

D. School 601

Chapter 601 - Situation change

In 2009, it just passed through the chaos. After that happened, Lu Qiujian saw in the news many things that happened only after the official Qin Feng came to power in the past. Some people quietly dropped their horses, and some were trapped in jail; those online powers The key political bureaus have a very thorough analysis, and it was the article about the shale gas revolution that caused the subsequent series of turmoil.

The reason for these people is that these outdated and out-of-political gangsters have an inextricable relationship with an energy group, and this energy group owns many of the world's top companies, making hundreds of profits every year. Hundreds of millions, but they did not make a slight contribution to the technical update of shale gas, and watched the people of the United States have been far ahead in this field! Those big guys will naturally be dissatisfied with them.

No matter whether this rumor is a netizen's conjecture or someone deliberately guides, it is still good for Lu Qiujian. At least after this argument appears, his pressure is much less! The public no longer asked Xi and plans to cut funds and scale down, but pinned their hopes on the adjusted energy group!

At the same time, China's energy policy is also slowly adjusting. The state's review of new thermal power plants, nuclear power plants, and hydropower plants is becoming more and more rigorous. Unless it is absolutely necessary, they will not easily approve the project proposal submitted below; even because The needs of economic development have to build a thermal power station or a nuclear power station in a certain place, and they all require that the power station must be carried out in accordance with the design plan given by them.

This new design solution seems to be a lot of waste in the industry, and unnecessary design has been added in many places, resulting in a substantial increase in the construction cost of the power station! This caused great dissatisfaction with the local government. There was even a rumor that the design unit that did not know where it came from was a relative of a big brother of the Presbyterian Church. The purpose is naturally self-evident!

Some hot-tempered local leaders directly shouted that the design fee can be given to you! But the construction of the power station must be carried out according to their own plan! This was naturally severely refuted by the relevant departments! In addition, the supervision of the power station construction has been strengthened, and once the project is found to be inconsistent with the design plan, it will immediately be ordered to stop work and restart; if it is found that there is a local

government without approval, it will start work rashly. The staff of Dali Temple will appear directly in front of the local officials in charge of the project the next day!

After three consecutive mayors and four local leaders in charge of power station construction, the rest of the cities that applied for the project suddenly realized that the central government was serious this time! They are puzzled though. But it can only leave a lot of designs in the newly built power station according to the central government's intention, which currently seem useless, but the construction cost is very high.

In terms of overseas oil purchases, the Chinese government has also slowed its pace cautiously. They no longer pay attention to the new oil fields that are difficult to exploit, have a long construction period, and have slow results. Instead, they focus on the oil exploration areas that have been completed and the local political situation is relatively stable!

Sai Weng's loss of knowledge is perfectly interpreted at this time. Although the shale gas revolution in the United States has given the Chinese government a sense of crisis, it is under great pressure from the public! But it is not without benefits, because the big buyer of the United States on the international crude oil market has repeatedly reduced its share of purchases, and the market supply and demand relationship has undergone tremendous changes; plus the real economy has gone from high to low in the past year. The downturn, the downturn in the global economy. It is difficult to support high oil prices.

High crude oil prices can only be carried out when supply is in short supply. Now that demand is not strong is an obvious reality, and on the supply side, oil exporting countries are trying to maintain economic stability by continuing to expand production capacity, and the tendency of energy supply diversification is becoming more and more obvious. When supply and demand are reversed and supply exceeds demand, prices are impossible Too high.

At the same time, the Chinese government also tried to let out the wind, and said that it would increase investment in new energy sources such as wind energy, solar energy, shale gas, and environmental protection and energy conservation!

Under the current complex international situation and the declaration of China's development of new energy, they can buy oil at a relatively low price! Judging from the currently signed contract. The oil supply for the next ten years seems to be guaranteed.

However, many international relations experts and energy experts have expressed their views on this move, saying that it is unwise for the Chinese government to reduce its long-term investment in overseas oil! Indeed, these government initiatives have solved the problems for the next ten years.

But what about ten years from now? You have to know that the exploration and drilling of the oil field cannot be completed overnight. Oil extraction is a large-scale project with a long construction period. If we do not plan for it from now on, when the energy demand in China continues to rise, we will be temporarily embracing. Can't find anyone!

The Chinese government is not indifferent to these issues. They acted with humility and sent many inspection and negotiation teams to the Middle East, Africa, Southeast Asia, and South America to actively negotiate. As for the task. That 's not there. You just need to make other countries still feel that we are very eager for oil.

While Qin Feng was doing all kinds of preparations for Xi and the plan. Lu Qiuqian also made a lot of achievements here. The new generation of controlled nuclear fusion experimental device has conducted two ignition tests in succession. The total output energy value and stable energy output time of these two times are far beyond the record created by Flint One!

Among them, the stable energy output time exceeded the epoch-making 1000 second mark, and a solid step away from the commercial application limit of 3000 seconds! This also greatly increased the confidence of the elders in Xi and the plan So only the latter strict adjustment policies for power plant construction and overseas oil procurement policies have been adjusted.

After achieving this result, Lv Qiuqian started non-stop to develop the third-generation controlled nuclear fusion reaction device. The design goal of the new-generation device is to reach the minimum commercial application limit of 3000 seconds! It can be said that if the third generation device is successfully developed, then China is only one step away from the application of controlled nuclear fusion!

The most critical step is also the most difficult step. To achieve this goal, major breakthroughs in low-temperature superconductivity, laser and materials science and other basic fields are required! So this time the progress is not as fast as the previous two generations of experimental devices! Fortunately, the theory and direction are clear. Lu Qiuqian only needs to lead the team to proceed step by step!

The specific research work is carried out by Ma Yang and Li Yan, and Lu Qiuqian only needs to help them solve the problems that they can't solve occasionally! So he has free time to do another thing.

Chapter 602 - 3 physics in body

Among the components of the Xihe project, in addition to research institutions such as superconducting laboratories, laser laboratories, and automated machinery laboratories, there is a special department that does not seem to have any relationship with controllable nuclear fusion at first glance-society Laboratory.

When this department was just established, Li Yan and others didn't quite understand it, but when they saw the task assigned by Lu Qiuqian to this department, they suddenly realized! Simply put, when controllable nuclear fusion becomes a reality, human life will definitely change dramatically, and there will be good and bad changes. People will be delighted by the inexhaustible clean energy, but they will also create new social problems.

For example, the decline of traditional energy sources mentioned before will surely cause a large part of people to lose their jobs; for example, people will fear the fusion power station because they do n't understand it, thus hindering the construction of the power station ... these must be completed in advance Perform deductions and make preliminary preparations, so as not to wait for the time when the controlled nuclear fusion succeeds, good things become bad things.

The work of the Institute of Sociology is to predict the changes in Chinese society after successful nuclear fusion, and to start from now on to prepare solutions to various problems that may occur in the future; such as how to reform traditional industries to allow those jobs Personnel can smoothly take over new jobs, such as studying the international situation after China successfully achieved controlled nuclear fusion, so that China can make good use of this opportunity to achieve a great revival. The previous plan of the relevant departments of China to strengthen the approval of the new power station is after them. The design scheme of the new power station that has been criticized is completed by the cooperation of other departments under their leadership! In this design, there is room to modify the thermal power station into a nuclear fusion power station!

