

D. School 471

Chapter 471 - White House decision

“Oh, this American people seem to take our plan seriously!” After the press conference, Qin Feng saw a series of policies issued by American States, and said to Lu Qiuqian with a smile.

“Hey, it will be difficult to buy equipment from abroad in the later stage!” Although the equipment of the first phase of the base is almost in place, it will definitely need to be added in the later stage. It's not good news for Xihe plan.

“Isn't it good? At least after the introduction of these policies, it will trigger a new wave of return for international students. At that time, our talent level will be greatly improved! As for the equipment, we will prepare from now on!” Qin Feng is quite optimistic! “Miguo has blocked us all the time. As a result, we have blocked a full set of industrial systems. This time it is also an opportunity for domestic high-end equipment manufacturing. We have been manufacturing basic industrial products for so many years, and we should invest in high-end fields. ! “

The government of the United States of America will certainly not speak out publicly about the restrictions on Chinese Americans in the field of aerospace, but how can Qin Feng's position not be known? Lu Qiuqian was also delighted and did not forget to raise his vigilance, “I think There will certainly be other ways, and our confidentiality work should be strengthened accordingly. “

“Well, just wait for some time to move to the new base! Changan was not the focus of the spy of the United States before. At that time, it will be fully closed management. It will not be easy for outsiders to listen to the news! The security department will also strengthen its work. Recently, several espionage operations that have been mastered by us have become frequent, allowing them to dig up a lot of secrets that have not been discovered before. They have monitored these people, and the harvest is not small! “Qin Feng introduced Recent situation. 黒し言し格酔心章 has uploaded

No wonder when he saw Lin Qianjun yesterday, he had a smile in the corner of his eyes, it turned out to be the reason! Talking about his recent work again, Lv Qiuqian left Qin Feng's office after leaving.

Not long after returning to the base, Professor Zhang's phone call came back, and he congratulated Lu Qiu as soon as he opened his mouth, “Little Lu, congratulations!”

“Oh, Professor Zhang, what good is this?” Lu Qiuqian replied with a smile, it seems that the matter of the day should indeed have a result!

Sure enough, what Professor Zhang had to say was that thing, “Xiao Lu, you have successfully been selected into the new batch of co-opted academicians of the Chinese Academy of Sciences and the Chinese Academy of Engineering, and you can be elected without any problems during the public announcement period. That ’s it! Haha, I do n’t think anyone will question your election? “

Scientists who have won the highest awards in mathematics and physics at the same time are not eligible to be elected as academicians of the Chinese Academy of Sciences? Those who stab people who are in trouble will not go to Lu Qiuqian! Therefore, in the view of Professor Zhang, the election of Lu Qiuqian is already a matter of course.

“Thank you, Professor Zhang, if it were not you and Director Guo, I am afraid it would not be so easy to be elected!” Lu Qiuqian knew that there were a lot of sayings in the process of the election of academicians. Professor Zhang and Director Guo are running around. Even if he can be elected, there will be a lot of delay during the period, so this thank you is very sincere, “Do you have time at night? I want to invite you and Director Guo to have a meal! I ’m going to Chang’an, I ’m afraid it ’s not so easy to see you in the future! “

I had dinner with these two. First, I would like to thank them for meeting with them before they left. Second, I wanted to ask them if they had any good seedlings coming out of Beijing Normal University. For Xihe, there is more talent. Not enough!

“Since you have spoken, I have to go no matter how busy I am!” Professor Zhang joked, and the two soon agreed to meet at a hotel near Beijing Normal University after work.

When they arrived at the hotel, the two of them congratulated Lu Qiuqian for a while, and Lu Qiuqian also expressed gratitude again; the guests and the host enjoyed each other for a meal, and the two of them added another one for Beijing Normal University. The general was pleased, and Lu Qiuqian had dug several good talents from them, among them Xia Jia who accompanied him to the High Energy Institute last time.

Lu Qiuqian wanted to change the old problem of poor promotion and promotion in the scientific community of China in the process of Xihe plan implementation. A talented woman who knew physics and had excellent writing skills was the best choice for the promotion department; if not consider Maybe he wo n’t like it when he arrives. He also wants to bring Da Liu to his publicity team!

On the second day of this reunion, the Chinese Academy of Sciences and the Chinese Academy of Engineering simultaneously announced the list of newly elected additional academicians. In this list

with an average age of over 50, only 24 years old The year-old Lu Qiujian became the most striking one; the 24-year-old candidates for academicians of the two academies also created the history of China.

The youngest academicians before him were Lu Ke, director of the Institute of Metal Research of the Chinese Academy of Sciences, and Zhang Yaping, a researcher at the Chungheng Zoological Institute of the Chinese Academy of Sciences. They were only 37 years old.

If Lu Qiujian can be successfully elected, he will break the records of these two people and directly raise the record of the youngest academician of the Chinese Academy of Sciences to the level of an unprecedented person and a non-comer; I am afraid that no one will think that a crossover will occur A scientist who is even more evil than him?

At the same time, he also created the record of the youngest academician of the American Academy of Sciences. Tao Zhexuan, who was originally selected with him, is expected to break the historical record at the age of 32. Unfortunately, the selection of Lu Qiujian made him lose this honor. The records of the youngest academicians in other countries in the world are not very clear, but I am afraid it is very difficult to surpass Lu Qiujian?

After the list of newly elected academicians in each previous session was released, the general public did not care much about it except the insiders. At the very least, why a great scientist such as Yuan Lao was not selected? And now because of the presence of Lu Qiujian, this list quickly spread to all major media.

Without exception, they chose a similar title-“Professor Lu Qiujian was elected to the new academician co-opted list of the two academics.” After a few days of quietness, the phone of Xihe Plan’s external publicity department was broken again. Too.

During the public announcement period, although some people questioned some people on this list, no one ever questioned Lu Qiujian’s selection; the public announcement period soon ended, and Lu Qiujian passed the last pass without dispute. Next, he only needs to receive the certificate from Dean Lu of the Chinese Academy of Sciences and Dean Xu of the Academy of Engineering to become a formal academician of the two academies!

Chapter 472 - Good things

NASA gets a lot of budget every year, but they undertake more research tasks, more than 16 billion US dollars to meet the current research plan is not enough, let alone add the moon base plan! Want us to rush to build a moon base before Lu Qiujian’s team, then increase the budget!

Director Griffin and Mendel expressed the same meaning. Abdelladi nodded while listening, and seemed to agree with their opinions.

“Do you think Congress will approve your application?” President Little Grove shook his head. Since the beginning of the Iraq War, the financial situation of the United States has been showing a tense attitude. Even if Congress approves NASA to accelerate the progress of the Mendel plan, it will not be given. As much money as Hua Guo.

Griffin shrugged, meaning that you had no money to tell wool and wool? At the same time, I made up my mind. After going back, I must use the power of the media to exaggerate the threat of the construction of China’s lunar base and win a better public opinion environment for myself, so that when I get funding next year, I might get unexpected gains!

“Ah, so you think the budget of other projects will be allocated to the moon base plan or cooperate with China, how about the two parties jointly carrying out the plan?” Xiao Shu Cong asked again.

“Any project that NASA is carrying out now has his undoubted reason for existence, and each item is not allowed to be cut down! As for the cooperation with Huaguo, did you forget what happened after the Hughes satellite explosion? “Secretary Griffin is again worried about the intelligence of this President of the United States.” Guiqiu Baiduo, * eye * song

President Bush looked blankly at the crowd. When the Hughes satellite explosion happened, the president sitting in the White House was the zip door. He did not know the details of the incident.

