Chapter 541 - Foreign aid

“Xiao Xiao, please take Mrs. Kabila outside to see the night view of Chang’an! From here you can see the lights of Daci’en Temple. Everyone who comes to Chang’an should go and see!” Lv Qiujian didn’t answer directly but He turned to Xia Xiao and said.

Xia Xiao took Patrice’s wife out of the private room intentionally, and there were only two of them left here. Lv Qiujian had been given a signal by Qin Feng before, and it was also a planned matter to get the bottom of him through personal relationships. So he smiled and said, “You can rest assured that it will definitely benefit both of us!”

“Like last time?” Patrice also reacted. Last time Lu Qiujian helped him build a refinery in his country, which benefited them a lot.

“Yes! Similar cooperation! Which oil refinery is doing now? The recent international oil price market is very good!” Lu Qiujian said.

“Not bad! It’s a pity that the goal has only reached half!” Patrice sighed. “The earliest purpose of building this refinery was to increase income for the country and second to train a group of qualified ones for my country. Workers! Although our financial income has increased, our workers can still only do the most basic work! It is not that your staff does not give opportunities, but they are really lacking in motivation and upward learning. With a higher income than other allergies, I am completely satisfied! “

It is too difficult to change the issue of nationality! Fortunately, since ancient China has wanted to become the center of the world, it has been rooted in the hearts of every citizen. Even the second person seems to have failed in China. This kind of character has put too much pressure on people, but it has also promoted China in this. For decades, if you work hard, if the Chinese are like them, Lu Qiujian should be blind!

“No matter what changes need a process!” Lu Qiujian said comfortingly, “Industrialization is undoubtedly the best way to change the character of the nation. The oil refinery is the first step. Now we should build more factories and transform more people. It ’s been a long time for industrial workers. The situation will naturally get better! “

“How can it be so easy to build a factory!” None of them are outsiders, and Patrice did not use the diplomatic dictates that he was used to to deal with Lu Qiujian. “Although we have abundant

resources, we lack the funds, Technology and talent. Without solving these problems, there is no way to build a factory! “

“Now, the opportunity is coming!” Seeing that the topic has progressed to the right time, Lu Qiujian threw out his purpose.

“Oh? Are you saying that China wants to build a new factory in our country?” Patrice’s eyes brightened.

“It’s not that we are going to build a factory with you, but that we both cooperate to jointly develop the rich mineral resources of Congo!” Lu Qiujian shook his finger. Corrected his words.

“What’s this time? Do you need more oil? Or copper? Cobalt or gold?” Patrice reported several Congolese minerals that are abundant in China but demanded by China. In fact, Congo also has coal and natural gas. It’s a pity that these words that are destined for China seem not very cost-effective.

“I’m afraid this is the next stage! We need rare earth mines most now!” This thing is not as easy to smelt as iron or copper mines. The country of Patrice is not even easy to smelt iron and copper. Not to mention this high-tech industry, where rare earth mines can only be seen where they are placed, and after some processing in China, they will become tens of thousands of high-value products per kilogram!

“Rare Earth Mine?” As a high-quality student at Princeton, Patrice’s vision is still very broad, he understands the opportunities in a little bit of pondering. Shrugged, “If the conditions are right, why not!”

“OK, since you have the intention of cooperation, then things are easy to handle!” The task was easily completed, and Lu Qiujian was very happy. Although there will definitely be negotiations in the future, but as long as both parties want to cooperate, then these are the details. “You can communicate with the country after you return to the hotel. I also need to report to the superior! Then I can start specific negotiations; but for now, let’s continue to taste Changan’s food and beautiful bars!”

After the business was over, Xia Xiao also took Patrice’s wife back to the private room, and the atmosphere inside became suddenly relaxed. The two were talking about the Olympic Games while drinking.

“Aha! To watch that game, I postponed the meeting time with the Portuguese Foreign Minister! At the last second, I thought you would shoot by yourself, but I didn’t expect it to be a pass!” Patrice danced. Talking about the final.

“It’s the same as when I was in the Princeton Tigers. You have a good chance. I will always pass the ball to your hands. I always believe in my teammates!” Lu Qiujian raised his glass and met him.

On the second day, Patrice could not visit the various places of interest in Chang’an. He flew directly back to Beijing to take a plane directly, and had fierce consultations with relevant departments.

Changan Nonferrous Metals Co., Ltd. once again expanded the scale of the research center after receiving the support funds from Xi and the plan, and a set of more advanced experimental equipment was shipped to Changan; Liang Xiao also began to follow the personnel of the personnel department to the country. Famous universities and research institutes have launched a new round of recruitment.

At the same time, Liu Guangming also arranged for a survey near the coastal port to find a suitable place to prepare for the construction of a new production plant. After all, Changan is too far from the seaside. If the ore is transported from the port to Changan, the transportation cost is too great. It’s higher, so it’s better to find a place nearby. In addition, the coastal area has more technical talents than Changan; even if the land price there is higher, it is more convenient to be in the coastal area if you consider it comprehensively!

Currently, it is only a preliminary inspection. If the agreement for the import of ore is not reached, the plan to build a factory in another place will only be invalidated.

Fortunately, he did n’t have to wait long, he saw such a news from the punctual news of the court, “... Chinese Foreign Minister Xiao Qi and Congolese Foreign Minister Patrice signed new two countries Cooperation Agreement; Foreign Minister Xiao Qi announced that China will provide Congo with US \$ 3.5 billion in financial assistance, which will be used in Congo’s resource development, industrialization construction, transportation construction, and many other fields. The cooperation once again demonstrated the sense of responsibility as a big country ... “

This is done! Liu Guangming slapped in front of the TV and snapped it on the table, and then quickly picked up the phone, “... hurry up to speed up the negotiation of the site and select the target as soon as possible!”

At the same time, about this foreign aid, the Internet also turned upside down.

Chapter 542 - The case

“Fuck, the people in the west are still eating grass, and the court has also given silver to the African grandfather. I think this big green fruit pill!” Some people started to laugh at the forum immediately.

“Upstairs +1! The imperial court sent money to Congo, are you afraid of the Great Gambian Empire sending troops to fight against it?”

“What do you know, this is my rabbit playing chess again, the geographical location of the country of Congo ...” My rabbit belly mafia began to list all kinds of evidence to guess the hidden story behind this aid.

None of them talked about the key points. These billions of dollars were not the imperial court's feeling that the money was too hot, so they just spread it out! It can only be said that these netizens really think too much. Under normal circumstances, this foreign aid process is: you have to build infrastructure, you have to open a mine, you have to build a railway, you have to build a factory, you can get a plan, get a few The 40-year mining right of a mine is mortgaged to the bank consortium. The bank consortium feels feasible and transfers the mining right as an asset to a company. After completing the construction materials, engineering team and equipment, it directly bids for certain domestic enterprises. Pulled more than N workers rumbling to kill the past and start work. Do you want small money? Okay, catch a few illiterates and half illiterates and come to work as hard labor. Or, let's wait for us to collect tolls for decades, dig mines for decades, and then come back to play!

So these billions of dollars, even the country does not even go out, almost all hit the domestic industrial enterprises. In a few years' time, these countries will become the dumping grounds of industrial products in China; the scissors difference mentioned in the high school textbooks of that year is just such a thing; of course, the morality of China is still better than other countries, Patrice Countries can also use these aids to build infrastructure and cultivate industrial technicians, but if they do n't have the motivation to learn, no one can do it!

