Chapter 531 - National Talent

“When Tang Taizong visited Yushifu in the past, he saw a lot of newly admitted Jinshiyu, so he proudly said that the heroes of the world were in the middle of Wuwu! I think today’s situation is exactly the same as what Tang Taizong saw. Ah! “Professor Zhang sitting next to Lu Qiujian said with emotion as he looked at the team outside the door.

“This is also due to the accumulation of more than 30 years of education. Without the college students who have been trained for so many years and the rapid economic development, I think it is not easy to gather so many candidates!” From the restoration of the college entrance examination to the present, Although the higher education in China has been criticized, it is undeniable that a batch of talents has indeed been cultivated over the past three decades. Without this accumulation, Lu Qiujian did not even consider returning to China.

“It’s all thanks to a teacher like you!” Lu Qiujian said this sentence from his heart. Professor Zhang also gave him lessons. Whether it is professional quality or teaching attitude, there is nothing wrong with it. The Department of Mathematics of Beijing Normal University can Maintaining the country’s first position is inseparable from the contributions of high-level teachers like him.

“Oh, you had heard my class at the beginning, this thing was enough for me to blow them a lifetime! Well, let’s not lie, let’s start the interview!” Professor Zhang reminded when the time had come.

“Well, let’s get started!” Lv Qiujian told him that Assistant Liu, who arranged to lay down his hands, was immediately busy. With so many people coming for an interview, if Lu Qiujian talked one by one, he didn’t know when it was going, so he needed First, we will screen out those who are not qualified.

Came to the door and sat down, took the resume from the first student who applied, “Which school? What education? What major? How many credit points? Have those professional certificates? Have you published any articles in the journal? Which laboratories? Or are there any project results? “

“Hang ... Aerospace University, master’s degree in computer science, with a credit score of 4.5.” The candidate regained his composure after a moment of nervousness, and he introduced his resume, “... already Obtained MCDBA Microsoft database certificate, Oracle database management certificate and Adobe certification; once published eight articles in relevant journals at home and abroad, mainly in the field of virtual reality technology, before I was in the State Key Laboratory of New Technologies in Virtual Reality After working for two years! You see, there is a copy of my

thesis at the back of my resume. There is also a recommendation letter written by the director of the laboratory! “

“Okay, no problem! You go in! The next one!” Assistant Liu, who looked at this resume, was ashamed, and he lived on a dog more than he did when he was in college!

“Sorry, your resume does not meet our requirements. You should go back!” After seeing the second resume, Assistant Liu finally found a little self-esteem.

“Why?” The visitor’s face was unwilling, “You just denied my ability with just one glance?”

“We only need 985 graduates, your school seems ...” Assistant Liu pointed to the school name on his resume.

“Although our school is not 985, it is still very strong in this major! The country can be ranked in the top ten!” Said the man unwillingly.

“I’m sorry. We only need the top three graduates in the country! Or you really have the strength to make achievements! But I see that in your resume, there are only three papers in provincial journals, and there is no internship in the State Key Laboratory Experience! It’s still a bit far from our request! “After talking, Assistant Liu threw the poor child aside,” Okay, next one! “

“... Winning certificate of the International Physics Olympiad? There have been two papers published in” Optoelectronic Laser “with citations reached ...” The assistant waved his hand before seeing half of this resume Said, “Okay, you can go inside and wait!”

“Foreign language level is not enough! How do you know the latest research progress abroad? When you resume your resume, the next one!”

“Published an article in the Journal of High Pressure Physics? Why didn’t you bring the paper over? On the page of the issue number? What is the main content? ... Can’t you answer it? Dear, you Let’s go back! Lest you go in and be debunked by Professor Lu! ”

“Humboldt University? Marx-Planck Institute? Okay. I won’t read the rest, go in!”

“West Pacific University? What kind of school is this? Never heard of it, go back!”

“Your undergraduate school does not meet the standards, and there are no outstanding achievements at the graduate level. I am sorry that I can only let you run for nothing! The next one!”

Assistant Liu swept through a copy of his resume, and many of them just sentenced each other to death after a quick glance. The resumes of the school tyrants who could be screened by him opened his eyes. Even at Beijing Normal University, he thought It is also not easy to find so many amazing characters.

“... The impact factors of the journals where your theses are located barely meet our requirements, but don’t be too happy; the people you just entered have peers whose resumes are much better than yours. . I urge you to be mentally prepared in advance! “Said two words kindly, Assistant Liu raised his head again,” Next ... Yo, you three ... how to wear and sell insurance today Seems like? I thought you guys had already gone in! Alright. You do n’t need to read your resume, hurry in! “

“Thank you Assistant Liu!” Ye Chu and the three of them have dealt with him in the past. They didn’t care about his ridicule and nodded grinningly, and quickly entered the door.

“I lean, why didn’t the three people just check their resumes? There is a shady screen!” Now students don’t rub the sand in their eyes Is this unknown? Didn’t you see the clothes of those three? Armani, Dunhill. Who might be the child! “Someone pretended to find the answer, and there was a riot for a long time.

“Don’t talk nonsense! The three who just entered are Professor Lu’s students!” Assistant Liu did not deal with student problems in the past, and quickly came out to explain, “Even without this status, these three are all in the four major journals of mathematics. People who have published articles! Shouldn’t such people go in? “

The words of Professor Lu ’s students calmed down the scene suddenly, and those who could get into Professor Lu ’s eyes would certainly not be mediocre; those of the same mathematics department who immediately heard the titles of the four major journals immediately admired them, but this was their own What the teacher can’t do! Competing with people like this, I ... I really have no confidence!

“Well, the answer is good, but there is only a small question. According to the latest article by Professor Weibrun of the University of California at Berkeley on arXiv, the third situation you just denied is actually possible! But you have shown your own Ability, go back and wait for the retest notice! “Lu Qiujian said with satisfaction.

“Thank you Professor Lu!” Hearing Lu Qiujian’s evaluation, the interviewer took a breath and hung his heart for a long time. Finally he put it back in his stomach, and when he got up, he bowed with respect, “I must go back well Study the article you just said, and I will certainly not let you down when I retest! “

Carefully put this resume in a folder and add notes to the form in front of him. Lu Qiujian turned his head and said to Professor Zhang, “The quality of these interviewers is really good!”

“Yes, the student conditions are much better now than we were!” Professor Zhang said with a cup of tea smiling, “At that time, the teachers were all just released from the bullpen, and the teaching attitude was no problem, but after all, it was already It’s been a long time since I was out of research; I want to search for a periodical and magazine. If they can find the latest international achievements, as long as they are willing and capable, some laboratories allow them to practice! If they do not study well, then they are too sorry for the current conditions! “Professor Zhang automatically ignored the IQ problem and could be put in All of them are graduates of first-rate famous schools, and there are no problems in this respect if you can enter these schools.

“Yeah, I also caught up with a good time!” Lu Qiujian said with emotion, if the talents accumulated in these years and the economic development of China allow the country to spend a huge amount of money to invest in Xi and plans, how can there be now Achievements?

Was talking, another interviewer came to them, Lv Qiujian took a glance at the resume, “Please sit down and briefly introduce yourself!”

