Chapter 651 - Time flies

People on the Internet usually don't believe in authority, but those are when they don't know about these authorities, and some unscrupulous media often intercept and distort authority's remarks, which further deepens the discrimination of netizens on authority! However, for those who have outstanding achievements and good reputation, as long as the thinking is slightly normal, people will still choose to trust.

In the Chinese scientific community, there is no authority more familiar to netizens than Lu Qiuqian! Now seeing Lu Qiuqian's position, they began to calm down and think about this matter; is this Mr. Guo hidden in the people, but is a talented person who is hostile to the mainstream scientific community?

By this time, many talents remembered that they were filled with indignation for a long time before they could watch the video of that show! So they reopened the video to study, and only then discovered that Mr. Guo's performance was not as good as he thought! At least the remarks on the show do not look like a scholar.

"Perhaps this Mr. Guo is indeed talented, but he has not undergone professional training! If we give him a chance, maybe he can make great achievements?" Or some unwilling people started to build in Lu Qiu Leave a message under the bib, but the tone has become more relaxed.

Indeed, you have to say that Lu Qiuqian suppressed civilian scientists and maintained their authority. No one believed it! People are not the ones who can't achieve success! The Fields Prize, Nobel Prize and the recently hot new battery, gravitational wave have already proved everything! In his identity and status, there is really no need to do such a thing.

Since others speak in a normal communication tone, Lu Qiuqian does n't mind wasting a little time to explain, "First of all, research in the basic field is very expensive! The LIGO Project spent US \$ 350 million on the discovery. Gravitational waves, such a large-scale project will of course have strict requirements for the staff. Do you think this Mr. Guo has shown his ability to participate in a large project with an investment of 350 million US dollars? "

"Secondly, to say something that may make Mr. Guo sad, in general, the most productive age of scientists is between 20 and 35 years old, and most scholars' most important achievements are made at this age. For example, Einstein 's theory of relativity, such as Yang Zhenning 's Yangmi equation, when he was forty years old, most scholars just used their own experience to work! I do n't know if Mr. Guo has this talent, but look at it now It 's too late to come! At his current age, he has neither

the energy to do creative work nor the experience to guide others to work! I think he is better to give up his unrealistic dreams now! “

As soon as these two comments were issued, the upsurge pushed by those unscrupulous media gradually dissipated! This is like if an ordinary martial arts teacher said that someone had no talent for martial arts, everyone might not believe it, and accused the teacher of failing to suppress the newcomer Barabara! But if Zhang Sanfeng said this, most people probably won't be optimistic about someone!

As for the unscrupulous media, although they are not willing to dissipate this wave of dissipation, they are not as mentally retarded as they usually show. They all know what kind of people dare to provoke what kind of people do not dare to provoke and quarrel with Lu Qiujian It will only make your own fans fall. Who will do this unworthy thing? They are not Ke Guang's idiots! So they quietly deleted the scarf they sent, and fell silent.

It is not enough to just discover gravitational waves. In the next few years, Xi and Jian, chaired by Lu Qiujian, increased their investment in this area, and launched several gravitational wave detection satellites one after another. It has become an international center for gravitational wave research, and many scholars from the United States, Germany, France, Britain and other countries have rushed to China in order to find an opportunity to participate in the Lyra Project and Tai Chi Project.

And these basic research fields do not need to be kept secret like controlled nuclear fusion. Even though gravitational waves have been discovered now, the data observed is not enough to support in-depth research on gravitational waves, let alone applications! Therefore, Academician Luo and Director Guo are not against these foreign scholars. As long as the ability can meet the requirements, then go to move bricks for me ... oh no, it is to do basic research!

Those who can find jobs in these two programs through screening are not ordinary people. Under normal circumstances, the professional level of the young Chinese students working in these two programs has also been greatly improved. It can be said that Huaguo attracted the golden phoenix through the two sycamore trees of the Tianqin Project and Taiji Project, guiding these young students from ugly ducklings to white swans.

However, the relationship between these and Lu Qiujian is not very big. His main energy is still on the study of controllable nuclear fusion. During this period, China began to launch probes to the moon, first orbiting the moon, and then After some preparation, the first lunar probe finally landed on the moon, and some soil and rock specimens were collected from the lunar surface and returned to the earth.

Many of this detector's technologies are transplanted from recyclable rocket technology. In addition, of course, new battery technology will provide energy for this detector!

With the sample of helium 3 collected from the moon, Lu Qiu set up a base to start a targeted experiment. The performance of helium 3 as a fusion fuel in a new fusion experimental device is much better than tritium deuterium plasma! When everyone saw the data returned after the first experiment, they couldn't help but feel excited. From these data, they seemed to be able to see that it was not far from the day when the project succeeded.

Good news also came from other quarters. Qin Feng was successfully elected as the elder of the newest presbyterian regiment at this year's conference, and Lu Kunqi also became the new prime minister! With the promotion of the two of them and the support of the elders, the last elders and others! The funds and personnel of Xihe Project increase again!

At this time, Lv Qiuqian slowed down the progress of the experiment instead. He did not deliberately pursue the early realization of nuclear fusion, but arranged these extra funds and human resources to the application field after the successful fusion, only with the Inexhaustible energy is not enough! Only by establishing a perfect energy utilization system can we maximize the benefits of this achievement!

Qin Feng is not in a hurry, because he knows that Lu Qiuqian's ideas are right, and according to the latest progress of the plan, he can undoubtedly wait for the results during his tenure.

Chapter 652 - Two thousand seventeen

"... The Imperial Television, here is the whole news column. The main content of the news today is! Comrade Qin Feng, the elder of the National Elders Corps, went to the Northwest Satellite Launch Center to visit China's seventh moon exploration satellite launch! Lu Kunqi met with representatives of the European Union and held friendly talks on China's export of electric vehicles ... Professor Lu Qiuqian, a well-known Chinese scientist, Xi and the head of the program, won the Nobel Prize in Physics again. This is the country since entering the 21st century For the third time since I won the Nobel Prize in Natural Science ... "In the canteen of Beijing Normal University, all the students who dine at the same time raised their necks and looked at the TV screen in the blink of an eye!

"After so many years late, the old stubbornness of the Nobel Committee finally can't hold on!" Lv Qiuqian's young students and young girls have discussed the award of their own seniors.

"If the Nobel Prize Committee does not award the award to Professor Lu, this is not the regret of Professor Lu, but the stain of the Nobel Prize!" A student wearing glasses laughed disdainfully,

“Professor Lu has no longer needed to use the Nobel Prize to go Prove his achievements, and the Nobel Prize requires Professor Lu to maintain his authority! “

“Yeah, since the gravitational wave was confirmed, Professor Lu has once again become a popular candidate for the Nobel Prize, but the Nobel Committee has dragged his awards again and again! The physics community has long been dissatisfied!” With the Tai Chi Project and Lyra With the deepening of the plan, evidence of the existence of gravitational waves has been found time and time again, attracting more and more domestic and foreign scholars to invest in this field, and more and more articles are published in “Nature” and “Science” every year! The gravitational wave research circle has become a force that cannot be ignored in the international physics community! Because the Nobel Prize was not awarded to their leaders, the authority of the Nobel Prize Committee has been repeatedly questioned.