In this way, after the research on nuclear fusion is successful and commercial power generation can be carried out, it can be rebuilt on the basis of these existing thermal power stations, although the construction cost of the thermal power station will be greatly increased in a short time! But in the long run, this is extremely economical! At that time, those who scolded the more ruthlessly, the more they praised the wise decision of the Central Committee! Of course, those with other ideas are ignored.

Another important work of this institute is to cooperate with propaganda departments to use channels such as science fiction, anime and movies. Inform people in advance what life should be like after a successful nuclear fusion, and paint a picture of a better life in the future, thereby reducing people's psychological barriers to nuclear fusion.

The work Lu Qiuqian is doing now is one of them. Cameron directed "Three Body" has officially started shooting, in this movie will appear a lot of future life scenes. Depicts the life of mankind after mastering controlled nuclear fusion and obtaining nearly unlimited energy! This happens to be a perfect way of publicity. Of course, Lu Qiuqian will not miss this opportunity. In addition to his role as Ding Yi in "Three Body", he also serves as a scientific consultant for the entire film, using his expertise. Let the future depicted in the three bodies be more in line with the laws of scientific

development, so that people can appreciate the beautiful future after the realization of controllable nuclear fusion in advance. Of course, this future is not threatened by the three bodies!

It is not enough to rely solely on the special effects of the movie, because the content depicted in the movie is more intuitive. It was n't long, and people could n't appreciate the charm of future life at any time, so Lu Qiuqian wrote another book "Physics in Three Body", through which he made various scientific fantasies appearing in "Three Body" Scientific and rigorous analysis, a large part of which is reserved for the future world and the space fleet!

He made a rigorous deduction of the future after the realization of controlled nuclear fusion from the perspective of the development of human science and technology, so that people can have a clearer understanding of the better life in the future through this book; the picture of advanced special effects is added to this The rigorous argument of the book can subtly let people dispel concerns about controllable nuclear fusion and accept the reality of the future.

As mentioned before, Nasa promoted his space exploration program through cooperation with Hollywood, and Lu Qiuqian borrowed the experience of Nasa this time. It's just more secretive!

"Cut! Jiang, what you just showed is still a bit restrained!" Cameron stopped shooting in the studio. He walked in front of Jiang Wen, who played Shi Qiang, to tell him, and Jiang Wen, who played Colonel Stanton, opposite Jiang Wen took the opportunity to rehydrate himself.

"Wow, are you shooting the scene where Da Shi proposed the Guzheng project to win the cigars collected by Colonel Stanton?" A sudden voice was inserted.

"You're closed ..." Cameron, known as the film tyrant, was able to withstand the interruption of his shooting, and immediately turned back to prepare to swear, but when he saw the person coming, his face was suddenly angry. For the gentle spring breeze, "Aha, Lu, you are finally here!"

"Mr. Cameron. Now it seems that your progress is not bad?" Lu Qiuqian smiled and hugged him, "How long has it been here?"

"I never thought that there are so many excellent actors in Hua Guo. For example, Jiang, his performance is perfect! There are also Ms. Gui who plays Ye Wenjie and so on! Of course. Kevin also performed very well!" Cameron Introduced the actors who were present for Lu Qiuqian, Jiang Wen who played Shi Qiang, and Kevin Beckon who played Colonel Stanton. He played the role of a soldier in "Yi Hai Xiong Feng". This performance came to him. It's not difficult to say; Zhang Juzai, who plays Zhang Beihai, and so on The biggest big player in the first part is probably Kevin Spencer playing Evans, but it's not his The shooting time, so he was not there.

Although he is much older than Lu Qiujian, due to his dual identity as a film investor and a famous scientist, Jiang Wen, Liu Yunlong and others appeared slightly restrained in front of him.

So Lu Qiujian took the initiative to greet them with a smile on his face, “Brother Jiang, I have watched all the films you made that year! When I was just preparing this film with Director Cameron, Thinking of Da Shi will definitely have you to play! In the seat, I really can’t find a character who is more suitable for you to play the role of Zhang Beihai ... “

The two words made the relationship closer, and the scene suddenly became relaxed. The shot of Dashi who won the cigar from Colonel Stanton was successfully filmed; then Cameron looked at Lu Qiujian, “Lu, you have time recently Is it time to complete your shooting mission? “

“Yes, it was this time that we originally agreed!” Lu Qiujian said with a smile.

Chapter 603 - 3-body cast

“Not today!” Cameron waved his hand. “Other actors will not be here until this evening. Your filming is expected to be completed in the next three days! Tonight, we can relax! As one of the investors in the film , You should ask us to have a few drinks! “

“Why not!” Lv Qiujian knew that Cameron’s idea was to make himself and the entire team closer and familiar with each other, so as to eliminate the strangeness between each other and make the shooting progress more smoothly. , “I have prepared the place and drinks, I believe we will have a pleasant evening!”

“Professor, you are much gentler than nasa scientists!” Kevin Becken, who once filmed “Apollo 13” with Nasa, came together for the first time.

“Xiao Lu, I heard that you let me participate in this shooting? I don’t understand. I haven’t participated in any film shooting before. How did you think of me?” Zhang Juzao also came to join in the fun.

“I think the actors who play the soldiers lack your unique temperament!” Just Huyou Mi Guo can show your strength! Arranging for you a character that has been fooled all over the world to meet your identity!

After a few jokes, Lu Qiujian and the actors have gotten closer. Now it is not too early, and Cameron is not planning to shoot the next shot! So the group packed up and started to go to Lu

Qiu Jian to prepare the banquet place for them! Along the way, the staff responsible for contacting other actors kept calling, telling the actors who were not there to meet tonight.

Lu Qiu Jian borrowed the sanitarium that he used for his wedding. The back of the mountains and the water and the beautiful scenery here. Is there any irrelevant people who come in to disturb them? It's perfect for a private party! These actors can also relax their constraints and relax as much as possible without worrying about interference from journalists. Does that paparazzi have the ability to mix in here?

The staff opened barbecue props, table and chair utensils, audio instruments and other dinner props by the lake. The lights illuminated the lake, the elaborate meals and the price of various drinks and drinks were delivered. As the actors came one after another, this quiet lake became lively tonight.

"Lv. Come, let me introduce you!" Cameron took Lv Qiu Jian around, "This is Ms. Jin Hena, a Korean actress who plays Yang Dong! She is your girlfriend in the play!" Cameron squeezed his eyes narrowly, and the meaning was self-evident.

"Miss Jin, welcome to Hua Guo to participate in the filming of this film!" Lu Qiu Jian greeted in Korean. He knew that a Korean actress was chosen to expand the market. Since he cannot change the background of the story, Cameron Had to find a way from this aspect. This is also the request of the Hollywood partner company.

"Eh!" Jin Hena was stunned when she heard Korean, but she didn't expect to hear her motherland's language here, "Professor Lu, your Korean is really good!"

