Chapter 661 - Restless rice

“God! Was the Zerg attacking us?” On Times Square, countless people looked up at the burning Norfolk Naval Base on the big screen and listened to the commentary of the Fox TV host, thinking of themselves for the first time. Have you ever seen the science fiction movie “Interstellar Paratroopers”, wasn’t the alien Zerg using meteorites to attack the earth?

“Don’t we have the most powerful satellite monitoring system on earth? Why can’t we even find a small meteorite? Are our taxpayers’ money corrupted by the government?” Some people began to question the government’s morality.

“The vast majority of our military satellites are used to monitor the military institutions of other countries, as well as possible missiles; and the trajectory of meteorites and missiles are completely different, and are not within the monitoring scope of these military satellites!” Someone explained.

“George! My poor George!” Some people saw the aircraft carrier sinking into the sea on the video, and collapsed on the ground with tears. It seems that this unfortunate George should be a member of the Navy.

“This is a nuclear-powered aircraft carrier! Shouldn’t radiation come to us with the clouds? Damn, what does radiation protection use? Iodine? Where can I buy these gadgets?” Someone started to look around Convenience stores, supermarkets, and quickly rushed in! Anything written with iodine in the supermarket was quickly snatched out! Some people who didn’t get it robbed others in front of the supermarket.

“The end of the world! The end of the world!” A group of young people in fancy clothes took the wine bottle in one hand and the pistol in the other and walked on the street. From time to time, they shot bullets at the surrounding windows, vehicles and even pedestrians ...

Various levels of riots have occurred throughout the United States, and the city of Norfolk, which is close to the disaster area, is the most serious! The highway that exits Norfolk City is remembered to be densely packed, with traffic accidents such as rear-end collisions and collisions happening along the way, and several high-speed passages are completely blocked! Even emergency routes are no exception. Fire trucks, ambulances, and police cars have pulled the siren to the maximum, and have not been able to move forward for even one step.

“Damn it! Take away your broken car!” Residents who were anxious and wanted to stay away from the radiation zone could no longer stand this desperate wait. They walked directly out of the car with a rifle and directly took the muzzle Aimed at the window of the driver’s seat of the vehicle in front!

“Hey, man! I want to leave early too! But you see it too, this is not to blame me!” The driver explained quickly with his hands clasped to his head, but he was so annoyed that he was able to take care of it and opened the insurance and shot.

“Put down the gun and raise your hands above your head! This is the National Guard, and do as we say right away!” The sound of the helicopter’s propeller came from above, and a big horn roared.

“Go to your National Guard! Immediately evacuate the highway!” The man with the gun immediately turned his muzzle and pointed it at the helicopter. He had only one idea in his mind now, that was to leave this ***** place quickly!

boom! The police in the United States would not speak as well as the Chinese police. As long as they felt threatened, they shot without hesitation. The poor guy’s head was directly fragmented.

Tell the highways to be like this, the situation in downtown Norfolk will only get worse! The poor policeman in the urban area could not control the situation in the whole city! Those residents who could not leave were gradually becoming crazy from despair! In fact, this radiation is far from deadly, but the news media will only say the situation more seriously in order to get ratings, so the string that has been tightened in these residents’ hearts has been broken by their encouragement!

Vicious cases of robbery, homicide, rape, arson, etc. continue to occur in Norfolk City, and the situation in the city is getting more tense! The helicopters of the TV stations faithfully recorded this scene and sent them to every household, so the residents of Norfolk became even more desperate.

Five hours after the disaster, the first batch of paratroopers finally reached the city of Norfolk, and white flowers bloomed in the night sky! Umbrella landing in the city area at night is undoubtedly a very dangerous act, but the government of the United States has not been able to take care of so much! If they haven’t made a move under such circumstances, they will wait to be ousted!

So the great guys of the paratroopers began to fall into the Norfolk city under great danger. Some of them hit the glass curtain wall of the building, and some were hung on the street lights by the rioters passing by. When the sieve was turned on, and his comrades pointed their guns at the rioters, they saw the lights of the helicopter of the TV station illuminating! They can only disarm the rioters with hate, and they dare not fight even with a slap.

Even so, they have no way to stop the media attacks, especially on various social media, the government's slow response, the corruption of military spending, and the government's attempts to hide the facts have continued to win praise from netizens. They have begun planning to start taking to the streets tomorrow. Take a walk!

The representatives of the opposition were connected in series like chicken blood, looking at each policy of the White House with a microscope! Prepare for your speech! Trying to find opportunities to win ample political chips for myself In addition to sending soldiers to Norfolk constantly, the headache for them is how to make up for the lost ships and soldiers, in Bremerton The naval base also houses four aircraft carriers, Kitty Hawk, Independence, Constellation, and Ranger. At other bases, there is a big guy like Kennedy that exceeds the performance of any other country in the world! However, these storage ships have been idle for many years, and it takes a lot of time and a lot of money to restore them to combat power! More importantly, where should they find the officers and men who will pilot these ships and planes?

This is not the thing that worries the military the most! Nuclear radiation at Norfolk Naval Base is the most terrible thing! After the Fukushima nuclear accident, the neon people had a headache because they could not find anyone to enter the radiation zone. They also mocked that the neon people had already lost their blood! But now it's their turn, and they remembered that they are in the rice country now, so there are probably not many people willing to sacrifice!

What is even more abominable is that those reactors are either burning at sea or sinking to the bottom of the sea. They have not been able to completely block them by airdropping cement as Lucia did when they handled the Chernobyl nuclear accident! And even if you can use this method, where can you find a pilot willing to take the risk of nuclear radiation to fly the plane?

Do you want us to completely destroy this place with a nuclear bomb?

Chapter 662 - Tonight we are all Americans

Soon, news of the impact of meteorite in the United States spread throughout the world! Although they do not know how much the United States has lost, the photos of the five aircraft carriers gathered at the Norfolk Naval Base a few days ago are everywhere! Finding out the comparison between the photos before the impact and the current photos, everyone understands that the five aircraft carriers and the huge aircraft carrier fleet of the United States are all over!

Nani! Dad's carrier is sinking! What shall we do? China has become more and more powerful in recent years, and it is completely impossible for us to feel safe just to anchor a USS Washington at Yokosuka Naval Base! We are planning that Dad will send another aircraft carrier to Asia to protect the weak us! Why is Dad's aircraft carrier destroyed by a meteorite now? What should we do? The neon high-level wailing!

They know that the loss of the US aircraft carrier will definitely weaken their influence on the international situation. At least before the new aircraft carrier forms combat power, their military strength in the East Asian generation cannot fully suppress China! If there is any change in China by then, because of the hatred accumulated over the years and the disputes on many islands, China may be putting the first batch of goals on itself! What should we do then?

Indonesia, the Philippines and other countries in the South China Sea usually rely on the father of the United States to support them in the back. From time to time, they still hold the idea that I can't hurt you and disgust you. Also shrink eggs! Immediately ordered to let their poor navy and air force put away the harassment plan! It's just that there are various protests in the media that are painless!

