Chapter 271 - Weird football rules (19/35)

„, 35

“Well, are you okay?” Barak said suspiciously, in addition to questioning his goalkeeping skills, Barak also has other concerns; Bayern is now in a backward position. If Real Madrid makes a penalty, it will be two. The ball is leading. If Bayern still wants to advance, he must score more than three goals. It seems too wavey to put Lu Qiu Jian in front of the goal?

“I have played in the United States before, and the experience of touching the ball with your hands is always more abundant than you? Besides, do we have other options now?” Lv Qiu Jian looked at the bench and said that Schlosser had been sent off the court. ! As for the others on the field, Barack and Lucio are tall enough, but let them keep the goal

On the sidelines to discuss with Magath, Magath reluctantly agreed to Lv Qiu Jian’s request, adding ten players on the field and six benches on the bench, and could not find the Billiu Jian is more able to judge the player of the ball, I hope he can create a miracle!

“Roberto, it’s all up to you in the frontcourt! Carlos is more impulsive when defending. Use this feature to create a free kick for us! This is our only hope of winning!” Magath patted Ze Luo. Berto’s shoulders, it is conceivable that there is one less player in the game, and the goalkeeper is still an amateur. Real Madrid will definitely surround Bayern’s half-court attack. Bayern, who is fully defensive, will not have too many offensive meetings. The free kick can continue to work!

“Okay! I will do my best!” As a member of the Brazilian national team, Ze Roberto is well aware of Robert Carlos’ strength, and he doesn’t have much confidence in Magath’s mission. HēyāngēcOM

Putting on Kraft’s jersey and putting on gloves, Lv Qiu Jian came to the goal and walked past Ronaldo who was preparing to take the penalty. He whispered, “I guess you will kick to the bottom right corner!”

Ronaldo’s penalty technique is quite superb. Lu Qiu Jian’s impression is that he rarely misses a penalty. Even if he is occasionally saved by the goalkeeper, he will make up the shot, so he can only use these small means to disrupt his psychology.

Uh, where should I kick? Ronaldo was really confused by Lu Qiujian. Since he bet on me to play in the lower right corner, then why should I just kick in the lower left corner? But what if he cheated me?

Forget it, don't think about it, anyway, he is just an amateur goalkeeper, even if I really kick in the lower right corner, would he rush? After the referee whistled, Ronaldo really pushed the ball to the lower right corner after the run. Out of concern for Lu Qiujian's words, the angle he chose was more tricky than usual.

At the moment Ronaldo touched the ball, Lu Qiujian had already judged the direction of the football. He quickly fell down and extended his right hand to try to stop the football. But when the finger was about to touch the ball, he thought of it and retracted it.

The football slammed into the goal post and flew back to Ronaldo. Ronaldo had no time to think about it and subconsciously blasted the ball into the empty goal!

A sigh rang out at the Munich Olympic Stadium. Depressed Magath slapped the canopy of the bench fiercely. Ronaldo stretched out his arms to make his usual celebration. Behind him was Robert Card, who was running towards him quickly. Los and Figo and others!

Lusenberg on the sidelines clapped hard. In his opinion, Real Madrid's qualifying has become a foregone conclusion after achieving this goal; Barak in the penalty area stared blankly at the football in the goal, just one step away to grab the point! Is Bayern's Champions League tour this year over?

But Lu Qiujian quickly got up and ran to the referee, shouting while running, "Mr. Referee, Mr. Referee, this ball should not be counted!"

Ok? The referee with a whistle in his mouth is looking at Lu Qiujian doubtfully. Is there anything wrong with this ball? I just saw clearly that no one entered the penalty area before Ronaldo touched the ball?

"The football did not touch my body when Ronaldo made a supplementary shot, so this ball should be counted as a second touch! So this goal should be invalid, and we should be given an indirect free kick!" Explained!

Oh yes, how can I forget this rule! The referee immediately spit out the whistle in his mouth, and the fast running side and the sideline discussed to make sure that Lu Qiujian did not touch the

football just now and decisively blew the whistle to declare the goal invalid and awarded Bayern Munich an indirect ball!

Lying trough, what's the matter? The Bayern fans at the scene applauded desperately for the referee, regardless of whether they understood it or not; Lusenborg angrily found the fourth official, and Magath turned angry.

Assistant coach Eich Cohen frowned for a long time and finally pulled out an unpopular rule from the depths of memory, "Felix, I think the referee's penalty is no problem! The rules issued by FIFA, except for the fall All dead **** except the ball, including mid-range kick-offs, hand throws, free kicks and penalty kicks. The kick-off team member shall not touch the ball again before the ball is touched by other players. Indirect free kick. "

"Ronaldo's previous shot hit the goal post, which cannot be supplemented according to the rules. Because the goal post is a public object, not a person, if the ball bounces back to the free thrower after hitting the goal post, the free thrower will touch It turned into a second touch! The referee 's penalty was very good! "Eich Cohen gave the referee thirty-two praises watching the angry Real Madrid players keep complaining around the referee , Lu Qiujian thought with a smile, fortunately I had seen the football rules issued by FIFA, otherwise the ball would be dangerous! I was able to touch the football just now, but the football will fly in the direction of Raul when blocked by me. At that time, I was lying on the ground, and I couldn't stop Raul's supplementary shot!

If the football is allowed to hit the goal post, it will fly back to Ronaldo's direction. If Ronaldo scores a goal, then he will violate the ball twice in violation of the rules! Bayern will receive an indirect free kick.

Of course, this rule is relatively unpopular. Lu Qiujian feared that the referee would not remember it for a moment, so he rushed to the referee to explain it after the goal. Fortunately, Italian referee De Santis quickly remembered this rule Only one misjudgement was avoided.

Ronaldo and others didn't understand how he had fouled this goal. They had been entangled with the referee. De Santiss, who was enraged, showed Ronaldo a yellow card before the game returned to normal!

There is more to playing! Lu Qiujian Youzai's return to the penalty area is ready to take a free kick, otherwise you will not know if it is a foul if you foul!

Chapter 272 - Special goalkeeper

“Ronnie, don’t be angry, the opponent is just an amateur goalkeeper, there is a chance in a moment!” Zidane came over and patted Ronaldo’s shoulder as a relief, “I will pass you more passes in a while!”

Ronaldo snorted sullenly, glared at Lv Qiu Jian’s direction and glanced back. He moved back two steps depressively and made up his mind. Waiting for more long-range shots, I don’t believe he can throw it out.

The game continued, Lu Qiu Jian kicked a free kick to Lucio, and Lucio passed to Barak. Barak took the ball forward and took two steps while looking for the figure of Ze Roberto.

Bayern Munich now has one less player on the field. Lu Qiu Jian, who was responsible for the tandem and organization of the offensive in the frontcourt, has become a goalkeeper again. The pass made a mistake and was intercepted by Beckham, Real Madrid quickly turned from the defense to attack.

Beckham’s signature long pass passed the ball to Ronaldo on the forward. Ronaldo stopped the ball and took a right-footed shot. He took the ball over Lucio who defended him and took two steps forward to rush on the Kovac. Before blocking, the goal was vigorously shot, and the football flew to the upper right corner of the goal like a cannonball!