There is a good saying, people who understand will naturally understand, and people who do not understand will not understand what they say! When netizens turned upside down in the forum shopping mall, similar companies across the country and Changan Nonferrous Co., Ltd. saw this agreement but were refreshed. Ma Liu began the preparation work for expanding production capacity, and a batch of leaders also went to Capital city. Long queues lined up in front of the relevant departments, trying to seek a share of minerals for their companies from this agreement.

After confirming the port for mineral transportation, Liu Guangming immediately purchased a piece of land near the port and sprinkled a large amount of silver to start the design and construction of the new factory. At the same time, under the leadership of Professor Guo and Liang Xiao, the

research center accelerated the research progress. It is necessary to get a new production process before the five links and one level of the factory plot are completed.

Only in this way can the production process be determined in advance, so that the newly built factory can use the new smelting technology, and the whole laboratory is busy and dark for a time.

Rare earth metal smelting companies are anxious, those mining companies and infrastructure companies are more excited, this is a big cake worth billions of dollars! They have resorted to various means. Preparing his own bidding plan, after going round after round of bidding, several Chinese companies with rich experience in overseas construction and production got the project and began to organize people to go to Congo.

A well-skilled worker, a large machine with powerful functions, has boarded the ocean-going ship, preparing to work in a new territory, to exploit the much-needed resources for China, and also to earn huge income for himself.

Is also mining and repairing roads, but the income in overseas and domestic is not at the same level, of course, the conditions overseas are much harder. However, if you go outside and work for a few years, you can save the income that you may not be able to get in the country for ten years. There are still many people who are willing to do it! The Chinese are not black uncles who are too lazy to lie down and lie in the sun. In order to get a better life, they are willing to spit sweat in any corner of the world.

“Hey, I don’t know when I will be back this time!” On the deck of the giant ship, a young man looked at the port that was going away and said with reluctance.

“There is one month a year to go back to China for family leave, and you will be able to return when this time next year! Is this your first time going abroad?” Said a slightly older worker in the uniform of this state-owned enterprise.

Looking at how calm he was, Fan Yihang couldn’t help but wonder, “Yeah. For the first time abroad, my mother heard that I was going to Africa, and I almost didn’t let me quit!”

“Hey, it’s the same when I’ve never been there. In fact, you just have to go and get used to it for a while!” The older worker said generously, “I was also afraid when I first went to the Middle East, so many years in the world I’ve gotten used to running around, and now you let me stay at home in peace, but I can’t stand it anymore! “

“The Middle East is better than Africa?” Fan Yihang remembered the luxurious life of the Middle East oil countries seen on the Internet.

“It’s not consoling, anyone knows that they started fighting that day! Fortunately, the company always pays attention to the local developments. As soon as there are similar signs, we will quickly withdraw us!” He still didn’t care. I have been to Antarctica that year. “

“Antarctic? Are there any projects over there?” Fan Yihang couldn’t help but grow his mouth. Compared with this one, those small trips around the world are so fresh and weak!

“Why not? Our country has a scientific research station in Antarctica!” He lighted a cigarette Meimei took a sip and looked up at the sky, “I want to work for a few more years, wait When Professor Lu Xi and plan to enter the moon, I still have to go to the moon to build! “

As soon as this remark came out, Fan Yihang only admired him. This is the romance of the working class! He did n’t know where it was higher than those who loved and loved on TV. He could n’t help but feel arrogant, “Brother Liu, I ’ll be the one by then!”

“Haha, your kid is afraid to think about going to the moon to see if there is Chang’e!” Liu Ge hugged Fan Yihang’s shoulder and laughed, “Eh, I tell you, don’t provoke the door to Africa when you come to Africa Girl, what I really think ... “

Lying trough, this style of painting becomes a little faster! Fan Yihang was immediately messy.

At the same time, in the base of Changan, the second test has been successfully completed, “Well, the time and total amount of energy output this time are slightly improved than the first time, which proves that our thinking is completely correct, Then carry out several verification tests, we can start to build a new reaction device! “Lv Qiujian said with a smile.

Compared with the first time in this experiment, there is no fundamental change, so he does not plan to go to Beijing to report to the elders in person, only need to submit a report to Qin Feng. However, a sudden call made him change his plan, “I used to be reviewed by others, I didn’t expect it to be my referee this time!”

Chapter 543 - Award review

“Xiao Lv is here? Sit! Wang Yang, give me a cup of tea!” As soon as he entered Qin Feng’s office, he got up and came out from behind his desk, greeting him warmly.

“Secretary Qin, this is the report of our latest experiment. Please look around!” Lu Qiujian entered the password, checked the fingerprint, and took out a file bag from the encrypted briefcase he carried with him.

“A successful experiment may be a coincidence, but the ability to repeat the experiment proves that our method is correct!” Supervisor Xi and the plan for so long, Qin Feng also has a deeper understanding of scientific research work, said with joy, “It seems so We are currently on the right path, and the future will only become brighter! “

“When I read this document later, I will convey the good news to the elders! Now let’s talk about other things!” Qin Feng put the document bag aside, “This time it’s mainly for you to call you over. The National Science and Technology Award Conference will be held soon! Some questions need to be discussed with you! “

“This year’s highest science and technology award was fully covered by our school! When I was in Changan Nonferrous Technology Company, I also met the disciple of Academician Xu Guangxian. He is outstanding in the field of rare earth smelting. If there is no academician Xu Guangxian and plan, I am afraid that Delayed for a while! “The two winners of this year were academician Xu Guangxian, who is known as the father of China Rare Earth, and academician Wang Zhongcheng, a neurosurgery expert.

Among them, Academician Xu Guangxian graduated from Jiaotong University in 44. When he graduated and left, the elders had just entered Jiaotong University. Later, they also met many times at work; after he returned to China, he taught for a long time in Beijing Normal University. system. Academician Wang Zhongcheng has been staying at Beijing Normal University School of Medicine from school to teaching, so it is not an exaggeration to say that this year’s two national highest science and technology awards were all included in Beijing Normal University.

“In addition to these two academicians winning the highest national science and technology awards, there will be 34 second-class awards awarded by the National Natural Science Award; 55 items awarded by the National Technology Invention Award. Among them, there are 3 first-class awards and 52 second-class awards; The National Science and Technology Progress Award awarded 254 projects, including 3 special prizes, 26 first prizes, and 225 second prizes; 3 foreign scientists were awarded the International Science and Technology Cooperation Award of the People’s Republic of China; of course, this is only a preliminary screening list. As for the final award list, you and other members of the organizing committee will review and confirm it together. This is also an important reason for inviting you to come over! “This conference is chaired by Lu Kunqi, and there are five elders including the elders and Qin Feng Join the meeting. So he remembers these data very clearly.

“By the way, your project department also won this time, and the tablet computer project team will win the first prize of the National Technical Invention!” Qin Feng gave him a thorough explanation. “In addition, should you join the results of your first experiment? In the list of winners, I and other elders have some concerns. “

“For those comrades who have made outstanding contributions to the scientific development of our country, we should give material and spiritual rewards! Material rewards have already been sent out to you! Spiritual rewards should not be missed! However, if the awards are announced Is n’t the reason for leaking our research progress? So my idea is to award these people, but not to publish their reasons for winning! What do you think? “Qin Feng said his plan.

