

F. University 1401

Chapter 1401: Foreigners Wailing _2

Principal Xu Dongcheng laughed and offered his congratulations.

"It's okay, just a bit better than Google Company's Alpha Dog."

Ding Yue replied calmly and modestly.

"Jim Lee, didn't you say that Alpha Dog's mobility performance is the top in the world, even surpassing those military robots? But why?"

Larry Page was very angry at this moment.

He thought he had the upper hand, but unexpectedly, Big White from Mist City Arts and Science University defeated them in the hundred Feet speed test. Larry Page felt he was losing face.

"Boss, our test data shows that Alpha Dog's mobility performance is indeed the best in the world, unless Big White from Mist City Arts and Science University has never been tested before."

Jim Lee quickly explained.

When creating Alpha Dog, Google Company spared no expense to enhance Alpha Dog's mobility to the greatest extent possible in its mechanical structure.

In other words, within the current global scope, no other robot can match Alpha Dog in terms of mobility speed and strength.

The United States military also has quite a few military robots, but even those are not as good as Alpha Dog.

However.

Under such circumstances, they were still beaten by Mist City Arts and Science University's Big White in the hundred Feet speed test.

"Fuck!"

Larry Page couldn't hold back anymore and even cursed.

After all, this AI robot challenge is extremely important for Google Company. If they lost, it would severely affect Google's future AI robot product development strategy.

It would also affect their reputation because if they lost to Big White from Mist City Arts and Science University, then Big White would be considered the world's most powerful AI robot.

At that point, Alpha Dog, coming in second place, would no longer be the center of attention.

Because like in any competition, people and the spotlight tend to focus on the most powerful contender.

"Jim Lee, what are the next competitive sports events in the challenge?"

Larry Page asked immediately.

"Next up are events like long jump, high jump, weightlifting, swimming, table tennis, and others."

Jim Lee hurriedly replied.

At this very moment, Jim Lee was also panicking because if they lost this, his job would be on the line.

"Is there any possibility for a temporary upgrade for Alpha Dog?"

Larry Page asked with a piercing gaze.

"Boss, we can attach some additional mechanical equipment to Alpha Dog, thereby enhancing its performance in other aspects of strength. We have prepared for this."

Jim Lee promptly responded.

This time, Google Company was fully prepared. Besides Alpha Dog's mechanical structure, it could be equipped with additional mechanical devices for an upgrade, which would significantly enhance Alpha Dog's mechanical performance.

Originally, this backup plan was prepared to prevent any unexpected situations.

But now, the unexpected has happened.

Who would have thought that they would lose to Mist City Arts and Science University's Big White right in the hundred Feet speed test?

They can't lose in the subsequent athletic competitions, so at this point, the backup plan for enhancing Alpha Dog's mechanical performance also needs to be deployed.

"I hope you can bring Alpha Dog's mechanical performance to a new level; I don't want to lose in the upcoming challenges. You understand what I mean?"

Larry Page said very solemnly to Jim Lee.

"Understood, boss, I understand!"

Upon hearing this, Jim Lee quickly led his team of mechanical engineers to prepare for the mechanical performance upgrade for Alpha Dog.

After the hundred Feet speed test concluded, there would be some interval time before the next event started.

And during this time, Jim Lee and the team of mechanical engineers were busily working on Alpha Dog.

"Ladies and gentlemen in the audience, the next athletic event we will proceed with is the long jump!"

The narrator at the scene, Huang Youjie, announced, "Please have the AI robots from both sides get ready."

At the left side of the sports ground, the staff members for the long jump event were getting ready.

Since this was a robot long jump, not a human one, there was no use for a specialized long jump facility. Instead, a mark was drawn for takeoff, and then came the markers for measuring distance.

Humans can jump several feet, but for robots, a mere few feet are nothing to sneeze at.

Because robots are boosted by mechanical power!

"If a robot does long jump, wouldn't it easily leap ten or twenty feet?"

"I'm not sure, but they're certainly going to jump farther than humans."

"Robots rely on mechanical power, they'll jump not just a little but substantially farther than humans."

"Do you think it's possible for them to just jump dozens of feet in a single leap?"

"Holy shit, jumping dozens of feet at once, isn't that a bit exaggerated?"

"But it's an artificial intelligence robot we're talking about, a robot, where anything is possible."

"Yeah, yeah, who could have imagined during the hundred Feet sprint just now, that robots only needed less than a second to finish a distance of One hundred feet."

"I think it's possible to jump several dozen to a hundred feet, you know. Think about it - if high-speed trains and fighter jets are so amazing, let alone this being the world's top-notch robot."

The audience started to buzz with conversation because during the hundred Feet sprint, the robots had already demonstrated mythical strength. So now with the long jump, for the audience, there were no limits to the imagination; anything could be possible!

At this thought, the audience began to anticipate, looking forward to either AlphaGo or Big White from the field of artificial intelligence robots to take a grand leap in the long jump competition!

"Alright, dear audience friends, after the preparation by the competition committee, the long jump field is ready. Now, let's welcome Big White from Mist City Arts and Science University to make the first jump."

Huang Youjie announced as the host.

The long jump competition was about to begin.

"Go Big White, just give it a casual shot."

Ding Yue said to Big White with a smile.

"Okay, Principal."

After receiving the instructions from his master Ding Yue, Big White, taking tiny steps, came from the rest area next to the Central Sports Ground and proceeded onto the field, guided by the staff, to the long jump takeoff mark.

"Big White, do you know the rules for the long jump?"

A staff member asked.

"Mm."

Big White blinked and nodded in response.

"Hehehe, Big White is so cute." The staff member was secretly thrilled; this was the first time he had been in such close contact with Big White. Big White's voice was really adorable, and the whole Big White was just too cute.

"Alright, then let's begin."

The judges, after confirming that Big White was ready, said.

Following that, Big White came to the starting position.

Big White was naturally well-versed in the process of this human athletic event, the long jump - after starting to run, then taking off from the takeoff line, and in the end, it was all about how powerful the takeoff was to determine the distance jumped.

One could see Big White cautiously come to the starting point and began to accelerate!

Big White's acceleration was not the same as a normal human's because Big White took tiny steps when he ran, making it look so adorable.

"Man, is this how you accelerate for a jump?"

"Big White's acceleration is a bit too cute, right?"

"Foul play, Big White is adorably breaking the rules!"

"How far can this jump?"

"Big White, are you sure this is long jumping?"

"It's over, I have a bad feeling about this."

The live audience, after seeing Big White's acceleration stance, were torn between laughter and tears.

And when the foreigners online saw this scene, they started to mock and ridicule.

"Too funny, does this robot Big White even know how to do a proper long jump?"

"Is this it?"

"I think for the long jump event, Google's AlphaGo is set to win."

Chapter 1402: Big White, Are You Here to Make Us Laugh?

Under the focus of public attention.

Big White took small, quick steps and ran up to the takeoff line, then leaped into the air.

It was unclear if it was because Big White looked too chubby or if the pose it took to start the jump was not quite right, but when Big White jumped, it thudded and fell back down.

