

D. School 621

Chapter 621 - Pharaoh next door

“Mr. Wang, hello! I will hear your voice from afar! Is this one?” Li Shufu walked to Wang Chuanfu, another leader of a domestic car brand, and watched with curiosity that he was chatting with him. Middle-aged person, haven’t you seen this person at various auto industry summits before? Why did Pharaoh talk so happy with him?

“Li Dong, let me introduce it to you. This is Mr. Liu Guangming, Chairman of Chang’an Nonferrous Metals Corporation! Liu Dong, this is ...” Wang Chuanfu quickly came forward and introduced.

“No need to introduce it, Chairman Li of Jixiang Automobile! Why would you not know a business person like you!” Liu Guangming warmly reached out his hand and looked at him like an old bustard saw a dude, a developer. When we arrived at the real estate group, it was called an eager one.

“It turned out to be Liu Dong! Before I came, I also saw in the magazine that you led Changan Nonferrous Metals to defeat Zejuan Co., Ltd. and Wayne Group, and grabbed the classic case of pricing power from the International Mining Group!” Li Shufu quickly delivered Compliment, he has studied this case carefully before, but he has never seen Liu Guangming’s photo. “If you know Li Dong knows you, I’m afraid I will invite him to recommend it!”

“Li Dong and I have just met. We are both alumni of the Beijing Institute of Nonferrous Metal Research! We used to only know each other, but this time we finally had the opportunity to meet!” Liu Guangming explained, and led them aside. The private room, “Let’s find a quiet place to talk! I am also a half host, and take you to taste Changan’s special snacks!”

After communicating with Ren Zhenfei, Li Shufu also understood how important it is to own a reliable partner if he also adopted an auction to determine the patent attribution as he did last time, so he readily agreed and Wang Chuanfu seemed to be the same. Mindfully, the three left the crowd silently. Entered the box.

“Dong Liu, you have been in Chang’an for many years, and you are a partner with Xihe Project. I don’t know if you can tell us what happened to Professor Lu calling us this time?” There were no outsiders in the box. Wang Chuanfu couldn’t help asking. Li Shufu also raised his ears, concentrating on waiting for Liu Guangming’s reply.

“The purpose of Professor Lu’s invitation to come over, I can guess some things, but since Professor Lu didn’t explain in advance, then I can’t rush to talk!” Liu Guangming can guess some of them, this matter is related to Changan Nonferrous Metals. The company couldn’t get rid of the relationship at all. After talking about it, he couldn’t help but reveal a little insider, “I can only say that this is definitely a good thing for the two of you! And it’s not a good thing in general!”

“They’re the same thing as President Ren last time?” Li Shufu’s heartbeat couldn’t help but accelerate, and Wang Chuanfu was more excited. Lucky Auto’s funds were exhausted in the battle to acquire Volvo. I envied them before, but now it seems that they are also lost. Maybe they can use the advantages of funds to get their company for this opportunity. The biggest benefit; by the way, this Liu Dong seems to play a role in it. It is necessary to make good use of the relationship of the same origin from the Beijing General Institute of Nonferrous Metal Research and his suit!

“It’s inconvenient for me to say too specific!” Liu Guangming pushed the topic back with a smile, “Everyone will understand when Professor Lu comes tomorrow!”

“Tomorrow we still have a meeting at this hotel?” The three of them happily chatted about the recent business developments for a while, and Li Shufu asked before leaving.

“Tomorrow Professor Lu will come here to pick you up for the meeting place. As for the specific location, it is temporarily kept secret!” Liu Guangming smiled mysteriously and waved goodbye to them.

Chatted for two hours. Wang Shufu and Li Chuanfu were also tired, and walked out of the box to the elevator. Li Shufu pressed the button on the 21st floor. Asked back, “Lao Wang, what floor are you on?” When they just chatted, they felt that Mr. Wang Dong Li’s name was particularly awkward, so he changed it to a more plain name.

“Coincidentally, it’s the 21st floor just like you!” Wang Chuanfu smiled, and waited for the two to reach the 21st floor, and found that even more coincident things were still in the back. Their rooms were 2106 and 2108. Just next to each other.

“Since Pharaoh, it’s more convenient for you to live next door to me! I will call you tomorrow morning and go downstairs together!” Li Shufu swiped the card into the door, hey. Why do I suddenly feel awkward?

Early the next morning, Li Shufu called the old king next door. The two came to the hotel conference room again early, at this time Lu Qiujiang was already talking and laughing with Ren Zhenfei here.

“Professor Lu, what plans do you intend to come up with for auction? Our financial situation for Hua is very good! We can certainly meet your requirements!” Ren Zhenfei and Liu Chuanzhi of Imagine Group stood by Lu Qiu Jian. However, the left-hand side in the construction of Lu Qiu is still Lei Busi who made a big splash at the auction last time.

“This time, there are indeed new technologies that I want to develop together with you.” Lu Qiu Jian’s words suddenly let all the big businessmen present hold their breath. “But now is not the time to talk about business, come, everyone eat first Breakfast, after breakfast, we will go to the meeting place, when that time, I will naturally show the information and samples to everyone! But let me say in advance, the meeting place is far away, it takes about eight or nine hours to drive, please Everyone is ready! If anyone is inconvenient, you can quit now! “

“It’s okay! I’m still young! There is no problem with this journey!” Li Shufu, 47, patted his chest and said what a joke, think about the last tablet for What are the profits of the Chinese company for eight or nine hours?

The same is true of everyone else. In the face of profits, these businessmen who are no longer young have regained their youth, and no one has proposed to quit.

After breakfast, Lu Qiu Jian announced, “It is now half past eight! We will meet at the hotel lobby at nine thirty, and then we will head out to Xingqing Mansion together. We will pack a resort there, and discuss cooperation while having fun!” Qiu Jian announced the destination of the meeting.

Hey, is there a direct flight from Chang’an to Xingqing? And since the meeting place is in Xingqing, why did you choose the meeting place in Chang’an? Isn’t it more convenient for everyone to go directly to Xingqing House?

Despite all my doubts, these people are business elites. I understand that Lu Qiu Jian must have made sense since he made this decision. Without asking too much, he went directly back to the room to start packing and preparing to go.

An hour later, when Li Shufu and Wang Chuanfu saw the vehicle prepared by Lu Qiu Jian for them, they suddenly understood the reason why the meeting place was so far away!

Chapter 622 - Old driver stop

There is a row of more than ten streamlined design sports cars full of technological beauty parked downstairs in the hotel, drawing people into the hotel can’t wait to see, “tesla-r?” Li Shufu, the boss

of the auto industry, naturally knows this Tesla's first product, and it is also the world's first mass-produced electric convertible sports car, "This does not seem to enter the country?"

"Yes, I asked Larry Page to help buy it! He is one of Tesla's investors!" Tesla's investors also include Google's other shareholders Sergey Brin and Yibei Jeff Skoll; Google made money from tablets. When Larry Page knew that Lu Qiuqian wanted to buy an electric sports car, he eagerly stated that if he had any new technology, he must consider and Google cooperates, but now Lu Qiuqian does not intend to contact them for the time being.

"It seems to be a bit different from the information I saw!" Li Shufu circled around the car, quickly saw the difference with his professional vision, and asked slightly suspiciously.

