Chapter 671 - The CIA's plan

“Now many intelligence personnel in charge of China’s affairs have been transferred to the Middle East, North Africa, South America and other places where they are just needed! Those countries in Southeast Asia don’t dare to provoke China easily!” They are not all fools. They can play lazy toads disgusting China. Now that the global control of the United States is in a cliff-like decline, they are afraid that it will be too late for China to make a tribute.

“We should continue to suppress China since the beginning of this century! If it wasn’t for the **** 911 that forced us to shift our strategic center, how could China have the present scenery?” Recalling the unfortunate incident, Richard Ke Irby couldn’t bear to resent it. The incident allowed China to develop quietly for more than a decade, and it took the second place in the world’s GDP! Now how much time will the Norfolk disaster win them?

“If you let them develop and wait for us to re-establish a new aircraft carrier formation, I am afraid that there will be no place for us in East Asia! Their products will fill the shelves of every supermarket in the United States-although they have already done so!” Trump is from the construction industry. He knows the strength of Chinese companies. If the US-based construction company enters the local market, then the US-based construction company has to fail for more than half!

“According to reliable sources, they have already planned to establish a permanent base on the moon!” Edward Miller added, “I don’t believe this base is purely non-military use! If their construction is completed, it will greatly weaken our current extreme Fragile military superiority! “

Military and technology are two major areas where Rice is far ahead of China. However, in recent years, some changes have made Mi feel unpleasant. First, China used tablets and new batteries to steal them from them. A large share of the global digital market and the automotive market; later encountered an event where the Los Angeles-class nuclear-powered submarine was forced out of the water by the conventional Chinese submarine on the edge of the Chinese territorial waters!

This means that the country ’s technological and military superiority is gradually being weakened, and it is not good news for them that they have already achieved corner overtaking in some areas.

“Energy! Energy is the lifeblood of every country today!” Richard Colby stood up and cheered for them. “China does not have our shale gas mining technology! The potential of hydropower has been tapped by them, no There will be too much growth! And the new energy sources such as solar energy and wind energy are far from reaching the time when they bear the heavy responsibility!

China can only rely on coal and oil to provide energy, and coal will cause serious PM2.5 pollution, and the global oil transportation line It is in our hands! As long as we can still control oil, then there is no way for China to overtake us! “

“However, China has been selling their overseas oil fields recently? What is the reason?” The hundreds of billions of dollars in sales are not a small number, not to mention that in this wave of sales, many American oil giants also accounted for a lot. Cheap, so someone immediately thought of it.

“It was because of the violent upheaval of their senior executives in the oil sector! Those oilfields were the handwriting of the senior executives who were out of business! We can regard their sale as a political liquidation!” Edward Miller took out According to the analysis of the CIA, “They still retain oil fields in countries such as Congo, and at the same time, China’s oil group is currently participating in bidding around the world! Want to win new oil fields as alternatives!”

“Haha! They will pay for their stupid political struggle!” Hearing this explanation, Trump and others relaxed a lot, “They always give up their interests for some inexplicable reason, A few years ago, it was the pricing power of iron ore, and now we are actively selling oil fields! We can let those oil giants cause them some trouble and raise the transaction price as much as possible! Let them pay more! “

Needless to say, Lucia’s entry into the Middle East is to maintain the high price of oil. How can the price of new oil fields be lower in this situation? Presumably, Chinese people have begun to regret their previous irrational actions, right?

“Although we have no way to directly interfere with China! But they are not monolithic! We have formulated a number of plans for this phenomenon!” Edward Miller continued to say the plan developed by the CIA. “First of all, we can use new social media to continue to increase A big attack on the haze problem in China! Prevent them from building new thermal power stations and put pressure on them! “

“This plan doesn’t cost much money! The big Vs who are active on the major online platforms are happy to do these things for us! They will guide netizens who lack the ability to discriminate against the Chinese government to exert public opinion pressure!”

“Maybe there is no need to spend money at all, we just need to send out a few green cards! For this, they are even willing to pay their own money to complete the task!” Edward Miller said proudly.

“However, your actions suffered a shameful failure in previous years, and the American ambassador to China was even a joke!” Colby remembered some unfortunate actions in previous years.

“But we don’t have to pay much for it, don’t we? If the result is naturally a surprise, we will lose nothing if we fail!” Edward Miller retorted.

“Tell me about the next plan? I don’t think you will put all your hopes on such a person!” Trump interrupted the meaningless argument between the two of them.

“The problems of ethnic minorities have occurred in various countries over the years!” Edward Miller said while looking at Trump. Wasn’t he just coming to power because of the support of the Americans in his policies? “Hua Guo is no exception. We can, as we have done in the past, prompt these people to do something that we are happy to see but that makes the Hua Guo government feel very headache!”

“This idea sounds more reliable than the previous one!” Trump knows the power of this problem deeply, but he never sees that Germany has been tossed, and the Nordic countries are suffering, “But this time you compare. What we have done before is more covert. Do n’t let the relevant departments of China have the evidence! We have a headache to deal with Lucia now, and we can’t anger China anymore! ”

“I will send intelligence personnel in charge of things in China! They will do their job well!” Edward Miller said vowedly.

Everyone discussed and approved these plans. A few days later, CIA intelligence officer Clint Hoover appeared as a mountaineer in a temple in the southwestern plateau of China.

Chapter 672 - Mental retardation

“Guru, a believer from Austria wants to see you!” A young monk entered the guru’s room and reverently folded his hands together.

“Hey, whether you like it or not, you should always come!” The master of this temple, also the most admired guru, Xi Zhudanzeng, in the hearts of believers in several counties nearby, flashed a bit of worry in his eyes, turning his hands in turquoise. The rosary turned around and said, “Let him come in!”

“Hello Dear Master Zhu Tenzeng, I am Clint-Hoover!” The Clint-Hoover scholars look like ten salutes, and then report their names, “I came from a distant place, Hope to receive your blessings! “

The little monk presented butter tea and local unique snacks for hospitality, and then left quietly, leaving the space for them! Sizhu Tenzin gently stroked Clint Hoover's head, "May the Buddha bless you, guests from afar!"

"Dear Guru! I brought Dharamsala's greetings!" Clint-Hoover cut open the mezzanine of the underclothes, took out a letter and handed it to Guru Siju Danzeng, then returned to his seat Sit up and sit down and secretly look at the expression of Xi Zhu Tenzeng! Trying to guess his mind from it.

However, he was destined to disappoint! Xi Zhu Tenzeng's face is still the kind and compassionate look, no change! I didn't open the envelope he handed over! Instead, he asked directly, "Dear guests, you are not far away, I am afraid not just to send this letter?"

