

Doomsday 29

Chapter 29: Castle day trip

After reading the dormitory building, Di Ping and Patton came to the other side. Only then did he discover that the dormitory building and the outer functional building are connected by a passage on the second and third floors. You can walk directly without going down to the first floor. Go to the opposite side.

As the name suggests, the functional building can be similar. Di Ping had a general understanding of what the functional building was for.

The first floor here is the training floor. There are more than a dozen training rooms, large and small. The large one can accommodate three to five hundred people, and the small one is only three dozen square meters, which is enough for one or two people to exercise.

However, the equipment in the room is not simple. There are a variety of training tools. Yanran is a martial arts training ground with black swarthy stones. You can see that the hardness is definitely not low, and the sound of stepping is very low, and there is no violent sound. , Suction effect leverage.

On the second floor is the dining floor, there is a large canteen, where thousands of people dine is loose, and the tables, chairs and benches are all available inside. It can be seen that the castle system has carefully considered these details; this second floor is not only a restaurant, There are also two high-end small restaurants with luxurious private rooms. This should be the so-called leading small stove.

The most interesting thing is that there is also a small bar! It's completely in the style of a small western bar. It's not a big bar, and you can drink in it with hundreds of people.

Di Ping went up to the third floor with a satisfied smile. The third floor was the conference floor. There was a large meeting room, three small meeting rooms, and one was called a war room. There were several maps hanging on the wall, but Di Ping I didn't take a closer look at the pictures. The most interesting thing is that there are two theaters on the third floor. Although the area is small, it is not a problem to accommodate a hundred or ten people to watch a movie.

This is the end of the world, this castle is completely a good place for people to enjoy, I think of everything for you, life, entertainment and battle are all available, it is a must-have boutique for home travel.

This is a circular high tower. Not only does it have stairs that lead directly to the surrounding area, but there is a dedicated elevator from the first floor to go straight to the tower. Di Ping really convinced this system. The main tower is the tallest building in the entire castle, standing on the top of the tower. In front of the glass windows, Di Ping could see the entire castle, the walking path on the wide city wall, the glass dome on the square, and the residential area outside the castle. In the distance is the endless sea of forests and the twinkling stars in the sky. It seems that everything he is looking at is under his feet. A strong arrogance suddenly rises in his heart. Everything here is his own, and soon he will have more Many things, more powerful strength, with such a powerful system, he can't live better in the last days and he doesn't need to live anymore.

The tower where the fort owner lives is not as simple as a house. It has a special rest room for the fort owner. It is on the top floor with excellent light and a large floor-to-ceiling glass window. Di Ping is standing in front of the glass window and watching. Night view outside.

There is also a small meeting room, an office, a training room on the lowest level, and a central control layer of the castle.

The castle master control room has a powerful integrated system. It can view the status of all system buildings and the occupied resource areas. It can send command messages to anyone generated by the system. It can also communicate with various small shelters and resource areas in time. It is said that it is the center of the entire shelter. Although Di Ping's system can perform these functions, he has a more convenient function, which is that when Di Ping is not there, he can authorize the commander to manage all of this, so that when Di Ping is out, There can also be someone in charge of the overall situation in time to avoid problems due to poor communication.

"Barton, how come there is electricity in this castle, where does it come from?"

Di Ping watched the entire castle surrounded by lights, whether it was a room or every room, even the corridors had street lights to guide the way, which must be supported by electricity.

"Master, there is a small energy gathering circle under the castle!"

Barton heard that his finger was placed on a virtual screen, and a scene immediately appeared, a place like a basement, small in area, about 100 square meters, in the room there are 12 stone pillars about one meter high, and each pillar top There is a small white jade bead inlaid on them, and the 12 beads, as if they are connected by a bright light, are constantly flowing. The whole room shines brightly, and in the middle of the 12 pillars there is a A thicker column with adult thigh thickness and an irregular prismatic crystal-like object on top. The light emitted by the 12 round beads finally gathers on the middle crystal, making the crystal appear to be electrified. Light and dark.

"This thing can generate electricity?"

Di Ping's eyes were straight, such a thing that was only in fantasy novels, really appeared in reality, but he smiled, his own system appeared, this is not an exaggeration.

"Yes, master, this energy-gathering circle gathers the energy of heaven and earth, and then transforms it into electrical energy to supply the entire castle energy!"

Button explained to Di Ping after turning off the screen.

Di Ping took a look at the time, and it was already past 12 o'clock. It took a lot of time to finish the tour of the castle, but he never thought that the castle is not too small, but it is about ten acres of land. And there are a lot of functions. It's normal to take a few hours to turn it down. It's a simple look. If you turn it down in detail, it's impossible without a day.

Don't dare to waste any more time. What he is looking forward to most now is the realization of the tavern. Only when the tavern is realized can he recruit heroes. Then his strength can grow rapidly. .

Di Ping was sent out in Patton's respectful and affectionate manner, and stood at the door until he saw Di Ping had finished walking, then turned to enter the castle, and the iron door behind him slowly closed.

After passing the small bridge, Di Ping walked to the right. There were five rows of townhouses on the right, each with five door openings. He had observed here a long time ago. It is simply a good place to build a manor warehouse or workshop. So he plans to put these buildings here.

Standing in front of the first row of townhouses, Di Ping had a thought, the system interface appeared in front of him, opened the manor, and clicked on the bound reality building.

"Di...Do you want to bind this building as a manor?"

"Yes!"

Di Ping confirmed in his heart.

