bitcoin's development. And his philosophy was naturally in line with the spirit of public supervision of Bitcoin.

With a subtle smile gracing the corner of Jagoan's mouth, he eloquently stated, "The reason we're contemplating the creation of a new payment system is fundamentally due to the realization that placing complete trust in a single entity is problematic, as it's susceptible to various external influences... But what if we extended this proof of credit to everyone?"

"We can set the rules so that the transaction can only be completed if the majority of people approve it. And if the user base is large enough, then no force in the world will be able to bribe so many people at the same time. Doesn't this ensure the reliability of the proof of credit?"

Snow and Assange were momentarily stunned.

Jagoan's idea had completely exceeded their understanding.

At this moment, even Jagoan, Jagoan, Jagoan, and others who didn't understand technology keenly sensed the cross-era nature of this plan. They had a vague feeling that they were witnessing history in the making.

Assange thought for a while and suddenly asked, "Then, how can we get more people to participate in the proof of credit? In the past, the parties involved were banks or the government. They were making a profit in the whole process. If you want individuals to participate, you have to give them some benefit so they have an incentive to do so..."

"But the reason why we want to do this is because of the shortage of funds due to fund security issues. So where will we get the spare money to incentivize users now?"

Just as Jagoan was about to speak, he saw Jagoan raise her hand.

He knew that Jagoan, the young mistress of the Maynard family in South America, was starting to get restless. Jagoan originally came from the financial industry, and this was within her professional expertise.

"The essence of this payment method is to use digital currency as a currency token. In this case, why don't we simply reward users who are willing to work voluntarily with some digital currency?"

"We don't need real money for this currency anyway. The specific amount can be calculated based on their actual labor, making it the fairest approach. If this currency is like a mountain of gold, let them be

the miners and distribute the gold to everyone who uses it for transactions. This way, they will also benefit from it.”

After Jagoan finished speaking, Snow and Assange’s eyes gleamed.

What a good plan!

Life at the Top Chapter 2484-After Celine’s speech, Jasper’s eyes were full of excitement.

Celine was indeed the hero of this era. With just a few words, she managed to guess the complete Bitcoin plan of later generations.

The mining system that she mentioned was the key to the popularity of Bitcoin. Even the metaphors she used were similar to the terminology used by Bitcoin’s mysterious founder, Sato Naka.

Jasper was beginning to wonder if Celine was the real ‘Sato Naka’ in history.

“I agree with this plan!” Snow was the first to express his opinion.

“I agree too!” Assange chimed in.

“There was still the question of how to implement the reward algorithm?” Celine’s question somewhat dampened the excitement that had just ignited.

“The reward algorithm is critical as it will directly affect the follow-up sustainability. The initial miners must be the beneficiaries. Will they try to monopolize this business? In that case, our idea of dispersing the coins will be in vain... Yes, and how much is appropriate for this reward? After all, this currency has no actual value at present, and it will depend on expectations. It is not appropriate to give too much or too little...”

This question troubled them. Not just Assange and Snow, but Jagoan also racked her brain.

Jagoan and Jagoan stayed aside throughout the whole process. The discussion was completely beyond their knowledge. They did not even know how to engage in this topic. At the same time, they looked at Jagoan with admiration.

“Jagoan is awesome. He seems to know everything, nothing is hard for him,” Jagoan lowered his head and whispered.

Then, he saw Jagoan glaring at him.

It was only then that Jagoan realized that Assange was still online, so he hurriedly glanced at Assange on the screen.

When he saw Assange immersed in thinking, not noticing any changes, he breathed a sigh of relief.

Seeing their frowns getting deeper and deeper, Jagoan finally could not hold back from saying, “Actually, we don’t have to worry about the amount of reward. We just need to set up a mechanism so that the reward base continues to decline...”

“At the same time, we will set the total amount of digital currency to a fixed value. As the number of mines decreases, the digital currency will naturally become valuable under the principles of supply and

demand. After several years of this, the value of digital currency will naturally become higher and higher. At the same time, because the proportion of mining algorithms will get smaller, the income obtained by miners will be constant...”