Big White's vigorous prep for the long jump was fierce as a tiger.

Then, the distance was checked.

Well then.

Two point five meters.

That's right, Big White had indeed jumped just two and a half meters, and after landing, for some reason—perhaps it was an unstable center of gravity—it thudded again, ending up sitting on the ground with a thump.

While adorable and quite silly, like a simpleton,

this performance truly surprised everyone.

"Uh!"

Ding Yue somewhat helplessly held his forehead, muttering, "Big White, I told you to just play it by ear, not to be quite this casual."

"Principal Ding, is this... Are you sure this is Big White's actual strength in long jumping?"

Principal Xu Dongcheng couldn't help but ask with a laugh and a cry.

Only Xu Bin, Wen Ruohan, and Ding Xiaoyou knew that this was simply Big White "playing around," because Ding Yue had just said to let Big White perform casually, not expecting Big White to take it this literally.

The reason Ding Yue had Big White perform casually was mainly because they still didn't know the strength of Google Company's Alpha Dog.

So, it didn't really matter how far Big White jumped.

Ding Yue only needed to have Big White jump just a little bit farther than Google Company's Alpha Dog.

Thus, Big White would initiate a second challenge after Google Company's Alpha Dog had its turn to jump.

"Uh, Big White, are you here to make us laugh?"

"I'm dumbfounded, two and a half meters?"

"What happened?"

"I thought Big White was a King of Glory, but this is it?"

"Started the jump fierce as a tiger, looked at the score, just two point five."

"Hahaha, I'm dying, Big White, tell me this was on purpose."

"Two point five meters? Are my eyes deceiving me?"

"Are you sure it's not twenty-five meters?"

"It's over, we're definitely going to lose."

"I think it must be because Big White made a performance error, look, after it landed from the jump, it even ended up sitting on the ground, so cute I could die."

"Big White, you're forbidden from being cute, show us your real strength."

When Big White's jump result came out, everyone in the audience was stunned. Two point five meters is a distance anyone can jump, right?

Is this really what an artificial intelligence robot can achieve?

However, more online viewers and audiences thought Big White was purely here for laughs, perhaps this jump was for the show of the challenge match, in any case, domestic viewers and the students of Mist City Arts and Science University wouldn't possibly believe Big White only had this level of ability, that anyone could reach two and a half meters even blindfolded.

But.

Those foreigners on overseas networks didn't think so.

"Hahaha, is this the level?"

"Seems like Mist City Arts and Science University's artificial intelligence robot doesn't understand what long jump is."

"Must be a malfunction in the robot, right?"

"Looks like Xia Country's artificial intelligence robots are only this good."

"Two point five meters, hahaha, isn't this a guaranteed loss?"

"I thought Xia Country's artificial intelligence robot was so powerful."

"Adorable sure, but doesn't have the strength for long jumping."

"Perhaps long jump is this robot's weak spot?"

"I knew it, a robot that looks so chubby, how good can it be at long jump?"

"I think Google Company's Alpha Dog is definitely going to win."

The foreigners, upon seeing Big White's "mistake" scoring two and a half meters, laughed and cried, thinking this was Big White's strength in long jump, with some even wondering whether Big White had some mechanical failure.

But they forgot.

In sports competitions like hundred Feet sprints and long jump, athletes can attempt a second chance or multiple challenges, until one artificial intelligence robot's performance completely surpasses that of another.

"Alright, we can see that Mist City Arts and Science University's artificial intelligence robot, Big White, has jumped a distance of... two point five meters."

Huang Youjie said this with a bit of embarrassment.

However.

Huang Youjie still had confidence in Big White.

"Next, let's welcome Google Company's Alpha Dog to the stage, ready for the long jump challenge!"

As Huang Youjie announced the arrival of Google Company's Alpha Dog, Jim Lee personally brought Alpha Dog onto the field.

Now.

Google's mechanical engineering team had made some modifications to Alpha Dog, upgrading its mechanical performance specifically for the long jump.

"Go, Alpha Dog!"

Jim Lee thought to himself.

The staff guided Alpha Dog to the sprint position and then checked with Jim Lee to ensure Alpha Dog knew the rules of the long jump to prevent any fouls.

Once confirmed, the judges indicated that Alpha Dog could start the long jump.

Then, from its position at the starting point, Alpha Dog assumed the posture of sprinting and, like thunder and wind, charged forward.

For long jump, the approach is actually very critical, even for mechanically powered robots, as a good sprint can indeed increase the distance jumped to some extent.

Chapter 1403: Big White, Are You Here to Make Us Laugh? - Part 2

"AlphaDog has jumped!"

Huang Youjie's eyes widened as he watched Google Company's AlphaDog running and jumping.

The moment AlphaDog jumped, Huang Youjie knew this robot was no ordinary machine.

Meanwhile, Ding Yue calmly watched Google Company's AlphaDog take the leap from the VIP seating area.

The leap of AlphaDog seemed to dominate the entire Central Sports Ground, that height left the entire audience in awe.

"Wow!"

The audience couldn't help but express their astonishment.

A perfect arc!

AlphaDog jumped and landed very steadily, standing there without any wobble after touching down.

"107 meters!"

The judges announced the score.

"My God, AlphaDog from Google Company just jumped one hundred and seven meters!"

At this moment, Huang Youjie deliberately used an incredulous tone to emphasize how impressive Google Company's AlphaDog was.

Because Huang Youjie knew, the more he hyped up Google Company's AlphaDog now, the more embarrassing it would be when they get shown up later.

"Holy shit! Is this even human?"

"The guy in front, look at what you're saying. It's not human to begin with, it's a robot."

"Over one hundred meters, truly amazing!"

"Big White jumped two and a half meters, AlphaDog jumped one hundred and seven meters, is this the disparity?"

"That's too incredible!"

"Damn, it deserves to be a robot!"

"Are robots really this incredible already?"

"How do I feel like in another dozen years, the era of robots ruling humans will arrive?"

"Don't worry, robots can't rule over humans because they are created by humans."

"Have you guys forgotten the three laws of robotics?"

With AlphaDog from Google Company jumping one hundred and seven meters, it indeed made many people feel it was unbelievable.

After all, initially everyone guessed maybe ten or twenty meters, or perhaps a few dozen meters. Even over one hundred meters, many didn't believe, yet Google Company's AlphaDog actually did it.

"Principal Ding, this distance, isn't it terrifying? Can our Big White do it?" Principal Xu Dongcheng asked anxiously.

"It should be possible, I guess?"

Ding Yue remained calm, answering without any panic.

Seeing Principal Ding so composed from start to finish, Principal Xu Dongcheng guessed Principal Ding must have absolute confidence in Big White, and thus he also believed in Principal Ding, believing in Big White.

On Google Company's side, Larry Page seeing his artificial intelligence robot AlphaDog jump so far, one hundred and seven meters, his somber face finally showed a smile.

"Boss, how do you think AlphaDog performed?"

Jim Lee approached his boss Larry Page and asked sycophantically.

"Not bad."