“Professor Lu, every teacher, hello, my name is Huang Xifeng. I studied undergraduate at the Department of Physics at Mizuki University. I was involved in the school ... I was the first author of hundreds of millions in” Hua Guo Physics Express ” He has published three papers and five second authors. The main research directions are ... After graduating from undergraduate, he won a full scholarship and went to MIT to continue studying for a degree. During this period, he followed Professor Tepla in polymer research. During the period, “Modern Physics Review” and “Physical Review Letters” published articles, the title of the article is ... “Huang Xifeng talked happily. His whole body exudes self-confidence, of course, his resume is indeed very dazzling. With this achievement, he can go to the physics department of any university in China to serve as a teaching post, and those national key laboratories will also be welcomed.

“Well, Professor Tepla is an authority in the field of polymers. I also chatted with him when I was in Stockholm! If you can study under him and graduate successfully, you have proved your strength!” Circles say big or small but small or not, the top ones should have heard of it even if they haven’t seen it.

“Stockholm? Is it time for you to get the Nobel Prize?” Huang Xifeng’s eyes radiate eager light. This achievement is a lifelong pursuit of all physicists. Even his teacher has not won this honor, and It seems that this life is unlikely to be obtained.

“Yes!” Time is precious. Lu Qiuqian did not continue to chat with him. After asking a few professional questions, he already knew his level. He may not be proficient in the profession of every interviewer. . But the thought of scientific research is unified. He only needs to understand the method used by the other party in the research process to be able to have a clear understanding of the other party ’s research level. “The professional questions are finished. I will ask the last question again. According to your qualifications, it is not difficult to stay in the country as a teaching post or enter a research institution. Why choose to return to China? “

“I do n’t say anything like patriotism! I chose to return to China for two reasons. The first point is that the research environment in the United States is somewhat unsatisfactory. I want to enter a more sensitive research direction. I was hindered by all sorts of inexplicable obstacles. And the white people I had to do were better to get similar opportunities! Secondly, through the reaction of domestic classmates, our country ’s research funding has become more and more relaxed in recent years, and the research environment has changed rapidly. Development; I think since authorities like you and Mr. Shi Yigong have chosen to return to the country, why should n’t I come back and try it? And it has always been my dream to participate in such great projects as Xihe Project. It seems unlikely that I will get this opportunity in the United States! “Huang Xifeng said so much in one breath. It seems that the decision to return to China was indeed made after careful consideration.

“Well, okay.” Lu Qiuqian sketched on the form, “You have passed the initial test, go back and wait for the call for the retest, pay attention not to shut down in the next few days!” Before the retest, the relevant department will definitely do a good job on his background. Deep investigation. After confirming that he is correct, he will be allowed to join the Xihe plan; Lu Qiuqian will also decide which one of the confidential level jobs he will be assigned based on their personal background rating.

After Huang Xifeng left, Lv Qiuqian seemed to remember something interesting and could not help laughing out loud; Professor Zhang on the side asked curiously, “What fun is this?”

“I heard him talk about Professor Shi just now, reminding me when I was in Princeton Professor Shi said to me!” Lv Qiuqian laughed.

“Oh, I guess Mizuki University ca n’t sit back until the graduates of our school get Nobel, so I asked Professor Shi to come back from the United States! I also prepared him the world ’s highest-

end frozen electron microscope! Nobel Prize! What did Professor Shi tell you at first? “Professor Zhang asked.

“The teams competing with Professor Shi mainly include the Reinhard-Lührmann team in Germany, the Melissa-Moore team at the University of Massachusetts Medical School in the US, the Robin-Reed team at Harvard University, the Kathleen-Gould team at Vanderbilt University, and the MRC molecular biology experiment in the United Kingdom. The Kiyoshi-Nagai team in the room ... but their conditions are not stronger than that of Professor Shi. The advanced equipment and the ability of Professor Shi, if there is a little more luck, the Nobel Prize still has great hope! “Said Wan Luqijian talked about his initial contact with Professor Shi, “When I talked to Professor Shi in Princeton, he said to me, as long as it is a person with normal intelligence, sending CNS with him is like an assembly line. It is not difficult at all. ! He also lamented that his intelligence business is really wasteful! “

“Haha!” Professor Zhang couldn’t help but laugh out, “I knew he shouldn’t go to Mizuki University, I should come to Beijing Normal University to read mathematics!”

After laughing for a while, Professor Zhang shook his head and said with emotion, “I used to find ways to go out, and now more and more people come back! This era can be said to be the best era in the history of scientific research in China!”

Chapter 533 - Kalinga Award

“Scientific research is ultimately a problem of burning money. Burning more money will naturally produce results!” Of course, the money should be burned to the right place. If the project leader takes it and eats and drinks the second mistress, it will be strange to produce results! “Our country can afford to burn money now, and it is only a matter of time before and after!” Lu Qiuqian took over his resume again and started another round of interviews.

When it was almost lunch, it was Ye Chu ’s turn to the three of them. Lv Qiuqian smiled and called the three of them together, “I will not ask professional questions about the three of you. I’m afraid it is clearer than you yourself! “

“Oh, that’s what your teacher taught you!” Ye Chu pulled his tie, which really made him feel awkward.

“The clothes are good, it looks a lot more mature and stable!” Lv Qiuqian laughed with a smile and said, “But have you all thought about doing research with me? Ye Chu, I heard that you have made a lot of money recently And the national team has always asked you to continue to be an assistant coach in the past! And it seems that Bayern is also interested in letting you pass? And Xiang Zhen,

did n't you tell me that your biggest ideal was to stay at Beijing Normal University to teach? Wang Wen, are you not interested in a company like Microsoft? "

"This kind of money is enough to spend!" Ye Chu scratched his head and said, "I also left the high-level guide with software for the national team. They only need to enter the data in the future and they can automatically come to a conclusion. I 'm here in person! After thinking about it, I still want to give you a shot! "

"I also want to do research while staying at Peking University, but is there anything better than doing research in China?" Xiang Zhen asked.

"Microsoft is just like that! I don't think there is anything more enjoyable than overcoming problems! I still want to continue following you!" Wang Wen's attitude is also very determined.

"You are going to a confidential unit. You will not be able to live a normal life for a long time in the future. You can tolerate these? Ye Chu, you are not afraid that your family will be in conflict with you? And the two of you, I am afraid in the future Not very easy to find the target! "Lu Qiujian continued to ask.

"I'm not afraid, I have confidence in our feelings!" Ye Chuluo said shyly, "And, even if something goes wrong, I believe you can help me find a solution!" He said to Lu Qiujian at the beginning Teach him how to get Xiao Xie's routine but admire the five-body cast.

The other two also had no opinions. Seeing this, Lu Qiujian understood that they had made up their minds, "So, let's go back and wait for the notice of the retest!"

"Thank you teacher. Thank you Professor Zhang!" Ye Chu asked again when Xie left, "Teacher, what are we going to do in the awards ceremony these days?"

"Let's take the time to communicate with Professor Thurston more! It will be difficult to think about this opportunity in the future!" Generally, when entering the base, the procedures for such foreign-related exchanges will become extremely cumbersome.

"Holly! Let's go!" The three of them said goodbye and immediately left the place and came outside. Ye Chu pulled off his tie twice and looked at the high-rise buildings, flowers and trees of Beijing Normal University with nostalgia. He knew that it would not be so easy for him to see these again in the future.

“Hey, it’s a pity that we didn’t get this award when we left Beijing Normal University!” Xiang Zhen said somewhat reluctantly, he always set the award, but the three of them never got it.