"Yes! I am a volunteer from a civilized world! I came here not far away to help your people rebel against the rule of the Chinese government and build their own country!" Vague points made him clear, so Crete-Hoover did not hide his purpose. "My friends and I think that the Tubos have the right to establish their own country! In this country, people should not worry When their beliefs are interfered, they will bathe in the light of the Buddha and lead a carefree and happy life! "

"Dear Mr. Hoover! What do you think we need most now? What do you let me use to persuade my people to act according to your wishes?" Master Zhu Zhuzeng did not answer, but instead proposed his own problem.

"Guru respected by thousands of believers, you have called me Clint! This is not my will, but the sincere desire of thousands of believers!" He tried to use this small skill to narrow the relationship. , Said after a moment of silence, "I think what is most needed here is freedom and democracy! And the right to express one's faith without any interference!"

West Zhu Danzeng slowly shook his head, "Dear Mr. Hoover, I don't care where you come from and who you work for! I just want to ask you to go back and go back from where you come! Please let us innocent People! Let 's live a peaceful life in our hometown, it 's good! "

Clint-Hoover never thought that his plan would be terminated before it even started! He changed his mind quickly, and reluctantly persuaded, "Master! This land is not originally from the Chinese! They have invaded the land left by your grandparents and forced you to live according to their habits! Do you and your people Are you willing to accept their rule in this way? "

“Guest! What do you say we should do? What can you bring to our lives?” Xi Zhu Tenzeng asked again.

“You should call on your believers to unite and drive them out of the plateau! Then build your own country, and we will provide you with financial and weapon support! International public opinion will also be on your side!” Clint-Hoover thought West Zhu Danzeng was interested, and he was busy with his own conditions!

“Destroy them? Are you telling me to drive away the doctors who walked in the pastoral area to see the believers? Or the railway workers who built the railway so that we can eat fresh vegetables? Or those in the classroom Our children’s teachers of knowledge ... “West Zhu Danzeng looked at him without blinking.” And then what should we do? Still sick as before, just follow the destiny and guard the richness of the land. Resources cannot be exploited? “

“As long as you are free, these are not problems, we can ...” Clint-Hoover wanted to explain, but was interrupted by West Zhu Tenzeng’s words.

“You can’t do anything! Brad Pitt can’t bring us enough vegetables, and Sophie Marceau can’t keep our children away from sickness! Even if you are Americans, you can’t build on the plateau Railway! “West Zhudan bluntly told his origins,” You can do nothing but use us to show your hypocritical emotions! You can’t bring us a better life, just I want to use us to achieve my selfish purpose! “

“But you see, the young people here are being assimilated by them ...”

“I want to ask you, I am in this race of my blood lineage, why can’t I enjoy the fruits of the progress of human civilization? Why do we have to be trapped in a tent, chanting a Buddha with a butter lamp For a bunch of outsiders to sigh and rely on? “West Zhu Danzeng’s tone became fierce Maybe someone is willing to give up civilization and return to ignorance, but that is definitely not us! “

After saying so many words, Xi Zhu Tenzeng, who is no longer young, looked tired. He waved, “You still leave! I do n’t believe that many of the young people here are willing to give up their lives and win a no network for themselves. , A world without electricity and modern civilization! Our nation is just plain, but not a fool! You cannot bring us a better life, all you can bring is misfortune and death! “

“Damn! You foolish guys! Can’t we just give up our cheap lives and give the Chinese government some trouble as we wish!” Clint Hoover came out of the temple and did not leave immediately. Instead, he found a place to live in a nearby county, trying to find another spokesperson.

“Open the door, send the water!” The waiter’s voice sounded. Clint-Hoover suspected he had opened the door, but he was greeted by a black hole.

“Made mentally retarded! It’s not enough to do this kind of thing once and want to do it for the second time? Is it true that the relevant departments of China are all eating rice?” Hey, have the elites of the United States been transferred to the Middle East? How come even such a rookie has come to the mission! This is really a little sense of accomplishment!

Chapter 673 - Weapon testing

And those guys in the White House are also idiots! Now they are all in trouble! Hua Guo did not provoke them, instead they came to the trouble of Hua Guo! Catch this kid alive and see what the guys in the White House look like!

However, they regretted that this goal was not achieved after all. Clint Hoover bit the medicine pack hidden in his teeth the moment he saw the muzzle and went to see God in a moment.

“Damn it!” The leading giant Que hit the door with a punch, and since Clint-Hoover entered China, he fell into the intelligence department and monitored it. Unexpectedly, there was a problem when he arrested!

“... what are you doing! Catch a rookie can make such a low-level mistake ...” Back to the base, the colonel scolded them directly for an entire hour! Ju Que and his team members stood upright and greeted the saliva sprayed on his face without saying a word, and his heart was full of regret.

I finally got enough scolding, and my mouth was a little dry. The colonel drank half a glass of water in one breath, and the tone eased down a little bit. Get out of this body! “

“Colonel! Is this a new task?” Ju Que immediately woke up from the annoyance and asked with a smile.

“Huh! Originally, people were planning to change people! How dare people dare to arrange tasks for you after such a thing?” The colonel said with a black face. “But I am free of my old face, and I finally won it for you!”

“What kind of mission? Don’t arrest like this time? We weren’t doing this with our swords?” Ju Que asked repeatedly, the shadow behind him, fish intestines, pure Jun, the general, Mo Xie and others hurried forward.

“The above decided to give the Americans a lesson! Let them know that we did not take advantage of the fire but we didn’t want it, not that we were incapable!” With a clatter, the colonel pulled down the projection screen of the office, and a map showed, “According to the latest news, there is a The special operations team of the troops entered Afghanistan. Your task is to wipe them out! Then leave Clint-Hoover’s belongings and let them know who did it! See if they dare to send these flies and bugs Come in!”

“Yes!” As soon as I heard that I was facing the most elite special forces in the United States, the blood in the chest of Ju Que and others immediately ignited. We people who have gone through **** training are not waiting for this day?

“Weapons have been shipped to you! The data has also been sent to your personal terminal! Give you a week to get acquainted with the weapons! Go to Afghanistan for the mission next week! Now, go to the training ground!” The colonel waved.

“Colonel, it took a week to get familiar with weapons?” Ju Que said with a smile, “You don’t know, no matter which country’s weapons can exert the most power in our hands!”

“Do you think that you are going out just to kill people this time?” The colonel seemed to laugh, “The more important task is to conduct battlefield weapon tests! You not only have to kill the delta team, but also get back detailed weapon test data!”

New weapons? Listening to such a careful tone of the colonel, surely it is not the average guy? As a soldier, there is no one who does not like weapons! Sword Team left the office and ran to the training ground immediately.

“This is a rifle?” Ju Que first saw the guy who looked a lot bigger than a normal rifle. He rummaged through the information in his mind and could not find out which model this rifle belongs to.

“How is the bullet like this? How to launch without primer or gunpowder?” Cheng Ying looked at the metal arrow in the bullet box for a while.

“Is there a problem with the sight scope of the sniper rifle? Can it be hit three kilometers away? What’s the use of these?” The fish sausage held the sniper rifle carefully. “But this ballistic calculator is really good? Than I used it a lot better before! “

“What is this thing for? A flamethrower? Isn’t it appropriate for our special forces?” The master was puzzled by a canned object with shoulder straps.