In the Middle East, various countries have mobilized urgently! Israel immediately raised the alert standard to the highest level! The leg of his son's house was broken! It is difficult to guarantee that some countries that are not open-minded want to take advantage of the fire, they immediately mobilized, issued weapons to the soldiers, prepared all kinds of missiles, and issued an emergency name and a call order! The Mossad building is brightly lit, and they are always paying attention to the information returned by intelligence personnel from all over the place! If it is found that that country intends to attack Israel, they intend to preemptively!

The kings, princes and princes of Saudi Arabia panicked directly. They can live a luxurious life with oil, all because of the behemoth of the United States standing behind them. The aircraft carrier of the United States can guarantee their safety! Although there is still an aircraft carrier in the Middle East, it has lost the ability to support it! They also become unsafe! Shouldn't those who have long coveted the oil resources of their own country do it right now?

Several Middle Eastern organizations opposed to the United States immediately issued a statement through Qatar Al Jazeera, announcing that this meteorite disaster was the punishment of the true ***** against the United States! The dawn of jihad victory is at hand! They called on the global opposition forces to unite to attack the overseas military bases, embassies and other institutions in the United States.

NATO also mobilized quickly, watching Lucia's every move nervously, afraid they would use this opportunity to attack NATO! At the same time, they warned their foreign agencies to beware of possible terrorist attacks.

However, their internals have also become unstable. In France, a large number of people took to the streets again, protesting that France has built so many nuclear power plants on their own territory! There was an accident at the Fukushima Nuclear Power Plant in the past, and today there is a

reactor explosion at the Norfolk Naval Base. How dangerous is nuclear radiation! For the safety of the French people, all these nuclear power plants should be demolished!

“Are these people crazy?” A French man sitting in an electric car imported from China looked at the crowd holding the slogan with an idiot, looked at the speaker impatiently, and greeted his colleagues Says, “French fuel tax is as high as 300%, but electricity is low-cost nuclear power. Coupled with the huge efficiency gap between the two, electric vehicles can cost up to 5% of fuel vehicles! Is there much money to power the car? “

“What do we use when we dismantle a nuclear power plant? Thermal power plants pollute the atmosphere! Hydroelectric power plants affect ecology-can we find places to repair hydroelectric power plants in France? Wind power plants and solar power plants also have various problems! Do they plan to return to the Middle Ages?” Said with a shrug.

“Absolutely impossible! They don’t want nuclear power stations, thermal power stations, hydroelectric power stations, but they can’t accept life without internet or WiFi!” The driver snorted.

“Why don’t you use this to provide energy?” The co-pilot looked at the young woman holding a placard with the word love written on it. “Did you use love to generate electricity?”

Such actions not only happen in France, but in Germany, Northern Europe, and the United Kingdom, people are constantly taking to the streets to demand the government to dismantle various nuclear facilities! Dismantle warships and fighter jets and stop research investment in this area. It’s been too long for them to live comfortably, and they have completely forgotten how their lives are coming now! Without strong military support, they have long been crushed by others!

Emperor Vladimir of Lucia laughed in the Kremlin after receiving news that the US Aircraft Carrier Fleet was destroyed by a meteorite! The noose around Lucia’s neck has been getting tighter all these years He’s almost oppressed, he’s out of breath! And now there is no doubt that it is a good opportunity to unlock yourself!

“The navy ship is ordered to use cruise missiles to attack the Syrian opposition! Send bombers to carry out carpet bombardment of the opposition’s entrenched area! Prepare the ground troops to enter the theater of war! Once the preparation is completed, immediately launch the ground attack!” A series of orders were issued Going on, the emperor went on to say, “If you ask for financial assistance from China, they will be happy to help us pay! In addition, if the chicken has any provocative actions, it will immediately fight back!”

After receiving the news that Lucia had sent troops, Lv Qiujian smiled slightly. Lucia, you must insist on this nut wall for a while! Only in this way can we have enough time to plant a few sunflowers. Once enough sunlight is produced, we can use them to buy pea shooters and ice watermelon! By that time, we will not be afraid of anyone's attack!

Turning off the news page and landing on the bib page, Lu Qiujian thought about it and published his comment on the incident, "Humans are so vulnerable in the face of disaster, the people of the United States are suffering from the worst tragedy ever, we pray God once again gives strength to help your country and people through the darkest moments in human history. We believe that in such days, the people and government of the United States can stand the cruel test, and the Statue of Liberty will stand still. May God bless the rice country, we are all rice people tonight! "

Chapter 663 - Nuclear bomb crisis

We express our deep sympathy for the casualties of the American soldiers, but I still want to say that it 's so happy to hear that the American aircraft carrier sank! This is almost the common idea of most netizens! I look forward to the Chinese government taking this rare opportunity to expand its right to speak in international affairs.

However, the Chinese government did not do as they thought! Instead, it was announced shortly after the Norfolk meteorite impact that the nuclear-powered aircraft carrier had serious consequences of huge nuclear radiation after the damage. In order to avoid this disaster in China, the Chinese government decided to temporarily suspend the currently ongoing nuclear Construction work of power aircraft carrier!

This statement caused the netizens in China to mourn, and wrote articles to criticize the government for choking on food! The surrounding neon and Southeast Asian countries were relieved! The government of the United States is also extremely puzzled about this. What exactly does the Chinese government want to do?

"I think that the behavior of the Chinese government is a good sign for us!" Secretary of State Richard Colby guessed, "China is not afraid of our fleet at Yokosuka Port, but is more worried about our treatment of China. Implement an economic blockade! Suspending the construction of an aircraft carrier under such circumstances can gain our favor, thus preventing us from being too sensitive to impose economic sanctions on China. "

"In the Chinese economy, the export industry accounts for a very large proportion, and having a peaceful and friendly international environment is exactly what they want! I think the guess of your Secretary of State is very correct!" The Minister of Finance agreed.

“Now we have only six aircraft carriers left, and it is not appropriate to have a conflict with China!” Said Admiral Paul Selva Air Force. In the past, the United States generally deployed two aircraft carrier formations in Asia, two in the Middle East, and one in the Mediterranean. All stay in the homeland security of the homeland, and prepare for rotation with these foreign fleets!

Now that the US aircraft carrier has lost all of its local aircraft carriers, it has to mobilize several ships from overseas. Under the current situation, General Selva Air Force is more inclined to transfer back from Asia. “Due to Lucia ’s relationship, we cannot move the Middle East and Mediterranean aircraft carriers are all transferred back, at least two aircraft carrier formations are to be kept in these two places; while in Asia, if China stops its own aircraft carrier construction, we only keep one aircraft carrier, the Washington, to monitor Korea, the Far East Military Region of Lucia, and Hua Guo is enough! “

“In recent days, there has been no abnormal change in the Chinese military!” CIA Director Edward Miller added. “Instead, the young leader of Korea was a little restless! In this case, we really are not suitable. Conflict with China again! “

“Damn the clown!” Trump said clenched his teeth. If he were not close to China and Lucia, the area was too sensitive, and the Americans had bombed his residence countless times!

“The recent unrest in North Africa has become more and more serious, and several countries have acted against the Embassy of the United States! We must give them a severe warning! In this case, the gap between aircraft carriers will be even greater!” Defense Secretary Ashton Carter Another bad news was reported!

“Edward! You must find out who the black hand behind the riots is in the shortest time! Then we immediately responded violently!” Trump knew that these riots were just temptations. If the United States did not respond in a short time, the consequences would be very Seriously, by then it was not as simple as hitting the embassy!