Lv Qiu Jian moved two steps in the direction that the football came, and then double-boxed out. Unfortunately, his experience was still inadequate. The football was not shot out of the penalty area by him, but flew straight up. Raul, who had been waiting for a long time, appeared ghostly like a spirit fox in the penalty area and ran to the landing point of football.

Bayern is in danger! Magath brushed up from the seat, and the piggy on the bench raised his heart to his throat. If Raul snatched the ball, he would not miss this opportunity with his shooting.

“Give up!” A scream came from the ear of Saniol who had just rushed back to the penalty area to grab a spot. He subconsciously went to hide and saw Lu Qiu Jian flashing past him like a cheetah, brushing. He jumped into the air with his right hand and held out his right hand to catch the football. While falling, he hit the football in his right hand hard with his left hand, making a loud bang.

The moment the football landed, Lu Qiu Jian’s hands were firmly controlled in his palm. At the same time, he raised his left and right elbows, staring at the crowd of people around him.

“Well, this seems to be a rebounding action!” Huang Daxian stayed for a while before reacting, this kind of action on the football field is rare! “I’m afraid Lu Qiujiang applied his playing experience to the football field!”

Raul flew over and looked at Lu Qiujiang’s elbow for a while. The tip of the elbow is only a few centimeters from your nose! Would n’t it be disfigured if I just ran a little faster! No, next time I have to stay away from him, in case my handsome face is on an elbow, it would be bad!

“Hassan!” Lu Qiujiang shouted and ran a few steps forward, raising his right arm to throw the ball vigorously to Salihamidzic wandering around the middle circle by inertia. This caused Huang Daxian to yell!

“Since Schmeichel retired, we have rarely seen this kind of precision hand-tossed long pass that crosses half a match! Lu Qiujiang’s pass is both in terms of speed and judgment of the landing point. First-rate! Salihamidzic received this pass without moving at all! “With the transfer of the lens, Huang Daxian discovered the subtleties of this pass by Lu Qiujiang,” Ah, Bayern’s Opportunity! Real Madrid’s defender Bravo has not returned to his place. Salihamidic is ahead of Pingchuan. He is accelerating to Real Madrid’s penalty zone! “

Who said the goalkeeper could not organize an attack? The goalkeeper is at the back of the team. No one can be better than the goalkeeper when it comes to mastering the overall situation on the court! Lu Qiujiang saw the hole in Real Madrid and quickly threw the ball to Salihamidzic.

The Angel Wings did not disappoint him either. When Elgra was about to be pushed up, he passed the ball to Ma Kai, who followed up in the middle. At this time, Real Madrid’s other center defender Samuel has been opened by Pizarro, Ma Kai took two steps and entered the penalty area to face Casillas directly.

Looked up at the lower left corner of the goal, and then vigorously kicked the ball to the lower right corner. Casillas was deceived by the fake action of his eyes. It was too late when the reaction came and flew!

Ma Kai scored, Bayern dropped the total score to 1 to 1 in the case of one less person, and the game returned to the same starting line again.

This goal hit Real Madrid in a huge way, originally one goal lead, the opponent’s goalkeeper was sent off, and he got a great opportunity to take a penalty. As long as the goal is scored, the victory can be basically locked; if the penalty is blown by the referee, the opponent’s amateur goalkeeper

not only intercepts his shot, but also passes the opponent to score! This Nima is really unacceptable! Lusenberg on the sidelines was almost vomiting blood!

Although the hero was Ma Kai, Salihamidzic assisted him. But all Bayern players are coming to Lu Qiuqian, and they all know that Lu Qiuqian's long throw of the ball is the key to this goal.

"Pay attention to the running position for a while. As long as you have a good position, I will deliver the ball to you accurately!" Lu Qiuqian pulled Salihamidzic and Ze Roberto II Said loudly.

Everyone nodded their heads in agreement, their eyes regained hope, now that they have equalized. Then it means that we still have a chance! What if one person lags behind? What if there is no goalkeeper? We can still win!

Real Madrid players are still not reconciled. After relaunching the ball, they used multiple long shots to test Lu Qiuqian. Although Lu Qiuqian's saves were twisted, they were rejected by him one by one.

Real Madrid's attack became more irritable, and the unwilling Robert Llos rushed to the frontcourt and shot a long shot. The football flew high after being blocked by Lucio's thigh, and was easily relaxed by Lu Qiuqian. Won.

Carlos was too annoyed to see Lu Qiuqian throwing the ball behind him. Carlos looked back, his compatriot Ze Roberto was waiting at the landing point!

Lying trough, empty behind! Carlos hurried back, but it was too late. Seeing that he was getting closer and closer to his penalty area, Carlos grabbed his teeth and pulled Ze Roberto's jersey, and Ze Roberto fell back. Ground.

Du ~~ A sharp whistle sounded and De Santis showed Carlos a yellow card. At the same time, he gave Bayern a free kick at the front of the penalty area.

Just as Real Madrid players lined up, Lu Qiuqian trot from the backcourt; he even planned to take a free kick? Really a special goalkeeper!

Chapter 273 - Advance to the top 8

After seeing Lu Qiuqian standing at the penalty spot, Beckham looked involuntarily behind his teammate Casillas. Between them, Casillas looked dignified, leaning against the post and carefully

observing the position of the wall and Lu. Qiu Jian free kick the possible angle, and shouted loudly to adjust the position of the wall.

Adjust the position according to Casillas' instructions. Beckham withdrew his eyes and looked at Lu Qiu Jian. Come on, let me see if your free kick is really as magical as the media said!

Ronaldo thought a bit more. He looked at Lu Qiu Jian for a while, and then looked at the empty goal of Bayern opposite. It seemed that he was trying to hit a long shot at half time when he didn't make a free kick.

Facts have proved that Ronaldo thought a little. After the referee whistled, Lu Qiu Jian ran a few steps and made a wonderful arc on his right foot, bypassing the wall of people and bypassing the hands blocked by Casillas. Falling into the goal did not give him a chance to fight back quickly.

Fuck, it was reversed so soon! The Real Madrid players stared blankly at the football that was still rolling in the net, and could not accept this reality.

This free kick seems to be the footwork! Ronaldo remembered the days when he played side by side with Recoba in Inter Milan, but did not expect to see the same footwork in another person!

"I knew it! I knew it! I knew you could do it!" Barak was so excited now that he was going crazy. His hands shook Lu Qiu Jian's shoulders for a while, and he was awarded a penalty 20 minutes ago. At that time, he was almost desperate, but Lu Qiu Jian pulled Bayern from the abyss, let them see the hope of victory again!

"It's awesome! Lv, we will definitely be able to advance, right?" Veteran Lizarazu couldn't restrain his excitement even though he experienced the shocking reversal of the French team in the 2000 European Cup final. But at that time, the French team was dominant, and Bayern's situation today is much more dangerous than that of the French team.

"Lv, from today. You are my idol!" Lucio ran from the backcourt, kneeling on one knee on the ground. Reported that Lu Qiu Jian shot his right foot on his knee and made a motion to help him shine shoes.

"Okay, the game is not over, now Real Madrid has 60 minutes to change the situation, we must stick to it!" It was almost time to see the celebration, Lu Qiu Jian said.