"Ah, because I occasionally need to browse the papers of some Korean scientists, so I spent some time learning Korean specifically!" South Korea is also a participating country of it, and their scientists will also have some inspiration for Xi and the plan. Achievement, so Lu Qiu Jian will pay attention to their language.

"You said it was too easy! When I was studying a foreign language, I spent a lot of energy!" Jinhe Na suddenly burst into starlight, and really smart men are the most beautiful!

Hello, I am married! Do n't look at me with this look! Lu Qiu Jian raised his glass, "Hopefully, we will cooperate happily!" And then took a sip. "Sorry, I'm going to say hello to the others, as the host of the banquet is really busy! See you later!"

Lü Qiujian pulled Cameron to the next guest. “Brother Bin, my dad likes the” Bright Sword “you played! You must sign me a few names later!”

“Haha!” Bin laughed as heartily as in the TV series. “I played the rustic Eighth Route Army before, but this time I played the commander of the Space Army! It feels really new!” He played the Asian Space Army. The commander Chang Weisi.

In the past, two Kevins are looking at the beautiful plate of fancy dumplings on the dining table together curiously. Those gold fish and jade rabbit-shaped flower dumplings look so cute. They are not sure whether this is an ornament or not. Yes, Kevin Becken hesitantly said to Kevin Spicer playing Evans, “It looks like they are made of flour. Should it be eaten?”

“Of course!” Lv Qiujian walked to the front and interjected, “This is specially made by a chef invited from a store called the world’s first dumpling!”

“Dumplings? Professor, do you say this is dumplings? Why is it completely different from what I ate in Chinatown?” Kevin Spacy still couldn’t believe it.

“The dumplings in Chinatown can’t be compared with this one. This shop is known as the world’s first dumpling shop. In the past they used to make dumplings for members of the royal family! Of course the level is much higher!” By this topic. Lv Qiujian soon became acquainted with these two Hollywood stars.

Everyone was eating beautiful and delicious dumplings together, while happily talking about the problems in the three bodies, “You mean that this kind of spaceship was specially designed based on the expertise of physics and space science?”

“Yes! I think if our technological level can reach the level described in the movie, then the spaceship of that era should be like this!” Lu Qiujian said firmly, the spacecraft powered by a small nuclear fusion engine It ’s not out of reach, maybe they can see the spaceship in the three-body movie become a reality in their lifetime Then Lu Qiujian followed and played the role of the first actor Wang Miao Bin, gui yalei who played ye wenjie, chen daoming who played qin shihuang, and hollywood stars who played foreign roles such as copernicus, newton, von neumann, etc. have greeted one after another. A face.

“You are not an investor!” Cameron said, and she took her to a quiet corner and sat down and said with a smile.

“Don’t you think that the investment talents who can ensure that the funds are in time and will not interfere with the shooting often are the best investors?” Lu Qiuqian shrugged, and the two laughed at the same time.

“Let’s just talk about the filming of the day! I saw the commercial you shot. The effect is not bad, but the movie and the commercial are still very different!” Cameron returned to the true color.

Chapter 604 - True performance

Name: Ding Yi, identity: a famous physicist, a character with no trimmings, some fluency, but a genius, almost omnipotent and omniscient. There are two doctorate degrees in philosophy and quantum physics, a master degree in mathematics, a first-level professor, an academician of the Academy of Sciences (and the youngest academician), was the chief scientist of the national neutron decay research project. The research was nominated for the Nobel Prize in Physics.

This is the basic information that Lu Qiuqian has to play a role. It is very similar to his own experience. They are the youngest academicians of the Chinese Academy of Sciences, and they have hosted a national key research project. Nobel Prize nominations have multiple degrees.

The difference is that Lu Qiuqian is younger than Ding Yi, and his degree is more amazing. Ding Yi has two doctorate degrees in philosophy and quantum physics, while Lu Qiuqian has two doctorate degrees in mathematics from Princeton University and Beijing Normal University, as well as Munich University’s degree in theoretical physics; Ding Yi was nominated for the Nobel Prize, and Lu Qiuqian has already won the medal.

Cameron has no doubt that Lu Qiuqian will not show the unique temperament of the genius scientist, which is exactly what those professional actors can hardly accomplish! Now that the biggest difficulty has been solved, the rest is much easier to handle! Instead of trimming the edges, let the dresser find him the worn-out clothes. For age, let the make-up artist dye his white hair and wrinkles. As long as he is a little flustered, he will do a little training! In other words, Lu Qiuqian only needs to adjust his personality a little, and then Venus’s real performance is just fine! What he usually looks like at work, just show it in front of the camera!

The scene was set in a three-bedroom room that was not renovated. Lu Qiuqian looked at the ceiling on the sofa in the living room with his eyes awake, and a pool table was placed in the corner of the living room.

Yes, Cameron is going to film the plot of the protagonist nanometer expert Wang Miao when he visited Ding Yi. Here Ding Yi will reveal to him the impact of protons on human technology.

He Bin, who played Wang Miao, entered the door, and Lu Qiuqian, who played Ding Yi, exchanged words. The topic quickly turned to the truth that physicists have committed suicide; Cameron nodded from time to time behind the monitor. Lu Qiuqian's emotions put me in place. The sadness mixed with the loss of his girlfriend and the frustration of seeing the end of physics are perfectly expressed by his eyes, tone and body language.

If it is ordinary people, it is difficult to understand and it is difficult to bring in this emotion. It is simple for Lu Qiuqian, as long as he thinks about the loss of LHC, his elaborate dark matter exploration experiment can perfectly show the psychology of Ding Yi at that time! The background set in the novel is exactly what I have personally experienced. If the dark matter exploration experiment does not yield the slightest gain, I must be as depressed as Ding Yi?

"Have you ever played billiards?" Lu Qiuqian got up and walked to the pool table, placing the white and black ***** at an angle that is easy to get into the bag. "I like playing with her very much because it reminds us of the particles in the accelerator collision."

Then Wang Miao easily scored the ball. Lu Qiuqian and he carried a pool table in the room to change several places. Wang Miao still went into the hole with one shot.

Just when Wang Miao was about to lose patience, Lu Qiuqian revealed the purpose of this experiment, "This ... the quality of the two ***** has not changed in the five trials; the position is, of course, based on the ball. The table is the reference frame, and there is no change; the velocity vector of the white ball hitting the black ball is basically unchanged, so the momentum exchange between the two ***** has not changed, so of course the black ball was hit in the hole in the five trials. This shows that the laws of physics are uniform in time and space! "

Wang Miao still didn't understand that Lu Qiuqian had to make the question more straightforward. "Imagine another result: the first time, the white ball hit the black ball into the hole; the second time, the black ball deviated; the third time. The black ball flew to the ceiling; the fourth time, the black ball looked like a The frightened sparrow flew around the room and finally got into your pocket; the fifth time, the black ball flew out at a speed close to the speed of light, hit a billiard table along a gap, penetrated the wall, and then flew out of the earth, Flying out of the solar system, as Asimov described it. What do you think? "

At this time Wang Miao finally understood what he said. The billiard table that Ding Yi said is the new high energy level large collider built by European LHC, Rice and China! Under the action of protons, these colliders located at different positions produced completely different experimental results under the same experimental conditions.