“I don’t think this plan is appropriate!” After a little thought, Lu Qiujian didn’t care if he was sitting across from one of the most powerful people in China. He directly expressed his views, “First of all, it is unfair to other research staff who won or participated in the selection if the reason for the award is not announced! This will make people doubt whether there is shady inside! It is conceivable that in the future There will be many similar awards for Xi and the planned birth. In the long run, the authority of the National Science and Technology Commendation Conference will become weaker and weaker!

“In addition, you know that the scientific community is actually full of hills. If someone sees an opportunity from this, learn that we have fabricated various reasons this time and refused to submit results for review, trying to get an award back! Are we not a bad example?” In the future. A highly controversial award-winning project is to block everyone with similar reasons.

“Finally, although there is no reason to announce the award, I am afraid that the list of winners will still be made public? The professional fields of these people ca n’t be kept confidential. If you are determined, you can think of us based on the winner ’s research field. The progress of the test! Is n’t this leaked again? ”Lu Qiujian said several reasons in a row.“ So, I do n’t think the results of this test should be included in this year ’s list of winners. ”

“Isn’t that too unfair to the staff of your experimental group?” Qin Feng frowned. What Lu Qiujian said just now was very reasonable, could it not be rewarded like this?

“If there is a reward, I have two options for reference!” Lv Qiujian also thought about this issue, “First. We can delay awards! Now they will not be rewarded, and until the results of this trial are lost in confidentiality Reward them when they are worth! “

This situation will not lack cases in the future. For example, academician Yu Min, the father of the famous hydrogen bomb, won five years after he won the National Supreme Science and Technology

Award! This will certainly not reward him with the latest research results. Even the highest science and technology awards previously awarded. It also rewards the contribution of those winners in the past.

“The situation you said is similar to the situation in which we award the highest science and technology awards!” Qin Feng also thought of these, “but the two are different. The highest science and technology awards have a tendency to honor lifelong honors to some extent. The rewards are not only those scholars with outstanding merits and deep qualifications! They are affirmation of their lifetime achievements! So it does not matter that the time is late! But other invention awards and scientific progress awards are time-sensitive! Not suitable put off!”

“Then I will talk about the second plan!” Lu Qiujian continued without changing his face or we can conduct an internal commendation that is not open to the public, and you or other leaders will come to the base to check in The staff who made outstanding contributions in this experiment will be commended and rewarded! Since then, they have received spiritual encouragement without worrying about revealing secrets! “

“You are Yijin Yexing! Rewarding this kind of thing loses its general meaning without letting people know!” Said on the mouth, but Qin Feng’s heart changed a little, “but there is no better way.”

Chapter 544 - Heroes

After talking about the award, Qin Feng stood up and said with a solemn face, “Come on, go to the hospital with me today to see an old man”

“Which one is it?” Lu Qiujian passed the people in China who could let Qin Feng go to the hospital to see people who have something to do with him, and the answer came out, “It is Qian Qian”

“Yes, Qian Lao’s health is not good now. The doctor said that he might not have much time.” Qin Feng’s tone was a little low, “So I think you should take a special trip to see him while you still have time now. Go, maybe there won’t be this opportunity next time “

“It should be, if I knew this before, even if you didn’t say I would go” said Lu Qiujian followed Qin Feng and walked outside the door

“When I was in Jerusalem, I had a chat with Professor Qian Yongjian, the nephew of Qian Lao, and he told him some things about Qian Lao.” He sat in the car and listened to Qin Feng’s current

situation. Speaking of this past, at the same time, I slowly recalled the old life of Qian Qian in my mind.

Mr. Qian graduated from Jiaotong University and was an elder and academician of Xu Guangxian. At Chang'an Jiaotong University, the library is named after Mr. Qian and the inscription was personally written by the elder to commemorate the outstanding history of this university. Alumni. It is said that Qian Lao always sat in the last row when he was studying at Jiaotong University and never paid attention to the class. Of course, he is not talking about WeChat or sleeping, but what the teacher tells is too simple for her. It's better to read professional books by yourself than to listen to him

By the time of the exam, due to the rigorous study style and strict exams of Jiaotong University, most of the students could not work even if they worked all night, but the average score of Qian Lao was more than 90 points; he successfully obtained the Gengzi Indemnity Scholarship of Mi Guo It is the only international student majoring in aviation among the 20 places in the country.

After graduation, he did not go directly to the United States, but stayed in the country to travel around. To in-depth understanding of the current status of the domestic aviation industry; however, even in the golden decade after being blown to heaven. There is nothing in the domestic aviation industry that can be easily achieved. The scattered imported aircraft cannot completely protect China's airspace.

However, it was not without gains in this tour. He first met Professor Wang Zhu, the famous aircraft designer at Qiantang Jianqiao Airport for the first time. Professor Wang Zhu was the first chief engineer of Boeing and was hailed as the father of Boeing. In the process of following Wang Zhu's study, Qian Lao learned to pay attention to engineering technology practice and manufacturing process issues.

Completed a domestic survey. He went to MIT to study for a master's degree. However, at MIT, which is more practice-oriented, the money that loves theoretical research is not happy; so he makes a decision quickly. Through a long journey from Boston on the east coast through the entire country to Los Angeles on the west coast; where he wrote a letter to the professor of fluid dynamics at the California Institute of Technology, Professor Feng Carmen, was quickly favored by Professor Feng Carmen, was He started working hard to study under his income.

While studying at California Institute of Technology, Qian Lao and four other members founded a rocket team. The rocket team also became the predecessor of the Nasa Jet Propulsion Laboratory. The first five members of the team were regarded by Nasa as the founder of the laboratory; with the encouragement of Professor von Carmen, the five members of the group began to tinker with explosives and develop their own rocket.

By 38 years, their research had made tremendous progress. The engine built by the Rocket team ran for a whole minute. This event caused a sensation in the entire country. They let the people of the country begin to realize it. It is possible for humans to enter space, and this day is very close to us

Due to various accidents in the experimental team, California Institute of Technology began to ban them from conducting experiments on campus, for them to be used as a research base in an inaccessible river valley. This base gradually developed into the jet propulsion laboratory of nasa; later inherited nasa The founder of Shiba's spae company once commemorated Qian Lao's birthday on his Twitter.

With the increasingly fierce fighting in World War II, Mi Fang also noticed the role of rockets in the war. At the beginning, they considered that Qian Lao's identity did not recruit him to the research center; but with the passage of time, they became more and more unable to Enduring the slow progress of the research, he gave Qian Lao the highest-level pass, included him in the team, and made an irreplaceable and tremendous contribution to the rocket development work of the United States.

After the defeat of Germany, Mr. Qian followed Professor von Carmen to Europe to review German aerodynamics expert Prandtl and Braun, the "father of rockets" who had received the development of v1 and v2 rockets.

What is interesting is that Prandtl is a teacher of Von Carmen, and Von Carmen is also a teacher of Lao Qian. These three generations of mentors and apprentices have made great contributions to the national defense of the three countries.