“We have identified three organizations! The principal behind these riots is one or two of these three organizations!” Edward Millerhui reports, “We will verify as soon as possible!”

“No need to verify! Tell me where the headquarters of these three organizations are! The military immediately started to formulate a bombing plan! Since they can appear on your list, then they will not be innocent!” Trump is going to kill chickens and monkeys!

“Which organization’s headquarters are in Syria, Iraq and Libya!” I don’t know if this is the case, or Edward Miller deliberately did it. None of the three countries he chose would make the United States feel too headache.

“Paul! How long can you be ready to attack!” Trump looked at the chairman of his joint chief of staff meeting.

“One week!” Admiral Paul Selva immediately reported, “Now we have three aircraft carrier formations in the region, which is enough to complete the bombing mission, but it will take longer if landing operations are to be conducted!”

“No! This time is just a warning! Let our allies prepare for cooperation! Notify China and Lucia before the bombing!” Trump made a quick decision! So no matter whether these three organizations are behind the scenes or not, the fate of the chicken that they became the rice country to warn others is inescapable!

“Also, issue orders to Hua Guo! Give the disaster relief materials such as mobile homes and tents we need to the Hua Guo people to produce!” He has not forgotten to respond to the goodwill released by the Hua Guo government, and it is on a global scale. He can’t find a supplier who can provide these products faster, better and more economically than Hua Guo!

After dealing with this matter, the focus of the topic turned back to Norfolk. “What is the situation over there now?”

“Local residents have evacuated 83%, and the rest will be evacuated within three days! The fire at Norfolk Naval Base has been extinguished! The first batch of people entering the disaster area is still being called!” The district also resisted very much. For this reason, the Selva Air Force admired the military court, and only slightly deterred the soldiers.

Trump just wanted to express his appreciation, Selva threw another bombshell there, “but we still have a very, very serious problem!”

“What is it?” An ominous hunch surged in Trump’s heart.

“At the time of the disaster, a lot of nuclear submarines were moored in the port! On that ... there was a huge number of nuclear warheads on it!” Warning, those submarines did not use meteorite impact as an enemy attack to launch counterattacks! The submarines also took the first dive to

escape, but several submarines were still seriously injured! According to the latest news, some nuclear bombs are protected The system is crashing ... “

“Gosh! Do I want to be the first president to see a nuclear bomb explode in the country?” Trump now regrets why he wanted to run for president.

“This will not happen in a short time! If we act quickly, and we can complete the remedial work before the problem occurs!” But it is too difficult to submerge the nuclear bomb under the nuclear radiation zone!

Chapter 664 - Sunflower

“The research on the miniaturization of nuclear fusion reactors has already been carried out! After the research is successful, it can be used directly on the aircraft carrier! Since then, what is the need for us to build an aircraft carrier of nuclear fission reactor?” Lu Qiujian smiled right Qin Feng said, “After the nuclear fusion reactor is installed on the aircraft carrier, we can install laser guns and electromagnetic guns on the aircraft carrier! The combat effectiveness is higher than that of the most advanced Ford class in the United States.”

“A good thing is a good thing! It’s just that we have to back the pot again! Now it’s a lot to scold us for being a tortoise!” Qin Feng also frequently surfs the Internet in his spare time, not knowing nothing about the upsurge; recent days Because of the suspension of the construction of the aircraft carrier of China, netizens have a bad tone.

“When the truth is revealed, they should be ashamed of today’s remarks!” Because information asymmetry is always prone to various misunderstandings, the Internet is also quite controversial about Xi and the plan spending so much money every year. “However, this news is not released to them. Those who understand will understand it!”

“The United States has responded by handing over a large order of relief supplies to us! With these orders, some small and medium-sized enterprises can live a good life!” Qin Feng couldn’t help laughing when speaking of this. Lv Qiujian sank the aircraft carrier of the United States. Not only did he not know anything, but he also sent such a large order, which is wonderful when I think about it!

However, this matter has nothing to do with the matter to be discussed next. Qin Feng said a few words and then stopped. He picked up another document and handed it to Lu Qiujian, “Now the oil fields that can be sold overseas are almost sold. ! Most of the funds of major multinational oil groups have been received, and it is now possible to start the construction of commercial power stations! “

“Well, the main tasks in the base now are the production of related equipment and the training of core technicians!” The construction of large-scale controllable nuclear fusion power plants is not a simple matter. Advanced equipment is not needed, and the high level of operation of these equipment is even more necessary. Technical talents, “Fortunately, the project team has also trained a large number of talents over the years, and dispatched them to various power stations. Together with the new recruits trained, there will not be too many manpower vacancies at the beginning!”

“In terms of factory construction, we have left space for the transformation of several large thermal power plants in the early stage! The location of these power stations also fully considers the factors of safety and confidentiality, and they are all set in the suburbs away from the urban area! We have chosen the construction team Several national team with excellent technology and political reliability! Guarantee the successful completion of the pre-construction work! According to the plan, the first one to be started is this power station outside the Beijing metropolitan area! As long as this power station is put into operation, it will trouble Beijing. The fog problem for many years can be greatly alleviated! “This is also a headache for the Chinese government.

“In recent years, some people have been attacking the government because of the haze problem!” For example, the famous documentary in the past few years, “but the solutions they gave are too impractical!” Economic development is the main problem after all. Electricity supply is the foundation of economic development. As long as traditional thermal power technology is needed to generate electricity, Haze is unlikely to be completely eliminated; after all, Chinese people can’t learn the high-end technology of Treasure Island and France that loves to generate electricity.

“Young people are always too simple, thinking things too easily!” Qin Feng criticized implicitly. The 9/11 incident that year won a 10-year respite for China, but after the Middle East calmed down, the country returned to Asia again. Restrictions on China have been increased; the current Norfolk meteorite impact incident has temporarily lost the ability of the United States to intervene in Asian affairs on a large scale, and once again won the precious time for China to immerse itself in development, as long as these nuclear power plants are completed and Successfully put into operation, Hua Guo will be invincible!

“By the way, the research of superconducting power transmission lines at room temperature has also been completed!” Lv Qiu Jian took out a hair-like thin metal wire. “After our unremitting efforts, we have finally reduced the diameter of the power transmission lines to the present day. Degree!”

The loss in the power transmission process is also a problem that has plagued the power sector for many years. To improve the efficiency of power transmission, it is necessary to use wire materials with better performance, and the highly conductive materials such as silver and gold are precious metals and reserves Small and expensive, and even if all the silver in the world is used to charge transmission lines, it is not enough!

The emergence of superconducting materials provides a new method to solve this problem. The use of this material can greatly reduce the loss during power transmission, and reducing the diameter of the wire to the degree of thin hair can reduce the need for the wire Total!

“It’s so thin? Can it be loaded with such a high voltage?” Qin Feng took a careful look at the wire in Lu Qiujian’s hand.

“The current cost of this material is still relatively high! If it is too thick, it is not cost-effective! Don’t look at this thin wire, it can definitely withstand super-strong voltage!” Many tests have been carried out in the early stage. The performance of this material is excellent, “and the range of applications is extremely wide, and it can maintain excellent performance in various extreme environments.”