"After we bought it, we modified it!" It seems that domestic modified cars are not allowed to go on the road, but this is not a problem for Lu Qiuqian or these big businessmen. "Despite security, you can rest assured that our car passes by After strict inspection, the old driver who came from the army and was driving will definitely have no problem. I will take the front car to open the way for you! "

"Since it was Professor Lü, we must be assured!" Li Shufu said that he was the first to get into the car. If the safety is not guaranteed, the state will definitely not let Lu Qiuqian get on the car, to be honest Your safety is more important than your own! Since Lu Qiuqian is riding this car, what's he worried about?

"When I went to the United States for a test drive, I really wanted to try a different car modified by Professor Lu!" Wang Chuanfu also chose a car to sit in. Although it is strange that Liu Chuanzhi and Ren Zhenfei and other IT giants showed why they wanted to get a new car, they did not question the trust of Lu Qiuqian and got on their cars.

tesla-r is a two-seater sports car. More than ten cars are only enough for Lu Qiuqian to sit with these businessmen, so their entourage had to take a luxury bus. Coupled with the front and rear guard police cars, a group of twenty or thirty vehicles drove through Chang'an City in the direction of Xingqing Mansion.

"I'm leaning, what kind of car is this? It looks so windy? There are more than a dozen cars pulled out at once? Wouldn't it be a local tyrant to hold a wedding for the child?" The wind-driven fleet attracted countless eyes along the way.

“Why are there no flowers in the car for a wedding? It is estimated that the second generation of the rich car is right, but it should not be the wedding but which luxury car club is holding a test drive!” Woo, woo, coach, I also want to be the second generation of rich.

“I’m going to shoot it and post it online!” Countless melon-eating people along the road picked up their mobile phones to shoot, and then uploaded it to their usual website. The news of a luxury sports car parade in Changan City spread throughout the country ; Caused an envy, jealous, and hateful scolding.

“Now that you have entered the highway, let the police car ahead drive faster!” Lu Qiujian said to Bai Yaoran, who was driving. How can such a slow one show the powerful function? Bai Yaoran pressed the intercom and whispered a few words, and then the BMW police car that opened in front began to accelerate.

“Huh?” Wang Chuanfu and Li Shufu, who are followed, have discovered something strange at the same time. Is the acceleration too smooth? It’s not like an electric car at all!

“Master, how far is it from Chang’an to Xingqing?” Li Shufu remembered another question. Remember that tesla-r’s mileage record seems to be 501 kilometers set in Australia last year, and from Chang’an to Xingqing seems to far exceed Five hundred kilometers, there will certainly be no Tesla charging piles along the highway. What if I run out of power halfway?

“According to our current driving route calculation, it should be 773 kilometers! The speed of the car is now 110 kilometers per hour, and it can be reached in about seven hours!” It was impossible to drive to such a fast speed in the urban area. Therefore, the actual full time is about eight hours.

“If tesla-r runs at a speed of 110 kilometers per hour, does it seem to last less than four hours?” Like a fuel-powered car, the faster the Tesla electric sports car runs, the faster the energy consumption! Li Shufu couldn’t help looking at the dashboard. I plan to see how much electricity this car has consumed so far.

“Huh? I said master.” Li Shufu’s eyes widened suddenly, and the data representing the car’s battery power almost did not decline. “Is your power display broken? Why hasn’t it moved so far?”

“It’s not bad! I ran so far when I ran the test a few times before and almost consumed the electricity!” The driver glanced at the dashboard and said lightly.

Hey, Li Shufu suddenly took a breath! The biggest disadvantage of electric vehicles and traditional fuel vehicles is the cruising range and the convenience of energy supplement! For now, you can't find a place to charge electric cars anytime, anywhere, so the requirements for cruising range are even higher! From the hotel to the present, it has traveled almost fifty kilometers, and according to the display of the dashboard, the power consumption is almost one-twentieth! This can be much higher than the current mileage of fuel cars! If this is the case, then this new energy vehicle is promising!

This is definitely not what Tesla's current technical level can achieve! Li Shufu immediately made a judgment. It seems that the technology that Professor Lu will show us this time is the new battery used in this car!

Li Shufu stared at the front cover of the sports car. What kind of magical battery was hidden under the cover? I really want to open it and see!

A reminder board in the rest area appeared in front of the thinking room! Li Shufu made a decisive decision. "The driver is about to stop! I ... I kind of want to go to the toilet!"

Have n't you just been out of the hotel? The old driver who was driving secretly slandered, hey. Urinary urgency and frequent urination indicate a bad kidney, and a poor kidney means that this person's private life is more chaotic! It seems that this guy is a scourge girl with more kidneys!

The driver pressed the talker and said a few words. The leading police car took a brigade and entered the rest area with a big team sports car! Before the car stopped, Li Shufu quickly opened the door and jumped down, rushed to the front cover of the car, looking for a way to open the front cover! Wang Chuanfu is the same in the distance. He grabbed the driver and pointed to the front cover. Wow wow, I do n't know what to say! It seems more excited than Li Shufu.

Chapter 623 - Endurance race

The reason why Wang Chuanfu is more excited than Li Shufu is that his BYD company not only produces cars, but also the first rechargeable battery manufacturer in China and the world's second, he is more aware of this new battery technology than Li Shufu. The huge benefits involved, if you can get this technology, BYD surpasses Sanyo to become the world's first manufacturer of rechargeable batteries is a matter of minutes!

"Wang Dong and Li Dong! What's wrong with you two?" Ren Zhenfei and Liu Chuanzhi are not in the automotive industry. They only paid attention to the comfort and speed of this car along the road, and did not see its energy consumption rate. So it's strange to see them as excited as these car dealers.

Wang Chuanfu's first reaction was to conceal his findings and not tell them, so that he may take the lead in the later competition, but a little thought realized that since Lu Qiuqian called them all, he naturally wanted them to participate. In the competition, this news will let them know sooner or later, what is the point of being a bad guy now! So he patted the front cover of the car and said, "Did you not find it? Now after driving 50 kilometers, the energy consumption of the car battery is only one-twentieth! This technology can be more powerful than Tesla! If it can be done Large-scale production, then the days when electric cars will replace fuel cars are not far away! "

"No wonder you are so excited!" This is a major event that has completely changed the pattern of the automobile industry! Now those Europe. Automobile companies in the United States, Japan and South Korea have divided the international market cleanly. Li Shufu and Wang Chuanfu are not easy to overcome them in traditional competition! If there is no great turmoil, it is almost impossible, and now the battery in this car is a technology that can subvert the entire automobile industry pattern, no wonder they will pay so much attention!

and many more! battery? Liu Chuanzhi and Ren Zhenfei exchanged glances. I wonder if this technology can be used on mobile phones, tablets and laptops? At present, mobile phone batteries and laptop batteries seem to be the biggest bottlenecks restricting the development of mobile digital terminals. Even the best technology can only keep mobile phones and laptops running for four or five hours! This makes users feel inconvenient, if such a large-capacity battery can be used in digital terminals. Wouldn't it be possible to solve this problem completely? In that case, they will also launch powerful impacts on Apple, Samsung, Dell and other large multinational companies in the mobile phone, tablet and notebook markets!

"Master, can you show us the front cover of the car?" Ren Zhenfei couldn't stand it either. Asked immediately with a smiley face to the window of the driver's seat! Hey, think of me as the chairman of the world's top 500. When did you lose a smile to the driver!

