

F. University 1241

Chapter 1241: The Press Conference Arrives as Scheduled!

Accompanied by a mechanical buzzing sound, a large group of drones took to the air.

Then, in the mid-air of the Central Sports Grounds, the drone lights switched on, displaying a Chinese character.

Ding Yue looked towards the drones.

Wasn't that the character for "Ding"?

What's going on here?

Ding Yue was stunned in place and after a while, turned to Director Xiong Yang beside him and asked, "Director Xiong, what's happening? Is this a rehearsal performance for the drones?"

At the New Year's Eve Gala of Mist City Arts and Science University, drone performances had become a norm.

Even during ordinary activities, Mist City Arts and Science University's drone major and the Drone Club would participate, using drones to perform, not to mention such an important event as the New Year's Eve Gala.

"Principal Ding, indeed the drones are a part of our New Year's Eve Gala, but this time, they're not for the New Year's Eve Gala rehearsal, Principal Ding, look."

Director Xiong Yang replied with a smile.

Ding Yue continued to watch the drones in mid-air.

After the "Ding" character disappeared, the lights lit up again forming the character for "Principal."

Upon seeing this, Ding Yue guessed that the drone performance was spelling out "Principal Ding" already.

Indeed.

The next character to appear was "Principal."

Buzz~

Then, over the sports field at the Central Sports Ground, another large group of drones buzzed upwards into mid-air.

The previous group of drones seemed to be over a hundred.

But now, it seemed to be more than just a hundred, a densely packed large group, Ding Yue looked and couldn't count them all.

"Principal Ding, there are a total of two thousand drones."

Director Xiong Yang said to Principal Ding with a smile.

"What does this mean?"

Ding Yue glanced at Director Xiong Yang, asking with some confusion in his heart.

However, Ding Yue had a guess in his mind.

After all, the first three characters had appeared, symbolizing himself, it seemed that this group of drones was aimed at him.

As more drones rose into mid-air and merged with the previous drones, a large, densely packed formation of drones formed a classic four-character phrase in mid-air — Happy Birthday!

When Ding Yue saw this, his heart skipped a beat, and then he was filled with emotion, goodness, they actually knew it was his birthday?

"Principal Ding, happy birthday!"

At that moment, Ding Yue's secretary Ruohan shouted "Happy Birthday, Principal Ding."

Following that, Director Xiong Yang and others also shouted, "Happy Birthday, Principal Ding!"

"Happy birthday, Yue Brother!"

"Happy Birthday, Yue Brother!"

Two familiar voices also came from not far away, and Ding Yue knew without guessing that it had to be his two buddies, Huang Youjie and Xu Bin.

Not only them, but his sister Ding Xiaoyou was also there. Ding Xiaoyou walked over and joyfully wished, "Bro, happy birthday, and may you lead our Mist City Arts and Science University to the pinnacle of the world!"

What a thing to say!

His own sister Ding Xiaoyou's birthday wish really understood him, after all, she was his actual sister!

"Principal Ding, happy birthday!"

Then Luo Peng, Su Beilin, Tong Yihang, Liu Tiefei, and others came over and wished Principal Ding a happy birthday.

"Principal Ding! Happy birthday!"

Soon, a louder noise came from the Central Sports Ground, and the students on the sports field were all shouting, "Happy Birthday, Principal Ding!"

Ding Yue was touched, it seemed everyone indeed knew it was his birthday today, and they had even prepared this drone birthday greeting performance specifically for him.

The students' romantic gesture for their principal really warmed Ding Yue's heart.

"Thank you, everyone."

Ding Yue said to the people around him, Secretary Ruohan, Director Xiong Yang, Huang and Bin, as well as his sister Ding Xiaoyou, Luo Peng, Tong Yihang, and others.

Then, Ding Yue turned to Director Xiong Yang and asked, "Director Xiong, can the sound equipment be used? I'd like to say a few words to the students."

The students had all just unanimously wished him a happy birthday.

As their principal, how could Ding Yue not respond?

So, Director Xiong Yang immediately arranged a microphone and the audio system, then handed the microphone to Principal Ding.

Ding Yue took the microphone and blew into it.

"Whoosh whoosh!"

"Hello hello hello, hello hello hello, hello everyone, I am your principal, Ding Yue."

Ding Yue greeted the students using the microphone to amplify his voice.

The students on the field and in the surrounding area, after hearing Principal Ding's voice, first looked towards the podium, only to find that Principal Ding was not there.

"Students, first of all, I truly thank you all for preparing this birthday gift for me today, and thank you to the students from the Drone Major and the Drone Club, your drone performance was very good, I was very pleased when I saw it."

Ding Yue first thanked the students from the drone major and the Drone Club, although most of the students from the drone major overlapped with those from the Drone Club, there were also students from other majors in the Drone Club.

Chapter 1242: The Press Conference Arrives as Scheduled! _2

"Taking this opportunity, I am very grateful to everyone, and at the same time, I'd like to say a few words to you all. Do you know what my birthday wish is?"

Ding Yue started a self-answered dialogue, "My birthday wish is to hope that every student of Mist City Arts and Science University can successfully complete their university studies in the majors they love. Whether you choose to continue with postgraduate studies or enter the workplace afterward, I hope you can all make your own contributions. At the same time, I hope that our Mist City Arts and Science University can keep moving forward with everyone's efforts. At present, we are just a provincially recognized private institution. In the future, we want to become a nationally recognized private institution. We have to go further, and for that, we need to work even harder. I believe in you, and I believe in Mist City Arts and Science University!"

After he finished speaking, all the students who heard Principal Ding's speech were undeniably stirred with excitement.

It was as if the blood in their veins began to boil.

It goes without saying that Principal Ding's speeches at Mist City Arts and Science University are universally recognized for their infectious power, always able to stir up the students' enthusiasm and passion at a moment's notice!

"Lastly, I want to talk about the New Year's Eve Gala. Today we have the dress rehearsal, and I hope everyone takes it seriously. On the night of the New Year's Eve Gala, those who have prepared performances will present a cultural feast for all the teachers and students. Thank you, everyone!"

After Ding Yue finished speaking, he put down the microphone in his hand.

He was just speaking off the cuff, saying whatever came to mind.

Originally, he just wanted to thank the students for the "birthday gift" they had offered him.

Above the Central Sports Ground, after wishing Principal Ding a happy birthday, the drones formed the words "Happy Birthday" as well.

This romantic "birthday confession" prepared by the students for their principal made Ding Yue feel the charm of his Mist City Arts and Science University students.

Afterwards, Ding Yue also watched the dress rehearsal for the New Year's Eve Gala for a while at the Central Sports Stadium.

From the dress rehearsal, it was clear that the New Year's Eve Gala was truly a "feast" with a dizzying array of performances.

Ding Yue started looking forward to the day of the New Year's Eve Gala.

However, before that day came, there was another important event that Ding Yue had to attend to.

That, of course, was the release event for Feiyue Group's Feiyue Future New Energy Vehicle.

Finally, according to An Yujia's arrangement, the Feiyue Future New Energy Vehicle release event was scheduled for December twenty-third, on a Saturday.

As the date of the launch event for Feiyue Future New Energy Vehicles approached, Feiyue Group intensified its publicity.

