

## D. School 681

### Chapter 681 - Moon landing

“Fifty-eight percent of the officers and soldiers recruited this time would rather go to the military court than go to the Norfolk Naval Base! The staff required for the salvage plan is now seriously insufficient!” The Admiral’s hair was a lot whiter. Since the Norfolk meteorite impact disaster, he has been suffering every minute.

“And after this news was reported by the media, public opinion unanimously expressed support for their choice. The people think that the government has no right to send them to the mortal road!” Ashton Carter added, because of this reason, he has not less recently been harsh by the media.

“Go ask the World War II veterans on Omaha Beach how they chose at that time! Do they think they must land safely under the Nazi machine gun fire!” Trump hit the table with a punch, “The American soldiers have now lost their courage to sacrifice the courage?” He felt that he was probably the worst president in the history of the country. Which previous president would face such a dilemma because of the meteorite?

“We must severely punish such violations of military orders!” Richard Colby realized that this is a serious problem. Now these soldiers will refuse to execute military orders because of nuclear radiation. Will they be the enemy next time? Too strong to refuse to fight Russia or China?

“Judges in military courts should not be disturbed by public opinion. They should maintain judicial independence!” Trump wished to shoot these guys who violated the military order directly, but he knew that according to today’s legal provisions and the tendency of judges, it seemed difficult at this point!

In other words, these soldiers who violate the military order will be sentenced to imprisonment at most, and the US government will also allocate a sum of money from the already scarce funds to imprison them!

“Can’t these tasks be done by robots?” Asked Edward Miller, who remembers that the country’s underwater robot technology seems to be at the world’s leading level.

“Because the radiation in Norfolk Port is too strong and the interference to the electromagnetic signal is very serious, we can’t use the wireless remote control! If you use wired remote control, how different is it from the diver’s own launch?” Ashton Carter It is not malicious to think that a soldier who died because of radiation only needs to pay a pension, while a soldier who has been

affected by radiation sequelae for a long time needs long-term and high medical expenses. The former is more cost-effective in terms of cost.

“In addition, the current environment in Haiti is very complicated, and robots alone cannot complete the work. We can only use them for auxiliary work! The main work must also be done by humans!” Admiral Selva reminded by the way, “Those who accept the order The soldiers are still emotionally unstable. If someone is injured by radiation during the previous salvage work, I think they will soon choose to resist this task just like those people! “

“Now public opinion is very unfavorable to us! Because the issue of nuclear radiation has not been resolved, the support of the current government has fallen to the lowest point!” Richard Colby broke the bad news again! “Recent large-scale demonstrations have erupted in major cities recently. They mainly protested that we failed to solve the problem of nuclear radiation and nuclear weapons, and expressed our dissatisfaction with our mandatory order for those soldiers to carry out salvage work under the cover of nuclear radiation!”

“Even if we want to eliminate nuclear radiation without sacrificing human life! So dear Richard, can you tell me how the protesting people intend to solve this problem?” Trump was speechless to these people, why are you not heaven!

“You don’t have to worry about the approval rate! Do you think those savvy opposition parties and opposition parties will impeach us now? They don’t want to come to power at this time and have a headache for this problem!” The finance minister is now Dead pigs are not afraid of boiling water! He already understood that at this time, no one was willing to pick up this hot potato, and before the work behind the Norfolk disaster was completed, his position was as good as Mount Tai.

“Solicit volunteers from the whole country or even the world! Someone will take risks for some reason! For domestic volunteers, we can give them tax concessions! And for foreign volunteers, as long as they complete a certain amount of work underwater , We will go through the naturalization procedures for them! “Someone proposed a solution.

This ... sounds good! We promise to be able to go through the naturalization procedures for them, of course only if they can stay alive for the prescribed time! This group of upright politicians representing the hope of mankind silently praised this method in their hearts.

The government of the United States soon issued a volunteer convening order to the world! Your experience in working underwater or driving a ship can’t be better. Milliken welcomes you. Once you have inspected a qualified government of the United States, you will be reimbursed for your

toll and provide you with a well-paid position. Persevere for a while, naturalization of rice is no longer a dream.

what? Do you know nothing? It does not matter, we have a perfect training system, as long as you sign your name on the contract, we will ensure that you can learn the skills required for work! But if you want to quit halfway, you must pay Militian sky-high compensation!

With the attractiveness of the nationality of the United States they are still recruited to a large number of volunteers from around the world! The only thing that makes them regret is that most of these volunteers come from third world countries, and it is too difficult to train them to complete such technical work under the cultural level!

However, with these cannon fodder ... oh no, with the help of volunteers, the salvage of the Norfolk Naval Base started slowly! However, not long after the work began, they discovered a new problem, that is, not all of these volunteers came for the nationality of the United States.

There are also a group of people working for organizations that some Americans do not like. They plan to steal nuclear weapons, or want to detonate them directly! The former is easier to say, as long as the precautions are in place! The latter makes the American people undefeated! They dare not imagine what a terrible situation they will face once an accident occurs!

In this way, the progress of the salvage work has slowed down again! Investigating the background of these volunteers has almost become Edward Miller's main job, so Hua Guo's few staff members have been taken away a large part.

Their surveillance of China has been reduced to a record low in the past ten years! So that when they approached the rocket launch, they realized that China had officially started the project of establishing a permanent base on the moon!

#### Chapter 682 - Lunar spaceship launch

On this day, across the country, from busy office buildings to crowded subways, from high-speed rail stations to quiet residential areas, from remote border soldier stations to the streets of bustling cities ... People All are paying attention to the live broadcast of various media channels-the first manned landing on the moon in China and the official start of the project of the Guanghan Palace Base!

“... We can see Secretary Qin Feng and Professor Lu Qiuqian whispering on the podium, their expressions are very relaxed, and they look confident in this flight to the moon!” Distance Launch In another hour, the live director gave the shot to Lu Qiuqian and Qin Feng.

All the audiences who saw this scene have a slightly calmer mood, yeah, there is nothing to worry about Professor Lu in us? Now that he has managed to complete the impossible task of leading the national football team to the Olympic gold medal, what's the matter of flying to the moon?

They are also guessing what Qin Feng is saying to Lu Qiuqian. Most netizens think that Qin Feng is asking Lu Qiuqian related technical questions.

I'm afraid no one would think of how much turmoil the Qin Feng and Lu Qiuqian's conversation would cause internationally. "Xiao Lu, how much helium 3 can you bring back when you successfully return to the moon this time? Can you meet the nuclear power plant How long is it used? "

"The total weight of the Yutu Lunar spacecraft is 82 tons, which is 32 tons heavier than the Apollo spacecraft. Among them, the lunar module weighs 28 tons. After using a small nuclear fusion engine, its effective load reaches 35 tons! In addition to the lunar mineral specimens, the remaining 26 tons of payload can be used to carry the initially refined helium 3! "The equipment previously launched on the moon can already carry out preliminary processing of the lunar soil. This time the astronauts brought With the new equipment, it will bring back higher purity helium 3, "We can extract about 5 tons of helium 3 from these raw materials, which is enough for half a year of use nationwide! And for launches like today we can each Every month! "

After using recyclable rocket technology, the launching cost is greatly reduced, coupled with the use of nuclear fusion engines, the manned moon landing is directly the price of cabbage! If Xihe plans to do so, selling the moon landing tour tickets to the world 's richest people can recover the cost of the launch.