So the relevant staff began to explain the process to him. On the second day of Valentine’s Day in 1996, the Huazheng Changxi Satellite Launch Center, the Long March 3B carrier rocket was carried by a Hughes company’s communication satellite and fired into the air. At 2 seconds after launch, the rocket’s attitude was unstable. After 22 seconds, the star arrow hit a hillside and a big explosion occurred.

The accident caused heavy casualties and caused a series of problems. When analyzing the cause of the accident, both Huaguo and Hughes made a big mistake, and Hughes was going to telemetry in Huaguo. According to the data, the fault point was calculated in the driving amplifier of the navigation gyroscope with deep skills; the second launch was successful afterwards.

It seems to be a matter of great joy, but there are many problems; first of all, the Long March 3 carrier rocket has a direct relationship with the intercontinental missiles. Hughes inadvertently obtained the American spies who spent countless resources and resources. Secondly, Hughes helped

China to correct the technology and remove the bugs in this type of rocket and even similar intercontinental missiles, so that China 's missile technology has been improved.

This incident was used by a senator named Cox to vigorously promote the threat theory of China and set off a new wave of anti-China in the United States; while China also collapsed, its housekeeping weapon was peeped by others After being beaten, he was raked.

Eventually, due to this incident, China and the US aerospace community had formed an invincible feud. The US further upgraded the arms export management regulations, announcing that any satellites containing US components could not be launched through Chinese rockets. International sanctions are imposed; and China has launched a new promotional method of packaged sales of even rockets and satellites, and waits until the satellites are in orbit to pay each other, which also eliminates the possibility of another leak.

After the staff introduced this matter, President Little Grove also understood NASA 's concerns, and they could not bear the responsibility of leaking information to China; and the consistent policy of the United States was to suppress the development of China 's space technology, from commercial satellite launches to The International Space Station plan has always obstructed China, and it seems unrealistic for them to open their mouths in this plan.

“Then we can't do anything?” The little bush spread his hands in frustration and looked at the elites of the political and scientific circles of the United States in the conference room.

“Mr. President, in fact, you don't have to worry too much!” Dr. Abu Dadi, who has been serving as a watchman, came out to make a siege. “Our country's aerospace technology is still far ahead of China. We sent people in the 1960s. The moon, and now nearly 50 years have passed, China has just carried out its second manned space flight. It will take a long time for them to reach the moon, not to mention the establishment of a lunar base! “

“NASA has a budget of more than US \$ 10 billion per year, more than 20,000 employees, and has ten jurisdictions including Ames Research Center, Golan Research Center, Langley Research Center, Jet Propulsion Laboratory, Dryden Flight Research Center, etc. A long-established and powerful research institution, and has long-term cooperation with nearly 100 top global universities such as California Institute of Technology, MIT, Stanford University, Purdue University, University of Michigan, Indiana University, and Pennsylvania State University Regardless of financial resources, material resources, or accumulated experience, we are far ahead of other countries in the world! “Abu Dadi did not notice that the Griffin Director had to eat people's eyes, and looked at the small bush from the perspective of a technical worker. The President conducts the analysis.

“Even if we now have accumulated research experience on the lunar base, it will take a long time for China to catch up, not to mention that we will not stay in place during this time, and we will go further when they catch up! “Abdrati was full of confidence in NASA’s strength.” So I don’t think we need to worry too much about China’s plan. “

“So, what should we do?” President Kobayashi turned his attention to his secretary of state.

Condoleezza-Rice analyzed that Abudrathi ’s opinion was closer to the facts, thinking for a moment, she proposed her own way of handling, “First of all, we have to condemn China for disrupting the existing space situation and triggering international turmoil. Behaviors; then increase the restrictions on exports of high-tech products and technologies from China and our allies to China, and increase the difficulty of China ’s realization of the plan; in addition, strengthen the management of Chinese and even Chinese-American staff working in science and technology departments in the country, As far as possible to avoid their access to core secrets; intelligence agencies should also strengthen their penetration of Xi and plans ... “

These decisions seemed to be a good solution for President Bush, and he consulted other people’s opinions. Apart from Secretary Griffin and Mendel insisting on increasing the budget, no one expressed objection, so this decision Passed smoothly.

Chapter 473 - Academician Certificate

In Beijing, the academic hall of the Chinese Academy of Sciences is full of joyful atmosphere. The newly-elected academician symposium will be held soon. Among the group of middle-aged and elderly people who are either gray-haired or have a crisis of vegetation degradation, they have just passed 24 Lu Qiujian’s birthday is particularly eye-catching.

If it wasn’t for his face, he had enough exposure on the whole news a while ago, and the popularity is too wide. The new and old academicians and staff members who met at the meeting all knew him. I am afraid someone should think that he is a small follower of an academician. Or the closed disciples asked him to leave the seat of the newly elected academician! According to the age calculation, many students brought by academicians are much older than him!

The meeting has not yet started. The academicians are divided into a number of small circles based on their school of origin and their disciplines to gather together and chat happily together; although Lu Qiujian is the youngest in the venue, the number of people around him is the largest. In addition to the six newly elected academicians from the Department of Mathematics and Physics, there is also the Department of Chemistry. Two newly-elected alumni from the Beijing Normal University from the Faculty of Life Sciences and Medicine, and the newly-elected foreign academician and mathematician Ludwig-Fadeyev from the St. Petrograd branch of Lucia Steklov Mathematics.

“After Mr. Fateev attended the meeting, he might as well stay in Beijing for a few more days, just this year’s Mathematics New Discovery Awards ceremony is about to be held. When the time comes, Professor Gals, Professor Thurston of the United States, and Professor Sel of France. and many other mathematicians will participate in the meeting. You can use this opportunity to communicate with them! “After finishing the above words in Russian, Lu Qiujian turned his attention to other colleagues.” Professor Long, Coach Zhang, you Both of you will appreciate the light by then! “

Now that the authority of the New Mathematics Discovery Award is getting higher and higher, the specifications of mathematicians participating in the conference have also increased. As the organizer, Lu Qiujian still hopes that more people can participate in the conference, so take this opportunity to immediately Started the work of attracting people.

Fateev is mainly engaged in the research of mathematical physics and has made outstanding contributions. He once opened the branch of quantum tribody problem research; using Fateev-Fu theory to lay the foundation of the path integral theory of Yang-Mills gauge field; proposed quantum The anti-scattering method pioneered the solution of a series of second-order nonlinear partial differential equations; it provided a mathematical and physical foundation for the establishment of quantum group theory.

These achievements have won many honors. For example, the famous Red Empire State Award, Lucia State Award, Dirac Medal, Marx-Planck Medal and Henry Poincaré Award, etc. His research field overlaps with Lu Qiujian, so I heard this invitation Immediately afterwards, I agreed happily, “Thank you very much for your invitation. I will go to Beijing Normal University in advance! I hope we can talk more about it next time.”

Both Professor Long and Professor Zhang are professors from the Institute of Chen Shengshen Mathematics of Nankai University. Among them, Professor Long mainly studies nonlinear analysis, partial differential equations and N-body problems. Like Lu Qiujian, he has won the Chen Shengshen Mathematician and the National Natural Science Award. His experience is legendary. After graduating from Nankai Middle School, he went to the prairie to work as a sheep and horse for a while. Then came back to colleges and universities to engage in mathematics research.