Larry Page was quite satisfied with the performance, as previously the robot's long jump was usually around fifty meters, and it was almost impossible to directly jump one hundred and seven meters like AlphaDog did, even the military robots from America couldn't do it.

"At Mist City Arts and Science University's side, clearly unsatisfied with Big White's result of two and a half meters, they applied for a second long jump challenge."

Host Huang Youjie announced the message from the competition committee.

This was also within Huang Youjie's expectations, as he was quite familiar with Yue's plans.

"I knew it, Big White definitely needs to jump a second time."

"Big White, you must keep it up."

"Don't just jump another two and a half meters this time, otherwise it'll be too embarrassing."

"Big White, Go Go Go!"

"Hope the first jump was a mistake, this time you must really step up, otherwise the foreigners will laugh at us."

Students from Mist City Arts and Science University clutched their fists tightly, their hearts raised to their throats, everyone hoping that Big White must perform well this time, otherwise, they would lose to Google Company's AlphaDog.

"Big White, as usual, you just need to be a little bit better than your competitor."

Ding Yue smiled with ease and said to Big White through his phone.

"Understood, Principal."

Big White responded.

Following that, Big White stepped gingerly to the long jump starting line.

"Big White, take your running start here," the staff member instructed.

However, Big White didn't react and remained standing at the starting position without moving to the running start position.

"No need."

Big White turned his head and shook it at the staff.

That's right!

Big White was planning to jump without a running start, opting for a standing long jump.

This is much more difficult than a running long jump, but of course, for a robot, there's no such thing as difficulty.

"Holy shit! Big White isn't going for a running start?"

"Directly from a standing jump?"

"What is it doing?"

"Could Big White really be malfunctioning?"

"I suspect Big White's chipset or motherboard might have burned out."

"Big White, wake up!"

"I feel confident about Big White, it has the strength!"

Students from Mist City Arts and Science University and the audience from Xia Country were stunned when they saw this.

Big White didn't run-up like its first jump or like AlphaDog, just a direct jump?

Even the people from Google Company were dumbfounded.

What in the world is this maneuver?

Whoosh!

Big White stood before the starting line, like a giant elastic spring, its chubby body rocketed into the sky like a rocket.

"My god!"

"Holy shit, holy shit, holy shit!"

"66666 damn!"

Everyone was amazed.

Big White's jump was truly earth-shattering.

However, Big White's landing was more precise.

Even though Big White's jump was elastic and looked awesome, jumping higher than AlphaDog, its landing path wasn't a perfect arc but slightly convex and then it hit the ground.

This time, Big White's landing was much more graceful, not like the first one where it just plopped down on its bum.

Everyone's eyes were on the distance Big White had covered after landing.

Even Google Company's boss Larry Page stood up to look over there.

While the exact distance wasn't clear, Larry Page could see that Big White's landing spot seemed similar to where AlphaDog had landed.

"How far?"

Larry Page urgently asked.

"Bo...boss, it's one hundred and eight feet..."

Jim Lee was completely stunned as he replied.

That's right!

Big White's jump was indeed one hundred and eight feet.

Which is just mere one foot further than Google Company's AlphaDog.

"How can this be!"

Larry Page was dumbfounded.

Once again the Artificial Intelligence robot Big White from Mist City Arts and Science University was just that bit better than his Google Company's AlphaDog.

"Ha ha ha, Yue, that extra foot is kind of a blow."

In the VIP stand, Xu Bin beside Ding Yue couldn't help but laugh.

Ding Yue calmly said: "Hey, it just has to be a little better than Google's AlphaDog. Big White really played it cool."

Good grief!

Beside him, Principal Xu Dongcheng was flabbergasted, was it all intentional?

From Big White's comical first jump of eight feet to now exceeding Google Company's AlphaDog by just one foot, was all this within Big White's calculations and under Principal Ding's control?

I must say, at this moment, Principal Xu Dongcheng was genuinely impressed. The Artificial Intelligence robot Big White from Mist City Arts and Science University is indeed the best!

Yes, in Xu Dongcheng's view, Mist City Arts and Science University's Big White is the most powerful AI robot, incomparable to Google's. Before this, Principal Xu Dongcheng thought that Google Company's AlphaDog posed some competition.

"Jim Lee! Jump again! Let AlphaDog make a new record!"

Larry Page was not willing to accept this, prepared to have AlphaDog jump again!

Chapter 1404: Mr. Paige is Furious

Ding Yue saw from afar Mr. Larry Page's extremely furious expression.

His heart was secretly thrilled.

No, wrong, Ding Yue already started laughing, even loudly. This wasn't just being thrilled secretly, this was an overt thrill!

Seeing Google Company's Alpha Dog challenge his Mist City Arts and Science University's Big White and fail one after another made people sigh.

"How far?"

"108 feet!"

"Did it win?"

"Yes, it won, surpassing Google Company's Alpha Dog by one foot."

"Wow, just a tiny bit more?"

"I knew it."

"Yes, yes, yes, I knew Big White could definitely do it."

"Now I'm sure that Big White's first jump was totally for show."

"I'm dying of laughter."

"Big White's first jump was two feet five, the second jump surpassed Alpha Dog by one foot; this show effect is just maxed out."

At this time, the students from Mist City Arts and Science University couldn't be happier.

Because of Big White's long jump, surpassing Google's Alpha Dog by another foot, beating Google's Alpha Dog, no, that's not right to say yet, because Google hasn't indicated that Alpha Dog will stop challenging in long jump, so it's not 100% certain that it has beaten Alpha Dog.

But just seeing that Big White didn't flop like the first jump was enough to make the students from Mist City Arts and Science University happy.

I have to say,

From Big White's first jump of two feet five to now one hundred and eight feet, barely surpassing Google's Alpha Dog by one foot, this is simply the show effect totally maxed out. The streaming audience screamed that when it comes to pranks, Big White is still awesome.

"It's terrifying to think deeply, that the AI robot Big White can now prank."

"I feel like Big White is just like a person."

"Whoa! Don't talk nonsense, man. If robots were really like humans, what would we do?"

"Robots are still robots after all, Big White doing this must be Principal Ding's idea."

"Yes, yes, yes, I also feel that only Principal Ding could pull off this kind of maxed out show effect."

"HAHAHAHA, Larry Page's face, just like a storm is coming."

"Google Company's people must be dumbfounded, right?"

"Guys, the foreigners on the foreign networks are already wailing. From losing to Big White in the hundred Feet speed test to now losing in long jump, foreigners' hearts are chilled."

"Our Xia Country is so awesome in the tech field for the first time, Mist City Arts and Science University rocks!"

"It's so uplifting, so motivating!"

"I knew it, watching this challenge match live, absolutely no regrets!"

"Go Big White, smash the Alpha Dog!"

On Feiyue Home streaming media platform, the official live channel of Mist City Arts and Science University already almost reached three million online viewers.

At this moment, nationwide, in various platforms and media live rooms, the number of viewers watching this AI robot challenge match is no less than ten million.

More and more viewers from Xia Country watched the live stream, and seeing Big White beat Google's Alpha Dog by one foot again, they all got excited and thrilled.