“No problem, although I am older, I will not let Carlos and Figo pass me easily!” Lizarazu, who is almost thirty-six years old, patted his chest. He has already won the World Cup, the European Cup, the Bundesliga and the Cup in his career. It would be better if he won the European Championship representing the highest honor of the club before retiring!

“Leave it to me at midfield!” The eyes of the runner-up collection professional Hu Barak showed endless firmness, and I will never let that tragedy repeat itself!

The defenders such as Lucio, Kovac and Sagnol have repeatedly guaranteed to keep the advantage of the ball; Bayern contracted overall in the last 15 minutes of the first half, and even Ma Kai and Pizarro returned on the front line. To help the defense in the penalty area, plus Real Madrid was a little bit unnerved after being hit, the score of 2: 0 finally stuck to the end of the first half.

“Good job!” When Lu Qiujiang returned to the sidelines, the consistently stern Magath couldn’t help but hug him warmly, “You are too surprised me!” He is now very much like himself. Signing Lu Qiujiang decisively and proudly, he could not imagine how Bayern would end this game without Lu Qiujiang.

“I think there was a loophole in the original contract. It didn’t even say that the prize is not lost! Can I ask for it now?” Lu Qiujiang made a joke.

“No problem at all!” Magath smiled at Kahn in the stands behind the coach seat. “I’ll give you the fine of Oliver’s red card as a prize blond, Oliver! Do you have any comments? “

“Absolutely not! If not enough! I will contribute a few more weeks’ salary!” Kahn in the stands stood up when he heard Magath. If it was not Lu Qiujiang, when people thought about the reason for Bayern’s elimination, the useless red card for handball in his game would definitely be said by people for several weeks. This is also a bit of gratitude to Lu Qiujiang.

“Okay, let’s go back to rest and talk about the tactics in the second half!” Magath took the players back to the locker room because of a delay on the sidelines. When they returned to the locker room door, Real Madrid’s The players have all entered the locker room.

Listen to the roar of Lusenberg from behind the door. Magath smiled and said, “Look. They are already nervous, as long as we stick to it for a while in the second half. The final victory will definitely belong to us!”

Into it, praised the performance of the players in the first half, Magath began to make tactical adjustments, “Pizarro, we can’t provide too much support to the frontcourt in the backcourt, so you may want to The next break! Desler, you replace Pizarro, you use your foot skills to control the ball in the midfield for a while, if there is a chance, make a decisive breakthrough, if Real Madrid fouls, I believe Lu will seize the opportunity ! “

“Okay!” Pizarro nodded somewhat depressedly. www.mtlnovel.com ~ He was certainly not happy to be replaced in such a crucial game, but Magat’s reasons were irrefutable.

Real Madrid also made adjustments in the second half, using Guti, who has better passing and organization skills, to replace the midfielder Gravesen, trying to use Guti’s ability to create opportunities. However, under the defense of the Bayern players, the Real Madrid has never found an opportunity to break into the penalty area, and the long shot outside the penalty area does not pose a great threat to Lu Qiu’s excellent judgment and response ability.

Instead, in a corner match, Lu Qiu once again confiscated the corner kick made by Beckham by grabbing a rebound and immediately tossed the ball to launch a quick counterattack. After Desler received the ball, he broke through to the front of the penalty area. After inserting Barak, Barak ran a long shot to break Casillas’ goal and locked the victory for Bayern.

Real Madrid players have superb skills, but their will is not outstanding. After Barak ’s goal, Real Madrid ’s morale quickly declined. Everyone except Beckham lost their fighting spirit until the end of the game. They also failed to break the goal guarded by Lu Qiu.

So Bayern Munich reversed Real Madrid into the quarterfinals with one less man!

Chapter 274 - Omnipotence (20/36)

As soon as the referee’s whistle sounded, all the fans celebrated as crazy as they had won the European Champions Cup. Eighty thousand fans on the scene chanted Lu Qiu’s name in unison. They all knew that Lu Qiu was the one The game led Bayern to the point of resurrection.

In the box, the three giants of Bayern Munich, Beckenbauer, Rummenigge and Hernes, also collectively applauded Lu Qiu. Unexpectedly, a part-time player who accidentally signed a contract only took half a season to conquer All Bayern fans, of course, these management members also fell for Lu Qiu’s skills; if he can participate in the game full time, then Bayern may create a record of the five major league points?

“Now it is almost certain that Lu Qiu is the best signing for the entire Bundesliga this season! No. Even putting it in the whole of Europe is the most successful!” “Photo” reporter Mark has thought about a news headline.

“No, I must be dreaming, this is not true! How could the Galaxy fleet lose to a team that has never had a goalkeeper!” Correspondingly, the Aspen reporter, the Real Madrid’s royal media I don’t know how to report this game.

Needless to know, when Real Madrid returns to Spain, they will face the endless anger of the fans; Calderon barely squeezed out a smile and hurriedly left the box after shaking hands with Bekenbauer and others, He knew that he could not sit on the throne of Real Madrid for a long time!

He deeply regrets that he had changed his coaching sooner. If Lusenbergs did not take office, he can still throw the pot to the head coach, but he is already the third head coach of Real Madrid this season! Three coaches changed in one season, this is definitely the responsibility of the club chairman!

The celebration in the Bayern locker room continued until the press officer urged the third time. The players of Bayern are all players in the battle. The experience of reversing the win is very rich, but like today, there is no penalty for a penalty. The situation is reversed, I am afraid no one has experienced it.

“Lv, Michael, go with me for an interview!” Kahn is not here. Magath chose today’s captain Barak and Lu Qiujiang to participate in the press conference together.

“This is a wonderful game. Real Madrid has performed very well. I can’t imagine what the game will look like without Lv!” Magath talked to the microphone. “Real Madrid was just out of luck and met a player like Lu!

“Yes, he is omnipotent!” Magath finished his speech, and Lusenbergs took the microphone depressed. “When in Spain. I watched many videos of the games that Lu participated in. I found that he played. The striker has played in the midfield and sometimes has good play on the wing! When developing the tactics for this game, I had a headache for how to limit his play for a long time! “

Lusenbergs spread his hands, “I think I’ve done a thorough study of him! I didn’t expect him to be able to play even the goalkeeper’s position! I now prefer that the referee didn’t punish Kraft! At least that penalty We can enter, so that the development of the game will not be as bad as it will be! “

“Igor, what do you think of Lu Qiujiang’s goalkeeping skills? You know he didn’t miss a goal in this game!” At the time of free questioning, a media reporter from Catalonia approached Casillas , What

he didn't finish was. An amateur goalkeeper missed one goal, but you lost three goals. How do you explain?

“Although his saves do not look like they have received professional training, his judgment of the ball path and his ability to select positions are first-rate! If he undergoes a period of training, I believe he will become a World-class goalkeeper!” Depressed Casillas replied.

“David, tell us about Lü's free kick!” The next reporter from the UK came to Beckham. Now the reporters love and hate Lv Qiujian. What he loves is that he always makes He hated the news because he was too difficult to interview, and he always likes to answer questions with unpredictable scientific knowledge. They don't understand! So at the beginning of the press conference, the reporters first found other people.