Professor Zhang once studied in Paris, a holy place for mathematics, mainly engaged in the study of Attia-Singer index theorem and demonstrative category. He has won the Third World Mathematics Award, the National Natural Science Award and other awards. At the conference, he also gave a 45-minute special report. In addition, he was elected to the top ten outstanding young people in China.

These two people, Lu Qiujian, met as early as when they went to Jiangcheng to attend the Chinese Mathematicians Conference and received the Chen Xingshen Mathematics Award. They also had more contacts in the later period, and they were not strangers to each other.

“Hey, I didn’t pay attention for a while. I didn’t expect that there are two top ten outstanding young people in our circle!” Professor Long’s gaze wandered back and forth between Professor Zhang and Lu Qiujian.

The top ten outstanding young people are selected once a year, but this award is for the death of the quota card, and it must take into account the scientific education, medical and health circles, political and commercial sessions, cultural and artistic sessions, sports and military, police and other fields every year. Delegates, so there are not many places in the scientific community, and young people mean that they are not old. It is quite difficult to be elected as an academician. It is indeed rare to have two top ten outstanding young people in the same academician election.

“I haven’t been officially elected yet! Not yet!” Lu Qiujian shook his head with a smile, in fact, he had a chance to win the award last year, but the list was determined at that time, he did not want to occupy the quota of others. So the organizer arranged him to this year, and still ranked first.

“Xiao Lv has already qualified for this award! Both the Poincaré conjecture of that year and the dark matter of last year are absolutely qualified to win. Even as an athlete, the two Triple Crown and Golden Globe Awards can also win the prize. It’s just that you have been inconvenient to receive awards abroad until now! Now the selection of the top ten outstanding young people can be regarded as a relief! They used to be scolded because you were not selected!” Professor Zhao also smiled. stand up.

Talked for a while. The meeting officially began. Prof. Lu, Dean of the Chinese Academy of Sciences and Executive Chairman of the Faculty of Sciences, first delivered a speech. He first conveyed the congratulations from the Elders to the newly elected academicians, and then welcomed them on behalf of the Academy of Sciences. Statement.

The speech ended and the meeting entered the link that everyone cares most about, that is, the issuance of the academician certificates of the two academies. Everyone was sitting in danger like the general who was about to confer the title, waiting for this exciting moment.

“Here is Professor Lu Qiujian from Xihe Project coming to the stage to receive the certificate!” Lu Qiu built the first newly elected academician who was called to the stage. This seems to be inconsistent with the convention, but none of the participants showed Dissatisfied, all clapped together Lv Qiu built the whole clothes, walked quickly to the stage, took the red certificate

representing the qualification of academician from the head of the road, and took a photo in front of the conference background board Commemorate.

“Xiao Luke lowered the average age of our newly elected academicians by a lot!” Dean Lu whispered and helped him open the certificate and put it between the two, leaving reporters with a good opportunity to shoot.

“Thank you!” Lv Qiujian whispered the certificate and looked down at the certificate that symbolizes the highest honor of the Chinese scientific community. From today, he has officially become a member of the highest scientific community in China!

Chapter 474 - Very annoying

There are a total of 30 newly-appointed academicians in this session, the oldest is Professor Wang of the Department of Materials Physics of Lushan University. He is 68 years old this year, and the youngest is 24-year-old Lu Qiujian; in addition to Lu Qiujian, 29 new academicians The average age is 54 years old, plus Lu Qiujian becomes 53 years old, he alone lowered the average age by one year.

After the issuance of the academician certificate of the Academy of Sciences was over, and it was the turn of the academician certificate of the Academy of Engineering, Lu Qiujian took the stage again. At this time, he set two records, the youngest academician of the engineering academy and the youngest dual academician.

The youngest member of the Academy of Engineering before was Major General Ma Weiming from the Naval University of Engineering. He has made outstanding achievements in the fields of independent system integrated power generation, power electronics, power system electromagnetic compatibility, and ship integrated power system technology. The submarine AIP power supply system received first-class merit; he was only 41 years old when he was elected to the Academy of Engineering.

The oldest dual academicians in the history of the Chinese Academy of Sciences and the Chinese Academy of Engineering are the 83-year-old Qian Xuesen and the senior academician Yan Kai. The youngest is the Lu Dean who has just given Lu Qiujian the academician certificate of the Academy of Sciences. When the academician was 53 years old, Lu Qiujian shortened this record by more than double.

There are a total of 34 academicians selected this year. The oldest is 77-year-old academician Xu. He is from Zhejiang University and was elected as an academician of the Faculty of Engineering Management. Except for Lu Qiujian, the average age of these academicians is 60.7 years, plus Lu Qiujian became 59.6 years old.

The average age of the academicians of the Academy of Engineering is much older than that of the Academy of Sciences, because the Academy of Sciences pays more attention to creativity, and the Academy of Engineering pays more attention to experience; but in Lu Qiujian's view, people of such a senior grade may be difficult to play in research. The great role, this title is even more affirmation of their historical contribution! If you want the two institutes to develop well, the average age of the academicians of the two institutes should continue to decrease.

At the same time, there are a total of 34 scientists in the history of China, both academicians of the two academies, Lu Qiujian is the 35th, and also the first after 1995. Four of these academicians have died, including just now. The already mentioned academician Yan Kai and academician Wang Xuan who has won the National Science and Technology Award. Now there are only 31 left.

Finally, a foreign academician certificate was issued. This time, a total of five newly elected foreign academicians, in addition to Ludwig-Fadeev, who just chatted with Lu Qiujian, also came from the University of California, Santa Barbara. Professor Allen-Hagg, an expert in physics, chemistry, and materials at the campus. Professor Frieder Murad, an expert in molecular and clinical pharmacology from the University of Texas Molecular Medicine Center, Professor Hu Zhengming, an expert in microelectronic device physics and integrated circuits from the University of California, Berkeley, and Professor Vanson-Kurtio.

Five of the selected people, from the United States accounted for three, the strength of the country's scientific and technological strength can be seen; and was born in Treasure Island. Later, the selection of Professor Hu Zhengming, a Chinese scholar who joined the American nationality, reminded Lu Qiujian of a disturbance in the selection of academicians.

It was his alma mater, Jingshi University, that caused the disturbance. In 2001, the Jingshi University did a very unreliable thing. The Jingshi University packaged Professor Tian, a lecturer professor of Princeton University Hingis, as Jingshi University's Full-time employees run for academicians, and as a result, they are seen by the Incubator University.

Later, the Jingshi University, which was still full of people, suppressed the Incubator University and used the interest exchange to select another incubator professor to be selected in exchange for the shortlist of Professor Tian. Therefore, Professor Tian has become the first since the establishment of the Academy of Sciences. It is also the only overseas academician who has not returned to the country full-time. His record has not been broken so far.

Professor Tian's academic level is naturally very high, but there is a provision in the selection qualification of the academician of the Chinese Academy of Sciences that must consider his contribution to the country. Professor Tian is obviously incompatible with this. Later, Beijing

Normal University also tried to repeat such an event during the physics session, but unfortunately, Beijing Normal University did not cover the sky like the mathematics in the physics session, and did not succeed twice.

I hope that in the days to come, Jingshi University will not use this kind of thing to find itself, otherwise there might be a rift in the originally harmonious relationship with his alma mater; Lu Qiujian sighed slightly.

