Chapter 66 - Plagiarism

“Isn’t there anything wrong?”, Professor Ferrig is still a little nervous. He used to just occupy the research results of his students. Using the identity of a reviewer to help students plagiarize others is the first time, if not Soman’s identity. He didn’t dare to do this in the background.

“Look! It’s been so long now! The other party still hasn’t raised any questions! He probably has given up his intention to publish a paper in” Science “!” Soman helped his tutor, which is the biggest in the mathematics in the past two years. ‘S breakthrough! How could a guy from Beijing Normal University find a solution? But now, as long as the “Science” review is over, this result will become your own.

“Soman, I’m always worried!” If it weren’t for his promise to provide a large amount of sponsorship for his institute from his family, he also said that it would be good to split the prize from the Clay Mathematics Institute in half. Professor Ferrig did not Will promise to let him plagiarize.

“What are you worried about? Isn’t it normal for the two teams to make progress at the same time in the scientific research process? Since Leibniz and Newton can invent calculus at the same time, then we and the Beijing Normal University proposed the Poincaré conjecture solution again. What is weird? “, Soman desperately encouraged his mentor,” Besides, we did not let him publish in other journals; and even if others have questions, think about it, do you believe Yale or Beijing Normal University more? ? “

The last sentence calmed Prof. Ferrig ’s mood a little bit. Indeed, almost any mathematician would subconsciously think that after Yale and a certain Chinese university disputed the Poincaré conjecture first, Yale was the one who made the achievement first, which is also an important reason why he dared to help his students plagiarize.

Of course, if Lv Qiujiang had published the name of Princeton University in his thesis, he would never dare to do so! He is now completely relying on Yale’s prestige accumulated over the years. Yale’s name can overwhelm the Beijing Normal University in China, but there is no way to overwhelm Princeton.

Although he does not understand Chinese culture, Professor Ferrig also knows the reason why persimmons are looking for soft pinch. In his view, Peking University is the soft persimmon.

“How’s your work done there?”, Professor Ferrig asked with some worry. No scientific research results will come out of thin air. When the dispute arises, there will be a lot of research. Document file to prove!

“I’m ready!” Soman took out a large stack of draft paper and notebooks, and he was busy with it these past few days. Even most of the paper revision work was handed over to Professor Ferrig.

“You are familiar with the knowledge involved in this thesis!” With these things, you can also quarrel with others and have something to do with it. Fortunately, mathematics research is no more than physics and chemistry. It requires so many experiments and fakes. It’s a lot more convenient! His only worry now is that Soman did not study the paper so thoroughly that he was asked during the speech.

“Within a few months after the publication of the paper, I will excuse myself to carry out in-depth research and stay closed. I will wait until the thorough research is completed and come out to see people!” Soman’s confidence in this is not very sufficient, but he has also responded well. ready.

“Well, I will send an invitation to Huaguo Jingshi University in the name of the Yale Department of Mathematics. The two sides will conduct in-depth research on this issue and send a few exchange lecture places!” In his impression, those Chinese Prof. Guo likes this very much, “If he is not satisfied, it will depend on you!”

“I will use my family’s relationship to apply for naturalization for him!”, Soman believes that after giving such a gift, the other party will probably succumb, and he will not be afraid if he is not satisfied with the lawsuit. After all, Mi Guo It is his own home court, and the lawyers in his family are not Bai Yang!

If the other party knows, he has a high-paying position and has a nationality of the United States can be sent. If you do n’t know Yale ’s loud signature and an elite lawyer with family support, Soman thinks that he is well prepared. As for the “Science” side, Professor Ferrig will naturally get it.

After a while, Professor Ferrig ’s phone rang, he hung up after saying a few words, “The editorial board review has passed, and the article has now been forwarded to the reviewers.”

“Who is the reviewer?” Soman’s heart began to thump, he seemed to see the moment since he appeared on the cover of Time Weekly; damn, why should I hide for months! He wondered if he could come out to be interviewed by reporters if there was not much dispute after a month.

Should I wear the Armani suit to play the young elite, or casually play Frankenstein? Just when Soman was frantic, Professor Ferrig made several phone calls and finally asked the name of the reviewer.

“One of them is Professor MIT’s Blue Wave. I talked to him at the International Mathematician Conference last year, and each other’s impression is not bad!”, The first is good news.

“Who is there?”, Soman is also very clear about the system of “Science”. If the other one can be done, then he has the first chance.

“Well, a troublesome person!”, Professor Friegg frowned, and he had met the guy several times over the years, but he never came along.

“Who the **** is Looking at Professor Ferrig, he was also covered with a layer of haze.

“William Thurston of Princeton!”, This time he didn’t even bother to teach the two words, “I am not familiar with him, if there is a problem, you will depend on your relationship!”

“Well, I think about it, our family seems to have donated money to Princeton, I can try to find someone to speak!”, The first time things started to break away from their control, the feeling of uncertainty in both of them.

But they do n’t know where the paper went to Professor Thurston, it ’s not just that they will be rejected! As they began to contact various relations, Professor Thurston also opened the mail.

Ok? New manuscript of “Science”? After opening it, I quickly browsed. The familiar content of the paper made Thurston a little puzzled. Was this Lu revised and resubmitted? How does it feel worse than the first draft? How is this going?

Since the reviewers could not see the name of the contributor, Professor Thurston thought it was Lu Qiujian’s revised paper. If it was the manuscript he resubmitted, let him pass it!

Professor Thurston smiled and began to write his review comments.