"... My dear, you have to take care of black charcoal and Guan Haifa these days, and do n't forget to buy cat food for them and bathe them every day! I will bring you a piece from the moon when I come back Rock as a gift! "At this time, the four astronauts have boarded the spaceship and are saying goodbye to their loved ones before leaving!

Yi Meng, the only female astronaut in this moon landing, was in a video chat with his boyfriend easily, and listening to his tone was like visiting a nearby city for a temporary trip!

The extremely grounded remarks of the astronaut after ninety quickly won the favor of all the young people watching the live broadcast. For a time, her boyfriend became the most jealous person in the world.

“Black charcoal, Guan Haifa, come to beckon to the owner!” At the end of the video, two black cats jumped into the chair under the guidance of the male owner and lay on his lap lazily, raised his paws lazily, shook, and fell down An audience.

“Okay, let’s talk about it first! I’m going to do the final preparations before launching! See you next week!” Yi Meng cut off the video after speaking.

Fortunately, she said that if we get married when we come back to the moon this time, otherwise I will definitely be worried about death! Many people were relieved.

“Report the commander-in-chief, all the launch work is ready! Please instruct!” The on-site commander reported to Lu Qiu Jianhui.

“Enter the five-minute countdown!” Lu Qiujian’s words made all the people watching the live broadcast put down their work and quietly looked at the screen with their breath.

“Four minutes and thirty seconds ... four minutes ... three minutes and thirty seconds ... three minutes ... two minutes and thirty seconds ... “The countdown is getting closer and closer, and the audience’s mood is extremely tense.

“The ten-second countdown begins!” Finally came the most exciting moment, “10, 9, 8, 7, 6, 5, 4, 4, 3, 2, 1! Launch!”

With a single order, the staff pressed the launch button, the Long March 11 rocket ejected a fierce flame, and the rocket carrying the Yutu rocket slowly detached from the launcher and rose into the sky!

“The Rocket is working! It has entered the scheduled orbit!”

“The separation of the escape tower, the separation of the booster, the separation of the first and second stage of the rocket, the separation is successful!”

“The booster is separated, the fairing is separated, and the target is found by USB Radar No. 3!”

“The first-level rocket successfully entered the recovery orbit!”

“Secondary rockets began to separate, and the separation was successful!”

“Yutu engine was successfully started, the arrow boat separated! The separation was successful, the target was detected by the USB radar monitoring station on the 5th, and the target was detected by the monitoring satellite on the 7th!”

“The spacecraft has entered a perigee height of 300 kilometers and an apogee height of 450 kilometers, and is about to enter a predetermined orbit.”

“The spacecraft reached the second cosmic speed, successfully broke away from the gravity of the earth, and began to approach the moon! It is expected that the Yutu will reach the moon in 64 hours! This speed is 9 hours faster than Apollo 11!”

With an exciting command, more than 500 million Chinese people witnessed the successful launch of the first manned spacecraft on the moon! In the process of watching, with the success of every step, huge cheers are issued all over the country. At this moment, even the most demanding bosses and strict teachers will not stop their heartfelt cheers!

“If all goes well, these four astronauts will set foot on the moon in 64 hours I am now curious who will be the first Chinese to step on the moon? What kind of moves will you make? “Lv Qiujian took the tablet and logged in to his account and posted a Weibo! This Weibo once again refreshed the platform’s clicks, comments and forwarding records!

When Yutu escapes the gravity of the earth and enters the lunar orbit, the work of most people in the launch center will come to an end! Qin Feng and Lu Qiujian got up and shook hands with the main staff of the project in order to thank them.

“Major General Liu, thank you for your outstanding contribution to the Chang’e Project!”

“It’s my honor!”

In addition to the local staff, there were several Lucia scientists who were born in the Red Empire but were dug to China after the disintegration of the empire and joined the Chinese nationality.

“Comrade Vasily-Kuznetsov! Thank you very much for your outstanding contribution during the development of the high-thrust rocket!” Qin Feng firmly grasped the hand of the old white-haired scientist.

“When I was young, I always thought that one day I could send astronauts to the moon, but I didn’t expect the ideal place to be but the Red Empire!” Vasily’s eyes were filled with tears and emotions.

#### Chapter 683 - Memories of Vasily

At the night’s celebration feast, Vasily Kuznetsov, who used vodka as a boiled water when he was young, was drunk and pulled Ali who had studied under Vasily Baplovich-Mishen like him. Ksejevic and Makarov cried like a kid who had robbed his beloved toy.

He remembered his beautiful youth spent in the lunar exploration program of the Red Empire. Like most fruitful scientists, Vasily Kuznetsov had a strong curiosity about his future industry in his childhood. heart.

On May 9, 1965, Vasily had just left his hometown in the Ukrainian countryside and entered the school of children of a large state-owned enterprise in Moscow. On his home TV, he witnessed the moon 5 being 64 kilometers away from the moon, preparing to In the final stage of landing, due to equipment failure, the brake rocket failed to ignite, hit the moon directly with great speed and was damaged, and raised a dust cloud 225 kilometers long and 85 kilometers wide on the moon.

Vasily deeply regrets this, and hopes that Korolev, who presides over the Red Empire’s moon exploration program, will be able to do miracles again; however, a few months later, he saw such a message on TV, “... Outstanding scientific and technological worker of our party, great designer and organizer of the Red Empire aerospace cause, the first artificial earth satellite launch vehicle, the first manned spacecraft, the first lunar probe, the first Venus probe , The designer of the first Mars rover, Sergey Pavlovich-Korolev, unfortunately died on January 14, 1966, at the age of 59 ...

“

“It’s too bad! I still want to go to work with his men in the future!” Little Vasily’s mood fell for several days, until January 31, 1966, the lunar exploration team left by Korolev After five failed soft landings on the lunar surface, the Lunar 9 probe entered space orbit with the help of the Lightning rocket.

Three days later, Moon 9 successfully landed on the surface of the moon and sent a signal to the earth 4 minutes later. Seven hours later, the first panoramic photo of the surface of the moon was sent to the earth.

This success cheered the entire Red Empire. Vasily and his friends stood excitedly on the table and yelled, claiming that the Red Empire had once again come to the front of the Americans; he was once again determined to engage in aerospace research. Although Comrade Korolev passed away, his assistant Vasily Baplovich-Mishin has taken over his career. From the current point of view, he seems to be doing well! Maybe he can go to work under his staff in the future.

In order to fulfill his dream, Vasily began to study knowledge in many related fields such as calculus, gas dynamics, materials science and so on.

However, it didn't take long for Apollo 11 of the United States to successfully land on the moon. Armstrong's small step completely broke the dream of the Red Empire taking the lead in landing on the moon! The Red Empire's enthusiasm for the moon landing program has greatly diminished.

