

## Chapter 269

Rheumatology department, this department is a very wonderful department. It doesn't mean that the doctors or nurses in the Department are wonderful, but the diseases are wonderful. If you want to understand this disease, no doctor can't estimate the same level of knowledge, but if you want to treat this disease, undergraduate course is enough, because many rheumatic diseases, that is, symptomatic treatment and cure? Think too much.

The diseases in this department can be traced back to the source. Almost all of them are autoimmune diseases. Generally speaking, the main cause and inducement of the disease are not clear! Or unclear. Anyway, the living environment, customs and mood may make you get this disease, and most rheumatic diseases are not easy to treat!

In the early years of China, farmers, especially elderly women, have worked hard all their lives. When they are old and their social conditions are better, they don't have to do heavy work. It's time to enjoy themselves. As a result, their whole body is sore. When they get up in the morning, their fingers are stiff like an iron bar. It's a good deed to practice for eight lives if they can reduce pain!

When you go to the hospital, the doctor prescribes some painkillers. After taking them for a few days, you can't have a stomachache. The whole body is in pain and urgency, and then people all over the world find scorpions and centipedes to treat themselves according to folk prescriptions. Every year, because they treat their own patients with rheumatic diseases, many of them die of organ failure due to poisoning, but what can they do? The hospital can't cure them!

There are also young and beautiful beauties. After a trip to the island, they lie on the beach and sunbathe comfortably for a few days. As a result, butterfly shaped erythema appears on their face or disk-shaped erythema appears on their body. Check it out, hi! Systemic lupus erythematosus, commonly known as small cancer in the medical community!

This disease is a coyote in the disease. I like young women very much, and I also like some women who have had children! When a woman is pregnant and has children, there is a huge change in the immune factors in her body. This change may be the factor inducing this disease, so please be kind to her. She has really gone through hell for you!

After exposure to the sun, the skin falls off. The skin is the first protective layer of the human body. As soon as it falls off, the epidermal blood vessels are exposed, which may lead to the formation of this disease.

In the sun, please put on the sunscreen. It's not smelly beauty, but self-protection. Some people will say

that my grandfather hasn't used sunscreen in his life. He still goes to the ground every day without anything!

Don't be stubborn! It's best not to get this disease. Once you get this disease, you really can't cure it. Most of the final destination of this disease is kidney failure! It's also hot. Put on some sunscreen when you go out. It's healthy and smelly. Why not.

In the early years, when China was still blocked by Europe and the United States, a very special thing was discovered. The recruits of a post loved this disease very much. Experts checked around and finally came to a conclusion that exposure may lead to the disease.

Recruits are not used to the ultraviolet radiation on the plateau and stand in the military posture. They stand in the military posture in the sun for a long time. For two days, it won't take long. Large pieces of skin on their neck and face fall off, and then some unlucky soldiers will get the disease ~!

In general, women, especially young women, are most likely to suffer from the disease. And rheumatic diseases, except gout, most of the other diseases are women.

Moreover, there are still a lot of people. This kind of disease is too much nonsense and very cruel. After getting sick, it will not kill you for a while and a half, but slowly torture you. Chronic pain all year round will make you lose your labor force, cripple you, and then kill you!

Perennial medication and treatment is only to alleviate symptoms and delay the development of the disease course.

Rheumatology department is not a place to stay, but it is not a department that women Xueba likes. Female Xueba likes endocrinology very much. Female Xueba in endocrinology has a model. This department can make them polite, knowledgeable and cultured. Opening mouth is the factor and closing mouth is the receptor!

Unlike rheumatology, it's not so high-end. First of all, female patients account for the majority. The pain of the same sex will make these women Xueba uncomfortable, and poor women account for the majority, so most female doctors don't like this department!

The reason why xuezha doesn't love this department is also obvious. When a patient comes, you have to explain to others that rheumatology department is either antibody or complement, either complement or antigen, chemokine, and many are professional English and abbreviations. To explain the disease to the patient or his family members, we should not be full of nonsense. If you come across a family member living patient who specializes in biology, they can ask you in a few words~

Therefore, the general learning dregs in this department really don't want to come. It's difficult to get

through the diseases in this department, but it's very simple to treat them. Just a few principles: pain relief, hormones, hormones can't be used, biological agents can't be used, so hormones and biological agents can't be used together. It's not easy. Leave the hospital and go home! The disease in this department is so rough! Simple! It's a human nightmare!

There are eight or nine doctors in the rheumatology department of the municipal hospital, most of whom are male doctors. The characteristic of this department is that most of the doctors are highly myopic and read to see. The doctor in this department has a competition with the female student bully of Endocrinology. If the doctors of these two departments gather for consultation, they can make the doctors of other departments ashamed!

They can make you feel the difference!

Director Wu wanghong, a male in his forties, is also a legendary figure. Super Xueba, don't mention anything else. Take out the internal medicine textbook. Ask a disease. How many pages can he tell you about the disease! Watching CT is better than the director of CT department!

He is also a semi versatile person in the field of internal medicine. In the early years, my family was poor. After graduating from University, I gave up the opportunity to guarantee research and came to the frontier with my bedding on my back, because the frontier is a three-class area with high wages! Can subsidize the family early. They are also the most unlucky generation. I don't know why. After their graduation, the University won't guarantee distribution! Find your own way out!

People are very kind. They feel like literati. They always speak slowly and their hands are always warm. This is a talented and virtuous physician. Kindness may be natural, but warm hands are developed the day after tomorrow, because his hands should check the patients. Keeping his hands warm will make the patients more comfortable!

The poor life did not complain to him, but made him open-minded!

The youngest attending doctor in the Department is Hu Jun. It can give people a feeling of martial arts. Shuo Zhuang is unique to people in Northwest China. He has a full beard and blue shaving. If you look at his back, you will definitely think he is a cook, not a doctor.

But such a strong northwest man has made some achievements in rheumatism and rheumatoid diseases, and has published papers in core journals for many times. He's in his thirties and unmarried. In small cities, there are too few women who can communicate with him. He is either factor or complement. Let alone ordinary people, the doctors in the surgical building don't understand.

Endocrine female Xueba has become a wife. He can only bark. I don't have any hobbies. I'm addicted to books. I can bury him if there are many books at home. I'll buy books as soon as I get a salary. As long as I think it's appropriate, I'll buy them as expensive as possible! It's so cute!

Zhang Fan entered the rheumatology department with a transfer form!