This means that humans can no longer explore the most basic laws of physics through colliders! The direction of human research is locked by protons! There is no way to make breakthroughs in basic areas. The development of human science and technology has lost the future.

“These high-energy accelerators increased the energy of particle collisions in the experiment by an order of magnitude, which has never been achieved by humans before. At the new collision energy level. The same particles, the same impact energy, all the test conditions are the same The results are different. Not only are they different in different accelerations, but also in different tests of the same accelerator at different times, physicists panic and repeat this ultra-high energy impact test under the same conditions again and again Every time the result is different, and there is no regularity. “Lv Qiujian read this long line of lines in a desperate to decadent tone. is precisely because he understands the terrible place of this phenomenon. Only then is it more real. If you switch to an actor who does not have such a deep understanding of high-energy physics, he may not understand Ding Yi ’s mentality at this time!

“Cut! It’s awesome! Lu, your expression and actions were just perfect!” Cameron couldn’t help applauding.

“It’s nothing. If I encounter such a situation, it will only lose earlier than the character pits in the novel!” How can I make a plan that appears without humans using the collider to obtain data related to nuclear fusion? ! If nuclear fusion cannot be achieved, how can you accomplish the task yourself! Lv Qiujian’s words are not lies.

Because Lu Qiujian’s perfect performance, Cameron’s shooting speed is much faster. The original three-day shooting schedule was completed in only two days! Next, there will be no performance task for Lu Qiujian. He can easily leave the shooting scene and continue to busy his research work.

While he continued his research work on a new generation of nuclear fusion devices, Liang Xiao also received good news there. Professor Guo’s research was finally successful!

Chapter 605 - Close net

“A year of hard work! Today finally succeeded!” In the research center of Chang’an Nonferrous Metals Company, Guo Zhenyu looked at the latest report with a smile, “Haha, the original waste mine scraps that are still occupying the place now are finally discharged. Has come in handy! “

“Professor Guo, let us see the data?” Liu Guangming’s voice on the side was a little trembling. He knew the significance of this data! This means that the mining alliance that the volume company, Wayne Group and Salman Group spent a lot of money to build has become useless. Since then, Changan Nonferrous Metals Co., Ltd. can free itself from the trouble of being constrained by raw materials. Production capacity.

“After adopting the new process, our comprehensive metal recovery rate will reach 98%, exceeding the original technology by 3 percentage points, and exceeding the technology being developed by the volume company by 5 percentage points!” Guo Zhenyu read the data on the report aloud, “new The smelted metal exceeds the latest products we have produced in many fields, such as heat resistance, low temperature resistance, tensile resistance, fatigue resistance, not to mention the garbage produced by the Co., Ltd. and Wayne Group. Now! “

Guo Zhenyu unreservedly dismissed the foreign advanced products that he could only look forward to as rubbish. Indeed, compared with their latest production results, the things produced by Juan Co. and Wayne Group are not much different from the rubbish! The gap is even greater than the gap between the Spanish team that has just won the World Cup in South Africa and the Chinese men’s football team. It is polite to say that garbage!

“What about the cost? Professor Guo! How much will our cost be after you have carried out large-scale industrial production without calculation? Is it higher or lower than it is now?” As an entrepreneur, Liu Guangming is more concerned about cost after all. The cost of this new technology is higher than it is now, so it doesn’t make much sense.

“Oh!” Guo Zhenyu smiled and raised a finger.

“Ten thousand yuan per kilogram?” Liu Guangming frowned. “This price is similar to that of Zeju Corporation! Although our product quality is much better than them, but if you want to enter the international market on a large scale, there is not much advantage?”

“What do you say! If it costs 10,000 yuan per kilogram, what am I still happy about?” Guo Zhenyu scoffed at his remarks. “You are so confident in our R & D center?”

“Oh? That is!” Liu Guangming’s heartbeat suddenly accelerated.

“The production cost is 1,000 yuan per kilogram!” Liang Xiao couldn’t bear to suffer any more, and reported a number that made his international counterparts crazy. “This is still the result of widening the purchase and transportation costs of slag! In fact, if it is to be put into production, the cost of these slags can be estimated to be greatly reduced. The local government is responsible for the pollution and pollution of these slags. The headache is dead, I think maybe they do n’t want to sell the money, maybe even the cost of loading the car can subsidize us! “

“Haha, a thousand dollars!” Liu Guangming’s head was dizzy, and the whole person seemed to walk on the cloud as if fluttering lightly, and he only recovered for half his life. This is more than double the current production cost! “Eh, the local government is not rich, anyway, even if you spend money to buy it, you can’t spend a few dollars, except for this money!”

Think about it, things that are not as good in quality as new products are sold in the international market for 1,000 dollars and one kilogram. Calculating a profit of nearly 4,000 yuan per kilogram, it is still in short supply! From nasa in the United States to the European Space Agency, to research institutions and aerospace companies in various countries around the world, they waited outside the factory in Jingle City to wait to discuss the purchase contract. However, due to the constraints of ore raw materials, the factory has been unable to carry out Load production.

Watching countless profits just slipped away from his own eyes. Liu Guangming was so depressed, and now, with this production technology. The profit per kilogram can rise to 5,000 yuan, which is four or five times the profit! It can be produced with energy, and Changan Non-Ferrous Metals Corporation has become the most profitable branch in the group. Liu Guangming couldn’t help but feel upset.

“Not only the cost of the product has dropped, but the quality has improved! The comprehensive utilization rate has also increased!” Guo Zhenyu continued to introduce his new achievements. “Our annual output of precious metals such as gold, silver and platinum recovered from **** will continue to increase. Increased by 50%, the recovery rate of chromium and arsenic in wastewater is also improved ... The comprehensive utilization of these waste residues, wastewater and waste gas is enough to recover our production costs! All the rest is profit! “This is the power of the efficient and comprehensive utilization program. Every link in the production process can be used to produce useful things and increase profits for the enterprise.”

“Good! Old Guo!” Liu Guangming slapped Guo Zhenyu’s shoulder fiercely. It seems that his own decision to dig him out of Peking University is too wise! “Don’t say anything, go. Give you a celebration! Let’s not get drunk tonight!”

“Can we not drink?” Guo Zhenyu forgot the pain in his shoulder when he heard that he wanted to drink. Begging for mercy, “I remembered that there are still two solutions in the mix that have not been tested! You go to play today, I will continue to experiment!”

“This can’t help you! Drink red wine if you can’t drink liquor! Come, Yunfeng, should the Mouton wine you brought back from France last time contribute?” Liu Guangming directly grabbed Guo Zhenyu’s arm said while dragging him out.

“No problem! I’ll go back and get it now!” Duan Yunfeng rushed back toward him.

“Dry!” In a luxurious box, Liu Guangming raised the glass in his hand and touched everyone, and then sipped out the two or two white wines in the glass.