“Lu's free kick technique is excellent!” Beckham heartily exclaimed. “Everyone knows that a player can master free kick skills. For example, I am only good at taking the penalty of 20 from the goal. A free kick from 5 meters to 30 meters must also be a position where the right foot can shoot; Carlos is more used to the position where the left foot can directly attack the goal; but Lu is different, from the mid-circle arc to the goal, almost All positions are within his range, he can choose the most appropriate main penalty method according to the position of the penalty point, which is a disaster for the defending side!”

“Yes. I was almost desperate when I was awarded a penalty!” This time the question was replaced by Barak, and he admitted his feelings at the time, “especially when Ronaldo's supplementary shot into the net. In a flash, I thought that the road to the Champions League this year might be over! But Lu re-ignited our hope with his excellent performance; to be honest, although the captain's armband of this game was worn on my arm, I think Lu It is the captain who leads us forward!”

“Hello, Lu, I am a reporter for the” Team “. I saw that you rushed to the referee immediately after Ronaldo made the penalty and said something to Mr. De Santis, then he decisively announced the goal Invalid! We really want to know what you were talking about at the time?” “Finally someone asked Lu Qiujian I told Mr. De Santis at that time that according to the rules of the game promulgated by FIFA, Ronaldo 's The supplementary shot is a second touch, and we should be awarded an indirect free kick!” “Lv Qiujian repeated the scene at that time,” Of course, even without my reminder, Mr. Desantis' professional qualities will find this problem and cancel the goal!”

“You are so familiar with such unpopular rules, how did you do it?” To be honest, few of the many reporters present were able to judge the basis of De Santis's penalty at that time!

"I bought the latest version of the football rules and remembered it after reading it!" Lu Qiujiang nodded and said.

"You mean that you read the rules and remember the content of each one?" The reporter of the "Team News" opened his mouth, he also turned over the book, and even the rules with explanations are thick. A book, how can it be so easy to remember!

"Yeah, my memory is not bad. I haven't forgotten what I have seen once!" Lu Qiujiang's face was light and calm.

Chapter 275 - Different reactions of the media

When Lu Qiujiang woke up from the bed the next day and turned on the computer to enter the news page, there were overwhelming reports of his excellent performance in the previous game.

"Yes, he reminded me at the time that Ronaldo's supplementary shot was a second touch and should be invalidated! I negotiated with the referee and made that decision after confirming that the football did not touch the goalkeeper during the flight!" This is the reporter's interview with the referee De Santis.

De Santis praised Lu Qiujiang's mastery of the rules very much. "Obviously Lu has a thorough understanding of the rules of the game. If every player can be familiar with the rules like him, our referees will be able to do the work easily. a lot of."

In the end, he had not forgotten to tease Lu Qiujiang, "Or Lu may consider to be a referee after retiring, I believe he might become the greatest referee after Corina!"

Then turned to the domestic webpage, which was also full of various interpretations of the game. At the same time, they put the photo of Lu Qiujiang wearing a goalkeeper jersey and goalkeeper gloves in the most eye-catching position.

Is very different from the report strength after the last cern report! Lu Qiujiang recalled his experience of browsing the web before going to Crete. The amount of news that time was a little bit worse than this time.

Lu Qiujiang understands this kind of reaction. For ordinary people, it is very difficult to understand the great significance of the Higgs boson, and there will not be too many people interested in this; since it will not arouse readers' Concern, these profit-making websites naturally refuse to spend more time reporting.

If it was not for Lu Qiujiang to play a huge role in it, the position of this news would have to be lowered; with the participation of Lu Qiujiang, the website would only raise the position of this news and use Lu Qiujiang's photos to attract The attention of netizens is that after all, a national scientist who has made great achievements in the world can still inspire national pride.

Of course, if this discovery will give Lu Qiujiang the hope of winning the Nobel Prize, the intensity of media coverage will be a new situation. This is the achievement of filling the gap of the Chinese scientist who won the Nobel Prize in Natural Science! By then, the entire website is not uncommon.

The European Champions League game is a concept. The number of fans is more than the number of tech fans and tech workers. People who know European footballer every year are better than those who know the name of the Nobel Prize winner every year. There are far more people (except when there are winners in the country. It must be known that the Nobel Prize in Physiology and Medicine last year was Mr. Tu Youyou, or there are more people than those who know that the Golden Globe winner this year is Messi) .

Lu Qiujiang's brave play in the European arena will surely attract the attention of countless readers. Raising such news to the most striking position of the website will bring huge traffic to the website. In the Internet era, traffic means attention. . Attention means money!

But that time the news went to the "The Hourly News" at 7 o'clock in the evening of Chao Tingtai. Although it was only a little more than ten seconds, the meaning in it was different! The audience of the court station and the news website are completely different. The more times it appears, the more favorable it is for his subsequent plans.

Poincaré conjecture is counted once, and the China Science and Technology Commendation Conference is counted once. Plus this time, he has been on the platform for at least the third time in more than a year! Scientists in China are also among the best! However, this is not enough! If you want to quickly grasp a lot of resources after returning home, you have to continue to increase the frequency!

Close the webpage and open qq. As he thought, the information prompt sounds constantly and quickly. Open it and see it. There are my own temporary agent Liu Yuzhou, and some students from Huaguo Jingshi University. But more of it is the football reporters around the world.

First look at Liu Yuzhou's news. Sure enough, a large number of merchants are looking for him to advertise. Nike and Adi both increased the cost of endorsement to eight digits, which is also the top in the international sports arena! In addition, because of his presence in Germany, companies such

as Mercedes-Benz, Siemens and others have also found them. In addition to being a scientist, he is also sought after by high-tech companies such as Nokia and Microsoft, and he has sent checks in order to allow him to speak for his products.

For these invitations, Lv Qiu Jiantong was pushed away, and business activities were very time-consuming, unless they were willing to reduce the incident to the extreme, otherwise he would not sign his name on any brand contract!

As for money. With the income of Simmons' Renaissance company, he can already live better than most people in the world! And even if he receives all the advertisements, he can't meet the needs of the plan, so he will ignore these pursuits that make all athletes hot.

Then I chatted with Li Yincheng and other old classmates, and looked at the work that Ye Chu and other students sent via email. After carefully revising the letter and setting up new assignments, he just opened the news for the media reporters.

"It may be considered that you are online! Since you agreed to be interviewed in Geneva last time, I am waiting every day!" Feng Hongqi sent a crying expression.

"I have been busy recently!" Lv Qiuqian again came up with this reason to cope with it, "It is still half an hour before I go to the laboratory. If you have any questions, please ask!"

Lv Qiuqian posted and copied this message and sent it to all the online reporters; then it was the same as the last online cafe. Fingers jumped fast on the keyboard and started to respond quickly in many languages such as English, French, German, Spanish, Italian and Chinese.

Most of the interviewers were sports journalists, and most of the topics they asked were about the game just past. Only the reporters of the Youth Daily paid more attention to his dynamics in science and technology.

"So, Dr. Lu, after making this great discovery, what is your work plan for the next stage? It is to further in-depth research on the Higgs boson, and strive to complete the Higgs boson as soon as possible. It is confirmed statistically that there is still a new plan? "The other party asked in a hurry.

"Then this area will be some repetitive work, I want to complete some more pioneering work!" Lu Qiuqian replied politely.