"Di...Binding requires 5 crystal coins. If the host has no crystal coins, please exchange it with the system!"

Di Ping is looking forward to the system binding, who knows that he will be using crystal coins with a beep, but he has crystal coins.

"Where do I go to change crystal coins?"

Di Ping had a black line and cursed the system as unreliable. He played the game and knew that this building and construction consumes wood. Who knows that when he gets here, he actually wants crystal coins, but what a crystal coin is.

"Di...Crystal coins can be exchanged with crystal nuclei, and the exchange ratio is based on the energy level of the crystal nucleus!"

It seems that the system heard Di Ping's heart and explained it with a beep.

Di Ping is a little puzzled. If you ask him about this system, he doesn't even have a fart. Di Ping thinks that the system will not interact with people, but often he will promptly give advice at critical moments. I don't know if the system is unwilling to communicate with me or is inherently cold.

"The system exchanges 10 crystal nuclei!"

Di Ping tried to ask. He now has 22 crystal nuclei in total, which he has carefully accumulated during these hours.

"Di...successfully exchanged and got 12 crystal coins!"

Sure enough, the system really exchanged it for him, and 10 crystal cores were exchanged for 12 crystal coins.

"Beep... the binding begins!"

A light suddenly appeared out of thin air, sweeping across the row of three-story townhouses like a brush, and the light swept across, the villas immediately changed like a dream, like magic, changing rapidly, in just one or two minutes. Later, this row of villas turned into a western farmhouse-like building, and then the light burst like bubbles, and suddenly disappeared, leaving only a changed appearance of the manor.

Just as Di Ping was shocked by the mysterious and powerful abilities of the system, the manor's yard actually opened. A noon man with an oriental face and ten peasant-like people walked out, greeted him with a smile, and arrived at Di. Before the plane, bow and salute.

"Dear master, you are welcome! Manor Delin is always waiting for the master's dispatch!"

After Barton's incident, Di Ping knew that this might have been a gift from the system to manage the manor.

"Hello Delin!"

Di Ping felt that neither Patton nor Delin looked like intelligent robots, speaking and doing things were no different from real people, so he did not treat them as robots, but treated them as ordinary people.

"Delin is terrified!"

Delin hurriedly bowed his body lower, and the smile on his face was richer. Although he was terrified, the satisfaction on his face was no different.

"Please check the manor!"

Although Delin was happy, he did not forget his responsibilities and respectfully led Di Ping to the gate of the manor.

The manor occupies a large area, there are also three or four acres of land, with three floors. The manor has a wood processing workshop, a grain processing workshop, an iron training workshop, a crystal processing workshop, and a Mithril processing workshop. Each workshop has a production line. , Di Ping's eyes were hot, the system was too powerful. Di Ping had never seen this many production lines. I don't know how to make them. What's more terrifying is that there is also a material delivery room in this manor, which is actually connected. The transmission array of the resource land, the resources of the resource land can be directly transmitted to this manor for production and processing, but this thing is not available now, and Di Ping has no resource land available.

At this time, there are 10 workers in the manor, and Di Ping needs to recruit more workers to work in the manor, and these production equipment can only be operated when resources are brought in.

"Master, please open up the resource land as soon as possible to let the manor run!"

Delin took Di Ping to see the entire manor and said with an earnest look at Di Ping.

"Okay, I know that. By the way, Delin, how do you do this food production?"

Di Ping now has access to resources, and he has to pick up the team, so he can do it all by himself! Suddenly he thought that what he cared most was the food issue. Now he has a lot of people, but the food issue is currently the most urgent problem to be solved.

"Master, grain can be brought in from outside for processing, or the owner can allocate workers to develop land to grow food crops!"

Delin explained.

"As long as they are allocated, they will open the land by themselves?"

When Di Ping was overjoyed, he hurriedly asked, he wanted to know more details.

"Yes, the owner, there are perfect tools for opening up the manor, and as long as the owner sets the scope, the workers will cultivate and plant as required!"

Delin confirmed Di Ping's conjecture.

"That's good! Delin, you allocate all the 10 workers to cultivate and grow food! The scope? Then the land in front of the manor, you watch to cultivate!"

When Di Ping got the affirmative reply from Delin, he hurriedly ordered, and delineated an area for Delin. This community is now Di Ping's sphere of influence. Of course, the more food, the better.

"Yes! My master!"

Delin responded respectfully.

After that, Di Ping and Delin talked a lot about the manor, only to gradually understand the power of the manor. The manor can be said to be the foundation for Di Ping to develop everything. Only if there is sufficient food, Di Ping can feed more people. In order to provide more workers to each processing factory, more workers can produce more resources, and more resources can upgrade the tavern workshop to recruit more heroes and build more powerful weapons, so that their strength can be improved more quickly. Only afterwards can we conquer the outside world, open up more resources, and provide more resources for the factory.

This can be described as one link and one link. The manor is the basis of everything. Good management of the manor is very important to Di Ping. He chatted with Delin for a while and finished the arrangements to see if the time was 2 o'clock. He had to hurry. Build a tavern, build all this, he can finally start to build a tavern.

At this moment, he was a little excited. In Delin's respectful eyes, he walked quickly to the left of the castle. More than 200 meters away from here, there are single-family villas. The layout of this community is full of south and east. For single-family villas, there are rows and stacks on the west, and the best part of the community is in the back. There are gardens and large single-family villas. The two small high-rise buildings where Di Ping lives are in the middle.