They needed to get more people to pay attention to this event. Otherwise, if nobody knew about this new energy car launch, the presale might end up looking pretty dismal after the event.

And so,

Ding Yue approved a budget for An Yujia for promotional expenses.

Announcements related to the event were posted on the Mist City Arts and Science University's official Twitter, the official Twitter of Feiyue Group, and Ding Yue's personal social media accounts.

At the same time, advertisements for the December twenty-third release event were also placed on various major automotive forums online.

On one car forum—

"Do you guys think there will be any surprises in Feiyue Group's new energy vehicle this time?"

"One thing's for sure, Feiyue New Energy Vehicles use graphene batteries, which definitely have an advantage in terms of range."

"That's what Chang'an Group said about their new energy vehicle before too, but how did that turn out?"

"The design of Chang'an Group's new energy vehicle was just too ugly. I heard this new energy vehicle from Feiyue Group is really good-looking?"

"How do you know it's good-looking?"

"There was previously a photo, wasn't it said to be Feiyue Group's new energy vehicle? It's rumored to have leaked from Mist City Arts and Science University."

"If it's that photo, I'm instantly impressed!"

"We're quickly approaching the twenty-third. Let's wait for the wave of Feiyue New Energy Vehicles."

"To be honest, I'm quite looking forward to an enterprise like Feiyue Group entering the new energy vehicle market because their battery technology really is advanced."

The car enthusiasts on the forum discussed the upcoming Feiyue Group's launch event, speculating about the features and advantages of the Feiyue New Energy Vehicle.

In fact, before this, Ding Yue had deliberately let his staff at Mist City Arts and Science University "accidentally" leak some photos of him test driving the Feiyue Future New Energy Vehicle to create buzz and attract more attention.

Some speculated that such a cool-looking car in the leaked photos couldn't possibly be Feiyue Group's new energy vehicle, it must at most be a concept car.

Others asserted that if it was truly such a futuristic new energy vehicle, they'd buy it without a second thought!

It must be said, Ding Yue's marketing tactics could be considered top-notch.

Just a single photo intentionally leaked had sparked discussions and garnered attention on various forums, websites, Twitter, TikTok, and chat groups over several days.

More and more people were becoming aware that Feiyue Group's new energy vehicle launch event would take place on the 23rd of this month!

In the blink of an eye, the 23rd arrived.

The press conference was set to begin at 10 a.m. sharp, so Ding Yue got up early today.

As the "host" of this event, Ding Yue was responsible for introducing the Feiyue Future New Energy Vehicle developed by Mist City Arts and Science University and Feiyue Group to everyone.

The venue chosen was the Central Sports Stadium of Mist City Arts and Science University.

The Central Sports Stadium is the largest indoor stadium at Mist City Arts and Science University, and the press conference would be broadcast live, as well as covered by television stations, social media livestreams, and other means to present the Feiyue Future to all interested consumers.

"Principal Ding, are you up? We should go for breakfast early, then prepare for the press conference."

At the entrance to his apartment room came the voice of his secretary Wen Ruohan.

Wen Ruohan had come over early in the morning especially to ensure Principal Ding got up in time for the Feiyue Future launch event.

In the past, she would have called him to wake up.

Today, to avoid the possibility of not waking him up with a phone call, Wen Ruohan came in person.

"I'm already up."

Ding Yue heard his secretary Wen Ruohan's voice outside his apartment room, and after he had just finished brushing his teeth, he went to open the door for Wen Ruohan.

"Principal Ding, I thought you hadn't woken up yet."

Wen Ruohan entered the room and said with a giggly smile.

"How could I not take today seriously? It's an important day for the press conference," Ding Yue said with a laugh, shrugging his shoulders, and then went back to his room to change into his favorite outfit.

Then Ding Yue headed to the Fifth Canteen, accompanied by his secretary Wen Ruohan.

Coincidentally, they encountered Miss An, An Yujia, on the way, who immediately came over to report to Principal Ding on the day's preparations for the event.

"Principal Ding, we have invited several of the larger domestic automotive social media teams, and in addition, both the Mist City television station and NTS will have reporters on-site for live coverage," An Yujia said to Principal Ding with a smile.

"Oh? NTS is coming too? Which reporter is it?"

Ding Yue knew that An Yujia had invited the auto social media teams and that the Mist City television would be broadcasting, but he didn't expect NTS to send someone as well.

"It's Reporter Wang."

An Yujia replied.

Hearing it was Reporter Wang, Ding Yue knew it had to be NTS's beautiful reporter, Wang Bingbing.

Ding Yue felt that Wang Bingbing was practically becoming a resident reporter at Mist City Arts and Science University—whenever there was any major event or news, NTS would send Wang Bingbing to interview and report.

Ding Yue couldn't help thinking, NTS really knew him well...

Chapter 1243: Starting with a King Bomb!

December 23rd.

Mist City Arts and Science University, Central Sports Stadium.

The weather was clear and sunny, but since it was already December, the temperature was a bit chilly.

Today, besides the usual student crowd at Mist City Arts and Science University, there were some additional faces, equipped with various media live-streaming gear, and even TV station vans, all converging on the university campus.

Domestically renowned auto blogger teams had been invited by Mist City Arts and Science University.

Both Mist City TV and NTS had sent reporter teams to live broadcast today's new energy vehicle launch event.

"Hey, isn't that Chen?"

"Li, you guys are here too?"

"Looks like Feiyue Group has deep pockets, they even invited you, an auto blogger with ten million fans."

"Cough cough, Chen, I'm here by invitation, no money taken, I'm doing this one pro bono."

Li Xin, a well-known automotive blogger, said to his peers with a smile.

As a famous automotive blogger, Li Xin had over ten million followers on Twitter and also had substantial followings on TikTok, Bilibili, and other platforms. His car reviews and thoughts were well-liked by netizens, largely due to his unique style, which could be considered one-of-a-kind on the internet.

"Li, you didn't take any money? That, I can't believe." Automotive blogger Chen said with a shake of his head and a smile.

For an automotive blogger at Li Xin's level, attending any car launch event or conducting car reviews almost certainly meant receiving payment from manufacturers, given his significant influence.

"Really."

Li Xin said with a laugh, "The CEO of Feiyue Group who invited me this time is an old childhood buddy of mine. I just came along to check it out, I truly didn't take any money."

Li Xin indeed hadn't been paid for this visit.

Under normal circumstances, attending such launches to provide netizens with immediate key information about the car usually comes with a fee, and the car manufacturers understand this as well.

For instance, during the last Penguin Auto Group new energy vehicle launch of the Penguin T666, Li Xin did a live broadcast, and Penguin Auto Group paid him several hundred thousand for his appearance.

"So, Li, since that's the case, you must have some inside scoop, right? Tell us, what are the highlights of this new energy vehicle?"

Automotive blogger Chen asked eagerly.

After all, the launch event hadn't yet begun, and getting a hold of some key information before the start, to publish early, certainly warranted more attention.

And for automotive blogger teams like theirs, traffic was everything.

"Don't even ask, there's a lot of juicy information, but I can't spill anything to you guys because even I don't know. Miss An just told me that this Feiyue New Energy Vehicle won't disappoint anyone."

Li Xin chuckled teasingly.

"Ha ha ha ha, Li, look at you..."