In addition, Korolev's successor, Vasily Baplovich-Mishin, did not have the political brilliance that he had. As a result, after several failures, the N-1 launch vehicle program was completely cancelled. Red The empire completely abandoned its plan to reach the moon.

But Vasily still hasn't changed his ideals. He believes that as long as the Red Empire still exists, they can't allow the Americans to monopolize the honor of landing on the moon! He continued to work hard for his dreams. After experiencing hard work, Vasily successfully entered the Moscow Aeronautical Academy's Department of Aircraft Design and began to serve as the director of the rocket teaching and research department, the academician of the Red Imperial Academy of Sciences, and the successor of Korolev Study under Mission's door.

After a long study, Vasily was finally able to enter the space department of the Red Empire to design rockets for the Soyuz spacecraft.

When he first entered the rocket design unit, Vasily was very excited that he would one day realize Korolev's unfulfilled dream and send astronauts from the Red Empire to the moon.

During his visit to China, he also met and exchanged ideas with Chinese Academy of Aerospace Technology Expert Wang Yongzhi who had studied under Academician Mission. At that time, he did not have a good impression of China's aerospace research. They do have unique points in these areas, but their comprehensive strength is far worse than that of the Red Empire.

With the increase in working hours, Vasily's position is getting higher and higher, and gradually become a high-profile young man in the team! Mission even expressed his appreciation for him personally on an informal occasion. If the Red Empire can continue, maybe he can really inherit Mission's position after a long time, and it is not necessarily true to realize Korolev's will.

However, gradually, he found that the funding of the institute was getting less and less, and the young people who were new to the job were more and more confused, and various research plans were repeatedly delayed! In the end, a thunderbolt came and the red empire collapsed!

Lucia, who inherited the Red Empire aerospace heritage, did not have much money to spend on it. In addition to Vasili's origin in Ukraine, he lost his job and once fell to performing on the street to play the accordion to make a living.

Fortunately, the relationship with China had played a role. Academician Wang Yongzhi personally went to Lucia to invite him to join China's space program! Vassily, who had nowhere to go, accepted this invitation with reluctance and enthusiasm; he began to make his own efforts for the aerospace cause of another red country. After more than ten years, a young talent came. Here, although he does not appear often, he will greatly advance the work of the Institute every time he arrives, and an incredible achievement has become a reality under his work.

Vassily's already dead heart became excited again. Perhaps under his leadership, maybe he can really realize his dream when he was young?

Decades of struggle finally saw the dawn of victory at present, no wonder Vasily would be so gaffe today, but even though he was drunk and unconscious, Vasily's mouth still had a smile on his lips.

After 64 hours, the entire country focused on the moon. With the attention of hundreds of millions of people, the lunar module of the Yutu spacecraft successfully landed at a predetermined location on the surface of the moon.

"... we can see that the landing is very smooth. After the door of the lunar module is opened, our astronauts can come down from the ramp and step on the surface of the moon! Let's guess Who on earth will be the first astronaut to go down the ramp?" The host of the live broadcast of the court station broadcast the latest progress in excitement.

#### Chapter 684 - Moon landing style

"The hatch has been opened! The first astronaut has walked out of the lunar module! From the symbol outside the spacesuit, the three male astronauts gave this honor to the only female astronaut Yi Meng!" A lucky and hard-working post-90s female astronaut has become the envy of all Chinese, "Yi Meng is about to become the first Chinese to step on the moon's surface, and will also become a successor to Neil Armstrong and Buzz. -Aldrin, Pete Conrad, Alan Bin, Alan Shepard, Edgar Mitchell, David Scott, James Elvin, John Young, Charles -Duke, Eugene Selnan, Harrison Smit, the thirteenth human to have ever landed on the moon! At the same time, because the twelve

astronauts who landed on the moon in the Apollo project were all male, she It was also the first woman to reach the moon. “

The host quickly introduced the background knowledge, and it was difficult for him to say so many names in one breath. In his talking, Yi Meng had already walked down the ramp of the lunar module and landed firmly on the surface of the moon. We will wait and see what way Yimeng will use to commemorate this great moon landing! “

People remembered Armstrong’s famous phrase “This is a small step for me personally, but it is a big step for mankind!” What will Yi Meng do?

“We saw Yi Meng raised his right hand, the \*\*\*\*\* and the index finger, the ring finger and the little finger, and the thumb was as wide as possible.” The host raised his voice, “This gesture is the middle half of the American movie” Star Trek “. The signature movement of the Vulcan and half-human Spock is called Vulcan’s hand-raising ceremony, which means ‘endless, prosperous and prosperous’; Yi Meng expressed this gesture to China and even the entire human race blessing of!”

“Endless life, prosperity and prosperity” is the dream of all Chinese people. Everyone hopes that this country with a long history of 5,000 years can exist forever. One day, the footsteps of Chinese people can walk through the universe, right? After hearing the host’s explanation, everyone thought so. In the past five thousand years, we have traveled to every corner of the earth, where there are humans, there are Chinese people, and now we are finally beginning to move towards the universe!

“There is another meaning of this gesture is ‘greeting from another planet’, we have reason to believe that this is not the last Chinese planet to set foot on, and we will also be on Mars and Saturn in the near future ... Even out of the solar system! Such greetings will appear on countless planets! “The host was so excited that he could not.

This gesture has also quickly become a popular expression of bib spread! Countless people began to look for or made a variety of Vulcan’s hand gestures, and posted them on the bib, in the QQ group, and in the WeChat circle of friends ... “Endless life, prosperity” Eight The word has also become the hottest vocabulary this year.

The screenshots and PS are still not enjoyable. Many netizens started to use this gesture to take pictures and upload them. Among them were the gray-haired tech workers in the launch center, the toddler children, and the office building. It is full of motivated white-collar elites, as well as hard workers on the assembly line; regardless of identity, age, status and occupation, Vulcan’s hand-launch has become their common language.

Then Qin Feng's move made this gesture completely red, and he also put this gesture in the live TV speech after the successful landing on the moon, "Endless life, prosperity, this is the best for us Chinese Blessings; we have reason to believe that after hundreds of years of sinking, our country of China has seen the dawn of a great national revival ... "

Qin Feng slowly recalled the beginning of the exploration of the universe by the Chinese. From the former public loser making wooden birds for three days, to the end of the Ming Dynasty, Wanhua took a rocket to fly, becoming the first hero in China dedicated to the cause of space. Then Feng Ru made the first plane of China; from the Dongfanghong satellite to the world, the singing of the song was excited all over the world, to the Shenzhou spacecraft carrying Yang Liwei to the moon, and today's successful moon landing! A few words of passion filled people's hearts and tears.

Several hours after Qin Feng's speech, a MV produced by netizens once again set off a climax. These netizens cut the major events of China's exploration of space mentioned in Qin Feng's speech together. The song of "Heart" appeared to netizens one by one.