Because it's not just Big White winning against Alpha Dog, not just Mist City Arts and Science University beating Google Company. This is Xia Country's tech field, for the first time in such an all-round competition, being able to beat America!

"F*ck! Jim Lee, let Alpha Dog jump one more time!"

Larry Page said a bit frantically.

Thus,

Google's Alpha Dog applied for a second jump, ready to challenge Big White's one hundred and eight feet long jump record at Mist City Arts and Science University again.

"Ladies and gentlemen, we have received the news, Google Company will let Alpha Dog challenge Big White's 108 feet long jump record another time, let's wait and see, can Alpha Dog really surpass Big White's long jump record?"

Huang Youjie announced after receiving the message from the competition committee.

"HAHAHAHA, I knew Google Company definitely wouldn't accept it."

"Indeed, just one foot short, if it were me, I'd challenge again too."

"Give it up Alpha Dog, you can't beat Big White."

"Come on, our Big White fears no challenge."

"It'll be funny if it doesn't even reach 107 feet this time."

"Big White, we're unwavering."

Xia Country's online viewers are very confident in Big White, not fearing Google's Alpha Dog's second challenge at all.

Very quickly.

Google's Alpha Dog reappeared at the long jump spot, Alpha Dog took a running start again and then leaped.

This time, it was evident that Alpha Dog's momentum and vigor were much stronger, Ding Yue felt the engineering team at Google must have added something like kinetic energy to Alpha Dog.

Indeed,

When Alpha Dog leaped, Ding Yue saw a faint, phosphorescent-like substance appearing under Alpha Dog's feet in mid-air.

Obviously, it was something akin to the light flare sprayed out by a propeller, it seemed that Google really went all out this time, directly maxing out Alpha Dog's propeller devices.

Chapter 1405: Mr. Paige is Furious _2

If long jump competitions start using such powerful propulsion systems, then it's no longer just about long jumping; it's truly a thorough contest of propulsion power, like comparing whose rocket has more thrust.

"Wow, they've really upped the ante with a propulsion system."

Xu Bin exclaimed in surprise when he saw this scene.

If previously the long jump competitions and the hundred-feet speed tests were based on the robots' own mechanical power, then AlphaGo's jump this time was different.

Because AlphaGo used a propulsion system.

"Holy shit, what's that?"

"It jumped that high?"

"Is that a propulsion system?"

"Goddamn, Google Company sure is loaded, they went all out and fitted a propulsion system on AlphaGo?"

"They've really put a lot of money into this."

The on-site audience, as well as viewers through various live broadcasts, saw the propulsion flames of AlphaGo; however, the glow from AlphaGo's propulsion wasn't sustained for long, presumably because, unlike rockets, it couldn't carry that much fuel, and the propulsion was likely just to boost the power a little.

In this challenge match rules, there was no mention of prohibiting the use of other power sources for either side's artificial intelligence robots, so propulsion systems like AlphaGo's were naturally allowed.

Ding Yue watched calmly, thinking that if you've fitted a propulsion device on AlphaGo, does Big White not have one?

You fuel AlphaGo with propulsion, but Big White has a cold fusion power device, isn't that much stronger than fuel propulsion?

And Big White has a set of armor that hasn't made an appearance yet.

But.

In long jump, Big White really doesn't need any fuel propulsion device; it can win just by relying on mechanical power.

This is the confidence of Mist City Arts and Science University.

After being propelled by fuel once, AlphaGo's jump was much higher than before, and a higher jump naturally means landing much further.

And indeed that was the case.

This jump by AlphaGo was visibly much farther than the prior one hundred and seven feet, or even Big White's one hundred and eight feet. It seemed like with a bit more effort, the field would almost be insufficient, wouldn't it have to jump directly from the starting point over to the spectator seats across?

But that didn't happen.

AlphaGo's jump eventually still landed within the sports ground, just that it was indeed very close to the spectator stands.

Wasn't that over two hundred feet?

Looking over, the audience felt that from here to there, it should be a distance of two hundred feet; after all, it almost spanned the entire length of the sports ground.

"201.19 feet!"

Soon after, the distance result of Google Company's AlphaGo's second long jump challenge was announced.

It broke the two hundred feet barrier.

It reached a distance of 201.19 feet!

"Damn, this is truly impressive!"

"Are you sure using a propulsion system isn't against the rules?"

"The challenge rules don't seem to prohibit the use of a propulsion system, and since AlphaGo has a propulsion device, that just shows how formidable AlphaGo really is."

"This is almost turning into a fighting robot."

"Fuck! I'm really looking forward to the upcoming combat event challenge. Isn't this robot fight going to be like gods clashing?"

The audience was shocked by how impressive Google's AlphaGo was and many began to look forward to the third big challenge event, which is combat.

Because combat is about two artificial intelligence robots engaging in close combative maneuvers. Given the current capabilities of the two artificial intelligence robots, with their hundred-feet sprints clocking in fractions of a second and jumps reaching one to two hundred feet, would the Central Sports Ground be enough for them to showcase their skills?

Seeing AlphaGo's second long jump challenge reaching 201.19 feet, Larry Page finally felt secure, an unprecedented level of certainty.

After all, although Mist City Arts and Science University's Big White was able to jump one hundred and eight feet in the last attempt, I don't believe it could beat me by another foot this time, could it?

Big White didn't seem to have that kind of fuel propulsion device, and with Big White's inflatable robot structure, it wasn't possible to use a fuel propulsion system, which was what the engineers at Google told Larry Page.

"Impressive, Google's AlphaGo's second long jump challenge has directly broken the limit."

Huang Youjie spoke with a flattering tone.

The goal was to praise Google's AlphaGo to the skies, then let it fall hard.

"It seems that Mist City Arts and Science University is also preparing for another long jump challenge," said Huang Youjie. "It looks like neither of the two artificial intelligence robots is willing to concede."

"It's getting heated!"

"I'm fanning the flames myself, let's get this fight started!"

"Neither Big White nor Alpha Dog are willing to give in to each other."

"That's it, it's settled!"

"Go Big White, go go go, I won't allow you to lose to a foreign robot."

"How far will Big White jump this time?"

"Blindly guessing, Big White will once again outdo Alpha Dog by one meter."

"Hahaha, outdoing by another meter, you really are too mean."

"If Big White really outdoes Alpha Dog by one meter again, that would be hilarious, it's definitely intentional."

With Big White's next challenge, the atmosphere on-site immediately became super charged.

After all, not even the hundred Feet speed test had both sides this on edge continuously challenging each other, let alone the long jump turning into a direct confrontation!

"Big White, you know what I mean, right?"

Ding Yue was still repeating that line.

After Big White responded, it once again approached the long jump spot.

Just like the previous jump, Big White did not take a running start; it was a standing long jump.

First standing in front of the starting line.

Then Big White squatted down, and its fat, chubby body squatted down, capturing the hearts of many beautiful girls with its meaty body lines, looking very cuddly.

Indeed, it was adorable.

If a person had such fat lines, the pretty girls would probably be disgusted, but Big White was different. Everyone wanted to touch Big White's soft, chubby body because it must feel great to the touch.