I believe everyone will know what happened afterwards. The establishment of the new Chinese government and the prevalence of McCarthyism have made Qian Qian go through arrest, bail, house arrest and hearings. In the end, it was the general ideal and the best way to change him back to China, and then started the glorious history of the rocketry of China.

It did n't take long for the car to stop in the hospital. Lv Qiujian followed Qin Feng into Qian Lao 's ward. Qian Laozheng lay in his bed quietly with his eyes closed. Wwww.mtlnovel.com Beside him; hearing the footsteps from the door, Qian Lao opened his eyes slightly and looked over here.

Qin Feng took two quick steps, gently pressed his hands on his shoulders, preventing him from getting up. "Old money, you don't need to get up if you are in poor health."

“Although I’m in poor health, I didn’t have the strength to do it.” Qian Lao didn’t pessimistically intend to other people who were seriously ill. He smiled a little from the corner of his mouth, and he just let him ignore him. At the head of the bed, then blinked and looked in the direction of Lu Qiujuan, “I can’t see clearly now, which one is this”

“Hello, Qian Lao, I am Lu Qiujuan” Lu Qiujuan quickly stepped forward to Qian Lao’s side and said in his ear.

“Oh ~ It’s Xiao Lu” Qian Lao lengthened his voice, and pulled out a trembling hand from under the quilt. Lu Qiujuan quickly reached out his hands and held this thin, bony hand tightly.

“It’s me. When I was in Jerusalem, I listened to Professor Qian Yongjian and talked about a lot of your things. I didn’t expect to meet you for the first time today.” The two had no communication before, so Lu Qiujuan took the money again. Yongjian moved out.

Qin Feng on the side looked at the thoughtful thoughts of the two of them, and he seemed to see that the leading figures of the two generations of scientists in China were undergoing some kind of identity transfer.

Chapter 545 - inherited

“Well, Yongjian also visited me some time ago!” Qian Lao smiled happily. “Yongjian also won the Nobel Prize last year. He also told me about you, saying that when he was in Jerusalem, he thought you could I won the Nobel Prize, but I didn’t expect you to go ahead of him! “

Happy to see Qian Lao, Lu Qiujuan slowly talked about the process of communicating with Qian Yongjian. Qian Lao nodded from time to time, and Qin Feng also said from time to time what happened after Qian Yongjian returned to China. The old lady also joined in; all three of them deliberately avoided scientific research problems and talked about some short-lived trivial matters of parents, for fear of spending too much energy and old energy.

But after talking about it, Qian Lao asked Lu Qiujuan’s recent research, “Xiao Lu! I also have a general understanding of the general situation of Xi and the plan. At what stage have your research progressed?”

Well, how should I answer this question? To tell the truth, it seems to be a leak, and to tell a false story, his conscience is a bit difficult, he turned his eyes to Qin Feng; Qin Feng turned his eyes to Mrs. Qian Lao.

“I’m going to help you wash some tangerines. You accompany my family with old money to eat!” Mrs. Qian knew they had something to say, and found an excuse to leave the caregiver in the ward, leaving only three of them in the ward. people.

“Lao Qian, Xi and the news released by the plan are just for the eyes and ears. In fact, the project team chaired by Xiao Lu is conducting research on controlled nuclear fusion. The current research has made major breakthroughs. In last year’s experiment, For the first time, the experimental controllable nuclear fusion reaction device at the Chang’an base realized that the energy of heat stimulation is greater than the input energy ... “Qin Feng whispered in Qian Lao’s ear, before he had discussed with other elders . They think it’s better to tell Qian Lao this matter, maybe he can stick to it for a while to make him happy!

“Oh? This is quite an achievement!” Qian Lao nodded as he listened, his already cloudy eyes gleamed. It seems to be happy for another major breakthrough of Hua Guo Technology.

Lu Qiujian’s hand was still pulled together with Qian Lao. He quietly moved his finger to keep an eye on Qian Lao’s pulse. It was found that his pulse was still stable, so he continued, “According to the time node table we made earlier, it is expected that there will be twelve to thirteen years before we can develop a relatively mature technology that can be commercially applied!”

“With controlled nuclear fusion, it is possible for mankind to truly open space voyage!” Qian Lao started his future prospects in his professional field. “It seems that our country will accomplish what Nasa has not done in the near future! “

“After the controlled nuclear fusion has been successfully commercialized, we will consider the miniaturization of the reactor. Install it in the spaceship!” Lu Qiujian continued to introduce, and at that time, humans are really qualified to start The journey of the stars and the sea.

“Well!” Qian Lao nodded slightly. Both China’s Long March series carrier rockets and Shenzhou series spaceships were derived from his missile program. If he could control nuclear fusion, he still didn’t know a little about spacecraft. Not unfamiliar, “Have you considered how to design such a spaceship?”

Qian Lao’s influence in the field of international aerospace is quite far-reaching. In the famous novel “Space Roaming 2010” by British science fiction writer Arthur Charles-Clark, the Chinese spacecraft was named “Qian Xuesen”; Lu Qiu In fact, Jian also wanted to discuss with him the ideas of the future spaceship, I believe that Qian Lao will also provide a lot of help for himself. But seeing how he was sick and sick, Lv Qiujian changed the subject again, “The spaceship is still a bit

far away. Our main work is still to complete the controllable nuclear fusion! Now the reactor data is uncertain. , So how to design a spaceship is impossible! “

“Hey, I can’t see that day!” Qian Lao was slightly lost, but soon recovered his optimism. “But I am very satisfied to hear the good news today!”

“Lao Qian, your health is okay! Xiao Lu and I also want to invite you to participate in the celebration feast of Xihe plan! As long as you follow the doctor’s instructions and actively cooperate with the treatment, I believe ...” Qin Feng also Persuade in a timely manner.

Due to Qian Lao’s physical reasons, this visit did not last long. Lu Qiu Jian saw that his spirit was slightly troubled. He offered his leave; Qian Lao knew that their time was very tight, so he did not propose to retain. Only one last word, so that they have good news about Xi and the plan and tell him.

“I will definitely do this!” Qin Feng nodded. He also hopes that the older generation of scientists who have made outstanding contributions to China, such as Qian Lao, can live a long and healthy life.

After coming out of the ward, Qin Feng was concerned about asking Qian Lao’s wife what he needed to help. He told the medical staff to do Qian Lao’s treatment and care work, and then took Lu Qiu Jian away.

“Lao Qian is a scientist worthy of respect by all Chinese!” Back in the car, Qin Feng said to Lu Qiu Jian, and Lu Qiu Jian nodded silently.

The US Navy ’s Deputy Chief Kimbell said about the strength of Qian Laoding ’s upper five divisions, but in Lu Qiu Jian ’s view, the five divisions said that they were lacking, and even if the Chinese army had five more divisions, it could not stop the other powerful nations. Coveted, but with advanced rockets and nuclear bombs, even the rice country and the Red Empire want to invade China. It was thanks to the contributions of older generation scientists such as Qian Lao, Deng Jiaxian, and Yu Min that the Chinese state was the foundation of survival, maintained the security of the country, and became a veritable power.

Even though Qian Lao said something against his turmoil during the turmoil, this could not obliterate his brilliance. Those networks are full of things like “Meaning a million pounds per hectare deserves death”, “I don’t understand the universal value of a deadly life.” , They may not even know what Qian Lao has done!