Finally, when Yi Meng landed on the moon and laid out a Vulcan hand-raising ceremony, it reached its peak, followed by their selected netizens imitating Yi Meng's photos of Vulcan hand-raising ceremony! So after the take-off commander of the aircraft carrier Liaoning took a semi-squat posture, his right hand curled up with his index finger and middle finger, and the take-off command gesture toward the front of the flight deck became popular, and another gesture became the object of imitation.

Following the previous name of "aircraft carrier style", the media referred to this imitation craze as "moon landing style" and conducted in-depth interpretations on major media platforms.

The court station also commented on this move by netizens in the evening news. "The popularity of the 'moon landing style' shows people's excitement about the progress of the country. For senior aerospace fans, not only it only represents the love for the motherland, but also the bitter journey of China's space industry from weak to strong, from near ground to the moon. It is a great consolation; it is the increasingly powerful motherland and the pride of the masses ... "

There is a joy on the earth The four astronauts on the cold moon began to be nervous and busy, and then people strangely saw that in the shots given by the guide, they were mostly cute. The other three astronauts rarely showed up; netizens couldn't help but guess.

"I think the other three astronauts must have gone to the Americans for evidence of landing on the moon! Then they found nothing, there was no American flag, no footprints from Armstrong, and they accidentally discovered the well-preserved bamboo slips and Wanhua rockets. The wreckage of

Chang'e, the plumage of Chang'e ... Can we say that the moon has been the territory of China since ancient times? “

“The means upstairs is simply rogue! But I like it!”

“Like +63325!”

Other countries in the world have also expressed great concern about the live broadcast of the Chinese moon landing, especially the people of the United States. The Apollo project has indeed greatly improved the country's technological level, allowing them to walk in front of the Red Empire in many fields. ! But they did not directly benefit from landing on the moon. Now that the Chinese are so enthusiastic about landing on the moon, they are also planning to establish a permanent base on the moon. What is this for?

#### Chapter 685 - Moon farming

Of course, the other three astronauts are busy installing helium 3 mining equipment. This kind of thing has not yet reached the time when it can be made public, and it will definitely not appear in the live broadcast.

However, it's not appropriate for them not to appear in the camera for a long time. Soon they returned to the camera and started another important work. “Audience friends, we can see that the three astronauts are building a closed loop. The loop life support system, this system is the core technology for humans to achieve long-term survival in outer space. It is characterized by the fact that manned aircraft can no longer require little or no ground support after entering outer space, and oxygen, water and food pass through the system. Biotechnology enables regeneration, and astronauts can work and live in the station for a long time, making long-term manned spaceflight and planetary exploration possible. “

“We invited the designer of the system, Professor Liu of the School of Biological and Medical Engineering of Beijing University of Aeronautics and Astronautics, to introduce the system to us!” For this live broadcast, Chaotingtai contacted many experts, and now the professor Liu also appeared In the studio, he is responsible for introducing this advanced system to audiences across the country.

“In fact, this is not the first time that a life support system has appeared. Constantine Tsiolkovsky, father of the Red Empire and scientist of the Red Empire, once proposed the idea of establishing an environment suitable for human existence on the space station with the help of the biological cycle at the end of the 19th century. That is, based on the principles of the ecosystem, biotechnology and engineering control technology are organically combined to build an artificial ecosystem composed of plants, animals, and microorganisms. Water and food, substances necessary for human life can be

recycled within the system, and provide similar for the occupants Due to the ecological environment of the Earth 's biosphere, humans enter this artificial ecosystem and become the consumer chain of the ecosystem, and at the same time play the role of controller to form a closed artificial ecosystem. “

“This idea was put into practice by the United States and the Red Empire, and two biological regeneration life support systems have been built in succession; and the biosphere plan we are more familiar with can be regarded as a large-scale application of this system!” Professor Liu first recounted the fate of this system. Come, and then show a few pictures, “China has become the third country in the world to establish this system in space, and has already reached the forefront of the world! We have conducted a long test in the Moon Palace Space Station!”

“You can see the panoramic view of the system in this picture. They are composed of two plant cabins and a comprehensive silo!” The building that looks extremely sci-fi is densely packed with several layers of short wheat, peanuts and other grains. There are carrots, green beans, strawberries and other vegetables and fruits. “These plant seeds are high-yielding crops that we have carefully selected in cooperation with the agricultural department to provide astronauts with various nutrients required for survival. In addition, we are still integrating Tenebrio insects are kept in the cabin, which can provide protein to astronauts. “

As soon as these photos came out, netizens were unable to vomit! How much do Chinese people love farming! In the yards of various overseas companies and in the gardens of embassies, the Chinese have opened up land to grow vegetables they like to eat. Now they have brought this spirit to the universe.

“Really there are carrots! Are they going to use them to attract Yutu? There are also strawberries. I’m curious if the strawberries grown on the moon will be sweeter than those grown on the earth!”

“Protest, why not grow rice on the moon! Not happy without rice noodles!”

“This is because rice has an anaerobic period, and methane gas will be produced at this stage, which is not conducive to system circulation!” Xueba, a botanist, explained.

On the TV screen, Professor Liu continued to introduce the situation of the system. “In the previous experiment, our experimenters survived in this system for 104 days, which is enough time for these astronauts to complete the initial mission! You can use the life support system to get the food, oxygen and water you need every day! “

“After the system is built, there is no need to prepare a lot of water and food for them in the subsequent moon launch, which can greatly save space for loading other items!” Professor Liu still has some words not They said that they also used the latest superconducting materials when powering this system, so that this system can be realized. “In addition, we are still working on a new generation of system research! We hope that one day in the future The cost of space planting has been reduced to a level that ordinary people can afford! Greatly alleviate the food crisis caused by reduced arable land and environmental pollution. “

Hey, this idea sounds very good! Think about it, since we Chinese people can farm in all parts of the world, of course we can also grow in the whole universe!

“At that time, we will spread a large area of planting sheds on the moon, and we will plant carrots in Yishui’er, which can be named as” Yutu “carrots, and they are guaranteed to sell hot! It ’s time to ask Matt Damon to advertise this kind of potato! Plant rice on Mercury ... “Someone started to come to a special crop plantation of planetary scale from YY, one planet grows a crop, think about it Just feel it!

“Hey, although Mercury’s name carries a word of water! But there is no water on it! How do you grow rice? And the cultivation of a single plant is easy to cause irresistible lesions!” The audiences in other countries see this scene are dumbfounded. Hua Guo really deserves to be a farming civilization with a history of five thousand years! Even if they have entered the industrial society now, they have already landed on the moon, but they still miss the old farm of farming! Living astronauts turned into peasants!

We are not just working as farmers, but our main job is actually working as a worker to mine! If the four astronauts were to hear such comments, would they probably answer that?

In the first phase of the moon landing project, they built a preliminary closed-loop life support system, completed the combination of moon soil excavation robots, and also installed preliminary helium 3 extraction equipment at the base! When they return to Earth after completing the first phase of their work, they will bring back enough helium 3 raw materials for the entire six-month power supply of China.