“This way, the problem will be solved!” Jagoan solved the problem immediately.

Snow and Assange looked at Jagoan in disbelief.

“Laine, you are a genius. You can even think of such a subtle method!”

“Mr. Laine, I admire you more and more...”

Jagoan did not praise Jagoan like Snow and Assange had, she had already witnessed Jagoan’s cross-generational thinking previously. To her, Jagoan was like a wise man from the future who seemed to know everything.

“Okay, now that we roughly have the general plan, we should name this thing now...”

“Since the core of this thing is a digital currency, and the smallest digital unit is bits, how about we call it Bitcoin?”

So, Bitcoin’s prototype was born on this ordinary afternoon.

Life at the Top Chapter 2485-“Okay, now that Bitcoin’s name is confirmed, it’s time for us to talk about how to hide our role in this plan,” Jagoan interrupted everyone’s heated discussion.

They looked at each other.

They could imagine how much Bitcoin would impact the existing financial system, but when that happens, as the promoters of Bitcoin, they would surely become the target of public criticism.

All forces would seek to control them. Whoever could control the founder would have authority over this new weapon. So, for their own safety, they must hide their identities.

“First of all, we can’t complete this project with just us. This is risky, not only from a complexity perspective but also from a safety perspective.”

Snow heard what Assange said and nodded, “That’s true. Even if we can do this alone, we are too concentrated and will be discovered. If we adopt an open source approach and call on enthusiasts to develop this together, it will not only solve the cost problem but the security problem too.”

“Then how do we get these enthusiasts to participate?” Jagoan raised a question at this time.

Snow laughed. “Write a white paper about this project and upload it. Believe me, no crypto enthusiasts can refuse the qualification to participate in the development of such a great project. Anyway, we’ve decided on the core structure, so we don’t have to worry about irrelevant people coming in and putting backends on this. As for rewards, just give them Bitcoins.”

Assange nodded and said, “The idea of the white paper is indeed good, but who will sign it? After all, we need someone to sign such an important thing, and we currently have four participants.”

Assange immediately excluded Jagoan and Jagoan from being the creators.

“We can put in one signature when the time comes to throw a smokescreen and reduce the chances of finding us,” Jagoan suggested.

“Good plan. So what should we call this creator?”

“Just call him Sato Naka...” Jagoan answered without thinking.

“This name sounds like it comes from a country in East Terra, and since none of us are from there, it can be useful for diverting future investigations...” Assange realized something at this time and said with a smirk. “Mr. Laine, why does it feel like you’re doing this to cause trouble to Sunrise Land? If I remember correctly, that country is a loyal ally of the United States, and Somerland seems to have beef with that country...”

Jagoan smiled and said, “What a coincidence then. Bitcoin will shake the foundation of the dollar, and the creator will appear to be from a country that’s most loyal to the United States. Let them get into a dogfight and confuse the masses.”

“Hahaha! You’re so evil. I like it!”

Snow and Assange laughed heartily at the same time. Jagoan could not hold himself back and typed his question on the keyboard.

Everyone laughed when they read it. Assange even looked at Jagoan with a doting look on his face.

Jagoan shuddered.

Life at the Top Chapter 2486-When they saw what Jagoan typed, they were taken aback for a moment before bursting into laughter. Even Jagoan, who had always been a fly on the wall, joined everyone in laughing at Jagoan.

Jagoan was a little confused and scratched his head. At this time, he looked abnormally adorable in his charming outfit.

If Assange was not here and he did not have to pretend to be mute, Jagoan would have asked directly.

He thought, So all of you understand but I’m the one who’s confused, huh?

This made Jagoan very depressed.

In the end, Jagoan could not stand it anymore so she explained, “Our plan itself has solved the funding problem.”

“Once Bitcoin is successfully developed, we don’t need to ask others for help as we can print money ourselves.”