“Senior scientists like Qian Lao are slowly gone!” Qin Feng’s tone revealed a sadness. Sitting in his position, he deeply understood Qian Lao’s contribution. For the great significance of China, “The future depends on those of you!”

Lu Qiuqian knew that his words were expectations of himself and other young scientists. The reason why he brought Lu Qiuqian here is also that he can make his due contribution to the rise of China like Qian Lao. Passing the inheritance of Qian Lao, helped China ascend to the highest throne.

“Please rest assured that Xi and the plan will be completed on time!” And Lu Qiuqian took the burden without hesitation.

Chapter 546 - Looking back at her

After a lapse of many years, Lu Qiuqian once again stood in the venue of the China’s highest science and technology commendation conference. The difference is that the last time he was an out-and-out newcomer, he entered with Professor Zhang, led by Professor Zhang He and other scientists at the meeting greeted each other; but this time he had not come to his seat, many people came to greet him actively, spitting out all kinds of beautiful words in his mouth, “Professor Lu, you are our Beijing teacher. The glory of the university!”

“Professor Lu, I didn’t expect that you not only have outstanding personal research ability, but also have such excellent organization and coordination ability at such a young age! Xi and the planning team under your leadership have frequent achievements!”

“Director Lu! We have a certain strength in materials science. We are currently conducting research on superconducting materials. Welcome Director Lu to our inspection and guidance ...”

“Thank you, you are too much!” Lu Qiuqian always smiled and greeted them one by one; some of these people simply wanted to get to know him, and some tried to get a share of Xi and the plan, and some thought Lu Qiuqian also gave different answers to his relationship with him to achieve a certain purpose.

For those scientists who do have strength and are related to Xi and the plan, Lu Qiuqian exchanged contact information with them and agreed on a time to meet and discuss in detail; for the field that is different from Xi and the plan, but in their own research Lu Qiuqian, a scientist with outstanding achievements in his career, has no lack of admiration; but for those who generally have their own babies, Lu Qiuqian turned to other places after only a few sentences.

It did n't take long for the meeting to officially begin, and the elders took the lead in appearance, followed by the first assistant, the elders responsible for publicity work, and the five elders Qin Feng and Lu Kunqi. The lineup was gorgeous. The reason why so many elders were sent Reflects the Chinese government's emphasis on technological development.

Last time Lu Qiujian could only sit on the floor, and this time he was qualified to sit on the podium with these five elders and other leaders. Undoubtedly, he created the National Science and Technology Award Conference of China The youngest person to sit on the podium since its establishment. And it is predictable that no one will break this record for a long time in the future.

No one disputed whether he could sit on the rostrum, whether it was the leader of China or the scientists participating in the conference. His past achievements and the status of the chief of Xi and the plan now make him the most important scientist in China . Being able to sit on the podium is also reasonable.

This conference was presided over by Lu Kunqi. After the meeting began, the elders first awarded Academician Xu Guangxian and Academician Wang Zhongcheng this year the highest national science and technology award. They were also the 13th and 14th winners since the award was established nine years ago; When they received the award certificate from the elders, they all stood up and applauded. Lu Qiujian was applauding and thinking about when Xi and the plan could be officially announced. [×] Is it time to get this award?

Then the National Science and Technology Progress Award Special Award, National Natural Science Award, National Technology Invention Award and other National Science and Technology Progress Awards, etc. In this way, Lu Qiujian also took the podium as the head of the tablet team .

Tablet PC and small high-precision celestial body sensor technology and other three achievements together won the first prize of the National Technology Invention Award, in addition there were 52 achievements National Technology Invention Award second prize, 34 achievements won the second prize of the National Natural Science Award 26 achievements won the first prize of the National Science and Technology Progress Award, 225 achievements were the second prize of the National Science and Technology Progress Award, and three foreign scientists won the International Science and Technology Cooperation Award.

It is worth mentioning that the full superconducting non-circular cross-section tokamak nuclear fusion experiment device, which is the EAST Oriental super ring developed by the Plasma Research Institute of the Chinese Academy of Sciences, is one of the 26 first prizes for national technological progress! The Firren No. 1 experimental controllable nuclear fusion reaction device, which is more advanced than them, did not participate in this selection because of Lu Qiujian's request.

“Xiao Lu, this award is just a small affirmation of our achievements in Xihe plan. I hope you can make greater achievements in the near future!” Said the elder Dad while shaking hands with her.

“You can rest assured! All of our team members are working hard for this goal!” Lu Qiuqian said implicitly; but by that time I am afraid that it is not him?

After the award ceremony, the first assistant gave a passionate speech. He first congratulated the winners of the meeting, and then reviewed the development of Huaguo Technology Industry in the past three decades and its great significance, and then ended with the role of technological development in today's era.

The speech did not last long. After the end, Academician Wang Zhongcheng gave a speech on behalf of all the winners. The speech made by the winner of the highest science and technology award was also an old tradition of the China Science and Technology Award Conference. The first session was conducted by Yuan Lao. The representative spoke.

After the meeting, Lv Qiuqian stayed in Beijing for another two days. Now the leading figures in all fields of the country have gathered together, and he has conducted in-depth exchanges with many scientists related to Xi and the plan. Several powerful young scientists joined the Xihe project team; in addition, they also reached cooperation intentions with several research institutions. As long as they can pass the review, Xihe Plan will provide them with sufficient research funding to support them to complete the research goals required by Xihe Plan.

These units who had talked with Lv Qiuqian were annoyed and grateful to him. What annoyed him was that he had taken away a lot of good seedlings that the unit was optimistic about. He was grateful that Lv Qiuqian sent them much-needed research funds.

When Lu Qiu was built, he was alone. But when he returned to Changan, he died with a lot of people. Among them are the newly recruited potential stocks like Ye Chu, and the instant combat power he dug from other research institutions, this time in Beijing. The trip can be described as full return!

After half a day's journey, a group of people got off the train, due to Lu Qiuqian's special train conditions are quite good. In addition, most of the people dug this time were young people, so these people did not feel tired. As soon as the train stopped, they hurriedly got off and looked at this city they will live for a long time.

“Lu!” Lu Qiujian introduced them to Li Yan and other authors who were welcoming them, while walking towards the exit of the train station. Just after walking out of the passenger exit, a familiar and strange voice came from his ear. Look, the pretty Natalie is waving his arms at him.

Chapter 547 - Ode to joy

“Hey, Nat, I’m not telling you that I won’t have time until tomorrow, so don’t you use the train station to pick me up?” Lu Qiujian said slightly helplessly, Natalie had arrived in Chang’an yesterday, and Lu Qiujian also She told her schedule and agreed to meet again tomorrow. As for today, he still has to catch the wind and dust for these newcomers.

Natalie looked at the curious crowd around him and said in Hebrew, “But the two of us haven’t seen each other for several years. When I thought we were in the same city, we couldn’t restrain our urge!”

The surrounding people suddenly showed a confused look. Among them there are many masters who are proficient in multiple languages, but most of them are proficient in English, French, German, neon and Russian and other widely used languages. Hebrew is understandable. The language is really not there!

Lu Qiujian also breathed a sigh of relief. If there is something ambiguous in this large audience, it would be a storm for the media to know it, so he also answered in Hebrew, “Which hotel do you stay in?” ? If I ended earlier there, I’ll go find you! “

Natalie reported the name of a top five-star hotel chain and her room number, hugged him gently, and said in the ear, “I will be waiting for you there tonight!”