"Don't be excited, bosses!" Lv Qiuqian Cai Shiran walked over in the car for a while, "You don't think it's appropriate to take the car apart from this place, you see it? And this place is full of people. Yes, it's not good for everyone if the news leaked out? Wait until Xingqing House, you want to dismantle as many cars as you want! We have prepared detailed technical information and a full set of tools and test equipment for you! Guarantee you I can learn everything I want to know! "

Well, if Toyota or Samsung knew this in advance, wouldn't they fly to Xingqing House immediately? Yes, they must not be allowed to participate in this cooperation! The fanaticism in the brain gradually calmed down. Wang Chuanfu and Li Shufu left the car cover reluctantly and stood up. "Sorry, we are so excited!"

“It doesn’t matter! Are you taking a rest? Let’s go on after we rest? There are roasted whole lambs and selected lambs prepared for us, and we will take the time to roast them. We can just start eating when we arrive! After a long delay, it won’t taste good! “What you want is this effect! How can you show the advancement of our technology if you are not excited?”

“I said Professor Lu! Don’t talk about roasting whole sheep! You are just giving me dragon liver and phoenix. I don’t want to eat it!” Wang Chuanfu now put all his thoughts on the battery.

“No worries!” Lv Qiujian raised his wrist to look at his watch. “If everything goes well, you can see what you want to see in about seven and a half hours!”

After all the big brothers returned to the car one after another, Liu Chuanzhi and Ren Zhenfei came to the end, Liu Chuanzhi asked hesitantly. “Mr. Ren, I didn’t pay attention to the dashboard just now, but do you think this kind of battery will be the same as the cell phone battery. The first battery is always consumed very slowly, but once the first battery is consumed, the remaining power will be Will it fall quickly? “

“Shouldn’t it be possible?” Ren Zhenfei also encountered this problem, but his confidence in Lv Qiujian was much stronger. “If it is such a product, Professor Lv will not take it out!”

I hope so! Back in the car, almost everyone started to stare at the dashboard from time to time, but the battery’s power, like the total bank loans of their company, always fell very slowly!

Li Shufu opened the car window. Feel the oncoming strong wind! At his age, he feels nothing about the speed and coolness of sports cars! Instead, it pays more attention to the comfort and safety of the vehicle! In this respect, the narrow seat of the Tesla-R sports car can’t be compared with the extended Rolls Royce! Without a constant temperature wine cabinet, he always felt that there was nothing in his hand! But the speed brought by the strong power now makes him seem to be back to the early childhood.

If you go to Xingqing House, the performance of this new type of battery is really as Professor Lu said! Do not. Even as long as two thirds! I completely changed the company’s strategy and smashed all the resources I could get here! Even It’s not a problem to resell Volvo to Ford! Li Shufu secretly made a decision.

The car gradually drove out of the provincial boundaries of Qin Province and entered the scope of Xixia Province! After driving for more than an hour, the police car in front slowly slowed down and turned into the rest area.

Hey, who wants to go to the toilet again? Hey, these rich people have bad kidneys! Li Shufu's driver sullied himself and followed into the rest area.

Ok? Is the police car going to refuel? Before getting off, Li Shufu saw the BMW police car in front of the pilot driving into the gas station, and he looked at Tesla's dashboard with a conditioned reflex!

Hey, how much power has just passed half? At this time, he somewhat understood the reason why Lu Qiu Jian had to run so far before the official start of the exchange meeting. It seems that the new electric car has completely defeated the traditional powered fuel car in this endurance race! This is the best product display!

Chapter 624 - State support

After coming out of the rest area, Li Shufu looked at the frequency of the instrument panel again, but until the team entered Xingqing, the electricity was still more than 20%.

Wouldn't it be a double battery? Li Shufu rubbed his eyes and couldn't believe what he saw was true! The convoy has just stopped in the yard of this resort! He immediately jumped out of the car at a speed that was completely out of his age. "Professor Lu, should we show us this time?"

"Don't worry so much? You have to fill your stomach! We haven't eaten so much along the way! And I'm planning to introduce some new friends to you while eating!" A middle-aged man in a suit and leather jacket is reserved and proud of himself; from the perspective of Li Shufu for many years, these people should be civil servants, and their official positions and places are not low!

If it is normal, he will definitely not miss the opportunity to communicate with these officials who hold the power, but at present, there is no way to remove him from the front of the car, "Professor Lu, if you do n't look, I will eat and eat here. Not fragrant! "

Seeing that he was almost lying in front of the car, Lv Qiu Jian had to change his plan, "Okay, anyway, roast whole sheep is almost ready! Let the resort help clean up the open space! Let's disassemble the car while eating roasted whole sheep! "

There is an ancient Chinese book to drink wine, we have a car to disassemble and drink wine today, but it also has a special style; the owner of this resort has already greeted the above, and he immediately greeted the people and horses when he heard Lu Qiu Jian's words. The table and chairs for the picnic were spread out on the lawn, and it took a while to tidy it up properly.

Several big-bodied chefs came to the lawn carrying the barbecue grill and the golden roasted sheep. They were planning to show their craftsmanship on the spot, and the fruit and wine were also delivered at a price.

The staff of Xihe Project over there also made preparations, took various professional tools, and found a prototype. First, the front cover was opened. Then I plan to remove the battery and engine one by one.

“It will take a while for the car to be dismantled. Come, let me introduce some new friends for you! This is Jiang Tianyang, Deputy Director of the Technology Industry Department of the National Air Defense Commission. This is Chen Yaochen, Deputy Director of the Industry Coordination Department, This is Zhao Shanhe, Zhao Director of the Oil and Gas Department of the National Energy Administration. This is Han Binhan, deputy director of the Comprehensive Planning Department of the Ministry of Transport ...” Introduce to them.

These people also enthusiastically shook hands with Wang Chuanfu, Li Shufu, Ren Zhenfei and others, and they were slightly surprised when they heard the positions of these people! The Air Defense Committee is not only good at flying planes, but more importantly, it has the power of macro-control to guide the reform of the overall economic system! Great changes in national economic policies are inseparable from their guidance! In addition, the Ministry of Transport and the National Energy Administration have a lot to do with electric vehicles! Since Lu Qiujuan invited them, does it not prove that the country has affirmed this new technology and intends to put it into practical application?

In China, there is no more profitable business than cooperating with the government! The eager mood of Li Shufu and others rose again! Their entourage also whispered in excitement, and the company developed them, these high-level staff will also have benefits! At the beginning, I was wondering why the boss attached so much importance to this invitation. Now it seems reasonable to be a boss. At least this vision is far from being comparable!

So Li Shufu, Wang Chuanfu and others temporarily moved their minds away from the car, took the freshly cut roast lamb from the chef, and talked to the officials of these key departments with a plate.

“Secretary Han, this time the country intends to make adjustments to the automobile industry?” Li Shufu had dealt with the Ministry of Transport before, and had met the deputy director of the Republic of Korea twice.

“There is indeed this plan!” I did not expect that this trial was immediately answered affirmatively, “In recent years, the international community has used the” Kyoto Protocol “to exert increasing pressure on our country! China’s economy is now developing well, and people’s demand for car purchases With continuous improvement, carbon dioxide emissions remain high! Therefore, the country attaches great importance to the development of electric vehicles! I hope to take this opportunity to reduce carbon dioxide emissions and reduce international pressure! This is not. As soon as the minister heard that Professor Lu has made something new here , Immediately sent me over! “

“This is under the banner of a sounding banner restricting our development! Why can’t they have a car for every family?” Li Shufu said a few words, pointing to the other officials who were talking and laughing with Ren Zhenfei and others. Road. “These few came for this event?”

