

DEMON SCHOOL

Chapter 12 - 1 mountain is smaller than 1 mountain

“Lv, can you tell me how you did it?”, The expression on Patrice’s face well explained what is envy, jealousy and hatred, “I have been in Princeton for two years and I couldn’t make a girl , You just picked the most beautiful flowers in a week! God is really unfair! “

“Did you never fall in love in high school?” Lu Qiujian asked, “If you are in love, you will understand that Congolese girls are not different from American girls, as long as they show what they appreciate Excellent, then the next thing will happen naturally! “

“When I was in high school in Congo, I was the focus of girls in the whole school!”, Patrice patted her chest proudly, “I will change girls for dating almost every weekend!”

“Then why don’t you understand this? If you say it is true, you will understand how easy it is to chase girls!”, Lu Qiujian looked back at him strangely.

“But when I was in high school, they chased me! I just need to choose the most beautiful one among them!” I think so, Patrice is tall, and looks like a handsome man among black people. It is no problem to study at Princeton, and add a distinguished family background! It’s an out-and-out Gao Shuaifu. Such a person has no trouble trying to please women in his own territory.

“Okay, I’m going to class! All day today, remember to bring my jersey shoes to the gym after class, I will go straight after class!”

Is still a big class for 150 people. Lu Qiuqian walked into the classroom and sat next to Alfors, “Hi Alfors, how is your weekend?”

“Oh! It’s awful!” Alfors pulled his hair hard. “The rejection letter of the” Annual Mathematics “made me spend the whole weekend with great disappointment. It feels like the Tigers. The third overtime of the game was worse by Harvard Crimson lore! “

“Do you want to continue to revise or deny it completely?”, “Annual Mathematics” is a professional mathematics journal sponsored by Princeton University and the Princeton Institute for Advanced Studies, and “Mathematical Invention” in Germany, “American Mathematical Society” in the United States and “Mathematics in Mathematics” in Sweden “Journal” is also listed as the four most authoritative magazines in the world of mathematics. The status of these four magazines in the mathematics world is like that of “Nature” and “Science” in the natural sciences.

Until Lu Qiuqian came to Princeton, the total number of papers published by the mainland in these four journals did not exceed 30, of which less than ten were independently completed. The difficulty of publishing an article in these four magazines can be seen! Alfors has the guts to contribute to the “Annual Mathematics”, which proves that he has surpassed all the mathematics professors in the mainland in the study of certain problems.

“Continue to modify!” Alphonse’s eyes returned to some glory. “According to the advice given by the magazine, I need at least three months. Now I can only pray that no one else has noticed this field in these three months. “

Alfoss did not say that Lu Qiuqian was not good to inquire about his research direction. It was at this time that the class time was up. The gray-haired and thin-looking Professor Gales walked into the classroom, threw the briefcase on the table, and inserted his left hand in his pocket, his body leaned to the side, his right elbow was propped up on the podium to support his body, and

his right hand scratched his hair. "Did someone make that question? If so, I will give you full marks in this lesson!"

The students in the front row looked back, and the students in the middle turned sideways. At the same time, more than a hundred people's eyes were focused on Lu Qiuqian. Before waiting for his expression, Alfors stood around his shoulder and shouted loudly. Tao, "Professor! Lu solved the problem!"

"Oh oh! Finally, a warrior challenged the dragon, Gals again?", Professor Gals stood upright in surprise, and said while applauding. Exchange student? Let me guess where you are from. Is it the University of Tokyo? The Pearl University of Technology? Or the Lion City University of Technology? "

"I'm sorry Professor Gals! Your guess doesn't seem to have hit the only correct answer to this question. I'm Lu Qiuqian from Beijing Normal University in China." Lu Qiuqian made a joke, and Professor Gals' guess made him somewhat uncomfortable, but China's position in the world's mathematics is indeed not very high.

"China? Beijing Normal University?", Professor Gals used two rhetorical questions in a row and asked two times around the podium before asking uncertainly, "The Beijing Normal University where Professor Wang Shicheng is located? His research on finite groups very creative."

"I will convey your compliments to Professor Wang when I return to China!" Fortunately, he didn't talk about the professors of other schools, otherwise I really don't know how to reply.

"Take your answer!", Professor Gals ticked his fingers. "Let me guess. Did you use Pete Lax's formula to solve this problem or Terence Tao's latest research?" Results. "

To solve the problem left by Professor Gals, he must have a very high degree of achievement in partial differentials, and Lacus and Tao, as he just

mentioned, have achieved good results in this field. Among them, Terence - Tao is more prominent. UU reading Terence-Tao knows the name is Chinese, his Chinese name is Tao Zhexuan, graduated from Princeton only six years ago, Lu Qiu did refer to his thesis when constructing this question. Even in the talented Princeton, Tao Zhexuan is a very outstanding one. He won the International Mathematical Olympiad Gold Award at the age of 13 and became the youngest recipient of the award. He entered Princeton at the age of 17, graduated at the age of 21, and became a University of California, Los Angeles at the age of 24. The correction professor is also the youngest full professor in the history of the school. Seeing his resume, one can't help but give birth to a mountain that is smaller than a mountain. Yes, a mountain in the mathematical world is rising, and his age is much younger than you. I don't know how many people are in front of him. Shameless and self-contained. Fortunately, Lu Qiu is not yet twenty years old, and he still has a chance to catch up with Tao Zhexuan!

Lv Qiu walked to the podium at a light pace, opened the notebook and handed it to Professor Gals, "Yes, I used some research results of Professor Tao."

"Let me see it!" Professor Gauls took the notebook and looked at it. It looked for ten minutes, and he kept muttering, "The unexpected idea is completely different from the answer I prepared. , But this method is more concise and more groundbreaking! It seems that Bitlens has gone further in the application of partial differentials! "

After a while, he closed his notebook, "Have you ever thought about writing the problem-solving process into a paper and publishing it in the" Annual Mathematics "?"

It is estimated that it's time for a thousand recommendations. It will be released in advance. Thanks to the beans for the 300 starting point reward, thanks to dare91 and a magic empty 100 starting point reward.