In the next few years, with the continuous improvement of the permanent moon base of Guanghan Palace, the production of helium 3 will continue to increase; by that time, I am afraid that for a long time no country can break the Chinese The monopoly of key energy! Because even the rice country, they may not have the energy to invest in it now?

Chapter 686 - We are developing countries

“According to the” United Nations Outer Space Treaty “signed in 1967, the moon belongs to all mankind! Has China’s establishment of a permanent base on the moon violated this treaty?” At the routine press conference after the successful landing on the moon, The spokesman for the moon landing program was bombarded by journalists all over the world.

“Accurately, what the” United Nations Outer Space Treaty “signed in 1967 stipulates is that no country can declare its own sovereignty over the moon, and our country of China has not put forward claims on the moon’s sovereignty! What is your question? Speaking of it? “The spokesperson’s answer disappointed those who wanted to hear since ancient times.

However, the next sentence made them laugh, “Hua Guo welcomes all countries in the world to participate in the exploration of the moon. We look forward to seeing more countries on the moon!”

Haha, isn’t this a bully! In addition to China and Rice, which country in the world is capable of sending astronauts to the moon? Moreover, the United States was trapped by the Norfolk meteorite, and I am afraid that it will be impossible to start the Apollo program again for a long time! What’s the point of this welcome?

Yes, we welcome you to the moon, but whether you can go on board or not is not our business! You can’t let us transport your astronauts to the moon? Sorry, our research project in China has not been completed yet! There is really no way to send you up! But you can wait patiently, maybe we can open up a lunar tourist route in ten or eight years, and then you will queue up to sign up!

“What is your next plan after this successful moon landing?” A reporter with the Discovery Channel logo stood up and asked.

“Continue to send more astronauts to the moon!” The spokesperson replied without hesitation, “The four astronauts will return to Earth after completing the initial construction of the base, and the next batch of astronauts will take over their work Continue to build the Guanghan Palace base and carry out a series of scientific research. “The spokesperson pressed the remote control device to display the next stage node list of the moon landing plan on the large screen. Six launches were scheduled during the time, and this number dazzled all the reporters present.

“Isn’t it too impatient to carry out such frequent launches? Especially when China still has so many poor people, is it not appropriate to use so much money for unrewarded space exploration? “A reporter from China asked.

“First of all, I want to emphasize that our launch cost has been published on the official website! You can see that this cost is much lower than the cost of the Apollo program in the United States!

For our country, the pressure is not great! As for you I do n't agree with what I said is not rewarded! "The spokesperson replied with a smile. " Everyone can clearly see that the moon landing plan is part of the Xihe plan, and since the Xihe plan was established, the tablet has been successfully developed. , New batteries and other by-products that greatly promote people's livelihood! The economic benefits brought by these products have been enough to prove that our research is extremely beneficial! "

"At the same time, the development of Xihe plan has driven the discovery of high-tech fields in our country, provided tens of thousands of jobs, greatly promoted the increase of employment rate! The orders issued by Xihe plan also promoted a large number of high Technology companies are thriving, and the development of these companies has provided more jobs and paid huge taxes. The state can use these taxes for infrastructure in backward areas, thereby driving economic development in the region! He said that the Xihe plan has greatly promoted the progress of our country's poverty eradication work! "The spokesperson's words made them speechless.

"Does the success of the moon landing plan mean that China has become the world's top technological power?" A reporter from Neon TV asked.

"I can't say that yet! As we all know, our country is still a developing country!" The spokesperson again made this universal excuse and refused to admit this. "The development time is still short, although some achievements have been made in certain fields, But it is still catching up in more areas! "

One big killer was not enough, and then he threw out a second big killer, "Everyone knows that China has a population of 1.4 billion, and the four astronauts sound like a lot, but divided by the big denominator of 1.4 billion It seems trivial! We need to work harder to catch up! "

Is it really appropriate for you to measure per capita here? As for how do these words of developing countries sound like a joke? A developing country sending astronauts to the moon? A developing country that has established a permanent base on the moon? Developing countries using recyclable rockets to launch space devices?

GDP ranks second in the world and looks to become the world 's first developing country soon? A developing country with the world's most advanced high-speed rail technology, battery technology, and aerospace technology? The developing country with the largest number of computers and mobile phones in the world? Your sister in development!

Reporters from countless developing countries roared in their hearts, you go away! We don't have a companion like you! A reporter from a developed country smiles bitterly in your heart. You are still

calling yourself a developing country like this. What about those of us that haven't even launched lunar probes a few times?

After the articles of the reporters were sent back to their home countries, the term developing country quickly became a hot topic among countries:

"The only country in the world with an economic power and a developing country swapping it."

"Hua Guo will never be a developed country. They didn't even plan to be!"

"If the adults of Hua Guo are developing countries, then the third-placed neon is also a developing country?"

"We are ranked fourth in Germany, it must be a developing country!"

"France, ranked fifth, said it is also developing."

"Sixth Britain said, let's join the big family of developing countries together!"

"The United States should cry. Isn't there only one developed country left in this world? It's so lonely!"

"Your shame! It's like the kind of person who drives a premium car to fly around and receives the living allowance! Woooooo, I really want to be such a guy!"

No matter how they talk, Hua Guo still has n't changed its plan for the construction of the Guanghan Palace base. Two years have passed slowly. The first phase of the construction of the Guanghan Palace base in China has been completed. A perfect system can At the same time accommodate more than ten people to work at the moon base! The mining of helium 3 is also very smooth.

Chapter 687 - Surprising Forbes

It was already past 11 o'clock in the evening. The 27th floor of a high-end office building in Beijing was still brightly lit. The sound of telephone, keyboard and fax machine mixed together, and it seemed extremely busy.

From the logo wall at the front desk, you can see that this is the office of a high-end financial magazine. Tonight is the day when their magazine is written. Everyone is waiting for a very important form, which will be the core of their next issue. content.

“Kevin, go call and remind me, no matter if they have-any-reason, I will get this latest rich-list before twelve o’clock!” The door of the editor’s office was suddenly opened. The man with gold wire glasses shouted out his head.

“OK, I have a call every five minutes!” Please forgive them for such a conversation. In China, they like to mix Chinese and English. Except for the hairdressers, these guys in the financial circle.

“Ding Dong, you have new mail!” The tone of Kevin’s computer attracted everyone’s eyes in the office. He glanced at it and immediately shouted excitedly, “Exciting! It is the message we have been waiting for! “

With a hula, everyone gathered around, and the editor-in-chief directly shouted, “What are you waiting for? Quickly open the mail, let’s see whether this year’s richest-man in China is Wang Chuanfu or Li Shufu!”

“No one wants to bet? I guess Wang Chuanfu spends on the pub for a while!” Taking advantage of the unopened work in Fujian, someone opened.

“I crush Li Shufu! Their cars are selling well in Europe this year! The American market also occupies a certain share!” Someone challenged.

“Why not Jack of the Forty Thieves, his company performed very well last year? If no one is optimistic about him, I’ll make an upset!” Others also said their choices.

Ding Dong, the attachment was downloaded, and Kevin immediately opened the document named “China Rich List 2020”. At this time of year, this list will arouse the curiosity of countless people. Who will be this year? Occupy the top position and get the title of the richest man in China?

