

## D. School 101

Chapter 101 - promote

“Cough!”, Alyosha had just walked into Alexander Jevich’s supplies and was suffocated by the smell inside. “I said how many days have you not been out?”

Alexander Jevich stared at the arXiv page with red eyes, as if he had not heard Alyosha ’s words.

Alyosha took two steps forward and saw the content displayed on the computer, “Wow, what new ideas do our geniuses have to post to arXiv?”

The word genius pierced into Alexander Jevich’s brain like a needle. He turned back suddenly and snarled at Alyosha for a while, “You are a genius! Your whole family is a genius!”

When Lu Qiuqian’s sixth paper in this series came out, he finally knelt down. Lu Qiuqian’s this paper just solved an important problem that he was thinking and thinking about this time, and eliminated him. The bottleneck in the research, he was faintly feeling that his research would open a new window, but his inspiration was interrupted by Alyosha, and naturally there was no anger.

Especially the word genius, if this happened before he heard others call him like this, he would be happy, but after reading the results of Lu Qiuqian during this time, Alyosha said The word seems to be hitting his face; if he is a genius, what should Lu Qiuqian count?

Of course, not only Alexander Jevich was inspired by Lu Qiuqian’s series of papers, but also gathered in Cambridge, Paris, Beijing, Beijing, the United States, and many other universities and research institutes. Where many mathematicians found inspiration from Lu Qiuqian’s new paper.

Or they solved a difficult problem in their research process and removed the stumbling block on the way forward; or they lit a torch when they thought they could not find the road ahead, so that they can continue to move forward; or A new window was opened for them, so that they found a new perspective ...

So in addition to those mathematicians who delved into Poincaré’s conjecture, experts in other fields also began to pay attention to Lu Qiuqian, but whenever he uploaded new articles, it would immediately lead to a series of downloads.

In order to improve work efficiency, some mathematicians refresh the arXiv page every few hours, and some find a hard graduate student to keep him in front of the computer and call him whenever a new paper comes out; some even I have written a special software program, as long as Lu Qiujian's paper is uploaded, the software will be automatically downloaded and a sharp prompt sound will be issued ...

Of course, all these are exactly the results that Lu Qiujian wanted. Now, the level of science and technology cannot meet the needs of his plan, and he cannot complete it independently. Then, a little promotion of the accelerated development of the mathematics world has become the current need. Things to do.

Like the birds and frogs in Dyson's mouth, Lu Qiujian's current work has not yet reached the level of birds, but at least it can be called a grasshopper. The jumping and jumping are better than those lying on the ground. The frogs look farther, and it's OK to show them a little distance in front of them.

The work of birds is important, but frogs can't be ignored either. After all, theory still needs to be supported by practice; as many people say, although the work of Yuan Druid does n't see much originality and pioneering work, he does The work has fed more than one billion Chinese people. I believe that for those who have not been able to eat before, Yuan Druid is definitely greater than Einstein.

"Coffee or tea?", Today Lu Qiujian came to Professor Gals's office by appointment. Professor Gals led him to the sofa and asked.

"Black tea is ready!", Lv Qiujian answered casually while wondering about the purpose of Professor Gals inviting himself to come over. This semester, he no longer brought his own class. Why did he pull himself over?

Fortunately, Professor Gals is not a wordy person. After arranging an assistant to help pouring tea, he asked directly, "What are you busy with now? It is not long before the summer vacation. If you want to hold a report on Poincaré's conjecture, , You should start preparing now at the latest! "

This is also because of Princeton's rich experience in organizing such events and the huge influence in the mathematics community, in order to ensure that a large international conference is prepared in such a short time. If it is Beijing Normal University, I am afraid that this time is not enough!

Oops, some people finally asked, did the school feel anxious? I can't always say that I would like to report this report at Peking University. Princeton is very good to himself. This is a bit unspeakable!

Fortunately, he was already prepared and said with a shy smile, "Recently I have some inspiration in other fields, so I wrote a few new papers."

"Oh? What kind of paper?" Gals hasn't been on arXiv recently, so it's unclear what this round of commotion caused by Lu Qiujian.

"Regarding combinatorial mathematics, when you taught us this subject, I became interested in this field. Until recently, I finally got a little, insignificant harvest. Lu Qiu Jian turned out an article that Professor Goers would be interested in from his thesis library.

"Oh? Tell me, what is the specific content of the thesis?", Professor Gals really showed the same curious expression as Lu Qiujian expected.

"It's about the use of combinatorial mathematics to shape a particular structure in Banach space. I found that if ..." For the achievement of the award, he extended a point from Professor Goles' research.

"Interesting idea! Was your article posted on arXiv? Quickly find me to see!" This just scratched Professor It's itch, he couldn't wait to stand up and pulled Lu Qiujian to press him To my computer.

Go to the arXiv page, find your own paper on combinatorial mathematics, download it and open it, and then give the position to Gals.

"Well, it was something that I had overlooked. I thought it was of little value here, but now I seem to have made a mistake ...", Professor Gols slid down the paper while sliding the mouse, while talking There are words.

"You see that I still have new ideas on this issue. Do you want to see if there are any loopholes in my article? I will go back and finish the next article first?" Lu Qiujian took the opportunity to make his own request.

"Okay! Write it and notify me immediately, if you have any questions in the research, please call me at any time!", Said Professor Gauls without looking up, completely forgetting his purpose of handing over to Lu Qiujian today. Do it all.