Lv Qiujian also participated in many academic conferences, awards ceremonies, and selection processes in China, and found many problems in it, such as factional struggles, such as interest exchange, such as seniority pressure, etc. Of course, there are principles that adhere to Scholars, but there are also a lot of people in the camp, these will inevitably cause obstacles to the development of science and technology in China.

Lv Qiujian has made up his mind, if he encounters this kind of problem in the future. It will never be tolerated. At least the kind of mistakes that occurred at the National Highest Science and Technology Commendation Conference will never allow it to appear again.

After the issuance of the academician certificate, Lu Qiujian did not relax, and then he continued to be busy. First, I presided over and participated in this year's Mathematics New Discovery Awards Ceremony had a pleasant exchange with mathematicians around the world, and gave encouragement to the newly awarded mathematicians.

Then he went to the imperial court to receive his ten national outstanding youth trophies, and won the honors that Nie Jiuduan, Yang Liwei, and Yao Ming had won.

From the press conference, a series of high-intensity exposures made Lu Qiu the most popular news person in China between the end of the year and the beginning of the year. The interview applications sent from all over the country almost filled the mailbox of Xi and the plan to contact the publicity department. The staff of the propaganda department was painful and happy.

The vast majority of interview applications have been brushed down in the publicity department, and a few lucky people have only been qualified to talk to the publicity department. It is almost impossible to interview Lu Qiujian.

During this time, the propaganda department has almost become the busiest among the various departments of Xihe Plan. The staff work overtime all day to deal with the interview applications of these media. , Which made them rack their brains.

“Professor Lu, when will this day come to an end!” The person in charge of the propaganda department couldn’t help but find Lu Qiujian to complain.

Lu Qiujian looked at the calendar on the wall and reassured him that the event should have almost exploded. “It’s good to insist on building. There are few professional media in these interview applications. Most of them are just following the trend. When news with more hype value appears, they should be dispersed!”

Chapter 475 - 2008 (for the quiet handsome guy)

Sure enough, it didn’t take long for someone to post Mr. Chen’s classic photography works in a forum in the Pearl City. Those media who liked gimmicks suddenly abandoned Lu Qiujian and flocked to the Pearl to prepare to chase down Mr. Chen and the supporting actors of his photography. The Xihe Plan’s Foreign Propaganda Department made it easy.

“Now we are working on one of the greatest scientific projects in human history, but they left us to pay attention to the scandal of a group of unknown stars. What is going on in this world!” I was idle, and the head of the propaganda department was not satisfied. When he got up, he couldn’t help but talk in front of Lu Qiujian.

“Isn’t this just right? Scientific research doesn’t require too much attention from people. We only need to have sufficient funds, complete equipment, and aspiring staff to work silently. It doesn’t matter whether ordinary people pay attention! We just need to know that our research results can benefit them!” Lu Qiujian said lightly. “The scientific community is not the same as the entertainment industry. Scientific researchers do not need to live under the spotlight, and we do not want them to need it either. Use a spotlight to maintain your sense of presence and earn your own benefits. “

Well, this is not very accurate. There are also many scientists who have benefited themselves through large-scale exposure. Among them are Hawking who really have real materials, and there are people like Mr. Guo who are pure flicker; hey, Let the ordinary people distinguish between these two kinds of people, and our propaganda department will work harder!

“You don’t have to worry about this, as long as we continue to launch our own propaganda strategy, through subtlety, there will definitely be people who slowly change their ideas!” Lu Qiujian saw that his face was not good, so he spoke comfortably, “maybe for a month, One year or even five years and ten years are the boundaries, and those who will be remembered are those in the entertainment industry. However, it is still those of us who are scientific and technical workers who will be remembered by future generations in units of 100 years and thousands of years! “

“Hundreds of years have passed. Who still remembers the communicative flower of Newton’s contemporaries? Not many people even remember the name of the king at that time! But Sir Isaac-Newton’s name is still remembered by future generations! When our plan is really successful, future generations will definitely write about our deeds, and the trivial things in our daily life will also become anecdotes for others to talk about! “There are many legends about Feynman in the Manhattan plan .

Only then did he slowly return to his normal leave. Lu Qiujian continued to prepare for the relocation of the base to Chang’an in the office, and did not leave the office until 8 o’clock in the evening and embarked on a journey home.

Regarding Mr. Chen ’s case, Lv Qiujian no longer has the passion of the previous life. Compared with him, some people in the scientific community are more exaggerated.

For example, Professor Nicholas Goddard, who graduated from Oxford University and taught chemical engineering at the University of Manchester. In addition to teaching and scientific research at the university, his biggest hobby is to be the actor in love action movies. The 61-year-old The elderly have been engaged in this industry for more than ten years. I like to partner with a young girl in her twenties; after all, the professor is not in the business of making money. Every time he shoots, he even has to post a taxi for himself, just to have fun; compare with him Up, Teacher Chen is too pure.

After returning home to eat, the two of them seldom laid back and sat on the sofa watching the TV without a glance. Xia Xiao suddenly raised his head. He looked at him blushing, “Hey. Have you heard that recently ... the thing that was copied online recently is hot?”

“Are you talking about Mr. Chen’s photography?” Lu Qiujian squeezed her nose and chuckled. “Have you seen it? Do you want to see it?”

“No!” Xia Xiao shook his head again and again, “Our studio is mad about discussing this matter today, some people say it is true. Some people say it is ps! But they are only discussing in private, nobody dare to give I read!”

“I’ll find it for you! You can judge it from a professional point of view to see if these are ps!” Lu Qiujian was refreshed and quickly got up to take out the laptop in the bedroom.

With his technique, let alone find out the pictures that have been released. It ’s not a problem to invade the man ’s computer and download all the pictures. He quickly found out some of the works

of Mr. Chen that have been released on the Internet and clicked to enlarge it to Xia Xiao; Xia Xiao's face was red. This is the first time she saw this picture.

At first, I covered my eyes, and then I could n't help but let go of my hands curiously, looked at the contents of the photo, and suddenly raised my head, biting my lips and asked, "Do you guys like women in uniforms? "

"Ah! This kind of thing! It's not true ..." Lv Qiujian didn't know what to say for a while, and said that it was not a bit of a disobedience, saying that it was a bit worried about the other person's disgust.

"Our studio has made a lot of uniforms for cosplay. I will bring them back tomorrow to wear them for you to see. Is it good?" Xia Xiao said with a red head on her head.

Upon hearing this, Lu Qiujian reacted immediately, tossing the laptop aside and putting her arms around her shoulders, saying, "How do you feel about the posture in the picture just now? Should we try?"

After a while, the light in the room turned off, and Lu Qiujian walked into the bedroom holding Xia Xiao. After a while, a reverie sound filled the room ...

Thanks to Teacher Chen! Early in the morning the next day, Lu Qiujian meditated aloud, and then he boarded the car bound for the base with vigour, and arrived at the temporary base, and people from the outreach department approached him again, "Professor Lu, the court station called, I said that you and our staff are invited to participate in the Spring Festival Gala, how do you respond to me? "

Um, this is nothing pretty, right? After moving to Chang'an, there will definitely be less and less time for me to get together with my family. Let's spend time with my family this Spring Festival! "I won't go anymore. You can see who is willing to go to and wait for them to sign up, and choose the staff according to their usual contributions!"