Take off!

Big White sprung into the air once more.

This time, the height of Big White's jump was still the same as before, not as high as Alpha Dog's second long jump, but that didn't matter.

Although it wasn't as high, Big White's mechanical power was exceptional, and its body's mechanical design was incomparable to Alpha Dog's.

The kinetic energy of the graphene battery gave Big White the power to move forward once again.

That's right.

This time, Big White still didn't utilize the cold fusion power device, but rather relied on its internal graphene battery for energy.

Big White landed with a swoosh, at a position very close to the audience stands, and with the previous jump by Alpha Dog as a reference, it seemed to be a bit further, but not by much.

It seemed.

Was it about a meter again?

"202.19 feet!"

The judges announced Big White's result for this jump.

202.19 feet, again outdoing Google Company's Alpha Dog by one meter.

At this moment, everyone seemed to understand what was going on.

"Damn it, Big White is doing this on purpose for sure."

"Hahahaha, another meter, I wouldn't believe it if you told me it wasn't intentional."

"I'm dying of laughter."

"Big White, you really know how to mess with people's heads."

"Good fellow, just one meter more?"

"I've noticed that in these athletic events, Big White doesn't outperform Google Company's Alpha Dog by much, just a tiny bit more, is it to save some face for Google Company's Alpha Dog?"

The audience on-site and netizens online, all came to a realization.

Everyone might have thought the earlier hundred Feet speed test, each time being 0.111 seconds faster, as well as the earlier long jump, being one meter further, were all coincidences or just slightly stronger skills.

But now, everyone understood, it wasn't just a little bit stronger, this was Big White not even considering Google Company's Alpha Dog, doing it on purpose just by that little bit.

Larry Page from Google Company also saw it clearly, at this moment, he was absolutely infuriated!

Chapter 1406: The True Robot War Begins

This time, Larry Page was truly infuriated.

Because he finally understood.

The artificial intelligence robot Big White from Mist City Arts and Science University was always performing just a tiny bit better than his own Google Company's Alpha Dog in the sports competition, and it was all intentional.

Whether it was running the hundred meter dash 0.111 seconds faster or long jumping an extra meter, all of it was deliberate.

This kind of intentionality was nothing short of an insult to Google Company's artificial intelligence robot, Alpha Dog!

Feeling the insult towards himself and his company Google, how could Larry Page not be incensed?

"They from Mist City Arts and Science University are definitely doing it on purpose, damn it!"

Larry Page was seething with anger.

But even if he wanted to vent, there was no way to do it, because based on the current situation, it looked very difficult to beat Big White, the artificial intelligence robot of Mist City Arts and Science University, in the sports competition.

"Boss, what do we do now? Alpha Dog doesn't seem to be a match for Mist City Arts and Science University's artificial intelligence robot Big White."

Jim Lee also recognized the current situation and asked his boss with great unease.

At this moment, Jim Lee's heart was filled with bitterness; he had thought that they would defeat Xia Country's artificial intelligence robot, earn the boss's appreciation, and thus reach the pinnacle of his life.

But now, faced with such a situation, could the boss fire him directly after returning?

Because if Alpha Dog lost to Big White from Mist City Arts and Science University, Alpha Dog's purpose would be greatly diminished, and it's even possible that the company would directly cancel the artificial intelligence robot project.

"It seems like a losing battle in the sports competition."

Larry Page was quite clear in his mind, knowing that they had completely lost to Big White, the artificial intelligence robot of Mist City Arts and Science University, in the challenge of the sports competition.

In that case.

Since this was the situation, they could only pin all their hopes on the combat sports competition.

"We only have one chance."

Larry Page said again, and after speaking, his sharp gaze fell upon Jim Lee.

"Boss, you mean..."

Jim Lee felt a shiver upon receiving this gaze from his boss Larry Page.

Could it really be time to deploy the "combat" equipment?

Alpha Dog, as an artificial intelligence robot, would originally use various combat techniques in the combat challenge, competing against Xia Country's Mist City Arts and Science University artificial intelligence robot Big White.

But.

For the combat sports project, Google Company had made a second plan, which was the combat equipment for Alpha Dog. In short, it meant installing some combat equipment on Alpha Dog, equipment that was powerful enough to completely destroy Mist City Arts and Science University's artificial intelligence robot Big White.

At this moment, Larry Page's mind was already filled with the fantasy of Big White being utterly destroyed by Alpha Dog.

He believed that at that moment, the whole world's audience would understand who the strongest artificial intelligence robot really was, and Larry Page had chosen such a "violent" method to showcase his Google Company's artificial intelligence robot Alpha Dog, partly because Google was planning to develop and release artificial intelligence robot bodyguards.

So, seeing as they were meant to be bodyguards, it was necessary to show off their immense strength, and crushing Xia Country's Mist City Arts and Science University's Big White was a good opportunity to display such strength.

"That's right, I want to see Alpha Dog smash Mist City Arts and Science University's Big White to smithereens!"

Larry Page said with a fierce look in his eyes.

This challenge was crucial for Google Company's future development in the artificial intelligence robot industry, so in Larry Page's opinion, they could only win this challenge, not lose.

"Understood, boss!"

Jim Lee, after receiving a clear signal from his boss Larry Page, immediately turned and headed with the mechanical engineering team towards the resting area for Google Company's artificial intelligence robot.

After Alpha Dog finished the sports competition challenges, they would immediately install the combat equipment on Alpha Dog.

On Mist City Arts and Science University's side, countless students were immersed in the jubilation of Big White's victory against Alpha Dog yet again.

After all, having defeated Google's Alpha Dog in both the hundred meter sprint and the long jump demonstrated that Big White's capabilities were naturally superior.

Most importantly, everyone realized that Big White being just a bit stronger than Alpha Dog every time was absolutely intentional—what did this imply?

Without a doubt, it meant that Big White's hard strength was far superior to that of Google's Alpha Dog.

Next.

The sports competition challenges would continue, and the audience had no suspense about the upcoming challenges.

And so it was.

In the weightlifting challenge, no matter how many kilograms Google's Alpha Dog lifted, Mist City Arts and Science University's artificial intelligence robot Big White always lifted just one kilogram more.

It could be said to be quite upsetting.

Chapter 1407: The True Robot War Descends _2

When those foreigners on the international web saw this scene, they were dumbfounded.

What's going on here?

Why is Mist City Arts and Science University's AI robot Big White always just a tad more capable than Google's Alpha Dog?

Just like that, the mentality of those foreigners on the internet started to crumble.

Subsequent challenges included swimming and table tennis, with Google's Alpha Dog ready to shine in useful events, especially since America is traditionally strong in the classic sport of swimming.

However.

No matter what style of swimming, however fast your Alpha Dog swims, Big White is always 0.111 seconds faster.

Yes, 0.111 seconds again, not a second more, not a second less.

The level of insult might not be considered very high, but the level of insult is definitely strong.

"Big White, you're so wicked haha."

"Big White, oh Big White, at least leave some dignity for others."