This year, they can't bear it anymore! The Nobel Prize Committee announced on the official website that due to its outstanding contribution in the field of gravitational waves, Lu Qiuqian from China exclusively enjoyed this year's Nobel Prize in Physics! It has been 12 years since the last time he won the award, but what surprised many people is that Lu Qiuqian is only 34 years old this year, which is much younger than most Nobel Prize winners!

“At the age of thirty-four, I have won two prizes! But at this age, when my thinking is exhausted, do you say that Professor Lu will win the third prize?” A student wearing a Bayern jersey looked at the glasses man.

“If the new battery technology is worth a Nobel Prize anyway in terms of achievements alone! This is a great invention that changes the human energy landscape! Since blue LEDs can win awards, why can't new battery technologies win awards?” He replied, “However, the most individuals in Nobel's history have only won two awards. It would be too difficult for the Nobel Committee to award Professor Lu the third time!”

“Hey, I thought that the scientific community can be more pure, but I never thought that these fly camps are indispensable!” The Bayern jersey sighed and turned to another topic. “Eh, you said that this court will broadcast the Nobel Prize award ceremony What? The first two times when Professor Lu and Mr. Tu received the award, it was broadcast live all the time? It seems that Professor Lu has not been seen on TV for some time. I do n't know if I can see it this time! “

“It is estimated that the award ceremony will still be broadcast! But it is not necessary to see Professor Lu!” The old man of glasses said, “It seems that since Professor Lu returned to China ten years ago, he has not been abroad! The invitation of foreign research institutes still received various awards, and I have never been to it! Like the last Abel Prize in the mathematics industry, he did not

go. This time it is estimated that it is unlikely to go to Stockholm to receive the award! Should others receive the prize for him? “

In the past few years, Lu Qiujiang has won many domestic and foreign awards. Battery technology has won him the highest national science and technology award, and his contribution in mathematics has won him an Abel Prize medal. After becoming the third Viscount of Jean-Pierre-Salle in France and the Viscount Pierre-Reine-De-Ligne in Belgium, he has won the Wolf Prize, the Abel Prize and the Fields Prize. Mathematicians with big awards! To everyone's regret, Lu Qiujiang did not appear at the awards ceremony of these awards, but his student Ye Chu went to receive the award instead.

“It feels a bit uncomfortable for others to receive the award! Do you say that this time the Nobel Prize Committee will award the award to Professor Lu at the Swedish Embassy in China as it did for the Landau?” Bayern jersey asked again.

“This ... probably impossible? Landau enjoyed such treatment because he was seriously ill and couldn't go to Stockholm, and Professor Lu's physical condition has always been very good! Now he is in his thirties and looks like two. Like in the twenties, the Nobel Prize Committee makes no exception for him? “The glasses man said uncertainly.

“But since the body is okay, why didn't Professor Lu go to receive the prize? What a glorious opportunity!” If I had only one breath left, I would climb to Stockholm.

“Oh I don't know this! I have said a few times before that Professor Lu is busy in research and has no time to receive the award!” In fact, with the advancement of Xi and the plan, China's technology has developed by leaps and bounds. A series of achievements such as new batteries, recyclable rockets, and lunar probes have been continuously introduced. Lu Qiujiang quickly became a national treasure-level scientist !

Under his impetus, Hua Guo realized the overtaking of Europe, Rice and Neon in many fields. It would be unrealistic to say that these countries have no ideas in mind. In order to ensure his safety, the country will probably never allow him to go abroad. Is that right?

Spectacle men's guesses are similar to reality, but what he can't think of is that Lu Qiujiang not only made outstanding contributions in these fields, but more importantly was the task that only the core figures of the level of the Chinese Elders Group can know. —Realize large-scale application of controllable nuclear fusion.

Sure enough, shortly after the news of Lu Qiujiang's award was announced, he left a message on his Weibo account and the official website of Xihe Project, "I am honored to win the Nobel Prize in Physics again, thank you Nobel The award committee, thank you colleagues who have worked hard in the LIGO project, and thank you for your support! But because the research has just reached a critical moment, I am afraid I cannot go to Stockholm to receive the award this time! I will entrust my student Ye Chu went to Sweden to accept the prize for me! "

Chapter 653 - What is Professor Lu busy with?

At 4:30 p.m. local time on December 10, 2017 in Stockholm, members of the Swedish Royal Family and the Nobel Prize Committee and the guests who attended the ceremony were preparing for the annual Nobel Prize presentation ceremony in the music hall of the Royal Swedish Academy of Music.

The grand occasion of the awards was also broadcasted synchronously with various channels such as the Internet and TV. At this moment, countless Chinese people waited for this exciting moment in front of the computer and TV.

After awards such as the Chemistry Award, Professor Bjorn-John, the chairman of the Nobel Committee on Physics, began the presentation speech of the physics award, "I did not expect to give a presentation speech for the same scientist for the second time in my life. Professor Lu Qiujiang pioneered a new gravitational wave detection method, and used this method to confirm the gravitational wave predicted by Einstein that year, this is a milestone progress in physics ... "

Then the nervous expression of Ye Chu on the podium under the watch of the Chinese Ambassador to Sweden, Guo Director of Beijing Normal University, and Academician Luo of Yixian University, etc., took the medal, award certificate and bonus cheque from the King of Sweden. He then shook hands gently with the king, bowed and thanked him again with the award certificate, and the king gave a slight return of salute. Then he bowed to members of the Swedish royal family, representatives of the Nobel Prize Committee, and the guests present at the scene. There was a warm applause from the audience, and then the music rang, to congratulate Lu Qiujiang for obtaining this great honor for the second time.

"Hey, what a pity, why didn't Professor Lu personally go to receive the award?" Numerous netizens asked at the same time on Weibo and various other social platforms.

At the same time, the White House was also discussing this topic. The new President of the United States, Trump, looked at his staff. "Even the supreme award ceremony for scientists is not attending. What the **** are he doing?" Is it really just researching space exploration technology, as announced by Hua Guo? "

There are not a few simple guys who can become presidents of the United States. Trump's previous funny behaviors just want to win votes for himself! In front of these American elites, he restored his savvy character.

"The Intelligence Bureau has tried many times to send our elite personnel to Changan's base, but the best performer so far has only been mixed into their external propaganda department! The information received there has been screened! Currently there is no Find out what is hidden in this base? "Edward Miller, the new director of the Central Intelligence Agency, replied. Fortunately, just after he took office, he could completely throw this pot to his predecessor." Now it seems that from Leon -Panetta, David Petraeus and John Brennan have suffered serious malfeasance! We have reason to believe that Lu Qiujian is doing some more important research under the cover of the space exploration program! Ten years later, we still know nothing about this research! "

"What kind of research would that be?" The new Secretary of State Richard Colby asked, brow furrowed. "A new intercontinental missile? A more powerful nuclear bomb?"

"We don't know the exact purpose of the Chinese, but after a side investigation, we have compiled a list of Chinese scientists who have gradually disappeared from the public eye since the establishment of Xihe Project and found that there is a great possibility that this base is in progress. Nuclear-related research! "Edward Miller has not been without gains since taking office.