Jagoan was still a little confused with Jagoan’s explanation. He continued typing on the keyboard obediently.

[But even if the value of Bitcoin rises later because of supply-demand, what do these Bitcoins have to do with us? We can’t get them.]

Assange could not hold back his laughter.

“Rowena, you are so cute when you’re ignorant. Have you forgotten that miners get Bitcoin as a reward? And we, as Bitcoin developers, are not the original miners. We can pre-mine a part in advance and that will be our profit. Even if it starts flowing later, we will definitely be able to mine more coins than other ordinary miners. This will become a steady stream of income. The only question now is, will Bitcoin be worth anything in the future?”

Jagoan said with great confidence, “Believe me, once we make Bitcoin, its future value will be higher than real gold. We can even rely on Bitcoin to have unparalleled wealth.”

Assange looked at Jagoan’s extremely confident expression, but there was still a little suspicion in his eyes. “Well, since you are so confident, Mr. Laine, I believe that this thing will be worth at least a few dollars. No matter what, at least this thing can solve our security problems, so we don’t have to worry about being traced. In addition, we need to set up a password algorithm for the entire system for security reasons. Even the most secure vault can be broken into, but it’s different when it comes to passwords.”

Snow then said, “We can set the computing power required to crack the password to the limit that this world cannot reach.”

The two technical geniuses, Snow and Assange, began to discuss the details of the algorithm. They seemed more interested in discussing technical details than making money.

The two were meticulous in every single technical detail, and they seemed to have completely forgotten that the original purpose of proposing the idea of Bitcoin was to solve funding and security issues.

Jagoan chose to shut up completely at this time.

It was not because he understood Assange and Jagoan’s explanation, but because he realized that if he kept asking, he would look like a fool.

“Will Bitcoin really bring us huge wealth in the future?” Jagoan walked up to Jagoan and asked quietly.

It was not that she doubted Jagoan, but Jagoan’s description of the value of Bitcoin just now scared her.

Assange and Snow did not know Jagoan well, so they had no idea what Jagoan meant when he said that it was ‘valuable’.

To Jagoan, who had witnessed how Jagoan went from rags riches, she knew very well how big this man’s vision was.

At this moment, she could not imagine how big Bitcoin’s fortune would become in the future and how it would impact Jagoan.

Life at the Top Chapter 2487-Jagoan’s assertion stunned Jagoan again.

Jagoan thought for a while and asked, “You mean you want to make Bitcoin fund the research and development of high-tech basic technologies?”

Jagoan laughed, “Why not? Now Somerland has a thousand things to do. Although it has made great progress in technology after years of catching up, there is still a big gap with the West. In some basic

fields, the distance is measured in decades. To make up for this huge gap, we need huge funds and also a large number of talents...”

“In the past, Somerland chose to introduce overseas funds and trade technology with the market to solve this problem. Although this plan has solved the problem of Somerland’s inherent lack of technological development to a certain extent, it has also planted dangerous seeds. Because the technology exchanged with the market can never be a truly important technology, and it will even have a serious dependence on the West...”

“But if you develop from scratch, no one can afford such a huge financial investment because you won’t see anything from this kind of investment for five or six years. It will take a longer period of accumulation for it to finally do anything. Yet, with a gold mine like Bitcoin, we can solve this problem!”

Life at the Top Chapter 2488-Even though she was mentally prepared, Jasper’s grand plan still surprised Celine.

“Jasper, what are the specific areas of research in these basic fields you are talking about?” Celine asked cautiously.

“Photolithography machine research and development, recyclable rocket launch technology, high-precision engine research and development, high energy storage and high load battery technology... And we have to complete all these within five years,” Jasper answered the question without hesitation.

These were things that would haunt Somerland for years to come. If they solved these basic technologies, Somerland would occupy an absolute leading position on all promising tracks in the future!

“Are you saying this Bitcoin that we are tinkering with now can provide financial support for so many things? Also, isn’t five years too short a time?”

