

Chapter 961

Foreign people don't know much about how to communicate, but Chinese people's communication can be regarded as a knowledge.

Not in the system. It's too high-end. Sometimes a word makes people lie in bed and think for three days without understanding what it means.

The simplest, such as an electric welder, toast the workshop director. Director, I am young and have little experience. You must support my work.

In fact, it means, old man, don't buckle the welding rod so tightly. Can't you let go a little!

Such words are popular in many workplaces, but there is less market for such words in medical treatment, especially in the field of surgery.

Why?

In fact, this is the cruelty of the medical industry. People can pressure you for a lifetime. Especially under China's three-level medical system.

Just as your father will always be your father, when you get to the title of director, people will retire early.

Therefore, Chinese surgeons are very humble, which is why they become more arrogant after becoming directors. There was a posture of turning over the serfs and singing.

Then what rebates, what female drug dealers, female equipment, this thing should not be too few!

The spring has been pressed for a long time and bounces too much.

But the leadership is different. Today, this hospital can't go on. He can be transferred to another hospital or even enter the Health Bureau. He is great to be an inspector.

But doctors can't. It's almost impossible for a doctor to jump out when he enters a third-class hospital.

Some people say that it's not good to go to a private hospital. Private hospitals look at money. People

are not non-profit units. Sometimes the boss asks you to see a doctor without conscience. It's hard for you to see it or not.

Therefore, in China's medical system, doctors who have not arrived at the director are relatively honest.

Chen Sheng dares to speak so hard because he knows, he knows doctors, and he knows the medical environment better.

For example, he said to the dean that if you don't have the support of superior leaders, you really have nothing to do with others.

When a group of doctors hurried into the operating room, Chen Sheng was also studying with a roster.

This thing is a technical job. It's really difficult to see a doctor's level and character from human life, face, dress, attitude and eyes.

But who is Chen Sheng? He is an ordinary man in this position. He has experienced for three years and is also an expert.

He looked up and removed the director and deputy director first, because these people are vested interests. The operation must be guaranteed in case. No matter what you do, you can't let them go today.

If you are too young, this is not a tea vegetable. There are not many patients. What will young people do.

Then there are a group of middle-aged old men left.

Aggressive eyes looked at the past one by one, and looked at the past one by one with a look of contempt.

Those who have no level and skills will never look back defiantly. They will not even look at each other for more than three seconds. After all, it is a special period. They are deeply afraid of being pulled to fill the pit. It is difficult to find the rhythm of this muddle in this hospital.

The salary is high and there are few things to do. Where can I find it.

After looking around, there was only a middle-aged man with a broken beard standing on the edge of the crowd. When Chen Sheng looked at it, he looked over without losing the wind!

"All right, that's him!" Chen Sheng muttered and asked directly.

"What's your name? You graduated from that school. What title do you have now?"

"Wang Cheng, graduated from West Lake Medical University, vice high school!"

Dr. Wang Cheng also urged sadly that they were the last batch of students to be assigned after graduation. In those years, college students went to the streets to make trouble. When they graduated, they cut the mess and gave them points.

I don't know what this person thought at that time. Anyway, the number of guaranteed research places is gone.

Thanks to my parents, I have devoted my whole life to the coal city and let him come to the big city of coal city! Because many students were sent to the county-level small cities of Changshu and Suzhou.

At that time, the county in the South was still a county, not a big Mac now. The economy was more fierce than that in the northwest.

Therefore, people are a thing of luck sometimes. Good things turn into good things, and good things turn into bad things.

The students who were sent to Nanfang County in those years have now become experts, and he has been marginalized by the Department because of his efforts to improve his skills and his bad temper.

If he has work to do, he will step aside.

He also wants to go to the south. Although his technology is No. 1 in the Department of orthopedics in coal city, let alone the south, even in the bird market, his technology is not enough.

Therefore, Xueba in those days is now a boring old man with a broken beard, pride and complaining.

"The operating room needs an orthopedic doctor. Do you dare to go, can you go, and can you do it!"

Exciting general, Chen Sheng, see if you can move. If he doesn't move, Chen Sheng estimates that he will change again.

"What's wrong with limb fractures. When you didn't come, I was still fixing the fracture for the patient! "

"Hey!" Chen Sheng smiled.

"Spinal fracture, can you do it!"

Wang Cheng, who was originally fierce, couldn't speak.

spine! These are all transferred.

"Now I need an assistant. Can you say a word?"

Don't give others a chance to think.

"OK! It's not the main knife. What's wrong with being an assistant! " It's starting to be awesome again!

"Enter the operating room!"

The other doctors looked at Wang Cheng silently and didn't know what to think.

The director and deputy director don't look very well.

However, they can't do it if they take charge of the knife at this time. They really dare to be angry.

The sweat on Zhang Fan's head flowed down. The building blocks collapsed three times and didn't dare to scold. LV Shuyan's hands began to tremble!

"Dr. Lu, don't worry. Take your time. Hey, that's it. When you deliver the baby, when the child enters the birth canal, there is a spasm. Yes, that's it!"

Zhang Fan pressed his voice like a child and asked LV Shuyan to spell the bones. In fact, even if Zhang Fan scolded, LV Shuyan couldn't feel it because she was too nervous.

The bones have been broken three times. I'm not a fool. How can I not know the seriousness of this matter.

Before Zhang Fan finished speaking, he didn't finish three words. LV Shuyan made a little force, and the building blocks collapsed again.

LV Shuyan almost bit her lips.

Chen Sheng said at this time, "Zhang Yuan, I found you an assistant. Look..."

Zhang Fan took advantage of the opportunity to turn his head. The other party's eyes were very clear. There was no doubt like Chen Qi.

"Orthopedics?"

"Orthopedics!"

"Spine?"

"No, trauma!"

"Have you ever had spinal surgery?"

"I worked as an assistant to the teacher when I was studying!" Wang Cheng's tone is very stable.

"Wash your hands and go to surgery." Zhang Fan nodded gently.

There is one more person. Although he is not spinal, he is also orthopedic at least.

Sure enough, the operation was quite smooth, and the spine was slowly fixed one by one.

Zhang Fan praised Lao Chen, "talent!"

Chapter 962

Spine, with this thing, the brain can really be regarded as the emperor of the body. Without spine, mammals may not be the jubilant group jumping on the blue water polo.

Because the spine is like a armor that protects the spinal cord extending from the brain.

What's the spinal cord? In short, it's actually the supervisor sent by the brain.

Your big toe is suffering from beriberi. In order to protect yourself, the skin quickly transmits the signal to the brain. Come on, langmaomao, the toes are infected with fungi.

Of course, this signal must be that your brain has a reserve of such knowledge. Without this knowledge, you still feel, oh, itch, simple, lower your neck, stretch your toes, and then put your toes into your mouth!

This is not a joke. Look at animals, cats and dogs. Where does it itch? It doesn't scratch first, but lick!

Therefore, for the human body, the spine is really a sea god needle.

What is the most afraid of fracture? It is not afraid of breaking it, but afraid of damaging the accompanying blood vessels, nerves and surrounding organs.

The spine is not only afraid of breaking, but also afraid of hurting the spinal cord. The length of the spine in adult men is about 72cm, and women are 7 to 10cm shorter than men. Especially in the lumbar spine, once broken, it will lead to unstable torque, change of center of gravity, and then various strange shapes.

There are four blood vessels in other bones, two on the left and two on the right. Some even have only one, such as the femoral head.

The spine is different. Its blood vessels can be called vascular network. It's like a maroon bag wrapped around a bone.

The spine starts from the neck. It's almost wrapped in red ribbons. It's directly like the red mesh silk stockings worn by young girls.

Therefore, in orthopedic surgery, there is a lot of bleeding in spine surgery, which can't be prevented. You don't know where it can mutate a blood vessel.

Moreover, not all blood vessels in the human body have names. Almost all blood vessels with names are thicker than the oil pen core. The oil pen core in the early years is not the current neutral pen core.

Therefore, whether there is a card surface sometimes depends on the thickness of the diameter.

Wang Cheng's craft is very solid, and he can only be solid in time.

For example, hemostasis and deep knotting are done very quickly and quickly. They are never sloppy, but the difficulty is a little higher. It feels that he is not very skilled.

Although I know what Zhang Fan is going to do next, I always feel a little wet. Just like a stumbling child, you say he will, but three steps and one somersault. You say he won't. If you don't look at it, he can walk tens of meters away for you.