"Big White just shows that little bit of superiority over Google's Alpha Dog, that's already quite considerate, isn't it?"

"Big White is too strong."

"Referee, I want to report Big White for score manipulation."

"The referee says it doesn't matter whether the score is manipulated or not, as long as you beat Alpha Dog, that's fine."

"Hahahaha, I'm about to die of laughter."

The audience at the venue and the viewers in the live stream were laughing uncontrollably.

After the swimming event, Big White won again.

Next up was table tennis.

Table tennis is a classic sport of Xia Country, and since it couldn't be accommodated well at the Central-West Stadium, they had to move to the sports hall where there is a table tennis hall.

In fact, during the swimming events, they were already next to the swimming hall; right next to it was a sports hall.

Big White and Alpha Dog moved to the new venue.

For the tens of thousands of spectators at the Central Sports Ground, it was naturally impossible to watch the match on-site, so they just watched the live broadcast on the big screens at the venue.

That's right.

Inside Mist City Arts and Science University's Central Sports Ground, there are multiple giant screens for the audience to better enjoy various sports competitions, a common feature of major stadiums.

After all, with such a large stadium, like during a soccer match, spectators with slightly less than perfect vision couldn't see clearly what's happening on the field, so they had to rely on the big screen for live footage.

In the table tennis challenge match, Big White and Alpha Dog had an intense fight.

However, everything was under Big White's control. Big White's posture while playing table tennis was quite silly and cute, while Alpha Dog looked all serious and ready for battle.

It must be said, of all the sports, table tennis is one of the most entertaining to watch.

In the best-of-five series, Big White played with the score each time, ending each game 11:10 against Alpha Dog, which made Google's people think at first that Alpha Dog had a chance to beat Big White in table tennis.

But to their surprise, after all three games ended with an 11:10 score, Google's people realized it was all in vain, as if everything had been planned by Mist City Arts and Science University's AI robot Big White.

"Congratulations to Big White for winning the table tennis challenge!"

Huang Youjie announced triumphantly, "It seems that in every sports challenge, our Mist City Arts and Science University's AI robot Big White is just a bit more impressive."

Huang Youjie's "just a bit" sounded cheeky when said out loud, but for some reason, all of the Xia Country spectators felt exhilaratingly good after hearing it.

"Director Huang, you're starting to play with the foreigners' minds too, aren't you?"

"Hahaha, Director Huang, your hosting tone is so wicked."

"I suspect the school intentionally chose Director Huang to commentate the challenge."

"Big White is awesome."

"I wonder if the foreigners can grasp the cheeky tone of our Director Huang?"

"A bit more, and it might become the foreigners' curse."

"The excitement of this challenge match is killing me with laughter, hahaha!"

Students from Mist City Arts and Science University, whether they were watching on-site or streaming from their dormitories, were all splitting their sides with laughter, especially when Huang Youjie announced that Big White had won the sports competition in its entirety.

In this artificial intelligence robot challenge, Big White had already secured the sports competition after drawing in the game of Go.

If AlphaGo were to lose the final combat challenge as well, it would mean challenge failure and solidify Big White as the world's top artificial intelligence robot, a status that even Google Company would have to acknowledge.

Therefore, the final combat challenge is crucial for AlphaGo from Google Company.

"Quick, start the third combat challenge."

"I can't wait to see the fight, hurry up and start it already!"

"The robot battle is finally upon us."

"This time it's a real robot battle."

"Indeed, the first two challenges, Go and sports competition, were also confrontations, but their spectacles are ultimately not as intense as combat."

"They're fighting, they're finally fighting!"

The audience had been looking forward to it with great anticipation.

Because compared to Go and the sports competition, combat is certainly the most entertaining to watch, as AlphaGo and Big White will be "going at it for real."

"Alright, dear audience, it seems that everyone is very excited for the combat challenge," Huang Youjie said, taking advantage of the halftime break to look at the live broadcast's chat and seeing everyone eagerly anticipating the combat challenge, so he hyped up the atmosphere a bit.

As for when the combat competition would start, that depended on when both sides' artificial intelligence robots were ready.

"Friends in the audience, the combat competition will start soon, our AI robots on both sides are getting prepared, so please wait patiently for a little while longer," Huang Youjie said.

The audience had no choice but to wait patiently for the start of the combat competition.

At that moment.

At Google Company, Jim Lee had already started outfitting AlphaGo with battle gear, along with the mechanical engineers.

On the side of Mist City Arts and Science University, there was no activity.

"Yue, shouldn't we equip Big White too? This combat competition might be labeled as combat, but I guess Google Company won't be merciful, right? Didn't we prepare Big White's battle armor?" Huang Youjie took the opportunity during a commentary break to ask Ding Yue.

"Not in a hurry."

Ding Yue smiled indifferently and said.

"Huang, Big White can be equipped with the battle armor at any time; we don't need to be too proactive. You know what I mean, right?" Xu Bin explained by the side: "It's best to let Google Company show their true colors as much as possible."

"Oh, I see, I got it, I got it."

Huang Youjie wasn't slow on the uptake; upon hearing Xu Bin's explanation, he understood what was going on.

About ten minutes or so passed.

There came news from Google Company that AlphaGo was ready for the combat competition.

"Yue, Google Company is ready," Huang Youjie conveyed the message to Ding Yue.

"Okay, then we can start preparing," Ding Yue nodded his head.

Big White on their side didn't need any preparation at all. Its armor set was always stored in the resting area of the Central Sports Ground, under the watch of designated personnel. Whenever Big White needed it, all it took was the push of a button or just Ding Yue's voice command.

"Dear audience, thank you for waiting. Google Company's artificial intelligence robot AlphaGo and Mist City Arts and Science University's Big White are ready. The much-anticipated combat competition is about to begin. Let's welcome the two AI robots to the stage with our cheers!" Huang Youjie led the excitement among the spectators present.

Chapter 1408: This Fist, For Xia Country

The combat athletic challenge is the most anticipated and also the most exciting among the three challenge events.

Now.

The Go competition and sports competition have already ended.

Big White is currently in the lead.

The combat competition is about to begin, and Google's Alpha Dog enters from the left side.

At this moment, Alpha Dog looks a bit different from when it first appeared, seeming to have equipped some additional gear, apparently prepared specifically for the combat competition.

"Wow, did Alpha Dog equip itself with weapons?"

"It looks very strong in combat."

"This Alpha Dog from Google looks like a big pile of steel robot. Our Big White is inflatable, can it even compete?"

"Don't underestimate Big White, didn't you all think it couldn't beat Alpha Dog at the beginning?"

"The combat competition is what I've been looking forward to the most."

"The so-called combat competition, that's just two AI robots fighting each other, right?"

"Let the battle begin!"

The audience's anticipation for the combat competition grows even more intense.

After Alpha Dog's entrance, with all its equipment, it looks rather fierce.

Foreigners are very confident about Alpha Dog's combat capability in the competition and even held a poll on Twitter.

[Who do you think will win the combat competition?]