“What metal is this material made of? The current ore reserves are not enough?” Qin Feng asked with concern.

“According to the current domestic reserves can only meet half of the demand! And we also have a lot of demand in other fields, it is impossible to use all to make wires; other countries also look at this material more closely, It is very difficult to import! “Lu Qiujian felt a little depressed.” We are looking for new mineral deposits, and we are also conducting research on wireless transmission technology! “

“Then it seems that it can only be used as the material of the main line! The other branches can only use the old materials!” Qin Feng is not very depressed, and the controlled nuclear fusion and superconducting materials have made him overjoyed and human. Can’t be too greedy.

“University Liu has already begun preparing to deliver materials to land on the moon and start the preliminary preparations for the construction of the lunar base!” Lu Qiujian reported a new news, “The helium 3 mined in these years can only meet the usage for the next three years, and so Launching rockets again and again to move the ants, the efficiency is ultimately poor! In the long run, it is necessary to build a lunar mining base! “

“Then do it! If we had to think about the American people’s ideas before, now they might not have the energy to control these!” Qin Feng said decisively with a big hand.

“Yes!” The Americans are now being dragged down by the Norfolk meteorite impact accident, and the nut wall in front of Lucia is blocking it. China now has time to plant sunflowers!

Chapter 665 - The conclusion of the investigation

“... The Norfolk meteorite crash has been in the past three months! As of today, the Norfolk military base is still in ruins! Millions of citizens of the country cannot return to their homes! Can only live in a mobile home! And the government of the United States has not yet produced an investigation report on this incident! Who should be responsible for this unfortunate disaster? Is this an unexpected natural disaster or other reasons? We invite today When we arrived at Dr. David Robininez, who had worked in the Lincoln Near-Earth Asteroid Tracking Program, we asked Dr. Robininez to help us find the answer! “NBC’s ace political show” meet- The host of “the-press” Chuck Todd appeared on this Sunday’s show as usual.

“Dr. Robin Binez, as far as I know, an important part of the Lincoln Near-Earth Asteroid Search Program is to search for near-earth asteroids?” Chuck-Todd and Robin Binez greeted each other Then directly cut into the topic.

“Yes! This is one of the reasons why the Lincoln Near-Earth Asteroid Search Program was established! And we are not the only research institution with such a mission!” Lobineiez began to introduce other institutions, “in NASA A total of six similar organizations have appeared in the history of the world. In addition to us, there are the Near Earth Asteroid Tracking Program (NEAT), the Lowell Observatory Near Earth Object Search Program (LONEOS), the Space Monitoring Program (Spacewatch), and Catlin. The Catalina-Sky-Survey, the Panoramic Survey Telescope and the Pan-STARRS Telescope! The Catalina Survey System is the first to discover the impact of this meteorite! “

With the introduction of Robin Binez, the profiles of these institutions were constantly printed on the TV screen. Chuck Tod nodded from time to time and asked after Robin Binez finished, “Mr. It ’s really amazing! But can you tell us why we have as many as six asteroid surveillance agencies, and we still have n’t been able to find this asteroid that destroyed Norfolk and brought great disaster to the United States? ”

“First of all, we are not undetected. The Catalina Sky Survey system won us three minutes of valuable early warning time! Only to save the world from destruction! You know that Norfolk was parked with a large number of nuclear submarines at that time!” Lobinei I corrected his mistake first, and then explained, “And compared to the vast universe, our investment is not as big as you think! The Lincoln Near-Earth Asteroid Search Program I worked for has only one pair GEODSS telescope; the same tool used in the near-Earth asteroid tracking program. Due to many factors, it can only work for 18 days a month. “

“Although the Low-Earth Observatory’s near-Earth object search program is capable of full-day search, their horizon is limited! The space monitoring program was established in 1980, and many devices are now outdated and unusable; the Catalina Sky Survey system is the largest , But it also has only three telescopes! The panoramic survey telescope and the rapid response system telescope

equipment are the most advanced, but it can't monitor any piece of starry sky at any time! Know that the earth is round! "

"Want to build a complete asteroid monitoring system on Earth, the current equipment is far from enough! Although they cover a large part of the starry sky, there are still omissions! And the focus of our previous monitoring is more than one kilometer. Near-Earth asteroids, these are the most threatening celestial bodies! And the meteorite impacting Norfolk this time is much smaller than this number! "

Robin Binez's regret, "We have regarded humans as our greatest threat for decades, and preventing asteroid collisions is just theoretical research! Meteorites fall on Earth almost every day, but they The vast majority were burned out when they entered the atmosphere! The very few who landed on the earth did not pose much threat! This makes us all forget that the Tunguska explosion has only passed more than a hundred years! "

On June 30, 1908, an asteroid fell near the Stone Spring Tunguska River in the Krasnoyarsk region of Russia and caused a big explosion. This explosion razed Siberian forests with an area of about 2,000 square kilometers to the ground. At that time, some scientists analyzed that this impact was equivalent to a thousand times the power of the Hiroshima atomic bomb.

"Mr. Doctor!" Chuck Todd had to interrupt his long talk, and the audience was obviously more concerned about these issues. "What we want to know is whether there will be a similar disaster in the near future! And this disaster Is it really a natural disaster? "

"Probably speaking, the possibility of two large meteorite impacts in a short period of time is not high! Disasters of this scale are rare in the history of human civilization! Except for the Tunguska explosion and this Norfolk There are not too many cases outside of the big collision! "Robin Binez hesitated for a while, but decided to appease the audience." So I think it is unlikely that a second time will happen again in a short time! "

"As for your second question! I think there is absolutely no way to control meteorite impact at the current level of human technology! And even if someone masters this technology, why did he give up after only one attack? To know our current There is absolutely no way to defend against such attacks! "

"What about aliens?"

"NASA hasn't grasped the evidence of the existence of aliens! We can't think of the reason for aliens to attack the earth!" Robin Binez sneered at Todd's whimsy Trump turned off the TV and his

The staff also agreed with Robin Binez 's opinion, "Mr. President, NASA 's findings are completely consistent with Robin Binez! We cannot find any evidence of man-made disasters! This incident should be a natural one. disaster!"

"So, let's officially announce the results of the investigation!" Trump said after drawing a cross on his chest. God, what did we do to make you angry and bring down such punishment?

The White House held a press conference on the second day and announced its findings. This conclusion is the same as that of Robin Binez 's judgment on the TV program yesterday; natural disasters and no short-term The second conclusion made people all over the world feel at ease.

However, fans of "Star Paratrooper" continue to claim that this is the beginning of the Zerg attack. We must unite to defend the earth; but their number is too small, there is really no wave! However, some Doomsday sect took advantage of the opportunity to cheat and collect money and was severely hit by the relevant departments of the United States!

When the news reached Hua Guo, Lu Qiujian watched the voice of the White House spokesperson swearing in the video, and a smile appeared on the corner of his mouth! Controlling the meteorite is not as difficult as you think!

Chapter 666 - Ways to destroy asteroids

Time back to when Lu Qiujian first proposed a plan to Qin Feng! Qin Feng took the tablet that Lu Qiujian handed him, and in the opened folder were several Hollywood sci-fi blockbusters, featuring "Meteor Crash" starring Michael Bay, Bruce Willis, and Ben Affleck. " , Also released in 1998, Robert Duval and Morgan Freeman starred in" The World Clash " , and based on the famous novel of the American science fiction writer Robert Heinlein's classic" Star Paratrooper "adapted "Star Fleet" and so on!