The other automotive bloggers burst into laughter along with him.

At this moment, major domestic automotive bloggers, Mist City TV, NTS reporters, and other media had all arrived at the Central Sports Stadium at Mist City Arts and Science University.

Ding Yue, with his secretary Wen Ruohan and Miss An who he had run into at the Fifth Canteen, made their way over to the stadium after having lunch together.

Before they could reach the entrance of the Central Sports Stadium, Ding Yue encountered Huang Youjie, Xu Bin, and his sister Ding Xiaoyou, among others.

After entering the stadium, Ding Yue successively met Chief Chu Jiannan and others who, being involved with the development of the Feiyue · Future new energy vehicle, naturally wanted to witness today's launch event.

Whether this vehicle would be a best-seller relied on whether today's launch could surprise the majority of car consumers.

In fact, no one knew the surprises of the Feiyue Future New Energy Vehicle better than Chief Chu Jiannan and the others since there were just too many to count.

"Miss An!"

As Ding Yue and others headed towards the rest area, a shout calling for Miss An came from afar.

Upon hearing her name, An Yujia turned around to see that the familiar face approaching was the famous domestic automotive blogger Li Xin, an old friend and classmate of hers.

An Yujia knew Li Xin; when Principal Ding mentioned needing to do some promotion for the Feiyue Future New Energy Vehicle, she immediately thought of her old classmate.

"Li Xin, you've arrived! Principal Ding, let me introduce you. This is 'Your Car,' our famous domestic automotive blogger, my classmate Li Xin."

An Yujia enthusiastically introduced Li Xin to Principal Ding.

"Hello."

Ding Yue warmly greeted the automotive blogger Li Xin.

"Hello, Principal Ding."

Li Xin approached, shook hands with Ding Yue, and said with a smile, "Today, I'm eagerly waiting for the good news about our car."

"Ha ha ha ha, absolutely." Seeing such a well-known automotive blogger so anticipative, Principal Ding nodded confidently, saying that today's new energy vehicle launch would surely not disappoint them, at least Ding Yue had that confidence.

Chapter 1244: Starting with a King Bomb! _2

"Li Xin, the press conference is about to start, we'll head over first. You've got to give us a good promotion later," said An Yujia with a smile to Li Xin, then went with Principal Ding toward the lounge area.

Principal Ding needed to go over and make final preparations. After all, this press conference was so important. Although Ding Yue had already made a lot of preparations, he still needed to take a moment to rest, get himself in the right state of mind, and then later on stage, introduce to everyone his Feiyue Future New Energy Vehicle.

"Miss An, is everything ready?" Ding Yue asked again after arriving at the lounge.

"Everything's prepared. According to the stage design, our car will rise up from right in the middle of the stage. That's the best spot for you to stand, Principal Ding." Yu Jia pointed to a screen in the lounge that showed a simulation of the stage at the event.

At this press conference, the Feiyue Future Car Model 0 would make its entrance in a unique way, and various stage effects were going to complement the event and add flair.

"Alright, let's review the entrance effect one more time." Ding Yue responded with a nod and a smile.

The entrance of the Feiyue Future Car Model 0 was accompanied by special effects crafted by Feiyue Animation Studio, which had spent three days creating them.

Ding Yue had already seen it once before and was very satisfied the first time he saw it.

Now that the press conference was about to begin, Ding Yue was ready to see it once more.

"Of course, Principal Ding." Yu Jia played the simulation of the Feiyue Future Car Model 0's entrance with the stage effects for Principal Ding.

After watching, Ding Yue nodded with satisfaction once again, then slightly adjusted his attire.

Ding Yue was never particular about his clothing, as long as it looked decent and appropriate, so he was dressed in his usual style which didn't involve wearing any special suits or the like to look more solemn.

In fact, Ding Yue thought that wearing a suit, like conducting a press conference on stage, always felt a bit too salesy.

"Principal Ding, five minutes to go." Ruohan, the secretary, reminded him of the time.

Inside the Central Sports Stadium, thousands of people had already gathered at this point.

Apart from those media personnel who were invited and seated directly opposite the stage, many students from Mist City Arts and Science University had also come to join in the excitement.

Reporters from Mist City Television and NTS were also ready.

"Hello, viewers, welcome to NTS's live newsroom. I'm the reporter Wang Bingbing. We're currently at the Central Sports Stadium of Mist City Arts and Science University. Today, a new energy vehicle press conference will be held here. This new energy vehicle was designed and developed by Mist City Arts and Science University and manufactured by Feiyue Group. It is said to use the most advanced graphene batteries..."

As soon as Wang Bingbing appeared, NTS's live newsroom ratings instantly soared.

Besides Wang Bingbing, there were also many well-known automotive bloggers who started live streams.

These bloggers had many fans who were car enthusiasts, and seeing so many of them live streaming, the fans knew that some amazing car must be about to be launched today.

Additionally, in the previous period, Feiyue Group had already done a lot of publicity for this new energy vehicle, and many netizens knew that today was the launch of Feiyue Group's new energy vehicle.

One point that everyone knew: Feiyue Group's new energy vehicle surely used a graphene battery, and it was definitely the best graphene battery.

What does a graphene battery mean?

That's right, it means cruising range, and in terms of the superiority of cruising range, everyone now knew that graphene batteries were the strongest.

Of course, the new energy batteries from Mantech Group in Europe and Ike Technology Group in America also had a certain influence.

But the graphene battery from Feiyue Group was different—this was top domestic technology!

As a person from Xia Country, one naturally supports domestically produced graphene batteries!

However, netizens were also somewhat cautious since Chang'an Group previously had a launch for a new energy car using a graphene battery that flopped, with very poor sales, and even directly resulted in Chang'an Group's "bankruptcy". This incident caused Feiyue Group's new energy vehicle to also be subjected to continuous skepticism before the launch.

Five minutes later.

Ding Yue had made all preparations and walked from the lounge to the stage of the Central Sports Stadium.

"Welcome, guests. Today is the new energy vehicle press conference held by Mist City Arts and Science University and Feiyue Group. Please welcome Principal Ding of Mist City Arts and Science University to the stage to introduce our new energy vehicle."

On the stage, after welcoming the guests, An Yujia handed over the stage to Principal Ding.

Ding Yue, walking toward the stage with a casual grace, took the microphone from Miss An's hands.

Everyone at the press conference was now looking at Ding Yue.

All the live broadcast cameras were also aimed at the handsome, young, and promising Principal Ding.

"Wow, I knew for sure Principal Ding would be hosting the press conference!"

"Principal Ding is still so handsome!"

"There's my husband!"

"My husband's amazing, running a university and making new energy vehicles!"

"Mist City Arts and Science University never disappoints me."

"Holy shit, this host is so handsome, is he the principal of Mist City Arts and Science University?"

As soon as the viewers in various live streaming rooms saw Ding Yue about to host the conference, the screen was filled with comments.

There was no other way, beauty equates to righteousness!

The only word to describe Ding Yue's good looks was—handsome!

Whenever Ding Yue appeared in the public eye, netizens couldn't help but exclaim how handsome he was, and many female netizens even directly called out 'husband'!

Of course, Ding Yue didn't just walk the path of a celebrity relying only on his looks—he took the path of strength, striving to build his Mist City Arts and Science University into a top world-class higher education institution.