“The body armor also has a USB port? What kind of weird design is this?” Mo Xie fiddled with the data cable hanging from the hem of the body armor ... these trained special forces arrived here and suddenly turned into curious babies. .

“This is an electromagnetic rifle. The instantaneous pulse current is used to generate a strong magnetic field on the drive coil on the barrel, which drives the bullet to fire!” A chubby, wearing glasses worker came in and began to introduce them to the performance of various weapons Come, “The caliber is 8 mm, the magazine capacity is 50 rounds, and the firing rate is up to 15 rounds per second. It can fire metal spiked bullets at three times the speed of sound. The effective range can be adjusted according to combat needs, from 50 meters to 2500 meters. Within its scope of application!”

The fat man pointed to a button at the rifle stock, “You can adjust the effective range of the rifle through this button, so as to choose the range you need most!”

Then picked up the bullet in the shadow of the shadow, “This kind of bullet is born to tear the enemy’s shell, and now none of the body armor used by soldiers in various countries can stop the damage it brings!”

“And this latest sniper rifle is also electromagnetically driven Compared with the rifle just now, his power is much greater! The launch sound is smaller and the speed of the muzzle is faster! The wind speed, wind direction, Humidity and other effects are even smaller, and you can accurately hit the target three kilometers away! “

“As for the bulletproof vest you took! It can not only resist the close shot of the gunpowder rifle! Protect your life! At the same time it is your energy storehouse!” The fat man took the rifle and pulled one from its stock The data cable is connected to the USB port of the body armor. “The rifle uses batteries to provide energy. One battery can meet the launch requirement of 1000 rounds of maximum range. If it is reduced to the minimum range, it can support the launch of 2000 rounds of bullets! You can choose to replace the battery or use the bulletproof vest to charge the rifle! Each charge takes three minutes! At the same time, it supports shooting while charging! “

“This is not what you call a flamethrower! It is a solo aircraft! It also uses electromagnetic power, and can carry soldiers and equipment of no more than two hundred kilograms for short distance flights!”

“These ... these are for us to use?” Ju Que couldn’t help swallowing. The weapons are a bit too sci-fi, right? If you have mastered these weapons yourself, then there is still a way for the Delta Force!

Chapter 674 - Help! Iron Man is here!

“I’m bluffing you with this shabby thing? You haven’t seen these yet!” The fat man opened a large box again, and said in a tone that the Modu people posed to their relatives in the country, “Come and see these Compared with these, the ones you just saw are nothing! This is a single-shot laser launcher. With it, you do n’t have to worry about being attacked by Apache or Chinook! This is an electronic grenade, only It takes one piece to paralyze all electronic devices within a ten-meter radius, whether it is a talker or a sniper’s ballistic computer, immediately reimbursed! And this ... “

Ju Que grew his mouth and only half a day suffocated a sentence, “I now think that the colonel gave us a week, it seems that it is not enough!”

“I can already imagine what kind of torture we have suffered in the past few days!” Cheng Ying remembered the very bad memories of when he first joined this special team.

“I was thinking, did our original parachute go to school?” The general was reluctant to look at the single-handed flying machine, which was more pulling than the parachute!

In the following week, all members of the Sword Team began arduous and excellent training. Each of them must be proficient in the application of at least ten new equipment in this short time! And that fat man became their most hated person.

“Cheng Ying! Are you an idiot? You can hit a coin three kilometers away with this sniper rifle. Why should you risk approaching one kilometer?”

“Ju Que! The battery replacement is three seconds slower than directly connecting the charging cable. These times are enough for the enemy to kill you ten times on the battlefield!”

“Master, Moxie! How many times have I said! The laser gun does not need to consider the amount of advance! Those helicopters can fly faster than the speed of light?”

“Gongbu, Longyuan! The individual aircraft supports short-term hovering. You can shoot again while hovering! With such a high flying speed, can you guarantee your hit rate?”

Whenever they worked hard, the fat man always stood lazily, and whenever they made a little mistake, he would provoke him to swear.

Fortunately, the ten members of the Razor Squad are absolute elites selected by the Million Army. Although these weapons are advanced, they have not deviated from the traditional weapons. After a week of running-in, all members of the Razor Squad Have mastered their weapons proficiently.

On the eighth day, a transport plane in the western theater landed at the airport near the base! All members of the Sword Squadron boarded the plane with weapons they were just familiar with.

“There are ten minutes to arrive at the scheduled location. You are ready to parachute!” The co-pilot reminded the driver from coming out that the transport plane entered the mountains of Afghanistan under the cover of night, and their goal was hidden inside.

None of the ten teammates went to get the parachute bag in the cabin, but just checked the various restraints on their body; Ju Que raised his head and smiled, “You can open the hatch when you get there, the rest We solve it ourselves. “

Arriving above the predetermined location, the hatch opened, and the wind blew in. Ju Que stood at the hatch and began to direct his team members to prepare to land, “Cheng Ying, you first! Then the generals, Mo Xie, Gongbu, Long Yuan ... I adjourn you! “

As soon as the voice fell, Cheng Ying jumped out first. When he was about 100 meters away from the ground, he pressed a button on his chest. The individual aircraft behind him made a small whine, and Cheng Ying hovered. In the air! Then he observed it and chose a more striking mountain and fell.

Less than a minute after landing, the last member of the Sword Team also landed here! Ju Que looked at his watch and couldn't help but sigh, “It's much better to use this gadget than an umbrella! Not to mention, the time spent just gathering saves more than ten minutes! You don't need to pack your umbrella. ! “

Long Yuan looked at the watch display on his wrist and pressed a few times, “Report, according to satellite positioning, we are now only fifteen kilometers away from the Delta Team!”

“There are no residents or military bases nearby! We flew in the form of No. 2! They landed three kilometers away from their camp! Then they walked out and copied!” Ju Que said as he took the lead to fly into the sky.

“Ju Que, I have arrived at the scheduled location and I am ready for a sniper!” This is the work cloth responsible for the sniper.

“Ju Que, the enemy’s secret whistle has been cleared! It is expected that the camp will be discovered in a minute!” Reported Yuyuanhui, who is good at assassination.

“Ju Que, we have occupied the commanding heights!”

“The retreat has been blocked by me!”

The members of the squad reported on their respective situations, and everything was proceeding according to Ju Que’s expectations! “After fifteen seconds, launch an attack without leaving any live mouth!”

The Delta Force deserved to be the elite of the Rice Army. When the first wave of bullets flew into the camp, they immediately woke up from their sleep and took up their weapons to counterattack.

“Damn, it must be the elite troops of China! No one here can solve the robin quietly except for them!” The squad leader Kuo Jian has understood that his current situation is very dangerous. Start shouting, “Evacuate according to plan three! Evacuate according to plan three!”