"Meteor Crash" is about NASA discovering that a meteorite with the size of Texas is flying towards the earth and will hit the earth after 18 days. In order to deal with this huge disaster, the Americans came up with a way to find the best oil drilling workers in the world, transport them to the meteorite, let them make a hole in the meteorite to put the nuclear bomb in, and then destroy the meteorite ! After a thrilling story, Bruce Willis stayed on the meteorite to manually detonate a nuclear bomb, and sacrificed himself to save humanity.

The plot of "The World's Big Collision" is similar to the previous one. It is also an asteroid to hit the earth, and then humans sent a spaceship to use nuclear bombs to destroy the asteroid, and finally sacrificed the entire spaceship team to keep human safety.

“Starship Fleet” was also attacked by Zerg meteorite at the beginning, and many large cities around the world were razed to the ground by the impact of the meteorite! Then humans began to fight back and abused the Zerg into scum.

There are several other films of this kind. A common feature of these films is that meteorites have become the biggest cause of threat to human security. Indeed, there is such a possibility in reality! For example, the Tunguska explosion more than 100 years ago, such as the extinction of dinosaurs 65 million years ago!

But for the solutions proposed in these Hollywood movies, whether it is drilling a nuclear bomb, or a spacecraft hitting a meteorite, Lu Qiujian has only a four-word evaluation-Mom’s intellectual disability!

As we all know, a nuclear bomb is a powerful weapon. If the structure of the meteorite is loose, under the power of the nuclear bomb, the meteorite will definitely be blown into fragments, so you can’t guarantee how much of the remaining fragments will still fall on the earth. ! Humankind will also suffer a huge disaster! This is the case in “Battery Collision”. The first nuclear bomb exploded the meteorite into two halves, and the smaller half still crashed on the earth, destroying several cities! According to Bruce-Willis’s approach, detonating a nuclear bomb at the core of the meteorite will only cause more debris! The consequences are more serious.

So is there a better way to solve this problem? Of course, scientists have already given many answers, and nuclear bombs are just one of them.

A more scientific method is to detonate a nuclear bomb near the asteroid. The strong radiation generated by the nuclear explosion can evaporate part of the surface of the asteroid, causing it to eject surface material into space. This jet is like installing countless micro rockets for an asteroid, and then achieve the purpose of changing its orbit. The universe is so vast, an asteroid hitting the earth is almost equivalent to a bullet hundreds of meters away wanting to hit a small house, as long as the angle is slightly changed, the bullet will deviate from the predetermined orbit, rubbing shoulders from the side of the house After all, so is the meteorite!

NASA has also proposed a method of dynamic interceptors, which is like launching a rotating bowling ball with a projectile gun and using impact to cause the asteroid to deviate from the ground orbit. According to NASA calculations, if this “bowling ball” is launched 20 years before the predicted impact, a 1.6-kilometer impact will be enough to deviate the asteroid by 273,500 kilometers from the original orbit, enough to deviate the asteroid from Earth’s orbit.

Another method is to send a spaceship to install giant solar sails for the asteroid, and use the powerful solar wind to make the asteroid deviate from its original orbit, thereby preventing it from hitting the earth. In some of the ideas proposed by scientists, the solar sail can even be adjusted to allow remote control of it to a certain extent, and to a certain extent, the purpose of accurately controlling the trajectory of the asteroid! However, the asteroid has been rolling and rotating. Even if we can send an unmanned spacecraft to land on the asteroid, it is difficult for us to set up a solar sail that can change its orbit.

NASA, which has a big brain hole, has also proposed a more exaggerated plan. A carbon fiber net weighing about 249 kilograms is enough to change the orbit of an asteroid like Destruction Star. The materials used in this skynet can act as a solar sail, increasing the solar radiation absorbed and emitted by the asteroid. This method can keep Destroyer away from Earth's orbit when he visits Earth again in 2036.

Similarly, using Archimedes' method of dealing with enemy fleets in the past could also avoid this disaster. We used a huge mirror to gather sunlight and heat a small part of the asteroid's surface to spray steam outward. This jet of matter will generate thrust and change the orbit of the asteroid.

You can also make a hole in the asteroid like Bruce Willis, but we do n't need a nuclear bomb. We can place a rocket in that position, then ignite the rocket, and use the rocket's thrust to change the asteroid's orbit, at the cosmic scale. , Even just changing the direction of the asteroid once is enough to keep the earth safe! You do n't need Bruce Willis to sacrifice your statement We can also send the aircraft to rub the asteroid at a critical angle, just like the snooker in Snooker, cleverly Change its flight trajectory; there are too many methods like this! The use of nuclear bombs is no good except that it is more violent and can accelerate the secretion of adrenal hormones. Of course, this is what Hollywood movies want! If a film of a solar sail changing the asteroid's orbit is taken, this visual effect will definitely make the investment company lose its pants.

Lu Qiujian paid attention to Qin Feng's expression while filling his brain with various methods of destroying asteroids! I saw that Qin Feng's brows became tighter as he watched. When he was about to fast-forward the last movie, he asked, "Professor Lu! Do you want to use this method to sink Mi Guo's aircraft carrier?"

"Yes! There are many ways to control the trajectory of the meteorite! As long as we can be accurate enough! It is possible to control a certain asteroid to crash to the place we need according to our requirements!" Lu Qiujian said those methods Again.

"Oh? What method do you plan to use? Nuclear bombs or solar sails? But the movement seems a bit big? We will be subject to global hostility!" Qin Feng disagreed.

“No! I just need a can of paint!” Lu Qiujian smiled.

Chapter 667 - Nippon paint, let the world see the colors of China

“Paint?” Qin Feng was suddenly messy in the wind. He couldn’t help but reach out to touch Lu Qiujian’s forehead to see if he had a fever today. Why does this sound so absurd?

“Yes!” Lu Qiujian nodded and replied, “We usually choose white shirts instead of black shirts in summer, because white can reflect more solar radiation, and black will absorb more radiation.”

“If you paint part of the surface of the asteroid white, these areas will receive more thrust from the solar radiation, and gradually push the asteroid out of its original orbit. This paint can be light-colored dust, chalk or any other The material that changes the ratio of asteroid reflection and radiation absorption. “Lu Qiujian explained another file on the tablet.” If we accurately control the area and size of the paint, we can let the meteorite move according to our predetermined trajectory!” “

“This ... this is a bit too weird, right?” Qin Feng looked at the long list of mathematical symbols on his computer, his face was stunned, and a can of paint could control the meteorite impacting the aircraft carrier of the United States. This Why does it sound so unreliable?

“This is the result of my meticulous calculation! And it has been verified by the supercomputer! Everything is under control!” Lu Qiujian replied firmly, “If you don’t believe it, we can do the experiment! We just need one A small space device will transport the material that can paint the meteorite in space, and paint the meteorite under my remote control! Then we can wait for it to crash at the predetermined location! “

“And these coatings will be burned by the high temperature caused by friction when the meteorite falls into the atmosphere, so there is no need to worry about leaving any evidence! The space device we need is small in size, and there is no need to worry about being discovered by satellites from other countries. And even if we find out, we can use other excuses to persuade the past. No one doubts the connection between the two! As long as the people inside us are not leaked, no one will guess that all of this is ours! ” Lu Qiujian detailed the results while watching Qin Feng’s simulation.

