

## F. University 141

Chapter 141: Principal Ding is Angry!

Sipping bubble tea and munching on various snacks.

Ding Yue leisurely sat on the sofa, his attention focused on the projection screen straight ahead.

The head of the Film and Television department was currently preparing to show Principal Ding the first episode of "A Bite of Xia Country," a food documentary project created by his team.

Upon inserting the USB into the computer, Zhu Youzhao quickly located the sample clip and clicked play.

Ding Yue was filled with anticipation.

After all, this film team from the Film and Television department had produced each episode of the food documentary "A Bite of Xia Country" at a considerable cost of 1.2 million "RMB".

He was certain that the quality of the final product must be excellent.

Assuming "A Bite of Z Country" on Earth in Ding Yue's previous life as the benchmark, Ding Yue would be fine if "A Bite of Xia Country" produced by the team were only a few levels below.

However!

The reality left Ding Yue somewhat disappointed.

The opening of "A Bite of Xia Country" didn't dazzle Ding Yue as he had imagined, the voicing over on the documentary was too immature.

Such a food documentary shouldn't use such a childish voiceover.

An in-depth sounding voice would normally do the job better.

Ding Yue couldn't help but furrow his brows and continued watching.

Perhaps the inappropriate voice over was merely a small issue, which could be easily corrected by replacing the narrator.

The issue wasn't big.

Ding Yue asked Zhu Youzhao to pause for a moment.

"The voiceover for the narration doesn't work for me, it's too immature," he offered his views directly to Zhu Youzhao.

"Okay, Principal Ding, shall we get another narrator afterwards?" Zhu Youzhao quickly agreed, nodding his head.

"Yes, let's get a narrator with a deeper voice, it needs to sound charismatic, understand?"

Ding Yue emphasized one more time.

"Yes, yes, yes."

Zhu Youzhao continued to agree with a nod.

"Continue."

The first episode of "A Bite of Xia Country" resumed playing.

Actually.

Not just the narration, Ding Yue wasn't satisfied with the opening visuals either; they seemed monotonous.

However, Ding Yue thought this might be because the production team's sample was not entirely finished yet.

The voiceover narration was a problem.

As Ding Yue continued watching, he quickly discovered another issue.

The script.

Darn!

This terrible script!

Ding Yue couldn't feel any immersion at all, solely due to the script which was simply too straightforward and mundane.

"Who wrote this script?"

Ding Yue couldn't help but furrow his eyebrows, asking Zhu Youzhao and the three students.

"Principal Ding, this voiceover script was written by the students of our drama & film literature major at the Film and Television Department," Zhu Youzhao replied.

"Don't you see it's not about the poor writing quality. Can't you feel it's too monotonous and lacks immersion?"

Ding Yue really didn't expect to spot quite a few disappointing elements despite watching for only a short while.

Even in his lowered expectations, these were hard to miss.

Who would watch such a food documentary?

Even the most basic voice-over was so terrible.

However, it's not like everything Ding Yue saw was flawed.

There were also some positives.

For instance, the opening few camera shots were quite beautiful, successfully encapsulating how nature provided food to mankind.

This was somewhat similar to "A Bite of Z Country" on Earth in his previous life.

"Principal Ding, I also feel that, although the visuals are rather pleasing, this voiceover seems a bit subpar," commented Wen Ruohan, the secretary who was an advance viewer of the first episode of "A Bite of Xia Country".

After watching it, she also identified this issue.

"Did you hear that? Didn't you realize this issue after production? Can't you afford voice actors? Isn't the budget 1.2 million per episode – hiring a professional voice actor shouldn't be that hard, should it?" Ding Yue said severely, looking at Zhu Youzhao.

Zhu Youzhao started shaking.

He originally thought getting Principal Ding to review the sample would please him and maybe land more resources for the Film and Television Department in the future.

But unexpectedly, Principal Ding seemed to have high expectations for this food documentary.

"The utilization of camera angles is good," Ding Yue suddenly praised.

He couldn't just point out the faults, he also had to acknowledge the positives.

Upon finally hearing a compliment from Principal Ding, Zhu Youzhao's awkward expression relaxed a bit.

"The camera angles were mainly handled by student Tang Yuanhua in this episode," Zhu Youzhao explained.

"Impressive."

Ding Yue gave a slight nod, giving Tang Yuanhua an approving look.

Tang Yuanhua was immediately thrilled; after all, who wouldn't be excited to receive praise from Principal Ding?

However.

Ding Yue initially thought that the only problem with this episode of "A Bite of Xia Country" was the voiceover narration. But it wasn't like that.