The other party was refreshed and quickly typed, “So what is your new direction?”

Lu Qiuqian thought about it, and it’s no big deal to announce it now, so he started typing in the dialog box, “The next thing I plan to study is ...”

Chapter 276 - Dark matter

“The next thing I plan to study is dark matter!” Lu Qiuqian entered such a sentence in the dialog box, and then sent to the reporter of “Youth Daily” in the past!

“You are talking about dark-matter?” The reporter on the other side apparently had a few brushes, and soon understood what Lu Qiuqian said. The visible matter in the universe only accounted for less than 4% of the total mass of the universe. The remaining 23% of the substance content is dark matter, and the remaining 73% is dark energy. (These three ratios have slight differences in different materials. I chose one randomly here, which will not have much impact on the next plot. .)

“Yes, dark matter and dark energy are currently hot topics in physics research. I can’t help but try to see what kind of results I can make!” Without waiting for the response there, Lu Qiuqian was ready to leave. “I’m sorry, there are still things in the lab. Let’s get here for today’s interview. See you next time!”

“Oh, okay, see you next time!” It took a long time for the reporter from the opposite side to respond, and when he entered the above words and sent them over, Lu Qiuqian’s avatar had darkened.

“Editor! Leave me a page, I interviewed Lu Qiuqian!” A reporter from the editorial team of the “Team News” stood up from the computer and said excitedly, at the same time he felt emotionally, paralyzing my QQ number. A few stars hung out, and finally I caught Lu Qiuqian!

This kind of scene happened in the editorial department of all major sports media in Europe. When Lu Qiuqian retired and returned to China, the qq numbers of these reporters were listed for several suns! This QQ level is almost comparable to those boring college students who spend nights in Internet cafes every day!

“How about it, did you find any big news?” The editor-in-chief of “Youth Newspaper” peeked at the reporter who had just been recruited from the Physics Department of Mizuki University for a long time.

“Well, there is very important news. Dr. Lu does not plan to continue to study the Higgs boson, he has a new research direction!” Li Meng, a female reporter who was specifically responsible for tracking Lu Qiuqian soon after arriving at the newspaper .

“Oh? Then what is he going to study?” The editor-in-chief stood there awkwardly. Hey, this kid is good at everything, but he doesn’t know how to look at him. Can I understand this inscrutable physical knowledge? You haven’t hurried to say things yet. Explain it in words I can understand.

“Dark-matter of Dr. Lu’s new direction, that is, dark matter!” Li Meng finally realized that he had graduated from school, and now he was not his teacher, and the editor-in-chief probably would not understand what dark matter is. So she quickly explained, “On the last day of the late 19th century, the famous British physicist William Thomson said while looking forward to 20th-century physics,” Dynamic theory affirmed that heat and light are two ways of movement, now. Its The beautiful and clear sky is enveloped by two dark clouds, these two dark clouds are ether drift and black body radiation. “

Seeing Li Meng seemed to be talking for a long time, the editor-in-chief simply pulled the chair next to her and listened closely; “In order to solve these two problems, physicists have worked tirelessly to give birth to the theory of relativity and quantum mechanics. Two great physical theories, and this has become the foundation of modern physics! “

Li Meng took a sip of water and moistened his throat, and continued to spread knowledge to the editor-in-chief. “To date, the standard model of particle physics can already explain the properties of all known elementary particles quite well. Theories such as optics have laid a solid foundation. Dr. Lu ’s previous discovery of Higgs bosons falls into this category. His discovery makes the standard model more perfect! “

“However, at the end of the 20th century, physicists discovered that the sky of physics was covered with two new dark clouds, that is, dark matter and dark energy!” Li Meng finally said the topic, “The two dark clouds have also become the most In the research field of concern, among the eleven most important problems in physics today listed in the physics section of the 2002 magazine, dark matter and dark energy are ranked first and second! And the origin of the universe is only ranked first. Eleven! “

Although he still does n’t understand what dark matter is, many years of experience in journalism have led the editor to quickly grasp the focus of the problem. Relativity is on par? “

“Ah, can’t say that!” Li Meng is full of black lines. It’s so difficult to talk to a layman! “Because I do n’t know what Dr. Lu can do now, we are not good at judging his results, but what is certain is that if Dr. Lu found the exact existence of dark matter like the Higgs boson. Evidence, then he will definitely win the Nobel Prize in the shortest time! “Li Meng said firmly.

“Then why the Higgs boson cannot be awarded. The dark matter can be awarded?” The editor-in-chief still didn’t quite understand!

“It’s not the same!” Li Meng subconsciously retorted, he felt his tone was wrong after he finished speaking, and quickly spit out his tongue to explain to the editor, “First of all, the Nobel Prize allows up to three people to win at the same time, Higgs, The three professors of Engle and Braut have already filled up the quota even Gerald-Guralnik, Dick-Hagen and Tom who predicted the God particles almost simultaneously with them -Kibbo is not eligible for awards, let alone Dr. Lu! Because according to the theory of Higgs and others, if the God particles really exist, he will be discovered sooner or later, even if there is no Dr. Lu, wait a few more years. This discovery will still be made. Although Dr. Lu’s work is great, it is not irreplaceable. “

“And dark matter is different! God particles had a perfect model before they were discovered. What exactly should dark matter look like? So far there is no conclusion about physics! If Dr. Lu really discovered dark matter, then he must first mention Come up with a complete model, and then look for dark matter according to the predicted properties in the model. “Li Meng said as much as the editor could understand.

“If his theory is confirmed by experiments, then this will be a major earthquake in the physics session, which will bring extremely profound impact on the future development of the physics session, and he will have no suspense in winning the award!” Li Meng finally concluded this way.

“You have to have a theory first, and then make experiments based on the theory. The results of the experiment will in turn prove the correctness of the theory! Finally, you can win the prize!” The editor-in-chief helped Li Meng to make a summary.

Chapter 277 - The history of dark matter (21/37)

In fact, the editor-in-chief is a layman. Finding dark matter does not necessarily require new theories. According to existing theories, it is possible to find dark matter, and even dark matter that has not been predicted by any theory in the experiment; if this is the case, the theory is put forward. The person who won the award, the person who discovered the latter situation won the award; the reason why Lu Qiuqian proposed a new theory, in addition to this theory is indeed feasible, but also want to make his reasons for winning more solid!

Since dark matter cannot be seen, how did physics discover its existence? Or why do physicists assume the existence of dark matter?

This starts from the work habits of physicists. Mathematicians now put forward some self-evident assumptions, such as the shortest straight line between two points, and then derive a huge mathematical system from these self-evident axioms; The physicist first proposed the hypothesis,

and then used it first. If this hypothesis can be self-consistent, meet the known phenomena in measurement accuracy, and make reasonable predictions, then it is correct.

Physics is falsifiable. For any physical theory, we may design some kind of experiment to falsify it; now we accept a certain physical theory, not that it is proved, but that it is not falsified by any real verification. If it is proved wrong by experiment, then it is wrong, if it cannot be proved wrong, then use it! For example, Galileo's two iron ball experiments proved that Aristotle's theory was wrong.