After more than two hours of conversation, Lu Qiujian’s rigorous derivation process, coupled with the miracles created in the past, made Qin Feng seriously think about the feasibility of this matter! And finally decided to take Lu Qiujian to the capital and go to the presbyterian meeting to discuss!

Because this is a military plan, in addition to the elders of the Presbyterian regiment, the meeting also invited a military representative, Vice Chairman of the Military Commission Gu Siyao, to attend the meeting.

After listening to Lu Qiujian's remarks, these leaders who held the highest power in China collectively persecuted. The plan proposed by Lu Qiujian was completely beyond their imagination, but why does it sound extremely feasible?

"Otherwise, let's do a test first?" Gu Siyao, the vice chairman of the Military Commission, tentatively asked after learning that the cost of the plan was only 50 million yuan.

"Next month, the Northwest Satellite Launch Base will conduct a recyclable rocket launch experiment. This plan is to carry out a multi-star experiment. We can use this launch to send a device for painting meteorites into space!" Lu Qiujian suggested, "We can first select a small meteorite for the experiment. Even if the experiment fails, it will be melted in the atmosphere, and it will not cause too much damage even if it falls on the earth!"

After a long discussion, the elder group and Gu Siyao unanimously decided to start the experiment according to what Lu Qiujian said! Once the test is successful, it is ready to attack the aircraft carrier of the United States at the right time and in the right place. This plan was also named the Guangwu plan by the elders, and immediately became the top secret of China. From now on, only the elders have the right to browse this opportunity, and never decipher others.

As for why it is called the Guangwu Project! Anyone who is familiar with the history books of the Kingdom of China knows that Emperor Wu Guang of the Han Guang Dynasty was deeply fond of destiny. During the battle of Kunyang, the history books recorded that "there are meteors falling into the camp at night, and there are clouds like a bad mountain in the day. The rulers are scattered and the officials are tired. "

With the help of meteorites, Liu Xiu, the son of the plane, broke the 400,000 Wang Mang army with 10,000 troops, and began his gorgeous journey to reign the world and restore the Han Dynasty. The elders also hope to use this name to make a good name.

A month later, the multi-star experiment of the recyclable rocket at the Northwest Satellite Launch Center was successfully completed, and the device with a major mission was hidden in more than ten satellites and was sent to space.

"Nippon Paint, let the world look at the colors of China! This advertising word is really appropriate here! Unfortunately, no one knows that all this is caused by us!" Although I don't understand why a foreign company Such advertising slogans were used, but it was for this reason that Lu Qiujian chose Nippon Paint as the paint for this experiment.

Three days later, a meteorite fell in the desert of northwestern China. The nearby garrison immediately received the news from the observatory and the superior's instructions to search for it; after finding it, the meteorite was accurately marked on the map, and then Carefully handed over the residual core of the meteorite.

"It's almost exactly the same as the predicted landing point of Professor Lu! The error is no more than ten meters! Such accuracy is definitely enough!" Gu Siyao said excitedly after carefully verifying the coordinate data reported over This feels higher precision than the Dongfeng 26 they originally intended to attack the aircraft carrier!

"The impact of the meteorite is more powerful than your missile!" Lu Qiujian was also satisfied with the results of the experiment. He directly took the residual core of the meteorite from the box. After testing, it has been determined that this meteorite is nothing. Radiation, "Look at this again, can you find traces of human control from this?"

The meteorite in his hand was not the size of a fist. The thick ice and rock originally wrapped in the surface had been melted away by the high temperature when entering the atmosphere, and no trace of paint could be found.

"Now I need to wait for the right time! I always feel that it can only be used once. It is too wasteful to deal with an aircraft carrier alone!" Gu Siyao was reluctant to use it as a conventional weapon. How good!

"Wait and see! Now is not the right time!" If the attack is carried out now, when the construction of the nuclear fusion power station is completed, the new aircraft carrier of the Mi Army may be in service!

"Well, we have to wait until the key is used!" Qin Feng nodded and said that the key time he said undoubtedly refers to the success of nuclear fusion research.

Chapter 668 - Meteor Summoning

This is just a few years. It was only after the commercialized controlled nuclear fusion experiment was completely successful that it was really time to officially launch the Guangwu Project.

Like the last time, all the elders arrived in Qi together with Gu Siyao, the vice chairman of the Military Commission. Now the elder elder has become Qin Feng; the last elder elder also attended the meeting. This man was originally named as a tiger. The old man's personality is restrained and strong. In his tenure, due to comprehensive national strength and other reasons, facing the aggressive attitude of the United States, he can only be complacent, and now when it is time to give some colors to the country, why not? Was there in person.

“This is a plan made by the last leadership group many years ago. Now that the controllable nuclear fusion power station is under construction, the United States will definitely not be willing to let us develop quietly! So now we are considering launching the Guangwu plan It’s time! “Qin Feng finished, Lin Qianjun’s information was distributed to the participants.

Among the people attending the meeting, Qin Feng, Lu Kunqi, the last elder, Gu Siyao, Lu Qiujian, and Lin Qianjun knew about this matter, and other elders saw this information for the first time.

After reading, the newly appointed five elders collectively lost their voices, and it was only half a day before someone asked in an incredible tone, “Is this all true? We have mastered this ... such a science fiction technology?” He thought for a long time. Found a suitable word to describe the Guangwu plan.

“Yes! This plan has been verified by many experiments!” Gu Siyao interjected. After the first experiment, Lu Qiujian hosted two more experiments, one on the grassland on the north side and one on the north. In the southwestern plateau, the error is smaller every time than the last time! Technically, it is well prepared.

The records and data of the experiment are attached to the information sent by Lin Qianjun. While they looked down again, Qin Feng said, “According to the report of the intelligence department, the nuclear-powered aircraft carrier Eisenhower will return to Virginia next month. At the Norfolk Naval Base, five nuclear-powered aircraft carriers will gather at this base! I think this is the best time to launch an attack! “

“We are not going to fight directly with the United States now, so we can only disguise this attack as a natural disaster! So we can only use it once! If we miss this opportunity, we will not wait until the five aircraft carriers gather in a port next time. “Know when!” Gu Siyao explained, “Opportunities like this have only happened a few times in history, and the most recent one has to be traced back to five years ago! And if our nuclear power plant construction is discovered by the United States, their aircraft carrier only It will be more dispersed! So now is not only the best time, but also the last time! “

As a soldier, he planned various strategies for the United States as an imaginary enemy. Now that the most feasible one has been applied, although it is not his credit, it still makes Gu Siyao feel bloody.

“However, if this matter is leaked, it will have a very bad impact on China’s international image? Moreover, the United States has no military interference with us now. Isn’t it inappropriate for us to carry out conspiracy attacks like this? Asked an elder hesitantly.