"Dr. Wang, this knot is good!" Zhang Fan said a word to Wang Cheng, and then said to LV Shuyan, "don't pout. Look at the orthopedic double hand knot of others. Although gynecology rarely plays, it's a basic skill!"

LV Shuyan finally became the third helper. Just pull a hook. Don't worry, so you have kung fu. Listen to Zhang Fan's ridicule. Although you didn't speak, you can turn your white eyes.

LV Shuyan is better than Wang Yanan. Even if Zhang Fan said she, she didn't refute. After the operation, she wouldn't compare with the front and back to you.

"Zhang Yuan, you're welcome. Dr. Lu is not an orthopedic doctor after all. In fact, I'm just proficient in these two skills. Hey, after coming to the unit, I have no patient, tied knots for decades and sewed skins for decades. Can I be unskilled? "

"Didn't you want to change places?"

The operation was stable. Zhang Fan asked casually.

"I thought, when I was young, I didn't have the courage. When I was old, I didn't have the technology. Where can I go?"

"Oh, modest!"

Zhang Fan smiled and stopped talking.

Wang Cheng waited eagerly for Zhang Fan to come to our hospital, but Zhang Fan stopped talking. What's the matter.

In fact, Zhang Fan has thought about Wang Cheng's position. It's good to be a basic skill trainer for interns, interns and residents. You don't have to know nothing after entering the Department. Then the doctors in the Department dislike it and fill in the blank of the hospital.

Of course, people of this level don't need Zhang Fan to speak in person. At least he is also an executive president, although he is vice president.

After the operation, give this matter to Chen Sheng. Chen Sheng is definitely doing well. This kind of thing, Lao Chen is best at, fanning the flames, digging holes and drilling walls. Chen Sheng's old business.

Fixation, there are many ways to fix the spine, and the patient's comminuted lumbar fracture can only be fixed with titanium plate and screw.

In fact, this thing is like the steel frame of the building on the construction site.

Prevent the titanium plate at the upper and lower ends of the crushed bone, and then drill the bone with an electric drill, and fix it up and down with screws, which is equivalent to raising the crushed bone and allowing it to maintain the prototype to recover.

Electric drill, though the electric drill in the coal city hospital is old style, not DC, but others are old German drills, which is awesome, but slightly heavy.

When the electric drill was opened, the bone residue, blood flower and bone marrow in the medullary

cavity crackled like water in the oil pan.

Really, after many orthopedic operations, the surgical clothes are absolutely more shocking than those of other departments.

For example, for ordinary foreigners, it will only make people sick, because there will be stool on their clothes.

The orthopedics department, take a closer look. When I go, fascia, muscle residue, bone residue and bone marrow residue are really a chest. They are really the same from the meat stall in the vegetable market.

Zhang Fan finished the spinal surgery here. He didn't have time to suture. He handed the operation to Lao Li. "Director Li, look at the suture. I'll go to the operating room next door and have a skin graft later."

"OK, go quickly!" Lao Li is now completely afraid to stand up to Zhang Fan. He can't stand it! Someone's orthopedic doctor taught himself a lesson in urology.

As a result, today, I was taught another lesson in orthopedic surgery.

There are too many classes. I have no face to hold it again.

"Hey, wave by wave!"

Zhang Fan took off his surgical clothes and didn't take off his gloves, because he had to transplant skin later, so he didn't have to brush his hands anymore. Just apply a disinfectant, which can save some time.

In another operating room, Xu Xian and Wang Yanan have pelvic surgery.

Zhang Fan went in quietly. The probe looked good. They did a good job.

Then he stepped back and went to Zhou Quanfu's operating room.

Since Lao Zhou entered the third Department of orthopedics and got the support of Zhang Fan, the young man has made considerable efforts. Under his leadership, the third Department of orthopedics has achieved quite good results.

There's no problem with the operation here.

Xue Xiaoqiao's operation is also good.

To tell the truth, Zhang Fan's team is now fighting for ordinary surgery.

Just waiting to join a few scholar doctors, the team can take off directly.

After a turn, Professor Li Cunhou from the capital finally came.

Chapter 963

Li Cunhou flew from the capital to the coal city. Although he was not very tired, he was in a hurry and not in a hurry. The degree of fatigue was still different.

Although the frontier is large, there are many airports. It is estimated that the number of airports in the frontier can rank first in China. The airport of coal city is not comparable to that of tea.

The airport of tea vegetable sounds better. It's not much bigger than the basketball court. But the airport of coal city is different. Although there is not much distance between the two cities, it crosses a Tianshan Mountain.

But people call it an international airport.

Lao Li got off the plane and thought about turning on the phone to call the contact. Unexpectedly, Chen Sheng directly sent someone to receive them at the airport.

Lao Chen took the tiger skin as an arrow this time. Anyway, the boss of the coal city spoke. As long as it is related to the operation, all open the green channel. The feeling of power is particularly cool.

Secretary Wang of the medical department held his head high and wore small leather shoes. He had a serious face at the airport, which was stunned by the leaders of the airport.

"What level of cadre is this, so young and rigorous!"

"It is estimated that he has obtained the section level, and he is still a cadre with real power. Otherwise, can he be so serious!"

The two staff members in charge of contact at the airport are particularly interested in secretary Wang. If they don't, they can't. The boss of the airport called and arranged it himself.

In fact, Xiao Wang is excited. In order not to humiliate the tea vegetable hospital, he tries to put on a

serious face. I've only heard and never seen people pick up on the airport platform. Although it's not picked up, it's good to have face.

Look, all the guests who got off the plane have seen a clear face here.

Secretary Wang and Li Cunhou are familiar. At the beginning, Li Cunhou's accommodation in the tea vegetable hospital was someone else. After Xiao Wang was busy, they were also acquaintances.

"Oh, please, director Wang!" Lao Li saw the little queen and said politely with a smile.

"Professor Li, you're welcome! I'm not the director yet! "

"Fast, fast, fast, it will happen sooner or later under the hands of your Zhang Yuan."

"Hehe, thank you for your kind words. Professor, get on the bus. You're waiting in the hospital."

"Good! Get in the car. " Big red flag, slowly leave from the airport.

"Your Zhang hospital is going to level the border now. It used to be a person flying a knife, but now they all carry half a hospital flying knife. It's too powerful.

At first I advised him to go to big cities, but now look back, your vision of Zhang Yuan is still long-term! "

Lao Li said with emotion. In fact, this is not purely a compliment. Lao Li has deep experience.

When there was no hope in his skin graft material team, few people left, one by one. Everyone is like a child without a mother. This company has some luck and that school strives for some funds.

However, everyone's goal is the same. When the materials successfully enter the clinical trial, it seems that everyone has changed overnight. They all have their own ideas.

Before the experiment was over, several people were poached by European and American pharmaceutical companies, and they couldn't stay. Therefore, when looking at Zhang Fan's team, Lao Li was really a little envious.

Some things can't be envied. Lao Li's team was originally mostly European and American expatriates, and the most important thing is that they had made some achievements when they joined the team.

On Zhang Fan's side, it can be said that most of them are doctors in grass-roots hospitals. It can be said that Zhang Fan grew up with them little by little.

After the car entered the hospital, Chen Sheng met him in the surgical building. As soon as Lao Li got off the bus, he was greeted politely by Chen Sheng.

"How can Dr. Chen carry the box himself!" Lao Chen said angrily that after Xiao Wang, he had to pick up the equipment box from Li Cunhou's assistant. Although it was not heavy, this move made Lao Li's assistant feel that it was not ignored and respected.

When Lao Li entered the operating room and saw the wounded, he said to Zhang Fan, "is the burn area so large?"

"It is estimated that the explosion point is near him. If the gas content in the mine is not very high, it is estimated that he will die. This time I'm bothering you, and I let you come all the way to save the field. "

"You see what you said, am I not an extra doctor of tea vegetable ~!"

Lao Li smiled.

Zhang Fan is not polite. It's not a polite time.

"Spinal surgery is finished, and now skin grafting is needed. Are you tired? Let's do it if you're not tired. I didn't bring a burn doctor this time."

"OK, it's nothing to be tired. Xiao Chen and I will be your assistants."

The wounded, like fried fish, first cut from the back, and then turned over to make the front.

The bloody meat smashed on the back is rotten, but it can still be seen after disinfection and hemostasis. It's just a little broken.

It can't be seen directly from the front. Like fried eggplant, the skin is open and the meat is cracked. Large areas of burnt skin can make people feel that they are probably cooked at the appointment.