The appearance of dark matter must be traced back to Einstein's theory. Einstein believed that the shape of the universe depends on the mass of the universe. He believes that the universe is limited and closed. If this is the case, the average density of matter in the universe must reach minus 30 cubic grams per cubic centimeter. However, the density of the observable universe so far is 100 times smaller than this value. In other words, most of the matter in the universe is "missing," and scientists call this "missing" matter "dark matter."

In the next 100 years, many physicists and astronomers found evidence of the existence of dark matter through different channels. In 1933, the Swiss astronomer Fritz Zwicky of the California Institute of Technology discovered a galaxy. The galaxies in the cluster are faster than expected. According to Newton's law of universal gravitation, it means that there is a lot of unobserved matter between galaxies.

According to his inference that the mass of the galaxy cluster is 400 times greater than the mass inferred from the luminous stars in the galaxy cluster, and the concept of "dark matter" was first proposed, but this view was not taken seriously at that time.

Until 1970. The female scientist Rubin and her at the same time Ford finally found convincing evidence. Through the study of the rotation curve of the Andromeda Nebula, they discovered a strange phenomenon; according to Newton's law of gravity, if the mass of a galaxy is mainly concentrated At the core of the galaxy, the speed of the stars outside the galaxy will decrease as the distance increases. But from the results they observed, the speed of the outer stars of the galaxy is constant within a considerable range!

So they reached a conclusion similar to that of Zwicky, either Newton's law of gravitation is incorrect, or a lot of unobserved matter is distributed in the non-core area of the galaxy; because Newton's law of gravity has not been falsified, dark matter becomes The only explanation.

Then many similar astronomical phenomena were observed, so the theory of the existence of dark matter was widely recognized, but until now, there has not been a reliable dark matter model established in physics, and no dark matter has been really found.

The existence of dark matter poses new challenges to particle physics theory. In the standard model proposed by Weinberg, only neutrinos may be dark matter, but research shows that neutrinos cannot be the main component of dark matter in the universe. So dark matter requires a new physical model that exceeds the standard model.

Physicists have also proposed a variety of models such as the minimum supersymmetric model, the extra-dimensional model, and the small Higgs model, but there is no way to obtain conclusive experimental evidence.

Because dark matter does not participate in the electromagnetic response. Therefore, it is difficult to directly observe with astronomical telescopes, so physicists have designed three different observation methods to explore, namely accelerator observation, indirect observation and direct observation.

Accelerator observation is the use of particle collision to create dark matter, and then speculate on the nature of dark matter based on the energy and distribution taken away by the dark matter particles.

Indirect observation is to observe the stable visible particles produced by the decay of dark matter particles, and to infer the properties of dark matter according to these clues.

Direct observation is to establish an observation room that can shield most ground interference signals in extremely deep underground, and detect the signals generated by dark matter particles and material nuclei in the detector. This is also one of the most feasible exploration methods at present. But this approach is a bit troublesome for Lu Qiujiang.

To explore dark matter, you must have an extremely deep underground laboratory, and now whether it is the underground scientific laboratory of 2438 meters underground in the Black Mountain Holtek Gold Mine in South Dakota, the United States, or the deeper Huajin Jinpingji Deep underground dark matter laboratories still exist only on drawings. There is still quite a long time before it is put into use, and he has no time to wait for the completion of these two major projects. However, the existing Italian gran-underground laboratory cannot meet his requirements.

So accelerator exploration has become his only choice at present, which is also the purpose of his previous efforts to find new data analysis methods and help cern adjust the test plan.

First of all, only by helping CERN complete the exploration of the Higgs boson, will he have time to complete the experiment on dark matter; secondly, he confirmed his strength through the huge contribution of the Higgs boson discovery process. It is possible for CERN to carry out experiments to discover dark matter according to his own test plan.

Of course, it is unrealistic to go to CERN immediately to come up with his own experimental plan and let Dr. Evans carry out the experiment according to this plan. A Higgs boson experiment is not over yet, CERN still has more discoveries are needed to make the Higgs boson statistically meet the criteria for determining existence; second, Lu Qiujiang needs to build his own dark matter model, so that the huge feedback from the collider experiment. The dark matter particles of the kind predicted by myself were found in the data.

“Professor Xuft. I have a new article for you to help!” Lu Qiujiang went into Professor Xuft’s office and put the paper on his desk.

“Oh? What is the article? About the Higgs boson?” Professor Xuft wiped his glasses and took Lu Qiujiang’s thesis. Lu Qiujiang did it during the discovery of the Higgs boson. After so much work, it would be a bit wasteful if you do n’t write a few articles.

“The article about the experiment will be completed by the entire experimental team! This time my article is about dark matter! I designed a new dark matter particle model.” Lu Qiujiang sat on the chair and waited for the professor’s reply.

“Dark matter!” Professor Xuft grumbled and opened the paper.

Chapter 278 - Lu Qiujiang's model

The article is not long, but Professor Xuft watched it for more than an hour. Lu Qiujiang sat immobile against him, but he was thinking of how to design experiments to find the dark matter particles predicted by his model.

It took a long time for Professor Xuft to put down this article, took off his glasses, and massaged his nose above the bridge of the nose for a while to relieve his visual fatigue. During this period, he wanted to say something but did n’t know how to say it. He shook his head and said, “Lu, although I also have some research in the field of dark matter, but this is not my most concerned field, so I can’t comment on your article for the time being!”

“But Prof. Jörg Dietrich and his team in our school have been observing the dark matter in the universe for a long time!” He said, “We will go to the Munich Observatory later Professor Dietrich, let him help you read your article! “

“Okay, thank you, Professor!” Lu Qiujian was not surprised by this result. Just as Professor Nan asked Professor Thurston to help him read the paper about Poincaré’s conjecture, the branch of modern science is getting more and more Fine, every tiny field requires scientists to devote all their energy; Fortunately, there are also experts in dark matter at the University of Munich, can help Lu Qiujian read this article, otherwise it will be more troublesome.

“It seems that you intend to use dark matter as the next research direction, a good choice!” Professor Xufute encouraged Lu Qiujian to collect the paper.

Hey, isn’t this easier to win the Nobel Prize! If there are not many fields that won the Nobel Prize in a short period of time, Lu Qiujian chose the most convenient path. If the condensed matter field is more likely to win, he will also choose it without hesitation. Thinking like this, it turned into the mouth, “The universe is so beautiful that people can’t suppress the urge to explore. The standard model has basically been able to solve the problem of the visible matter field, so I turned my goal to dark matter.”

“Professor Dietrich’s temper is a little weird. So this time I will not take you past; but I want to wait for him to read your article and let you pass immediately!” Said Professor Xuft took off his own Jacket, walked out with the handbag, “So you have to keep the phone on.”

“No problem, I won’t go anywhere today. Just waiting in the laboratory!” Lu Qiujian followed Professor Xuft except for the office, separated at the door, watched him drive the car to the direction of the Munich Observatory, and then returned to the experiment In the room.

Another Mr. Dietrich, who had not recovered from the surprise of the Higgs boson, looked at the computer and made a smirk from time to time.

“Hey. Pay attention to the image, in case someone comes in, you will doubt the average IQ of our laboratory members!” Lu Qiujian couldn’t help but patted him on the shoulder. If a reporter came in and saw him like this, he might think he was mentally retarded. Hospital?