“Who will leak it? Is it you or me?” Before Qin Feng spoke, the elder spoke first, and he shouted sharply, “Your last sentence is even more pedantic! Our embassy of Yugoslavia provokes Mi Guo? The Galaxy has provoked the rice country? Comrade Wang Wei, the air and sea defender, has provoked the rice country. The people of the rice country feel that their interests are threatened, and they will use all kinds of means without hesitation! Why can’t we? “

These things were all experienced by the former elder personally. When the incident happened, he did not know how many cups were dropped in the back, but when the time came, the national power of China did not allow them to directly conflict with the Americans; so he could only grit his teeth. Swallowing this breath, it is futile to send out meaningless protests again and again! Now that it’s finally time to retaliate against the Americans, how can he not be excited?

“Comrades, could it be that we have spent a lot of time hiding our eyes! Have we lost all the blood in our bones? If we pretend to be grandchildren, we will really become grandsons?” After venting his anger, the former elder’s tone eased slightly. With a red face on his face, he slowly lowered his head.

“Comrades, you must remember that your responsibility is to work for the great rejuvenation of China and the interests of the people of China! Now we have the best opportunity since the establishment of China! The success of controlled nuclear fusion can allow us Get rid of the dependence on traditional energy sources such as oil and coal, and make our economic development reach a new level! A new technological revolution is at hand! We will never allow our own development to be disturbed! “

“And the United States is undoubtedly the biggest obstacle on our way forward! Now we have a great opportunity to weaken the power of the United States, and also have this ability? Then why not pre-empt it? Is it necessary to wait until the United States aircraft carrier to the East Sea Nanhai, you messed up our coastal cities before you plan to do it? “The meeting became the personal speech of the former elder. Qin Feng watched quietly on the side. He knew that his predecessor was helping him reduce resistance.

“I propose to start voting now! Those who support the immediate implementation of the Guangwu plan, please raise your hands!” The speech of the former Great Elder ended. Qin Feng initiated the voting in time. He first raised his hand, followed by Lu Kunqi, Gu Siyao and the former Elder .

Then the remaining five elders raised their hands accordingly, even the one who asked the question just now is no exception!

“Okay! All the participants passed unanimously! I ordered! The Guangwu plan immediately began to prepare! And implemented immediately after the US Army’s Eisenhower entered the Norfolk naval base!” Qin Feng’s voice was not high But the tone is full of decisiveness!

A month later, the representatives of this meeting came here again, but this time there was a large screen in the conference room. The large screen is the real-time picture of the Norfolk Naval Base captured by China Satellite! Everyone was so excited that they could see that the cash-loaded American ships turned into flames under the impact of meteor fire and rain.

“This one is for Comrade Wang Wei! This one is for the Yugoslav Embassy! This one is ...” The former elder murmured in the corner with tears in the corners of his eyes.

“How can you not have a drink at this time!” Gu Siyao looked around in the conference room!

“I prepared a good wine there. It was Maotai, which was given to my father by the prime minister. It has been preserved so far! Now it is time to drink it!” Qin Feng said with a smile. “But I will go to Sichuan first. Pu made a phone call to express China’s sympathy! “

Hahahaha, laughter in the conference room!

Chapter 669 - Chaos Theory

In 1963, the Meteorologist Edward Norton-Lorentz of the United States proposed the theory of chaos. This theory has great influence. Its main spirit is that in chaotic systems, small changes in initial conditions may cause long-term and huge subsequent chain reaction. One of the most well-known theories of this theory is the butterfly effect. A butterfly patting its wings in Brazil will cause more butterflies to flap their wings together. In the end, there will be thousands of butterflies waving their wings with that butterfly. The result could be a tornado in Texas, a month later.

There is also an old folk ballad: lost a nail and broken a shoe; broken a shoe and folded a war horse; folded a horse and injured a knight; injured a knight and lost A battle; a battle is lost, and an empire is lost. King Richard III of England lost his horse due to the lack of a nail in the horseshoe of his horse during the battle of Persia in 1485. His army was defeated by this effect, and Charles III became a captive of the enemy and was eventually forced to abdicate.

In other words, it is possible to achieve an inconceivable purpose by making a slight change in a small link! Lu Qiujian’s control of meteorite movement is an accurate application of chaos theory.

The trajectory of the meteorite is affected by multiple factors, including its own reasons, such as the shape, weight, material composition of the meteorite, etc., as well as the influence of the surrounding universe, such as the gravity of the sun, moon, earth, and the interference of solar radiation, Solar wind, sunspot explosions, etc.

After entering the earth's orbit, it will also be intervened by many factors such as the rotation of the earth, changes in the atmosphere, and abnormal climate. Any small change will cause a great deviation in the falling point of the meteorite!

To give an improper example, wanting the meteorite to land on the Norfolk Naval Base on time is as if you vigorously drove a golf ball on the top of Mount Tai, and also required the golf ball to accurately fall into the hole under the mountain. The same! Wind speed, air humidity and other factors will affect the landing point of the golf ball, and controlling the meteorite is more difficult than controlling the golf ball many times!

The painted area is one square centimeter less, the time for the meteorite to enter the earth's orbit is one second later than originally planned, and the prediction of tropospheric air motion has a decimal point error! These will make the Guangwu plan suffer a bitter failure like Charles III. The falling point of the meteorite may be changed from Norfolk Naval Base to New York City!

When the meteorite fell on the Norfolk Naval Base, you can comfort yourself that since it is a military base, you should be ready to be attacked at any time. When you fall to New York, the person who is in charge of the plan becomes the executioner!

Therefore, if you want to accurately control the falling point of the meteorite, you must have careful and massive calculations. Even the current supercomputer may be too weak; but this is an exception for Lu Qiu Jian. With the cooperation of the supercomputer, he The development of the brain domain is maximized, and this task is completed perfectly!

After such a thing, the most difficult sport for Lu Qiu Jian is probably golf! No matter how difficult the course is, he has absolute certainty to get a hole into the hole, and it is extremely easy to raise the score record of this course to a level that can never be surpassed even in theory.

In the same way, according to this theory, Lu Qiu Jian can make a violent tornado and a pour of heavy rain happen when he wants them to happen by burning a bonfire or sprinkling a piece of dry ice at the right time and place. The place! In other words, the weather weapons and combinations that the armies of various countries dreamed of were easily realized! The meteorite call is just one of the more difficult and powerful weather weapons!

“It has been almost seventy years since the beginning of the Anti-American Aid Korea! We have finally attacked the homeland of the rice country for the first time! Come, for this historical moment! Everyone toast!” Qin Feng took out the treasured Maotai and personally gave Lu Qiuqian etc. Full of people, Lin Qianjun robbed several times without taking it away, the excitement was overwhelming.

“Fucked!” Even the elder elder, who is now close to his elder year, did not quit. He drank the fine wine from the glass, and then sighed, “I’m lucky to say that! I can witness the suffering of the American people. To such a huge blow! The depression accumulated in my heart for many years can only be dissipated! It is a pity that the elder is close to a hundred years old, and I can’t accept this kind of stimulation, otherwise how happy he should be! “

“If the elder is present, he is afraid that this is not only our first attack on the homeland of the United States! This is also the first time that China has attacked the homeland of the Western aggressor country since the Opium War of 1840!” Lu Kunqi raised again The wine glass, “Come on, this glass of wine honors the ancestors who have thrown their heads and sprinkled their blood for the revival of China in the past 160 years!”

