Chapter 50 - Exam questions

“Guys, don’t play too much for Christmas! Our next game will be on the 27th!” Before the dissolution, coach Thompson still reminded that this year is a rare opportunity for the Princeton Tigers. Don’t want to lose because of some accidents.

Hey, why is he an exchange student! Thompson looked at the back of Lu Qiuqian with regret, if he joined Princeton from his freshman year, he spent four years to polish the lineup and adjust his tactics, so that the Princeton Tigers may be able to break through the creation of Bill Bradley. The best results are not necessarily.

Ha ha, forget it, even if he joined the Tigers as a freshman, I am afraid that he has already been robbed by the NBA. Why would he waste four years in college? Thompson laughed after thinking about it. It was already good to meet such a player. Too much extravagance could only make his mood worse.

“Where are you going to go for Christmas? Should we go to Las Vegas again?”, Patrice tentatively asked, it seemed that he had tasted the sweetness since last time, “The round-trip ticket counts as mine? First class! “

“Forget it, I still have an exam!”, Lu Qiuqian shook his head and rejected his proposal. Occasionally relying on mathematics to make profits in the casino, it is ok to do it once and a half times. The Las Vegas guys are not philanthropists. How could you let them use their sites as cash machines?

“However, if you want to make money, there is a chance recently!” Lu Qiuqian found out that the account of the Luther Technology Company had problems in his heart. After the information of the Luther Technology Company’s fake account was exposed, they ‘S stock will surely fall quickly. Knowing this in advance, Lu Qiuqian has come up with countless ways to profit from it.

“Oh? What is it?” Patricton came to the spirit, although he did not lack money, but no one would not like more money! “I can still get 300,000 dollars here, you can use it all!”

“I found an opportunity in the financial market!”, Lu Qiuqian repeated what he said with Jason Norman, “I estimate that he will publish his analysis report soon, if we If you prepare now, you can definitely make a fortune in the financial market! “

“Awesome! It’s much more fun to make money from the pockets of big capitalists on Wall Street than to make money from casinos!”, Patrice clapped, “I will transfer the money to your account when I return to the dorm! The split is still the old rules!”

“I will take 10% this time!”, Lv Qiujian smiled and shook his head. “Jason will notify me after the article is completed. I will work with him on this operation! You just wait to collect the money! But keep it secret! “

The knowledge that can be obtained from the book Lv Qiujian is certainly no problem to use, but Wall Street also has many unspoken rules that are unknown to outsiders. This requires the help of Jason Norman. The two of them have reached a gap between the games. Agreement, the reputation goes to Jason, and the benefit goes to Lu Qiujian.

Back to the dormitory, picked up the phone and sent a text message to Natalie, then Lu Qiujian found Professor Nan ’s class notes to review, in order to avoid his intervention in the future game, Lu Qiujian planned to get a full score for this exam.

Natalie quickly returned the message. Lu Qiujian used her two minds. She read the notes and chatted with her in the south and the sea until she went to bed late at night.

“No, no, I don’t agree with you. Professor Dyson, I think the third of these seven questions is the one most likely to break through in the last ten years!”, Professor Nan looked at Frey The green sweater of Man-Dyson’s eyes twitched. It was too weird to match with a white shirt, red tie and black suit.

“Dear Nan, you are thinking from a mathematical point of view, but I think the fifth question is the most likely to achieve a breakthrough!” Professor Dyson waved his arm like a praying mantis. “The fifth question When it comes to the key to theoretical physics, you have to admit that compared to mathematics, people invest more in physics and attract more geniuses! “

“If investment can solve all problems, humans will have flown out of the earth!” Professor Nan shook his head disapprovingly, and secretly sighed in his heart. Although investment cannot solve all problems, it can solve most problems. If domestic investment If you can keep up, why should you go far away?

But it seems that the domestic investment has also gone up. Although it can not be compared with Princeton, but it has been able to meet its own needs, can you consider going back?

“But you can’t deny the huge role of money in promoting science!”, Professor Dyson threw the A4 paper in his hand to Professor Nan’s desk. “Go, I have an appointment with Edward today. We just asked him about this question. Views!”

Edward in Professor Dyson’s mouth is Edward Witten, a theoretical physicist who has received the Fields Medal, a top expert in string theory and quantum field theory, and works at Princeton Institute for Advanced Studies as Dyson.

“Okay, I would also like to hear his opinion Professor Nan ’s favorite place in Princeton is that he can often collide with these top figures in the scientific world, even if he is not studying a major. Can bring a lot of inspiration to yourself!

“I said you can’t wear some tasteful clothes?”, Dyson frowned as Professor Nan took off his camel jacket from the hanger, and at the same time stood up and patted his sweater proudly.

The teaching assistant who just walked in laughed loudly, and at the same time vomited in his heart, I am afraid that the entire Princeton is the least qualified to express opinions on the taste of clothing, right?

“What’s the matter?”, Professor Nan seemed accustomed to Dyson’s inexplicable pride and asked indifferently in his jacket.

“Lv has arrived outside the door, I will ask where is the test paper for this exam!”, The teaching assistant quickly put a smile on his face.

“It’s right on my desk!” Professor Nan stretched out his fingers at random and took Dyson out, “Go, take you to meet a nice guy!”

The two walked outside the door and greeted Lu Qiuqian casually. Professor Nan patted his shoulder and said, “I’ve added a lot of difficulty to you this time. If you can’t give me a satisfactory result. “

“I understand, you can rest assured!”, Lu Qiuqian nodded confidently.

Professor Nan yelled and walked down the stairs with Dyson. Lv Qiuqian was led by the teaching assistant to a small empty office to prepare for the exam.

Ok? As soon as I got the test questions, Lu Qiujian frowned. The questions above didn't seem to be all about computational mathematics and applied mathematics?
