

## D. School 98

### Chapter 98 - Close one's heart

“Xiao Lu! Your decision is right! Your age is now when you are active in thinking and producing great results! It’s too wasteful to play basketball!”, President Liu went out and reported the news To the principal, the principal immediately asked Professor Zhang to call him to appease Lu Qiujian.

Different positions are different from the perspective of the problem. Fans and officials of the basketball management center believe that Lu Qiujian has such a high basketball talent to study mathematics. It is a waste. From the perspective of Beijing Normal University, he It is a waste to give up your research career to play basketball.

“Well, I have now rejected all media interviews, and I am preparing for the report!” Of course, Lu Qiujian will not forget what they care about most, and gave Professor Zhang a pill by the way!

“Hahahaha! That’s good, it made me worry about it for a while!” Professor Zhang felt relieved temporarily, at least the report of Beijing Normal University would not be able to run away! “Speak when you come back next semester, I will pick you up at the airport in person! After you come back, I will arrange a research team for you, the school will provide funding, whoever you want, what equipment is just opening! Even the supercomputer can’t be allocated to you , But it is still possible to help you arrange for a while! “

Even the basketball management center is so active, and Beijing Normal University will not rely solely on Lu Qiujian to study here, thinking that he will stay here willingly after graduation. If he has been staying in the country, it will be ok, but he already knows now After Princeton’s wealth and academic atmosphere, wouldn’t it produce other ideas?

So although the funding of Peking University cannot be compared with that of Princeton, the principal still made a large budget for Lu Qiujian. Of course, he is backed by his current results, and others are not easy to say anything.

“Supercomputer?”, Lv Qiujian suddenly became interested. On the top 500 of the world’s supercomputer rankings, the United States is now the leader in the United States, but there are so many big guys in China that can reach the top 20, if Being able to get some time is very good for your task!

“The director of our National Intelligent Computer Research and Development Center is your brother! The whole world is hard to say, we are still very influential in Beijing Normal University in

China!” Professor Zhang Qiu heard that Lu Qiuqian was immediately interested and gave him this. He certainly will not disappoint Beijing Normal University, “We are trying to find a way for you in the Dawning series of products. Even if you want to use military equipment, it is not impossible to discuss! As long as you can come up with a suitable reason!”

Huaguo developed the first supercomputer Galaxy One as early as 83 years, making Huaguo the third country to independently design and develop supercomputers after Miguo and Neon. Now it can manufacture 10 trillion yuan per second. This supercomputer is still quite attractive to Lu Qiuqian.

“Then thank you! After the report, I will give you a few plans to review!”, Lu Qiuqian cheerfully agreed! I have been under pressure to delay the request of Princeton to hold a report!

“Okay, waiting for your good news! Remember to say it before you return to your country!” Professor Zhang didn’t forget to tell him before hanging up the phone.

Hanging up the phone, Lu Qiuqian lay in bed and planned to take a short rest, who knew that the mobile phone had been ringing indefinitely. In just a few minutes, several strange calls came in. I don’t know whether it was the reporter or the ball. The manager of the team!

Lu Qiuqian only accepted the exclusive interviews of three old acquaintances Li Xiao, Zhou Wei and Feng Hongqi after the game, and all other people’s applications were ignored.

In an exclusive interview with Feng Hongqi and others, Lu Qiuqian once again denied the possibility of joining the NBA. Li Xiao and Zhou Wei originally came to the United States to interview Lu Qiuqian because of Poincare’s conjecture. I have searched some information and have a vague understanding of the status of this problem in the history of mathematics.

So they could barely understand Lu Qiuqian’s decision. Of course, the more important thing is that the two of them now have a good relationship with Lu Qiuqian. The news agency after he returned to China still had to send them to interview, so he was not very worried about his future. ; And Feng Hongqi is a little depressed, but he is a reporter of sports media! What other reason does Lu Qiuqian not interview basketball?

Is even more depressed than him. Those media colleagues in the United States watched a big news in front of them but could not dig out something. It is really unacceptable!

So these people used the effort to press the bottom of the box, called to make an appointment, chased around the school, found acquaintances, asked for generous interview fees, etc., which made Lu Qiujian very troublesome.

Forget it, let's not use this number first! Lv Qiujian changed the phone number again, sent messages to those familiar with them one by one, and threw the old numbers into the trash bin, which was quieter!

From the championship to the final semifinals, it took almost a month for me to concentrate on research, and now it's time to take it away! Let's take a look at the mathematics community's evaluation of their papers at this time. Fortunately, we will prepare for the report in a few months. If it is asked when it is time, it will be big.

Turn on the computer, clean up the \*\*\*\* in the mailbox, read a few weighty letters from peers, read them one by one, and then log in to the math section of the arXiv website. Many scholars have written new ones about his two papers. Article posted here.

Is an online database containing preprints of scientific literature. Founded in 1991 by the American physicist Paul Kingspar, high-energy physicists quickly accepted this new form of communication and actively participated. And soon it was extended to other fields such as astrophysics, condensed matter physics and even mathematics.

The reason is that faster exchange of theory and experimental progress has become an important requirement for scientists. If you follow the traditional journal delivery and conference exchanges, obtaining the latest results of your peers may be delayed by half a year to a year. This is for the front-line Scientists are absolutely intolerable!

These times mean that you will waste millions of dollars and take another detour, but you will miss the Nobel Prize! ArXiv saves the process of submission to review and publication, allowing you to browse the latest achievements of other peers at the fastest speed, thus speeding up the progress of scientific research.

So without waiting for the next four major journals, Lu Qiujian can see the latest reaction of the mathematics to his thesis here. He browsed through them one by one and silently kept their doubts in his mind. These are all Important information for writing a meeting report in a few months.