No wonder the leaders of coal city didn't dare to do the examination. They pulled him into the operating room for the first time. The patient's injury, let alone coal city hospital, is estimated to be dangerous even if he goes to the bird market.

Debridement, burn debridement is too cruel.

The pliers lifted the charred meat bit by bit. Really, it was just like cleaning up the pig's head in the rural new year. Pieces of charred skin were stripped off.

The scalded fat on the surface is like fried crispy, or like the skin of a toad, with small bright yellow bubbles all over the body.

And with the action of the doctors, the water bubbles trembled like a layer of toads floating in the lotus pond.

The fat layer is full of blisters. With a touch, piaji immediately flows out of the sticky solution. Even the flow feels that it is pulling the silk. LV Shuyan looks at Zhang Fan's operation and gets goose bumps.

True diaphragmatic response, like a toad lying on something flowing out of liquid, is particularly uncomfortable.

After removing the fat layer, the severely scalded muscle layer should also be removed. Because the energy brought by burns directly makes the muscles in some places mature.

In other words, all muscle cells in this place have been killed and necrotic. They must be cleaned up, or they are the source of pollution.

When the sharp knife gouged out the meat, the scalded muscles shrank and contracted, like air dried beef. There was coagulated blood left on the dark red meat strips. Lao Li and Zhang Fan and Lao Li's assistant, Dr. Chen.

Three people started work at the same time. The operation time is too long. One lumbar vertebra has been done for more than three hours, nearly four hours. Now the scalded wound has begun to secrete liquid.

Just like the marinated meat drenched with cooked oil, the meat smell can be smelled.

The operation of lumbar spine is very clear. You can see whether it is OK or not at that time. The operation of scald is not necessarily. The recovery after operation and the survival of transplanted skin are uncertain factors.

Therefore, the cost of large-area scald may not be much cheaper than that of lumbar spine.

Titanium plate, the price of titanium plate of lumbar spine is much more expensive than that of titanium plate of limb fracture, and the skin transplanted in vitro is transferred directly from the laboratory, and the price is not cheap.

To tell you the truth, the price of this cigarette is too high. There are other people's treatment costs. One million can't be stopped!

QingChuang, three people move very fast. Although Lao Li and Dr. Chen can't compare with Zhang Fan, they are always more agile than LV Shuyan and Li Xiong.

Moreover, the three people did not know how many rabbits and dogs they killed in the animal laboratory of tea vegetable University. They still had a tacit understanding.

We all know that Zhang Fan doesn't like to talk during the operation, and the other two people also do the operation silently.

In the coal city government building, the commander's face was livid, because just a few minutes ago, the top leader of the farm called, although he didn't scold like Ouyang.

But the deep tone of the leader made the commander of the coal city feel like a big stone.

Chapter 964

Sometimes, doctors can not only save a life, but also save a person's political life.

In recent years, China has paid more and more attention to safety, both property safety and production safety.

Very unreasonable set a red line. I don't care if you fall or sink. Just cross this line. Sorry, class is over!

I'm really glad to have this system, otherwise how many people

The leaders of coal city hospital do not know that they have become grasshoppers after autumn.

They looked at Professor Li Cunhou and his assistant, the main leader of the hospital, who were called by Zhang Fan.

"I thought it was awesome! And all stand by! Don't ask for help. Who can't shout? Let me shout, I can! "

Two leaders of the hospital were chatting in the office.

At this time, they forgot the way they were worried all day and almost peed their pants at that time.

The patient did not enter the hospital and died in the mining area, which has nothing to do with them, but when he entered the hospital, no matter what the reason, as long as he died, he had to be punished.

Now, the patient has been taken over by tea doctors. They are not afraid at this time. Even if something happens, the main responsibility is Zhang Fan's.

So, they're in a panic at this time. Not only began to ridicule, but also felt that Zhang Fan's level was just like that.

Really, that's how people remember to eat or fight.

In the operating room, Zhang Fan and the three of them have completed debridement.

"Zhang Yuan, after the clinical experiment of our materials, once I enter the clinic, I want to make a global itinerant operation teaching!"

While the nurse was preparing the materials, Lao Li smiled and said to Zhang Fan.

"Good thing, Congratulations!" Zhang Fan didn't connect. There are many such things, such as Johnson & Johnson holding the chairman of a surgical association in Jinmao, and then performing surgery in hospitals all over the world in order to sell materials and buy instruments.

Zhang Fan is not particularly interested. It's a waste of time to change a place for an operation.

But everyone else felt incredible when they heard it.

"Touring surgery! Global! " The anesthesiologist in coal city was stupid with the anesthetic, as if the anesthetic in his hand had been injected into himself.

The itinerant nurse listened to Li Cunhou's words and looked at the anesthesiologist strangely. The meaning in her eyes was: "brag, isn't it? Tour? Global? "

The nurse didn't believe it. She thought they were acting on the operating table.

Then he looked down at his clothes and didn't walk away!

I haven't grown up yet. Let them show themselves here. Is it love at first sight? But they already have an object!

Because the topic is too big, the nurses are immersed in their own world.

But the anesthesiologist believed it.

Before the operation, the anesthesiologist should write anesthesia medical records. He still knows Li

Cunhou's name.

Although he is not in the burn department, his name often appears in major journals, so anesthesiologists understand that Professor Li is definitely not bragging.

If Zhang Fan doesn't take over, Lao Li is a little embarrassed. He means that things come out, but this thing still needs to be taught, otherwise it will be a little difficult for everyone to explore, so he wants Zhang Fan to lead a team to go on a teaching tour with him.

But this boy doesn't take over.

Let him go on a tour by himself. It's no problem to tour, but teaching is very troublesome. Don't think that all hospitals will give face and get some regular patient numbers for you to come on stage. Hospitals all over the world are not Chinese hospitals. Chinese people pay attention to that all visitors will not make you too embarrassed.

But people in other countries may not understand it. Therefore, without Zhang Fan, he is not confident enough.

Zhang Fan didn't take over, Lao Li had to continue: "Zhang hospital, it's estimated that it's winter on the products. In winter, there are fewer tea vegetable patients, or you..."

As soon as he said this, darling, the anesthesiologist in coal city had green eyes. He looked at Zhang Fan and thought he was going to eat Zhang Fan.

Although Li Xiong was surprised, he didn't have any idea. After all, he was here at his age and was still in the urology department.

LV Shuyan's eyes were full of small stars. She wanted to promise for Zhang Fan immediately.

LV Shuyan graduated with a master's degree and didn't read a doctor. Later, she felt a little regretful, because she looked at QQ space and the students who read a doctor that year, either drying the beaches abroad or drying the equipment of high-end laboratories.

To tell you the truth, she is very envious.

"Do the operation first, and we'll talk after it!" Zhang Fan smiled and neither refused nor promised.

"You're sure!" LV Shuyan muttered under the stage.

Li Cunhou nodded helplessly.

Zhang Fan has many things to consider. First of all, he has to apply for going abroad at this level, according to Ouyang.

The second is home. He and Shaohua have closed the mountain for afforestation for so long. He also wants to have children early.

As for itinerant teaching, it seems nothing except making some money, but are you short of money now? There seems to be no shortage! Tens of millions are still lying in the bank.

Moreover, the most important thing is that it's hard to earn money. For example, flying knives abroad is great. It's finished in a week or two. This tour starts at least monthly. Otherwise, why are the tour doctors the former presidents of some associations? It's a waste of time.

For skin grafting, the material made by Li Cunhou is really convenient, although it has no advantage in lower area skin grafting, because small area burns can be directly self grafted.

For example, if your face is scalded, scrape a layer of skin on the inner thigh and transplant it, it may be cleaner than the previous face protein.

When it comes to large-area skin grafting, the advantages of this material are reflected.

For example, early allogeneic skin grafts were all piglet skin. They are all piglets born not long ago. Their hair is small yellow hair. They were skinned and transplanted on the human body.

No matter how small it is, it is also pig. First of all, it is airtight, and keratinization is also very serious. The main rejection reaction is also a big problem.

Lao Li's material has no such problem. At present, the cost is a little high.

Skin grafting begins!

Dr. Chen carefully looked at Zhang Fan's technique. Dr. Chen accompanied Lao Li in this operation. I don't know how many burn experts in the north and south of the river have done it together.

Everyone has their own advantages, but Zhang Fan is the best. Especially in some details, it's like Zhang Fan doesn't know how many times he has used this material.

Obviously, it is a new material, which we haven't used before, but Zhang Fan is more skilled and better master the nature of the material than others.