“Yes! Secretary Qin had a small meeting with our leaders! Then we were arranged here to come to the on-site office!” Speaking of Han Bin’s envious look, “Let’s cooperate with Professor Lu’s work We have also formulated a series of planning policies based on Professor Lu ’s plan, and we will conduct in-depth consultations after you have tested the technology! ”

Pull the middle-level backbones of several key national departments to thousands of miles away to solve problems on the spot for you! Professor Lu, you are really good! Recalling his hard work to meet these people in Beijing for the company’s development, Li Shufu could not help secretly lamenting that this person and the person are incomparable after all!

“The country really has confidence in Professor Lu!” Li Shufu said with emotion, seeing these people, his confidence in Lu Qiuqian became even greater.

“That’s because Professor Lu has never let the country down!” Han Bin vaguely heard some news, knowing that the influence of Lu Qiuqian at the high level is far from those that are now manifested! He has made up his mind to make good use of this opportunity to build relations with Lu Qiuqian, maybe he will be connected with him in his future career.

“Also Since Professor Lu returned to China. Just a few years of effort, artificial intelligence, tablet computers, recyclable rocket systems plus today’s new batteries! Which is not a far-reaching technology?” Li Shufu nodded and said yes.

Not only what you think! There are many others that are not open to the public! Han Bin really wanted to say something. The staff over there have removed the battery and greeted them. Everyone rushed there.

“Let’s see!” Li Shufu ignored the other real power officials and piled up without looking back. When he finally squeezed into the inner circle and saw the battery removed by the technician, he took a sip. Air conditioner.

Wang Chuanfu on the side also grew his mouth, and he couldn’t believe the facts he saw. He kept chanting, “Incredible, incredible!”

Chapter 625 - Warm questions

Wang Chuanfu, as the leader of the battery session, deeply knows the current development status of global battery technology. According to his ideas, even if the current state-of-the-art technology has been improved by a few levels, if you want to achieve such a long mileage, the size of this battery is at least much larger than the size of the battery pack used by Tesla! But from the samples disassembled by the technicians, its size is much smaller than Tesla’s 18650 lithium cobalt oxide lithium battery pack!

The 18650 battery is a standard lithium battery model developed by Sony, where 18 represents a diameter of 18mm, 65 represents a length of 65mm, and 0 represents a cylindrical battery. The battery used by Tesla is more than seven thousand 18650 cobalt Lithium acid lithium batteries are connected in series.

If disassembled, this battery pack looks like a dense bullet box. Rows of small batteries are neatly arranged in the battery pack, and a special liquid is used to cool these batteries. A device composed of multiple components like this is likely to affect the use of the entire battery pack due to a problem with one of the components.

But the integrated battery that Lv Qiuqian has taken out now does not have this problem. It uses fewer components and is less likely to fail. In other words, it has higher stability! This is another big benefit for large-scale commercial promotion. These keen businessmen soon discovered this.

“The size is one-fourth smaller than the battery pack used by Tesla-r and one-third lighter!” Liu Guangming played the role of a lecturer at this time. He was holding the microphone with red light to the business man in front of the car. We introduce the advantages of this new battery, and we are very proud. The most critical metal material in this battery is produced by his company! It is conceivable that if this battery is widely promoted, it will bring great profits to his company.

In the past, he just wanted to seize the opportunity of cooperation with Xi and the plan to make a lot of achievements, so he could be transferred to the headquarters of the Nonferrous Metals Corporation as soon as possible. But now he was reluctant to leave! God knows how much amazing technology Professor Lu can come up with. It would be a pity if these achievements were left to others!

“The battery capacity is more than double that of Tesla-R! The driving range is as high as 950 kilometers at a speed of 110 kilometers per hour! If the speed drops below 100 kilometers, the driving range will definitely exceed 1,000 kilometers! The displacement of a 50-liter fuel tank 1.6 car. It may travel 400 kilometers in congested sections of the urban area, and 600 kilometers at high speeds. “Liu Guangming compared his usual car. “Calculate that our battery can make the cruising range of electric vehicles more than double that of fuel vehicles! Li Dong and Wang Dong are all leaders in the automotive industry, so I don’t need to say more about the significance of this?”

“How long does it take to charge the battery? If, like Tesla-r, it takes half an hour to fully charge, I’m afraid it’s not conducive to sales!” Li Shufu calmed down at this time, and began to pick up the problem.

The suspect is the buyer, and Liu Guangming, who has also been in charge of the enterprise for many years, understands the truth and did not get angry because of his doubts. He explained calmly, “We have designed a special charging system for this battery. A high-voltage charging pile is used. It only takes five minutes to fully charge! This is not much worse than refueling! “

“But the construction of charging stations is not an easy task!” Wang Chuanfu said.

“Please don’t worry about this!” Deputy Director Chen Yao of the Industry Coordination Department of the Air Defense Commission interjected, “The Air Defense Commission is studying a plan to add a charging function to the existing gas station! The charging function can be fully placed at that time. Come on gas station! We have now planned some gas stations in several cities as pilots. I believe that it will not take long for everyone to see the charging station officially unveiled! “

This is grabbing food from the oil department! Can two barrels of oil agree? Such thoughts came out at the same time in the hearts of everyone here, but the senior executive who thought about two barrels of oil has been very unstable recently. I am afraid they do not have this mind to think about these things! As for the following people, as long as their wages and benefits remain unchanged, who cares whether to refuel or recharge the car?

“Is it safe to charge the charging station and the gas station together?” Won’t sparks ignite gasoline when charging? Li Shufu’s chief engineer asked.

“We have fully considered this point when designing the charging pile! After rigorous testing, we found that these problems will not occur during the charging process!” A staff member of Xihe Plan came out and explained.

“As far as I know, the battery capacity of tesla-r battery will decrease by 15% after driving for 100,000 miles! How does our battery perform in this respect?” Wang Chuanfu raised another question.

“Our data is 5.8%, which is just over one-third of Tesla-R! And our battery can be reused later, and only need to replace the solution in the battery to restore it to the new factory capacity!” This work The staff had long expected it.

“How to deal with the solution after replacement? Will it cause pollution? If you want to export to Europe and Rice, the requirements of the environmental protection department are equally important!” Li Shufu has begun to consider the international market.

“Oh, Li Dong must not know the tradition of our Changan Nonferrous Metals Company! Our department will not let go of any kind of material that can bring us profits!” Efficient and comprehensive utilization is our signature. “We will reprocess the waste liquid after replacement, without worrying about pollution!”

“And the design of this battery case also considers the problem of solution leakage After our test. Even under the impact of 100 kilometers per hour, the battery case will not be damaged to the extent of solution leakage! It is much more reliable than a fuel tank! Even if the leakage of this solution is much lighter than gasoline, if this does not pass their audit, then fuel cars may have been banned by the environmental protection department for a long time! ” Joked.

“How does it work in extreme environments? For example, a low-temperature climate of minus thirty or forty degrees? A high-temperature climate! What happens if you encounter unexpected conditions such as flooding and lightning strikes?”