However, his phone did not respond at all. He did not have his teammates around him and could not use sign language. He could only shout loudly at the risk of leaking the target, and the voice just fell. A bullet two kilometers away took his life.

The unexpected attack and the suppression of weapon performance caused the Delta Squad to be defeated in less than ten minutes. Most of the players were killed or injured. Only two lucky people temporarily escaped the encirclement of the sword along the mountain road.

“Taiwan, you catch up to solve them! Give them a big one!”

“Good idea!” Tai A directly picked up a bazooka and flew into the night sky. After a while, it surpassed the two leaky fish, hovered in the air to aim the bazooka at the oncoming two, and used him from Hollywood movies. The tone learned in the school shouted, “Hey, baby, look here!”

Seeing Taia hovering in the night sky, the two Delta players collapsed directly! “Help! Iron Man is here to kill us!”

With a loud explosion, the two team members were sent to the sky, Tai A shrugged, “Although I am not Iron Man, but not the villains in Hollywood movies, I will not give you too much nonsense to give you a chance to escape. ! “

“Your nonsense is enough!” Ju Que groaned, “Hurry down and help clean up, we want to leave a deep impression on the American people!”

Chapter 675 - caveat

“All the enemies have been wiped out by us!” Ju Que glanced at the data terminal on his wrist. Less than ten minutes passed from the beginning of the battle to the present, and they wiped out the trump card of this troop of the US army. “All personnel report casualties!”

The result of the feedback made him even happier. The Delta Force was not vegetarian. A total of five people in the Sword Team were shot. However, the bullets were blocked by helmets and bulletproof vests. No one was injured except the unlucky stem. ! And the officer is just a minor injury, he has already started to bandage himself, and after going back to rest for a week, he can jump around again and again.

“Very good! Clean the battlefield and gather their corpses together! We want to impress the Americans!” In addition to the generals taking a break, the others quickly got busy and moved the soldiers’ corpses to Together, pose to kneel toward Hua Guo, and by the way remove all traces of new weapons.

“Not bad.” After he was busy, Ju Que was very satisfied with his team’s work. He took out the document found in Clint-Hoover from his pocket and stuffed it into the jacket pocket of the Delta Force Captain! The purpose of destroying the enemy this time is to warn the United States and tell them not to try any more tricks and tricks against China! Once found, Hua Guo will send fierce revenge!

Ju Que pressed on the data terminal screen on his wrist, and began to issue an evacuation order, “We are going 100 kilometers in the direction of the northwest! There is a helicopter to pick us up and return to our country! Rest for three minutes and leave immediately after three minutes!” Yun Century can’t land here, and their training time is still short. They haven’t been able to complete the

high-end ingenuity of using individual soldiers to board the in-flight transport aircraft! Therefore, the return trip can only use helicopters.

However, the range of the helicopters is limited, and their distance into the country exceeds the limit that the Chinese helicopters can reach, so they can only go back and evacuate! If you put it in the past, you must march all night for a distance of 100 kilometers! Also beware of the entanglement of forces along the way!

Now it's much easier! The use of single-handed aircraft allows them to reach a predetermined location within an hour, without worrying about the interference of forces along the way. With their ability to detect, there is no way to find these low-flying soldiers!

There was no accident during the evacuation process. When it was dawn, they returned to their bases in China. After completing the battle summary and weapon evaluation report quickly, the Lijian team entered a sweet dream.

They can enjoy a good night's sleep, but the American military in Afghanistan can't fall asleep. At the agreed contact time, they didn't receive a signal from the Delta team, "Damn! What's going on? I don't think that Afghanistan is home. The forces will threaten them!" "Major Lescott Rogers, who was responsible for providing them with logistic services, twirled anxiously in the information room!

"Use the alternate channel to signal them!" However, this time no information was received! Major Rogers knew he could not wait any longer! This elite team probably had a problem. "Order the drone to start investigating the place where they last signaled! The helicopter is ready to take off! We must go to the scene to find out what happened to them!"

An hour and a half later, the drone sent back photos of the scene! Just glanced at the photo, Major Rogers was so angry that he dared to attack the great army of the United States! They still insulted their bodies so much! "Damn! If you let me know who did it! I will make them regret it!" Major Rogers shouted.

"According to the information returned by the drone, there are no available people within 20 kilometers of the listing!" After the assistant reported, Luo introduced Xiao immediately took four helicopters to the place where they were killed.

"Major! Look at what I found?" Lieutenant Yurien-Sigil, Rogers' lieutenant, carefully took the gift left by Ju Que from the captain of the Delta Force. "How can a credential for a climber appear it's here?"

“I’m going to make a phone call!” Major Rogers took Clint-Hoover’s fake documents for a moment and returned to the helicopter to make a few calls. Clint-Hoover’s identity was revealed and the Delta forces were killed. The elite guy also surfaced, “This is a CIA intelligence officer in charge of things in China. He lost contact after entering the flower a week ago, and now it seems that he should have been killed! We have reason to believe , This is Hua Guo’s act of revenge! “

“I don’t know what kind of mission this Clint-Hoover shoulders, but I can guess he must have angered the Chinese! The Chinese warned us with the life of the delta team! Warning Let ’s not try to provoke them anymore! ”Rogers punched the helicopter ’s shell with a punch,“ Why did the CIA make mistakes for us to accept revenge? These ***** bastards! ”The last sentence did n’t even know he scolded Is it the CIA or the guy who killed these delta teams.

“Major! I found something interesting here! I think we will stay here for a while!” Lieutenant Julian Sigil, who was looking at the traces of fighting, pinched an arrow-shaped metal bullet and delivered it In front of Major Rogers This kind of thing has been found in many places here, and many of the great guys in the Delta team have traces of such bullets in their bodies! The lethality is amazing! I have never seen such a bullet before! Do you know what model this is? “

“It’s similar to the kill arrows of some grenade bullets! But much more refined!” Major Rogers looked to the left and right for a moment. It didn’t look like it was bombarded by grenade bullets.

He took out a magnifying glass and carefully observed the warhead. He even stuck out his tongue and licked the bottom of the warhead. “There is no trace of gunpowder firing! Did you find the shell near you?”

“No! Our people searched every inch of land around us! We could only find the shells left by our own people!” Lieutenant Sigil shook his head.

Major Rogers’ face suddenly became severe. It seems that this attack was not just to warn them, “I think if I am not wrong, this kind of bullet does not need a shell at all, nor is it fired with gunpowder! The electromagnetic rifle that some arms companies are developing! Julian, search every inch of land! Restore the battle process! “

Chapter 676 - Battle recovery

“We need more professionals! Trace experts, ballistics experts, deplaning experts, digital simulation experts ...” Lieutenant Sigil reported a long list, “We need the headquarters to take these people Come here quickly! Now we must seize the time, we do n’t know when the heavy rain and strong wind will clear the traces here! ”

“There are no conditions for autopsy here, send poor Vermeer’s body back to the headquarters, and then take over all the experts!” Major Rogers ordered, Vermeer was the team captain’s name; he stroked his chest With a cross in mind, you can make your last contribution to the United States of America! Let your corpses tell us what advanced weapons the Chinese used.