“Fuck!” Lu Qiuqian raised his wine glass, and there was an illusion in his heart. Now this meeting room, which gathers the highest power in China, seems to have suddenly become the Liangyipo’s Juyi Hall. Those elders who are unsmiling on weekdays Suddenly turned into a majestic Liangshan hero.

“I suggest that this third glass of wine honor Professor Lu Qiuqian!” The former elder changed his extremely formal title It is Professor Lu’s outstanding work that made Hua Guo the first master on the planet. A country that controls nuclear fusion technology! It is also Professor Lu Qiuqian who came up with this method beyond our imagination and cut off an arm of the United States, which won us time to commercialize the controllable fusion technology! It was Professor Lu Qiuqian who gave me the hope that the old man would see Hua Guo standing on top of the world again in his lifetime! “

“Cheers!” For the third time, everyone raised their glasses, and Lin Qianjun, who was watching them, scratched his head anxiously. This time he should be scolded by the elders’ health doctor! According to their age, it is not suitable for drinking this way!

The old Maotai gifted by the Prime Minister that year was less than a half of the whole bottle left today. After three rounds, the wine bottles brought by Qin Feng were empty! He waved his hand and said, “Okay, today’s drink is here first! If you want to drink Xiao Lin, I’m afraid I will find someone to sue!”

“Enough is enough! Today the world will be in a mess, and we have to seize the time to do what we should do! According to my guess, Vladimir is probably going to call to seek funding soon!” Lu Kunqi said with a smile, “I have to find a way to collect some military expenses for him!”

If the nut wall is covered with iron sheet, it will last longer. Everyone in this conference room hopes that Lucia will live in the Middle East for a while, so as to leave more development time for China.

Chapter 670 - The stretched rice country

The kuma who received the small money was like chicken blood, and the Lucia soldiers who were full of vodka rushed into Syria with their chests in their hands, disturbing the already messy situation in the Middle East!

More and more refugees are flooding into Europe, and China has issued several travel warnings one after another to remind people in China that it is best not to travel to Europe in the near future. And the little fresh virgins in Europe still open their arms and accept batches of Middle Eastern refugees, providing them with food, water, subsidies and even cough ...

European leaders are getting more and more headaches. They have fiercely debated at the EU conference, and they have repeatedly asked Lucia to withdraw from the Middle East and return a peaceful space in the Middle East! It was pushed back by Vladimir in one sentence: Is there peace before the Middle East? We entered the Middle East just to bring them peace!

The soft ones didn't work and the hard ones wanted, but they discussed for a long time and no country was willing to lead the army into the Middle East, so they pinned their hopes on the country.

“We have to put more pressure on Lucia!” Admiral Selva Air Force had a headache. The disaster at the Norfolk Naval Base cost them half of their aircraft carriers. Now it seems that not only can it be taken away, but also to find ways to increase troops!

However, the military budget of the United States this year has almost been spent, and Congress has not approved the second appropriation after the Norfolk disaster. How to fight without money?

“Let the British take their Queen Elizabeth to the Middle East!” Ashton, the Secretary of Defense, proposed that he really did not expect the United States to place its hopes on this younger brother who had been playing soy sauce behind them for decades. .

“However, the British have always claimed that the launch of Queen Elizabeth is too short and has not yet formed combat power!” Edward Miller said with a shrug. When he heard this excuse, he could not wait to send field personnel to blow Downing Street to ruins immediately. !

“What if we provide weapons and military guidance to Lucia’s enemies?” Trump is well aware that the United States has temporarily lost the ability to intervene directly.

“I have to say that even if F22 is given to those people, they can’t compete with Lucia’s army! What’s more, can they find someone who can drive F22 from them?” Those people only play AK , Give them a bazooka, and they do n’t even know that they should not aim their tail flame at their comrades.

Those people deliberately dressed themselves up as extremely brutal, but their brutality is only relative to those unarmed civilians. They really want to fight. Even the army of North Korea can smash them into scum. Moreover, the opponent they now face is Lucia, whose military strength is second only to the United States.

“A bunch of waste! Why did we waste so much money on these wastes a few years ago?” Trump scolded at the table, “What about Xuanwu Stone International? How many combatants can they send?”

Xuanwu Stone International is the vest of the well-known private military and security consultancy company Blackwater, which was forced to register a new company due to the inhuman massacre of Iraqi civilians in Iraq! However, they still receive orders from the government of the United States to complete some work that is not convenient for the government of the country to personally complete!

Many of their employees are elite members of the retired Rice Army, and their combat effectiveness in small-scale battles is better than that of the regular US Army! Now Trump puts his hopes on them.

“Another American embassy in North Africa was attacked by a terrorist organization yesterday! We do not have the ability to interfere directly in this area! So I handed over the task to Xuanwu Stone International!” Edward Miller introduced, “Pay again After depositing this task for Xuanwu Stone International, we no longer have any more funds to hire them! You know, there have been too many troubles recently! “

Silent for a long time, Trump knocked on the table and said, “Let the Neon people send us money! And Korea! We have protected them for decades, and now it is up to them to contribute to the

interests of the United States. It's time! If they refuse, we will withdraw the Eisenhower from Asia!
“

“Your Excellency! The Eisenhower is currently the only force that can restrict China! We cannot ignore our most dangerous enemy because of minor problems in the Middle East!” Secretary of State Richard Colby quickly reminded.

“Of course I know! But I think neon and South Korea will only be more nervous than us!” Trump leaned back in his chair, closed his eyes, and tapped his fingers rhythmically on the table. “If the Eisenhower withdrew from Asia, Without our protection, Neon and South Korea will immediately receive threats from China, Lucia, and even North Korea! They will absolutely not be able to bear such serious consequences! In addition, let them send troops and bring their own dry food and weapons, Give us life in the Middle East and North Africa! “

“As protectors of the United States, they have an obligation to make sacrifices for the interests of the United States! If they refuse to sacrifice voluntarily, then we have no obligation to continue to protect them!” Admiral Selva's remarks became more naked, ” I will convey the decision of the White House to the Supreme Commander of the United States in Neon! If the cabinet of this term of Neon disagrees then we will reorganize the cabinet with a group of bureaucrats who can accept this resolution!

“Agree!” Edward Miller agreed. “The CIA will do a good job! We have enough politicians in our database who are willing to sacrifice neon interests for the interests of the United States!” Anyway, their private interests and family interests are No loss!

“After half an hour I will talk to Prime Minister Neon!” Trump turned his head and said to the White House secretary. The secretary hurried away after taking orders, and then he looked at the Minister of Finance. “Twenty minutes for you. Give me a number! “

“Understood!” The Minister of Finance, nervous for many days, could finally relax a little, and he was already prepared to crack down on Neon and South Korea.

I have also pondered several places where money and manpower can be extorted. This meeting came to the last topic, “Whether it is the unsealing of the storage fleet or the construction of a new fleet, as well as the recruitment of soldiers and the training of officers, it takes a long time Time! It is foreseeable that we will not be able to intervene effectively in Asia for a long time! So how should we limit the development of China in this case? Especially when we still need China to help us with post-disaster construction Situation! “After asking Trump, he looked at all of you.