"In addition, it's time to go back to the holidays! This is probably the last free time before we go to Chang'an! You discuss it with the people in the administrative department. We have a good time once. I'm afraid there won't be much chance when we go to Changan! After finishing this matter, Lv Qiujian arranged a new task.

A few days later, on the last day before the holiday, the entire base was filled with a festive atmosphere. After some excitement, Lu Qiujian announced that in addition to the necessary staff on duty, everyone else would take a holiday together! When you return here after the spring break, you can prepare to go to Changan Base!

Chapter 476 - Team structure

Remember [WW.CM] for a second, the fastest update, no pop-ups, and free reading of popular novels!

Not to mention, after controlled nuclear fusion is achieved, electricity will definitely become the most important energy source in people's lives, then electric vehicles, large-capacity fast-chargeable batteries, etc. have become the most urgent needs, and will not be carried out at that time. R & D might as well be prepared from now on. ◇ ↓,

"I have finished talking about the organizational structure of the team. Let's ask Assistant Li to arrange the relocation of the base for everyone!" Lu Qiujian gave the microphone to Li Yan.

"Comrades! We are about to begin formal research ..." Li Yan's title made everyone stunned, but the relocation arrangement was very detailed, and everyone was too late to think about it. Recorded in the notebook, "... we will take the action of separating equipment and people for relocation. Each department will first count the number of equipment and number it, and then submit the list to us, I will take someone to check Rear....."

Li Yan took longer to arrange work than Lu Qiujian. After the talk, he answered questions from several staff members and distributed detailed plans to everyone. Then the entire temporary base began intense and busy work.

The equipment and materials taken to Changan should be carefully sorted out, and the equipment that is taken away is not required to be cleared. All useless paper documents will be destroyed after being reviewed and signed, and even a trace of ash will not be allowed to leak out.

The preparatory work was carried out for half a month. Li Yan was too busy for a while. He slept no more than four hours a day. After the preparation work was completed, he was thin.

Despite this, he still can't take a rest. The personnel and equipment to Changan still need him to take care of it; when Changan base is reorganized and installed, I am afraid that he can't take a good rest within two months! Lu Qiujian was worried about his physical problems, and arranged the most skilled doctor Wei Yunyue at the base to take care of him personally. It is important for him to maintain a healthy body and mind.

In the past half month, personnel and equipment have begun to be transported to Changan one after another. To ensure safety, the mode of transportation is still train transportation, and the equipment will go to Changan with the exception of the base staff. There are also security personnel under Lin Qianjun and the army sent by the elders.

When they arrived in Chang'an, the three parties jointly checked the seals of the equipment and confirmed that they were correct before they were transported to the base through military vehicles. Everyone tightened their strings along the way, for fear of a slight omission.

This made the spies in the United States and other countries very depressed. They frequently changed their personnel to track after the convoy left the Beijing temporary base. Who knows that there is no trace of omissions in the preparation of the transportation convoy along the way, which makes them waste a huge amount of manpower and material resources. In the end, it can only return without merit.

What they did not know was that most of their whereabouts were discovered by Lin Qianjun's men. "Reporting Director Lin, from the departure of the train to the present, we have found a total of nine batches of a total of 37 spies with different scores and peeping. Nineteen of the 37 spies are what we have mastered before. , The other 18 were the lurkers they had just activated, and some related staff members with unknown truths were bought by them, which facilitated their peeping! What should these people do? "

"Choose a group of spies that have no monitoring value. We have such a big deal. If there is nothing to harvest, it will cause suspicion from foreign intelligence agencies! So I will take advantage of this opportunity to catch a few and say more!" Lin Qianjun gave a decisive order. "The ghosts who have been in contact with the people on the arrest list have also been arrested and questioned! The staff members who are not in contact with the spy list are temporarily untouched! See if they will make contact!"

"If they haven't reached the security deadline, let the anti-corruption department come forward to take them down, and then we will interrogate them again!" In Lin Qianjun's view, these people are more abominable than those foreign spies!

"Yes! Guarantee the completion of the mission!" The subordinate replied loudly, leaving Lin Qianjun's office and going back to start the arrest immediately according to the plan made in advance.

In an inconspicuous hotel outside the Bianjing City Railway Station, the curtains were tightly closed and the room was dimly lit. An ordinary-looking middle-aged man carefully took out a uniquely shaped machine from the trunk and pressed a few times at a train parked on a distant platform.

“Excuse me, do you need room service?” There was a faint voice outside.

“No need!” The man immediately put away the machine and said decisively.

Outside the door, a woman in a uniform of a hotel attendant made an ok gesture to others. Then he retreated silently and came to the duct of the central air conditioner.

After listening to the door for a while, I heard that the person outside the door was gradually going away. The man in the room felt relieved and took out the machine again to monitor it.

Ok? Why do you feel a little drowsy? Didn't you sleep well in these two days? wrong! The man who just called the door has a problem! When he responded, it was too late. He collapsed to the ground without any help to destroy the machine.

The door was knocked open with a bang, and several staff wearing gas masks rushed in, keeping him and the equipment in the suitcase in their own hands.

Even if such a situation occurs simultaneously in various cities along the special train, from Beijing to Changan, more than a dozen foreign spies have no escape, and the intelligence agencies of the United States and the United States in China have suffered the worst losses in recent years. The news came back to the United States, and a huge roar came from the office of the CIA Director General Michael Hayden.

The means of foreign spies are not just monitoring, they also try to cause confusion by making car accidents and other means, so as to take advantage of the muddy water to check the equipment loaded in the car; but these were discovered by Lin Qianjun 's men in time, and the team 's defenses were tight. No opportunity was found, and the batches of equipment were transported to the Changan base without any risk.

After more than a month of busy work only successfully completed the relocation of the base; from now on, Lu Qiujian and his core team will spend a long time in this hidden base ; During this period, they have no reason not to leave the base, they must be accompanied by personnel from the security department when they go out, and communications and calls will be monitored ...

They have already been psychologically prepared for the inconveniences in these lives. In their view, as a scientist, he is proud of his lifelong participation in such a grand project. As a Chinese, he can personally promote the great rejuvenation of the Chinese nation. The price is worth it!

Chapter 477 - Base relocation

Remember [] in one second, the fastest update, no pop-ups, free reading of popular novels!

During the Spring Festival, Lu Qiuqian and Xia Xiao both took their parents to Beijing, and their main task these days is to persuade both parents to move to Chang'an!

"I live in a good place at home. I don't have an acquaintance in Chang'an. How bored I am!" Lu Qiuqian's mother seemed hesitant.

Hey, I can't always say that something unpleasant might happen in your hometown, right? Lu Qiuqian had no choice but to resort to the trick, "Mom, I went to Chang'an and got married. If I had a child, we would have no time to bring it, wouldn't you bother you! Would you be wronged for us? Did n't Xia Xiao's parents go to Chang'an? Are you not good at walking together and playing cards? "

"Really?" Lu Qiuqian's mother's eyes suddenly lighted up, and he agreed to do it; Xia Xiao's parents' work had already been done. The work transfer letter from the Chang'an Museum was also sent to their current unit. , Without leaving their favorite job, and being able to be with their beloved daughters, how can they be dissatisfied!