“If we want to lay solar panels on the roof to charge the battery?”

“Will the battery leak automatically if not used for a long time?”

“Can I use the home transmission line to charge the battery?”

Questions were thrown out by car dealers such as Li Shufu! I can hear Ren Zhenfei and Liu Chuanzhi, the big bosses in it, feel itchy, you are now seeing the cake! But ours? We also want to know whether this technology can be applied to digital products!

Chapter 626 - Power age

“... Only a simple modification can be used to charge the battery with the solar panel, so that the car can obtain a longer cruising range ... Our charging pile system is not complicated, it can completely The developers collaborated to install charging piles in the parking lot ... This battery has been tested in various extreme environments and performed very well ... “Lv Qiujian personally answered questions one after another. These car manufacturers are getting more and more excited, forgetting that their stomachs have not been filled for a while.

“In addition!” After answering all the questions, Lv Qiujian finally turned his attention to Ren Zhenfei and Liu Chuanzhi, the IT leaders, “This new technology is not only applicable to large batteries, whether it is mobile phones, tablets or This technology can be used on laptop computers! The cost is not higher than the current lithium battery! However, I think you are probably facing a new trouble! “

Looking at the serious face of Lu Qiujian, Ren Zhenfei and others not only have a tight heart, is there any defect in this powerful battery? He quickly asked, “What’s the problem?”

Lu Qiujian smiled, and the atmosphere suddenly changed from dignified to relaxed, “That is, a single charge can allow mobile phones and other mobile digital terminals to be used for a long time. In this case, consumers may often forget where the charger is! I think you guys I am afraid that more chargers will be produced! “

“Haha!” Everyone couldn’t help laughing, and Ren Zhenfei and Liu Chuanzhi applauded excitedly, “So we can sell more chargers, which is a good thing!”

Lu Qiujian waved his hand, and someone immediately sent samples of batteries used in various mobile digital terminals prepared in advance, small-sized square mobile phone lithium batteries, larger tablet batteries, and thicker laptop batteries. “You can use these samples Take it for testing, compared with existing products. It has faster charging speed, longer battery life, longer service life, and higher safety! Here are our test data! You can take it back for reference. “

Looking at Li Shufu, Wang Chuanfu and others who were still talking, Lu Qiujian continued, “We will use the samples removed from the car directly. There are three samples in each house, and the data is also attached! You have prepared various testing tools! You can test here as much as you like! “

“Now. Let us put our work aside first and enjoy the food prepared by the host for us!” Lv Qiujian terminated his speech and lifted the glass from the waiter’s tray. “Let us power Have a toast with the bright prospects of the times! “

Since the discovery of voltaic batteries by Volta, a professor of physics at the University of Lipavia in Italy in the 18th century, humans have been pursuing a more powerful and powerful mobile power storage system, but due to materials, reactive substances, manufacturing costs, etc. In the 21st century, people can still only use mobile power supply devices on small power equipment such as mobile phones and laptop computers; and on large equipment such as automobiles. Still need to use primary energy sources such as fuel oil and natural gas; and now the battery launched by Lu Qiujian allows them to see the possibility of human beings entering the era of electricity completely.

Ren Zhenfei, Li Shufu and others are vaguely aware that human life may change dramatically because of this invention. This technology may become the beginning of a new technological revolution! At the thought of standing at the door of a great change, they couldn't help but want to see what was inside the door and how much benefit they could bring to themselves.

“... I'm still saying that there is nothing more important than choosing the platform!” Lei Busi sang Fang Qi among many businessmen with a red glass on his face, “Just standing on the wind, Pigs can fly! The essence of business success is to find the outlet and follow the trend; grasp the strategic points and opportunities, far beyond the role of tactics; no doubt. This new battery will set off a strong burst in the market And a long-lasting storm, and you are now a big step ahead of your competition! Let us have a drink for the glorious future! “

“Cheers!” Ren Zhenfei, Li Shufu, and others were said to have a ***** vein, and they all lifted up the wine glasses and drank together. Trance seems to see the moment when his company defeated the old overlords in industries such as Samsung, Apple, Toyota, Honda and so on.

Officials such as Han Bin, Zhao Shanhe, Jiang Tianyang and Chen Yao were surrounded by many businessmen. They threw out various issues of their concern from time to time. Jiang Tianyang and others were patiently answering questions one by one, Support or not, we certainly support it! The country has always attached importance to the development and utilization of high and new technology. This new battery technology that is conducive to promoting industrial structure adjustment and reducing environmental pollution will greatly reduce exhaust emissions and improve energy efficiency! What reason do we not support? Any comments, please mention it. We will answer it now and we will answer it. If we exceed our authority, we will also give feedback to the superiors as soon as possible. Try to satisfy you in the shortest possible time. reply.”

“The current draft of the access standard for electric vehicles has been taken out, and I have brought a copy here. We can hold a meeting together tomorrow to study carefully! After the review is determined, you can apply for the production license of electric vehicles!” Transportation Han Bin, deputy director of the Ministry of Transport, threw a big bomb again When did the efficiency of the national government work so quickly? Wang Chuanfu and others were uncomfortable for a while. They subconsciously turned their attention to Lu Qiujian, who was talking to Ren Zhenfei. Was it

all driven by him? When they thought they could participate in the formulation of this policy, they were very happy, which meant that the automobile manufacturers present had already reached the forefront of their peers. They nodded quickly and agreed, “It must be certain that we will be there tomorrow! “

“Also, the pilot city of the gas station reform of our Energy Bureau is currently under review. I don’t know what Li Dong thinks of including Qiantang City in the first pilot city?” Zhao Shanhe of the National Energy Administration is not alone, Qiantang as Li Shufu’s base camp is located, if he can become the first batch of pilot cities, it will greatly benefit his future sales.

“Our Air Defense Committee has always focused on the application and promotion of emerging technologies! We have formulated a series of tax relief and financial support policies, and you can also understand together tomorrow!” Deputy Director Jiang Tianyang, who is good at flying aircraft, continued.

This has caused these car manufacturers to be in a trance for a while. When have we enjoyed such treatment!

Chapter 627 - Moon landing plan

“Hey, if those joint venture car companies did not fight, I wouldn’t just call these people!” Lu Qiujian and Qin Feng’s secretary Wang Yang looked at them from afar, “Compared with the achievements of the Ministry of Railways Get up, what have they done for decades? The technology didn’t get much, but the market has lost a clean one. “

“There is still a difference between the automobile industry and the high-speed rail!” Wang Yang is limited to his identity. His speech is not as unscrupulous as Lu Qiujian. Once others understand his words as Qin Feng, it is not appropriate, so he immediately turned to the topic On the one hand, “Isn’t it realistic that you want to get as much money as the last tablet based on the entrepreneurs who are here now?”

“Well, the capital reserves of these companies are far worse than those of Apple, Microsoft, Samsung, and Sony!” Lu Qiujian did not deny this problem. “But if we change the way, the profits may be more! It will not bring us tens of billions of profits at once like last time, but it can bring us endless capital! This is like the amount of water caused by a storm in the Pacific Ocean and the Amazon River injected into the sea for ten consecutive years. The difference in water volume! “

“Now there are not many opportunities for sudden increase in funding for research! So compared to the one-time income, I hope that the long-term income is more!” The continuous funds brought by this battery will be built by Lu Qiu. The project provides endless fuel, driving research to move forward firmly.