"I guess this is talent!" Dr. Chen looked at Zhang Fan's operation and was filled with emotion.

As time slowly ran out, patients in the operating room were pushed out one by one.

"Commander, a patient came out of the operating room. The operation was very successful!"

"OK, great, great!" Depressed for a day, the commander stood up when he heard the news.

Before long, the good news came one by one.

"Commander, the patient in the operating room of Zhang hospital has not come out yet. It is also the most serious patient!" The commissar called.

"I'll come now!"

The commander put down the phone and rushed to the hospital. If all the wounded are treated successfully, he will definitely turn over.

Chapter 965

Waiting, most waiting is painful. For example, parents waiting for candidates outside the examination room. No matter how good or bad you study, you are looking forward to your children's extraordinary play.

And with roses, wandering downstairs. Did you come down? Did you come down? The room cards are ready. Don't her mother or aunt come today!

Of course, the most painful thing is in the operating room. Look at the stools in a row outside the operating room. How many people sit there, expressionless, holding their mobile phones, and their fingers turn white.

A doctor or nurse came out and surrounded him, hoping to get some news. Really, this feeling is quite uncomfortable.

And that's how the commander and commissar feel now. To tell you the truth, their relatives don't feel this way when they have surgery.

The leaders of the coal city, Like poplars, stood straight behind the leaders, looking more solemn one by one. I don't know what recognition conference they thought they would attend!

If it was in the past, whether it was experts from the bird market or experts from the capital, it would be very free for hospital leaders to enter the operating room, but not today. Tea vegetarians are a little difficult to deal with.

Especially the young Dean, who is young, doesn't know how to respect his predecessors!

Looking at the leaders so worried, the leaders of coal city hospital were also uncomfortable. After thinking about it, they finally let the nurses in the operating room go in and have a look.

In the operating room.

The doctors who finished the operation went into Zhang Fan's operating room.

Wang Yanan, Xu Xian and Xue Xiaoqiao all finished the operation.

Although skin grafting does not seem to belong to orthopedics, in fact, skin grafting in orthopedics may not be less than that in burn department. Therefore, Wang Yanan and Xu Xian did not need Zhang Fan to say, but directly changed their clothes and went to the stage to help.

欸, Wang Yanan went up, 欸, Xu Xian went up, 欸, Wang Guofu went up.

Really, this feeling makes Li Cunhou, who has been involved in scientific research and clinical practice for decades, feel particularly bad.

Looking at the doctor in front of him, "he has only been in this industry for a few years. Look, look, the people around him are so envious."

Under Zhang Fan's special training, the younger generation of orthopedics, brazing bars for dinner and chopsticks in cars, where everyone works with a group day and night.

Moreover, Zhang Fan taught by example, and the improvement of technology is quite rapid. Really, Lao Li thinks these orthopedic doctors around Zhang fan can be the main players of skin grafting.

One person helps one, although not as fast as Zhang Fan, but better than Dr. Chen and even Li Cunhou.

Li Cunhou has jumped out of the shackles of surgery. Now he is mainly in research, but Dr. Chen can't. He has to prove himself clinically.

Looking at several doctors under Zhang Fan, his envy salivated.

He didn't do less skin grafting, but his promotion was not high. Now look at Zhang Fan's doctors. He thinks he should come to tea vegetarians to study for some time!

"Zhang Yuan, Dr. tea vegetable's Kung Fu is really more and more powerful!" Li Cunhou didn't give up.

"Ha ha!" Zhang Fan ignored him!

"If we were in the capital, we would not be allowed to perform this kind of operation until we reach the vice High Commissioner. Your doctor can pull out and be alone. Why don't you bring some doctors to our tour teaching and change them? "

"What tour teaching?" The operation was coming to an end, and everyone was relaxed. Wang Yanan asked curiously.

"The clinical trial of allogeneic skin grafting materials is almost over. Professor Li wants to conduct a global operation tour teaching!"

Dr. Chen quickly introduced a sentence.

"So good? Hey, hey, master, take me! " Wang Yanan quickly said to Zhang Fan.

The girl now asks Zhang Fan to call Shifu“ You'd better do your orthopedic surgery. Skin grafting is a matter of the burn department. Does it have anything to do with you? "

"Yes, why not? I think the orthopedic doctors in your tea vegetable hospital do better than those in the burn department! And every operation will be paid. Think about it, you don't have to worry about the dowry if you have dozens of operations! "

"Are you going to hospitals in other countries all over the world?" If Wang Yanan, who doesn't have money, doesn't pay attention, she thinks she would have more face if she could go to other developed countries for surgery.

Will the family, especially her mother, still think it's shameful for her to mix with a group of lords!

Xu Xian also stared at Zhang Fan. It doesn't matter whether he is famous or not. It's mainly money. He is just the opposite of Wang Yanan, so there are still differences between men and women.

He chased the flower and had to ask for a house. The flower belongs to a big city, and the family heard that the conditions are good, so the boy playing with snakes is under great pressure now.

Not only Xu Xian and Wang Yanan, but also Zhou Guofu listened.

He is different from Xu Xianwang Ya Nan. Zhang Fan brought him when he started in the tea vegetable hospital. He was also deceived by lard in those years, so he has no relationship with Zhang Fan now.

"Why, depending on the situation, you all want to go?" Zhang Fan asked with a smile. He doesn't care

about Lao Li, but Zhang Fan still needs to pay attention to his doctors.

"Yes!"

"Want to go!"

"Take me!"

Several people laughed into flowers, especially Xu Xian. He was originally squinting. At this time, he couldn't see his eyes. It was a seam. I didn't know that he thought there were two antennas on his face.

"OK, operate first!"

The head nurse of coal city secretly looked at the door. Zhang Fan lost his temper before entering the operating room. So the head nurse didn't dare to come in, but looking at the laughter inside, he knew that the operation was very successful.

Then he quietly went out of the operating room. After seeing the commander and political commissar, he directly reported, "the operation is very successful and will be over soon."

"Good! Great. Oh, that's great, great! "

The commander's original face of defeat is now as red as drinking too much.

"Yes, it's amazing. I didn't expect that our frontier doctors are so powerful now!" The political commissar also has no room for praise " Why don't you report to your superior now? "

"Don't worry, don't worry. Wait until the doctors come out. They won't be here for a while."

The leaders of the coal city hospital looked at the two chief officers in a good mood, so they came together and licked their faces: "leaders, the medical staff of our hospital have been on standby, and there are our doctors in the operating room."

The implication is that we are also meritorious.

As soon as the commander heard it, he was red and dark clouds covered his face. Stared as if to say: "what's the matter with you!"

Seeing that the leaders were going to get angry, the hospital leaders embarrassed and lowered their heads. This place is the door of the operating room, not a place to swear. Otherwise, it is estimated that the leaders of the hospital will catch fire again.

Chapter 966

Sometimes, you can't cross the line if you have the ability. Other things are hard to say. Let's talk about the functions of the human body, such as the nose. Many people have a problem.

What's wrong? I'm a beautiful woman and a handsome man, but there's a small problem. When I'm alone, I secretly smell my underwear and socks.

Do you like smelling, or do you think you can continue to wear it after shaking?

You may think it's nothing to smell about it. As a result, fungal pneumonia came. It's no exaggeration at all. In particular, some parents smell their smelly feet to their children when they have nothing to do, which makes them funny and fun.

As a result, the child had fungal pneumonia.

And again, let alone fungal pneumonia, fungal beriberi can not be completely cured. So don't let your organ do what it doesn't want to do.

Sometimes, it seems that the rules handed down by our ancestors are incompatible with this era. In fact, this is the life wisdom summarized by others for thousands of years. Although others can't explain it scientifically, they can't generalize that they are all antiques.

The leaders of coal city hospital now feel capable, but they did what they shouldn't do and said what they shouldn't say.

Originally, the leaders of coal city now feel that they are trying to survive from death, and they are lucky to be reborn again. Really, no one has a pursuit in his life. He finally reached a high level and was pit by the people under his hand. This anger is estimated to be able to chop the one under his hand into dumpling stuffing and swallow it raw.

"Your mother, if you don't tell me, I almost forgot you. You didn't hide quietly and even took the lead. Is my commander a bean bag?"

The treatment of anger is absolutely different from that of anger dissipation.

"Considering the backwardness of hospital construction and the slack of personnel and technology, the division headquarters decided to temporarily stop the hospital leadership work of Comrade Liu and Comrade Yang and enter the study class."

The president and Secretary of the hospital are stupid!