“It’s Wang Chuanfu! He became the richest man in China with total assets of US \$ 102.4 billion. Li Shufu followed closely with total assets of US \$ 99.8 billion. Lewis ranked third. His coarse grain mobile phone just beat Apple and Samsung to become The world ’s number one smartphone brand, which also brought Lewis ’total assets to \$ 91.6 billion!” Kevin reported the names and total assets of the top three in one breath. “The fourth, fifth, and sixth places are all high-tech. Company! Wow, this looks much more comfortable than all real estate developers in previous years! “

“Yes!” The man who just opened the game gambled for his wise choice. “I’ll call to book a table. I’m going to have a drink tonight!”

“Wait! Kevin, did you read it right?” The editor’s expression became very excited. “Really such a number? I remember last year’s global richest-man was Microsoft’s Bill-Gates, and his total assets also But it is only 89 billion US dollars! Did the richest man in the world become a Chinese this year? “

“Last year, all three of them made it to the top ten. Isn’t it strange to be number one now?” Despite this, everyone in the office realized that their front page headline might be changed tomorrow!

“The world list has also been passed!” Kevin received a new email, which quickly confirmed their views. These three Chinese rich people occupy the top three in the global rich list, Bill Gate ’s classmate fell to fourth, which seems to be his lowest ranking in nearly three decades, and the fifth is Google ’s Larry Peiqi.

“Bill-Gates’ total assets are 91.5 billion US dollars, which is only 100 million US dollars less than Lewis!” 100 million US dollars is an unattainable number for ordinary people, but it is very small on this list. There is a slight difference in the statistical methods. Lei Busi may have to change positions with his classmates at Bill Gate.

Everyone had to be happy about Lei Busi’s luck, because for them, the Chinese monopoly of the top three in the world’s rich list is more valuable than the monopoly of the first, second, and fourth! It’s just that if that’s the case, I’m probably going to stay in the office all night again tonight!

“The pub party tonight is cancelled! You immediately write a new headline-news! Cindy, go help out to call for supper and help us prepare coffee and tea!” The editor really issued the order as they thought, “Everyone Work hard, make this issue good, and wait until this time is over! I invite you to go to the yacht party! “

Cindy, who was in charge of the affairs, immediately picked up the phone and burst out a long list of requests to the sellers without asking them what they needed. After working here for so long, she was very familiar with the taste of everyone in the company! Hang up the phone, the coffee machine begins to make a grunting sound again!

Other people in the office did not complain, for these elites in the financial industry, working overtime overnight is simply normal! They also understand how much this form will bring to their

magazines! This also means that he will win more bonuses, so everyone rushed back to their desks and started to work hard for this headline.

These people have different working habits. Some of them sit cross-legged with laptops on the ground and quickly strike the keyboard; some abandon advanced electronic equipment and write and write on the thick Montblanc multi-function leather notebook; Lit a cigar in his mouth, closed his eyes and thought about what kind of sentence in his mind to hold the reader's gaze at the first moment to arouse their curiosity.

Simply speaking, it seems meaningless for the Chinese to take the throne of the world's richest man? Since the second half of last year, everyone has been discussing this matter. The rapid development of the new battery industry has made the assets of those lucky people who have a lot of shares in the new battery association rise rapidly! Their ascending to the top three is considered reasonable by many people; and if it is not for Huahua's unique shareholding mechanism, Ren Zhenfei may only rank higher than them! Doesn't this mean that the top four are monopolized by the Chinese?

The editor-in-chief quickly pondered, writing down one keyword after another in the notebook, electric cars, new battery associations, new smartphones ... and tried to dig deeper from these keywords Something comes!

"Chief editor! I have an idea!" Kevin seemed to think of something! Jumping excitedly and shouting loudly.

"Oh? What's the idea?" The editor-in-chief was ready to immediately convene a meeting for discussion.

"Editor-in-chief! Look at these people!" Kevin circled the names of the top five in the world's richest man's list on his tablet. "Did you find that they have nothing in common?"

Chapter 688 - Lu Qiujian's Rich List

"What are you talking about?" The editor-in-chief is a little puzzled. You have to say that the three in China are okay, but what do they have to do with Gates and Pei Qi?

"Although Gates and Peiqi have been regulars on the global rich list for a long time! But it is undeniable that some of their important wealth growth in recent years has come from monopolies on tablet PCs in several regions! Will be at the top of the rich list, but there will definitely be some decline in the ranking! "Kevin excitedly forgot to add English when speaking, and wrote a few words on the tablet next to their names!

“Let’s look at the three of our country again. What is the root cause of their asset surge? Haven’t they got the opportunity to participate in the new battery industry? Without new batteries, how can Wang Chuanfu and Li Shufu cars be sold all over the world? ? Neon and South Korea, which have always been famous in the automotive market, now have a large number of their products, and the share of the United States is gradually increasing! It is for these reasons that they have accumulated a huge amount of wealth! “

“And if Lewis didn’t use the ultra-long standby battery as an entry point, how could it be squeezed into the smartphone market? And the VR phone they rely on to beat Apple recently is not a product they developed!” Kevin quickly changed a few A short line with new batteries and VR technology next to the three of them.

Then the tablet, new battery and VR technology all point to another term-Xihe plan, “They all benefit from Xihe plan! Use the advanced technology of Xihe plan to separate from the international market A big piece of cake! It can be said that if there is no Xi and plan, the current global rich list will definitely not be like this! “

“Yes! That’s it!” The editor-in-chief immediately responded. He knew that the headlines for their next issue had been found. “Call everyone to the meeting room to have a brainstorm. Let’s create a sensational news together! “

Coming to the meeting room, the editor-in-chief gave Kevin the opportunity to speak, “Kevin, tell everyone what you just thought! Let’s take a look at how this view should be operated to maximize the benefits!”

Kevin quickly wrote the reasoning process he just drew on the whiteboard. “... From this, we can see that Xi and the plan have dominated the ranking of the global rich list to some extent! Li Shufu , Wang Chuanfu and Lei Busi benefited from this plan and became the top three richest in the world! Gates and Peiqi have also achieved considerable growth in their assets because of this plan! In the first two auctions, he made a decisive bet and jumped into the forefront of the world’s top 500! If it is not their company’s unique equity mechanism, Ren Zhenfei will also occupy a fairly high position on this list! “

“So we plan to write an in-depth article with the title of” The Rich List Dominated by Xihe Project “! Excavate in detail the impact on the world economy since Xihe Project was established, and count the companies that have benefited from Xihe Project List, list accurate data to compare their benefits and market share changes before and after contact with Xihe Plan! List again the well-known companies and bankrupt companies whose competitiveness has gradually declined due to the emergence of Xihe Plan “Famous rich!” The editor-in-chief’s eyes shone with excitement, “For

example, the Wayne Group of Bankruptcy of the United States, for example, Toyota, whose market share has fallen sharply, for example, Tesla owner Elon-Ma, who has just fallen into extreme poverty Sk! “

“This will be a very exciting article!” The editor-in-chief set the tone for this article, “Taking the theme just mentioned, everyone talk about what can be modified!”

