

Dungeon S 1796

Chapter 1796 King Of Bearling -Part 34

The bullets consecutively punched through the ice armour that the Blizzard Dragon had and it did not have the time to react against it. The Mechanoids were not sure whether this was because of the cold energy emission that it was producing that caused it to be slower in nature but it worked to their advantage.

The moment Tellie pushed through with the 10 consecutive bullets supercharged with a mix of her own power as well as Lynn's Penguin Fire Maqi, it finally did a serious number on the Blizzard Dragon. That was also when Lynn had pushed for the attack. Her sword was not with her mainly due to the fact that it was frozen along with the Fortress Golem but she still carried a few combat knives at her thighs.

She used those combat knives as the intermediary for her output of Red Penguin Fire Energy, a fairly large Penguin silhouette in flames emerged just like how Jin had enabled a Panda silhouette when he used Byakko's lightning and his own Maqi combined together. Without hesitation due to the time sensitivity of the dragon's regeneration, Lynn smashed her dagger into the exposed wound that Tellie had made, and finally, an explosion of great fiery Maqi consumed the Blizzard Dragon.

Surely, the Blizzard Dragon would retaliate but Tellie was not going to give any chance for it as she could feel there was a change in the temperature. The emission of cold air had stopped momentarily after that explosion. Tellie was unsure whether it was due to Lynn's flaming explosion that counteracted against the ice but there was one thing she was sure of.

The solid ice armour that the two headed Mecha Blizzard Dragon had been melted off slightly by the explosion Lynn had put out. This meant that it was not a solid clear crystal panel that would be able to reflect Tellie's laser beams at all.

Not to mention, her rifle still had some residual Red Penguin Fire energy within it so the sniper set her sights and released the largest ever energy blast she could come out with. After all, the entire atmosphere was cold as heck, surely the overheating could be compensated rather quickly with the icy temperatures that were around her.

Hence, the huge energy blast of laser decimated the dragon's twin heads the moment Lynn dropped to the ground to reposition herself for another attack. This time for sure, the ice energy emission had totally stopped and Lynn took the remaining combat knife that she had to do the very same attack once the energy blast took out the heads.

The Penguin Cultivator jumped up and slammed the knife into the headless body of the Mechanoid ensuing another huge blast of fiery explosion that it would lit up the skies of Bearling City momentarily. "Okay guys, I think you need to come and help us now. There are too many critters for Lynn and I to handle. Page, please aid Lynn. I think she overexerted herself once more/"

"Yeap, we saw the explosive end from our side. Good job. Coming over now." Page said as she put the Fortress Golem into auto mode, fighting against the remaining Dragonlings while she came out of the cockpit and flew off using the Mind Jacker Hovering Module. It was in no time Page found Tellie carrying Lynn to one side, fending off the Blizzard Dragonlings with her sniper rifle on the other hand.

And to think there was still elegance in holding a sniper rifle, shooting it, and doing a single hand reload, (Granted her fingers were extendable as well) Page admired Tellie's shooting ability as she came hovering down to feel the coldness of the area. Only when she was in close proximity to Lynn that she feel warm.

"I do not think the situation is the same as Jin's bad sleeping habits," Tellie said and Page understood, taking it away from Tellie's arms as the sniper continued to hit accurately against the Dragonlings that came too close. Page activated her nanobots and checked Lynn's system. Unlike the normal Mechanoids, Lynn's exoskeleton and the circuitry were entirely different from the rest. A normal combat medic Mechanoid would never be able to heal her.

Thus, it was a good thing that Page had Lynn's schematics uploaded to her system courtesy of Old Flammet who also gave her certain tips on how to repair her during an emergency. "The thing that has the highest failure rate would be the power core. As terrible as it sounded, the routing of the multiple power cores isn't my greatest achievement even though it proves to be a revolutionary improvement to the Mechanoids that I had done." Old Flammet said previously.

"So, what you need to do first is to get the power cores up and everything should be working fine after that. The self repair System will kick in because of that weird energy flowing within her." And thus that was what Page had done. Repairing the power core circuits only to find they were badly burned from the inside.

"Perhaps all the flame explosions caused that to happen, especially seeing how cold this whole entire place had become." Page said to herself but she was too focused that she did not see an icicle projectile aiming at her. It was not until Tellie came to block the shot that Page realised that she had been targeted.

"No worries. It's minor damage. Our Mechanoid armour can still handle that much." Tellie said as she already fired back a counter shot against the Dragonling who was successful in hitting her. But before that shot could land, the Dragonling was already dead Yinn was at the top providing cover.

"You know, you can call the cavalry," Diaz said in the System channel before she and Click zoomed in with their Fortress Golems, shooting non stop at the Blizzard Dragonlings and even trampling them if those small dragon mechanoids did not move fast enough away.

"Ya! Don't act the hero yourself! Tellie. You have done it too many times!" Click commented and Tellie was glad that everyone was still well and alive. All they worry now for was Jin.