"What's the specific direction? Do the Chinese want to create a big guy who destroys the earth?" Trump was not satisfied with this answer. "They are not Korea! They don't need to blackmail the whole world to live well." ! "

"I need more time, money and manpower to investigate! The Chinese government's defense of this base is very strict! I think even Ethan Hunt and James Bond can't get in! To understand We must pay a higher price for the secret! "Edward Miller never admits that he is incompetent. He knows the way of political struggle. As long as he proposes a condition that they cannot meet, then even if the mission fails, it is not his responsibility .

"You make a budget and hand it over to me!" Trump made the decision. "The impact of China on the United States has been increasing over the years. They have now become our most powerful enemy. We must figure it out. Their goal! "

"Uh, okay!" Edward Miller began to guess what Trump's bottom line was, and he planned to double that number.

“How does the spokesperson comment on the accusation by environmental protection agencies that your island in the South China Sea will cause environmental pollution?” A reporter from France asked at a regular press conference of the Chinese Ministry of Foreign Affairs.

“Our island and reef expansion work uses natural simulation ideas to simulate the movement of stormy waves in the ocean, the transportation of coral debris and other biological debris, and gradually evolved into a natural process of marine oasis, which has a limited impact on the coral reef ecological environment system. And in the process of natural simulation construction, all the energy used by us is supplied by new batteries, which will definitely not cause any pollution to the sea area! After the completion of our relevant construction activities, our ecological and environmental protection capabilities on islands and reefs will be greatly improved. The method has stood the test of time. “The spokesperson Zhen Zhen’s reply made many reporters speechless How do you evaluate the restriction of the US Congress on the number of electric vehicles exported from China to the US? Asked a reporter from Reuters.

“We strongly protest the violation of the principle of free trade and the violation of consumer rights by the US! We believe that the freedom of choice of the consumers of the US cannot be interfered with. This behavior of the US Congress is a gross interference in the human rights of the US people! Being able to realize their mistakes as soon as possible, so that the people of the United States can also use electric cars with more favorable prices and lower energy consumption! “Your spokesperson Yi Zhengzheng said.

“But now the new battery technology is in the hands of you Chinese people! Haven’t you ever thought of sharing this technology that has contributed greatly to human society?”

“Our government is the government that governs the country according to law! And the patent law is a ladder to promote human technological progress. Our country believes that the patent law, the cornerstone that promotes human progress, should not be shaken for the sake of a temporary benefit!”

“Your Excellency Spokesperson, may I ask why Professor Lu Qiujian did not attend the Nobel Prize award ceremony? Can you tell us where Professor Lu Qiujian is going now? What are the important things that will make him even the Nobel Prize award ceremony? Is there no way to participate in person? “The YMCA reporter’s question attracted everyone’s attention.

Chapter 654 - Due to human waste?

“Of course for the greatest cause of mankind!” His Excellency spokesperson solemnly looked up and admired, “Professor Lu is busy exploring the unknown science ... Dear Sirs and Ladies, Professor Lu Scientific research has given up the opportunity to go to Stockholm to receive the Nobel Prize! This spirit of indifference, fame, and concentration is really admirable, and I am proud of scientists like Professor Lu in China! “

Yes, lyrical for a long time is still equivalent to saying nothing! Afterwards, a reporter asked again, but it was still the diplomatic remarks of your Excellency the spokesman, who finally found nothing.

“Hahahahaha! Hey, hello, I found it more interesting to see the spokesperson of the Ministry of Foreign Affairs than listening to Guo Degang’s crosstalk!” Ning Lixin was lying naked in front of the computer in the mobile board office of a construction site on the west coast of Africa Laugh together.

“I said that your kid can’t lie down in front of the computer for a while? Go, go shopping with me in the city!” Jiang Ke, who was in the same office as him, stood up and said.

“There’s nothing in this broken place, what can I do if I don’t lie in front of the computer? The scenery is tired, and the seafood is too vomiting! The urban area is not as prosperous as our old town! If there is no Internet, I will support “Never go on!” Ning Lixin said lazily on his chair; when he graduated, domestic work was not easy to find. He wanted to work abroad and paid a high salary before he followed a subsidiary of China National Petroleum Corporation to the African continent.

At the beginning, he still felt fresh, the natural scenery was beautiful, the air was fresh, and the cheap ***** seafood really made him hide for a while! However, it didn’t take long to stop it. Without shopping malls, supermarkets, or cinema playgrounds, he felt as if he had returned to his hometown of a small county 20 years ago. Everything was so boring. Not to mention the gunshots from time to time outside the construction site! Fortunately, the company pulled the network cable thoughtfully, plus the penalty for breach of contract when he signed the contract, and he persevered with his teeth clenched, only waiting two years to return home in a hurry.

The two were talking, a small slit opened in the office door, and Xiao Zuanfeng, the company with the most informed information, slipped in silently. After he entered the door, he quickly closed the door again, looked around the window, and then mysteriously He rushed in front of him and lowered his voice and said, “Have you heard? We may be returning home!”

“Really?” Ning Lixin’s eyes lit up immediately. “Is it time to change? When will the domestic successor arrive?”

“No! According to the plan at the beginning of the year, didn’t the shift start after three months? Why is it ahead of time now?” Jiang Ke asked suspiciously.

“Who tells you that it’s time to change shifts?” Xiao Zuanfeng’s expression was a little complicated. “We just can’t come after we go back! This place is almost not our company!”

“Huh? You make it clear! What the **** is going on!” Jiang Ke’s expression suddenly became serious. The construction of this oil field was saturated with their hard work. Now the company suddenly wants to give up, which is too sudden. ? “Is it going to be transferred to other subsidiaries? Why? This is all built by our company brick by brick. Why should we give it to others? Why didn’t you see them when there was no hair here? Now they are increasing their mining volume. But to pick the fruit? “

“It was not transferred to other subsidiaries, the group company directly sold this oil field!” Xiao Zuanfeng’s tone was full of righteous indignation, “sold to the French oil company!”

“This group of bastards!” Ning Lixin had forgotten how much he was looking forward to returning to China. “How much effort did we have to take this oil field? The scars on Jiang Ge’s shoulder are still visible now! Today, he said he sold it? ”Although he did n’t come here long, he often heard Jiang Ke and other seniors talk about the hardships in the construction of this oil field.

“If you give it to other subsidiaries of the group company, I will recognize it! But why should it be sold to foreign companies? Petroleum is a national strategic resource! They are purely selling countries! No, I want to find them!” Jiang Ke stood up at the table and said he was going out.

“Brother Jiang! Brother Jiang! Didn’t you sell me this time?” Xiao Zuanfeng was so scared that he quickly pulled him, “I also listened to such a bit of wind, things have not been finalized yet! It’s fake! “

Among the only star-rated hotels in cities near the oil field, several executives of French oil giant Total are holding celebrations, “Let’s have a toast for this great victory!”

“Congratulations, Mr. Francis! You have won a large project for the company with reserves exceeding one billion barrels and a daily output exceeding 30,000 barrels! This is a rare harvest for the company in recent years!” Touted.

“What’s even more beautiful is that the Chinese have done all the infrastructure work! We don’t need to waste time on drilling and construction! It can now make profits for us!” Abel added.

“But I don’t understand, why would China National Petroleum Company give up such a cash cow? Could it be that its reserves have dried up?” Sophie, a French media reporter who followed them to Africa, asked doubtfully.