“Leaving Beijing Normal University is not leaving mathematics, as long as you continue to do research under the teacher, I think it is a matter of time to get this award!” Ye Chu felt faintly. His future research direction will also be related to the ten questions raised by Lv Qiujian!

“Don’t say, hurry to dinner, go to the hotel after dinner, I heard that today the mathematicians of Princeton and the Paris Normal University are coming! We must seize the opportunity to talk more with them!” When he first entered the university, he Well, you may regard these two schools as your future goals, but after Lu Qiu built the door, they gradually realized that they already have the best learning environment in the world.

In the evening, Lu Qiujian also ended the day’s interview and came to the hotel. I had a pleasant exchange with old friends who had been far away for a long time, and new friends who hadn’t seen him for a long time.

Professor Thurston and others were surprised to find that even though Lu Qiujian changed his studies to physics after graduation, he still kept his attention to the frontiers of mathematics and was able to put forward his own unique views on those frontier issues. Mathematicians who have studied these problems often gain a lot.

This awards ceremony has still attracted widespread attention from mathematicians and Chinese media around the world. No matter from the status of the guests, the achievements of the winners, or the global influence of the awards, the mathematics has been born for only a few years. The Discovery Award has become the most internationally influential and authoritative award among the science and technology awards hosted by China.

Sat on the podium and watched one after another young mathematicians on stage to receive the award. Lu Qiujian is quite pleased that their achievements have greatly accelerated their research progress through indirect effects. The new algorithms and new formulas they have created will be produced in the fields of physics, chemistry, computers, materials science, etc. The huge impact, and the cost of achieving this goal is only a bonus of more than one million US dollars per year, this business is really cost-effective! No wonder the scientific community says that the breakthrough in the basic field is the most important breakthrough!

Although the tablet computer has earned tens of billions of funds for them, but in terms of long-term impact, it is not at the same level as these mathematical results!

“Lv, President Tillman has always told me to invite you to visit Princeton for a lecture; there are many old friends waiting for you to communicate in the past.” After three days of pleasant exchanges, Lu Qiujian began The mathematicians saw off, and Professor Thurston repeated the old saying in the airport terminal.

“I’m really sorry, you also know that my recent research is very busy, and now it is my age of strong creativity, I don’t want to leave myself with regret!” Lu Qiujian refused politely, “As for the old friend you said, I think Can they come to China at the awards ceremony next year? “

Sent away these mathematicians, and those who were recruited a few days ago did not need him to take the re-examination, so Lu Qiujian went back to tidy up and planned to return to Chang’an today to continue to prepare for the next experiment.

However, on his way to the train station, a phone call came, “Professor Lu, congratulations on winning the Kalinga Award of this year!”

Chapter 534 - Award collector

“Karinga Award?” Lu Qiujian was a little surprised, he did not expect this award to fall on himself; the Kalinga Award was founded by Indian industrialist Patnaik, which was founded by the Indian emperor in the 2nd century BC Kalinga’s name is used to commemorate his anti-war ethics, passion for science, culture and education, and it also represents a spirit esteemed by this award. The Kalinga Award mainly rewards people who have made outstanding contributions in popularizing science and technology, including scientists, journalists, educators and writers.

The winners of this award must devote themselves to introducing science, research and technology to the public during their careers, and to promote the importance of science and technology internationally. The award is recommended and nominated by a special international judging body, and then approved by the Director-General of UNESCO.

The winner of this award will receive a prize of two thousand pounds (and some say 20,000 dollars) and a silver Einstein medal.

In the later generations, Professor Li Xiangyi, the director of the China Science and Technology Museum, the director of the popularization department of the China Science and Technology Association, and the chairman of the China National Science Museum Association, became the first Chinese to have won this award.

Perhaps it was the role of his book “When Humans Start to Look at the Starry Sky”? Lu Qiuqian couldn’t think of any other reason. His own book has been translated into dozens of languages and sold all over the world. The sales volume exceeds Hawking’s “A Brief History of Time” and “The Universe in the Nutshell”. The sales records of popular science books have played a huge role in the popularization of scientific knowledge, so it should be awarded this award.

“Yes, that is the award awarded by UNESCO! I have just been notified here that you will be the only winner of this year!” The other side said excitedly, and the Kalinga Award has not been awarded in some years or At the same time, there are records of two winners, and the honor of winning alone is undoubtedly higher.

In the history of this award, there are also many scientists who have made outstanding contributions, such as the American scientist Warren Weaver who pioneered molecular biology and mechanical translation, and the future British Wilkins, Creek and American Watson He won the Nobel Prize in Physiology and Medicine for proving the three-dimensional molecular structure of DNA, announcing that biology has officially entered the era of molecular biology.

The founder of the origin of life hypothesis, for the first time established a scientific theory of life as a whole on the earth. The Red Empire biologist Alexander-Ivanovich-Obalin, known as the pioneer of studying the origin of life, his trilogy of origin of life is still remembered by the scientific community.

The president of the Royal Astronomical Society of England, who made outstanding contributions to clarifying the composition of stellar heavy elements, created the astronomer Sir Fred Hoyle of the steady-state universe model. At the same time, he also proposed the element synthesis theory, namely the famous B2FH theory, with the Burbich couple and Fowler. In 1983, the Nobel Prize in Physics was awarded to Fowler, but he missed it because of tensions with certain institutions.

The President of the Royal Institute of London, the President of the British Chemical Society, the President of the Faraday Society, the leading member of the National Space Navigation Commission, and the 1967 Nobel Prize in Chemistry, George Porter, who worked with Obalin in 1976 for his commitment to children ’s science Get this honor together. For his famous saying, “Children are born scientists. They like to be thorough and extremely imaginative. And this is exactly the motivation and factor necessary for a real scientist to engage in scientific research.” Lu Qiuqian also deeply agreed.

In addition, there is Dennis Flanagan, the old editor-in-chief of one of the world’s most popular science magazines, “Science Rice”. The German popularist Homar-von-Dieterfurt and other well-known people who wrote “The Philosopher’s Whisper: Man and Nature”.

“Thank you very much for telling me this good news!” Lu Qiuqian whispered gratitude. I am afraid that he is even happier than himself now is President Yuan Xinye of Beijing Normal University Press! With this good news, the book “When Humans Start to Look Up at the Starry Sky” is estimated to be reprinted, and then sold for a fortune!

“Also, UNESCO invites you to go abroad to participate in this ceremony.” Said the other party began to introduce the time and place of this ceremony.

“I’m afraid I won’t be able to go about this!” If the Nobel Prize may be hesitant, but even if the country arranges for himself to go out, he does not want to waste this time. “Recently my experiment is at a critical stage. In any case, you can’t go away! You can arrange for others to accept the award on my behalf. By the way, help me apologize to the organizer and UNESCO!”

“That’s really regrettable!” The other party’s tone didn’t mean any regret. It seems that this sentence is easier to say, “Then I will arrange for our staff in UNESCO to receive the award on your behalf. After receiving the award, the medal will be delivered to you in the first time!”

“Well, this matter will trouble you!” After talking about Lu Qiuqian hanging up the phone, the car also drove directly into the Jingcheng Railway Station. He entered his own train and boarded the journey back to Changan. Lu Qiuqian didn’t care about this award. The media refused to miss this good opportunity for hype. Although the awards in the popular science category cannot be compared with the Nobel Prize, it is also the industry’s number one award. It is also approved by UNESCO, and it can definitely be publicized.