"Hello everyone, I'm Ding Yue."

Ding Yue simply introduced himself.

Actually, there was no need for an introduction, as everyone on the internet knew that this handsome man was the principal of Mist City Arts and Science University and the man steering Feiyue Group behind the scenes.

At such a young age, he had achieved such extraordinary success, making many young people feel as if they were good-for-nothings.

"Today, we at Mist City Arts and Science University and Feiyue Group have, as promised, brought everyone new energy vehicles. In an era where new energy vehicles are a major trend, succeeding in this field is no easy task."

Ding Yue began the press conference with a calm composure.

In the past, Ding Yue might have felt a little nervous facing such big events, worried about not doing well.

But now things were different. With his rich experience, press conferences and big talks were effortless for Ding Yue.

Applause erupted at the venue.

Actually, most of the applause came from the students of Mist City Arts and Science University present at the Central Sports Stadium.

These students from Mist City Arts and Science University were extremely proud of the new energy vehicles developed by their school and manufactured by the school's company.

"This new energy vehicle we've developed is named Feiyue · Future. The meaning is straightforward—Feiyue represents our Feiyue Group, while Future signifies the future of new energy vehicles and our future lifestyle. Alright, I am a very straightforward person. Without further ado, please welcome the Feiyue Future New Energy Vehicle onstage!"

Ding Yue spoke with vigor and enthusiasm.

As Ding Yue's voice fell,

Special effects began to play on the stage, and an image that looked like a 3D hologram appeared.

A Feiyue Future New Energy Vehicle drove in from a distance, with a very futuristic and sci-fi visual effect. At the same time, two "enemies" appeared in the effects-laden scene.

And at that moment, the Feiyue Future New Energy Vehicle transformed, accompanied by clicking and whirring mechanical sounds.

The car changed into a humanoid shape!

"Holy shit!"

The audience was filled with exclamations!

Chapter 1245: The Theme Song of This Car is Simply Explosive

In this Parallel World, the concept of "Transformers" does not exist, nor do the "Transformers" series of movies and comics.

Therefore,

when a car transformed into a humanoid robot shape, every single person in the Mist City Arts and Science University Central Sports Stadium erupted into a chorus of astonished gasps.

The naked-eye 3D effect of this segment, along with the footage of a car transforming into a car robot and then transforming back into a car, was simply too explosive.

What's more crucial, that transformation effect was incredibly smooth!

"Fuck, that scene is awesome!"

"It's that cool?"

"So creative, the car turned into a robot!"

"That car is so badass, I want one!"

"This this this, is simply too cool!"

Viewers in various live broadcasts were all completely dazzled by this entrance scene!

Of course, this was merely a sequence of special effects and not the actual entrance of the Feiyue Future New Energy Vehicle, but the sci-fi feel of the car shown in that footage left everyone in awe.

Just based on the appearance of the car, it was like an explosive start!

At the unveiling, Ding Yue did not elaborate on how amazing this new energy car was in various aspects. He started by just introducing the name of the car.

Now, everyone knew that this new energy car from Feiyue Group was called—Feiyue · Future.

Beyond that, everyone also saw the appearance of this new energy car, which was simply too cool for words!

"The car in the footage looks cool, but can the real car be that cool?"

"Guess it definitely can't be as cool as that!"

"Hahaha, the video is for reference only, please check the actual product!"

While netizens were joking around, the video ended, and following a sci-fi, melody-rich piece of music, the Feiyue Future No. 0 New Energy Vehicle slowly rose from the center of the stage, spreading sideways.

This piece of music was also very catchy, incredibly explosive, and everyone at the event felt that Feiyue Group was truly putting their heart into it!

"This music is so good!"

"Fuck, what is this music? It sounds so good, so exciting, with such a strong rhythm."

"Holy shit, holy shit, a car making an entrance like this, I'm lit!"

"What's the name of the song?"

"Does anyone know what this music is called?"

"This background music sounds so good, my god, what kind of divine existence are Mist City Arts and Science University and Feiyue Group?"

"A battle song rises!"

"I just want to know what the song is called?"

"A damn music company, what's it doing making cars!"

"Damn it, Feiyue Automobile is already a mature music company, hahaha!"

Everyone wanted to know what this music was called because they had never heard it before, but it was just too exciting.

Only Ding Yue knew that this music came from Earth in his previous life, the theme song of the movie "Pacific Rim"!

After getting the score, he had the music department at Mist City Arts and Science University produce this music and named it "Mech Armor."

After all, the original name of the song was "Pacific Rim," and it was in English. When Ding Yue brought it over to this Parallel World, he renamed it.

After the music was produced by the university's music team, it wasn't released until today for the Feiyue Future New Energy Vehicle launch event. Ding Yue believed that the appearance of this music would definitely surprise everyone.

And indeed, the song would certainly add even more glory to his Feiyue Future New Energy Vehicle!

As "Mech Armor" played, the Feiyue Future New Energy Vehicle slowly ascended from below the stage, and the car positioned at the side was raised onto the stage, presented before everyone.

"This is the first new energy car developed by Mist City Arts and Science University for Feiyue Group—Feiyue · Future!"

Ding Yue stood beside the car, reintroducing it with great emphasis.

With fiery music, and the real car unveiled, the launch reached its first climax as applause erupted like thunder and continued unabated like a raging tide.

"Holy shit! It's exactly like the car in the footage!"

"My god! That's too cool!"

"OMG, gotta buy it!"

"Such a cool car, I'd spend my entire fortune to get it!"

"This car perfectly fits the image I have in mind for a new energy vehicle!"

"Truly cool!"

"Such a sci-fi feel to it, fucking awesome, no wonder it was developed by Mist City Arts and Science University."

"Is this car going to cost several millions yuan?"

"Damn, this is cooler than a supercar, how is this possible?"

"I guess we probably can't afford it?"

Netizens watching the live broadcast were boiling with excitement, having already been ignited by the theme song of the Feiyue Future New Energy Vehicle launch earlier on; seeing the car's real form now, they were thoroughly enflamed.

The car's exterior design is the most direct impression a vehicle can give, and generally, cars that look cool never sell poorly.

Chapter 1246: The Theme Song of This Car is Simply Explosive _2

The exterior appearance of this Feiyue Future vehicle seriously shocked countless viewers who were watching the launch event live, with terms like "beautiful" and "stunning" being repeated so much that viewers had grown tired of them.

After the real body of Feiyue Future was revealed, the popularity of the launch event soared.

Before the launch, Li Xin had heard from his old classmate, An Yujia, that this new energy vehicle would not disappoint everyone, and damn, it was true. As soon as it appeared, it immediately excited everyone.

This body, it's probably fair to say that no one dislikes it, right?

In just a short minute or two, the cool and highly sci-fi body of the Feiyue Future New Energy Vehicle spread across the entire internet.

Twitter trending #9 Feiyue New Energy Vehicle Launch Event! Trending Score: 2039476

Twitter trending #17 Feiyue · Future Reveal! Trending score: 1306795

Twitter trending #29 This car is too cool! Trending score: 1045631

Twitter trending #33 Sci-fi Movie Car! Trending score: 904357

In a very short period of time, the Feiyue Future New Energy Vehicle launch event held at Mist City Arts and Science University already formed four trends, two of which were discussions about the sci-fi feel of the Feiyue Future vehicle by netizens.