Lu Qiujian nodded slightly, and then turned around to introduce Natalie to Li Yan and others, “This is Natalie, the friend I met when I played NCAA at Harvard! I will be with her for two days. Apple shoots ads! “

All of them showed a sudden realization, and Ye Chu and other young people quickly gathered around, “Dear Queen Amidala, can you sign a name for me?”

The exit of the train station is really not a place to speak. Seeing that there are more and more people coming around, Natalie has to reluctantly take her assistant to leave first. Lu Qiujian also led the team to make a temporary break and organize a wind reception The hotel in the dinner party is a little late today. This group of newcomers will rest at the hotel for one night before officially entering the base and starting work.

Come to the hotel for a short break, and wait for these people's spirits to recover slightly. The Qifeng Gala Dinner specially held for them began. Lu Qiujian raised his toast to express their expectations and blessings. "First of all, you are welcome to join our Xihe project team. I do n't like long talk. Here I will only say a little. , As long as you join the Xihe project, you will no longer have to worry about research funding. As long as your request is reasonable, then I will find ways to win you more money! I hope everyone will be able to work in the future Good results! Cheers! "

"Cheers!" Ye Chu and others responded in unison. For a person who is interested in scientific research, there is nothing more attractive to them than sufficient funds. Lv Qiujian's words happened to scratch their itch, and each one suddenly became energetic and began to secretly calculate that he would What kind of projects will you get and what methods will you use to achieve breakthroughs in this field?

"We will arrange the specific work after entering the base. Today everyone will eat and drink happily. When the base is busy with you!" After all, this is a site for outsiders. Lu Qiujian does not want to disclose the project here. Information.

Most of the people present are young people, who are in a lively and active age. After experiencing the restraints at the beginning, the atmosphere quickly became active under the leadership of Ye Chu and several people. Lv Qiujian also walked through the wine glasses one by one. Every time he met a new person, he could say the name of the other person, Experience and outstanding achievements made in the past have made everyone admire.

The banquet lasted until more than ten o'clock in the evening, and all the people dissatisfied with their satisfaction; Lu Qiujian left the hotel, boarded Bai Laoran's car, and reported the name of Natalie's hotel. Although things about him and Natalie are secret, they are not unknown. The intelligence capabilities of the Chinese government may have been known for a long time, so he was too lazy to cover up, and generously exposed their relationship in front of Bai Laoran.

Bai Yaoran was slightly surprised when he heard the location reported by Lu Qiujian. After seeing Natalie at the train station, he quickly knew where the other party was staying; but these were not things he should worry about. He just needed to ensure the safety of Lv Qiujian. Before that, he had learned about Na There was no suspicious personnel in the hotel where Tali lived, so she started the car silently and drove to the five-star hotel.

"I won't go back tonight, you will pick me up tomorrow morning!" The car arrived at the door of the hotel. Lu Qiujian said to Bai Yaoran before getting off.

“Okay!” Bai Yaoran responded in a low voice, watching Lu Qiu Jian enter the hotel lobby, and then parked the car in the nearby parking lot. It seems that he did not plan to leave tonight.

Enter the elevator to the floor where Natalie is located, find her room and ring the doorbell. Before Lv Qiu Jian lowered her hand, the door opened quietly, and Natalie reached out her right hand to hook Lu Qiu Jian's neck pulled him in.

After a suffocating long kiss, the two sat on the sofa. Natalie's right hand drew a circle on his chest, telling the thoughts of parting, leaning on Lu Qiu Jian's arms, her mind and body As if they had all been home, they felt extremely peaceful.

Under the continuous love, the passion between the two gradually warmed up. The moon outside the window saw this scene shyly hiding behind the clouds And the two of them in the room had already rolled together like a boat. Entering the port, the collision angle invades the enemy's body ... After a while, the room sings intoxicatingly.

Upon awakening, Lv Qiu Jian saw Natalie beside him showing a contented smile and Masako sleeping, so did not disturb her, put on her clothes and got up, leaving a note on the bedside table and left quietly.

In the morning, I accompanied these newcomers back to the base and placed them in the peripheral base for relevant training. Then they entered the base, checked the preparation of the new reaction device, pointed out some problems, and arranged the next work points until In the afternoon, she left again for Natalie's hotel.

Accompanying her to walk around in Chang'an, when the moon was in the sky, the two returned to Natalie's hotel again. In the hotel's living room, Natalie played Lu Qiu Jian's clarinet, Lu Qiu Jian Then playing with Natalie's horn; the two of them started playing a song called “Ode to Joy” in this beautiful city in this beautiful night! This piece starts with a weak tone and a vibrato. From the beginning of the calm experience, many variations gradually reached the climax, and finally the two arrived in heaven at the same time.

Chapter 548 - Forbes Celebrity Leaderboard

“CUT!” At the scene of the commercial shooting, the director stopped again. He had thought that Natalie's acting as the best supporting actress in the Oscars must be no problem. Then the biggest difficulty of this commercial shooting will be on Lu Qiu Jian. Jian Jian was born, I didn't expect that after the shooting started, Lv Qiu Jian and Natalie would have no problem when they performed alone, but when they came to the opponent's play, Natalie always made mistakes!

The director scratched his head. He attributed the reason to Natalie's inability to adapt to the climate in Chang'an. He waved his hands helplessly and said, "Take a break first, Natalie, our shooting time is very tight. I hope you find the state soon!"

"Oh, sorry, I think I'll be fine after a rest!" Natalie said uncertainly, and he wanted to win the heroine when he learned that Lv Qiujian would shoot an ad for Apple, just as Jobs also had. The same thought, so the two met immediately, and she was finally able to meet again in Chang'an and Lu Qiujian, but when the two really started playing the opponent's play, his mood could not calm down. 【×】

The whole crew stopped for a while, and the supporting actors on the side watched Lu Qiujian ready to move. They all knew that Lu Qiujian and Cameron had reached a cooperation agreement for an investment of 500 million US dollars. If they can show their faces there, they can immediately. There was a huge change in the Lei Yue Longmen; but Lu Qiujian was not an insider. It was too much trouble to usually see him. Didn't someone make a big joke some time ago? Now I want to do everything possible to mix into the crew, but it is a chance.

Seeing that the shooting was suspended, they quickly picked up the towels and drinks in their hands and prepared to rush towards Lv Qiujian. However, when Lv Qiujian walked towards Natalie, they had to stop.

"Hey, Nat, what's wrong with you, isn't it like your usual level?" Lu Qiujian still asked in Hebrew, disappointing everyone with ears that stretched out on their side. What did they even use to Lu Qiujian? The language is not clear, let alone understand what they say!

"I don't know!" Natalie shook her head. He also replied in Hebrew, "Maybe I will leave when I think of the end of the shooting, so I make mistakes frequently? Sorry, Lu. I really can't bear to leave you!"

Everyone on the side heard Natalie answering in the same language and couldn't help but look at each other. Do they speak the language of Naboo in Star Wars Episode 2?