“Uh, Lu, do you say that our name will appear on the paper?” As mentioned earlier, the author names of cern’s major papers can be written on several pages. From the past practice, they look at their laboratory, As the head of the cooperating unit, Professor Xufute played a huge role in the experiment and was sure to be selected. The name will still be very high, Dietrich as the first person to find the data is also likely to be selected, others are not sure!

“I think there should be no problem!” Lv Qiujian said firmly, after comforting Dietrich he went back to his computer and conceived the experimental plan. In the experiment of the Higgs boson, he was a supporting role. , Engeler and others are the protagonists, but this time I want to be the protagonist, I feel absolutely different.

This is like Lu Qiujian working for a big boss Higgs in a company. Although he made a big project, he can get a bonus, but it is not worth mentioning compared with the big boss Higgs's gains. It's now; I started my own business. The big heads you earn are all yours!

Of course, it would n't work without previous work experience at Higgs. It 's very difficult to start a business without any relevant industry experience; I do n't know the relevant rules in the industry, I do n't have the necessary connections, and I do n't have enough professional knowledge. Will not accept his project.

Now after half a year of preparatory work. The preparations for starting a business are almost done; he now knows how cern works internally, and he knows the real power figures in cern, such as Evans and Hoyle, and has a good relationship with the veteran Higgs of the theoretical world. , Exercised his ability in the field of experimental physics and won unanimous praise from relevant scientists. If his theoretical model is recognized by the physics community, then he can start experimenting.

If Higgs can win this year. No, as long as there is no accident, the three of them will definitely win the prize! Because of his tremendous role in the experiment, Higgs and others owe a big favor to him, so when his results come out, he will definitely recommend himself as a candidate for the Nobel Prize in Physics ~ [www. mtlnovel.com](http://www.mtlnovel.com) ~ Nobel prizes have different requirements for nominees. For example, the literary prize is relatively broad. Academicians of various nationalities, professors of literary history and language in universities and other colleges of higher education, Nobel Prize winners and The presidents of writers 'associations of all countries have the right to recommend candidates; any country can pick up a bunch of professors and teachers who are eligible to be nominated. Of course, you have to take out a small country like the Vatican and San Marino.

The number of people who are eligible to be nominated for the Physics Award will be much less, only limited to Swedish or foreign academicians of the Royal Swedish Academy of Natural Sciences, members of the Nobel Committee on Physics and Chemistry, scientists who have been awarded Nobel Physics, Recommended by scientists such as Lund, Oslo, Copenhagen, University of Helsinki, Caroline School of Medicine and Royal Institute of Technology permanent or temporary physics professors. I am afraid that the total number of scholars with the right to nominate the Nobel Prize in Physics is less than one thousand! This is many times worse than the literary award.

For example, after the report of the Higgs boson, the three nominees for Higgs, Engle and Braut were the candidates for this year's Nobel Prize in Physics.

Lu Qiujiang, who was planning the experimental plan, was disturbed by the vibration of the mobile phone in his pocket. Probably Professor Xuft's phone? Lu Qiujiang felt the phone over and over again, hey, why is Beckenbauer?

"Lu, next Wednesday, you must come to the club anyway!" Beckenbauer said solemnly.

Chapter 279 - Pharmacy 10 arrives at Bayern

"Well? What's the matter?" It's too early to calculate the time before the quarter-finals of the Champions League! Wasn't the other games in the quarterfinals finished yet?

"A leader from your home country will visit Munich in the near future, and the Bayern Club may appear on his itinerary! So the club hopes that you will be present at that time!" This is a good opportunity to promote Bayern Munich to China! Beckenbauer had long watched the huge market in China, and since Lu Qiujiang kicked out, countless Chinese sponsors came to talk with Bayern about the next year's contract, and the club's revenue has increased significantly; Beckenbauer naturally will not let go of this good opportunity to improve Bayern Munich's popularity in China.

"Well, which leader is this? When is the specific time to visit Bayern?" Lu Qiujiang asked.

"It is said that it is the highest leader of a coastal province in China, a young and promising politician! As for the specific travel time is still in the confidential stage! So I am not sure! But what is certain is that visiting the Bayern Club is the other party's initiative The request put forward will not make you run for nothing! By the way, which leader also specifically mentioned your name. "Beckenbauer said half-jokingly and half-seriously," Maybe you are him The main reason to come to Bayern! "

Who is the one? Lu Qiujiang speculated that he would quickly find a few possible candidates in his mind. If it were him, it would be necessary to go there. "Well, I will arrange the time. I will start on Wednesday morning Go to the club! "

"Okay, I will send a car to pick you up!" Lu Qiujiang used to take a bus or run before going to the club. He is probably the only player of Bayern who doesn't drive himself? This makes Bayern's car sponsor Audi very depressed. If Lu Qiujiang can drive his own car, what a good advertisement!

Hanging up the phone, Lu Qiujiang did not think about which leader was going to come to Bayern to waste too much time. It is a little early for her to get in touch with senior people, and there is not

much need for her. , When I return to China after receiving the Fields Medal and the Nobel Prize, I think the elders will receive their own?

However, he did not pretend to avoid being high, and it was beneficial to establish a certain relationship earlier. At least when you meet again, you can have multiple topics.

Put the phone back in his pocket and continue to simulate the progress of the experiment on the computer, while waiting for Professor Xuft's phone call, but until the end of work. The phone still didn't ring again.

"Today's work is finally finished, Lu, what are you going to eat for dinner? I was about to vomit for the pizza some time ago. Let's go to dinner tonight?" Dietrich stretched out and walked up to Asked beside him.

"What do you want to eat? Karl. Ludwig .. Will you also go together?" Lu Qiujian greeted the others and asked.

While everyone was talking hotly about where to eat a big meal, the door of the laboratory was pushed open, and Professor Xuft walked in, followed by a middle-aged man who looked about forty or fifty.

Xufte glanced at the noisy crowd and waved his hand, "Go do what you want! Lu, please stay here. This is Professor Jorge Dietrich. Let's talk about your article. . "

"Huh? You have a new article?" Another young Mr. Dietrich asked, "What is it about? Is there anything I can help with?" He had already decided to hug Lu Qiujian's thigh is gone.

"I'll talk to you tomorrow!" Lu Qiujian glanced at Professor Xuft's direction. Dietrich nodded appreciatively with Ludwig and they left the laboratory.

"Hello, I'm Jörg Dietrich at the Observatory of the University of Munich!" Professor Dietrich raised the printing paper in his hand. "Hillman told me this is your article? I happen to be in dark matter After a long time of research, I am very interested in your article, so I want to come over and talk to you! "

"Very honored!" The three of them walked to the lounge area in the corner of the laboratory and sat on the sofa to discuss Lu Qiujian's article.

“We recently observed that there is a sign of dark matter in the filaments of a super galaxy cluster.” Professor Dietrich first introduced some of his research progress. “We all know that the gravity generated by huge filaments Caused the beam of light emitted from the earth to a distant galaxy to bend; my team and I used this change in beam to calculate the mass of the filament and draw its shape. The x-rays emitted by the hot gas of normal matter nearby showed that Normal matter is part of the filaments of this super-galaxy cluster, but only accounts for 10% of its mass. The rest must be dark matter. “

“But what exactly should the dark matter in the filament look like. We still have no idea. The model you described in this article can solve some of my confusion to some extent! Then, can you tell me you How did you come up with this model? “Professor Dietrich ignored Lu Qiuqian’s age and didn’t think he used the honorific title.