“No, we have verified this in detail! Total is not so easy to deceive!” Franz, who is in charge of this acquisition negotiation, replied confidently, “The reason they are willing to sell this oil field is to a large extent It is a political reason! “

“Oh? What’s the reason?” Sophie suddenly became interested What’s your favorite inside story!

“Sophie, sometimes some things are obviously good, but for some reason its owners have to give up!” Franzman is a gentleman who fills Sophie’s glasses with drinks, “like This is the case for the oil field! You know that the senior officials of the Hua Guo Petroleum Group who won the oil field were arrested for some reason not long ago! So the status of this oil field within the Hua Petroleum Group has become embarrassing! “

“Then they gave up the oil field? This thing is incredible!” Sophie’s face was startled.

“I can only say that the struggle within large enterprises is more cruel than you think! This is not the first time, nor the last time because of people’s waste!” Francis smiled disapprovingly, similar things are in the road It has also happened inside Dahl; if not, how could he seize the opportunity to win this oil field? Despite the high price, it is totally worth it compared with the upcoming gains!

Another one was sold, which is good, but the speed will be accelerated! In the office of the Prime Minister of China, Lu Kunqi murmured and signed his name on the document.

Chapter 655 - The curtain opens

“Prime Minister, since this time we have sold 70% of the oil fields in the Middle East, West Africa, etc. However, due to the buyer ’s ability to pay, we have only recovered \$ 100 million, and the remaining part will take two years. Only within the account! “Qiao Yunshan, deputy director of the Air Defense Committee, is reporting in front of Lu Kunqi.

“The speed is still a bit slow! If the news spreads, these oil companies may not be able to get the money! Let’s think of ways to replace them with other things and settle the balance as soon as possible!” Lu Kunqi frowned slightly.

As the number two in the key department, Qiao Yunshan naturally knew what Lu Kunqi said. He nodded and replied, “We are already talking to them! These companies still have some technologies

we are interested in! If we can get them It will play a significant role in improving our industrial level! “

“Well, pay attention to controlling the speed of negotiations. Now even if there is a small loss! They will always have to give us back!” Lu Kunqi told him, “Yes, we can start the second after the funds are in place. Step planning! How have you done the preparation work over there? “

“Everything is ready! Just waiting for the news from Professor Lu!” Qiao Yunshan responded with restrained excitement; Lu Kunqi silently looked up subconsciously and looked at Changan’s direction.

“Secretary Qin! You are still waiting for the news outside! Although we have made careful preparations, there are always chances of accidents during the experiment!” In the cave of the Changan base, Lu Qiuqian persuaded Qin Feng At the same time, he made a look to Wang Yang and motioned him to persuade him.

“Needless to say, for Hua Guo, you are more important than me! Since you insisted on the scene, then why should I leave?” Qin Feng did not hesitate to stop Lu Qiuqian’s words, At this moment, he has been waiting for more than ten years. Now that he has reached the last step, how can he be willing to leave?

“Well, let us witness this historical moment together!” The persuasion was invalid, and Lu Qiuqian stopped sticking and turned to the console.

“You don’t have to control me, everything will proceed according to your original plan!” Qin Feng followed decisively, and Wang Yang quickly took two steps to cover the radiation protection suit on Qin Feng.

“Everyone!” At the console, Lu Qiuqian picked up the microphone and swept the partners who had accompanied him for more than ten years. Li Yan’s hair had become gray, and the crow’s feet appeared in the corners of Ma Yang’s eyes. Ye Chu As people mature, Li Long is carelessly touching the pictures of his wife and daughter in the pocket of his shirt

Hearing Lv Qiuqian’s voice, they turned their eyes to the console one after another. Lv Qiuqian took a breath and suppressed the turmoil in his heart, and began the most important pre-experiment speech since the base was built. “Everyone, we have been the first It ’s been a long time since the second meeting. Long ones such as Li Yan have been around for more than ten years, and short ones such as Lu Feng have been around for five years! It can be said that you have left the best part of your life in this cave in.....”

With Lu Qiuqian's speech, these people gradually fell into memory, recalling every moment they spent in this great plan, a time suddenly became like a dream, unconsciously ten years passed like this! Even more incredible is that in just ten years, they have seen the dawn of success.

"... To this day, all we can do is done! I believe we are the best team in the world, and you are the best researchers in the world! Now let us start this long-awaited Experiment! "After a short speech, Lu Qiuqian issued an order to start the experiment!

"Power supply inspection!"

"The power supply test is completed! Everything is normal!"

"Helium 3 fuel detection!"

"After testing the helium 3 fuel, it fully meets the experimental requirements!"

"Laser transmitter inspection!"

"After the laser transmitter is tested, it will start charging!"

A strong and powerful question and answer sounded orderly in the cave! Hearing that Qin Feng and Wang Yang were excited, Qin Feng couldn't help leaning forward, grabbing the guardrail probe and looking down; Wang Yang forgot to remind Qin Feng to pay attention to safety for a time, then squeezed his right hand and released it.

"All the preparations for the experiment have been completed! Please issue an order!" Ma Yang looked up at Lu Qiuqian.

"I announced that Xihe plans to start the ignition test of the experimental controllable nuclear fusion reactor No. 9 at now!" Lu Qiuqian issued the order without hesitation!

"The experiment begins! The superconducting magnetic coil starts!"

"Superconducting magnetic coil started!"

“Start with helium 3 fuel!”

“Helium 3 fuel delivery is complete!”

“Laser transmitter ready! Start ignition!”

“Ready! The ignition is on!”

..... After a little silence, the irritating voice sounded again, just like the numerous experiments before, they started the ignition test skillfully and accurately.

“The fuel starts to heat up, 12.5 million degrees, 15.5 million degrees, 21.25 million degrees ... When the predetermined reaction temperature is reached, the fuel starts a fusion reaction!”

“Received output energy, the current intensity is exactly the same as expected! Energy output is stable!”

“Start to cut off the power supply and transfer the line to the reactor output line!” Lv Qiujian issued an order. From this moment, the task of supplying energy to this huge base will be handed over to this small reactor!

The light in the cave flashed and then turned on again. Qin Feng looked at the light overhead and murmured to himself, “This is the light of the sun! This is the light of the sun!” “

“Yes, Chief, this is the light of the sun!” Wang Yang supported the trembling Qin Feng. These lights and the sun’s light are all from nuclear fusion. Qin Feng said that there is no problem!

The test lasted for a long time, and I tried to change the fuel again during this period, and there were still no problems! The reactor continued to operate smoothly.

“Xiao Lu, so the experiment has been successful?” Qin Feng, who had not closed his eyes for more than thirty hours, was full of bloodshot eyes, but he could not see a trace of fatigue from his face.

“Yes! There is no doubt that this is a successful experiment! The power consumption of this base is similar to that of the entire city of Chang’an. The power generation of this reactor is more than enough to supply this city! As for the cost of power generation, it is the same as the traditional power station. It ’s not worth mentioning! ”Lu Qiujian replied,“ Our design for large-scale fusion reactors has also been completed. According to our estimates, as long as there are seven fusion power stations in the country, it will be enough to meet all electricity needs! ”

“Good! Good!” Qin Feng seemed to see the curtain of the new era slowly opening!