“This technology can make the cost approval for the next year smoother! If the recyclable rockets are successfully launched in a few months, then maybe some more can be added!” Wang Yang’s words represented Qin Feng.

“Well, when I’m busy with this while, I will go to University Liu to see how their recent research progresses, and strive to complete the first successful launch this year!” Lu Qiujian understood what he meant, “In addition, I think we The lunar exploration spacecraft plan should also speed up! “

“Oh? Are you talking about?” Wang Yang’s eyes lit up. He is one of the few people who knows the foundation of Xi and the plan. He deeply understands the significance of the moon to Xi and the plan. The amazing reserves of helium 3 in the lunar soil will be the most important fuel in the future of controlled nuclear fusion. So, Lu Qiujian’s eagerness to promote the progress of the lunar exploration program does not mean that the experiment has made tremendous progress?

“Yes. We replaced the experimental tritium deuterium plasma with helium 3 a while ago. The effect is very amazing!” Lu Qiujian nodded and whispered, “I have reported this situation to Secretary Qin during that time. You are busy contacting relevant units to prepare for this exchange meeting, so Secretary Qin did not tell you! “

“This is great great news!” Wang Yang said with restrained excitement, but he frowned in a flash. “Now Xi and the plan have seen a lot of money! If you want to reach the Apollo plan in a short time I ’m afraid it ’s not realistic! “He also knew how much it would cost to carry a man to the moon.

“It is not necessary to carry out a manned flight for the time being!” Lu Qiujian also knew this, and at the same time he also thought about the countermeasures. “If it is just to launch a recyclable unmanned spacecraft, the cost will be much lower! If the central government increases some funds and the benefits of the new battery, I think it is still possible to achieve first place within a few years. The second landing detection! “

“I will pass on your opinion to Secretary Qin!” Wang Yang remembered his responsibilities, keeping this matter in mind, and planned to report to Qin Feng when he reported to work tomorrow morning.

“Thank you!” This matter came to an end here. At this time, the banquet opinions were coming to an end. Lu Qiujian turned around in the crowd and left, and the other people hurriedly dispersed themselves, taking themselves The core team came to the room where they stayed. In spite of the rest, an emergency meeting was immediately held.

“We must take down the lucky car for this project!” Li Shufu’s face was not exhausted. He sat at the top of the conference table and stared at his subordinates. “This is the best opportunity for our auspicious car to rise! It is a hundred times more important than the previous campaign to acquire Volvo!”

Emphasizing the importance of the matter, he went on to say, “What kind of cooperation do you think Professor Lu will come up with now? Is it the same auction as the last tablet computer patent transfer or a new way of cooperation?”

“The benefits that this technology can bring far outweigh the tablet PC, but Professor Lu did not convene the old auto companies such as Toyota and Volkswagen, which may indicate that he did not intend to auction the battery patent.” Finance The director said first, “To be honest, the payment capabilities of our participating companies are far inferior to those of established companies! So I think Professor Lu may adopt other cooperation methods that can bring long-term benefits to himself!”

“It makes sense! I have thought about this, but what new way will he adopt?” Li Shufu nodded.

“I think there are two possibilities. Either he is going to build the battery factory alone and then sell the battery. And we will be the main target of sales! Or he will choose some cooperative enterprises to participate in the construction of the battery factory!” The company vice president said.

“It is very likely, if it is to cooperate to build a factory. Wang Dong may be more advantageous, we may not be able to come up with much?” Li Shufu was a little unwilling. Wang Chuanfu holds the world’s second largest rechargeable battery company, and he certainly has an advantage over him.

Everyone here also understands that once this battery is produced, it will definitely be in short supply. Whoever has a greater say in the factory, who is likely to get more shares of the battery. Output is of the utmost importance; the company with the most batteries will surely take the lead in the competition of electric vehicles.

At the same time, none of the other villas where other companies are located turned off the lights. The meeting rooms of each villa were brightly lit, and refreshing consumables such as cigarettes and coffee consumed batch after batch. If it is not tomorrow that there will be a meeting with the government department, they even plan to hold the meeting overnight.

It wasn’t until four o’clock in the morning that the lights of the conference rooms gradually went out; at eight o’clock in the morning, the peaceful resort became lively again. After breakfast,

officials such as Deputy Director Jiang Tianyang and the businessmen came to the big conference room to start discussions related policy.

These severely sleep-deprived businessmen stared at their red eyes and started a heated argument and discussion at the meeting! The two sides fully exchanged opinions. They heard from Jiang Tianyang's words that the central government attached importance to this technology, and looked forward to tomorrow's formal meeting.

Chapter 628 - cooperation method

"Originally, I was planning to hold this meeting until the day after tomorrow, to give you a little more time to test the product! But I saw the lights in your villa that light up until 4-5 every night, and your eyes are turning red, I think it's better to have a meeting as soon as possible! Otherwise, in case of a physical problem, my guilty will be greater!" Before the meeting officially started, Lu Qiujian made a joke.

"Lao Wang, who is that? It doesn't seem to be doing research, and I just saw Director Jiang that they are very respectful to him, I don't know what came from?" Li Shufu asked, whispering at Wang Yang's mouth. .

"It is Secretary of Secretary Qin!" Wang Chuanfu has learned Wang Yang's identity through Liu Guangming. This representative here must represent Secretary Qin's meaning, so he is more optimistic about the prospect of this cooperation.

"Secretary Qin?" Li Shufu figured it out after a bit of pondering. There are many secretaries named Qin in Hua Guo, but even his secretary is eligible to receive the compliments of Secretary Jiang and others, then there is only one possibility. That popular candidate for the next elder; he immediately had the same thoughts as Wang Chuanfu.

"I won't talk more about gossip! I will talk directly about the way we plan to cooperate this time!" Lu Qiujian's time is much more precious than those officials. If there is any time for a long discussion, we will directly enter the topic, "our current The plan is to build several battery factories nationwide for the production of new car batteries, mobile phone batteries, tablet computer batteries, laptop battery and other batteries! "

"The construction of the factory will adopt a cooperative approach. Xihe plans to issue a patent. You will provide the funds. The government is responsible for coordinating the land and other supporting facilities!" Lu Qiujian printed a map of China on the projection screen. "As for the location of the factory We are initially set in these cities, Qiantang, Pengcheng, Macheng ... "

Great! Li Shufu clenched his fists. Since the scheduled factory is located in Qiantang City, it means that Lu Qiujian regards his Qiantou snake as a planned partner, so that the gap between him and Wang Chuanfu in the battery field has been minimized.

Ren Zhenfei has the same thoughts. Pengcheng is his base, and setting up a factory there will definitely facilitate the production of his mobile phone; if it is just the introduction of this battery, it seems a bit wasteful. It's time to launch a new type of mobile phone and tablet computer. With the big selling point of ultra-long standby battery, I believe that the new product will set off a storm in the market.

A laptop with a battery life of more than fifteen hours will definitely be the first choice for business elites who travel a lot! No one hates people looking for charging power more than they do! Liu Chuanzhi also secretly calculated.

Unfortunately, the biggest piece of cake cannot be eaten! But is it possible to find a way from the output? I now have the strongest battery production capacity in China. The basis is many times better than these people do not know. Once the factory construction is started, I will definitely be the first to put into production! Wang Chuanfu was a little unwilling.