After the news was published, it was again lively on the Internet because of Lu Qiuqian. Someone with good deeds carefully counted the number of honors that Lu Qiuqian had won. NCAA champion and MVP, Chen Shengshen Mathematics Award, National Natural Science First Prize, Wolf Prize, Fields Prize, Nobel Prize. There were also Bundesliga champions, German Cup champions, Champions League champions, German Super Cup champions, European Super Cup champions, World Club champions, Bundesliga, UEFA Champions League Golden Boot Award and Best Player, European Golden Boot Award, Mr. European Football, Mr. World Football, then two gold medals for the Olympics! As well as the Kalinga Prize that I just received, just double the number!

“Hey, the average cow can get any of them is enough for everyone to admire! But it seems very easy to put here Professor Lu?” Someone expressed emotion.

“How long has it been since I collected so many awards, and these awards are still in many different fields. Have such figures been born in the history of mankind?”

“Don’t forget, it will be the award ceremony of the Lawrence Awards immediately after the start of the year! Who can be the best male athlete of the Lawrence this year besides Professor Lu? I think it is simply to call him the prize collector!”

Chapter 535 - Throw money

When the train arrived in Chang’an, it was already 5 o’clock in the afternoon. Lu Qiuqian glanced at his watch and said to Bai Yiran, “I will not return to the base today, let’s go home!”

“Okay!” Bai Yiran’s expressionless car drove to the villa Lu Qiu built on the outskirts of the city. After more than an hour of driving, the car entered this gathering area of Changan’s top rich people.

“Xiaobai, let’s go to my house for dinner together!” Lu Qiuqian loosened his seat belt and sent an invitation. I don’t know what dishes are made at home today?

“No, what time will you use the car tomorrow morning? I’ll pick you up!” This community has long been a key monitoring area for relevant departments, and there are their own people inside the community, so he doesn’t have to follow him when he arrives here. Lu Qiu built.

“At half past seven, I will go to the base first to see the progress of the work over the past few days, and then prepare other arrangements!” Lu Qiuqian knew that since he had rejected his invitation, he proved that he had other Things need to be busy, so I didn’t keep it. I got off the car and waved goodbye to Bai Yaoran with the gift I bought from Beijing.

Pushing open the iron fence gate of the garden and passing through a pebble walkway among green vegetation, Lu Qiuqian opened his door. “Yes, Mom and Dad, you are all here! What do you eat for dinner today? How does it smell so sweet?”

“Huh? How did you come back today? Didn’t the newspaper say that you won the Kalinga Award? You don’t need to go to the United Nations to receive the award?” Father asked in surprise, he did not see Lu Qiuqian for a while. .

“Recently the experiment is very busy, so I entrusted others to help me pick it up!” Lu Qiuqian explained, then walked to the sofa and sat down, starting to pull out things from the bag, “Dad, this is for you. Pipe, mom, this is for you ... “

I usually have less chance to meet, and Lu Qiuqian paid special attention to such small details, but whenever he went to work in those places. It is always necessary to buy some local things for the parents of both parties. These things are not necessarily expensive and may not be of much use, but this can prove that he always misses his family. They can also feel more comfortable in their hearts.

“You are so busy all day, do you still remember what you are doing?” Although he said so on the mouth, but he was very satisfied with Lv Qiujian’s way of looking at the expression on his face when they received the gift.

“Don’t have dinner yet? I’ll go to the kitchen to help Xiaoxiao take the hand, and dinner will be ready soon!” As the mother got up, she walked to the kitchen. When we arrived at the door, we just met Xia Xiao, who came out with the dishes. When she saw Lu Qiujian, she suddenly showed a pleasant smile on her face.

In a trance, the plate on his hand was crooked, and it was about to slip off. At this time, a hand reached out from behind her to gently take the plate, and Xia Xiao reacted. “Sister Zhang, thank you! “

The babysitter behind him smiled sternly, “It’s okay. It’s okay. Since Professor Lu is back, don’t worry about the kitchen. I’ll prepare dinner right away!”

In the moment just now, Lu Qiujian’s eyes narrowed. This babysitter is a bit interesting and looks honest and honest, but the reaction just now is not what the average person can achieve! I am afraid that she may be the manpower arranged by the relevant department? With these people following their family members, there must be no problem with their safety!

After a while, the food was all over. At the dinner table, a group of people around Lu Qiujian kept asking. He picked up some news that could be revealed to satisfy the curiosity of the parents.

After dinner. Seeing his father’s appearance, he wanted to chat with Lu Qiujian, but he was dragged away by his mother. Xia Xiao’s parents also went back to their rooms, so only two of them remained in the whole villa!

“It looks like it’s going to snow outside! Let’s go to the floor-to-ceiling windows upstairs and watch the snow while drinking tea?” Lu Qiujian whispered around her waist.

“Well. I’ll get tea!” Xia Xiao tapped lightly and turned the tea leaves out of the cupboard. He followed Lu Qiujian to the bedroom upstairs. A full set of tea set was placed in front of the floor-to-ceiling window in the bedroom. Lu Qiujian hugged her In her arms, she tasted the fragrance of tea and the fragrance from her hair.

Fine snow. The aroma of tea, plus the beautiful woman in her arms, made Lu Qiujian feel relaxed. The two snuggled together while drinking tea while whispering the trivial things of their respective time, watching the flying snow outside the window gradually dye the garden white, this is called life!

Suddenly I didn't know there was a song from the villa next door, "Single-dog, single-dog, single-everyday. See-AV, hit-the-plane, they re-doing-all-day. "

"Hey, is it Christmas today?" Lu Qiujian's thoughts fluttered, and vaguely returned to his last Christmas in Beijing Normal University. At that time, it seemed that the two of them were alone together?

Xia Xiao's face began to flush slightly, her body twisted uncomfortably on Lu Qiujian's thigh, and she also remembered her past courage to stay in Lu Qiujian's house and refuse to leave.

"Don't you think we should do something in such a commemorative day?" Lu Qiujian took a slight breath in her ear, then placed one hand on her shoulder and one hand on her leg bend, Pick her up and slowly walk towards the bed ...

Waking up the next day Lv Qiujian looked at the still sleeping beauty beside her, gently kissed her forehead, dressed lightly, and left a note on the bed, Turned and pushed open the bedroom door and went out.

By the door, Bai Yao really had been waiting there. Lu Qiujian handed over the plastic bag in his hand. "Sister Zhang made the buns. I said that your training also includes cooking skills? Sister Zhang's craft is really good." ! "

Bai Yaoran's eyes twitched, but he never said anything, took the bun and put it in front, and then drove the car toward the base.

"How about the progress of the project in the past few days? I have any problems?" When I arrived at the office, I asked Ma Yang, Li Yan and other key personnel to ask.

"Everything is normal, everything is done step by step according to the time node table! It is expected to be ready for the next experiment within the scheduled time!" Li Yan replied.

"Is there no problem at all?" Lu Qiujian didn't believe it.

“There are still some problems! The most important thing now is that the rare earth metal reserves of several core components of the superconductor have dropped sharply. This test is no problem, but I am afraid that it will not be enough in the future! This problem must be solved as soon as possible. Only!” Li Yan continued to report.