"The work of the hospital is temporarily changed from..." the commander turned to look at the middle-level leaders of coal city hospital. At this time, everyone woke up from the shock. It doesn't matter whether the president and secretary are dead or not. Now these two positions are empty.

Then, one stood straighter than the other, and the other was taller than the other. I didn't know that I thought it was a chest election meeting.

What reserve and face are all gone. At this time, I want the commander to point their names.

"Which doctor in our hospital enters the operating room to assist the medical team of tea vegetable hospital?" The commander turned to ask the Commissar.

"Dr. Wang Cheng of surgery. He graduated from West Lake University and has a good reputation among the people. "

The political commissar immediately reported what he knew to the commander. He is now in a similar mood to the commander.

With so much to say, whether the president and Secretary can be in the hospital in the future is a problem, let alone be a leader.

They looked at the people around them like wood. No one stood up to talk to them, and no one gave them sympathetic eyes.

It was originally the two of them who surrounded the commander and political commissar, but other levels were not enough. Now we are deeply afraid of being involved. Like avoiding the plague, we hide far away and isolate them independently!

In an instant, their building collapsed!

I can't provoke Zhang Fan. I can't clean up you two?

Not long after cleaning up the two leaders of the coal city hospital, Zhang Fan pushed the wounded out. They were really unlucky.

"Hard work!" When the commander saw Zhang Fan, he came forward and held Zhang Fan's hand for the first time. He didn't care about Zhang Fan's ruthlessness before the operation.

"Yes, we are all from the frontier. It should be. Professor Li is very troublesome." Zhang Fan smiled and said, "the flowers and sedan chairs are all lifting up, so Lao Li gives awesome power. Zhang Fan is also generous."

"Hard work, Professor Li hard work!"

"Ha ha, it's not hard. Although I'm not a frontier registered permanent residence, I'm also half a frontier person. Ha ha, you're welcome, you're welcome!"

"Come on, come on, arrange for the experts and doctors to have a rest. During the day, they didn't eat a mouthful of water and food. They didn't give up their hardships for the wounded." The commissar immediately arranged for everyone to rest.

"Dr. Wang, after going down, we must take more care of these patients. Although the operation is over, we are not out of danger. Once we are infected, we can't help it."

"OK, Zhang Yuan, don't worry. Even if I don't sleep, I'll stare at them." Wang Cheng, who didn't know the promotion, agreed with his teeth.

This is the responsibility. He didn't want to ask for help or complain to Zhang Fan, so he was willing to bear it with his teeth.

As a result, as soon as I looked back, I saw the director of the hospital office, the director of the medical department who did not deal with him, the section chief of the personnel department and the director of the finance department.

One by one, they smiled with extra intimacy, and the wrinkles on their faces were eliminated.

"Am I fired? Do you want to pay?" Wang Cheng's face was livid. He didn't expect the leaders of the hospital to be so narrow-minded.

Think of the attack on the spot, or when Zhang Fan left.

The director of the finance department held Wang Cheng's hand in both hands, "director Wang, no, President Wang, you've worked hard! The hotels of the tea vegetable medical team have all returned. Now it's too late. Shall we prepare the room?"

The director of the finance department is now worried that Wang Cheng doesn't need him. The Finance Department of the hospital doesn't show mountains and dew, but it's really a good position. The salary is almost unchanged.

"Dean?"

Wang Cheng looked at each other, clenched his teeth and thought to himself, "fuck, are you drunk or are you deliberately giving me trouble and eyedrops."

When Wang Chenggang wanted to think about what to say.

The director of the medical department almost fought because of their professional titles. When the director of the finance department finished, he came forward at the first time: "Wang hospital, the duty table of ICU has come out today. Please see if it is appropriate. If it is appropriate, I will issue it to the Department!"

"Are you drunk?"

"Comrade Wang Cheng?"

The political commissar and Zhang Fan finished talking and came over.

"Yes, leader, I'm Wang Cheng."

"In view of the current form of the hospital, through careful consideration, our division Party committee has temporarily appointed you as the president of the hospital. It has always been a heavy burden. You should take out today's efforts on the operating table to face all this."

Great good things fell on him. Wang Cheng trembled and didn't know what to say. He never thought of becoming the dean in his life.

As a result

After thanking the leaders, Wang Cheng stood behind Zhang Fan. When Zhang Fan was almost ready to greet them, Wang Cheng quietly said to Zhang Fan, "Zhang Yuan, thank you!"

Zhang Fan smiled and lined up Wang Cheng's shoulders without saying anything. This hospital is going to be fixed. In the future, this will be the training center of the hospital.

Chapter 967

Some doctors, patients or family members are good friends before operation. What I said before the operation is particularly good. Don't worry. I've done no less than 5000 such operations. Ask about it. I'm the best in the province.

The leaders of XX Department were all operated on by me personally, and the operation methods of this operation were improved by me!

The family felt that the doctor was really powerful. As a result, after the operation, the effect was not good, the patient was uncomfortable, and the family members were also uncomfortable. They called the doctor and wanted to ask.

The doctor changed his face! I said at that time that any operation is risky. Your situation is not an accident, or the operation is not done well, or complications can not be avoided. Don't come to me in the future!

He did say this at that time, but what he said at that time was so good that patients and their families didn't pay attention to the complications, or the doctor focused on boasting his arrogance rather than explaining the complications to patients.

In case of those who boast about their technology and hospital before operation, we must be very careful. Do competent doctors still boast by themselves? Competent doctors definitely dislike too many patients.

According to the understanding of conventional people, Zhang Fan really had a little face before the operation, and did not give the coal city commander and political commissar face. If this is the case with ordinary industry experts, the two leaders will no longer think about making friends even if they don't bear grudges.

However, medical treatment is different. To tell the truth, it is difficult to enter and refine this industry. Although the poles all over the world are full of magic doctors, whether you are infertile or have infertility, or don't lift it, he can cure you anyway.

In fact, to be honest, most doctors in hospitals, such as a provincial grade III hospital, just follow the rules. It's too difficult to study unknown diseases or improve the current treatment methods.

Therefore, once an expert emerges, everyone feels that it is too rare.

This is not true. Zhang Fan and his colleagues returned to the hotel. After a short rest, the leaders of the coal city came to the door in person, booing the cold and asking for warmth, as if they didn't care about Zhang Fan's attitude at all.

"Zhang Yuan, I'm tired today. I have to have a good meal tonight! We are all ready. "

The political commissar politely and Zhang Fan said with a smile. I don't know what's going on. Zhang Fan's delicious name has spread.

Zhang Fan also wondered, as if the name delicious is particularly easy to spread. How can people who have never dealt with before and don't know know know that Zhang Yuan is delicious!

In fact, this is also what Ouyang explained to Chen Sheng. After all, Zhang Fan is too young and has a long way to go. Eating and drinking doesn't matter, but you can't accept anything. Therefore, Ouyang specially explained to Chen Sheng that once someone asked Zhang Fan about his hobbies, he said Zhang Fan was delicious.

Zhang Fan was not wronged anyway!

As soon as the political commissar said, the commander also said, "we don't have any good things here, but the chef is a little good. Let's try Zhang Yuan later to see if it suits our taste."

"You're welcome, you're welcome. Just have a meeting meal. There's no need to bother the leaders so much."

After the operation, Zhang Fan is still approachable.

In fact, Zhang Fan also wants to talk to the two. Ouyang has called and said that the leaders of coal city are interested in cooperating with tea vegetable hospital.

The dinner atmosphere was good. The guests were happy when the two sides deliberately made friends.

The leaders of coal city really don't brag. Their chefs are really good.

Especially for a dish, Jiaolong went to sea. Zhang Fan wanted to study in the back hall.

This dish pays attention to a crisp.

The dish looks like a dragon, a carrot carved dragon head. The serious delicacy is the dragon's body.

The outer skin of the body is said to be the same as high-precision flour fried dough sticks. If it is fried, then the cook empties the non oil absorbing interior, and then puts in all kinds of scallop meat and sea fish.

Then add hot oil again, which must be large oil, and quickly put it into the pot again. When you put it on the plate, it looks like a sea dragon.

Gently clip a piece into the mouth, the thin skin of the fried dough sticks directly burst in the cavity, and

rush left and right in the mouth with the aroma of grease.

Then, when lips and teeth bite on scallops and diced sea fish, another kind of crispness breaks out in the mouth.

The light seafood is mixed with crisp oil in the mouth. When you bite it gently, the soup in the seafood emits like small water spray. The aroma of the warm soup is wonderful.