Seeing the expressions of these people in his eyes, Lu Qiujian continued. "We want 50% of the shares in each factory, and you share the remaining 50% according to the amount of investment!"

Lu Qiujian did not limit the scope of cooperation to the company in the city where the factory is located, but welcomed more people to participate in the auction. He did not want to make these factories a product of a company; The more intense, the more capital invested in the factory! The more money there is, the sooner the factory will be built and the first batch of products will be produced, and Xi and the project team will receive the benefits of this product one day earlier.

"The President of Qiantang Bank just sent me a text message. He said that we have secured a loan amount of one billion RMB for us! Interest rate ..." The financial director glanced at the phone and gathered in Li Shufu's ear to report.

"Go to his interest rate! No matter what the interest rate is, you promise me immediately!" Li Shufu lowered his voice and shouted, what time is it. Also care about this little money! As long as the shares of the factory can be won, there will be profits in the future.

"In addition, once you get more than 10% of the shares in a certain factory. Your company will automatically be qualified as a member of the China New Battery Association! In the future, the production distribution and sales plans of these factories will be combined with the China New

Battery Association. It was decided through negotiation! Members should not violate it! “Lv Qiujian came up with a charter again. He did not want any company to screw up the brand of the new battery because of his own interests.

Although only one kind of alloy necessary for this new type of battery can be manufactured by Changan Nonferrous Metals Corporation, and the formula is also in his own hands; with this, he can also control the output of the battery, but he does not want to spend too much energy in this regard. , Or let them do these things! I just need to act as the last mediator.

As soon as the plan was thrown out, even small companies that weren’t planning to compete with Li Shufu were tempted to join the new battery federation, let alone say anything else. Would it be convenient to buy this kind of battery and apply it to your own products? So they started to sort out their company’s funds again, intending to participate in the competition We have calculated the funds required for the construction of each factory. Let ’s first look at this factory in Qiantang City. The factory plans to cover an area of 500 acres ... “Lv Qiujian pressed the laser pointer. Ppt turned to the next page, and a factory rendering appeared on the screen, next to this The technical indicators and construction budget of the factory.

“Although there is only so much capital required, the more funds available for building a factory, the better!” After reading the data, Lu Qiujian finally came up with a plan for share allocation. “We divided the total construction funds of this factory by five to get What is needed is to obtain the funds required for 10% of the shares. Now use this number as the base price for the bidding; every 10% of the shares bid, the highest bidder will get this part of the shares! The same is true of the distribution of shares in other factories! All funds will be used for the construction of the factory, and if there is a balance, it will be regarded as Xi and planned profits. “

Lv Qiujian has come up with the old method of auction again, but this time without those well-funded international companies, I am afraid that the harvest will be much less! Fortunately, he pays more attention to the long-term benefits in the later period. Besides, after the completion of the factory construction, there will be some surpluses. The money is also a small gain!

“You guys, please move to the auction hall!” To the next auction hall, Lei Busi, who had been in the limelight last time, stood on the stage again and was ready to host the auction.

Chapter 629 - Preparation for launch

The total amount of this auction is far less than the previous one, but the degree of fierceness is more than that. After a full day of intense bidding, the shares of several initially planned factories have been divided up. [520novel.com 520xs.la updates fast, the website pages are refreshing, there are few ads, no pop-ups, I like this kind of website most, and I must praise it] Li Shufu, Wang Chuanfu, Ren Zhenfei, Liu Chuanzhi and other companies are all in these factories Gained a large

share, and other companies did not return empty-handed. With more or less shares, they naturally became members of the new battery federation.

Changan Non-Ferrous Metals Co., Ltd. has just won a big victory in the international competition, and the capital reserve is quite rich. It also participated in this auction and won a large share, and they also have control of the production of that special alloy. , Become the biggest winner outside the Xihe project team.

The next thing they have to do is to complete the land acquisition and factory construction work as soon as possible with the high cooperation of the government! And in the shortest possible time to complete the design and finalization of various models of electric vehicles, new mobile phones, tablet computers and notebook computers and other products that can use new batteries, and strive to push new products in the first time after the factory achieves mass production. To the market.

There are still a series of detailed work to be completed, but Lu Qiujian has to leave first, “I still have some things to deal with, so I will not accompany you! Those Tesla electric cars will be distributed to you as souvenirs for the meeting. One for each one, just take it away when you leave! I wish you all the best for the next cooperation! “

No need to take an electric car this time! His train has already stopped at Xingqingfu Railway Station. After getting on the train, he drove all the way to the satellite launch base at night. [Quick update, clean website pages, few ads, no pop-ups, I like this kind of website the most, I must praise it]

“Professor Lu, welcome!” University of Liu and others personally greeted him at the train station and drove the military vehicle directly to the platform. After getting on the bus, he asked with concern, “Professor Lu, I heard that you are doing it again in Xingqing What happened? “

“Those who don’t have enough funds in the country alone will not be able to spend on the project. I have to find a way to make money!” I mentioned Lu Qiujian and turned the topic aside, “How is the recent research progress? When is the first time expected to start?” emission?”

“I have encountered some problems!” Liu Liu frowned as soon as he talked about this. “The materials of some components are always unacceptable. Many tests have failed to meet our booking target. I am afraid that it will be difficult to conduct an experimental launch this year. ! “

“Oh? What are the materials?” Lu Qiujian asked lightly. He did not appear frequently in the aerospace field. Most of the time, it ’s just pretending to increase exposure, making others think that

they are really studying aerospace technology; after throwing him the design of the recyclable rocket, he did n't ask much, so they do n't know their progress.

“Some superconducting materials! Mainly used in superconducting magnetic pumping circulation system!” Liu Daxiao shook his head, “We have almost searched the superconducting institutes all over the country. But no one material can meet our requirements! They said that even if the project is started now, I am afraid that it will not be possible to produce results until next year! And it may not fully meet our requirements! “

“What are your requirements?” After listening to the data he reported, Lu Qiujian felt a lot more relaxed. The data he gave to Changan Nonferrous Metals Co., Ltd. was completely achievable and the demand was not large. After meeting the requirements of the controllable nuclear fusion reaction device, the remaining part is more than enough to be used here. So he said. “Just leave it to me! I will let someone send you the materials you need by next week!”

“Already have a mature product?” Liu Daxiao was taken aback, but he had traveled all over the country for this kind of material. I didn't expect it to be solved so easily now!

“Well, you don't have to ask about the source! What difficulties do you have after this problem is solved? Can I help you solve it?” The superconducting material's confidentiality level is much higher than that of the new battery material. Only after mass production and greatly reduced costs will it be made public.

“Understood!” As a soldier, University Liu knows the importance of the principle of secrecy better than anyone else, “The rest are just a few small problems! When we come back to the base, we will first catch the wind for you, then rest for one night, and tomorrow Discuss these things together! ” Then the rest is just a matter of time.

“Well, if this work is completed successfully, then there may be a more important work that requires your participation!” Lu Qiujian revealed a little bit of wind.

“What is the project?” Liu Daxiao turned his head suddenly. Recyclable rocket technology was very unusual in his opinion. Now Lu Qiujian has thrown out another more important plan. This base must have Get involved!

“I plan to launch a probe spacecraft to go to the moon! Collect some lunar soil and ore to come back for analysis! Prepare for the construction of the lunar base later!” Lu Qiujian explained the matter with another reason.