“Think about the company three years ago. At that time, how could we think that there would be today! This is all thanks to Professor Guo!” After the third tour of the wine, Liu Guangming began to reminisce.

“Mainly because of the funds supported by Xi and the plan, without this money, we can’t buy such advanced instruments and spend so much manpower and material resources to conduct experiments!” Guo Zhenyu didn’t take credit.

“Yes, let’s thank Professor Lu for the second cup!” Liu Guangming fell into the stomach again.

“Hey, we were not so angry with the International Mining Group and Zejuan Co., Ltd.!” After the third tour of the liquor, Liu Guangming remembered the past suffocation days. They have n’t let us lose a lot in the international competition, but it ’s different now! It ’s time they paid the price! ”

Chapter 606 - smug

“Hi, Dustin! I heard that you Linus Mining Company bought two more mines?” At the airport in Jingle City, several old friends of the mining group met again, and Calif-Ukel smiled and Dustin Linus greeted.

“Come on, the mine has just been put into development, and there is no ore output yet! You are much faster than us! How about? Can the output increase by 10 percentage points this quarter?” No, go back and speed up the development process. , The next step is definitely a good market, you have to take the opportunity to earn more money.

“Hey, what kind of price are we reporting this time?” Hibni’s Josephus seemed to have a sly smile on his face. He couldn’t wait to blackmail China’s non-ferrous metals company.

“The situation in Congo has recently shown signs of change, and Changan Non-Ferrous Metals’ early storage of ore seems to be almost consumed! They may only be able to find us now!” Youkel looked like he was in his chest. In the current situation, we can’t decide the price according to our wishes! I don’t think we need to be mixed in the ore circle! “As long as there is basic business literacy, no one will miss this good opportunity.

“What are you waiting for! Let’s eat the cake we deserve! I think it will be delicious!” Linus closed his eyes drunkenly and stretched his arms, as if he wanted to take the whole world. In my arms, this shape is exactly the same as the little plum in the big ship, so I just said that I am the king of the ore!

The feeling of being able to manipulate the market is really wonderful! This is probably the situation that every businessman dreams of? They have monopolized the supply of products. Many companies with strong payment capabilities are trying to obtain shares from themselves. The supply of products is in short supply, and the prices are freely opened by themselves. Is there a better business than this?

“Guys! Let’s enjoy the warm hospitality of Chang’an Non-Ferrous Metals Company!” Ukelang walked with his head in front, followed by Linus and Josephs. Excited as if a pervert is about to enter the bathing center, and ashamed as if going to the director of an unspoken actress.

“Welcome, dear Mr. Youkel, Mr. Linus, Mr. Josephs! Welcome to Chang’an Nonferrous Metals Corporation!” In the factory in Jingle. Liang Xiao greeted them with a smile, and introduced them to the hotel’s own hotel. “You guys go back to your room for a little rest, I prepared a wind-up dinner for you, I hope you will like it.”

This hotel was specially built by Changan Non-Ferrous Metals Corporation to entertain large customers around the world. Although the rooms are few in grade but not inferior, Ukel and other three did not stay here when negotiating before. Walking directly to the third floor where the luxury suite is located, he asked with a little dissatisfaction, “Chairman Liu didn’t come today? Don’t he think we poor businessmen who sell ore and earn some hard money are not worth his personal reception?”

Damn. Sure enough, I guess right! Now that the lean ore smelting technology has been successfully studied, you will have little value! Liang Xiao didn’t answer directly, but stopped them, “Three people, sorry, the room for you is on the first floor! Please come with me here!”

“The first floor ?!” Ukel smiled angrily, knowing that the luxury of the room decoration of this hotel is increasing with the floor, the third floor is a luxury suite, and the second floor is a deluxe standard room. The first floor is an ordinary standard room. They used to stay in luxury suites when they came here. Why did they only arrange the worst room this time? “Wow. It seems that the business of Chang’an Nonferrous Metals Company is really good! Presumably the hotel rooms are already occupied by buyers from all over the world? Since that’s the case, we won’t trouble you any more, Dustin , Hibni Institute, let’s go to the city and find a hotel by ourselves! “

“Hey, there is no way. I have claustrophobia, and I can’t sleep in a small room!” Linus and Hibney were side by side helping to exert pressure on Liang Xiao! You have to figure out, without the ore we provide, what production products do you use to supply these buyers?

Youkel and others called out in their hearts while walking outside the hotel. Come and save me, come and save me. I will humiliate you by then.

However, the results disappointed them, Liang Xiao scratched his head. “Oh, since this is the case, I will arrange a car to take you to the city! Maybe you will not come to the dinner party? Will we see you tomorrow when we negotiate?” Also claustrophobic? Do you want to be so hypocritical? In a few months, you should worry about whether your house will be forcibly auctioned!

Ha ha, the guy is still young, I can’t bear the pressure to arrange for us ... I waited for him to just arrange the car for us instead of the new room? Did I hear it wrong? What exactly happened here? The three looked at each other in surprise, and after finding out that they had heard it correctly, Ukel’s face suddenly cooled down. “No need, Ukel also can afford this petrol! Dustin, Hibney. So, since Changan Nonferrous Metals Company does not welcome us, let’s go back! A few days ago, Mr. Juan Qianbingwei invited me to vacation in Hokkaido. I rejected this invitation because I missed my old friend Mr. Liu. Now it seems that I It seems that you can start enjoying the holiday again! “

“I’ve always longed for the lavender fields and hot springs in Hokkaido, Calif, do you think Mr. Zui Juan would mind a few more guests?” Linus also began to put pressure on Liang Xiao with Yukel!

“Mr. Ukel! Are you really going to leave?” Liang Xiao really showed a nervous look Yes! Dustin, Hibney Institute, let’s go! “A few people moved two more steps towards the door.”

“That’s too bad!” Liang Xiao couldn’t help lamenting.

Ha, do you know how bad this time? Boy, I remember how you look! Looking back, I must let Liu drive you! Youkel again looked forward to Liang Xiao’s retention.

However, Liang Xiaoyan ran back and said, “Oh, today, in order to prepare your dinner, I also specially asked people to buy a few fresh live fish! I must hurry to stop the chef! Or kill They are too wasteful if no one eats them! “

Nima, it turns out that you are not worried about us but those few worthless fish! So far, the three could no longer hold their anger, pushed open the door fiercely and went out, then boarded their car

and drove directly to the direction of the airport! They have been so low-minded that even if Liu Guangming came to keep them in person, they would not stay!

Chapter 607 - No one keeps

After driving for a while, Ukel finally calmed down. He instructed the driver to slow down and then asked back, "Dustin, what do you think is going on today? It's not rare that we had an appointment to negotiate with Liu again last time. Day? How dare they treat us like this? "

"Well, maybe this is not Liu's meaning! But we met an unreliable employee? Like my secretary, she always messed up the things I commanded! If not for her ***** I fired her long ago! "Linus guessed from her own experience.