The subordinates brought by Major Rogers immediately became busy. They quickly transported the body of Vermeer to the helicopter. The propeller set off a gust of wind and flew into the sky, flying toward the headquarters.

Major Rogers ordered a Marlboro, standing beside a large rock near the battlefield, silently looking at the direction of China, using one cigarette after another to link his inner anxiety, and soon his feet were covered Cigarette butts.

“Who’s special!” Major Rogers reached his hand to his pocket again, but he felt nothing for a long time, and he was exhausted by a whole pack of cigarettes! Depressedly rubbed the cigarette case into a ball and threw it to the ground! Fortunately, at this time, the sound of the helicopter rotor sounded in the distance. Years of experience in the army made him know that the two slaves were coming without judging from the sound.

“Major! All relevant experts at the headquarters are here!” Lieutenant Sigil jumped from above without waiting for the helicopter to settle, and reported to Major Rogers.

“Do what we said just now! Check every inch of land! I want to know exactly what kind of weapons the Chinese use!” Major Rogers quickly issued an order, and then extended his right hand, “Lieutenant, put your body on Hand over Marlboro! “

“Yes!” Lieutenant Sigil took Marlboro from his pocket and handed it over. The experts took out all kinds of advanced equipment under his leadership to start an inch by inch investigation.

“There is a clear trace of the magnetic field left on this bullet!” Dr. Robert Lansa, an ammunition expert, placed the arrow-shaped warhead found by Lieutenant Sigir under the magnetic detector for inspection. He couldn’t help but look at the data displayed on the screen Mouth, “God! What a terrible weapon!”

“Doctor, what did you find?” Major Rogers asked in three steps and two quick steps, approaching him while looking at the magnetic detector’s display, but he saw nothing.

“Major! This instrument can analyze the magnetic force carried by this warhead to infer the strength of the magnetic field that pushes it out of the muzzle!” Dr. Lanza pointed to the string of numbers and explained, “Based on the data shown, It is calculated that the electromagnetic rifle used by the Chinese can keep this bullet at a distance of more than 1500 meters and it still maintains a terrible accuracy! The initial velocity of the bullet will exceed three times the speed of sound! It is terrible!”

“Gosh!” The cigarette butts in the hands of Major Rogers fell to the ground. Faced with such a terrible weapon, no wonder Vermeer would wipe them out; he asked with a hint of fluke, “Dr. Lanza, you are sure they used Is it an ordinary assault rifle, not a sniper rifle?”

“Look at this bullet, its caliber is less than 8 mm! And the average sniper rifle bullet is much larger than this! I guess if we expand the search range, we can definitely find the hidden traces of their sniper!” Dr. Lanza He shook his head and continued to talk about the data he analyzed from this warhead. “You see, the use of electromagnetic drives no longer requires a bullet casing, and the volume and cost of bullets will be greatly reduced! By allowing the size of the clip to accommodate a larger number Of bullets, the continuity of firepower has been greatly enhanced!”

“But doesn’t it take time to replace the battery?” Major Rogers also visited the electromagnetic rifle laboratory in the United States and knew a little bit about them.

“If you follow the battery technology level of the United States, you may be right!” Dr. Lanza once again refuted his point of view, “but in the field of battery technology, Chinese people have already led us too much! Their civilian products They are more powerful than our military products! Not to mention the usual practice of other countries, more powerful products must be given priority to the military! I think a battery is enough for them to support a long battle!”

Major Rogers immediately ordered people to expand the search range, and he continued to discuss this terrible rifle with Dr. Lanza! Guess its shooting speed, battery life and other data.

It did n’t take long for the soldiers who were dispatched to conduct a large-scale search to return, “Major! We found traces of sniper lurking three kilometers away!”

“Three kilometers!” Major Rogers couldn’t help repeating this number! In his memory, the farthest sniping record in human history has also occurred in this country. In 2015, two Australian snipers used an M82A1 anti-material rifle to shoot a leader of an extremist group from 2800 meters away. The two snipers fired at the same time, and the leader of the extremist group fell dead 6 seconds later.

This time it was aimed at ordinary people without defense and this time the Chinese faced the most elite soldiers of the rice army! They will not choose to shoot at the extreme distance of the sniper rifle! In other words, the distance of three kilometers is far from the maximum range of this sniper rifle! It may even be just half of the range!

“The latest news from Headquarters! Sergeant Harrison is very likely to die from sniping! Those anatomical experts believe that the bullet that hit him is very similar in shape to this!” Lieutenant Sigil reported again soon The bad news!

“Electromagnetically driven sniper rifle?” The range of more than five kilometers, it sounds almost electromagnetic gun! And the elite soldiers are quick to respond. They certainly will not react within 6 seconds after the bullet is launched, which means that the bullet that killed Sergeant Harrison will fly faster than the traditional gunpowder sniper rifle!

The fear in Major Rogers’ hearts has increased. In the past few decades, in most cases, it has always been them who rely on the advantages of equipment to crush the enemy, but now the equipment of the United States has begun to fall behind?

“Major! I suggest you come and see this!” Another professional raised his Delta Force’s special talker and shouted to him.

Chapter 677 - We have no money

“Mr. McClintock! Did you find something amazing?” Rogers trot all the way to the digital technology expert McIntock and asked.

“Look at this!” McClintock’s fingers flexibly disassembled this small and delicate communicator, exposing the precision components in its housing to Rogers. He pointed to a component and said, “I just checked After seeing the communicators left by all the soldiers, I found that they all have a common problem! That is, this key component responsible for signal transmission has appeared damaged at the same time! “

McClintock handed over the shell of the talker to Rogers again, “Mr. Major, we can find that the shell of these talkers is not damaged at all, and there is no trace of bumps or impact! This means that the Chinese have mastered the special Killing technology for this component! “

“It’s like a graphite bomb specifically for power equipment?” Major Rogers quickly thought of a similar weapon. After the graphite bomb exploded over the target, it would release a large amount of graphite fiber coils, as long as it landed on the On the exposed high-voltage power lines or transformers in substations and other power facilities, graphite fibers with excellent electrical

conductivity treated by special chemical treatment will cause short-circuit and burnout, resulting in a large-scale power outage.

“Yes! This kind of weapon we don’t understand is not only effective for the intercom! We have detected that the sniper’s ballistic calculator, digital terminal watches and other electronic devices carried by soldiers have been damaged to varying degrees, thus losing their effectiveness!

“McLintock wiped a sweat,” we can think that this weapon will cause huge damage to all digital electronic products! “

“This means that once the Chinese use this weapon! Will they form an electronic suppression on the battlefield?” Major Rogers was keenly aware of the horror of this weapon.