“This is really a big project!” Liu Xiaoxiao’s mouth did not close for a long time. The Apollo program of the United States lasted 11 years and cost US \$ 25.5 billion; although the current technology is much more advanced than the country at the time, all the technologies The requirements have also increased, in order to achieve the goal of Lu Qiu Jian. The money spent will not necessarily be less than the Apollo plan.

“I don’t think about the manned moon landing for the time being! In this case, the budget will be much smaller than expected!” Anyway, the amount of helium 3 he needed in the early stage is not large Basically, the goal can be achieved by relying on the robot. Wait until When there is a large-scale demand, the accumulation of technology is enough to make manned moon landings cheaper.

“That’s also amazing!” Liu Daxiao regarded it as the stability of Lv Qiu Jian, and could not help but raise his evaluation one more level. In his impression, he was like Lv Qiu Jian before he was thirty. Not many successful young people can resist the temptation to complete their work step by step.

Unfortunately, he did not know that Lu Qiu Jian was not interested in becoming the leader of the second project to send humans to the moon. How could the core of the first team to complete controlled nuclear fusion sound loud?

After staying at the base for a few days, Ma Yang escorted the new superconducting material to the base and passed the test. The remaining small problems were also resolved smoothly, so the date of the first launch experiment was finalized and will be in This satellite launch base began the first recyclable rocket launch experiment; University Liu started a busy rush around the country, making final preparations for this launch.

And Lu Qiu Jian is also preparing to go to Modu to participate in the premiere of “Three Body” and to negotiate with Cameron’s shooting plan for the sequel!

Chapter 630 - The phone cannot be messed up

“It’s my first time to come to Modu!” Lu Qiu Jian said with a little emotion when he saw the train slow down and entered the train station. It’s also a coincidence. He is also a frequent traveler all over the country, and The level of scientific research in Modu is not low. Many units have signed cooperation agreements with Xi and the plan, but those were all contacted by Ma Yang or Li Yan. He had previously been the largest city in China in the future. [520novel.com 520xs.la is updated quickly, the website page is refreshing, there are few advertisements, no pop-ups, I like this kind of website the most, I must praise it]

“There are still two days from today to the start of the premiere. You can take some time to look around!” Bai Yiran said after planning how to coordinate with the local authorities of Modu to ensure the safety of Lu Qiujiang.

“Well, it depends!” Presumably, the news of the battery has already spread? Since then, I have definitely been harassed by those car companies since I came to Modu. Modu has the largest auto listed company in the domestic a-share market. In the past year, all the top three in the national passenger car sales list are The brand produced by Modu has the lowest sales volume of 1.89 million units and the highest sales volume of 2.7 million units! How can a company of this size be indifferent to this big cake?

In the past few days, some people have begun to greet themselves through various channels, causing Lu Qiujiang to turn off his personal mobile phone directly and hand over the official mobile phone to Bai Yaoran.

“Hello, who is it?” The phone that Bai Yiran held in his hand rang while he was talking. After listening silently for a while, he whispered, “Where do you know this phone number from?”

“I” said the other person for a while, and then hesitantly said, “I asked from a friend. I couldn’t get another phone call from Professor Lu. I had to call this! Is this important? Our company”

“Professor Lu’s phone is confidential, and the number is leaked!” Bai Yaoran interrupted his words without hesitation, glanced at the new text message he received, and the identity and position of the caller was written on it. “You Is it Mr. Shao Guiyue, director of Modu Automobile Group? Now please stay in the office and do n’t go out. Ten minutes later, the staff of the relevant department will go to your company to talk to you! Think about how to tell the truth! “

After saying Bai Bairan hung up the phone, as an elite officer of the relevant department. (Cotton and flower ‘sugar’ small ‘say’) He hates this kind of leaking incident very much. Now these people can inform others of Lu Qiujiang’s mobile phone number for a little humane or insignificant benefit. Will they leak it in the future? An important secret? Everything must start with the anti-micro-war. Now it is just by this opportunity to give these people a lesson, let them know the importance of them, and have a long experience! So the deputy director of the office of the Modu Automobile Group, Shao Guiyue, became the little rooster who killed the monkey.

“Related departments!” Shao Guiyue held the phone in the office building of the Modu Automobile Group. The forehead is full of cold sweat, even in a large company such as the Modu Automobile Group, the relevant department is not something he can provoke!

I just made a phone call, so serious! Wouldn't it be scary? Having just relieved himself a few words, he suddenly realized that something was wrong, and I called in a few minutes. The other party not only found out my identity. Even if I check where I am now, this is not what an ordinary unit can do! So it's really the relevant department that came to me?

No, I have to save myself! Shao Guiyue trembled and rang his immediate boss, the leader who gave him the number, and he cried with a cry on his phone, "Mr. Wei! It's a big deal! People from related departments are coming to our company to track down who we are. Where did you get Professor Lu's phone number! "

"Ah? Don't you?" As a leader, the first reaction must be dumping the pan when something happened. He quickly appeased Shao Guiyue. "Xiao Shao, can't you do some small things like this? You? What should I say to you? Let 's do this. You must carry things up first, and I will find someone to find a way! "

"Mr. Wei, I" heard the beep on the phone. Shao Guiyue was speechless. I went to your uncle, and the momentum of the task was explained! Now throw all the pot back to me! What can I do? Shao Guiyue wanted to cry without tears.

Ten minutes later, the door of his office was pushed open, and several sharp-eyed men in black suits came in and stared at him, "You are Shao Guiyue, deputy director of the Modu Automobile Group Office?"

After getting a positive answer. The leading man drew a document from his arms and shook it in front of his eyes. "You are involved in collecting state secrets through illegal channels. Now let us explain the situation to us!"

"I, I" saw the name of the famous unit on the ID. Shao Guiyue's legs were soft and she couldn't speak.

The man Shi Shiran walked across to him and sat down, watching the latest feedback from his assistant, "You just called your company's vice president Wei Keyu? So you learned from him This number? "

Although Shao Guiyue did not dare to admit it, the expression on his face had betrayed everything. The staff who led the team made a look. Two young guys walked behind Shao Guiyue and set him up. office!"

In Wei Keyu's office, under the deterrent of the relevant department's documents, the secretary did not dare to block and put them in the group. Wei Keyu saw Shao Guiyue, who was held by the two, and the phone in his hand fell to the ground.

"Several comrades! This is because of the company's business needs, I learned about the work phone of Professor Xia Lu through private channels. Isn't that a big deal?" Wei Ke said with cold sweat.

"Professor Lu's work call is on the same level as the Deputy Prime Minister in the confidential sequence! Do you think it is irrelevant to inquire about the work call of the Vice Premier at will?" The staff of the relevant department said coldly, "Now call you Lu The professor's phone call is clear and detailed! Do n't be lucky! "

Should I confess my leniency or resist the strict return home? Wei Keyu and Shao Guiyue fell into deep thought at the same time.

The staff of several automobile companies were taken away by the relevant departments for investigation because of similar things, and more than a dozen colleges, research units and government departments were involved. The big names in the domestic automobile industry realized this , Some phones can't be inquired!

Of course, these were all carried out in private by Bai Yaoran, and Lv Qiujian was not clear about this; he is now in a university in Modu, chatting happily with an old professor who has not seen him for a long time.