There was no helping it; the body of this car was simply too eye-catching, too appealing.

"I really like it!"

"Is there really such a good-looking car? I have doubts!"

"I just want to know how much it sells for?"

"Just asking, is this really a new energy vehicle launched today? I thought it was from a sci-fi movie!"

"Oh my god, this car is so handsome, even a girl like me loves it!"

Netizens' love for the body of the Feiyue · Future New Energy Vehicle was overwhelming, to the point that many wanted to buy this vehicle just because of its body.

Meanwhile, at the Penguin Auto Group headquarters in Shencheng, Kuang Xuejin was watching the launch event, and as he read the online reviews of the Feiyue Future New Energy Vehicle, the worse his mood became.

At first, when Kuang Xuejin learned that Feiyue Group was preparing to produce a new energy vehicle, he took it seriously.

But later, after Chang'an Group's usage of Feiyue Group's graphene batteries failed in creating a successful new energy vehicle, he disregarded Feiyue Group entirely, believing they couldn't

possibly make a decent new energy vehicle, especially since new energy vehicles aren't just something anyone can make.

Moreover, considering how Hengtai Automobiles, a major company, faltered in producing a new energy vehicle, Kuang Xuejin became even more dismissive of the mere Feiyue Group.

Now, seeing this Feiyue Future New Energy Vehicle produced by Mist City Arts and Science University and Feiyue Group, with its body design so far ahead of others.

The sci-fi feel of this body was so appealing that even Kuang Xuejin, as a competitor in the new energy vehicle market from Feiyue Group, personally liked this car too.

Success!

Now, the only word in Kuang Xuejin's mind was this word, which he regarded as an appraisal of the body shape of the Feiyue Future New Energy Vehicle.

Almost flawless!

"Mr. Kuang, isn't Feiyue Group being too much? Not only is the car body designed beautifully, but the theme song of the car launch is so stirring. The online reactions have literally exploded!"

In the office, another executive, Liu Jin, from Penguin Auto Group, when he saw the real appearance of Feiyue Future and after browsing online comments, exclaimed that this car seemed like it was "cheating!"

"The design is indeed beautiful, but do you think such a car will be cheap? Cars are no longer luxury items. For luxury cars, the market is already there, so they won't pose a competition threat to us, Penguin Car, as there are still luxury cars worth millions and tens of millions."

Kuang Xuejin couldn't help but coldly smirk, confident that the Feiyue Future New Energy Vehicle launched this time by Feiyue Group wouldn't carry any price advantage.

After all, with such a cool body and confirmed graphene batteries plus other necessary configurations for new energy vehicles, this new energy vehicle's price wouldn't be low.

Kuang Xuejin was well aware that there were new energy vehicles in the market costing between 200,000 yuan and a million yuan, but they were not excellent. Naturally, it was vehicles from Penguin Auto Group and Tesla Group in the price range of three to five million yuan that dominated the market. Others attempting to compete at this price level had virtually no sales.

For those priced over one million yuan, consumers began to see them as not cost-effective. Once deemed not cost-effective, their sales were just so-so.

"Mr. Kuang, you are right. Let us see how this car is priced later. They made such a good-looking body and even used graphene battery technology; the price definitely won't be cheap. Perhaps it will sell for over a million. Haha, who would buy it?"

Liu Jin analyzed and commented.

...

Among the audience watching the Feiyue Future New Energy Vehicle launch, there was someone special.

This person, within the spacious luxury of his mansion, also watched the event with friends.

This person was Mr. Wang from Wang Group.

Originally, Mr. Wang hadn't planned to watch this event, but his friend Lin Xin told him about it, mentioning that it was developed by Mist City Arts and Science University and released by Feiyue Group.

Mr. Wang held an interest in this private university and Feiyue Group, having a favorable impression of them personally.

This was because the last animated movie "Love, Death & Robots" he enjoyed, was produced by Feiyue Animation under Feiyue Group.

"This company is quite impressive. They do well in entertainment, and they even present surprises in the technology and new energy vehicle sector," Mr. Wang couldn't help but comment.

"This car looks cool, I even want to buy one now, but I'm not sure about its performance in other aspects."

Lin Xin, standing beside him, said.

Lin Xin might not be as wealthy as Mr. Wang, but he was still from a very affluent family with a strong background. For him, buying a vehicle worth several millions yuan or even more was nothing!

"I guess this car will sell for over a million, I heard it uses a graphene battery?"

Mr. Wang shrugged and said.

"It seems so. I heard graphene batteries are powerful, apparently they basically solve the range issue, just not sure if it's as amazing as the manufacturers claim," another rich second-generation joked next to him.

"As for new energy vehicles, it's all hype anyway. I still don't think the technology of new energy vehicles is that mature, like the Penguin Car T666 released by Penguin; it's just so-so," Lin Xin said with a disdainful smile.

In the eyes of this wealthy heir, he really didn't care for new energy vehicles from Penguin Group, having several luxury cars worth millions in his own garage.

"Although I'm also not keen on new energy vehicles, I must say I love the exterior of this Feiyue Future. I'm planning to order one. How about you?"

Mr. Wang playfully said to his friends.

"Wow, Mr. Wang, if you put it like that, we have to buy too. Plus, I also love the design of this car. It's so cool, truly sci-fi. There isn't a man who wouldn't like the look of this car, right?"

Lin Xin shrugged and joked.

Just like that, this group of rich second-generation heirs decided to buy a Feiyue Future New Energy Vehicle.

"I'll give Feiyue Group a call to see when we can get the car."

Mr. Wang Sicheng chuckled playfully, as he took out his phone and said to a nearby internet-famous beauty, "Do you like this car?"

"I love it, this car is really cool, just like you, Mr. Wang," the internet-famous beauty responded.

Chapter 1247: 3,000 km range?

When the Feiyue Future New Energy Vehicle officially debuted at the launch event, revealing its exterior, its popularity instantly soared.

"The exterior adopts a 'future' theme, with a sci-fi texture and clear lines. We used the most open design to give this car a driving feeling from the future," Ding Yue began introducing the exterior of the Feiyue Future.

Rustling~

As soon as his words fell, the venue erupted into a round of enthusiastic applause, and in various live broadcasts, netizens were uniformly stunned by the exterior of the Feiyue Future.

Indeed, the exterior of this car made netizens feel the astonishing and stunning impact brought by Feiyue Group.

"I think if the exterior has captured your attention, then next, you must be very interested in the other performance aspects of this car."

Ding Yue continued, "Now, let me introduce the other aspects of this car. As for new energy vehicles, what you are most concerned about must be the battery life, right?"

When people talk about a new energy vehicle, without a doubt, as Ding Yue said, what they care most about is the vehicle's battery life.

Before this, the battery life of most new energy vehicles was only about two to three hundred, three to four hundred kilometers.

However, a while ago, when Penguin Auto Group's Penguin T666 was released, the battery life underwent a significant enhancement.

What will be the battery life of this Feiyue Future New Energy Vehicle?

In fact, netizens were quite confident about the battery life of the Feiyue Future New Energy Vehicle, as everyone knew that it used graphene batteries developed by Feiyue Group.