“Well, I know!” This matter was also expected by Lv Qiujian. “It just happens that the royalties of tablet computers are also in place, and next year’s funds will be more than this year! I will find those Cooperating units will pay for it! No problem will not be solved!”

Chapter 536 - See you again Liang Xiao

“Xiaoliang is here! Sit down!” In the office of the chairman of Changan Nonferrous Metals Co., Ltd., Chairman Liu Guangming greeted Liang Xiao with a cordial seat and signaled the secretary to make tea, “Don’t take that, go and put me in the drawer Take out the Tongmuguan Jinjunmei and give it to Xiaoliang!”

“Chairman Liu, I don’t understand tea anymore. Isn’t it a waste to drink such a good thing for me?” Although Liang Xiao didn’t understand tea, he knew that Liu Guangming wanted to take ordinary tea when he heard the name and the place where it was stored.

“I don’t understand what I teach you! We have to have a refreshing thing to do research? Smoking is harmful to the body, and Chinese people are not used to drinking coffee! What do you not drink tea?” Liu Guangming took the tea from the secretary and expertly I started the process of making tea; I do n’t know when to start. When people talk about business, they always like to drink tea while talking. Liu Guangming expressed support for raising his hands, which is much better than drinking! Over time, he also developed a good tea skills.

Looking at Liu Guangming’s movements in the clouds and flowing water, Liang Xiao secretly pondered his intention to call him over; after a while the tea was ready, Liu Guangming passed the tea cup, “Jin Junmei was picked from Wuyishan National Nature Reserve at an altitude of 1200-1800 meters The original wild wild tea tree in the high mountain is a high-quality black tea innovated on the basis of the production process of Zhengshan small black tea; this gold word represents the grade, and the one who takes the bud tip only is Jinjunmei, which is also the highest quality. Ye Zhe is Yin Jun Mei, and its quality is inferior to Jin Jun Mei.”

Although I do n’t understand what you say, it sounds so powerful, Liang Xiao took a tea cup and tasted it, feeling elegant and changeable, with both traditional fruity aroma and obvious floral fragrance, could not help but say a vulgar Come, “It’s really good tea!”

“This tea is not only bright in color, sweet and sweet, refreshing, and excellent in taste, but also bright and eye-catching, light weight loss, refreshing brain, healthy stomach and digestion ...” Liu Guangming looked at his belly. “I think it’s right for you to drink this, I will give you a few or two when I leave in a while!”

Liang Xiao, after all, did n’t drink much tea, did n’t understand the weight of this gift, and thought he did n’t have much money. There is no escaping directly, “Eh, thank you, Chairman Liu!”

Seeing Liang Xiao was in a good mood, Liu Guangming began to talk about the business, “Xiaoliang! Since you came to our company. The performance has been very good! The company’s corporate culture has greatly improved with your efforts, and the company has also received Praise from the relevant departments of the company! “This is indeed the case. Since Liang Xiao came, the company’s internal journals, websites and radio programs have been greatly changed. The vice president of the company’s corporate culture construction specifically asked him to ask for two people But he was blocked by Liu Guangming, joking, how could the talents he finally got easily let go? What’s more, Liang Xiao’s role is far more than that.

“Professor Guo also told me that you were in the laboratory, but he helped him a lot!” At first, he transferred Liang Xiao to the laboratory because he had a relationship with Lu Qiujian. He usually went to Lu Qiujian. There are multiple topics for reporting, and Liang Xiao ’s writing is indeed excellent. Helping organize materials is very good! Now he runs the laboratory more diligently.

“I also find it interesting to be in the laboratory, and I learned a lot from Professor Guo!” Liang Xiao is very satisfied with his work. He can get a little more than an hour or two a day for the writing work. For the rest of the time, he followed Professor Guo Zhenyu to help him deal with the work of the laboratory. Over time, he became very interested in scientific research experiments.

“Professor Guo also said that you are very talented in scientific research! This kind of talent does not refer to professional skills, but your ability to organize and manage the laboratory!” Liu Guangming said rightly, “Professor Guo said since you started helping After he manages the laboratory, his work is a lot easier! He can be freed from his daily affairs and devote himself to research. I also found that the work efficiency of our research center has improved a lot than before! So, I Just ask. Do you want to go directly to the research center to work? “

“Ah? What about my current job? I don’t want to do corporate culture construction?” This thing was abrupt. Liang Xiao didn’t turn around for a while and asked subconsciously.

“Now the work on corporate culture is on the right track, is your assistant doing well? I will help her add two more staff by then. She only needs Xiao Ji Cao Sui to do the job here! There is a

shortage of people in the center! “Liu Guangming threw out his own conditions.” As long as you are willing to go, I will directly give you the position of deputy director of the laboratory. You are responsible for helping Professor Guo manage the laboratory! Our laboratory’s The salary is much better than the corporate culture! Your base salary is directly doubled than it is now, in addition to the achievement of the research goal, there is a bonus! This bonus is higher than the annual salary! “

“To be honest, I don’t have any idea about money!” Liang Xiao thought for a while and hadn’t figured out how much his income would be. He usually does not pay attention to his salary card, only know that the money is spent to get it! Anyway, my parents do n’t need to support themselves, he does n’t have a girlfriend, and he ’s not hungry when he is full Actually, I also like to work in the laboratory, but I go to the laboratory when I learn Chinese language and literature Isn’t this becoming a layman leading an insider? “Liang Xiao expressed his concerns.

“You don’t have to worry about this at all!” Liu Guangming interrupted his words, “Actually, in our industry, there is a saying that if you are not afraid of layman’s leadership, you are afraid of layman’s leadership; because many times, as a unit or project leader People, what is most needed is not professional literacy, but the ability to organize and coordinate. It can fully mobilize the enthusiasm of a team, give full play to the talents of each team, coordinate and solve various problems within and outside the team, and eliminate all interference for the team ’s work This is the most valuable ability of a leader. As for the professional aspect, he only needs to have a clear understanding of the overall situation and the overall situation, and he must fully understand and respect the objectivity and scientificity of the relevant work. enough.”

“While insiders lead insiders, it is easy to cause directional tangles and errors. As insiders, because of their deeper understanding of the profession, it is easy to fall into a difficult position in the profession, and stubbornly believe that their own or their approval is correct. , And other people ’s views are wrong, which leads to wrong direction, causing irreparable losses, and it is likely that he will not find it himself, and others will not be able to persuade him to find the problem. This is the so-called ‘good rider fell on the horse, Those who are good at water are drowning in water, those who are good at drinking are drunk, and those who are good at war are killed in killing. “

Chapter 537 - Exclusion

“I’ll give you an example! Do you usually watch the ball?” Fearing that Liang Xiao could not understand, Liu Guangming found a typical case. “Are you worried about the situation where the football leaders manage football things?”

“Well, there are some such worries!” Liang Xiao nodded and answered, in his impression the leadership of the Football Association has been scolded, even if Lu Qiujian led the Olympic team to win the Olympic gold medal, the fans will all The credit goes to Lu Qiujian and Gao Gao, but no one said good things about the leadership of the Football Association.