Chapter 656 - Norfolk Military Port

Recently, the international situation seems to have calmed down. Except for China inexplicably starting to sell overseas oil fields, several large domestic thermal power stations have begun renovation projects in order to meet the growing demand for electricity. There seems to be little news! The turmoil in the Middle East has subsided slightly, and Lucia is struggling to survive the economic crisis. At first glance, everything seems to indicate that the US can continue its hegemony.

If there is any exciting news, I am afraid that the US-based Eisenhower nuclear-powered aircraft carrier will end its six-month mission and return to the Norfolk naval base. The world ’s largest aircraft carrier military port has gathered five aircraft carriers again. , Attracting the military saliva of global military fans!

There are currently 11 aircraft carriers in the United States. Among them, the USS Washington is stationed at the Yokosuka Military Port in neon Kanagawa Prefecture. While protecting their younger brothers, they are guarding against the movement of China. The home ports of Calvinson and Reagan are Washington. The state of Bremerton, but it is mainly active in the Middle East, maintains the control of international oil security in the United States; the home port of Stannis in San Diego, California, protects the security of the Pacific Ocean; the Lincoln is stationed in Everett, Washington.

The remaining six aircraft carriers: Enterprise, Nimitz, Eisenhower, Roosevelt, Bush, and Truman all use Norfolk Naval Base in Virginia as their home port.

However, because these aircraft carriers often perform missions around the world, it is not uncommon for multiple aircraft carriers to gather in the Norfolk military port! Among the memories of these military fans, the most famous one was at 17:30 on July 2, 1997. Five nuclear-powered aircraft carriers were anchored in the port. At that time, the US Navy ’s latest Nimitz-class aircraft carrier, the USS Stanislas, Return to the port to join the queues of Washington, Roosevelt, Enterprise and Eisenhower. Although there were five aircraft carriers in Hong Kong at the same time in 1992, not all of the five aircraft carriers were nuclear-powered aircraft carriers at that time!

Then on December 20, 2012, five aircraft carriers, a large number of amphibious assault ships, and large dock landing ships were neatly docked at the pier of Norfolk Military Port to prepare for Christmas. The aircraft carrier gathered here was exactly the same as today. , They are Eisenhower, Enterprise, Truman, Lincoln and George-W-Bush.

This time, in addition to five nuclear-powered aircraft carriers, there are five Ticonderoga-class guided missile cruisers: Wright Bay, San Jacinto, Normandy, Monterey, Anzio, and Vera Bay.

There are also 21 missile destroyers headed by the Alibaba-class guided missile destroyer Alibek loaded with the Aegis combat system, the amphibious command ship Whitney Hill, and twelve attack nuclear submarines led by the Jacksonville, There are also many other amphibious landing ships, supply ships and other supporting ships; what is more eye-catching is that the new Zumwalt-class destroyer who recently joined the army also appeared here.

Looking at the battleship formation that is so long that the tail can hardly be seen, I am afraid that all countries that want to challenge the hegemony of the United States will have a feeling of powerlessness. The world now has a total of 22 aircraft carriers, and the United States accounts for half of them! And they are the most advanced and powerful aircraft carriers. Do n't see that there are only five ships in the Norfolk military port. Even if the 11 aircraft carriers of other countries add up, they may not be able to fight!

After all, China 's Liaoning is only a training ship, and Lucia 's Kuznetsov is backward in design. The British Queen Elizabeth and the Prince of Wales have not yet officially entered service. France 's Charles de Gaulle is a good thing. Unfortunately, there is only one. The aircraft carriers in Italy, India, Thailand and Brazil are just a few things to do! The fighting power can not be compared with the fleet of the United States! Such a fleet may only be defeated by aliens? Perhaps aliens may not necessarily win. At least in Hollywood movies, the American soldiers have beaten the poor aliens countless times!

The major media of the United States have published this message on the front page, shooting the Norfolk Naval Base from the sky, and the behemoths representing the most powerful military delivery capabilities of the earth have made every citizen of the United States surge in their hearts. Endless pride! As long as these powerful war machines are not sunk, the hegemony of the United States will not be shaken!

These photos quickly spread to the world through the Internet. Lucia 's young people sighed and re-read the old photos of the Red Navy, trying to find a glory of the former empire from there, but look at the current navy fleet. The rusty ships, they sighed silently, and the Red Navy probably never came back.

The proud gentlemen of the British Empire lipped their lips in disdain, which is far from our ship-reading style at the beginning of the last century! But can you still find the fleet that covers the entire ocean to hold a ship review? In other words, the next ship review will be held in the queen's bathtub!

The neon Heisei otakus applauded the power of Dad's country, while YY, which of these ships would be the most beautiful if they became ship mothers? Is it the black long straight Reagan or the three-attribute Eisenhower? Or is it the elder sister Faner's Washington?

The politicians with low IQ on Treasure Island started jumping up and down again! Do n't be afraid of the conspiracy of the Communist Party of Azerbaijan. We are a democratic regime, and Milli 's strong fleet will protect us!

However, domestic netizens have become silent. Indeed, China 's economy has experienced rapid growth in the past decade. The country 's GDP has exceeded the neon to become the second in the world and the gap from the United States Getting smaller and smaller! In a few more years, it may surpass the rice country and become the first in the world!

But the scene in front of them made them completely sober. Rice is still a big country that is so powerful that it is almost desperate. Looking at his poor training ship, there is still a long way to go to surpass Rice!

"Hey! Damn it! Why can you all go to the shore to drink and drink to hook up with the girls, but I can only stay on duty in this small observation room!" Sergeant Enleko looked at his comrades in dismay We walked across the deck and hugged the passionate girls.

Could someone still attack us here? Enleco shrugged, took out the latest iPod music player he bought, plugged in the headphones, and the bipod on the console heard the music of his favorite band, Rhapsody from Italy. This classic The gorgeous music fused with heavy metal really fascinated him.

As night fell, Enleko rubbed his sour neck and looked out the window, God! What exactly is this? He stood up with a swipe, and the iPod fell to the ground, only to hear Rhapsody's lead singer still crying desperately, "... UNDER-THE-RAIN-OF-A-THOUSAND-FLAMES "

Chapter 657 - Meteor fire rain

Enleco pressed his right hand on the table and jumped up quickly, putting his entire face on the bulletproof glass, looking at the fiery red spots that suddenly appeared in the sky! These fiery red spots quickly descended with the tail smoke. Seeing the direction of their fall, it seems that it is the Norfolk Naval Base!

“Aren’t Lucia crazy to destroy the world! What about our missile defense system? Did the Pentagon give all the money to Las Vegas!” Enleco blew the alarm tremblingly, sharp for a while. Changming’s shattered the silence of Norfolk’s night sky!

“Damn, should I stick to my post or hurry to escape?” Enleco struggled for a moment, but still decided to pick up the phone to report to his superior. The reason was not his loyalty, but because he was not sure that other places would be better Safety.

“Sergeant! Please report what you see to me quickly ... I get it! I will report to the superior immediately!” After receiving the call from Enleco, the Pentagon staff immediately flew to Superior office.

After entering the door, he saw that Lieutenant-Lewis had just picked up the phone, “This is the Pentagon, I am Lieutenant-General Lewis! Please tell me!”

“This is the Catalina Sky Survey system, and I am Leo Bedman, the asteroid monitor at Mount Pigino Observatory.” The other side quickly identified himself.