It's true that Chinese people can be casual about anything, but when eating this piece, they really try to study it.

After a comfortable meal, the hospital probably has a charter. Specifically, both parties have to quarrel. Of course, for this kind of thing, people's leaders point out a general direction, and specific things have special personnel to negotiate.

Li Cunhou was going back to the capital. Zhang Fan asked. He has nothing important to do recently. He won't have much to do until the clinical trial of materials is over.

Therefore, Zhang Fan pulled her back to tea.

Although this guy's surgical level is average, he is famous, and the doctor who came back from the United States pulled back the tea element. Zhang Fan wants him to sit in the clinic for a few days.

Although several stans are poor and dying, almost all of them are local tyrants who come to tea vegetarians to see doctors. These local tyrants wear robes and headscarves. Although they scold Lao Mei day by day, they can use apples and jeeps. They still like Lao Mei's things very much.

The two branches of chasu city hospital can't do a wave of flow, so some doctors liked by Stan local tyrants must come to the clinic regularly. The hospital is a non-profit unit.

But externally, Ouyang's knife is very fast.

Back to tea vegetable, Zhang Fan asked Chen Sheng to set up a negotiation group. Let's argue with Meicheng hospital slowly first. After all, it's two places across administrative units, so it's not so fast for a while and a half.

Back to tea, things are always busy.

Ren Li and Naduo are coming back from their studies in Marubeni. This also needs to be vigorously publicized. How to raise the charges for Stan countries without publicity.

Also, Zhang Fan didn't rest for two days and was ready to go out. This time, he walked with Ouyang and was ready to recruit people in major colleges and universities.

Ouyang is full of confidence, "master, our main goal this time is master graduates. Doctors can recruit the best. Undergraduate, medical technology departments can be undergraduate, and clinical departments must be master or above."

Ouyang set the recruitment level at the same level as that of Bird City provincial hospital during the meeting.

Although Zhang Fan didn't say it, he felt that old lady Ouyang was a little floating.

As a result, after the meeting, Ouyang said to Zhang Fan, "you can blow the wind to old Lu and old Wu, and make a big phone call to your teachers and brothers. At that time, we will bring all the frontier specialties, with light ceremony and heavy affection."

"Ha ha!"

Zhang Fan knows what Ouyang's idea is.

Chapter 968

When cadres, especially at a certain level, leave their place, where they want to go, what they want to do, leave for a few days, and explain to whom they are responsible and what their purpose is when they go to their destination.

Therefore, Zhang Fan, when they are going to recruit doctors, they must form a report to their superiors. Moreover, there are too many people staring at the tea vegetable hospital now.

Because the tea vegetable hospital is so popular now. You see, even the meatball countries have come to see the intestines, so they don't say anything about Stan, and some patients in China are attracted by it.

Although the fruit is too big for ordinary people to pick, they can join the team to share the fruit of victory.

Moreover, the difference between Zhang Fan and Ouyang is that Zhang Fan came from a small doctor and knew the ups and downs of the little doctor. Ouyang, although they came from childhood doctors.

However, they have never tasted the hardships. When they graduated, college students were the pride of heaven. Let alone small cities, even big cities were superior.

They went to the hospital, which was definitely not as difficult as today's undergraduates. Moreover, the country made houses in those years. The pressure is definitely not as great as that of young people now.

Therefore, Ouyang they just think that today's young people can't bear hardships. Can't withstand the pressure. In fact, if they change them, it is estimated that they can't withstand it. They will cry. What often overwhelms people is not life pressure, but mental pressure.

It's also a bachelor's degree. If you look at people who enter the land tax, industry and commerce, the government and the bank, you can't even see a complete sun a day. It's a little useful when people at home are sick!

Therefore, Zhang Fan is different from Ouyang after taking charge of the family. Zhang Fan thinks of ways to send money and things to everyone. Love alone cannot generate electricity. Many times, when enthusiasm is slowly eroded by the hardships of life (actually money), it is difficult to make people shine and heat.

The treatment income in China must be handed in, and then distributed by the government in proportion. Zhang Fan doesn't care about this piece. He doesn't pay much every year.

Therefore, in terms of foreign income, Zhang fan used his head, because there is no precedent for tea, and the hospital sees foreigners. Is this income distributed proportionally or all to the hospital.

The government has no definite statement, mainly because Ouyang and Zhang Fan resisted very strongly, so the money is in the bank, up and down.

But Zhang Fan is not afraid of corruption. For example, the previous stage fee, regardless of the main knife and assistant, regardless of the size of the operation, was 30 yuan.

Zhang Fan raised the platform fee directly according to the operation level. Two hundred main knives, one hundred and fifty, two hundred and three hundred each. This makes the young and progressive doctors more motivated.

No matter what surgery, they are all standing full. Even one appendix is gathered together by four doctors. Chen Sheng reported this to Zhang Fan, and Zhang Fan ignored it as if he didn't know it.

I'm afraid you can't do medical treatment. If you do more, it's always good. Even if you can't do it, it's

also good to look at it.

Moreover, Zhang Fan is different from Ouyang in that Zhang Fan's circuitous tactics are better than Ouyang's.

For example, when the summer drought came and there was no grass on the grassland, the government appealed to everyone to donate money to let the herdsmen on the grassland get through the difficulties.

Ouyang usually holds with the leaders on the number of donations, and Zhang Fan feels it's not worth it.

His approach is to take money directly to buy sheep and cattle. You can't keep them alive. OK, I'll buy them. After you buy it, you can rank it according to people's hair and stage fees. Zhang fanquan has a share of this kind of thing.

This has become a scene in both tea and vegetable.

In the past, the staff of airports with good welfare, such as some rich units, the Finance Bureau and the Local Taxation Bureau. But even if they are heroic, they are not as heroic as others.

Hair beef, one and a half pull cattle, doctors and nurses of tea vegetable hospital mobilize the whole family to get meat. Mutton, sometimes a hair is one or two, other rice flour oil.

Send it all.

Anyway, your government won't let me pay the bonus, so I'll send things in a different way. When asked by my superiors, I have many reasons. I'm supporting the local enterprises of tea vegetable!

Not to mention the Spring Festival, it can be said that the tea vegetable hospital is in charge of food, even the meals of your family members.

Therefore, after Zhang Fan's operation, the mental outlook of the hospital staff has been different.

The leader was also unwilling, but the big leader said that the meat was rotten in the pot. Let him go

It seems very helpless. In fact, I'm secretly laughing.

The welfare of the unit is good, which also makes the working attitude of doctors and nurses become more kind. Moreover, now Zhang Fan's prestige and reputation have burst.

The superior passed Ouyang's and Zhang Fan's report, and Zhang Fan and Ouyang began to prepare to go.

They are not ready to go to the bird market this time, because there are so many graduates in the first

year of the Medical University in the bird market. If you don't go, there will be local doctors coming to the door. If you go, you may not be able to attract doctors from other counties.

Therefore, Ouyang and Zhang Fan prepared to leave Xinjiang first.

Before leaving, Ren Li and her colleagues also came back. This short, frequent and fast study allowed physicians to see what medical care in developed countries is.

The report after coming back is very popular, because many internal medicine treatments often lie in the concept.

For example, the number of *Helicobacter pylori* carriers in Marubeni is the lowest in Asia. This bacterium has no symptoms when it does not develop. Once it develops, it can be said that it will not heal.

Therefore, their idea is to divide meals and census. The ancient Chinese literature search for the serving of individual dishes is done by the Chinese students.

Zhang Fan also specially entertained them. Ren Li was better. That flower was like going to the primeval forest in Africa. It was crazy to see the hot pot.

"Eat slowly! My God, I'm greedy for you when I go to the meatball country? "

Zhang Fan looked at the nest and said with a mockery that the mutton stained with sesame sauce was about to overturn.

"The food in meatball country is too expensive. A meal is enough for me to buy a pair of jeans. Besides, I can't enjoy it. Every day, laver packs rice. I'm almost laver. "

.....

Zhang Fan hasn't left yet. A very special patient came to the anorectal Department of tea vegetable hospital.

After Zhao Zipeng came back from his studies, the anorectal Department became different from before.

The work of the Department is quite good. The tea vegetarian private anorectal Hospital can't be opened soon.

However, Zhao Zipeng is still too young after all. He has some special diseases, so he can't help it.

"Zhang Yuan, come to the Department and have a look. There is a special patient. I'm not sure."

Zhao Zipeng calls Zhang Fan.

Chapter 969

With the development of economy and the country, many people begin to highlight their personality. In fact, it's very good. The uniform blue overalls look boring. After all, they don't look good without suspenders and super shorts!