“I will use this case to give you a good analysis! First of all, the biggest mistake of the leadership of the Football Association is that they do not follow the objective laws of football development! A country’s football wants to be strong and needs a developed youth training mechanism to deliver fresh blood to the league. Cultivate talents for the national team through a healthy and upward league! So it is not difficult to become a qualified Football Association leader. It is only necessary to do a good job in youth training to ensure a healthy environment for the league! Germany’s football level in recent years Why did it improve quickly? It is because they have a huge youth training system and an excellent league like the Bundesliga! “Liu Guangming is also an old fan.

“Therefore, stars such as Ram, Podolski, Schweinsteiger, Gomez, etc. have emerged in Germany. After them, there are also Hedira, Thomas Mueller ... Emerging, how could such a German team not be strong? “Liu Guangming said with emotion,” Look at us again, the youth training work has not been grasped, in addition to the Xu guidance on Chongming Island, who has worked hard in youth training? As for the league, in order to impact the competition in the past few years, the league schedule was cut off in a hurry, and the promotion and demotion was also cancelled! What is all this for! The youth training is not good, the league is over! It’s strange that this national team can get better! ”Liu Guangming could n’t help but swear!

“But now it’s much better! Since Huang Ziwei came to power and grabbed the work of the Football Association, they have the support of the Olympic gold medals. Let the league return to the right track! This is the result of following the scientific laws of football development! I believe that even if the next two competitions can not get good results. But when this wave of newcomers gets up, we can see that it is completely different Liu Guangming’s confidence in the future. “The job you are going to do now is the same as Huang Ziwei! You do n’t need to help them point out the research direction of the experiment. Professor Guo will get the job done. You only need to help him manage the laboratory, It is enough to mobilize the enthusiasm of the researchers and at the same time to avoid the general direction of the research from getting off the track! I believe that you can do it with your ability! “

“When you say this, I think I seem to be really capable of these jobs!” This passage was very inspiring to Liang Xiao. He nodded thoughtfully.

“Since this is the case, try it first!” Liu Guangming patted the table and made a decision. “I will arrange the personnel department to handle the procedures for you and transfer you to the research center! The name of the director will help you get right when the job is on track! “

“Yes, I listen to you!” Liang Xiao is not polite. He is also a graduate of a famous school. He has grown up in the admiring eyes of his classmates since he was a child. It is not very difficult to see this matter.

“Then tomorrow ... no, go to the laboratory to report to Professor Guo now! The next most important job is to help Professor Guo sort out the work summary of the recent period and arrange the work plan for the next stage!” Said Liu Guangming lowered his voice. “Director Lu may come to our company for inspection in the near future. The research center will be the top priority. It is necessary to present our short-term efforts and results to Director Lu clearly!”

“Okay, I promise to do this beautifully!” Liu Guangming said that it was Liang Xiao’s strengths, and he was not worried at all.

He also told him some key points of the laboratory work. Liu Guangming got up and let him leave, “OK. You can go to the laboratory to find Professor Guo! Work in the corporate culture construction department will take time to hand over these two days; Xiao Gu , Go and give me two or two of my tea leaves! “

“Thank you, Chairman Liu, then I’m over!” Liang Xiao embarrassedly leaves tea and leaves the chairman’s office, causing Secretary Gu to look sideways. I always come here only to send things, and it seems that only the person in front of me and Professor Guo in the laboratory can take things away!

Upon arriving at the laboratory, Professor Guo immediately welcomed, “I have spoken to Chairman Liu several times, but he finally put you here! The laboratory is acquaintances, so you don’t need to greet you. Regular meeting Shangzai told them that you are joining our team! I invite you to dinner at night and welcome! Now you can look at these materials and compile a detailed report, which will be used in two days! “

“Eh, good!” Seeing a thick stack of information at the doctor’s office, Liang Xiao didn’t bother at all, “You can tell me the key point of this report, I have a good heart ! “

“The work is actually very simple. In the field of rare earth metal smelting, the elimination method is mainly used! This method puts it bluntly the process of excluding the wrong option among several options, just like the undirected multiple-choice question during the exam. It is more troublesome What ’s more, the threshold for rare earth metal smelting is a little higher, there are more options available, and more money is spent. So our main job is to catch a group of specially trained experimental personnel, one by one to eliminate the wrong options, and finally put one Or dig out a few correct answers. Sometimes you ’re out of luck and find out at the end that oops are all wrong answers. That ’s okay, it ’s a great series of numbers, just a by-product in the process. It is actually more useful than the regular product, just like the tablet computer that Professor Lu launched some time ago! “Professor Guo patted on the large pile of materials.” These are all the data we used to conduct experiments during the exclusion method! “

“There are successes and failures in these experiments. Your task now is to list our exclusion screening process and tell Professor Lu what achievements our research has achieved and what problems still exist; what aspects we will carry out next The main goals of the research are those! In this way, Lu Qiu Jian can have another very clear understanding of our work progress and work ability! This is directly related to how much support we can get from him next! ? “Professor Guo asked.

Chapter 538 - Mineral issues

“I understand, is this the same as the work I did last time!” Liang Xiao thought for a moment and said, this time it’s still a work summary and writing materials.

“It ’s different from last time! Last time you were just doing the work as a material writer. Now you are the deputy director of the laboratory. You need to consider this report with a new identity. When writing the report, you still have to It should be considered that there are still problems in our pilot plan chapter? What changes need to be made in the future? Is there a better choice ... etc. These are all you have to think about! “Director Guo has great expectations for him .

“These! It sounds a little difficult, but I will work hard!” Said Liang Xiao, hugged the materials and started to work. “Yes, I have the tea I got from Chairman Liu, what is Tongmuguan Jinjunmei , Give you half! “

“Your kid doesn’t understand tea, it’s too wasteful to drink this! Give it to me, you want to drink tea directly from my drawer!” Professor Guo recklessly requisitioned his loot.

Liang shook his head silently, still the authority of the field! How come sometimes like a child! In the next few days, Liang Xiao quickly handed over his own work, and moved to Professor Guo ’s laboratory to start a new job. The old employees of those laboratories have already been familiar with him before, and they are also concerned about his ability. Zhiming Ming expressed great welcome to the young man’s arrival. With their help, Liang Xiao quickly got the job done; then, Lu Qiu Jian also came to their company again.

“Oh, compared to what I saw last time, is the change a lot now?” Lu Qiu Jian said while visiting the company. Obviously, during this time, Changan Nonferrous Metals has added a lot of high-end Equipment and the age structure of employees have also changed a lot.

“Since receiving the first fund of Xihe plan, we immediately started the equipment replacement and the recruitment of new employees! As of now, our company’s hardware equipment can be said to be the best in the country. Even if we put Compared with the same industry in the world, we are not behind! “Liu Guangming held an explanation next to Lu Qiu Jian,” As for talents. Our staff went to

universities and research institutes across the country and dug many outstanding talents. ” . Now our research team is also one of the best in the world! “

Lu Qiujian stopped behind a certain staff member, looked at his skillful operation of the experiment, and nodded. “Xi and the plan involve a wide range of fields. The strength of our project department alone is far from meeting the demand; That ’s why you need to work together with partners like you! Only if everyone makes progress together, will the project have hope for ultimate success! It ’s great to see that you have n’t wasted our support! ”

This sentence is not a polite one. Research on controlled nuclear fusion involves more than ten major branches of science, such as materials science, plasma research, laser technology, superconductors, and permanent magnets. The research of countless small branches is too broad. He can only control in the general direction. Some more detailed work will be completed by cooperative units like Changan Nonferrous Metals Corporation!