“I think it seems that gimmicks are not enough if you use the name of Xihe Plan!” An OL with a bone-like temperament stood up and directly marked X on the whiteboard with the words Xi and Plan! Then write the name of Lu Qiujian next to him, “It is better to replace Xi Hejian with Professor Lu Qiujian! Xi He project is conducted under the leadership of Professor Lu, and Professor Lu can be used instead; for ordinary people, Professor Lu ’s popularity and topicality are much higher than Xihe ’s plan! And the “Global Rich List controlled by Lu Qiujian” sounds much more powerful than the title you just mentioned! ”

In the meeting room, they talked about each other immediately. They compared Xihe plan from various angles and Lu Qiujian used it better in this news. Eventually they reached an agreement, and the effect of using Lu Qiujian was completely exploded. Xi and plan! “Lv Qiujian controls the global rich list” sounds like a fan of the big devil rule the world, it is simply too eye-catching!

“That’s it for the main title! And what’s the subtitle? Terry, are you going to collect the data? Kevin writes the lead? Martha writes the comment? Evelyn, you go and find all the photos that Professor Lu can find! We choose One of the most domineering is the cover of the next issue of the magazine! “The general direction has been determined, the editor-in-chief immediately began to divide the work, and the whole office is busy again.

“This photo cannot be used indiscriminately by Secretary Qin! The background impact is not enough! This expression does not match the article, it is too gentle!” The editor-in-chief took the tablet handed over by Evelyn and quickly looked at the pictures. Lu Qiujian’s pictures have some doubts in my heart. Hey, Professor Lu seems to be thirty-seven this year? Why doesn’t it seem to be less than thirty?

Terry opens three notebooks at the same time The data that can be used for writing articles such as the list of the top 500 companies and reports of major companies in recent years are collated and sent to Kevin, and then Kevin starts based on these data Writing an article, Martha bit her pen and wondered how to comment on this phenomenon. Cindy walked quietly around the crowd and filled their coffee cups.

“Just use this one!” After repeated comparisons, the editor finally found the photo he wanted. “You go to fix this picture again, remove the other characters in the photo, and add the title we just drafted below! “

“Get it! The editor-in-chief has finished writing my article!” Kevin took the lead in raising his hand three hours later.

“Five minutes to comment!” Martha shook her empty coffee cup and shook Cindy!

“The cover is drawing!” Evelyn’s work is also coming to an end!

“Very good! The article sent me to see!” The editor-in-chief looked at the time and seemed to be in time for printing!

After the final proofreading and revision, this article was finally sent to the printing house that had been waiting for a long time. The machine was booming, and a fresh and hot magazine was sent to all parts of the country the next afternoon!

Chapter 689 - Won the grand prize again

Ok? How did Professor Lu go to the cover of Finance and Economics Magazine! Is there any important auction recently? This was the first reaction of many big financiers, big entrepreneurs, and big businessmen after seeing this magazine; they quickly picked it up and read it.

I saw that the cover used a still photo of Lv Qiujian when he appeared in “Three Body”. He stood behind the porthole of the spaceship in outer space, with his hands on his chest, looking down at the blue earth! As if the entire world were under his control, next to it was a line of eye-catching headlines-“Lv Qiujian Controlled the Global Rich List.”

The subtitle below reads-“You may not see his name on the rich list, but he can decide who can become the richest man in the world!”

Hiss ~ Almost everyone who saw these two sentences couldn’t help but take a breath. What on earth did this magazine want to say? Then opened the magazine text, and they suddenly realized when they saw the latest year’s global rich list! The top five tycoons in the global rich list all got their chances from Lu Qiujian, and they only occupy today’s position! It is no exaggeration to say that Lu Qiujian controls the ranking of the global rich list!

And these five rich people are not all his achievements. Looking at the back, Amazon's Jeff Bezos, Microsoft's Paul Allen, Google's Sergey Brin, Lenovo's Liu Chuanzhi, etc. exceeded double digits. The wealthy of the company has gained a substantial increase in assets because of Lu Qiujian; on the other hand, because of the competitive relationship with the products launched by Lu Qiujian, the volume of the company has disappeared from the list for many years, the South Korean Samsung Group The total assets of Li Jianxi, Steffen Covante and Susannah Kratten of BMW in Germany, and Hyundai Zheng Mengjiu in South Korea are declining.

At first glance, it seems that those who have a lot of prosperity and those who are prosperous will die! These business tycoons carefully thought about their company's changes in recent years, and keenly realized that all projects related to Xi and the plan or Lu Qiujian made a lot of profits for them, and even helped "Three The "Sports" series of factories that manufacture peripheral products have made a lot of money; on the other hand, those projects with competitive relations have suffered a loss, from digital products to the automotive industry to VR technology!

Looking at the names of the top three on the rankings, these big bosses couldn't help but feel a sense of sourness; hey, you guys are really lucky, they took the ride of Professor Lu early, and now they have become the world. The top three in the rich list! Why didn't I seize this opportunity! Didn't the three of them be much stronger than me earlier?

They made up their minds secretly, no, I have to find someone to follow Professor Lu's developments in time, if there is a similar opportunity, don't hesitate, even if you are ruined, you have to participate! Professor Lu will never let our investment float!

For ordinary people, seeing the top three in the global rich list at the same time is replaced by a sense of national pride in the hearts of Chinese people, and the psychology of Qiu Fu is also slightly relaxed on weekdays. After all, these three are not those Unscrupulous developers, who make money with high technology, they do n't have too much slander!

When they saw the impact of Lu Qiujian on this list, they were even more excited! Seeing Muiyou, those who show off their wealth on the Internet are simply weak! People quietly determine the attribution of the richest man in the world! This is more difficult than getting to the top of the rich list?

If Professor Lu wants to go into business, I am afraid that becoming the world's richest man is also an extremely easy thing? But in that case his role is relatively limited! It will not have such a profound impact on China as it is now! Take a look at the electric cars running on the street, the tablet computer in your hand, the NPC with high IQ and realistic VR technology of the new generation of online games, and the permanent base on the moon. Which is not done by Professor Lu?

With Professor Lu in China, we can probably see the future world depicted in the “Three Body” series of movies in our lifetime? Of course, it was an era without threats from the three bodies!

The Lu Qiujian page on the bib directly exploded, and countless people left a message under his bib, “Professor Lu, you must say something about your next chance to get rich! I will sell my sister by then All must be mixed! “

“Is the sister on the right swollen? Do I sell a new version of Overwatch?”

“I’m stupid on the right, how can my sister be overwatch pioneer? Especially playing with a VR system is so much fun!”

This phenomenon can be seen by the envy of countless company bosses, who just want to send Lu Qiujian a box of cash immediately, and only ask him to say something on the bib. You can immediately set a daily limit!

So after following a professor in basketball and Archimedes in football, Lu Qiujian also had a new nickname in the economic circle-God of Wealth! The God of Wealth who can bring you countless wealth! Did n’t Li Shufu and Wang Chuanfu get the favor of the God of Wealth before they got their current wealth?