"Did you just forget your mind in her ***** and forget to put it in your head! If you still have that gadget!" At this time, do you want to think of these messy gadgets? How did I spread such a group of unreliable partners? Youkel rubbed his temple in distress, "Have you not seen the dead fat man before? Is he such an unreliable guy?"

"Can you put a dead word in front of the fat man?" Josephus looked at his spineless stomach depressedly and protested weakly.

"Fat fat man! Fat fat man! Fat fat man!" Youkel said three times in a row. "He also participated in the previous negotiations, and his speech was very organized. If there is no reliable reason, he will never offend us! "

"Perhaps he was bought by other competing companies? You know, fat people are generally greedy for money!" Linus finally proposed a relatively reliable possibility, but Josephus was innocently shot again.

"It's possible, but you tell me Dustin, now there is a company besides us in the world that can provide them with ore?" Yukel asked with a shrug.

"Can it be that country has discovered a new mine?" Josephus guessed. "Like Congo?"

"Impossible! The survey and mining of the new mine takes a very long period. Think about how long it took us to mine the new mine? This is still in the case of complete infrastructure! If there are new mines, why haven't we got the news? This Is n't it a dug box of gold coins in your backyard! Who can hide in such a big mine? "Linus retorted." Anyway. There is no way to solve the problem of their ore demand in the new mines! They The ore storage is almost bottoming out now! It is impossible to wait until that day! "

“Or maybe a small company has too much financial pressure to sell the ore we sent them to Changan Nonferrous Metals Company?” Youkel pondered for a long time and finally came up with a relatively reliable answer. “For example, Tsuchiya Co., Ltd.? Their new product development progress is slow, and they have no income for half a year! With their financial strength, there is no way to stick to it! Perhaps the only way out is to sell minerals.”

“It’s very possible! I’ll call to check what Tsuchiya Corporation has done recently!” Linus immediately picked up the phone and dialed. Say a few words and hang up the phone, “But, Calif, the storage of Tsuchiya Co., Ltd. can meet the demand of Changan Nonferrous Metals Company for up to three months, even if they can get this part of the ore, it is just their own production time. It’s been three months to sing! But after that? They have to find us. Why did they do the kind of thing they just did?”

“Perhaps they just want to create an illusion for us, but we mistakenly thought that they have mastered new channels for mineral purchases, thus putting pressure on us in this way. Forcing us to lower prices?” Youkel pondered his chin.

“Are they treating us as fools? Can’t we inquire about such a thing? I think it might be another possibility!” Speaking of this, Linus’s face became much more severe, “They should feel that with these three With a monthly buffer time, they will not be able to sustain the roll company or the Wayne Group! When these big companies go bankrupt, our ore can only be sold to them! This is their real purpose!”

“You’re right! If that’s the case, it’s too bad!” If you roll Co., Ltd., Wayne Group and Salman Group, they fall, then Yukel Mining, Linus Mining, Great Western Mining Group Once the mining company has only one big customer left, and this big customer does not need to buy all of their ore, then the situation will change 180 degrees and compete with each other to adjust the price strategy in order to obtain a copy The contract has become them, this situation for Yukel is simply the end of the world for them!

“Damn, don’t Americans and neon people always boast about their advanced international technological level! How come they haven’t broken through the technological monopoly of China!” Linus wanted to scold mother now. If the technical level of Wayne Group and Zejuan Co., Ltd. can surpass Changan Non-Ferrous Metals Corporation, the major companies still maintain fierce competitive relations! That was the golden age of their mining groups.

“Should we inquire about the research progress and capital reserves of Xijuan Co., Ltd.?” Ukel hesitated while holding the phone.

“Hey, guys. Why do you scare yourself like this?” Josephus still maintained his optimism. “I think you are thinking too much. How much output did Changan Nonferrous Metals Company put on the international market in the past year? ? There is no way to meet the needs of all customers-their sales are not even one-third of the international market! Then they can still achieve sales and provide funding for their research, I think maybe Soon they will be able to crack the technology of Changan Non-Ferrous Metals Corporation! At that time we can still profit from their competition The words of Josephus brought them both back from ***** Yukel closed his eyes for a long while and finally said slowly, “Who will win the final victory in this cruel competition of rare earth metals?” I think there is a way to tell! “

“Oh? What is it?”

“It can be seen from Liu’s attitude towards us! If he still asks for us, it shows that he has no confidence in the complete collapse of the Zheju Co., Ltd., so he will definitely retain us before we arrive at the airport! The supply of ore! If he did n’t keep us. It means that he is very confident in the competition and feels that he can be used by the infirmity! “Youkel ’s eyes flashed with a panic. “So let’s slow down and go to the airport now!”

However, until they arrived at the airport, the long-awaited phone still didn’t ring.

Chapter 608 - What happened to them?

“Calif, shouldn’t you owe your phone?” Sitting in the waiting hall of the airport, the three of them stared blankly at the phone on the table. Half an hour had passed. Liu Guangming still didn’t. Contact them, and now the flight is about to take off, these three people are at a loss.

“My secretary will not be as useless as your big-breasted secretary!” Youkel glared at Linus. “Moreover, even if my phone is down, will Liu not contact you?”

“It seems that the current situation is not good!” Even the most optimistic Josephs now realizes that the situation is out of their control. “I think our importance has greatly dropped in Liu’s heart!”

“What should I do now? Are we going back?” Linus was at a loss. Since the merger of Zeju Co., Ltd. and Changan Nonferrous Metals Co., Ltd., these mining groups only need to lie down to make money. Youzaiyouzai It’s been a long time, and his business acumen has dropped so much.

“If the situation is as bad as we imagined, then we will die if we go back!” Youkel’s eagle eagle stared at him fiercely, saying one by one, “We really need to go back, but not back Canada, not back to Australia, not to ***** South Africa! But back to that nasty factory! Find out what happened? “

“Go back and continue to accept the humiliation of the dead fat man?” So that our faces are all gone? Linus hesitated, and Josephus shot again innocently.

“Let’s put that ***** face on!” Youkel seemed to guess his voice and picked up the phone to get up and get up, “If they are really broken, then we are probably going to lick the soles of the fat man , Begging him to give us a pitiful order, so that we can avoid the trouble of bankruptcy! “This time in order to expand production capacity. They have already smashed all the funds from the previous blackmail from the companies of Zejuan Co., Ltd.! Now is the time to relate to the company’s life and death. Compared with money, what is the face of the face?

Can you not put a death word in front of the fat man? Josephs protested silently. However, no one took care of him at all, and Linus followed Ukel quickly. He mumbled and followed quickly.

“Go back to the factory! How fast can you drive!” Unlike the slowness you just took, Ukel’s heart is now extremely anxious. Damn, why has the situation suddenly become so bad? What happened to Changan Nonferrous Metals? Do they no longer need our precious ore?

“Yes, sir!” The driver was photographed by his power, daring not to ask questions, and immediately drove the car to the factory on the outskirts of Jingle City.

It took more than two hours to go to the airport, but it only took me half an hour to return! Youkel and others immediately went to Liang Xiao after getting off the bus. After talking to the doorman for a long time, Liang Shi smiled and Shi Shiran came out. “Gentlemen, don’t you plan to go back? How come back?”