Didn’t Professor Xuft say that he had a strange temper? Now it seems to speak very well! “Of course I think so.” Lu Qiuqian slowly said his inferred thoughts.

The exchange between the three people lasted for more than three hours, and it was not declared until Xuft was hungry. Professor Dietrich was reluctant to invite Lu Qiuqian to visit the observatory next time. As for the paper, of course In recognition of his approval, Professor Dietrich suggested that he send it to “nature”.

Modify the article according to the process of discussion, and continue the daily work of Professor Xuft’s laboratory. The time soon came on Wednesday with Beckenbauer.

Came to the Bayern training ground in the car sent by the club. The players seemed to know that a politician from the motherland of Lu Qiuqian was coming to visit the club. I do n’t know who came, so there is nothing to tell them.

Until the afternoon, the opponent finally came to the training ground, Magath immediately terminated the training, and took all the players of Bayern to prepare for the arrival of the opponent; In sight.

Who do I think it is, it turned out to be him! Hey, I remember he went to Leverkusen? How did Bayern come? Just thinking about it, the leader who was given the No. 10 jersey by Leverkusen in his impression has come to the lawn of the training ground.

Chapter 280 - First meeting (22/37)

Bayern players stood in a row under the leadership of Kahn awaiting the young politician's reception. Comrade Qin Feng, who is currently the leader of Jiangnan Province in China and is also a popular candidate for the elders of the next session, came over and shook hands with them. .

"This is Kahn, I've watched your game! Barak, it's a pity to miss the last game in the last World Cup ..." Sure enough, as in the legend, Qin Feng really likes football, Bayern Several leading players in the lineup can call out the opponent's name without a reminder.

Finally, when Lu Qiujian arrived here, his handshake time was longer. "Dr. Lu, I have heard of your name for countless times. I didn't expect it to be the first time I met on this occasion."

Ok? Heard my name? Would you like to watch the news about the Poincaré conjecture on the court platform or the list of winners of the Natural Science Award? Lu Qiujian secretly guessed while responding.

Fortunately, Qin Feng did not let him wait for a long time to reveal the mystery, "The court station reported that the previous year you cracked the Poincaré conjecture for the first time, and the awarding news for the Natural Science Award was the second time, but you are more That mathematics teaching program! "He said with a smile," My daughter has improved a lot in mathematics since she watched your program. My wife reminded me to thank you when I came to Germany! "

It turned out to be this! Lv Qiujian came up with the picture he had heard in the last life when he heard someone say, "I would rather cry in BMW than smile behind the bicycle", so I found a picture to refute each other. "It can help school-age students improve their mathematics. Interest is exactly the purpose of such a program. I am also very happy to see that my program has achieved good results. "

Because Schweinsteiger and other players were waiting for a handshake, he did not continue to chat with Lu Qiujian, nodded and walked back, but when the handshake ended and took a group photo, he put Lu Qiu again Jian pulled to his side. Journalists from China and Germany pressed the shutter to record this precious influence.

The politician's schedule is always very tight, after taking a group photo. Qin Feng tried a few more feet on the court to end the interaction with the players and began to visit other areas of the club under the guidance of Beckenbauer.

Of course, Kahn, as the team captain, and Barack, the core of the team, also followed the team, and of course Lu Qiujian also came with them.

what. Isn't this Mr. Military Officer? Lu Qiujian saw Mr. Wuguan who was beaten by himself in the training room last time in Qin Feng's entourage. It seems that he seems to be the staff sent by the embassy to take charge of Qin Feng's security. Seeing Lu Qiujian just nodded slightly, he quickly turned his vigilant gaze aside.

".. This is the honor room of the Bayern Munich club. Since the club was founded in 1900, Bayern have won a total of 15 Bundesliga championships. Four European Champions Cup championships." Introduced Qin Feng to the existing Bayern After the honor, Beckenbauer turned his attention to Lu Qiujian, "This year there are excellent players like Dr. Lu in this team. There is great hope to win the Bundesliga championship and the German Cup again. In the Champions League, our grandfather is confident to beat all Opponent! "

Amount, provided that Lv Qiujian can participate in all Champions League games! Recalling the last round against Real Madrid, Beckenbauer was a guilty conscience, and this game was too thrilling. If Lu Qiujian followed the team to the Bernabeu in the first round, I do n't need such excitement to advance!

"Wish your club will achieve better results in the next game!" Being a politician is tiring, even in this relaxed environment, Bayern can not be directly wished to win the championship, otherwise if going to Manchester, Madrid in the future. What if Milan visited? So Qin Feng answered vaguely.

After visiting the honor room, Beckenbauer came up with Bayern's No. 10 jersey and presented it to Qin Feng. The No. 10 jersey generally symbolizes the core position in the team, so when there is no special reason, the club usually chooses this number when giving guests gifts.

Qin Feng took the jersey and put it on his chest to wait for the reporter to take a picture. Afterwards, he handed the jersey to his secretary and said to Beckenbauer, "Can you send me another Dr. Lu jersey?"

"Of course!" This was actually expected by Beckenbauer, but it was awkward to give two different numbers of jerseys at a time, so I chose the number ten; when I saw Qin Feng proposed that the club staff behind him immediately Take out a prepared No. 27 jersey and give it to Qin Feng.

"Mr. Kahn, Mr. Barak, and Dr. Lu. Come and sign for me!" Qin Feng made the same move as the ordinary jersey after receiving the jersey, beckoning in the direction of the three of them. .

Perhaps the signature he wanted was his own, but since Kahn and Barak were also on the scene, it was always bad to be thin. So they called them together? Lu Qiujian speculated.

He signed his name on the No. 27 jersey, surrounded him with Kahn and Barak, and took another group photo of four people. This process was considered to be over.

The next party came to Bayern's echelon training ground. Qin Feng was very moved to watch the young players of different ages under the leadership of the coach. "German football can achieve such a good result probably has a lot to do with focusing on youth training? If there is such a perfect echelon in our country, our national team will certainly not disappoint the fans again and again?"

"At the European Cup in 2000, Germany failed to qualify for the group stage due to the aging of players. The German Football Association President Gerhard realized that there was a big problem in German football, so he launched an expanded talent promotion plan. The implementation began after the World Cup, and Germany has invested nearly 50 million euros in this plan every year. Only now has such a scale. "Beckenbauer is not only the chairman of Bayern, but also the spokesperson of German football, he advised in time. , "If China has such a demand, Germany can help!"

50 million euros? This number is a bit too much for Hua Guo; the visit lasted for more than an hour and was declared closed. Qin Feng whispered something to the secretary next to him when he was leaving, and the secretary came to Lu Qiujian , "Dr. Lu, Secretary Qin invited you to meet at the Chinese Consulate General in Munich in the evening."

"Okay, I will arrive early!" Lu Qiujian nodded and replied, thinking secretly, what did he invite me to meet?