But sometimes, we must not pursue specificity. For example, if you get sick and get an influenza, even if it is a mutated bacterial virus, because of the base number of the sick population, even if there is no mature treatment, you will find an appropriate treatment in a short time.

If you get a rare disease, it's not about money. First of all, someone has to be able to diagnose, say nothing else, "puppet man (multiple sclerosis) and involuntary dancing (Huntington's chorea)", these rare diseases.

Don't mention that you are in a senior official's hospital. Even if you find the wrong department in the national key hospital directly under the Ministry of health, you may not be able to diagnose you. It's no exaggeration at all.

Foreign definitions of rare diseases are different. For example, in Marubeni, people think that refractory or stubborn diseases with less than 50000 patients are called rare diseases.

Golden hair comes directly. If it's less than 200000, it's a rare disease.

As for domestic, there is no definite definition at present.

At present, there are about 7000 rare diseases recognized all over the world. It can be said that each is a disaster for individuals. Sometimes, you may not be able to cure if you have money.

Most of them are hereditary diseases, while a few are brought by novelty and curiosity, such as AIDS. If the European and American rich did not go to the open-air white and black match on the African grassland, maybe they would not have this disease now.

Not to mention how gentlemanly the golden hairs are, beef can be eaten with blood, and how exquisite it can be.

Zhao Zipeng of anorectal department found a rare anorectal disease early in the morning.

Zhao Zipeng looked silly and couldn't start, so he had to call Zhang Fan.

As soon as Zhang Fan got out of the elevator, he saw Zhao Zipeng standing at the door of the elevator with a blank face, as if he were thinking about some world problems.

"Why!" Zhang Fan asked after seeing Zhao Zipeng with Xiao Wang of the medical office.

"Zhang Yuan! I'll wait for you here. " When Zhao Zipeng heard Zhang Fan's voice, he immediately returned to his soul, and then quickly leaned over.

"Here comes a female patient, 35 years old, with special symptoms, hemorrhoids combined with anal prolapse, and there are signs of infection."

Zhang Fan was stunned, and then asked, "how many visits?"

"First time to our hospital!"

"Look at the patient first."

Speaking, Zhang Fan took the lead in entering the Department. As soon as he entered the ward, he saw a woman lying on the bed surrounded by a group of big men like bears.

I'm wearing a white coat, otherwise I really think it's a ceremony.

The doctors bent over one by one, lowered their heads and watched carefully. Moreover, there is an exaggeration to take out the notebook and copy it directly! After all, it's a little too much to take pictures with a mobile phone in this place.

Zhang Fan's eyes crossed the group of men and saw them on the hospital bed. The woman climbed on the hospital bed, with her head to the window and her butt to the door. Zhang Fan looked at the middle of the snow-white hip at a glance, which was like inserting a half pull lotus mist, and the bottom of the lotus mist was facing the door. It was really similar!

Because the patient's symptom was rare, the anorectal doctors in the Department organized a group to make a ward round.

Rare diseases are rare in small places. After all, the population base is so small.

But there are also many people who can't cry or laugh, such as the magnetic ball inserted into the male urethra. Male doctors can't help shivering when they check.

To tell the truth, after cystoscopy, men can walk with their crotch in pain, just like Zhao Si, the king of Asian dance, with one hand drooping and the other trembling. How can he insert more than a dozen magnetic beads larger than peas?

Really, he is definitely a Jianghu great Xia and a pain tolerant expert. Otherwise, how can he put it in one by one? Moreover, this thing has magnetic force. It hurts when you think about it in the alley.

Anorectal diseases are often more serious in women. Men, especially once they have tasted the life of men and women. It began to go downhill.

When I was still a rising boy, I had to find a place where no one could see when I peed. I wanted to put JJ on the wall before I peed. But once I finished behind the boy, it seemed that it would be different. Anyway, I just thought it was no big deal and I was not afraid of being seen.

When women have tasted the taste of men and women, they develop in two directions. One is as reckless as a young man turning into a man. When they are in a hurry, they take over in the street.

The other is more and more cautious.

In bed, this is the second kind, the more cautious one. Because he is an office clerk, he has little activity and sits for a long time. He usually has the habit of constipation, which leads to another problem: he likes to look at his mobile phone in the bathroom.

Anyway, it's the kind of person who can stay in the bathroom for half a day without being disturbed.

As a result, I got hemorrhoids.

You said hemorrhoids, go to regular treatment, she didn't, she felt shy and difficult to speak, and then went to the beauty salon.

In the previous beauty salons, people had few ways, so they would show you eyebrows and cut your double eyelids at most.

I don't know whether it was because of the rise in rent or the brain hole of being a boss.

Anyway, only you can't think of it, and no one else can't do it.

From chest maintenance to hip maintenance, there are all kinds of essential oils and nutrients.

It can not only whiten, but also tighten. Really, it sounds very tall.

The patient bought a hip maintenance in the beauty salon. It is said that it is all kinds of massage and stimulation. Because they are waitresses, she doesn't feel too embarrassed.

Moreover, every maintenance seems to be a little effective, so I insisted on it for half a year.

As a result, there was an accident and fecal incontinence!

It's amazing. The boss of the beauty salon said that you are born different from others. The maintenance has no effect. You'd better go to the hospital. I won't ask you for compensation if you pull it in bed.

The woman was so scared that she even cried and took it to the tea vegetable hospital. Thinking about it, she suddenly became a baby in the moon. She couldn't even control her defecation. How can she not be afraid.

This time, I don't feel shy. I can do whatever the doctor asks. It's absolutely easy to take off my pants.

Originally, the essential oil in the beauty salon was filled with anesthetics. After each massage, the use of anesthetics made the patients feel a lot easier.

In fact, the situation is becoming more and more serious. As a result, the rectum and anal canal move down and prolapse due to violent massage. I don't know how the beauty salon massages. Anyway, prolapse appears.

This is not over yet, because it is impossible to say what essential oils are, which directly leads to infection and edema.

Originally, the skin of this place was very thin, just like a film outside the sausage, very thin.

Because of prolapse, edema and swelling, this piece is directly like a red lotus mist.

And because of pulling, she doesn't know how to do it.

"Zhang Yuan!"

"Zhang Yuan!"

When the anorectal doctor saw Zhang Fan, he began to say hello.

"Gloves!" Zhang Fan nodded and said.

Zhao Zipeng quickly handed over the disposable rubber gloves.

Zhang Fan started the inspection and said it was an inspection. In fact, you can't touch it.

You can think about it. The swelling is like the sausage mouth in the East and West, and the feeling of redness and swelling is like a fruit that will break at the touch.

Moreover, it still presents a prolapse shaped prolapse, which is really like a ripe lotus mist. It really has a ruddy feeling that makes people bite. To tell the truth, such a ripe lotus mist can not be seen in the north.

The nerves in this place are quite rich.

At the touch, the female patient shouted like killing a pig. Zhang Fan dared not touch it.

"Doctor, do something quickly. It hurts me. Woo! Woo! Woo! Woo! "

The patient's husband was embarrassed to face a group of doctors who looked at him with strange eyes.

"Doctor, this was made in the beauty salon. I'll find them to settle the accounts. Look at the pit where my daughter-in-law was!"

The sweat on a man's head, I don't know whether it's an explanation or really angry. Anyway, he's incoherent in saying this sentence.

Really, it's embarrassing.

You should also check for pain, otherwise you can't understand anything.

"Did you use the medicine for dehydration and detumescence?"

"Yes, but this is the terminal organ. The effect is not good."

"Give me lidocaine!"

Routine examination is no way, because the patient is dying of pain, so we can only think of a way after local anesthesia.

"Prolapse is about 10cm, with ring mounted mucosal rupture on the surface, serious relaxation of anal sphincter, erosion and bleeding and pus production!"

When lidocaine was injected, Zhang Fan began finger diagnosis. While checking, he said the results of the inspection. Zhao Zipeng of the pipe bed quickly recorded it in the book.

This is to form a medical record file. For example, later, Zhao Zipeng will record such a sentence on the computer.

"Vice president Zhang Fan's ward round record" because Zhang Fan's professional title is not high, he

can only write his position.

Normal adults, when the anal canal is diagnosed, a middle finger is stuffed in, which feels very tight. What's the feeling of this tightening.

In fact, it's also simple. You put your middle finger into your daughter-in-law's mouth, and then let her shut up and suck hard. That's about the feeling. Of course, if someone bites you, that's another feeling.