Caterina Sky Survey System? What is that stuff? A secret agency I have n’t heard of? Without waiting for the staff to think about it, a huge warning sound came from the end of the phone, “We just observed a meteorite falling into the atmosphere and dispersed into thousands of fragments falling to the ground at a speed of 15 kilometers per second! According to the results we just calculated, the place where these meteorite fragments fell will be the Norfolk Naval Base! It is expected to reach the ground in three minutes, please be prepared for protection! “

“Damn it!” Lieutenant General Lewis directly shattered the phone into pieces, with only three minutes left. What do you ask me to do? Tell those soldiers to pray to God!

“Everyone! Now notify the Norfolk Naval Base to turn on all anti-aircraft firepower! Ready to meet the impact of meteorite fragments!” Lewis roared open the door of his office with all his strength, and his voice was full of unwillingness and despair!

Meteorite fragments? All the staff on duty at the Pentagon were stunned! Is it April Fool’s Day or is Lieutenant General Lewis drinking too much? How to issue such incredible commands!

Bang Bang Bang! Lieutenant General Lewis pulled his pistol directly and fired three shots at the ceiling! “Everyone! Carry out the order immediately!” The huge howl shattered the office glass directly.

Now all people understand that this is no joke. The indestructible United States of America was really hit by a meteorite. They quickly picked up the phone and dialed all the phone numbers that can be found at the Norfolk Naval Base and the stationed fleet!

At this time, the Norfolk Naval Base had already become a mess! Countless soldiers and residents looked at the falling fragments of meteorites in the sky with horror, screamed in horror, and ran desperately to the suburbs away from where the meteorite fell! A soldier ran forward while blocking his hand, but no car dared to stop at this time! The next time he directly took out a pistol and forced a Ford to stop, smashing the owner’s head with a single shot, pulling him off the car and sitting on the **** driver’s seat ...

A civilian soldier with a wounded leg sat desperately on the corner of the street, praying helplessly in his mouth, “Superman, Iron Man! Come and save us! Even Magneto! Save me!”

“Everyone! Go and control the air defense weapons! Break the meteorite!” The office tom kick was kicked open, and Captain Grant shouted at Enleco.

“But I still have to be on duty here! This is my duty!” Enlaiko hesitated a little, and Captain Grant pointed the pistol directly at his head.

“Yes!” Enlecco closed his mouth immediately and ran out with the captain! God, I have been trained to meet the Chinese J-attack, I have also been trained to be attacked by Lucia missiles, and even Neon sneaked into our drill plan again! But I never thought that I had a day to meet the impact of meteorite! Can anyone tell me whether I am currently on duty or participating in the production of a Hollywood blockbuster?

“You! Go to assist in the operation of anti-aircraft missiles! You! Go join the anti-aircraft machine gun group! Enlecco! Come with me to the Phalanx console!” Captain Grant led Enlecco to the MK15 Vulcan Phalanx quickly The air defense weapon system ran!

Entering the position, Captain Grant operated quickly. This aircraft consisted of six 20-mm automatic rotating artillery guns. The target position with a reflection area of 0.1 square meters can be determined within 5000 meters, and its motion parameters were calculated. The powerful weapon issued in minutes was gradually activated under the control of Captain Grant.

“Enleco! Report the radar data to me! ... Enleco! Do you want to go to the military court? Hurry up and report it to me!” Captain Grant shouted several times without hearing a response. Looking back, En Lecco was staring at some place outside the window with his mouth wide open.

Captain Grant subconsciously glanced past his eyes! The entire person suddenly petrified, and saw countless meteorites have flown over the fleet! A burst of screams hit these expensive war machines. Judging from the speed at which they fell I was too late to start the Phalanx anyway!

The same is true of other ships, the vast majority of officers and soldiers have not even entered their posts! Occasionally, several fast-moving soldiers fired missiles, but those missiles with a rate of fire that were not as fast as Mach were as slow as Captain Grant’s grandmother in front of a meteorite falling at a speed of kilometers per second! It’s totally less than a little obstruction!

With a loud bang, the Eisenhower became the first victim, and a meteorite smashed into the middle of its deck, setting off a monstrous flame! The F-35B fighter on the deck was directly blown into the sea by the shock wave!

Then, another meteorite fragment fell to the sea not far away, provokes a huge wave, and the battleship where Enleco is located under the impact of the sea waves shook violently, directly throwing him out of the position and falling Into the sea.

Before it was too late to curse, one after another meteorite fragment hit the head of the entire fleet like a hail! The entire Norfolk suddenly turned into flames.

While Enleco stayed in the office, the music of the Rhapsody band continued, “... under the rain of thousands of fires, we faced the pain in vain in the shadow of the falling stars”

Chapter 658 - God does not wish

Under the high-speed impact of 15 kilometers per second, even if the weight of each meteorite fragment is not noticeable, the decks of these warships are fragile like pieces of paper!

Meteorite fragments hit the deck of the warship, and the deck was torn to pieces in less than a microsecond. These high-strength alloys quickly cut the body of the surrounding soldiers, the armor of the aircraft on the deck, and any Objects exposed within the debris range.

The first deck of the area can’t resist the impact of meteorite fragments. They penetrated the second deck and the third deck ... and finally penetrated the bottom of the warship and disappeared into the

depths of the sea! The nuclear reactor also exploded violently under the impact of meteorites, and the flames spreading around and the icy seawater drilling from the big hole at the bottom of the deck had a violent impact!

These meteorite fragments not only landed on the sea, but also a considerable portion fell on the ground of the Norfolk Naval Base. Those structures that at first glance seemed indestructible changed like sand castles under the impact of the meteorite at once. It must be fragmented.

What is even worse is that this naval base also has huge oil depots and ammunition depots. These can provide sufficient supplies to the powerful navy fleet of the US Navy on weekdays! But this time it turned into a dying death! Under the impact of meteorite fragments quickly ignited and detonated! The Norfolk Naval Base rises with huge clouds of mushrooms, as if ... as if attacked by nuclear weapons!

The sounds, explosions, and howling of meteorites striking the surface of the ship and the earth are intertwined to form a tragic doomsday symphony!

In the face of such an unmatched manpower disaster, the resistance of the American army appeared fragile and helpless, and few missiles lifted up could not even reach the edge of the meteorite fragments! The Phalanx was smashed into two pieces by meteorite fragments before even aiming at the ship, and then flew high and smashed the ship next to it, making a huge explosion; huge buildings were destroyed by the impact of the meteorite, only Leave the next unfathomable craters!

“General! The Norfolk Naval Base has lost contact! Repeat, the Norfolk Naval Base has lost contact!” Suddenly disconnected calls caused the Pentagon atmosphere to quickly become tense.

“Merge all the satellites that can observe the Norfolk Naval Base! Which military base is closest to Norfolk? Let all their planes take off! I want to see the latest situation in Norfolk!” The Pentagon’s top chief, Mi Guo Defence Minister Ashton Carter looked as though, “Isn’t the president contacted yet?”

“Your Excellency President is attending a very important foreign affairs event ...” The secretary answered carefully!