Before this, the graphene batteries developed by Mist City Arts and Science University were already well-known, and they had now taken root in Mist City, gradually becoming a mature industry.

"As is widely known, Mist City Arts and Science University possesses the most advanced graphene battery technology, and under the development of Feiyue Group, the technology has matured and attained a significant industry scale," Ding Yue said confidently.

"The graphene battery technology from Mist City Arts and Science University is freaking awesome!"

"Ding Xiaoyou is forever the genius!"

"Sorry for asking, but what is a graphene battery?"

"The guy before, you don't know what a graphene battery is?"

"I knew it, it was definitely going to use a graphene battery, then the battery life of this Feiyue Future must be good."

Netizens began discussing enthusiastically as Ding Yue introduced the use of graphene battery technology in the Feiyue Future.

"As our graphene battery technology keeps maturing, our new energy vehicles naturally emerged, this Feiyue Future New Energy Vehicle is just using our graphene batteries, so naturally everyone is curious, what about the battery life using graphene batteries?"

"The battery life has been introduced during Chang'an Group's new energy vehicle launch event, right?"

"Exactly, I remember that Chang'an Group's Chang'an Nova new energy vehicle also used graphene batteries."

"Isn't Chang'an Group already out of the game?"

"It's mainly the exterior of Chang'an Group's vehicle, ridiculously ugly, the interior and everything also mediocre, and the control system used was just lousy, their decline was just expected."

"I remember Chang'an Group's launch event stated that their graphene battery-powered vehicles could easily exceed 1,000 kilometers."

"It should be almost the same as Penguin Group's new energy vehicles in terms of battery life I guess."

"Isn't our domestic graphene battery technology way better than Mantech Group's new energy battery technology in Europe?"

"Support domestic products, starting with myself!"

"So you're telling me, this Feiyue Future is entirely made in China? That's awesome!"

"Indeed, although Penguin T666 is quite good, the battery and motor systems used in Penguin T666 are from foreigners."

Regarding the battery life of this Feiyue Future New Energy Vehicle, netizens made a rough guess, estimating that it should be around 1,000 kilometers, similar to what was introduced at the Chang'an Nova launch event, as well as close to the battery life of Penguin Auto Group's Penguin T666 new energy vehicle.

Standing on the stage at the launch event, Ding Yue continued with a smile, "Recently, our Mist City Arts and Science University has once again optimized our graphene battery technology, using graphene batteries and the corresponding motor technology, we've formed an entire power system for the Feiyue Future, so the question you all care about the most comes, what about the battery life, we have conducted the most comprehensive tests on this Feiyue Future New Energy Vehicle, obtaining the most genuine data and results!"

Soon they were about to announce the battery life data of this Feiyue Future New Energy Vehicle, and everyone at the venue as well as netizens in various live streams were eagerly waiting.

Will this new energy vehicle from Feiyue Group continue to amaze everyone?

"After our real-world tests, this Feiyue Future New Energy Vehicle using our Feiyue Technology's graphene batteries, after a full charge and under full-load operation, will achieve a battery life of..."

Chapter 1248: 3,000 kilometers range?_2

When Ding Yue talked about it here, he raised a finger.

"Wow, 1,000 kilometers!"

"As expected, 1,000 kilometers is basically the limit for the endurance capabilities of new energy vehicles now."

"It looks similar to Penguin Auto Group's Penguin T666, and to Tesla's Model 4."

"In terms of endurance capability, it's just average."

"It's a huge progress that new energy vehicles can now achieve a range of 1,000 kilometers."

"It seems like the endurance capability of this Feiyue Future New Energy Vehicle is not much better than that of the Penguin T666."

"This endurance doesn't seem to surpass America's Tesla Model 4?"

When netizens saw Ding Yue raise a finger, they were pretty much certain that the endurance capability of the Feiyue Future New Energy Vehicle was over 1,000 kilometers.

If this had been the first new energy vehicle capable of surpassing 1,000 kilometers in endurance, that would have been something, but it clearly wasn't the first.

Now, every new energy vehicle that uses the Mantech Group's new energy battery from Europe, along with the fuel cells from America's Ike Technology Group, can basically achieve an endurance of 1,000 kilometers.

Precisely because of this, netizens now say that the endurance capability of new energy vehicles has entered the era of 1,000 kilometers.

Not only that, but the charging speed has considerably increased as well.

It used to take an overnight charge just to barely fill the battery.

But now it's different; it has been shortened to just a few hours, and the longest charging time does not exceed five hours.

Just when everyone at the venue and online thought that the endurance capability of this Feiyue Future New Energy Vehicle was just over 1,000 kilometers, a miraculous scene occurred at the conference.

The one finger that Ding Yue had extended did not retract but instead, he extended another finger!

"Holy shit! Am I seeing this right? What does this mean?"

"Could it be 2,000 kilometers of endurance capability?"

"WTF, a full-load endurance of 2,000 kilometers; that's pretty awesome."

"Is that for real?"

"Good lord, I initially thought it was a 1,000 kilometers endurance, which seemed pretty average, but now it's 2,000 kilometers?"

"That's really impressive, a 2,000 kilometers endurance!"

When everyone saw Ding Yue extend two fingers, they were all surprised.

Because a 2,000-kilometer endurance capability has not yet been achieved by any new energy vehicle, not even Penguin Auto Group's Penguin T666 or Tesla's Model 4, which both have endurance capabilities over 1,000 kilometers, but not up to 2,000 kilometers.

And this Feiyue Future New Energy Vehicle, duly optimized with graphene batteries, truly has extraordinary endurance!

"A 2,000 kilometers endurance capability? And it's a full-load endurance, can you believe that?"

In the Penguin Auto Group building in Shencheng, Kuang Xuejin, while watching the conference, felt skeptical the moment he heard Ding Yue say their Feiyue Future New Energy Vehicle could reach a 2,000 kilometers endurance.

"A full-load endurance of 2,000 kilometers is indeed a bit exaggerated, but with advanced graphene battery technology, Mr. Kuang, it could really be possible. I've heard that Feiyue's graphene batteries are even being used in aerospace applications," Liu Jin, a senior executive at Penguin Auto Group, said seriously.

"Damn, if this is true, then in terms of endurance capability, isn't Mist City Arts and Science University and Feiyue Group gaining the upper hand again?"

Kuang Xuejin felt quite bitter inside.

He had thought that the Feiyue Group could not really stir up any waves, but unexpectedly, this Feiyue Future New Energy Vehicle really had some tricks up its sleeve!

However.

Just as Kuang Xuejin and Liu Jin felt that a 2,000-kilometer endurance capability was exaggerated, in the live stream of the conference on the screen, Ding Yue did not retract those two fingers but instead, raised a third finger!

Boom!

In an instant, Kuang Xuejin felt thunder roaring in his mind!

"WHAT! How is that even possible, a 3,000-kilometer range? Isn't that just bragging?" Liu Jin was baffled, hardly able to believe that Ding Yue had actually raised a third finger.

At the same time, Ding Yue, on stage at the launch event, raised his third finger and said with a smile to everyone, "Not 1,000 kilometers, not 2,000 kilometers, but our Feiyue Future New Energy Vehicle can achieve a full-load range of 3,000 kilometers!"