But the patient's finger diagnosis gave Zhang Fan the feeling that his finger was stuffed into the intestinal tract, or into a pipe much larger than his finger.

I can't feel the contraction of the muscle at all.

At the end of the inspection, the woman's shy face was stuffed into the quilt and didn't come out at all. She was like a returnee with her head stuffed into the beach, puckering her ass to bask in the sun.

"Must do an operation, prolapse is serious!" Zhang Fan takes off his gloves and explains his condition to the patient.

"Good! Doctor, you must use your heart, please. " The patient's Zhang Fan also knows that the situation is serious. Who is not nervous about hanging such a big lotus mist on his ass.

"Don't worry, we will work hard!"

Chapter 970

If the human body is described in terms of pressure, it is probably three vacuum plastic bags, one for the brain, one for the chest and one for the abdominal cavity.

At ordinary times, the fast control of these cavities is electrical control, that is, the so-called nerve reflex, and the slow control is fluid control, that is, hormone control.

This is a very general description. Another is the neglected stress control.

Simply put, for example, coughing, exhausting and defecating are actually caused by the pressure formed by the muscles of the body.

Once the pressure is abnormal, it will lead to physical problems.

For example, some people have mild cough all year round, which is not violent. Sometimes they disappear when they are busy, but they can't help coughing as soon as they stop.

Then, there was nothing wrong with the lungs. As a result, hernia came out and anorectal prolapse came out.

He asked the doctor, my cough is a mouth cough, not a butt cough. Why do you say I coughed out the head of the large intestine? You quack, you know a fart!

Others don't like to eat crude fiber. When they go to the bathroom, it's like practicing Qigong. Their faces are purple and red, and their stools are thick, which can block the toilet.

Over time, hey, the stool didn't come out and got out the large intestine.

This is no exaggeration. You have to force to change the virtuous circle of the body. The body is not a flesh man. It can change the position of your organs. Therefore, when you have frequent cough and long-term constipation, you should pay attention to it, solve it early, and don't think it's okay. When something happens, it's the lotus mist hanging between your hips!

After appeasing the patient and his family members, Zhang Fan and Zhao Zipeng prepared for emergency surgery. We can't delay it. If we drag the infection into the blood, it will cause sepsis.

Anorectal department, anorectal department, to be honest, it is an insignificant department in major hospitals. However, this organ is particularly difficult to mess with because it is too complex.

In terms of complexity, the complexity of the lips is the younger brother in front of the anorectum. Especially for some special anal prolapse and hemorrhoids, you should not only operate on them externally, but also tighten the slack inside.

Lysis is particularly common in medicine, but tightening is rare because it is difficult.

In particular, some hemorrhoids surgery looks like a clover after completion, just like the logo of Adidas. You don't have to think about it. The operation failed.

Therefore, in anorectal surgery, the routine is to be conservative if you can be conservative, and only operate as a last resort, because the degree of failure of the operation is particularly high. You don't know whether it will cause fecal incontinence after the operation.

Therefore, anorectal surgery generally has two requirements. First, judge the situation, that is, do the optional surgery, and don't force it. 2、 Find a respected battlefield veteran.

Anorectal surgery is not a simple resection. It involves a reconstruction.

It is necessary to combine reality and provide people with a smooth passage for defecation and exhaust. Therefore, a doctor who has seen 5000 operations is definitely not as powerful as a doctor who has personally performed anorectal surgery.

Often after anorectal surgery, it leads to fecal incontinence. In fact, most of them are more than brave surgeons, not caused by the development of the disease. Originally, there was no fecal incontinence. After the operation, there was fecal incontinence. The doctor told you that it was caused by the development of the disease. You can slap him in the face.

Therefore, in the anorectal department, there is a saying that a green surgeon with a scalpel in his hand is definitely more dangerous than a gorilla with a machine gun.

"Remember, when there is infection and edema, we can't deal with it according to the general anatomy. At this time, the organizational structure will change. We must be cautious.

It's more difficult to go back after a knife than to go to heaven. Therefore, I'd rather hesitate before the knife than regret after the knife. "

Zhang Fan touched the red lotus mist in his hand and said to Zhao Zipeng gently.

"Yes!" Zhao Zipeng nodded gently.

Cut it open. At the most red and swollen place of the lotus mist, Zhang Fan gently cuts a hole with a sharp knife.

I saw pus popping out like a drunk lying on his back vomiting.

Don't look at the red abscess like a fruit. After it is cut, the color inside will also be red. In fact, it's not.

After the knife edge was cut, the pus like black sesame paste came out with a smelly smell. This smell is different from stink. It also has a smell more fishy than dead fish and rotten shrimp.

The purulent liquid and smell that burst out in an instant came directly to my face like poison gas.

"Come on, clean up the pus!" Zhang Fan said to Zhao Zipeng.

Because of the pressure, most of the pus was sprayed out at the first time, but there were many pus that could not be eliminated after the pressure disappeared.

Zhao Zipeng wrapped wet gauze on his middle finger, and then stuffed his finger into the cut anorectal abscess like a child stealing honey.

At this time, the abscess thought it had shrunk, like a rotten persimmon that fell from a tree and broke a mouth. With the activity of the intestine, a little thick water would flow out from time to time.

At this time, because most of the pus was removed, blood appeared. The pus was mixed with blood, which was as clear as flowers on high-grade coffee.

Zhao Zipeng put a finger in it and wiped it in circles. He came out once in a circle and once in a circle. From the initial coffee color, it slowly turns brown, and then turns bright red.

At this time, the pus was clear, and almost dozens of gauze were used.

This wipe is more thorough than any chemical disinfection. Many people were injured and broken, and then went home to take iodophor and gently applied it. In fact, the effect of iodophor must be wiped to take away bacteria. If you don't wipe it at all, it's better not to apply it.

This is the reason why patients often cry and cry when doctors change their dressing in the hospital.

Because it's a prolapsed piece, you can't put it in. Where to put it in is to take the newspaper to the grave and fool the ghost. When someone takes a stool, it is pulled out directly.

Therefore, for adult prolapse, surgery is generally necessary. What bath treatment ah, what ultraviolet light ah, are all deceptive and fool the RMB in your pocket.

Why prolapse, anorectal prolapse.

At present, to tell the truth, the cause is uncertain.

But from the result to the cause, most male patients with anal prolapse have the symptoms of prostate hypertrophy! So, when you feel your masculinity is quite awesome now.

But when you are old, you should suffer. You stand in front of the urinal for half an hour holding the faucet in one hand, and you have to cover your ass in the other hand, or maybe the anal canal will fall out for you.

This is the urine did not come out, the egg came out first!

Therefore, men must not hold their urine. When they are young, they hold their urine and block their eggs when they are old. It's very sad.

There is a long-term cough and long-term constipation, long-term chronic diarrhea, will lead to anal

prolapse.

After treating the infection focus, Zhang Fan began to suspend.

In fact, it is to find a point in the abdominal cavity to suspend the prolapsed intestines.

This operation, to tell you the truth, is not easy to do. The length of your suspension is inappropriate. If it is short, it will lead to fecal incontinence. After a few days, people will not pull out the lotus mist, but it will become meat balls again.

Therefore, this kind of surgery is quite exquisite a doctor's experience. Although the data in the textbooks seem to be particularly detailed, in fact, the data in medical textbooks are about.

For example, if the needle is 6 ~ 7cm, is it 6 or 7? No one can say this. You must see a doctor, feel it, experience it and cover it.

This experience, others tell you is useless, what a sense of breakthrough, what a sense of emptiness.

To tell the truth, it's not difficult for a young man to experience a sense of breakthrough!

"Pay attention here. Don't break the intestinal wall!" Zhang Fan gently picked up the edematous intestines and pointed to Zhao Zipeng with his fingers.

Intestines, the normal intestines are like silk, with toughness, smoothness and temperature, while the edematous intestines make the intestinal wall like a piece of paper because the intestinal wall is rich in a lot of water.

A little careless, it will be torn. Once the intestinal wall breaks, the hanging operation will change its name and become a repair. And this tear is particularly troublesome and difficult to repair. Sometimes I have to cut off a piece of the intestinal tract.

This is called intestinal resection.

As can be imagined from the name, this kind of operation is more difficult.

Zhao Zipeng looked at Zhang Fan holding his intestines. His saliva kept swallowing. It was not greedy, but nervous.

The swollen intestines were like a big maggot, lying in Zhang Fan's hands as if to say, "come on, boy, come on, you can touch me!"