“Pull him out of the venue immediately! No matter whether he sees Vladimir of Lucia or Qin Feng of China now! Let him answer the phone immediately! I need him to authorize all military bases in the United States to enter the highest combat readiness!” Chief of Staff The chairman of the joint meeting, Paul Selva Air Force, shouted loudly. As a soldier, he has realized that the United States may now lose half of its aircraft carrier formation! It is almost the most vulnerable moment after the

World War II! At this time, if the news spreads, the enemies of the Americans who dismissed it may be about to move! They must be prepared in advance!

At a high-level venue in Washington, President Trump of the United States was chatting cordially with the visiting Prime Minister of a small European country. The two of them laughed from time to time, and the sound seemed to be quite good.

“Your Excellency the President! You must leave now! The Pentagon has an important phone call to find you!” The White House Secretary hurried over and whispered in his ear.

“What? Can’t you wait? Prime Minister Karaze and I are exchanging views on the situation in Europe!” Trump said dissatisfiedly with a low voice.

“We have been attacked! You must return to the White House to command!” The secretary had to explain and took Trump’s arm away, leaving the unknown prime minister here.

Back in the car, Trump immediately asked, “What the **** happened? Who attacked us? Are they terrorists in the Middle East or extremists in Africa?”

“It’s our homeland that has been attacked! Thousands of meteorite fragments hit the Norfolk Naval Base! I’m afraid ... I’m afraid it has been completely destroyed now!” The White House secretary said in a low tone.

“Are you kidding me? I’m the president of the United States! Not a Hollywood third-rate actor! Am I the studio right now?” Trump exploded directly!

“This is the latest picture from our military satellite!” The secretary opened the tablet and enlarged the picture sent from the Pentagon to Trump.

“Oh, God! Are you going to abandon Milian?” Trump’s complaint came to an abrupt end as he pressed the flaming Norfolk Naval Base on the tablet and the fragments of meteorite that were about to fall.

“You must now return to the White House and issue the highest vigilance order to our military bases in the name of the President of the United States of America and the Commander-in-Chief of the Three Armed Forces! And immediately summon all important White House officials to prepare to enter Norfolk for rescue!” The White House secretary reminded.

“How is this possible? How is this possible?” Trump subconsciously flipped through the photos, long unwilling to believe the facts he faced.

“The president suddenly left from the talks! The Secretary of the White House looked serious! What the **** happened?” The reporters around the meeting suddenly realized that something big was about to happen! They quickly took out their mobile phones and called the media where they were. At the same time, news of social attacks on Twitter, Instagram, and other social softwares in the United States also quickly spread. Come on! Many residents near Norfolk have climbed to the highest point they can climb, and pointed their phones at the sky of fire and rain! I took a photo and sent it to my social account.

Then came the residents and rice officers and soldiers who survived from the Norfolk Naval Base. The photos they took were more shocking. The high mushroom clouds, the sky of flames and the fragmented buildings made the netizens like hell!

After receiving the news, the live broadcast aircraft of the major media that rushed to the scene even directly presented the tragic situation on the scene to all the audiences in the United States! All the citizens of Militia stopped their work, the police let go of the thief’s arm, the baseball player forgot to swing his stick, the McDonald’s shop clerks forgot to collect the money ... everyone died. Stare at the incredible scene that appears in your sight!

God, do you really want to abandon Milian? Everyone made the same cry as Trump.

Chapter 659 - Super loss

Half an hour later, as the last meteorite fragment fell into the water, the red light spheres in the sky, like the flames of hell, disappeared! The attack on the Norfolk Naval Base was finally over; only military aircraft from afar and live broadcast aircraft from those TV stations rushed over Norfolk.

“Chairman Qin, thank you for your concern! I believe in the long-term friendship between our two countries, but at this sensitive time, I hope you can control your own behavior! No misunderstandings will be regretted!” Trump frowned, holding a hotline and said quickly.

“Hua Guo is a responsible big country! It is our consistent aim to maintain world peace! We are deeply sympathetic to learn that the United States has suffered such a great disaster! And we are willing to help the United States of America in disaster relief work ... I hope that the United States of America can get out of the shadow of disaster as soon as possible ... “Qin Feng at the end of the phone blessed the unfortunate Militia with a solemn tone.

After saying a few words, Trump picked up another phone call, “Vladimir, I am very busy now, so I won’t talk nonsense! I hope you can restrain Lucia’s army!”

“Lucia is a peace-loving people! But she never fears threats! Lucia has the right to do anything to safeguard national security!” Lucia’s tsar replied hard, “We will not touch the interests of NATO, but those terrorists Supporters must be punished! “

“Milligan can still control the Middle East!” Said Trump again and hung up the phone! After all, some people did not fear the threat of Millikan and planned to stand up and take advantage of the fire! But listening to their meaning seems to just want to teach a country that is not eye-opening! In today’s situation, they seem to be able to swallow this breath.

“Your Excellency Prime Minister! Now it’s time for NATO to play its part! We can’t let Lucia’s sphere of influence expand too fast!” This time the call went to Downing Street, but the other party said a lot of nonsense, but it was a buzz. The responsibility of money is also unwilling to bear.

After the emergency hotline call ended, ignoring the calls from neon, South Korea and other countries, Trump walked into the meeting room; the White House officials who were urgently called from everywhere started a video conference with the Pentagon here, Trump was black Looking at Admiral Paul Selva Air Force Chairman of the Joint Chiefs of Staff, “General, I have issued an order to enter the first-level alert for all rice military bases in the world! And I have conducted with the heads of state of Lucia, China, the European Union and other major countries. A dedicated line was contacted to warn them not to try to test the patience of the United States of America! Now, can you tell me where this attack came from? How much have we lost? “

“No detailed data is available yet!” Admiral Paul Selva also had a black face. “But just looking at the photos returned from the satellite, the Eisenhower, Enterprise, Truman, Lincoln and George-W-None of the five nuclear-powered aircraft carriers Bush has been spared! Two of the latest Zumwalt-class destroyers sank to the bottom of the sea. The amphibious command ship Mount Whitney is burning flamingly. Other destroyers, missile cruisers, amphibious landing ships, The loss of supply ships and nuclear submarines is countless! The loss of ground structures at naval bases has exceeded 70%! The fuel, ammunition and other materials we have stocked have almost been lost. This is the largest human loss since the invention of war weapons! “

“Oh! God!” There was a cry of excitement at the scene. The total cost of R & D and construction of the first Ford-class nuclear-powered aircraft carrier cost a total of US \$ 13.7 billion. If the US wants to make up the five aircraft carriers, it will cost at least 50 billion yuan. US dollars, this is only the construction cost of the aircraft carrier itself, it is impossible to add supporting radar, weapon systems and carrier-based aircraft without hundreds of billions of dollars! The Zumwalt-class destroyer costs 2.5 billion US dollars, and the Aliberk-class destroyer costs nearly 1 billion US

dollars. The navy's gold-swallowing beast's name is not in vain! Roughly calculated, the loss of the fleet alone has reached the level of hundreds of billions of dollars, which has not added the loss of the ground.