"This time when the shooting is over, there will be another time!" Lv Qiujian was soft-hearted and couldn't help but persuade, "You know that Mr. Cameron and I have reached a cooperation agreement. A large part of this work will be in China Filming, if you join this crew, I believe we will have many chances to meet again! "Natalie was quite a fan of science fiction because she played Queen Padme-Amidala in Star Wars Prequel Influential, the team that let her join "Three Body" seems to be quite good for this movie, but what role should she let her play?

Lv Qiujian thought about it and put it aside for a while. This matter should be left to Cameron to worry about. Anyway, he has already said that the proportion of the Chinese character in the first movie is too large, which is not conducive to it. Global promotion, now he has given him this opportunity. Presumably he can handle it perfectly?

“Good idea!” Natalie’s eyebrows were raised and her eyes flickered. She didn’t care what role she would play in this movie. Lu Qiujian had already expressed welcome to come back. Seeing her thoughts, this is enough to satisfy her! “I will buy the original work of this work and prepare it carefully after the shooting!”

“Ah, it seems that Amazon hasn’t completed the preparations before publishing. If you want to see the original English, I’m afraid it will take a while!” Lu Qiujian reminded, “Of course I will send an e-mail if you need it. Edition for you! “

“I think it’s not bad that you sent me a Chinese version!” Natalie suddenly changed her Chinese and stuttered. “I ... recently ... studying ... Chinese. I believe I can read Understand this book! “

Oh oh! This is really a surprise! Lv Qiujian grew his mouth in surprise, and everyone beside him broke his glasses, and he was indeed a genius girl! No wonder Apple will invite her to build a partner with Lu Qiu!

“No problem! When the shooting is over, I’ll go to the bookstore to buy a set for you!” Lu Qiujian immediately responded, after this little storm. Natalie’s heart disease is gone, and her condition is much better.

“Mr. Director, I think my state has been adjusted! Now it’s time to re-shoot!” Natalie said cheerfully after a short break.

“Okay, let’s start again!” Lu Qiujian gave only such a short shooting time, and he didn’t dare to delay with one eye. Immediately mobilized his hands to start another round of shooting, and he was pleasantly surprised that Natalie performed very well in the following. Almost every shot was passed once, and the shooting was completed perfectly after half the expected time.

“CUT! The last one passed!” The last shot was successfully completed. The director walked curiously to Lu Qiujian and asked, “Professor Lu, what did you say to Natalie just now? How did her status change so quickly?”

Um, can I tell you that we are talking little love? Lu Qiuqian turned his eyes and got the idea, “You know, Ms. Portman has just arrived in a strange city. Some psychological changes are inevitable, according to the opinion of David Mayer, a psychology professor at Michigan Hope College. People in this situation are most likely to have mood swings, so I chatted with Ms. Portman in Hebrew and used her home language to eliminate this negative emotion, so She recovered quickly!”

Okay I’m sorry! I should not ask you this question! The director is full of black lines, I just want to satisfy my curiosity, but I don’t want to be in class!

“Ms. Portman, do you think my psychological intervention has worked?” Lu Qiuqian quietly blinked at Natalie playfully.

“Actually, I think that this kind of psychological intervention may solve some problems in the short term, but in the long run, it seems to have no benefits; I highly recommend Professor Masuda Morita’s natural intervention method. I think if I stay in Changan more Longer, I’m sure I will get used to the life here soon!” Natalie said in a pun.

This time, even with other crew members, everyone was embarrassed and couldn’t get in! The more painful thing than chatting with a school tyrant may be trying to participate in a conversation between two school tyrants!

Chapter 549 - Forbes Hall of Fame

So okay, the poor director had to change the subject, “So how about we go to the gala dinner when the press conference is over?”

Lu Qiuqian looked at his watch and showed a regretful expression, “I’m sorry, although I also want to participate in this dinner with Ms. Portman and you, but I will have an important academic meeting to participate in later, so I’m afraid I can’t Go! I hope you all have a good time!”

Natalie also said in coordination, “My body is a little uncomfortable, I think I am afraid I have to go back to the hotel to rest for a while, which is really regrettable!”

Next time there will be such errands killing me ... well, I will still come, who doesn’t want to cooperate with their celebrities who are just as popular! Director, feel depressed and walk to the side to greet others.

The scene of the press conference was another lively scene. Numerous entertainment media reporters have thrown their questions to Lu Qiuqian and Natalie, especially Lu Qiuqian. Natalie will

often participate in Hollywood events, and Lu Qiujiang has few opportunities to appear in front of reporters.

“Professor Lu, how does it feel to cooperate with Natalie?” The gossip fire of the reporters started to burn, and if you can dig up any gossip, you will make a lot of money!

“Natalie and I met when we were in the United States! That was when I went to Harvard and the Harvard Crimson team on behalf of the Princeton Tigers.” Sooner or later, someone will know that it is better to be concealed I said, but Lu Qiujiang’s words did not develop in the direction that the reporter imagined. “I have also read her professional papers on psychology, and there are many ideas above that are quite inspiring to me! For example, that article about baby forehead Papers on Ye Development and Visual Memory, and papers on the study of brain function using near infrared spectroscopy imaging ... “

Hello, I want to hear your gossip! I’m not here to listen to a lecture on psychology! Many reporters are as messy as the director!

After skillfully passing the reporters, Lu Qiujiang and Natalie left. They each took a few rounds around the city in a car, and Natalie shrugged off the paparazzi that followed; and the paparazzi who followed Lu Qiujiang were even more unlucky. A confidential unit. They flinched under the guard of the door.

When they left Lu Qiujiang’s car and drove out again, he came to a chain of bookstores and bought several copies of “Three Body”. Then head to Natalie ’s hotel.

It did n’t take long for the two to meet again in the room where they had played famous songs. Natalie watched Lu Qiujiang for a long time with her head turned sideways. “Are n’t I a slightly talented psychologist in your mind? ? “

“Those are just for reporters!” Lu Qiujiang said with a shrug. “And I think you are also talented in other research fields!”

“Oh? What area?” Natalie asked curiously.

“Well, for example, the supplement of the consumption of the body’s self-generated lubricating oil in rapid mechanical movement and the neural response of the movement to the lubricant supplier? The operation experiment?” Lu Qiujiang’s fingers moved back and forth at Natalie’s collarbone Friction, “I think we need to collect more experimental data to complete this experiment!”

“What are you waiting for? We don’t have much time!” Natalie rolled over and sat on Lu Qiujian’s lap, his hands hooked his neck. “According to my calculations, we need to conduct five more experiments before I leave Changan to collect enough data!”

Therefore, these two talented school bullies were conducting the experimental operation all night long until Natalie lost all strength until the end.

“I will read this book carefully on the plane and find a suitable role for myself!” As the division approached, Natalie Yang Yang Qiujian gave her the book, “Wait for the plane in the United States. After landing, I will ask my agent to contact Mr. Cameron! “

“I think he will also welcome you!” Of course, Lu Qiujian will also influence Cameron. As the biggest investor in this film, he has the biggest voice in casting. “I believe it won’t take long for us to meet again in Chang’an!”

Natalie returned to the United States with the shooting team, and Lu Qiujian also returned to the base to start preparations for the next experiment. The new reaction device being built according to his design will try to break through the output created by Sui ren No. 1 before. Double records of energy and duration. If this experiment is successful, then they will once again sell a solid step on the way to achieving controlled nuclear fusion.