1. Alpha Dog

2. Big White

Holding a poll on Twitter is quite remarkable, and clearly, these foreigners on the global network mostly voted for Google's Alpha Dog, with about ninety percent of them supporting it.

Indeed.

This time on Twitter, Alpha Dog directly garnered 93.7%!

The remaining 6.3% are probably votes from Xia Country's overseas students and overseas Chinese for Big White.

Today's battle, if Big White wins, then Mist City Arts and Science University along with Feiyue Group taking this opportunity to promote "Super Combat Team" and Big White overseas, might just make countless foreigners fall in love with this AI robot and its cinematic image.

At the challenge event.

"Please welcome Big White!"

Huang Youjie announces with great enthusiasm.

After Google's Alpha Dog entered, next is the AI robot Big White from Mist City Arts and Science University.

Big White, still in its innocently dumb appearance, takes small steps to the center of the Central Sports Ground.

It can be said that Big White's little steps have become iconic for its walk, and numerous audiences love this walking posture.

Big White isn't equipped with anything, it still looks exactly like it did during the Go and sports competitions, with a plump white belly.

"Both AI robots have taken their positions."

Huang Youjie, as the host, says: "Next, I will introduce the rules of the combat challenge. In fact, under the inheritance of human combat sports rules, the AI robots from both sides are allowed to use external equipment with the ultimate goal of defeating the opponent!"

One could say the rules of combat sports are quite broad, which makes the AI robot combat challenge all the more versatile and exciting.

After all, when humans engage in combat competitions, there are all sorts of rules restricting the opponents.

But robot combat competitions are different, after negotiations between the challenging and challenged parties, many restrictions are lifted, allowing AI robots to perform better.

"Alpha Dog! Smash Big White!"

"Go, Alpha Dog!"

"Alpha Dog looks really strong in combat, that Big White over there is definitely no match."

"That Big White doesn't have any equipment?"

"Let me tell a joke, an inflatable robot vs. a steel robot in a PK."

"That Big White looks like it's here just to be funny."

"Even though it lost to Big White in the sports competition, Big White will definitely lose miserably in the combat."

On international platforms like Twitter and INS, this kind of opinion is mostly seen, and students from Mist City Arts and Science University, as well as audiences from Xia Country, are pretty used to these comments.

After all, it's no surprise that foreigners choose to support America's Google Company's Alpha Dog, just as the audience from Xia Country supports Mist City Arts and Science University's Big White.

"Principal Ding, I heard Big White can use National Arts, is that true?"

On the presidential stage, Principal Xu Dongcheng curiously asks Principal Ding.

"Hahaha, Principal Xu, you're quite well-informed. Our Big White does indeed have a National Arts Chip, it has learned almost all the National Arts, and is under the tutelage of our National Arts master Sun Chengkang."

Ding Yue answers with a laugh.

Big White truly knows National Arts, and in this aspect of PK National Arts, it's even more proficient than the currently very famous National Arts master Sun Chengkang from Xia Country.

Previously, Sun Chengkang had a National Arts PK with Big White at Mist City Arts and Science University, and even if he went all out, he would be parried move for move by Big White.

As an AI robot, in terms of countering moves perfectly, it performs exceptionally well.

Chapter 1409: This Punch, For Xia Country _2

Because artificial intelligence robots analyze opponents much faster than humans, as soon as you make a move, Big White can analyze the opponent's offensive and even defensive methods, and thus find stronger defense tactics and ways to break through attacks.

"I'm really looking forward to this."

Principal Xu Dongcheng rubbed his hands together and said, "Last time when Sun Chengkang, the National Arts master of Mist City Arts and Science University, fought against the Thai Boxing challenger, I was extremely excited. This time our artificial intelligence robot competing against a foreign artificial intelligence robot, I believe it will be just as spectacular as the last time."

As a loyal partner of Mist City Arts and Science University, Principal Xu Dongcheng naturally supported Big White and hoped that Big White would demonstrate an extremely high standard of National Arts combat.

At the Central Sports Ground.

After Big White and Alpha Dog, the two AI robots, made their entrance, they awaited the referee's whistle to start the match.

Before that.

The staff first briefed the two AI robots on the details of the combat sports, then asked Alpha Dog and Big White to step back a bit to their respective positions.

"Google Company's Alpha Dog is ready."

"Mist City Arts and Science University's Big White is ready."

Both AI robots were ready, eagerly waiting for the referee team to signal the start.

"Big White, let's not rush and see Alpha Dog's attack methods first,"

Ding Yue at the chairman's stand was communicating with Big White through his mobile phone.

"Understood, Principal."

Big White responded.

"Ready!"

The referee team signaled the two AI robots to prepare to start.

"Fight!"

Once the referee team's voice dropped, Big White still stood still without any reaction, leading the staff to wonder if something was wrong with the machine?

In contrast, Google Company's AI robot Alpha Dog launched an immediate attack.

Alpha Dog's attack was ferocious, and in a blink of an eye, it had already reached Big White's front.

"Holy shit, Big White, be careful!"

"Why isn't Big White moving?"

"Is this what they call an unchanging response to a myriad of changes?"

"Why does Big White look so silly 0.0"

"Move, Big White, they are hitting you already!"

Faced with the fierce punch from Google Company's AI robot Alpha Dog, the audience was already sweating for Big White.

Only Big White stood still in its place, towering and unshakable as a mountain.

At the critical moment.

Just as Alpha Dog was about to land the punch on Big White, Big White seemed to suddenly max out evasion and effortlessly dodged Alpha Dog's attack in an instant.

Alpha Dog's punch clearly had a flavor of Thai Boxing in it.

And Big White's dodge had a taste of the softness and firmness of Tai Chi.

"Hahaha, I knew Big White could dodge it."

"Big White's got a bit of a Tai Chi grandmaster vibe to him."

"Kinda cool."

"That dodge really was cool."

The audience cheered unabated, their hearts relieved seeing Big White easily evading Alpha Dog's punch.

"Ladies and gentlemen, as you can see, the combat between Alpha Dog and Big White has officially begun. Alpha Dog went on the offensive and launched an attack on Big White."

Huang Youjie started commenting on the battle situation.

At the same time, Huang Youjie introduced: "Here, let me explain the rules for determining victory in this combat sports challenge. First, the challenge time is one hour. Within this one-hour battle time, whoever defeats the opponent, making them unable to counter, will be declared the winner. If neither side defeats the opponent within an hour, then the scores will be calculated based on the

attack points as determined by the referee team. Attack points refer to the score the AI robots earn after effectively striking the opponent's body. Ultimately, if the first premise is not met, the one with the most attack points will win the combat sports challenge."

Huang Youjie's lengthy introduction, despite being wordy, was very clear to the listeners.

The first way to win is to directly defeat the opponent.

The second is if the first is not accomplished, whoever hits the opponent more times wins.

Such combat sports challenge rules were quite reasonable for artificial intelligence robots.

At least no one had any objections to these rules.

In the first three minutes of the combat competition, Google's Alpha Dog launched no less than ten attacks on Big White.

But.

Every attack by Alpha Dog was easily dodged or neutralized by Big White. So far, the duel was still in the form of hand-to-hand combat, and no weapons had been used.