All the officials at the meeting turned white with a brush! However, what made them desperate was still behind. Paul Selva Air Force General wiped his forehead cold sweat and said, "These are not the biggest problems! At present we have to face a very difficult thing! The fleet anchored at the Norfolk Naval Base has a large number of nuclear-powered aircraft carriers and nuclear submarines. Under such a disaster, nuclear reactors have experienced serious explosions and leaks! According to the latest information, radiation near the Norfolk Naval Base The index is rising sharply! We must now block this area to prevent entry, and urgently evacuate nearby military and civilians! "

With a clatter, the words of Admiral Paul Selva Air Force had just dropped, and the finance minister who came to the meeting fell back to the ground and fainted. At the time, the Fukushima nuclear accident caused more than 100 billion US dollars of losses, and the Chernobyl accident has caused losses of 200 billion US dollars. He dare not imagine how much damage this Norfolk nuclear crisis will bring. .

"Norfolk is the second largest city in Virginia, with a population of more than 400,000 in the urban area and a population of nearly 1.8 million in the entire metropolitan area! Are we going to move them all out?" The Minister of Civil Affairs looked enviously at the Minister of Finance I just wish I had passed out.

"And at least tens of thousands of officers and soldiers were lost in this disaster! Their pension problems and the cost of conscription ..." Defense Secretary Ashton Carter said half-wisely and shut his mouth wisely.

"Conscription? Do you think we can recruit enough soldiers at this time?" Trump couldn't help but sarcastically, the losses just mentioned together have exceeded trillions of dollars! I am afraid that the economy of the United States will be in danger of collapse!

boom! He snapped the table sharply, "I do n't want to hear any lost data from now on! Who can tell me why such a big disaster has no warning! Are all our radars and telescopes a waste!"

"Your Excellency, we did not receive a warning from the Catalina Sky Survey system until three minutes before the disaster! But it was too late to do anything at that time!" Ashton Carter explained with a daring rash.

“Caterina Sky Survey System?” A series of question marks appeared in the minds of everyone. What system is this? Trump knocked on the table, “Take their responsible person in! I need to know what caused this disaster!”

Chapter 660 - How to get rid of it?

“Your Excellency, President! I’m Steve Larson, the head of the Catalina Sky Survey System!” After a while, a scientist in a white coat was connected to the video conference from the big screen. According to the information shown, this Mr. Steve Larson has multiple doctorate degrees and has been the head of the Catalina Sky Survey System for many years.

“It’s nice to see you on this occasion and it seems inappropriate to see you, so let’s get started! Excuse me, Dr. Larson! Can you tell us what kind of system the Catalina Sky Survey system is and why Didn’t you observe the meteorite until a few minutes before the disaster?” Trump asked leaning forward.

“The Catalina Sky Survey system originated from the Near Earth Object Observation Program delivered to the National Aeronautics and Space Administration by the National Congress of America in 1998. The main task of this program is to identify at least 90% of the near-Earth objects with a diameter greater than 1 km. One mission is the Catalina Sky Survey System. In order to accomplish this task, we have installed three Schmitt telescopes near the peaks of Mount Limmond and Mount Pigino in Arizona, and the Settin Spring Observatory in Australia! For some time, we have surpassed the Lincoln Research Group on Near-Earth Asteroids and become the most prolific near-Earth object and potential threat asteroid discoverer. “Dr. Steve Larson’s overview of the Catalina Sky Survey System Introduced again.

“1998? I remember that year there seemed to be several Hollywood movies about meteorites hitting the earth?” Someone in the conference room whispered, maybe the Catlinna Sky Survey system was established after being influenced by these films, right?

“Very good, Mr. Doctor! I think we have understood the role of the Catalina Sky Survey System!” Trump punched ***** the table and stared at Steve Larson, “but can you Tell me, why does the country still not have enough early warning time with such an organization? Are the taxpayers’ money wasted by you?”

“Your Excellency! If you could understand what I said just now, you wouldn’t have such a doubt.” Dr. Larson was not scared by him. “We only have three telescopes that are not so powerful. We want to monitor this. The vast starry sky is not realistic! And the taxpayers do n’t give us as much money as you think. In 2012, our observation center in Seting Spring, Australia, almost faced only because of the annual maintenance cost of \$ 30,000. Close! I think that if Congress can extract a tiny amount of that huge military budget every year, no such tragedy will happen today! “

“The distance between the near-Earth asteroid and the Earth is not far away, which has caused great trouble to our early warning; on January 1, 2014, we discovered the small row 2014AA, and it was on January 2. It hit the earth and was burnt over the Atlantic Ocean! On February 15, 2013, a meteorite crashed in Chelyabinsk region of Russia. This time, no observatory in the world could observe it in advance! “

“Furthermore, the main task of the Catalina Sky Survey System is to observe and monitor asteroids with a diameter of more than 1 kilometer, and this asteroid definitely does not meet this standard!” Dr. Larson’s words said that everyone was speechless In other words, because there is a dysfunctional institution that has a funding gap of \$ 30,000, you can’t really ask for it too much.

“So, Dr. ; was this meteorite not under your supervision before? And do you think this is a natural disaster or a man-made disaster?” Trump asked the last question.

“There are too many near-Earth asteroids! And we can only find hundreds of new ones every year, unfortunately this one is not in our observation range!” About the latter question, Dr. Larson hesitated It took a long time to answer slowly, “According to my shallow knowledge, I think that with the current level of human technology, there is absolutely no way to control the asteroid with such precision! And the United States is the world’s most vulnerable country to meteor impact! This event is natural The possibility of disaster is greater! “

“Okay, thank you very much, Dr. Larson! Now you can continue to do research! If you have any new findings, please contact the White House immediately!” Trump finished, and the image of Dr. Steve Larson from Disappeared on the screen!

“Now that the disaster has been preliminarily ruled out, the fear of the second attack can be put aside for the time being, and the focus of the meeting will be on how to deal with the aftermath!” Dr. Larson’s words made them a little loose In one breath, since it is not the work of a hostile country on earth, you don’t have to worry about the danger of war!

“The most important task right now is to make an emergency evacuation of the citizens of Norfolk! Avoid them from being damaged by nuclear radiation!” The Minister of Civil Affairs cannot imagine how they would face the anger of the people and Congress if they did not deal with it in a timely manner. Impeachment!

How strong is the radiation now? How much will it rise in the future? Will it really affect people’s health? Such words surged in everyone’s hearts, but no one dared to say such words! Because even if there is really no impact, the officials who ask such words will immediately be put on hats that

ignore the safety of the people's lives by political enemies, and will completely knock down the dust.

"I suggest to immediately block the traffic routes near Norfolk except government rescuers, everyone is allowed to come out and not enter! And immediately mobilize all the nearby National Guard, police, firefighters, etc. Assist Norfolk City in the evacuation work! "A staff member suggested.

"Immediately notify the Norfolk local government to do a good job! And immediately conduct a paratrooper airdrop to maintain local order!"

"Draw a temporary camp in the surrounding urban area for rest of the evacuated residents! We need a lot of tents, mobile homes, food, water and other necessary materials! Should we contact Hua Guo? No country in the world is better at building than them Activity board room! "

"We have to prepare mobile phones and tablets for them! Chargers and WiFi signals are provided! Otherwise these people will definitely be noisy!"

"Our warship is still burning in the sea water! The soldiers are still wailing in Norfolk! What are they going to do?" Admiral Paul Selva asked with dissatisfaction after hearing that everyone was discussing the residents who were still in safety. , "If no one is in charge of them, you don't need to think that the next conscription can recruit people!"

We are going to save people in areas where fires are burning, there are explosions from time to time, and there is huge nuclear radiation! God, you still let me die! Everyone wailed!
