

D. School 59

Chapter 59 - After relaxing

Fu Wei's psychology is like ten thousand grass and mud horses galloping past. He looked at the small model beside him. When he first got it, he felt very cherished, but now he doesn't have the same feeling as before.

Although she is taller than Natalie, they are Hollywood stars!

Although her legs are longer than Natalie, they are Hollywood stars!

Although her cup is bigger than Natalie, they are Hollywood stars!

Although ... but they are Hollywood stars! When a man is pursuing a woman, in addition to the other person's appearance, body, and temperament, the bonus brought by her identity seems to be more inspiring to the vanity of the man; Have you never seen a beauty? Presumably no one would think so, there are indeed many beautiful women who do not lose to them in appearance and figure, but none of them can meet the desire of men to conquer.

The reason why Fu Wei was willing to spend a lot of money to hook up with this little model, he did not have such an idea in his heart. When he brought Elena to the party, he had the obvious idea; at the beginning, he did gain a lot Envious of jealousy, but with Natalie's arrival, everything is gone.

Hey, why do you always have trouble with me! Fu Wei looked at Lv Qiujian depressed, a small model playing soy sauce at New York Fashion Week and a starring Hollywood blockbuster who were completely different players.

"Is she your girlfriend?" Yang Yang bit her lip and still couldn't help asking, which shows that women are more courageous than men at some point, even if she is facing a Hollywood star, Yangyang did not give up.

"No, it's just the friend I just met when I last went to Harvard to play the game!", Lu Qiujian's answer made her ecstatic, holding Lu Qiujian's hand tighter.

"Hey, Nat, I thought you wouldn't come!" Lu Qiujian said in Hebrew, gently pulling Natalie to her side.

“Suddenly think about it, anyway, today there is nothing to do, it seems to feel good to live in another culture?”, Natalie saw Yang Yang’s arms around Lv Qiujian’s arm, somehow Lv Qiujian lived on the other side of the arm, “You know, I have always been interested in Eastern culture, especially the film directed by Wong. If possible, I even want to cooperate with him!”

“What language do you speak?” Yang Yang protested out loudly. What can they not tell me?

“Oh, sorry!”, Natalie immediately changed to English, and at the same time reached out her hand, “Hello, I am Natalie, Lu’s friend!”

“Hello, I’m Yang Yang!” Yang Yang reached out his hand unwillingly, and under the pressure of Natalie’s aura, it still didn’t fall.

There is a beautiful woman by her side, which is happiness. If there are two people, it is only pain. Lv Qiujian hastened to do peacemakers, “I’m a little tired. Let’s go and sit and drink something!”

Through Yangyang’s kung fu to get a drink, Natalie pretended to frown, “Lv, I’m so unattractive? Why would you still bring another beauty since you invited me?”

It’s a character who confuses all beings at a young age. This look is really unbearable. Lu Qiujian explained, “Yangyang is one of the organizers of this event, and I came here only at her invitation ! “

“Oh? Then you have nothing to do?”, Natalie still refused to give up.

“You know, the relationship between people is very delicate, we don’t know what will happen to other people in the future?”, Lu Qiujian shrugged, “but it is this uncertainty that makes the whole world more Is n’t it beautiful? “

Natalie’s eyes twitched and she nodded slightly, seeming to agree with Lu Qiujian’s statement, but when Yang Yang was about to return with a drink, he suddenly said, “But there are so few interesting people in the world, if we meet, we will not Will you give up easily? “

Without waiting for Lu Qiuqian to answer her, she got up and took a drink from the plate Yangyang was holding, and pulled her to talk about various topics between women; well, really an elf, Lu Qiuqian took over Yangyang I thought about drinking a glass of red wine.

After a short break, the people who attended the party were almost there. Everyone sang around the Christmas tree and sang while drinking, and at the same time exchanged their various experiences after arriving in the United States. Lu Qiuqian and others also sat in the corner and hummed with them, listening to their bitterness, joys and sorrows.

Unfortunately, Natalie got up and left as soon as eleven o'clock. Lu Qiuqian knew that her tutor was not strict enough and did not keep her. She sent her to the taxi and returned to the house.

Everyone stayed in the middle of the night before they came to each other to find a place to sleep in the house. I do n't know if other people were happy or not. Lu Qiuqian struggled to spend a night on the sofa alone.

After waking up the next morning and accompanying Yangyang for breakfast, Lu Qiuqian said goodbye. He still had to play a game during the holidays. There was not much time left for him to write a thesis; he gave a call to Patrice. No one picked up for a long time, Lu Qiuqian took a taxi and went back to Princeton first It seems that this guy was quite comfortable last night.

Go back to the dormitory, turn on the computer, click on the LaTeX software, Lu Qiu constructs the rationale, and begins to write a thesis to crack the Poincaré conjecture. Gushan Zhicun 's conjecture is a tool to solve Fermat 's theorem, as long as the conjecture is proved, then crack Fermat The theorem is a matter of course.

Also has this tool for Poincaré's conjecture. That 's Richie Stream, which Richard-Hamilton is studying. This is an old dude who likes surfing, traveling, and changing girlfriends, but his achievements in mathematics have been difficult for 99% of mathematicians. .

I flow, an equation named after the Italian mathematician Gregorio-i. It can be used to complete a series of topological operations, construct geometric structures, and transform irregular manifolds into regular manifolds, thereby solving the three-dimensional Poincaré conjecture.

When using i-stream for spatial transformation, there will always be points where the direction cannot be controlled. These points are called singularities. How to master their movement is the key to prove the three-dimensional Poincaré conjecture.

Although Hamilton, Cao Huaidong, and Zhu Xiping and others have made a lot of progress in the research of i -liu, they have been unable to find a good solution to the singularity after many setbacks. As the number of topological operations increases, the singularity will also increase and eventually lose control.

The key to Lu Qiujian's solution in his thesis is this problem. He had thought of a method when answering the question. He verified this method in a conversation with Professor Thurston. It's time.