"You promised!" This matter was finally resolved, and Lu Qiuqian wiped a sweat. "I will find someone to take you to Chang'an after two days. You can go to the house I bought! It's all packed, you can live in directly! When I'm done with things here, I'll go find you! "

"Can't we go together?" Lu Qiuqian's mother mumbled, and she, who was born in a state-owned enterprise, also knew that the task was coming. She couldn't help herself. When Lu Qiuqian responded, she waved and said, "You are busy with you Go, do n't worry about us! "

After solving this, Xia Xiao had much to deal with. When Lu Qiuqian went to Chang'an last time, she not only bought three villas, but also bought an office building nearby, which was enough for her to open a studio! She also did a good job of placing the studio staff in the early stage. Willing to go to Chang'an for a salary increase together, unwilling to pay severance pay, the recruitment work on the side of Chang'an has also begun, and there will be no worries about finding the right manpower.

After solving the worries, when the holiday was over, Lu Qiujian came to the base and started to arrange the final preparations before the relocation. In addition to the transfer of personnel and equipment, it is more important to readjust the organizational structure of the entire team to better meet the needs of the plan.

“We have been working together for some time! The work in the previous stage has achieved a certain degree, and some problems have been exposed!” In the large conference room of the base, Lu Qiujian talked, “Our previous organizational structure continues The organization form of our country ’s previous major projects has its advantages and disadvantages. “

“The advantage is that you can concentrate your manpower to complete the research and development of science and technology! The disadvantage is that you do not pay enough attention to things other than technology! So after communicating with superior leaders and heads of departments, I plan to adjust the existing organizational structure!” Lu Qiujian projected a new organizational framework on the screen, “According to the results of the negotiations. I divided the existing team into the following departments, first of all our core department, which is Xihe planned technology R & D center , The center will administer theoretical research departments, experimental departments, plasma research laboratories, laser technology laboratories, magnetic confinement laboratories, etc. all departments related to technology research and development! This department will also be the entire team The largest department! I will be directly responsible for this department, and assistants such as Li Yan and Ma Yang will help me complete my daily work. “

“There is also a logistics department. The logistics department will also take charge of the entire team ’s diet, entertainment, medical care and help the base staff handle private affairs! In addition to protecting the health of the staff, medical care also needs to introduce excellent psychologists. Let our The team has a healthy mental state! “According to Lu Qiujian, mental health is even more important than physical health.

This was not beyond the expectation of the participants. They waited closely for Lu Qiujian to introduce the members and work responsibilities of the next department.

“The third department is our external publicity and liaison department! The work of this department is equally important. They will be responsible for publishing project developments without revealing secrets!” Such developments may be real or fictitious. . “To establish a positive image of Xi and the plan, to promote science externally; the department will be composed of professionals such as advertising planners, crisis public relations experts, senior news practitioners, science fiction writers, etc. They will use news, novels, film and television and even animation Various forms of publicity through traditional media and online media ... “

Lu Qiuqian never hoped that after successful research and development of controllable fusion, he would get the same reputation as genetically modified food, and thus was resisted by the masses. If the results of such research and development would be meaningless.

And to achieve this effect requires a long-term imperceptibility. After the results come out, we will publicize and explain, the time is not enough! If outsiders ignite the flames again, it is easy to cause unnecessary turmoil. Lu Qiuqian wants to eliminate these in the bud. To achieve this task, the secrets cannot be disclosed, and some propaganda departments have suffered!

“Base security department. This department will be completed by Major General Li Jiajin and Director Lin Qianjun. Major General Li is responsible for the external, and Director Lin is responsible for the internal ...” This part is not too detailed, and Lu Qiuqian passed by .

Then listed a few other conventional departments such as administration and personnel finally arrived at the last department, this department has not appeared in the previous period, “The last department is the business cooperation department! Everyone knows In the process of research and development of science and technology, various by-products often appear. This by-product may not involve too deep secrets, but it is of great commercial value to the outside, such as the Internet and touch screen technology developed by cern. These are all possible. Projects that bring countless benefits! “

“As scientific researchers, we have not judged whether a product has professional qualities of commercial value, nor is it suitable for these tasks! So I will assign these tasks to a person in charge! This department will be composed of senior venture capital company executives and negotiation experts. , High-tech company marketing director and other professionals! They will review those products with low confidentiality level to determine whether the product has commercial value! “

“Give these products to the right companies to operate and earn more money for Xi and the plan by collecting patent fees, technology shareholding and other means!” The funding of the Chinese government is not enough to complete the Xi and the plan. Moreover, it is not an overnight thing that technology changes the world. Lu Qiuqian wants to gradually promote the development of China’s high-tech industry in this way!

Chapter 478 - Dig people

In Sanjin, an uninvited guest came from the Niangziguan Power Plant far from the urban area of Yangquan City. He got off the car and walked into the office building. After a while, the director’s office was busy. The man and the director chatted a few words and showed him After asking for his own certificate, the factory manager asked with some doubt, “What’s the matter with you coming to our factory this time? The technical strength of our factory is average. It seems that it can’t help Xi and the plan?”

“Xi and the plan involve a very wide range. We don’t know that we need technical talents! We also need people in logistics, publicity, business and other fields! I came here just to transfer individuals from your factory, and I also asked the factory manager to help. “This man named Shi Xiangjie said.

The Niangziguan Power Plant is a state-owned enterprise. This kind of transfer of personnel from other departments will happen frequently. It will definitely support Xi and the plan director, but the people who can be seen by others may also be the technical backbone of the plant. An engineer left the factory and it was really not easy! So he tentatively asked, “I don’t know who you want to tune?”

“I haven’t determined whether we should really mobilize. After all, we have to get the consent of others. I just wanted to talk to him this time!” After speaking for a long time, the teacher Xiang Jie said that he wanted to mobilize. The name of the person, “Can you invite engineer Da Liu to talk to me?”

“Oh, you mean Da Liu!” The factory manager lengthened his voice and gave a little breath. Da Liu’s technology was indeed good, but he didn’t get to the factory’s indispensable point. Obstructed, he called his secretary to give a few words, and then accompanied the teacher to talk to Jie Jie with a smile.

After a while, a middle-aged man with ordinary face who would not be noticed when thrown into the crowd came in. He had short hair, he wore a pair of black-framed glasses, and there was a little unshaved stubble above his lips. He looked at the factory manager and asked ignorantly, “Director, what’s the matter with you calling me here?”

“Da Liu! This is the director of the personnel department of the Xihe Planning Project Department. The director of the division came from Beijing to see you!” The factory manager said to Da Liu in a rare and kind gesture.

“Hello, division director. You came to me for a special trip? Are you looking for the wrong person? There are several engineers in our factory with the surname Liu!” Da Liu didn’t understand that his technical level was counted in the factory. It’s not the best. What about Xihe plan?

“Yes, I am looking for you!” Shi Xiangjie looked around. Make sure that the person in front of you is the one you saw in the profile, and then turned to the factory manager, “Director, do you see any quieter small meeting room on your side? I want to talk to Liu Gong alone ! “

“Don’t be so troublesome, you can use my office!” The director of the factory got up. Make room for the two of them and close the door before going out.

The teacher sent him to Jiemu to go out, and when he looked back, he saw where Liu still stood! “Liu Gong, don’t be constrained, let’s sit down and talk slowly!” He said that he picked up the tea that the factory manager had just brewed and poured a cup to Da Liu.

