

Chapter 237

The west wind blows, telling countless worries in the world. The hospital is a place where the joys and sorrows of the world are staged every day. The joy of new life and the sorrow of death are repeating this life every day.

According to laymen, the doctors and nurses working in the hospital seem to have no feelings and are insensitive. Zhang Fan was not used to other people's opinions at the beginning, but he was used to working for two years. The heart is the most important. As long as you can look after the disease and treat other people's diseases well, you are the best doctor.

This is a hospital, not a club. Others come to see a doctor, not to make friends, so Zhang Fan slowly understands that the core here is to treat diseases. Skill is better than everything.

The biggest operation in anorectal department is rectal cancer. There are a lot of patients in Northwest China, and the terrible thing about this disease is that it is too broad and wide for the population. And with the development of medical statistics and epidemic, the terrible part of this disease has been slowly untied by scholars.

First, a large number of patients with this disease are young adults. One person is ill and the whole family is killed! This is also the hateful part of the disease. The second is after surgical treatment. Generally speaking, there is no quality of life after surgery. For a young adult, it is a kind of torture to be covered with feces.

The surgery for rectal cancer was done by ordinary foreigners before. After Zhang Fan became the acting director, he was not generally strong. As long as it was intestinal disease, he robbed it all. The doctors under the Department are also very face-saving! Everyone wants a cow! Standing right at the tuyere, pigs can take off. Now that's it. Zhang Fan has entered the fast lane with anorectal department.

On Monday, Zhang Fan held a morning meeting in the Department "Comrades, in the past two weeks, the number of patients has been very high, but there are also many problems. I won't call the names of those who don't change their dressing in time and have a bad attitude towards patients one by one. I think it's all unintentional. So let's talk about it collectively. There's no trivial matter in medical treatment. I hope there will be no similar problems in the future. There are gods three feet above your head. I hope you can worry more. Go to work! "

Monday morning meeting is very important. It is necessary to summarize the work of the previous week and arrange the work of the next week. If there is a work plan, announce the work plan and eliminate the work problems if there are problems. Therefore, Monday morning meeting is very important for the

work of a department. This is why many people can't find directors and experts in the morning when they go to see a doctor on Monday.

Zhang Fan went to the clinic with two nurses and a transferred doctor, which is now Zhang Fan's standard configuration. He was young, pretended to be ignorant and didn't understand the rules, and robbed the patient under the eyelids of the general surgery department. Other departments don't know how to feel. Doctors in the second and third orthopedic departments tremble when they see Zhang Fan being so overbearing.

The new orthopaedic graduate student was dead when he learned about Zhang Fan's past. The age difference is not big, but it is so excellent. As long as you don't leave this hospital, you will live in the shadow of Zhang Fan forever in your life! I thought the graduate degree was ahead of the younger generation. As a result, someone turned the corner to overtake.

For these things, Zhang Fan has no way to scruple, and there is no need to scruple. When he first came to the hospital, he must keep a low profile, because the brand has not been erected, it is different now. Zhang Fan's signboard has been regarded as a banner, which is better than the director of general foreign affairs. He should also give Zhang Fan some respect. This is strength.

Outpatient service, Zhang Fan has just started working. Chen Yan, a nurse in her heart, came to find Zhang Fan. Excellent nurses in her heart have a temperament, a temperament of wind and fire! The temperament brought by work“ Zhang Fan, help my relatives. " Because when Zhang Fan was in his heart, Chen Yan had a good relationship with Zhang Fan, and she took good care of Zhang Fan who had just entered the Department at that time, although Zhang Fan was out of the Department, the two had frequent contacts.

"What relatives do you have? Bring it in and say hello to me. It's not your personality. " Zhang Fan said with a smile.

"Aren't I worried? You've become a director. If you don't give me face as a little nurse, I won't give it. It doesn't matter if I lose face. I can't lose face in front of my relatives." Chen Yan also said to Zhang Fan with a smile. In fact, this is a respect. It's nothing to bring it in directly, but it's better to say hello in advance, isn't it!

"Look at what you said. Bring it in."

"This is Dr. Zhang, director of anorectal department. If you have any discomfort, please tell him. Director Zhang, I'll go to work first and call if I have something to do." As she spoke, Chen Yan squeezed her eyes at Zhang Fan and left.

"What's the matter? What's wrong? " Zhang Fan asked while looking at the patient. This observation is

very important in the medical industry. First, we should look at the person's nutritional status, second, the mental outlook, and third, the mind. Therefore, an excellent doctor is also a master of observation.

"I have a little bloody stool recently, and the number of stools has increased. I always feel that I can't pull it clean and want to go to the bathroom." Chen Yan's cousin, aged 43, has a bad face and is depressed. But the nutritional status is OK, and the body is fat. From the perspective of dressing, the quality of life should be well-off.

"Is there any other discomfort?" While writing the outpatient medical record, Zhang Fan asked, this outpatient medical record is a preliminary diagnosis data. Although it is a simple medical record, it also has hundreds of words. According to 50 patient numbers a day, there are a lot of words to write.

"There seems to be no more."

"Do you have a fever, nausea and vomiting, how about your diet and sleep?"

"No. Everything was OK. "

"Defecate about several times a day. Is there any pain in the anus?" Zhang Fan then asked.

"The number of times is about five or six, which is not large. Anyway, I want to go to the bathroom at any time. There's no pain. It's just that it's frequent. " Brother Chen Yantang said a little embarrassed.

"Does the stool take shape?"

"It doesn't seem to take shape. It's a little bit every time!"

As soon as Zhang Fan listened, he felt something was wrong“ After going to the bathroom, do you always have the pleasure of defecating? "

"Yes."

"How long has it been?"

"Two months!"

"Oh! Dr. Zhao, take him to the examination bed to prepare for a finger examination. " Zhang Fan said to Zhao Zipeng.

"OK. Come with me, untie your belt, take off your pants and lie on it. " Zhao Zipeng explained the matters needing attention to the patient while preparing the things to be examined.

When the patient was preparing, Zhang Fan took the time to see a patient, because the number of

outpatients in a day was not small, and there were operations in the afternoon. If he didn't hurry up, the patients couldn't finish watching, so he delayed the operation in the afternoon.