“No, we did not say to go back! We are still waiting for a new round of negotiations with the respected Chairman Liu!” A flower blossomed on Yukel’s face, and there was no arrogance. “Just now we went The city visited the beauty of Xiajingle City, and now it is back! “

“That’s it! But I thought you wouldn’t come again, so I canceled the budget for the reception fee. Now that the finance department is off work, I am afraid that this fee is not easy to apply for?” Liang Xiao scratched his head in distress.

“It’s okay! We will pay for the hotel and the meal!” Mommy. When will we go to the manufacturer and spend our own money! Ukel bit his teeth and swallowed blood, and said with a smile.

“Well, please follow me to the hotel!” Said Liang Xiao and led them to the hotel reception again.
“Open three rooms for these three gentlemen, well, they pay for themselves!”

“Sorry, Director Liang, now there is only the last standard room left! Several media representatives have just arrived, and the remaining houses have been booked almost!” The hotel receptionist said apologetically.

“Ah, that seems impossible! The three gentlemen will probably go back to the city tonight!” Liang Xiao said regretfully, and the right hand behind him gave the front desk a thumbs up.

“No, it doesn’t matter! I think the three of us can squeeze!” Youker and others now dare not leave easily. He gritted his teeth and said; how many years have I not lived in a hotel room other than the presidential suite since being the general manager of Ukel Minerals? He took out his credit card.
“Help us check in!”

“Sorry, pos machine of the hotel is broken. Do you have cash?” The hotel reception is sorry again.

When did I stay in such a poorly served hotel! I continued to bear, Ukel touched the wallet, only two hundred dollars in it, “Is that enough?”

“Sir, our standard room is now 688 US dollars a night, plus the deposit you need to pay 1000 US dollars, these seem ...” The front desk pointed to the revised room rate table just behind.

Standard room for \$ 688! Do you think you are the Four Seasons Hotel New York! Youkel is about to vomit blood, and Linus and Joseph hurried to get out their wallets, but how could there be many traps on people like them? After a long time, the material cost 725 US dollars.

“Liang, do you have any cash to borrow from us? I will pay you back twice tomorrow!” In desperation, he had to ask the nasty fat man for help.

“I usually eat in the factory and drink in the factory! That needs money! I don’t believe you I even have a wallet!” Liang Xiao patted his shriveled pocket to show innocence.

However, in the end, Liang Xiao came forward to guarantee them, so that the hotel did not charge a deposit. “These three gentlemen are big bosses, and they can’t do anything about stealing hotel things!”

Send them to the room, Liang Xiao patted the ***** and walked away, “I will have another meeting in a moment, see you tomorrow!”

“What’s the matter with them? How dare you treat us like this?” After Liang smiled away, Linus angered again and shouted hard at the table.

“Dustin! Tap! The cash on our body is completely out, how do you compensate for the broken table?” Youkel said with a sullen face.

“I said ... you, another important question now!” Josephus raised his hand weakly.

“What?” The two turned back at the same time.

“You just said that all our cash is handed over to the front desk, so what should we do for dinner?” Josephus asked, touching his stomach.

Chapter 609 - Technology Conference

Finally, after some controversy, Linus took a taxi to the city to get money. Youker and Joseph stayed in the hotel to find out the news. They didn’t rush to eat before the restaurant was off work until more than 8 o’clock in the evening .

“I just found out that most of the reporters staying in the hotel today are media reporters! I think Changan Nonferrous Metals Company may have some important news to be announced soon!” Josephus said while gorging.

“What’s the news?” Linus quickly asked, wouldn’t it be the worst result he expected? Is Liu Guangming going to announce at the press conference that Changan Nonferrous Metals has acquired Zejuan Co., Ltd. and Wayne Group?

“I don’t know!” Seeing Linus’ displeasure, Josephs quickly added, “Those reporters don’t know, they were just invited by the propaganda department of Changan Nonferrous Metals Company, and they are also speculating on the specific news content!”

“What did you guess?” Linus lowered the fork in his hand.

“Someone said that Changan Nonferrous Metals Corporation may continue to expand the factory! This is good news for us. The scale of the factory has expanded, and the demand for ore will definitely increase! But Liang ’s behavior today is not as if it is to be expanded! “Youker succeeded Josephus and said,” Some people say that Changan Nonferrous Metals Co., Ltd. will apply for China’s technology awards for its new technology! This has little to do with us! Others say they will announce new technologies! “

“New technology? What kind of technology? Is it a technology that can produce metal without ore?” Linus could not help joking, he did not realize that his guess is closest to reality!

“It seems that this new technology is the key to their attitude change!” Youkel felt tired for a while. Today, it is a day running northeast and west, coupled with deliberately pondering the intention of Changan Nonferrous Metals Company, and lying down to make money A good day may consume the feeling of crisis that is gone forever; he kicked off his shoes and lay down on the bed, “rest early today. When we wake up tomorrow, let’s go to the press conference to see if they can take it What kind of things come out and decide the next step! “

“This is only the case! Someone has already sent me back the news just now, no matter whether it is Zejuan Co., Ltd. or Wengen Group, they have not completed the technical breakthrough! It seems that they cannot compete with Changan Nonferrous Metals Company in a short time. Now! As for whether they can continue to carry it. It depends on how much money they have accumulated! “Linus sighed and occupied another bed.

Josephus took a look at the left. “Hey, where did I sleep at night?” There are only two beds in total. What should I do if you are alone?

“This bed is too small! I think you might not be able to sleep!” Ukel replied lazily, closing his eyes.

“And the quality is also very poor, I think if you fall asleep it will collapse! For your safety, this bed is still my sleep!” Linus echoed, completely abandoning poor Josephs.

“You can go and see if there are quilts in the cupboard, and there is room between the two beds. You sleep on the floor!” Youkel ignored him, and a grunt sounded in the room soon.

Regardless of the company’s strength or its position in the industry, Josephs is still much worse than the two of them. For a while, he only pulled out the quilt from the cabinet and lay between the two beds, as Yukel said. Go to sleep! God! It ’s okay if there is no blonde! Now there is not even a bed! If the news tomorrow is not as bad as we thought, I will surely regret this group of ***** from Changan Nonferrous Metals!

At seven o'clock in the morning, the alarm awakened them from their sleep, and Ukel and Linus got up and finished washing, preparing to go out early to inquire about the news conference. And Josephus was still lying still in the open space between the two beds.

"Hey. It's changed!" This dead fat man, is still asleep at all times! Ukel kicked his calf dissatisfiedly.

"Carrif, I remember too. But I seem to be stuck by these two beds!" Josephus, who was caught, tried to struggle twice and couldn't get up.

"Damn! This trip to China is terrible! What kind of unlucky things will make us encounter!" Linus couldn't help complaining.

The two of them spent a lot of energy and tossed for a long time. With the screams of Josephs, they finally said that the two beds were moved away to rescue Josephs. Sure enough, what is the most troublesome fat man!