She worked at Colossal Investments for many years and participated in many investment cases. Many of these investment cases involved some high-tech. So, she was very aware of how expensive it was to develop technology from scratch.

The ones Jagoan mentioned were the most important and expensive of all core technologies.

The time required for these investments and accumulations was all measured in years at least. Even the West took many detours while developing these technologies. However, now Jagoan not only said that he would rely on the funds attracted by Bitcoin to develop these, but also compressed the time to just five years.

In Jagoan’s perception, this was simply a fantasy. Her first reaction was that this was absolutely impossible. However, Jagoan was the one who was saying this and he was someone who had created countless miracles.

Jagoan suddenly doubted her judgment.

Jagoan smiled confidently. “Of course, I still think this time is a little conservative. In my opinion, as long as Bitcoin is officially operational, two or three years of financial support will be enough if there is no external interference. But the United States and Western forces will never allow us to develop like this

and will definitely interfere in every possible way. No matter how covert we are at the beginning, they will still find out sooner or later.”

There was a reason for Jagoan’s confidence.

Although he did not understand technology, he was very clear about the development path of these technologies.

This would not be a secret in the future, because the real core would always be the specific technical parameters and implementation details. However, this would be published on public platforms in the future, and it would play a significant role in this era by substantially reducing the cost of trial and error.

This implied that if they decided to pursue this path again, they would save a considerable amount of time and money.

“This plan is so incredible. So grand.”

Jagoan disregarded Jagoan’s surprise and proceeded to share more remarkable information. “But, in my opinion, this is just the beginning. After all this, we will still need to develop artificial intelligence, brain-machine interfaces, and self-driving...”

A series of nouns representing cutting-edge technologies, even for the future, rolled off Jagoan’s tongue one after another.

To people of this era, those were nothing less than fantasies found in science fiction novels.

The reason Jagoan shared so much information with Jagoan was that he knew he couldn’t complete this grand plan by himself. He needed the help of many forces, and the Maynards in South America were one of the indispensable ones.

As long as he could achieve the goals, the foundation of Somerland’s industries will be extremely solid in the future, and it will never be affected by any external factors!

Life at the Top Chapter 2489-“If we could achieve all that, it would be unbelievable...” Celine murmured to herself, unable to calm her racing heart for a long time.

She could not help being intoxicated by the beautiful blueprint that Jasper constructed.

If all Jasper said could be realized, Somerland would truly be on top of the world. The possibilities would be endless. No country would be a barrier for Somerland. This was the dream of every Somerland descendant.

No matter where they resided, they never forgot their roots, and they always aspired to restore this ancient nation to its rightful position.

“It will happen...” Jasper said that with certainty.

Now that he had reincarnated into this world, he must do something big. In addition to achieving great wealth and power, he also believed that he had a responsibility to help Somerland truly reign as number one in the world.

“In this case, I think I have to take this Bitcoin thing more seriously.” Jagoan had regained her composure by this time, and her eyes were filled with confidence.

Jagoan was a little amused looking at her like this.

He thought to himself.

Do you think that I came up with the ideas that excited Snow and Assange just for fun?

Now that Jagoan had made a decision, she would of course go ahead with it.

She raised her voice and pulled Assange and Snow back from their argument over a technical detail. “I believe that, in addition to addressing costs, we must also focus on its stability. For instance, we can employ distributed encryption algorithms. This way, even if one layer of the encryption is compromised, it won’t disrupt the overall system. At that point, Bitcoin could genuinely ignite sparks in every corner of the world, like something seemingly insignificant yet with a massive impact. Not even the United States would be able to extinguish it then.”

Jagoan’s idea made Assange and Snow shudder.

They had different opinions on the direction of the encryption structure. Then, Jagoan’s idea opened up a new way of thinking for them.

Both intuitively agreed that what Jagoan said was the real correct answer.

“Miss Maynard, you are truly a genius. I even feel that you are the incarnation of the goddess of wisdom.” Snow could not help but praise Jagoan.