Lu Qiujian didn’t have time to take care of this at this time. He is now in the Beijing City Mass Hall, waiting for the opening of this year’s China Science and Technology Awards Conference with science and technology workers from across the country.

It did n’t take long Qin Feng appeared on the theme stage with smiles and several elders such as Lu Kunqi. Careful people will find that there are more smiles on Qin Feng ’s face than when he first took office. A lot, presumably because of the rapid development of China in recent years, right?

“... The past year has been a year in which China has made significant achievements in overcoming multiple difficulties and challenges, as well as a year of good news in the scientific and technological community. The first-phase project of Guanghan Palace Base was successfully completed, and the second-phase project was officially launched; The exploration of the near-Earth asteroid belt has made remarkable achievements; a new generation of electric vehicles in China has begun to completely replace old energy vehicles ... “After the national anthem was played, Lu Kunqi first published an enthusiastic In his speech, he affirmed and praised the achievements made

by the Chinese science and technology community in the past year, and encouraged everyone to continue their efforts.

Then, another elder read out the “Decision of the Government Administration on the National Science and Technology Awards 2019”. The first award was convincing and surprising to everyone.

Qin Feng personally awarded Lu Qiujian the highest China Science and Technology Award this year. No one will question this result. According to Lu Qiujian’s achievements, he should have already won the prize! But the reason for the award surprised everyone. The decision did not disclose the reason for Lu Qiujian’s award, but vaguely stated that Lu Qiujian had made outstanding contributions in a certain confidential work, so he was awarded the award!

#### Chapter 690 - Reasons for winning

This is somewhat unreasonable! You have to say that Lu Qiujian obtained it with the help of gravitational waves, new battery technology, moon landing plan, recyclable rocket technology, or even dark matter completed in Europe, Poincaré conjecture completed in the United States, and even the Langlands program a long time ago. This award will do! Anyway, these achievements are fully up to the standard of the highest science and technology award in China! But what do you mean by keeping it secret?

There must be a clear reason for the award. If it does involve secrecy, it must be delayed or uncommonly commended. Isn’t this principle proposed by Lu Qiujian a few years ago? This clause has been implemented very smoothly in recent years. Why is it that it is his turn to violate this rule now?

There was a roar of noise at the scene, and the scientists at the meeting whispered in silence, but Qin Feng and Lu Qiujian on the stage were all smiling with a smile, which did not seem to be affected.

Passed the award certificate and 10 million cash checks-yes, after these years of development, China’s economic conditions have continued to improve, so the bonus of the highest science and technology award has also increased, the proportion is still the same as before, one million To reward individuals, nine million was invested in the winner’s project as scientific research funds- Qin Feng said in a voice that only he and Lv Qiujian could hear, “After waiting for so many years, I finally waited for the award of this award to you. ! “

“Although I have won many awards before! But this one is what excites me the most!” Although the highest science and technology award in China is not as authoritative as the Nobel Prize and the Fields Prize, he represents the Chinese The lifetime affirmation of these scientists is that the scientists who have previously won this award: Yuan Longping, Sun Jiadong, Cheng Kaijia, Yu

Min, and others are all dedicated to the development of China's scientific and technological careers. Qiu Jianshen is proud.

"There may be many people who have doubts about this award!" After the award was over, Qin Feng took the microphone and began to speak, and the scene suddenly became quiet. "Indeed, the delay in awarding the award of confidentiality is a principle proposed and promoted by Professor Lu. We strictly implemented this rule in the past and will continue to implement it in the future! "

Qin Feng's words are even more confusing. Since both the past and the future will be implemented, what does it mean to make an exception here in Lu Qiujian? If we really want to give him an award, we would n't have any opinions about just turning one of the above achievements? Why bother to become what it is now?

Perhaps guessing what was in their minds, Qin Feng quickly responded positively, "The reason for this is that this achievement can be made public in a short time, so we gave Professor Lu a little time in advance and awarded This is not a violation of this rule! "

"I believe you will not have any doubts about Professor Lu when he knows exactly what he has done! Don't worry, this day is not far away!" Qin Feng said above, Ma Yang, Ye Chu, etc. The core staff of Xihe Project endured the smile desperately, the tears in the corner of his eyes kept falling, and the hard work of more than ten years can finally be made public today!

In the past, because of participating in this work, I didn't feel less blamed by my family. When asked, they didn't want to lie or express themselves, let alone torture people! Well now, this great achievement can be made public in a few days, and all the misunderstandings I have suffered in the past can be revealed!

Shouldn't the stars blame me for not having time to watch the stars with her now? Ma Yang thought to himself that he had officially married Qi Yunxing a few years ago. The encounter at Lv Qiujian's wedding made them attract each other and overcome difficulties. After the marriage, the two were busy and met each other. Rarely, now I seem to be able to spend a little more time with her!

It's a pity that I couldn't accompany Mei Mei to watch a game abroad. Now my career can let everyone know, but she has already retired, and I still can't accompany her to travel abroad! But there are many places in China that are worth visiting! Or can we go to the moon base to make up for the most unique honeymoon trip? Ye Chu thought so.

With the inexhaustible energy provided by controlled nuclear fusion and the endless resources in space, does this mean that a materially rich society can be realized in the near future? The loyal proletarian revolutionary soldier Li Yan or Comrade Arthur is full of beautiful visions for the future.

It's my life's honor to be able to join Xihe Project. It is more valuable to be able to leave my name in such a great project than to become a billionaire in the financial circle! Li Long, who was drawn from the financial company to Xihe by Lu Qiuqian, countless times fortunately for his original choice.

After going back, go to Laoliang Grave and give him three times the wine, tell him that our two jobs are not done in vain, and now we have finally come to the last moment in peace! The white-haired academician Shangyang wiped a tear. Academician Liang Wenchao has hung the sign of the Chinese nuclear fusion plan on the bright surface over the years to attract the attention of other countries, and has been constantly wandering between China and Europe and the ITER team, Provide cover for Xihe plan! It is their superb acting that makes the world's major countries think that the real level of China's nuclear fusion technology is almost the same as that of Academicians Shangyang and Liang Wenchao!

Will they scold us \*\*\*\*\* when they know the truth? Academician Shangyang thought about it and laughed again Maybe the Americans will give us the Oscar for Best Actor Award! Unfortunately Laoliang, you didn't wait until this day! But do n't worry, my old bones wo n't last long, and I ca n't regret the day when Xi and the plan really come true! In a few days I will go with you below and tell you the good news in detail!

This is the end of the China Science and Technology Commendation Conference! Lv Qiuqian's award made people think it was well received, but the lack of reason for the award made them full of doubts. Everyone opened their minds to guess the real reason for Lu Qiuqian's award, and anxiously waiting for the day when the truth was announced.

Other major countries in the world have also turned their attention to China. Lu Qiuqian has created countless miracles in the past more than ten years, and now obviously he has made another achievement that is enough to shock the world. Don't be vigilant!