Regardless of having breakfast, the three quickly went to the auditorium of this factory, according to news from reporters. The press conference will be held here.

"It's a little crooked on the right, it's a little upward!" Just entered the meeting room. I saw the nasty, fat man Liang Xiaozheng arrogantly directing the staff to adjust the position of the banner on the stage.

"What does that say?" Yukel asked a reporter, who said it should be the subject of this press conference.

"New Technology Conference of Changan Nonferrous Metals Research Center!" The reporter translated the content on the banner into English. After the end, I added a sentence, "It seems that they have developed some amazing technology!"

With a groan, an ominous feeling surged in the hearts of the three of them; "I think no matter what kind of technology they need our ore, right?" Linus said comfortingly. The other two nodded one after another, but are they really so confident in them?

At nine o'clock, the technical conference officially began. Liu Guangming took Guo Zhenyu, Liang Xiao and others to the stage. Liu Guangming first expressed the welcome of a team of media reporters, and then announced the purpose of this conference, "This The second good news is to share with you. The first good news is that after the efforts of the past period, the company's products have received a good reputation in the international market, so we want to take this opportunity to expand the factory again. Expand production capacity to meet the needs of farming and reading customers ... "

This time, they will be finished! Products with better quality and cheaper prices have entered the market, and they still have a good life! The three men exchanged glances, and if the companies like Juan Co., Ltd. collapsed, their good days should come to an end.

However, the news that made them more concerned is still behind. Liu Guangming continued after introducing the expansion plan of the factory, "The second good news is that our smelting technology has once again made a major breakthrough ..."

Chapter 610 - Doomsday

"I think maybe if we cut production and continue to maintain a close alliance between us and prevent Changan Non-Ferrous Metals Company from splitting us, then maybe we can still maintain a certain profit! Although it must not have earned so much in previous years! But still You can have a great time! "Ukel looked at them cautiously. If there were any differences between them and Changan Non-Ferrous Metals broke down, it would be really over!

"We will never give in easily!" Linus and Joseph nodded quickly. "Let's listen to Liu's words, and then go back and discuss the next countermeasures!"

It is regrettable that their countermeasures were smashed by Liu Guangming's next words before they even began to conceive. "After more than a year of hard work and a lot of manpower and material resources, under the leadership of Professor Guo Zhenyu, Changan Nonferrous Metals Company A major breakthrough has been made in lean ore smelting! "

"Poor ore smelting!" These four words dazzled the three of Youkel! Yes, there are no more rich minerals in China, but there are still many poor ones! If this technology is true, then what they can finally put on the negotiating table becomes useless.

Immediately, Liang Xiao opened a ppt and pointed at the screen with a laser pointer to give a detailed explanation for the reporters present. "We tested hundreds of ore and solution ratios and finally came to this epoch-making technology! Let Rare earth metal smelting is no longer limited to rich ores; whether it is lean ore or waste slag, as long as our new technology is used, high-purity metals can be extracted from these ores! "

“In the first one or two decades of mining, people usually only collected rich ores and discarded lower grade ores as waste products on the mines. This has caused great pollution to the environment in which the mines are located! But from now on, these The waste ***** that no one wants is turned into a treasure in our hands ... “Liang Xiao’s voice was as intoxicating as the fairy music in the ears of Liu Guangming and others, but it was almost comparable in the ears of Youkel and others The soul-improving sound is even more annoying.

“This can never be true! This must be the smoke bomb they released! They want to press down on us in this way!” Youkel was ashamed. Murmured.

“Using poor ore and waste ***** as raw materials, their product quality will definitely decline?” Linus is also desperately looking for life-saving straw. “Yes. It must be like this! Xiang Pharmaceutical has developed high-quality products. , We have to use our ore! “

However, Liang Xiao’s next words made them fall into the bottom again. “... After adopting the new production technology, our comprehensive metal recovery rate will reach 98%, exceeding the original technology by 3 percentage points, exceeding the technology being developed by the volume company by 5 percentage points! The heat resistance, low temperature resistance, tensile resistance, fatigue resistance and other fields are all beyond the latest products we produce now ... “

“And its cost is lower! I believe that after the expansion of the factory is completed, the price of new products we put on the international market will be significantly reduced again! The production capacity of our new factory is also sufficient to meet the needs of most international customers!” Then he sentenced the death penalty of rare-earth metal production companies such as Zejuan Co., Ltd. and Wayne Group. Under such circumstances, they absolutely have no way to compete with Changan Nonferrous Metals Corporation!

“We don’t have a way out this time! They won’t be able to persevere for a long time! The price of one thousand dollars has already beaten them breathlessly, and now it looks like Chang’an Nonferrous Metals will cut prices again! Is the price below their cost line? “Linus was sweating. A whispered face.

“What should we do? When Zeju Co. and Wayne Group fall, which companies will buy our ore?” Josephus did not mention other companies such as Salman Group and Tsuchiya Co., which is obvious If Lianzejuan Co., Ltd. and the Wayne Group fall down, these companies will surely be gone!

“Gosh! I must be having a nightmare! Hurry up and wake me up!” Youkel flapped his head in annoyance. What happened to this trip to China? It was originally a gleeful preparation to easily harvest huge profits. Who knows that the entire situation in China has suddenly turned 180 degrees, and he has thus changed from the harvester to the party that will be harvested! This is simply unacceptable! Oh yes, they are not even eligible for harvest now! Huaguo’s current poor mines can meet their needs. They may only want to lick the dead fat man’s shoes if they want to sell the ore.

“Damn! When Liu asked us to buy large machinery and buy new mines to expand production capacity. Did he anticipate today’s situation?” Linus thought of Liu Guangming’s scene of complimenting them in front of him, now It seems that at that time Liu Guangming buried them a nail.

If it were n’t for spending too much money on equipment and mining, they would not be as embarrassed as they are today! Relying on the large amount of funds looted from the Novolum Corporation in the early stage. They can also stick to it for a while, and wait to see if new changes will occur in the international market.

But now, their purchases are no longer expected, and the ore they bought before has not been used up, and I am afraid that there will be no funds to buy from them in the future! Maybe they went bankrupt faster than themselves! If Changan Nonferrous Metals Company is not interested in their ore, they can only pile the hard-earned ore on the roadside ... oh no even if they pile on the roadside There is a lot of extra expenses that need to be paid for each other’s expenses, environmental protection expenses, etc. Otherwise, the government will fine them to bankruptcy before they go bankrupt due to business failure.

The bad situation changed their mindset a few words, and Linus looked at the other two allies in a flicker of eyes; Changan Nonferrous Metals Company obviously could not eat the output of the three of them, but if the price of the rich mine was reasonable. They still don’t skimp on a contract, right?

Well, Australia and Jingle City are the closest. In terms of transportation costs, Linus Mining Company has many advantages over Yukel Rare Earth Company and Great Western Mining Group! If this is the case, should I wait for a private consultation with the respected Mr. Liu when the press conference is over?

He has realized it. If you want to continue to survive, you must first hug Changan Nonferrous Metals Co., the only thigh in the world! There is no other way!