“Yes, we will fight the enemy in the dark!” McClintock knows deeply how powerful the electronic suppression is in today’s combat, which is equivalent to digging out the eyes of the American army, “And What makes me despair is that I do n’t know how they did it! “

There is no way to defend without finding the reason! No powerful army could let the bomb fall on his head, and Rogers fell into deep depression.

But before he could recover from his depression, the third expert called to deepen his loss again! Randy Stiva, a ballistics expert who stayed on the battlefield for a long time, has made new discoveries.

“Major Rogers! A rocket explosion happened here! I think poor Thomas and Rossman died from this explosion!” Stiva crouched in front of a striking crater, “After my calculations, I found An incredible truth! “

He stood up and pointed to an altitude one kilometer ahead! “This rocket was launched from there! At first, I thought I had made a mistake. There was no place to stop there. According to common sense, the enemy could not be launched from there! But after repeated calculations, the answer was always the same! I could n’t Explain why the enemy appears in that position, but this is the truth! “

Major Rogers looked in the direction pointed by Stiva, which was located in the middle of the two peaks, and there was nothing but air! “Are we fighting Iron Man? He floated in the air and fired a rocket! Then poor Thomas and Roseman were bombed into the sky!”

“Although I don’t believe your guess, I can’t find a more reasonable explanation!” Stiva nodded. “The two peaks are close together, and the helicopter can’t stop there! And we also No news of helicopters entering the area! “

“Complete the report as soon as possible! I think the Pentagon has a headache!” Rogers slammed the phone in his hand to the ground. “It’s all because of the CIA’s idiot! The CIA’s mistakes require our military to take responsibility! Damn guy! “

“Secretary Miller! Is this your plan?” Admiral Selva slammed a thick document onto the White House conference table. “Hua Guo is not turbulent at all, and I have lost an elite The Delta Team! The great guys did n’t understand the reason they were attacked until they died! “

The Director of the Central Intelligence Agency, Edward Miller, looked through the document with embarrassment. He also received news of the attack through other channels. He knew that the Selva Air Force had reason to be angry.

“But ... but their sacrifices are not worthless! They exposed the weapons secretly developed by Hua Guo!” Edward Miller racked his brains and finally found a barely reasonable explanation.

“Okay, Paul, now is not the time to quarrel!” The haggard Trump interrupted their dispute, and he was exhausted by solving the follow-up problems caused by the Norfolk accident.

“In addition to warning us, this attack is considered to be an actual weapon detection by the Chinese!” Edward Miller guessed the real purpose of the Sword Team’s mission, “From the results of this attack , I think these new weapons are very successful! Although this news may be difficult for us to accept, I still have to say that the Chinese have already left us far behind in certain fields! “

“Before it was battery technology, submarine technology! Is it finally the turn of conventional weapons this time?” Defense Secretary Ashton Carter knocked on the conference table uncomfortably This incident was against the United States of America ‘S serious provocation! We must fight back! “Admiral Selva Air Force showed his hawkish side,” Find out the culprits who made this attack, and then kill them! “

“Are you going to go to war with China in full?” Secretary of State Richard Colby had to stand up and remind them, “We lost five aircraft carrier formations! Three more ships were dragged by Lucia in Europe! We all It’s almost impossible to protect the local security! You still feel that the situation is not chaotic enough and you want to conflict with China? “

“Paul, sit down! This incident is over, no revenge of any kind is forbidden! Isn’t this the first time this happened?” Trump understands that this is not the time to show the toughness of the United States and the special forces of the two countries. The small-scale confrontation has occurred many times before, “Now the most critical thing is to figure out what kind of weapon they are using! Then start the research immediately, we must catch up before we have fallen too far behind!”

“But Your Excellency! We are running out of money now!” The Minister of Finance raised his hand weakly.

Chapter 678 - Broken arrow

“This disaster has consumed too much money, the unsealing of the storage fleet is still in progress! Those Norfolk citizens who cannot return home need to be resettled, we have not even salvaged all Norfolk nuclear equipment, We absolutely ca n’t afford the money to develop new weapons now!” The Minister of Finance now only wants to resign. Unfortunately, his resignation has been repeatedly vetoed by Trump, and he can only forcefully clean up this mess.

“Paul, you have to sort out our current weapons research and development projects! Cut off some projects that are not urgent, and let the costs come to this!” Trump can only now dismantle the east wall to make up the west wall. !

“Okay, Paul, do n’t persevere! We ca n’t fight against China anymore! Lucia has enough headaches for us! But I promise, when we recover from this accident, we must It will give the Chinese a tough response! “Trump stopped the words of the Admiral of Selva Air Force and began another important discussion.” Now let’s discuss how to deal with this serious broken arrow accident! ” “

Broken Arrow is a series of terms defined by the Ministry of Defense of the United States used to describe nuclear incidents. The second most serious nuclear accident refers to an accident involving nuclear weapons or nuclear weapons components that does not cause war. It includes: nuclear explosions, non-nuclear explosions or fires of nuclear weapons, radioactive contamination, airdropped nuclear weapons or nuclear weapons components, and the movie of the same name starring John Travolta makes the term widely known.

This series of codenames also includes: blunt sword, curved spear, brown giant, empty quiver, stray shuttle dart, and the most serious nuclear flash, etc .; blunt sword refers to a minor nuclear weapon accident involving nuclear components, which may hinder its deployment Accident.

Bent spear refers to a low-level nuclear weapons accident that cannot constitute a spike, broken arrow, or nuclear flash; spikes are nuclear reactors and radioactive accidents and events, but they do not cause nuclear war. The Fukushima nuclear accident in the previous years is a fall if it is placed in the country At this level, the empty quiver is where a nuclear weapon or nuclear weapon

component is robbed, stolen or lost. The stray shuttle is similar but more serious, which means that nuclear weapons fall under the control of non-governmental organizations.

The most terrible thing is the nuclear flash. When this code appears, humans are only one step away from extinction. This indicates the possibility or real detonation of nuclear weapons and the danger of nuclear war, including: accidental, unauthorized or unexplainable. Nuclear explosion or possible nuclear explosion. Accidental or unauthorized launch of nuclear missiles or missiles with nuclear loading capabilities, the missile's flight direction is another nuclear country, or may reach another nuclear country. An unauthorized flight of a nuclear-bombed fighter or a nuclear-bomb-capable fighter or unauthorized changes to the approved flight plan may result in the entry into the airspace of another nuclear country. The threatened targets discovered by the missile early warning system may trigger a nuclear war.

The accident at Norfolk Naval Base was attributed to the broken arrow. Although it will not cause a nuclear war and lead to human destruction, it is still possible to erase Norfolk from the map; in order to solve this hidden danger, the White House has done It took a long time to prepare, and with the delay of time, nuclear weapons under the Norfolk surface became more and more insecure; so that other major countries and organizations in the world have called on the United States to quickly solve this problem.

“Nuclear weapons are the greatest threat to human peace! It can destroy mankind at any time! All nuclear-weapon states in the world should immediately destroy their nuclear weapons!” This is a spokesperson for a French environmental protection organization told reporters.