Ding Yue continued, "What does this mean? We know that from Mist City to Wucheng in the Northwest Province, it's approximately 2,884 kilometers. This means that, if you drive our Feiyue Future New Energy Vehicle with a full charge, you can directly reach Wucheng, 2,884 kilometers away, without needing to charge mid-journey, without worrying about the endurance of long-distance travel!"

As soon as Ding Yue announced this, the 3,000-kilometer range was revealed, and the whole venue erupted.

All the car bloggers were shocked beyond belief!

"3,000 kilometers, isn't that exaggerated?"

"I can hardly believe it, can it really reach a range of 3,000 kilometers?"

"What kind of battery is this? It's awesome!"

"Holy crap, are graphene batteries this powerful? I can hardly even imagine!"

"Did I hear wrong, a 3,000-kilometer range? How awesome is that?"

"This car is too awesome, its range capability is truly mind-blowing, and it really fits the car's aesthetics so well, I want to buy one so badly, but I just don't know how much it costs!"

"This Feiyue Future really meets my needs, it looks great and has strong endurance, but I guess it will be expensive?"

The online viewers watching the live broadcast were thoroughly stunned. A new-energy vehicle with a range of 3,000 kilometers was something unimaginable to everyone.

"Our range capability is so outstanding, I believe everyone would like to know, how about the charging speed? After all, a battery capable of 3,000 kilometers range, everyone must think the charging speed is quite slow?"

Ding Yue smiled and continued hosting the presentation.

"The charging speed of graphene batteries, I still believe, is very fast."

"The charging speed of graphene batteries must be at least ten times that of ordinary batteries?"

"Principal Ding really knows how to keep us in suspense, haha!"

The students from Mist City Arts and Science University found Principal Ding's enthusiastic presentation engrossing.

"We used graphene, a material of the future, perfectly crafting it into a battery, and our graphene battery technology is very mature. I believe we will definitely bring everyone a surprise!"

As Ding Yue said this, behind him the large screen showed the battery data chart of the Feiyue Future New Energy Vehicle.

"So how long do we need to fully charge this car?"

Ding Yue said, turning halfway around and pointing towards the big screen.

At that moment, a data appeared on the big screen—30min!

Wow!

When the 30-minute data appeared, the venue once again erupted with thunderous applause!

"Holy shit! It can be fully charged in thirty minutes?"

"Isn't this charging speed a bit too fast?"

"Man, what kind of electric current does the charging station need?"

"Can the National Grid even handle such a fast charge for a battery with a range of 3,000 kilometers?"

People were astonished.

The charging speed of this Feiyue Future New Energy Vehicle was less than an hour, just a mere half hour was needed to fully charge it.

Good grief, was that just enough time to smoke a cigarette or take a shit?

It was unbelievable!

Today's release of the Feiyue Future New Energy Vehicle had truly shocked the new-energy vehicle industry!

Chapter 1249: Peers Announce Departure with Tears

Range of 3,000 kilometers!

Charging time of just half an hour!

Such performance, both domestically and globally, has not been achieved by any other new energy vehicle; it's almost overturning the entire industry landscape for new energy vehicles!

At the product launch, the car bloggers were struck dumb, one after another.

Damn! Is this Feiyue Future really that awesome?

Some car bloggers even began to question their own beliefs, wondering if Principal Ding was just pulling their legs at this event?

After all, in the new energy vehicle industry, many companies are highly covetous, but not lacking are groups that only know how to make PPT presentations, not actual cars.

Could Feiyue Group be one of those companies that only makes PPT presentations and doesn't know how to build cars?

Even though the Feiyue Future on stage looks spectacularly cool, who really knows if this car possesses the impressive capabilities Ding Yue claimed of a 3,000-kilometer range and a charging time of just half an hour?

"Chen, do you believe this Feiyue Future can really achieve a 3,000-kilometer range and charge in half an hour?"

"That's a bit of an exaggeration."

"Li Xin, what do you think?"

"This is a live broadcast of the launch event, so I don't think Feiyue Group would dare to fabricate data, right?"

"If it really has such powerful performance, I'll be the first one to buy this car!"

The car bloggers at the scene started discussing fervently.

Some expressed doubt that the 3,000-kilometer range and 30-minute charge time announced by Ding Yue might be falsified, nothing but a PPT created by Feiyue Group.

However, other bloggers were willing to believe in Mist City Arts and Science University and Feiyue Group, especially in Principal Ding.

Li Xin was among those more inclined to believe.

Because Mist City Arts and Science University and Feiyue Group had brought many surprises to everyone in the past, and they indeed possessed the most advanced graphene battery technology.

Meanwhile, in the Penguin Auto Group's headquarters in Shencheng.

Kuang Xuejin, the Chairman of Penguin Auto Group, was completely dumbfounded when he saw Ding Yue announce at the conference that Feiyue Group's Feiyue Future New Energy Vehicle had a 3,000-kilometer range and needed just half an hour to charge, he exclaimed, "That's impossible!"

"Mr. Kuang, if... if this is true, then I'm afraid we..."

Liu Jin, a senior executive at his side, was also stunned.

If everything Ding Yue said at the conference was true, what did that mean?

It meant that all current new energy vehicles on the market would be left with virtually no competitiveness against Feiyue Group's Feiyue Future.

A new energy vehicle that is not only cool looking and extremely eye-catching, with unrivaled range and astonishing charging speeds—who wouldn't want to buy that?

And who would want to buy a new energy vehicle that only has a range of 1,000 kilometers and takes several hours to charge?

"Didn't you just say that if this car really has such incredible performance, it definitely won't be cheap? We still have an advantage in that regard."

Kuang Xuejin thought for a moment, the only advantage he could think of was probably in terms of price.

Although the price of the Feiyue Future had not been announced at the launch, Kuang Xuejin and Liu Jin both guessed that such a high-performance vehicle certainly wouldn't be cheap.

Kuang Xuejin could only pin his hopes on this.

Otherwise, in this "war" for new energy vehicles without gunsmoke, his Penguin Auto Group might suffer a terrible defeat.

At the same time, other new energy vehicle company bosses like Kuang Xuejin were also flabbergasted.

Lei Ren, the head of Dami Technology Group, was watching the launch with very mixed feelings.

Before this.

Dami Technology Group had invested a substantial sum into the creation of new energy vehicles and had also launched the Dami 1 series of new energy cars.

Although they hadn't become a top player in the new energy vehicle industry, the Dami 1 series was still selling quite well, and they had been planning to increase their investment in the field even more.

But at this very moment, Mr. Lei Ren's thoughts underwent a fundamental change.

Investing even more money into the new energy vehicle industry?

Why the hell would I pour more money into it just to get beaten? The Feiyue Future New Energy Vehicle from Feiyue Group is already reaching a height that all other new energy car manufacturers cannot match.

"Is the technology from Mist City Arts and Science University and Feiyue Group really that impressive?" Mr. Lei murmured incredulously to himself.

"Mr. Lei, the range and charging speed, along with all other aspects of performance, are far too superior to our Dami 1 series!"

Next to Mr. Lei, Chang Feng, the Vice President of Dami Technology Group, said with disbelief.

"Enough!"

Right then, Lei Ren had an indescribable feeling. If he had to describe it with one word, it would be —bitter.