Seeing the other party was as bad as the legend, so Shi Xiangjie had to speak first, “Liu Gong, this is the case, you know that our Xi and plan are very eager for talent, since I read your resume. I know that you are the talent we need, so this time I come from Jingcheng to invite you to join our team! “

“Director of the division, I don’t quite understand it!” Da Liu was a little puzzled. “My professional level is average. There are not one hundred thousand to eighty thousand power engineers of the technical level like me all over the country. How did you find me? ? “

“Liu Gong is humble! There are indeed many power engineers across the country, but you are the only one who writes science fiction so well! I have read all your works, and I like” Village Teacher “,” Chaowendao “most, “Spherical Lightning”, “Three Body” ... “Shi Xiangjie almost finished the list of his works,” I am not here to invite you to work in the power department of Xihe, but to invite you to Our publicity department is serving! “

“Publicity department?” Da Liu seemed to understand something. It seems that this uninvited guest wants to use his strength in science fiction to promote Xi and the plan!

“Yes, you must be clear that our national scientific research institutions do not pay enough attention to the propaganda work, and Xi and the plan do not want to repeat this error! So we formed a strong propaganda team!” Then Shi Xiangjie began to give examples. “The American science fiction novelist Charles Schiff said not long ago that it is obviously more clever and effective to convey ideas through popular culture like novels and movies than holding a press conference or advertising; at NASA, they also Many times through the cooperation with science fiction writers and Hollywood, to convey their views! “

“Recently NASA and Tor-, a well-known science fiction publishing company, have collaborated to plan a series of science fiction novels. In this collaboration. NASA Space Flight Center has established a studio in which scientists and engineers will Writers are trained in space science so that the latter can create novels that are completely in line with science, and spread the NASA’s current and future missions in the novel stories. While promoting the development of science fiction, This boosts the interest of young readers to learn science and mathematics, and devote

themselves to it. I think you should understand how great this plan will play! “Shi Xiangjie said,” We also want to invite you for Xi and plan Promote! “

“I have lived here for decades, my family’s work is here, you made me go to the field suddenly ...” Da Liu seemed a little moved, but thought of the family’s withdrawal.

“Please rest assured that as long as you are willing to join, we will take care of your wife’s work! You don’t have to worry about where you live, we will also arrange for your daughter’s school! Presumably you also know that Chang’an has many famous schools, The quality of education in those schools is far from comparable to local schools! “Shi Xiangjie continued to follow the guidance.

“Ah, but what I saw in the news, your base seems to be completely closed? I’m afraid I might not be able to adapt!” Da Liu struggled with hunger in the end!

“The base is mainly the research department and the department that provides them with logistics services! Our publicity department is not included! Our office is located in the southern suburbs of Chang’an, and there is no difference between working in an ordinary company!” Shi Xiangjie dispelled his concerns , “Also Xia Jia, do you know? She has also joined our publicity department. If you want to go, she will be your colleague!”

“I have no comments here, but I have to go back and discuss with my family!” After asking a few questions, Liu nodded.

Chapter 479 - Experiment preparation

Remember [.6] in one second, the fastest update, no pop-up window, free reading of popular novels!

“Are you saying that people are willing to arrange work for me? Will they also arrange a school for our girls? Even the accommodation will be resolved? Isn’t this a liar?” Mrs. Liu’s first reaction after hearing his words was like this. Is n’t it good to get up?

“No, people take official documents and certificates! Besides, I will still go through the formal organizational procedures even if I want to transfer away! The higher-level department should not follow him and flick me!” Da Liu almost laughed .

“Changan ’s middle school is much better than ours in this small place! The best middle schools in Sanjin are Longcheng No.5 Middle School and Kangjie Middle School. They can be combined with Chang’an No.1 Middle School, High-tech No.1 Middle School, West Engineering University Affiliated Middle School, and Normal University Affiliated Middle School. There is still a gap

compared with the National High School attached to Jiaotong University! We now want to go to Longcheng No. 5 Middle School and Kangjie Middle School. It is basically impossible! If we can go to these schools, it will be very good for our girls to go to college in the future! “Mrs. Liu When the other party’s identity is no problem, they start to carefully measure it. Just like most parents in the country, the first criterion they measure is whether it is beneficial to their children.

“But our acquaintances are here. If you went to Chang’an, wouldn’t you be bored after work?” Da Liu usually likes to stay at home to study and write, and it’s almost the same everywhere, but his wife is different.

“As long as our girls can read a good book, what’s the problem? You’ll ask for more. If this is true, we’ll go to Chang’an!” Mrs. Liu decided decisively.

After inquiring through many parties, and calling Xia Jia again, after confirming that this matter is true, Da Liu quickly made a decision. The child’s studies are on the one hand, and on the other hand, as a science fiction writer, he usually There is no shortage of various high-end research institutions, such as Einstein’s equator, such as geocentric orbit. Now that he has the opportunity to witness the China space exploration program, he can’t afford to miss it.

“That’s good. I’ll go through the transfer procedures for you and your lover! And the admission procedures for your children! See how long you need to prepare to go to Chang’an?” Shi Xiangjie knows that moving things is very troublesome Yes, “When you are ready, I will find some cars to help you move over!”

“Eh, then thank you!” Da Liu replied a little embarrassedly, “I still have to deal with some home affairs, it is estimated that it will take half a month to go to Chang’an!”

With an appointment to pick him up, Shi Xiangjie returned to Chang’an with a happy mood; at this time, all the preparation work had been completed in Changan’s base, and he could get bored according to the plan.

In the conference room of the base, the senior members of the technical department are all concentrated in the conference room. Lv Qiujian is giving them a near-term work arrangement, “... The theoretical work in the early stage has been basically completed, so the focus of our next work is to build an experimental reactor as described in the theory. The secondary reactor is still designed with tritium and deuterium as raw materials, using magnetic confinement and laser ignition. “

These are the content that has been finalized in the early stage. Lu Qiujian here is just to repeat it again, but the next content enters the essence, “To accomplish this goal, the key issues we need to

solve are R & D high-power, High-accuracy, fast-response laser ignition device. This involves many disciplines such as materials science and laser science. This task will be completed by the laser laboratory, and other departments will cooperate! “

“Plasma laboratory is responsible for plasma heating and electric drive, plasma control and other aspects of research, be sure to complete the task before the completion of the experimental reactor ... This work is completed by the plasma laboratory.”

“The magnetic restraint device involves the cooperation of multiple departments such as permanent magnets, superconductivity, mechanical engineering, and electric power. The key point is to solve the problems of magnetic control and magnetic strength, which are completed by the magnetic restraint laboratory!”

“The mechanical engineering department is in charge ... The data department is in charge ... The accelerator department is in charge ...” An item of work is assigned, and after completing the general arrangement, Lv Qiujian will assign another. The backbones of each experimental group got together and communicated with them in detail, asking them to ask the difficult questions in the experiment. And find ways to help solve them one by one.

There are not only one laboratory for each project, at least there are two best domain authorities in China that can be found to lead the team from different angles, and there are even more than three experimental groups in the relatively important areas. competition. And Lu Qiujian will only choose which one is the best and best for this project!

This is exactly the same as the Manhattan plan of the year, which can avoid the slackness of an experimental group to a certain extent, so that all other experimental groups are ready, but they can only sit and wait for their results; these authorities who chair the experimental group also Knowing that there will be only one winner, this will determine their future. They can't be sloppy, so they put all their energy into the research work, for fear that they will be one step behind.

The previous work was very complicated. Fortunately, Lu Qiujian had a group of excellent assistants such as Li Yan and Ma Yang who could assist him in completing the management of the team.