The reaction device has not been built yet, and the country has completed the post-production of the advertisement. Under the promotion of Apple’s strong propaganda, this commercial film starring Lu Qiujian and Natalie has been synchronized in major global The country went live, and for a time Apple became the most high-tech company in the world.

Lu Qiujian has many fans around the world by virtue of his influence in football, basketball and technology. Especially at last year’s Olympics, he miraculously led the host to win two gold medals at the same time, pushing his reputation to the top; Natalie has also attracted many young people around the world with many films such as “Star Wars Prequel”; even more rare is that Lu Qiujian has never participated in promotional activities before. This allows fans who have long wanted to support him to find opportunities to express their emotions. They have acted in line in front of Apple stores around the world. Ready to buy Apple’s newly launched iPad, even with other products sales have also been greatly improved.

This made Jobs very happy. It’s so worth it to just call this more than 100 million dollars! It is a pity that Lu Qiujian probably will not shoot the second commercial for him.

Just as Lv Qiujiang's advertisements were spread over the Internet, various TV stations, newspapers and magazines, and LED displays on major squares. The Forbes China Celebrity List also announced their rankings in the past year.

In this ranking, Lu Qiujiang's familiar Yao Ming ranked second with a revenue of more than 400 million yuan, benefiting from the victory of the Beijing Olympic Games and after the Olympics, he left the Rockets to Los Angeles, where the market is more vigorous, and performed well in the new season. For his sake, his income has been greatly improved compared to 2007, and his total income is almost twice that of the third-ranked Kung Fu superstar.

However, he may have to look at the income of the first place! The number one Lu Qiujiang has earned more than 700 million yuan in the past year, and most of his income comes only from an advertisement! This is much easier than him!

Chapter 550 - Foreign exchange

Although the advertisement was filmed in early 2009, Apple paid Lu Qiujiang the payment as early as the contract was signed, so he was able to take the top spot in the 2008 Forbes celebrity list.

To be honest, Lu Qiujiang also made this list when he was at Bayern, but at that time his income was all dependent on Bayern's salary and bonuses, so the ranking is not so exaggerated, it is in the top ten; and that At the time, Lu Qiujiang's income of tens of millions of a year was still within the scope of everyone's acceptance, and now a sudden outflow of more than 700 million, everyone was not calm, because the amount of this money is beyond the ordinary people's imagination.

So the debate about whether Lu Qiujiang should take so much money broke out in major media in an instant. Some people think that Lu Qiujiang has this ability, and Apple is willing to pay so much money. Money is what he deserves! Judging from his contribution to the country, Lv Qiujiang will undoubtedly exceed Yao Ming many times, so he should take more money than Yao Ming, and there is no question at all.

In addition, some people did not object to Lu Qiujiang making money through advertising, but he suggested that he could make an endorsement for domestic brands to earn this money. Why did he want to serve foreign companies? Really do n't say, there are quite a lot of supporters of this kind of remarks, but even if I read it for the chairman of the Chinese company, I can only smile bitterly, and even if they join together, they ca n't come up with such a big Apple!

Others have no doubt about Lv Qiujiang's income, but they put forward their views on its usefulness, believing that Lv Qiujiang should donate part of it for charity, and took Gates and others as examples. Opponents believe that as long as it is legal income and used for legal purposes, then Lv Qiujiang has the right to use this income freely! And it stands to reason that Lu Qiujiang is also

eligible for butterfly compensation in the patents of tablet computers, but he uses all the funds from the patent auction to Xi and plans. This is more than ordinary charity.

Some specious people also began to write articles to elaborate their views. They took out the status of Lu Qiujianxi and the chief planner, thinking that this position is undoubtedly a national public official. And can public servants in the country catch up with advertisements for their own benefit?

However, these negative news did not have much impact on the public. All of Lu Qiujian's income was earned through legal channels using his own efforts; of course, they did not know that Lu Qiujian's first pot of gold was won from Las Vegas, and even if the news broke out, I am afraid It can only add luster to Lu Qiujian's legend!

They have expressed their support for Lv Qiujian in various ways, so the post with speculation was scolded by netizens as Xiang; more importantly, the senior officials of China did not question Lv Qiujian's income. Some The inexplicable person hurriedly submitted the document but received a reprimand from the leader. Such a thing happened a few times, and no one dared to express an objection to this issue.

Lu Qiujian did not care about these things. When I browsed the web, I glanced at arxiv and continued to download and read the latest papers in related fields.

"Professor Lu, are you looking for me?" Just after reading three papers and thinking about how these results should be applied to Xi and the plan, Ma Yang came and knocked on the door of his office.

"There is such a thing that you need to do!" Lv Qiujian picked up a document from the table and handed it over. "Look at this first!"

"Invitation letter? Iter invites China's controllable nuclear fusion research institute to send representatives to Cadarache, France to visit the international thermonuclear reactor under construction?" Ma Yang looked at this invitation questioningly, and then bowed his head carefully. After reading it, in this invitation letter iter official stated that they have sent an invitation to all participants of iter, hoping to take this opportunity to allow experts in the field of global controllable fusion to gather together for exchanges, so that iter's Future development put forward effective suggestions with dogs.

"Have you finished reading?" Lu Qiujian asked after seeing Ma Yang closing the invitation. "I plan to arrange for you to join the delegation of China and visit Cadarache in France."

“In what capacity?” Ma Yang asked. Obviously, he was definitely not likely to attend as Xi and the plan participants and Lu Qiujian’s assistants!

“Of course, I did not go as a member of Xi and the planning team! This time our delegation is mainly composed of the east team under the Chinese Academy of Sciences! In addition, there are a few representatives of other research institutions!” Exclude Xi and the plan. Miguo and Huaguo are still the two countries that are currently investing the most in the field of controlled nuclear fusion. Now Miguo has 28 large-scale nuclear fusion experimental devices, and Huaguo has 16 large-scale experimental devices in addition to Xihe, ranking third It’s five of Lucia.

Lu Qiujian took out a set of identification from the drawer again, “This is the identity prepared for you. The staff of a nuclear fusion research institution in Mianzhou City, Shuzhong Province, there is no other Shuzhong Province in the delegation. Representative, and Xiaobai also greeted over there! So you do n’t have to worry about identity. “

“I also have to look at the information of this institute The people in the province have asked me three questions!” Ma Yang took his identification. Keep this information in mind.

“It’s all ready for you, and it won’t take long in your memory to write it down!” Lv Qiujian handed over the information. “You should pay attention to a few issues during this visit. First, keep the research progress of Xi and the plan confidential. You can express some opinions, but you cannot reveal the issues related to Xi and the plan; second, you must carefully study the situation of iter and see if you can Can’t provide some help for our plan! “

These requests came to mind when Ma Yang received the invitation letter. He nodded and said, “No problem, when I get it, I will read more and ask more questions, and express less opinions!”

“Okay, you will put your work in the first few days, study the materials of this institute and iter, and prepare the plan to go to Kadarashe! In addition, Xiaobai will do some training for you. Work, you pay attention to cooperation! “In fact, there is not much risk in this work, but it is always good to prepare well!

After three days of preparation, Lv Qiujian came to the capital and other members of the nuclear fusion project team across the country and boarded a flight to Marseille, France. After the plane landed, they will switch to the location of the international thermonuclear reactor experimental reactor by car Cadarache.