Did he not know that if there were no nuclear weapons, Europe would have been flattened by the steel torrent of the Red Empire! Although nuclear weapons pose a huge threat to human survival, they also avoid direct military conflicts among the world's major powers because they do not know whether their opponents will launch nuclear bombs when they lose hope of winning.

“The location of all nuclear bombs below the water surface has been determined! They are still safe, but we cannot guarantee that they will continue to be so safe! We must take them out in the near future and put them back where they should be stored, or destroy them directly!” Admiral Elva also calmed down. China may not necessarily start a war against the United States, but the threat of nuclear weapons is imminent.

“And those reactors are still emitting deadly rays. We don't know how they will affect nuclear weapons!” Ashton Carter reminded. “At the same time, it also puts severe restrictions on the personnel who enter the sea to salvage nuclear warheads. Considering the accident at the Fukushima Nuclear Power Plant, the neon people can only find staff who are nearing the end of their lives to enter the radiation area. We are also not optimistic about this! “

“And this salvage mission is much more difficult than solving the failure of the Fukushima nuclear power plant!” Admiral Selva added, “The staff needs to dive underwater, cut the nuclear submarine and then remove the nuclear weapons from it! This takes a long time Time and extraordinary physical strength! I think even if this accident can be resolved, the funds spent on these workers to solve the residual symptoms after nuclear radiation will be a very terrible number-if they can survive! “

“Can’t you use a large ship to drag a nuclear submarine away from underwater to a location away from the radiation zone before cutting?” Richard Colby asked.

“No! First, most nuclear submarine reactors have also leaked to varying degrees! We will tow them there, where the radiation will be emitted. If we don’t want to let the nuclear radiation continue to spread, we can only let them stay in the original Earth! Second, the wreckage of those ships has completely blocked the waterway of the Norfolk port, and large ships can’t get in! “Admiral Selva replied frowning.

“Although we can use a tugboat to gradually remove underwater debris, those workers are also affected by nuclear radiation! Millions of tons of steel are not so easy to remove!” Steel buried under the Norfolk seabed is even better than the world Most countries produce more crude steel a year!

“If we are going to tow away nuclear submarines with severe nuclear radiation, I am afraid that major cities in the country will quickly gather a long parade! We will be impeached and stepped down immediately!” Trump added.

“So we can only salvage in situ now!” Admiral Selva stood up. “I’ll go back to the Pentagon to make the final preparations! Those nuclear weapons can no longer allow us to wait! We must start now. Action! “

Chapter 679 - Do you want to go to military court?

The Bremerton Naval Base in Washington State, where the only remaining aircraft carriers of the US are Calvinson and Reagan! Since the Norfolk accident, people at the naval base have been gathering protesters for a long time, mainly from nearby cities! They are all afraid that the Norfolk accident will repeat itself here!

The protesting residents held various placards and demanded that the two aircraft carrier battle groups immediately leave Bremerton! Or simply destroy the aircraft carrier directly to keep them away from the danger of nuclear radiation!

The navy officers and soldiers who were loved in the past have also become the object of their protest! Of course, these residents like these soldiers not because of the glorious image of the American soldiers in Hollywood movies, but because their consumption provides sufficient employment and expensive economic income for the surrounding residents! But now, they would rather give up and let the soldiers get out with their aircraft carrier! Or they haven't realized what they would lose if the aircraft carrier withdrew.

"I haven't been out of the barracks for three weeks! Sally I'm afraid I've been taken away by that little ruffian?" Captain Jamila Williams stared dumbly at the crowded protest team outside the barracks! In order to avoid the intensification of contradictions, Bremerton Naval Base has canceled everyone's holiday! Unless official business needs, everyone must stay in the base!

"I would rather go to the Middle East to fight with Lucia than stay here like jail!" His partner Captain Steven Rogers also grumbled. This kind of life is simply too difficult. Endured!

"Jamira, Steven! The people of the Pentagon asked you to report to the conference room in Building Three!" Perhaps God heard their prayers and immediately ordered her soldiers to come to them!

"Has a mission?" Williams and Rogers looked happy! He tidied up his military uniform and walked quickly toward Building Three. "Steven, will the Pentagon transfer us there? North Africa or the Middle East?"

"It's good if you go to the Mediterranean theater! I miss those Italian girls so much! They will completely dry you out!" Captain Rogers couldn't help licking his lips.

"As long as I can get out of this ghost place! I would like to let me go to Africa!" Williams thinks this is probably the most difficult time for him since joining the army?

"Gosh, aren't you afraid of getting AIDS?" The two of them spit each other all the way to the conference room in Building 3 with the excitement of leaving.

"Report! Captain Steven Rogers / Jamira Williams came to report!" The two of them stood upright and raised their chests to report loudly.

"Dear Mr. Navy Captain, please sit down! I'm Lieutenant Colonel Sam Dundee!" The man sitting behind his desk smiled as if he wanted to make the conversation with the two great guys easier and held up his coffee. The cup asked, "Do you need coffee?"

“Thank you, sir! But no more! We are now anxiously hoping to get the task sooner!” Williams and Rogers sat straight in their chairs, eyes full of desire to dedicate themselves to Milian.

“Very good! The United States is proud of you!” Lieutenant Colonel Dundee nodded appreciatively. “Now let’s verify your resume! According to the information, you have worked in various naval departments! Have a wealth of diving experience! Ability to handle a variety of Working under water! “

“Yes! Mr. Lieutenant Colonel! I promise you can’t find many people in the entire Navy who are better than us at this job!” Do you want us to work in the Mediterranean? How many divers are not available in North Africa and the Middle East! Rogers and Williams excitedly recalled those passionate Italian girls.

“Now the Pentagon has a very important task for you! This task requires excellent diving skills. Are you ready?” Lieutenant Colonel Dundee didn’t seem to start so smoothly.

“Observation of military orders is the first duty of soldiers! We are ready to accept the call!” The two stood up and answered loudly.

“Great! Give you three hours to prepare! Then set off with me immediately!” Lieutenant Colonel Dundee passed the two orders.

“Follow your orders!” Williams and Rogers took both hands and asked excitedly, “Sir, where are we going? Italy or Greece?”

“No!” Lieutenant Colonel Dundee looked at them in amazement, wondering why they would guess so, “We don’t need to go so far, this mission is in the United States! The Pentagon will mobilize all Navy divers to Norfolk The Naval Base of Kyrgyzstan rescues underwater nuclear weapons! “

“Water!” Rogers and Williams’ faces changed drastically. They dared to confront the most fierce enemies, but when they learned that they were going to face nuclear radiation, they were not so calm! Rogers hurriedly opened the order to look over, and saw that the above text was exactly the same as what Colonel Dundee had just said.

“Lieutenant Colonel, I think we seem to have misunderstood your intention!” Williams said with discretion, “We thought you would send us to fight in the Middle East or North Africa!”