After a month of running-in, each experimental group was surprised to find that their test progress seemed to be much faster than originally planned; recalling it carefully, it seems that whenever the project enters the bottleneck and cannot see the future direction, just find Lu Qiujian, he always pointed out the right direction, which saved them valuable time.

It also gave them a sense of frustration. Hey, he has been struggling in the industry for decades, and I did not expect a young man in his twenties to see clearly! But think about this young man as the youngest Fields Medal and Nobel Prize winner in history, they are relieved again. Although they are all geniuses, geniuses can't be compared with such evil spirits!

Seeing that all the experimental groups are working smoothly according to the plan, Lv Qiujian also breathed a sigh of relief. He has already given a phased direction. At least within this year, they only need to follow this direction; You can also take a little time to complete another task.

"Then I will leave the base temporarily for the next period of time. If you have any questions, please go to Ma Yang or Li Yan. If they can't solve it, please call me again!" At the regular weekend meeting of the week, Lu Qiujian made such an arrangement.

"Where are you going?" Xie Ke, the person in charge of the artificial intelligence experiment group, asked.

"Go to the Olympics! The current job can be completed according to plan! I can't use me for the time being, so I can complete another commitment!" Lu Qiujian said.

Chapter 480 - Men's basketball collection

At the end of July, in the basketball stadium of the ancient capital Jinling Olympic Center, the Chinese men's basketball team is preparing for the final warm-up match before the Olympics-the FIBA Diamond Cup. The Chinese men's basketball team will play with Seville, Australia, Angola, Iran and Argentina, the last Olympic champion.

However, the atmosphere inside the team seems to be a bit abnormal today. The core of the team, Yao Ming, who has just recovered from injury, looks at the entrance of the basketball court from time to time. Like him, there is also the second point guard Zhang Qingpeng inside; As the representative of the new generation of the Chinese men's basketball team, his position in the national team was second only to Liu Wei, who has been partnering with Yao Ming for many years. Unfortunately, the arrival of that person made him lose the opportunity to participate in the Olympic Games.

Liu Wei's status is self-evident. Although another organization defender, Chen Jianghua, is not as good as him in technology and experience, but his age is younger and his potential is greater than him. Out of consideration for training talents in the future, the basketball management center finally Zhang Qingpeng gave up between them.

At this time, Zhang Qingpeng was still quite dissatisfied. The opponent won the NCAA championship is awesome, but he hasn't played an official game since 2003. It has been five years, how much strength can he save?

Just when he was thinking about it, there was a commotion outside the door. The reporters and fans waiting outside the basketball hall issued various screams. It seemed that there was some big man coming.

The door opened with a clatter. The person in charge of the basketball management center walked in with a young man in sportswear. The young man was accompanied by a beautiful girl in her twenties. Sister? What is this for? The players couldn't help but wonder; the door was closed again, and coach Yunas stopped training to bring the players together.

Yao Ming's face was bright, Zhang Qingpeng's mouth was slightly raised, ho, the boss of the basketball center came to give him away personally, this face is really big enough!

"Come, let me introduce to you. This is the last player of our national team, Professor Lu Qiujian Lu; this is Professor Lu Yunyue, Professor Lu's personal doctor." Applause, then Yao Ming took the lead in applauding, and then the others hesitated for a while. I also took a few shots.

"Hello everyone, I am Lu Qiujian. I play the position of guard. I hope that I can achieve good results on behalf of the Chinese men's basketball team at the Olympics!" Lu Qiujian simply introduced himself.

"Professor Lu, welcome!" The leader of the team, Yao Ming, stepped forward and shook hands with Lu Qiujian. From the earliest encounter on the side of the NCAA, he hoped that this day has been looking forward to for five years, and today it is finally realized, and his heart is inevitably excited.

Then Yi Jianlian, Wang Zhizhi, Liu Wei and other old players stepped forward to shake hands with Lu Qiujian and introduce themselves. When Zhang Qingpeng stepped forward, Lu Qiujian took the lead in holding his hand and said a few sorry words, he His face looks better.

"Qingpeng! You worked hard some time ago, and we have remembered your contribution to the national team. Next time, if you want to go back to rest, go back and rest. You can also continue training with the team!" The boss said comfortingly, this was Lu Qiujian specially reminded him on the way to come, otherwise he would say that.

After introducing each other, the boss of the basketball management center stepped aside. Lv Qiujian went to the dressing room and put on the Chinese men's basketball jersey. He had wanted to wear the No. 14 jersey. Unfortunately, it was taken by Wang Zhizhi, so he had to take it. Zhang Qingpeng's No. 6 jersey.

Changed his clothes and came to the court to do a half-hour warm-up. When his body was fully active, he came to the court with a basketball. The eyes of all the players in the team looked at them in full, and five years after leaving the basketball court, how much skill did he have left?

"Professor Lu, let me help you pass the ball!" Seeing Lu Qiujian seemed to be shooting training. Yao Ming instantly remembered his amazing shooting skills in the NCAA game, and immediately ran enthusiastically.

"Just call me Xiao Lu, it's not at school, Yao brother you are so strange!" Lu Qiujian said with a smile, then took two bets, and took one step outside the three-point line. Basketball hit the net.

Hiss The old pitchers Li Nan and Zhu Fangyu's face suddenly changed. As sharp shooters, they naturally can see how Lu Qiujian's shooting action is standard, and the shooting point is high and the shooting speed is fast, generally 'S defensive player has no time to react, this hand is much stronger than himself.

Fans and reporters outside the stadium heard that the training atmosphere of the national team seems to be very different from the past. From time to time, you can hear the praises of Yao Ming and others. Is this Professor Lu's basketball skills really so powerful?

After a 20-minute group match ended, Zhang Qingpeng, who was against Lu Qiujian, lost his persuasion. Lu Qiujian easily defeated his defense, and he scored 18 points and 8 points for cutting vegetables. Assists, but also limit his mistakes again and again, the level of the two are not at the same level!

"But I'm looking forward to seeing you. With your joining, I think we will definitely make a breakthrough this time!" After the training, Yao Ming walked to his side again. A few words of greeting, Lu Qiu Jian Weifeng turned around, "Xiaowei said just now that looking at your movements on the court is awkward, I'm afraid it's still hurting? Should I let Xiaowei help you?"

Speaking of his body, Yao Ming regretted that in the past season, he was reimbursed for the injured season, leaving only McGrady to lead the Rockets forward, watching him in the front of the TV and being beaten by the Jazz. Not a taste; it stands to reason that he should continue to recuperate now,

but for the Olympics, he can't take care of so much anymore, and he is ready to take his wounds to battle. "Something is wrong, it doesn't matter!" He said lightly.

"I'm afraid that's not the case." Wei Yunyue squatted down and pinched around his ankles without waiting for his promise. "You are an old injury. If you don't need heart treatment, I estimate that you can play another season at most, career. Career is over! "

"Not so serious?" Yao Ming was startled by the result.

"Xiao Wei is a famous disciple, her medical skills are top-notch in the country, you better let him see carefully!" Lu Qiujian made a voice.

"But the day after tomorrow is the first game ..." Yao Ming was unsure.

"You go to check first. If you are worried about the Olympics, first look at my performance in these games. If you can be satisfied, you can rest assured and wait for your pay. If you are not satisfied, I will not stop you! As for the basketball center I'll help you over there! "Lu Qiujian sighed secretly in his heart, he didn't want the tragedy to repeat itself again.