Jagoan looked at Jagoan and raised her head, like a child waiting for her praises.

Jagoan looked at Jagoan’s cute appearance with a smile on his lips.

“Jagoan has mentioned a good direction for us. I suggest you think from this perspective as well.”

Jagoan was not trying to praise Jagoan deliberately.

In his recollection, the encryption approach ultimately adopted by Bitcoin and later by Ethereum was indeed the one that Jagoan had mentioned. As a layman who did not know much about technology, Jagoan was keenly aware of this direction. So, even Jagoan had to marvel at Jagoan’s talent.

Finally, after a heated discussion, Snow and Assange finalized the first draft of Bitcoin’s structure. It was getting late by this time, so the two ended the call reluctantly.

At that moment, Snow had a sudden thought and asked curiously, “Laine, it just occurred to me that if you want to promote Bitcoin, it would be advantageous to have a physical endorsement. Otherwise, even if you manage to establish its credibility, it might still take a considerable amount of time.”

Life at the Top Chapter 2490-Snow’s question was exactly what Jasper wanted.

The answer to Snow’s question was in their next plan.

“Snow, you are right. If you want to better promote this digital currency system, you need a physical endorsement. Then what are you planning to do?”

Snow was curious, and then he started to mutter to himself, “Gold will definitely not work. Gold is already a universal currency. If gold is used as collateral, the significance of Bitcoin will be greatly weakened. It would be like gilding a lily...

“Silver is definitely not good either. Silver corrodes easily and is essentially a carrier whose value cannot be retained for a long time. If you use it as collateral, it is equivalent to saying that Bitcoin is a constantly depreciating asset. This is contradictory to the idea of designing a deflationary demand system to allow Bitcoin to appreciate.”

Snow loved to think, so before Jasper could answer, he began to think about the answer himself.

As he thought about it, Snow’s frown deepened. He listed many precious metals, but in the end, he found that none of them were suitable.

Seeing Snow’s distressed look, Jagoan reminded him, “How about using oil?”

“Oil?” Snow was stunned for a moment. After that, he realized, “Yes, oil is good. Why didn’t I think of it?”

“Oil is essentially a consumable, but due to the harshness and necessity of its production location, its value is no less than gold. Moreover, it is limited. As more and more oil is mined, its supply and demand curve will be in the same deflationary direction as Bitcoin, so it’s suitable! And, oil has never been used as currency, so there is no functional overlap with Bitcoin! The most important thing is that the country we are in, Qari, is one of the largest producers of oil!”

The more Snow thought about it, the more he realized that what Jagoan said made sense. Hence, he became more excited. “Laine, you are a genius!”

Snow was so excited that he threw himself at Jagoan. Right now, he wanted to hug Jagoan and kiss him.

Before Jagoan could say anything, Jagoan quickly stretched out his hand to stop Snow.

“Mr. Snow, Somerland doesn’t have the custom of being so intimate.”

Snow said embarrassedly, “Laine, I’m sorry, I was too excited.”

“It’s okay, I understand.” Jagoan smiled. Then, he turned around and saw Jagoan, who seemed eager to try the same.

It seemed that she was also preparing to imitate Snow and be “excited” for a while. However, Jagoan probably would not have stopped her the way he had stopped Snow.

Jagoan felt a little troubled.

Just when he was about to say something, he heard an angry voice suddenly rang out in the room.

“Assange, you’ve gone too far, you’ve gone too far! I will definitely teach you a lesson in the future!”

Jagoan had just changed out of his dress. He had not had time to take off his wig yet, so he still looked like a woman. This made his current angry expression not only not scary, it even made him look inexplicably adorable.

Seeing that her long-gestating plan was interrupted by Jagoan, Jagoan was furious and snapped, "Jagoan, what did Assange do to you now? Was he going to confess to you?"

Jagoan's fingers trembled with anger as he pointed at the computer screen.

He said in a trembling voice, "Look at what he said! He's... He's such a meanie!"