“There is no need for divers there now!” Lieutenant Colonel Dundee interrupted his explanation. Divers located in the Middle East, Europe and Asia also received similar orders, except for those who are inseparable, all Divers must participate in this plan! “

“Mr. Lieutenant Colonel! I have served in the Middle East for many years! I once participated in the Iraq War and secretly sneaked into the Iraqi military base to place bombs in the war! I think if I go to the Middle East, I will definitely perform better than those guys now “Rogers seems to have found an opportunity.” I am very willing to go to the Middle East for the most dangerous missions. You will transfer me to the Middle East to return to those divers who have not much practical experience! “

Fighting the enemy will not necessarily die, but there is certainly no good end to the Norfolk Naval Base! If you take a step back 10,000, even if you die when fighting with the enemy, it will be very simple, and it will not be as painful as it is after suffering from nuclear radiation! After the Iraq war, he had seen many victims who were heavily contaminated with depleted uranium bombs. He didn't want to be like that!

“Do you want to go to the military court? The Pentagon's order cannot be refused! Please remember your responsibility and honor as a soldier, and pack up immediately!” Lieutenant Colonel Dundee shouted sharply.

The two looked at each other, and they knew they had only two options: either go to Norfolk to receive nuclear radiation, or go to the military court!

Chapter 680 - Shredded atomic bomb

“I'm sorry, Mr. Lieutenant Colonel, I refused to accept this task!” After hesitating for a long time, Rogers chose to refuse, and the memory of the victims of the depleted uranium bomb was really terrible! His fear of nuclear radiation even exceeded military discipline!

“It's 13:45 now.” Lieutenant Colonel Dundee looked at his watch. “I will be here waiting for you until 16:45! If you haven't packed your things here by this time, Report from an office, then I will immediately order the military police to arrest you! And accept the severe sanctions of the military court! Now, get out of here! “

“Yes! Sir!” After saluting the two, they silently walked to the door of the office. Captain Rogers couldn't help but look back at Lieutenant Colonel Dundee. “Sir, I will wait for the military police in the dormitory!”

After the visitor left, Lieutenant Colonel Dundee sat back in his chair in frustration. Since he received the order, he had expected all kinds of difficulties, but he did not expect that the resistance he encountered was much more serious than he expected! Obviously Captain Rogers is not the first person to refuse to accept the mission, nor will he be the last one!

“Steven, are you crazy? The military court will deprive you of your rank and throw you into prison! Do you bear the cute little Luke to see his father as a hero become a criminal?” From No. 3 Out of the building, Jamila Williams looked at his old friend in surprise.

“Jamira, you have n’t been to Iraq, you do n’t know how terrible nuclear radiation is!” Rogers shook his head. “I would rather Luke see his father become a coward or even a criminal than his dad. Become a terrible monster! Nuclear radiation will make all the hair on your body fall off, the skin will produce sores, and the disgusting pus will flow out! And this disease is hereditary, Jamila, do n’t you have children? Do you want your child to be like this? “

“Gosh!” Williams couldn’t help swallowing. “Isn’t the Pentagon preparing nuclear radiation protection equipment for us? Isn’t it dangerous?”

“Please note that you are going to work underwater! Jamila, how much strength do you think you have to put on a layer of radiation protection equipment after wearing a bulky diving suit? Not to mention you need to carry heavy Professional equipment to cut the submarine’s shell! That is not an easy job! “Submarines need to withstand huge pressure, the requirements for the shell material are very high, but it is not so easy to cut! “Think about it. It’s terrible to accumulate even a tiny dose of radiation for such a long time!”

“Such a thing has not happened in history!” Rogers also wanted to save his friend, he continued to persuade, “In the winter of 1945, the physicist Slotin of Los Alamos National Laboratory was underwater. While the nuclear reactor was still working, he dived into six feet of water for repairs. In a short period of time, he received a radiation dose of at least 100 roentgens, which caused symptoms such as vomiting and hair loss afterwards. Working underwater will take longer than him! The nuclear radiation will endanger you! And no one knows when the nuclear material in the reactor will change! “

This Srotin has been famous in history because of many deaths. This time it was only a trivial matter to repair the reactor without shutting it down! In the future he will do even more terrible things.

In May 1946, under the watch of seven colleagues, Srotin conducted a preliminary experiment on nuclear fission reactions. The experiment required two beryllium hemispheres to surround a

plutonium core. It is worth mentioning that in the previous experiment, this plutonium nucleus has caused the death of Srotin's colleague, Harry Daglien, because of the radioactive reaction.

Slotin grabbed a 9-inch-diameter beryllium hemisphere, held the hole in the dome with his thumb, and used a screwdriver in his right hand to keep the two hemispheres from touching each other. The use of a screwdriver is a serious violation of the rules, he should use shims to maintain separation.

Then, tragedy happened. The screwdriver slipped on the ground like the script was arranged. The upper and lower beryllium hemispheres immediately merged together, creating a "transient critical" reaction and generating a nuclear fission shock wave. At that time, all the scientists present observed a dreadful blue light formed by the ionization of air in the gap of the beryllium hemisphere. A scorching heat wave hit them. At this time, there was a sour taste in Srotin's mouth, and his left hand felt a strong burning sensation, which was extremely painful.

We know that the minimum mass of fissile material required to maintain the chain reaction is called the critical mass. The first atomic bomb "Fat Man" used plutonium to create a hollow sphere below the subcritical level. When detonating, the explosives surrounding it are used to squeeze the plutonium to reach the critical mass and increase the instantaneous criticality. Now the situation facing Srotin is exactly the same. If he does not take immediate action, the beryllium hemisphere will turn into a small nuclear bomb, turning him and all his colleagues into powder.

On the occasion of a desperate attack, Srotin instinctively pulled his left hand up to pull the upper hemisphere made of beryllium and toss it on the ground. He exposed himself to lethal doses of neutrons and gamma radiation. According to ex-post calculations, the dose of radiation received by Srotin is equal to the amount of radiation received when the atomic bomb exploded 1463 meters from the center.

Slotin died nine days later after absorbing excessive nuclear radiation. Three of the seven survivors also died of possible radiation-related diseases a few years later.

Rogers told this story to Williams in a solemn tone, making him really feel the terrible power of nuclear radiation! Finally, I concluded, "So, I would rather go to the military court than go to the Norfolk Naval Base! Even if my life imprisonment at least I can continue to live, and to Norfolk there is almost no possibility of surviving! I and I'm not afraid of death, but I can't stand the torture of perennial pain! If I die in a short period of time like Srotin's, if I'm tortured by radiation like the other three scientists for a long time, I'll die! It's definitely more terrible than hell. Torment! "

Three hours later, Lieutenant Colonel Dundee did not see Rogers and Williams in his office. He sighed and silently dialed the call of the Gendarmerie Department!

Rogers and Williams did not have any resistance, and let the military police take them away! At least you can stay away from the **** of Norfolk, right?
