

## D. School 25

### Chapter 25 - Waiting days

The shadow of a famous tree of people. As a mathematics professor at Princeton and a recipient of the Fields Medal, the name of Professor Gales' mailbox has almost been branded in the minds of editors of every top mathematics journal.

Lambert disregarded the prescribed review order and opened Professor Gals' mail to read, "" A method for solving partial differential equations "? Has Professor Gals started to change his research direction?"

With the development of modern science, scientists like the classical science period whose research scope covers several fields are becoming scarce. Most people can branch in a branch under a discipline ... making a little progress is worth celebrating During the period, Professor Gals's research fields were mainly functional analysis and combinatorial mathematics. The reason why he received the Fields Prize was the contribution made by the method of combinatorial mathematics to the Banach space. That's why Lambert has this question.

Green ... ball ... between. After struggling to spell out Lv Qiuqian 's name, Lambert saw that the author was not Professor Gals but his student, so he lowered the expectation of this paper by a few points. After all, the master and the master 's disciples are not. the same.

But since it's open, let's finish reading. Lambert looked at the article and found that it is not very long. As a review editor of the "Annual Mathematics", Lambert may be more in-depth in mathematics research. Not as good as those professors, but far more extensive in their knowledge, and he soon discovered the value in the article.

"If this derivation process proves to be correct, then the study of partial differentials will have a big impact!", Lambert took a sip of coffee and said to himself, "Then this article should be sent to who?"

In the eyes of the editors, we can only find out whether an article is probably valuable for publication, and more professional reviewers can only rely on reviewers who have intensive research in the field of the paper.

Of course, it is still too early to send the papers to professional review editors now. In order to avoid omissions, the "Annual Mathematics" adopts a multi-person review mode. Whether it is passed or

rejected, more than two editors need to review , And wait until they are sure that there is no problem before sending it to the professional review editor.

Reviewer editor review, professional reviewer review, even if these are passed, it does not mean that your paper can be published, because the world 's most important mathematicians will submit articles here, and the annual number of pages of the "Mathematics Annual" So much, what if the editor has just received a breakthrough paper from Professor Wiles or Professor Chen Shengshen just after deciding to publish your article?

Therefore, a magazine like "Annual Mathematics" can be published within three months after receiving your submission, even if it is fast!

Lv Qiujian also understands this point. Fortunately, "Mathematics Annual" is a magazine run by Princetonians. Whether it is passed or rejected, he can get news in advance through several professors.

So after handing over the paper to Professor Gales, Lv Qiujian put this matter aside and reverted back to his previous life, shuttled in various classrooms during the day to receive the teaching of the world 's top mathematicians, and went to books in his free time The library reads the relevant works, and writes the accumulated questions in the notebook. When the class is in class, ask the masters who have in-depth research in the field to which these questions belong.

Fortunately, the professors in Princeton do n't put a lot of racks, they will answer the questions of Lu Qiujian in detail, and these questions are just right, they are quite cutting-edge questions in these fields; by chatting, they will find Lu Qiujian in These areas also have in-depth knowledge. This answer not only solves the problem of Lu Qiujian, but also enlightens their own research.

Soon, the name of Lu, an exchange student who loves to ask questions, spread in the Mathematics Department of Princeton. At the beginning, whenever he asked questions, there were always a few students around to listen, but as time went on, There are fewer and fewer classmates around him, because if you can't understand the question, what's the point of sticking to it?

"Lv, how are you looking at my thesis?", Just after asking a question, Alfoss came and asked.

"I already have some ideas. I will think about it after I finish training. I will send you the results before next week!" In fact, Lu Qiujian has already done it, but someone helped go to the library to occupy a seat in these two days. He helped to buy drinks and helped download various cutting-edge papers. In these days, he still wanted to enjoy a few more days.

“Yeah! It’s great!” After so long and busy, Alfors finally got an accurate reply. Seeing that the paper was expected to be published, he jumped happily.

But in a short time, it is frustrated. It is said that when a top mathematician is puzzled by a research problem, he will intuitively find a way forward. This intuition has great value and will shorten the time you take detours.

But you cannot always rely on this kind of intuition, because he cannot always provide you with this kind of guidance. Once he leaves you, this kind of assistance system will disappear, and your research will return to . The slow speed before, it seems like a person who is used to driving a Ferrari sports car returns to the tractor driver’s seat. This contrast will make people doubt their scientific life.

“Ah, am I really not suitable for this path?” Looking at Lu Qiuqian’s going away, Alfors was in doubt.

Of course, the Tigers have no such feelings, because they have long known that they have no future in basketball, and they are not like black people from ghettos. There is no other way except basketball. Can go. Being able to enter Princeton means they have broad prospects.

So watching Lu Qiuqian’s skills mature day by day, they not only did not jealous, but sent heartfelt praise, “Lu, you will definitely lead us to the top 64 this year!”

“Spencer, if you shoot a little more decisively, we can even break into the top 32!” Lv Qiuqian sent encouragement in due course. Basketball is a five-person sport. Every time a short board is made, you can Survive some more time in the knockout stage.

“Man, just look down below! The little white-faced crying noses of the Manhattan Jewels that great Patrice will play!”, Looking at Lu Qiuqian sitting on the bench, Patrice was proud Bulging his biceps.

The cunning Thompson coach used Lv Qiuqian as a secret weapon to press him to the bench during the warm-up game, and wanted to wait until the official game to beat the opponents of Harvard.

Thanks to Dozi and Donglai Jiankun for their rewards. Now they have received more than 800, and they will receive two more chapters for 1,000.
