

Chapter 286

With the development of science and technology, the research on diseases of large organs has become more and more thorough. Especially since the new century, with the breakthrough of genetic engineering, it seems that many diseases are expected to be won.

But Zhang Fan is a pessimist, even if there is a system, he is also a pessimist. The more liver, the more pessimistic! Stem cells are developing rapidly in the early stage. The south, especially the rich and middle class around the harbor circle, retains a large number of stem cells. Or go abroad, such as Bangzi country, and inject stem cells to delay aging.

Only he knows whether it works or not. First of all, the environment inside the body is very, very complex. More oxygen, less oxygen, more magnetic field strength and less magnetic field strength can interfere with artificially cultured cells.

No one can be sure what the organs or cells produced in the laboratory are! Then rush to inject, the risk in this is not a big word can replace!

Even if as like as two peas can simulate as like as two peas, the body will also produce new, identical functional organs. Zhang is still a pessimist.

Surgery can keep improving, but human enemies are also developing rapidly with the pace of science and technology. Bacteria and viruses can be said to develop rapidly, no slower than humans. The earth is getting smaller and smaller. People can reach any place on the earth in one day.

Now there are more and more known superbacteria, and human beings continue to die. The large-scale industrialized meat production can be said frankly that it is piled up with antibiotics and hormones. Thousands of chickens, cattle and sheep are confined to a limited space.

How can we ensure the survival of these foods without antibiotics or even hormones! Then, a large amount of accumulated antibiotics entered the human body. Then, bacteria also learn in the human body, quickly learning how to fight antibiotics.

When vancomycin became a common drug in second-line hospitals and antibiotics were routinely used for colds, mankind was not far from the end. It's not alarmist. Once a super virus or bacteria breaks out.

The rest is screening. Humans screen viruses and bacteria through antibiotics. In turn, these gadgets will

screen humans in a certain environment. Just like medieval Europe, streets and cities are full of human beings waiting to die.

The European population is always unable to rise because they have been brushed by bacteria and viruses in their roots, and there is definitely a factor of being drunk today in their genes.

The population density of China was higher than that of Europe. Why didn't such a magnitude of population die? A word, Chinese medicine! Simply put, the thing Tu Lao studied, let alone malaria, is effective for many diseases!

Where did Tu Lao get his inspiration? However, with the development of large industry, the natural environment has been destroyed, and then artificially forced to plant, many herbal medicines have been changed to the growth environment. As for medicine, God knows!

Ginseng three older than children's arms ~! This is not ginseng, this is radish, maybe there is still a problem radish.

When the three chamber two capsule tube was put into the stomach to compress and bleed, Sister Li's blood pressure was forcibly raised by drugs. Now it is a critical point. If the platelet can not be effectively improved, it is only a matter of time.

When Sister Li is not bleeding, if she takes the time to have an operation and cut off her spleen, there may be a glimmer of hope. But now Sister Li's life state, the operation is no longer possible. It's up to her.

"What should I do?" Hu Jun frowned and asked Zhang Fan in a low voice. Xueba level characters have no way. What can we do? Patients have no desire to survive. What can they do if they are bent on dying.

The body is a complex thing. Really, this thing is too complicated. For example, the so-called emotion, a thing that cannot be measured in units of measurement, sometimes occupies a very important position in people's life.

If Sister Li's desire for survival is particularly strong, her body will be stimulated with all kinds of known and unknown hormones and antibodies, and then combined with drugs, she may be able to achieve twice the result with half the effort. But when this desire for death comes into being, Sister Li's body is also like a broken dam, and the longer the flood, the higher the flood, Sooner or later, the medicine will not stop the dam.

"Drug maintenance handle, observation handle. If, if there is a promotion, do the operation. If there is no promotion, let the family prepare for the future! "

At the door of the ward, two old people were holding the glass on the door of the ward, crying silently and looking at their daughter in the ward with tearful eyes.

"Binger! My meat, mom, I'm sorry for you. Forgive mom. As long as you can live, I'm willing to die for you, bing'er! My ice. " Sister Li's mother didn't dare to cry loudly. One hand picked the glass and the other covered her mouth.

Bent body, anxious mood. How painful and painful can't let Sister Li in the ward have hope of living.

After the critical illness notice is given, the family members are told some things in advance, so that the patient's parents or children can understand how their children or parents die and how they die. Sometimes it's really cruel.

But the patient's right to know is like a sharp blade to let those who don't understand understand! Clear not clear, understand not understand, right and wrong, say not clear! Often at this time, doctors have seen many examples of patients who have not died but their families have not. Is the doctor an indirect murderer?

If you don't understand at this time, you are often much happier than understanding. If you are confused, you don't have to bear the pain that can't be shared by others.

"Uncle and aunt, come here and let me tell you something." Zhang Fan has no intention of their family affairs. This matter is neither under Zhang Fan's control nor under Zhang Fan's control.

When Sister Li was hospitalized, Zhang Fan once heard Shaohua say such an ear. It seems that Sister Li's husband has special money, and Sister Li has a brother. Anyway, it's a dog blood marriage and dog blood life!

"Doctor, please, help Bing Er, she's so young! If she vomites blood, you can take my blood and give it to her. I'm her mother. I can do it. "

Sister Li's mother's shriveled lips and tears on her face. After walking to the doctor's office, he said and walked, two meters away from Zhang Fan.

The old man knelt down and cried on his knees. At this time, he cried loudly, vented or regretted tears, flowing through the bridge of his nose and lips.

Sister Li's father also cried bitterly. The tears of beans stuck to her white beard and glowed a little under the light of the fluorescent lamp! It's like Sister Li's reluctant smile when she just entered the hospital. It twinkles, suddenly falls to the ground, and the smile disappears!

"Aunt, get up quickly and stabilize your mood first. I can't work like you. I have to be busy to treat Sister Li and observe her condition. We can't waste time anymore." Zhang Fan is nervous. It's not the old man kneeling down for him, but the old man's mood is really dangerous.

The two old men are now tight bow Xuan. If they can't be properly recovered, they may break! After

Zhang Fan hurriedly picked up the two old people, he couldn't explain his illness for a time.

Sometimes, this is a dilemma. If you don't explain your condition, the patient will die, not to mention the family members, that is, the superior doctors can eat the competent doctors.

"Why didn't you explain your condition, why didn't you sign, why! Why! "

And explain the condition, now this situation, ruthlessly say, regardless of the old man's life or death, directly say! Zhang fan can't do it!

"Aunt, doesn't Sister Li have a brother?" Zhang Fan asked.

"Ah! Don't talk about him. Just say what you have. We can resist it. " Sister Li's father sighed and heard his son. The two old people seemed to be a little calm.

The director of rheumatology department also came, and the deputy director and two attending doctors came.