The success of controllable nuclear fusion requires that China ’s scientific research strength as a whole can buy a big step to complete, which is far from the work that the base in the cave can independently complete.

Take Changan Nonferrous Metals Corporation, for example, research on superconductors requires rare earth metals, some important components of controlled nuclear fusion reaction facilities require rare earth metals as raw materials, and remote control robot arms require rare earth metals ... This is still only direct If the application is indirect, it will be more. For example, it is necessary to go to the moon to mine helium 3 as a fusion fuel. Rocket launch, satellite manufacturing, lunar mineral mining equipment, etc. also require rare earth metals.

It can be expected that with the deepening of the controlled nuclear fusion plan, Xihe plans to have more and more demand for rare earth metals in the future. So Lu Qiujian put the first stop of the inspection here.

“In the field of metal smelting, research is to burn money! Why the technology of Germany and neon is so developed, because they have been burning funds for nearly a hundred years. Only then have they accumulated a lot of experience and mastered the unique We want to catch up with their leveling, heating and other technologies in a short period of time, there is no shortcut to take, only burn more money than them! “Professor Guo said with emotion.

“Any scientific research is inseparable from burning money, but how to burn it to whom needs to be carefully considered!” Lu Qiujian heard his out-of-string voice, “After reading the laboratory, now go to the conference room to hear your report ! “

Who should I burn? How to burn? Why do I sound so awkward? The corner of Liang Xiao's mouth couldn't help but swallow. Is this to visit the laboratory or discuss the grave?

The position was quickly transferred to the meeting room. Where the projection facilities, tea drinks, and fruit snacks were already prepared, Lu Qiujian took Ma Yang to sit in the middle. Hearing Liang Xiao's report carefully, "... After research and analysis. We have proposed a total of 327 possible combinations, 83 acidity schemes, and 34 compounding times. Scheme, one hundred and one kinds of purification and decontamination agents In this year, we have used the elimination method to screen a total of 248 combinations, failed 220 Nine kinds, nineteen kinds of success, six of which have high practical value, these six kinds of ratios exceed the latest technology of other companies at home and abroad ... In the next three months, we will Test and verify the remaining ratios in order to find the best solution ... "

Lu Qiujian and Ma Yang nodded from time to time while listening. The research center of Chang'an Nonferrous Metals Co., Ltd. still made some achievements under the leadership of Professor Guo Zhenyu, at least faster than other domestic cooperative units. More than that, it is worthy of being a disciple of Academician Xu Guangxian, the father of China Rare Earth.

"Listening to your report, Changan Non-Ferrous Metals Co., Ltd. is superb in technology research and development, but why has the recent output dropped significantly?" After Liang Xiao finished his speech, Lu Qiujian raised the first question.

"The reason for this is that several major international mineral suppliers have recently joined forces to raise prices and have made new adjustments to the mineral output quota! As a result, our company has appeared in the acquisition of mineral raw materials. "A big gap!" Liu Guangming quickly explained, "but our purchasing department has reached an agreement with those international mining giants again, and it will not take long for new ore to be connected! The output will naturally be restored by then!"

Chapter 539 - Industry Status

"Huh? It's not a good thing that all the resources are stuck in other people's hands!" Lu Qiujian frowned, reminding him of Hua Guo's follow-up on iron ore. The blackmail by BHP Billiton and Rio Tinto Group has caused heavy losses to the China Iron and Steel Group.

Hey, it seems that the Rio Tinto case hasn't happened yet? You must find an opportunity to remind the relevant departments, and also pay attention to these problems in the field of rare earth ores.

And after the controlled nuclear fusion is officially exposed, foreign countries will definitely interfere with the import of related minerals, and these things need to be prepared beforehand.

Seeing Lu Qiujian in deep thought, Liu Guangming quickly stated his solution, “For this problem, we have prepared the following solutions, first of all increase the investment in lean ore smelting! We need this kind of minerals rich in the world Not much, so the mineral market price is artificially high, and everyone’s costs are climbing up. If our company can break through this level, those other foreign companies can only pick up things that waste the freight when the mud is dumped. When the baby is used, even the good waste residues that others have given up due to process problems can be used. The waste residues after extraction can also be used as cement bricks, and the comprehensive utilization rate of the product has greatly increased. “

“In addition, we also intend to apply to the relevant departments through the head office, and the country will provide financial assistance to certain mineral resource countries in the third world to obtain the rare earth resources of the country! Anyway, where are these things placed? Idle, they are neither capable of smelting nor mining! It’s better to hand it to us! “Liu Guangming feels heartbroken here, which countries in Africa lie down on such good things are still poor, we have no minerals we want , God is so unfair!

Although China’s rare earth mineral reserves rank first in the world, due to the variety distribution and the wanton mining in previous years, the kind of mineral reserves required by Changan Nonferrous Metals Company is not much. Can only find a way from abroad now.

On the one hand to upgrade the smelting technology, on the one hand to expand the source of mineral imports, Liu Guangming’s strategy is still very effective. Lu Qiujian also expressed his support for this, “Well. The method is good; but it is a bit slow to reflect to the higher level through your head office! You can directly respond to Xi and the Planning Project Department. Resources, we will directly seek support from the highest leadership! “

If according to Liu Guangming’s plan, it is necessary to report to the China State-owned Nonferrous Metals Corporation first, and then the China State-owned Nonferrous Metals Corporation will report to his superiors, the layer-by-layer procedures will take a long time to go; and to Lu Qiujian, If he feels it necessary, he can directly respond to Qin Feng, which can save a lot of time. And coordinated by Qin Feng, the degree of attention of relevant departments must be different! The results obtained will also be very different.

“That would be great!” To be honest, Liu Guangming was not sure how long it would take for him to respond to the problem through the original channel. It was natural to see Lu Qiujian taking over the most difficult task, “I will later Relevant materials are delivered to you! “

“No problem, yes, let’s talk to us about the international competition in this industry! If the leaders ask me, do I have a bottom line?” Lu Qiujian then asked.

“Okay!” Liu Guangming finished and walked up to the stage, called up the relevant documents from his laptop and hit the projection screen. The competition in the same industry is the work they need to pay close attention to every day, so the information in the computer Very full. What is presented now is the market situation of the industry in the most recent quarter.

First of all, a global map was displayed on the projection screen. Several points were circled on the map. He pointed to these points with a laser pointer and started his own commentary. “The scale of this industry is actually not large, and the annual global output adds up to more than 100,000 tons! It is mainly monopolized by companies in these countries, first of all, the Wayne Group of the United States, and the Neon Zejuan Co., Ltd., which The two companies have strong technology accumulation and high product quality, and mainly take the high-end route! “

“Then followed by the Salman Group of India, they are closer to the international bonanza because of the advantage of transportation location. The transportation cost is much lower than ours, and they have a great impact on us in the low-end market!”