Ding Yue guessed that according to the program set for Alpha Dog, the plan was probably to try to beat Big White with hand-to-hand combat first, and if that didn't work, to then use weapons.

Now Big White was all about dodging or neutralizing the opponent's moves, not avoiding the fight.

It was clear to everyone that Big White was analyzing the attack patterns of its opponent to find opportunities or weaknesses to strike back.

This was the intelligence of the people from Xia Country, and also the intelligence imparted to their AI robots.

Foreigners are different.

They only know relentless attack, and if one attack fails, they'll try twice; if two fail, they'll increase the intensity of the attack.

This is closely related to foreign culture.

In the few minutes of Alpha Dog's attacks, not once did they cause any substantial damage to Big White, nor did they score any attack points.

On the contrary.

Big White had completed its analysis of Alpha Dog's attack.

When Alpha Dog launched another attack, Big White immediately counterattacked.

And Big White's counter move was using the National Arts of Xia Country.

Boom!

One could see Big White throwing a straight punch to the face, and Alpha Dog was sent flying by this punch, duang~ landing on the ground; the audience could clearly hear the sound of steel hitting the ground.

The sense of imagery was strong, as the cameras caught every moment of the fight between Alpha Dog and Big White. And the best shot would be presented on the live stream and the big screen at the venue.

"Big White is awesome!"

"Good!"

"Well fought!"

"This punch is for Xia Country!"

"That feels good!"

"Amazing, Big White seems really smart."

"I can clearly feel that Big White is much smarter than Google's Alpha Dog."

"In front of Big White, Google's Alpha Dog is like a dumb dog, I'm dying of laughter."

"Nice!"

"666!"

The cheers of the audience were like waves, one after another.

And in the Mist City Arts and Science University's official live stream room on Feiyue Home streaming media platform, the audience was boiling too, with a barrage of '666' and 'awesome' flying across the screen.

Big White's punch, that countering move, was spectacular.

It not only knocked Google's Alpha Dog into the air but also scored an attack point.

Even though the punch was strong, for the Alpha Dog, made of aerospace-grade composite metal materials, it was clearly not enough to cause any major damage.

Despite being knocked to the ground by Big White's counter punch, Alpha Dog quickly got up and adjusted its status.

"Damn it!"

When Larry Page saw this scene, he was itching with annoyance, not expecting to be punished by Big White.

But no matter.

Alpha Dog hadn't given it its all yet, and it hadn't used any weapons; Larry Page was still very confident.

"Let Alpha Dog beat that White Fatty!"

Larry Page angrily told Jim Lee and the others.

Although Alpha Dog was also an AI robot, its AI program was obviously different from Big White's, being more under the control of people like Jim Lee.

Big White was different. It had its own human-like brain logic program.

Sure enough.

At Larry Page's command, Alpha Dog seemed even more enraged, leaped up, and soared into the air, an intense pressure attacking Big White in an instant...

Chapter 1410: Fully Armed, Big White Armor

Mist City Arts and Science University's Central Sports Ground is semi-enclosed.

That is to say,

right above the center of the Central Sports Ground, there is an opening.

When Google's AI robot Alpha Dog jumped, the height of its leap almost matched the entire height of the Central Sports Ground.

The audience had to look up to see the figure of Alpha Dog.

"Wow."

When Ding Yue saw this, he couldn't help exclaiming: "This combat power is quite impressive, it has strong jumping ability, but why didn't it show such power during the long jump?"

Hearing Yue's words, Xu Bin analyzed with a smile: "Perhaps Google added fuel propellers to Alpha Dog afterwards?"

"Indeed."

Ding Yue guessed the same.

Although they could only see the faint blue flames ejected from the soles of Alpha Dog, there must be other propellers elsewhere, otherwise, the height of this leap would be too exaggerated.

It's understandable that Google added more fuel propellers or other devices to Alpha Dog afterward.

After all, this fighting competition is Google's last chance.

Originally, Google initiated this AI robot challenge themselves, but they never expected that Alpha Dog would end up drawing with Big White in the Go competition.

Not only that, but it also lost to Big White in the sports challenges.

So, for this last fighting competition opportunity, Google would definitely seize it and equip Alpha Dog with everything necessary.

"Yue, should we also equip Big White with Big White armor?"

Xu Bin inquired.

Since Google's Alpha Dog had demonstrated extraordinary combat power, indicating that Google had already equipped Alpha Dog with all its devices, under such circumstances, if they didn't equip Big White with Big White armor, it could likely get hurt by Alpha Dog.

Even though Big White's frame was made from newly-developed high-tensile ceramic composite materials, facing those weapons equipped on Alpha Dog, it might not be easy to withstand.

That was the reason why Ding Yue had prepared Big White armor.

"Let's not rush, let's wait and see."

Ding Yue thought for a while and decided not to hurry with the Big White armor.

After all, Big White armor is akin to an ace up the sleeve; not only does it provide absolute safety protection for Big White, but there are also propellers installed on the armor.

The energy for the propellers comes from the cold fusion energy device already installed in Big White.

With the addition of propellers on Big White armor, Big White can not only achieve supersonic speeds but also fly!

Yes!

Just like in the animation film "Super Combat Team," the energy and armor equipped by Mist City Arts and Science University could enable Big White to perform all the actions depicted in "Super Combat Team."

If it weren't for Xia Country's air traffic control, Ding Yue would have loved to ride on Big White's back and let Big White carry him flying around Mist City.

Clearly, this scene could only appear in movies, as it's hard to realize in reality.

However, it's not to say it can't be done. If he wants to experience it, he could leave Mist City, find mountain areas around the city without aviation routes, and then experience flying while carried by Big White.

But, for such an experience, Ding Yue still preferred something more like Iron Man – wearing an iron suit and soaring into the sky.

When Alpha Dog leaped, the audience at the venue could clearly feel the kind of imposing pressure it brought.

However,

facing Alpha Dog's leaping attack, Big White remained calm as usual.

The attack was swift.

Although Big White stepped back a few times, Alpha Dog, still in mid-air, could readjust and accurately attack Big White again.

This meant that Big White had no way to retreat, and this strike had to be confronted head-on.

Big White also calculated this outcome, so he had no choice but to punch back, colliding head-on with Alpha Dog.

Bang!

The punch that Alpha Dog delivered when landing was ferocious.

Big White could only respond with a punch.

However!

Given that Alpha Dog had powerful mechanical energy, while Big White stood in place to counter the punch, in terms of force, Alpha Dog definitely had the upper hand.

Not only this.

The material of Big White's fist, made from high-tensile ceramic composite, although hard, still found it difficult to handle Alpha Dog's iron fist.

Luckily, Big White's fist wasn't smashed.

That would have been really embarrassing.

It must be said, the hardness of the high-tensile ceramic composite material is indeed very high; facing Alpha Dog's fierce iron punch, it still remained intact. However, Ding Yue estimated that if the intensity of Alpha Dog's iron punch were a bit higher, Big White's high-tensile ceramic composite might not have held up.

"Use speed!"