Yes, Mr. Lei Ren was feeling bitter!

After much effort and significant capital investment in the new energy vehicle sector, and even achieving some success, he thought steady progress would eventually secure a place in the vast future market of new energy vehicles.

Now all such illusions were shattered.

The Dami 1 series seemed fine only because it was released early and supported by a loyal fan base of Dami Technology Group.

Chapter 1250: Peers Announce Departure with Tears _2

But Feiyue Group's Feiyue Future New Energy Vehicle is just too abnormal, we simply can't compete!

There's no chance we'll surpass Feiyue Group's new energy vehicles in the future!

So, thinking about it, the new energy vehicle sector doesn't seem suitable for us, Mr. Lei thought. It was better to pull out quickly, otherwise, it would only get worse, even risking dragging down Dami Technology Group.

"But Mr. Lei, should we still continue with our planned phase two investment in the new energy vehicle industry?"

Chang Feng asked.

"What else is there to continue, didn't you see what their cars are like? There's absolutely no way to compete. We should withdraw now to minimize our losses!"

Mr. Lei Ren responded swiftly.

"Indeed, Mr. Lei, we can't continue with new energy vehicles anymore, it's just too strong, too abnormal!"

Chang Feng couldn't help but curse.

Of course, his swearing wasn't meant to insult anyone, but rather to express that the opponent was simply too powerful.

Previously, both Mr. Lei Ren and Chang Feng thought that the biggest competitors in the new energy vehicle sector were strong companies like Huawei Technology Group and Penguin Auto Group.

Who would have thought, Mist City Arts and Science University and Feiyue Group would come out of nowhere, bringing a new energy vehicle that no one could have anticipated!

Mr. Lei Ren had already decided that after watching this Feiyue Group's launch event, he would immediately call a board meeting. In the meeting, they must halt the new energy vehicle project and refocus on mobile and other electronic products to minimize the losses from the new energy vehicle project.

Like Mr. Lei Ren of Dami Technology Group, Xiong Tianqi of Huawei Technology Group saw through everything as well.

Today was the launch of Feiyue Group's Feiyue New Energy Vehicles, and Xiong Tianqi had been watching the live stream early on.

After all, Xiong Tianqi had previously interacted with Mist City Arts and Science University and Feiyue Group. He had even almost used the graphene battery developed by Mist City Arts and Science University but ultimately chose to work with Penguin Auto Group using the new energy batteries from Europe's Mantech Group!

Now, Xiong Tianqi really regretted his decision.

Because when compared to the graphene battery developed by Mist City Arts and Science University, the new energy batteries from Europe's Mantech Group, though impressive, were vastly inferior.

The European Mantech Group's new energy batteries had a range of just one thousand kilometers.

But the graphene battery developed by Mist City Arts and Science University had a range of three thousand kilometers and outperformed the European Mantech Group's in charging speed by a lot!

"Sigh!"

Watching the live broadcast of the launch, Xiong Tianqi couldn't help but sigh repeatedly, "Why didn't I insist on using the graphene battery developed by Mist City Arts and Science University!"

This one wrong decision had now put Huawei Technology Group into a very awkward situation.

Because Feiyue Group's Feiyue Future New Energy Vehicle, after this launch event, would undoubtedly be sought after by many consumers, for it was simply too excellent!

As the person in charge of new energy vehicles at Huawei Technology Group, Xiong Tianqi felt heartbroken.

He saw the clear gap between Huawei Technology Group and Feiyue Group in the new energy vehicle sector.

This gap wasn't just in marketing, but a real technological gap.

Technological advances aren't something you can catch up with in just a year or two. It's like Xia Country's chip technology still striving to catch up with foreign semiconductor technology despite enormous investments, yet till now, it hasn't caught up.

Xiong Tianqi realized that the future new energy vehicle market might be firmly controlled by Feiyue Group, and if Huawei Technology Group continued with new energy vehicles, it would undoubtedly be fruitless.

Moreover, Huawei Technology Group initially wanted to enter the new energy vehicle sector to grab a piece of the emerging market.

It seems now that domestically, only Penguin Auto Group's new energy vehicle business could match Feiyue Group.

As well as Tesla from America, other brands wanting to create their own new energy vehicles in the future will most likely just have to seek graphene battery collaboration from Feiyue Group.

Xiong Tianqi predicted that in the next year or two, the number of new energy vehicle manufacturers would significantly decrease, and some might even go bankrupt.

But they definitely wouldn't all disappear, after all, even if the Feiyue Future New Energy Vehicle from Feiyue Group were incredible, it couldn't possibly dominate a hundred percent of the entire new energy vehicle market, not everyone would choose to buy the Feiyue Future New Energy Vehicle, but most people would, Xiong Tianqi had almost no doubts about that, since even Xiong Tianqi himself wanted to experience buying one.

"It looks like I need to prepare to exit the new energy vehicle market."

Xiong Tianqi muttered helplessly.

...

Mist City Arts and Science University, Central Sports Stadium.

At the Feiyue Future release event, every feature Ding Yue introduced about the car was met with explosive applause from the audience, as well as a barrage of praises from netizens online.

From what Ding Yue had shared so far, the netizens believed this would be a phenomenal car!

"Next, I will introduce the intelligent in-car control system!" Ding Yue continued at the event.

Every new energy vehicle has an intelligent in-car control system, with "Intelligent Driving" being a key feature, particularly the assistance with automatic driving, and then there's the in-car intelligent system that provides a very comfortable and convenient driving experience, which traditional cars also have, but compared to new energy electric cars, it can connect better with an electric motor system for improved performance.

"I believe everyone knows that we at Mist City Arts and Science University have a project on artificial intelligence. Tell me loudly, what is this artificial intelligence project called?"

Ding Yue said, lifting the mic.

"Big White!"

Almost in unison, the same name erupted from the audience.

Online, those viewing the launch live were also abuzz.

"Holy shit! They're using Big White?"

"Big White!"

"Big White ftw!"

"No way, they're really using Big White?"

"I heard Mist City Arts and Science University's AI robot Big White is frickin' awesome!"

"That's epic!"

"I freaking love Big White. If they use Big White as the intelligent in-car control system, I would absolutely buy this Feiyue Future, no matter the cost!"

"Good grief, this sci-fi aesthetic design, a range of 3,000 kilometers, superfast charging, and equipped with Big White for the intelligent control system, how much is this Feiyue Future going to cost?"

"It must be close to a million, right?"

"Could anyone even afford this new energy vehicle without spending several millions?"

"I declare, this Feiyue Future is the real deal when it comes to new energy vehicles, it's incredible!"

"This is simply a revolutionary launch event, comparable to the introduction of the iPhone 4 back in the day!"

"I agree, this launch event for the Feiyue Future New Energy Vehicle has really opened up the landscape in the automotive industry, kind of like what the iPhone 4 did back then!"

Netizens could hardly believe that the intelligent in-car control system used in this Feiyue Future New Energy Vehicle was actually "Big White?"

Some even wondered whether this car would be very expensive? Could the average person afford it?

Others compared this launch event to the iPhone launch back then, initiating a whole new tech storm!

"You're right!"

After the cheers in the room died down, Ding Yue said with a smile, "Yes, Big White. We've also used Big White in the Feiyue Future!"