“Others are some companies in the United States, Neon, India and some European countries. There are a total of 14 large enterprises in the industry in the world! Among them, there are 11 foreign companies and 3 domestic companies. These are our three Changan Nonferrous Metals companies. One! We are not too far behind in technology, and are now gradually catching up, only because of the lack of rich minerals, we have been at a disadvantage in international competition ... “

After talking about the international situation, Liu Guangming changed the map to the country. “... When the rich mineral deposits were still rich before, no matter it was a state-owned enterprise or a private enterprise in the country, it was not a lot to see that they could make money. The resources are completely consumed; now the rich mines are almost mined, and those private companies see the profit rate decline So they began to withdraw from this field, began to transform to do real estate development, hehe, who makes real estate money fast now! But Because this product is related to the lifeblood of the country’s high-tech, even our state-owned enterprises can only continue to grind their teeth even if they lose money! “

Hearing here, Lu Qiuqian could not help nodding. Indeed, SOEs have many problems such as inefficiency and chaotic management, but for this reason, their existence is still necessary.

“Later, the state reorganized the industry, eliminated a group of low-tech and small-scale enterprises, and merged the remaining enterprises. Our Changan Non-Ferrous Metals Company also merged with several SMEs. Today ’s scale! After the integration, we have the strongest technology development capacity and product production capacity in the country. We are also confident that we

will win the final victory in the competition with Wayne Enterprises, Juanze Co., Ltd. and other companies! “

“I also hope you can do it!” After listening to Liu Guangming’s explanation for a long time, Lu Qiujian had a preliminary plan for how to respond to Qin Feng. “Give me a copy of these materials, and I will report to the superior leaders as soon as possible. They help us solve the problem of mineral imports! “

“That’s really thank you so much!” Liu Guangming knew that what Lu Qiujian said at the high level was completely different from what he said.

“Yes, I would like to ask about mineral imports!” Lu Qiujian suddenly thought of something, “Does the Congo have the kind of minerals we need?”

Chapter 540 - Patrice

“Yes! From the proven situation alone, Congo has enough reserves for our domestic enterprises for many years!” Liu Guangming said in surprise, “This is also the main goal we hope to fight for. Also understand? “

“Oh, I traveled to Congo once when I was in college. It seemed that I had heard of some of these things!” Lu Qiujian did not say his relationship with Patrice. It ’s better to see if you want to use this relationship!

“Congo ’s minerals are not only large in reserves and difficult to mine, but more valuable is the high grade of minerals. The area where the minerals are located is close to the ocean and transportation is also convenient! Although several other African countries also have storage, they are not as good as Congo Advantage! If you can win Congolese minerals, then I am confident that the Wayne Group and Zejuan Co., Ltd. will be completely defeated in three years, let alone the Salman Group in India! “Liu Guangming’s eyes shone with fragrance It seems that in the near future, Changan Non-Ferrous Metals Co., Ltd. has become the No. 1 throne in the same industry in the world!

“I’m going to help you negotiate on the issue of mineral resources! All you have to do is complete the technical development as soon as possible!” Let Lu Qiujian prepare to get up, “As for the technical development funds, Xihe Planning and Project Department will provide you with support, you Make a report and report the amount of funds and other support you need. We will evaluate your application after inspecting other related companies in the complete country, and finally give a suitable number! “

“Okay! Let’s start preparing for this work right away!” Listening to Lu Qiujian means that the money will be approved soon? Think again about the uproar in the tablet computer patent auction

some time ago, Liu Guangming was very happy. Now Xi and the plan are rich and rich. Lu Qiujian slightly leaked himself from the fingertips, enough to carry out another round of technology. updated! By that time, whether it was Wayne Group or Zejuan Co., Ltd.

After running back and forth for a few days, plus the hard work of other working groups, by the end of the month, Lu Qiujian had already touched on the situation in China in this field. He found that China had gradually caught up with the country in terms of technology. At the same level as neon, they are all subject to foreign mining groups like Changan Nonferrous Metals. To varying degrees, there are problems of excessive production costs and gradual decline in output.

Since all of this is the case, then this situation is worth reporting to Qin Feng. Lv Qiujian picked up the red phone on the table, "Help me pick up Xi and Comrade Qin Feng, the leader of the plan leadership team!"

"Okay. Wait a minute!" After verifying Lu Qiujian's identity, the call was quickly transferred to Qin Feng, and Lu Qiujian said the situation in detail.

"I know, you submit a report, and I will reply to you as soon as possible after the study with other members of the group!" Qin Feng said over the phone.

Wait for the report submitted by Lu Qiujian. After reviewing through relevant channels, it was found that the domestic related enterprises did indeed need the help of the central government. Qin Feng immediately summoned the relevant departments to have a discussion and came up with a targeted solution. They also set the target on Congo, "For diplomatic considerations, among these mineral exporting countries, the relationship between Congo and our country is the best! The oil refinery we built in Congo a few years ago also provided a lot of oil for our country! By the way, this thing seems to be the same Director Lv took the lead to complete, he has a good personal relationship with Patrice, a new generation member of the Kabila family, which is quite powerful in the Congo! "

"Now Patrice Kabila is the Congolese Minister of Foreign Affairs!" The consultant of the African Department of the International Relations Research Center inserted a sentence.

"This resource should be used well! I think the diplomatic service can issue an official invitation to the Congo. Invite this Mr. Patrice to visit China! We will discuss this matter with him once we arrive! At the same time, let the embassy in the Congo investigate Concerning the specific storage situation of Congo-related minerals, other departments are also making relevant preparations! "Qin Feng made a decision.

“Yes!” The people responded in unison, the foreign affairs department was busy contacting the Congolese Ministry of Foreign Affairs and the Embassy in Congo; the International Relations Research Center began to analyze the impact of this cooperation, and aimed at other countries may appear The response proposes a corresponding response strategy; the financial sector begins to calculate how much capital is needed to reach this cooperation ...

“Comrade Qin Feng, the party and state leader, cordially received Congolese Foreign Minister Patrice, and the two sides carried out friendly exchanges on issues of common interest to the two countries ...” A figure of Patrice appeared, and Lu Qiujian rubbed Xia Xiao’s hair. “You have a rest in these days. Tomorrow Patrice will come to Chang’an. It’s our turn to entertain him!” “

The next day, Patrice stepped out of the cabin and saw at the first sight Lu Qiujian who was standing below to meet him! Suddenly laughed, quickly walked down the ramp and gave a big hug. “Hey, Lu, you did a great job at the Olympics! I still remember James’ frustrated look!”

After greeting, he remembered that there was an official from China next to him, and immediately restored his status as a diplomat, and politely apologized. “Sorry, Professor Lu and I are roommates at Princeton University. We haven’t seen each other for a long time. Please forgive me for my gaffe!”

The staff waiting a long time ago already knew their relationship. Moreover, Lu Qiujian’s position was higher than them. They dare to worry about it and had to go through the process. Patrice got into Lu Qiujian’s car again.

“Seeing how you are now reminds me of the two of us when we went to the bar in Princeton for the first time!” No outsider Lv Qiujian also spoke a lot, “I want to know Did you meet that guy when you visited the United States? “

“Haha! It’s a pity that this kind of thing didn’t happen!” Patrice quickly recalled the scene in the bar where Lu Qiujian helped him refute the white top student.

This conversation brought the two people a little rusty due to the lack of contact for a long time. When they entered the city and arranged their accommodations, Lu Qiujian and Xia Xiao took Patrice and his wife to the old restaurant in Chang’an Dine.

After tasting the authentic food of Chang’an and having enough wine and food, Patrice finally asked the question, “Lu, can you tell me why you called me to come to China this time? I think you should definitely know!”