The more Ding Yue watched, the more issues he discovered.

The first one was that it had a high repetition of scenes.

Moreover, the clip editing was quite sloppy which seriously affected the quality of the footage. Compared to the beautiful shots that Ding Yue had praised earlier, there was a noticeable drop in quality in the latter clips.

The voiceover narration that Ding Yue didn't like just made things worse.

This made the quality of the episode practically unbearable.

One million two hundred thousand!

And this is what they produced for me?

They already went out to film and capture the process of food preparation, couldn't they make the shots more diverse and exquisite?

Zhu Youzhao noticed that Principal Ding was serious the entire time he was watching the episode.

At first, Principal Ding even praised the beautiful shots, but as he continued to watch, he didn't say much, Zhu Youzhao sensed Principal Ding's dissatisfaction with the episode.

Even Wen Ruohan, the secretary sitting next to Principal Ding, seemed bored by the episode.

"Principal Ding, this documentary feels a bit off. I can't pinpoint it, but it doesn't feel that good," Wen Ruohan cautiously whispered in Principal Ding's ear, sharing her impressions of the documentary.

Right now.

Ding Yue was having mixed feelings.

He was both disappointed and a bit furious.

He was disappointed because he thought that the episode created by the Film and Television department's team wouldn't be that bad.

But seeing it now, the voiceover, the video, the editing, the quality?

Is this it?

If it was a low-budget documentary, that would've been fine.

But this cost One million two hundred thousand per episode!

What infuriated Ding Yue was this, that they spent One million two hundred thousand 'RMB' and this is what they ended up with?

Thud!

Feeling rather angry, Ding Yue tossed the bag of chips to the side and looked at Zhu Youzhao with stern eyes: "Don't play it anymore, turn it off!"

Zhu Youzhao shivered slightly when he heard this.

He immediately went to the computer and stopped the projector.

The four students also sensed that Principal Ding was not satisfied with the episode of 'A Bite of Xia Country' they produced.

"Principal Ding, what...what's wrong?" Zhu Youzhao asked cautiously in a low voice.

"Director Zhu, is this the level of documentary your department produces?" Ding Yue chided sternly, "And you thought you could outshine the Architecture Department and Art Department with this? Well, what's your plan?"

Honestly.

Ding Yue was infuriated at this moment.

I approved a budget of several millions yuan for you, One million two hundred thousand per episode, and what you produced far short of my expectations!

This could only mean two things.

Either the Film and Television Department's staff and students aren't competent enough to produce a decent food documentary.

Or they weren't sincere about producing it, Ding Yue felt like the money wasn't used appropriately!

Ding Yue found the latter possibility more likely.

Given the 'BUFF' perk which Ding Yue entrusted to the faculty and students of Mist City Arts and Sciences University, even if they were bad, they shouldn't be incapable of making a passing grade documentary.

"Give me the budget for your shoot!"

Ding Yue, with a solemn face, said to Zhu Youzhao.

"Ah, okay, okay." Zhu Youzhao, who was very scared by Principal Ding's anger, feared it would not bode well for the Film and Television Department.

Zhu Youzhao quickly took out a copy of the budget for the first episode of "A Bite of Xia Country" from his briefcase.

The budget details exactly how One Million Two Hundred Thousand was spent.

After receiving the Budget, Ding Yue read it carefully.

Firstly, the money was definitely spent on the entire shooting process. Ding Yue made sure there wasn't fraud or misappropriation of approved funds.

If such a thing had occurred, it would have been a serious issue.

One Million Two Hundred Thousand 'RMB'! After reviewing the budget, Ding Yue realised most of it went to equipment procurement and daily expenses of the team.

It took nearly three weeks to produce the first episode of "A Bite of Xia Country", visiting Yunnan Province and Guizhou Province. The expenses on this journey were extravagant.

The rest of the budget was also within a generous range.

Yet the final product was this?

It's clear the production team of the Film and Television Department didn't put their hearts into producing "A Bite of Xia Country".

It was as if they were going through the motions, the money was spent, and the result was an episode that dissatisfied Ding Yue.

"One million two hundred thousand! The school approved One million two hundred thousand per episode, and you filmed this without due commitment?"

The more Ding Yue thought about it, the angrier he became. He threw the budget on the side and reprimanded Zhu Youzhao and the Film and Television students a few times.

"Can't you guys take your job seriously? Aren't you ashamed to have made such a lousy food documentary? Immediately tell the shooting crew to stop. Reflect on this first, and reshoot everything!" Ding Yue said with regret.

There was a sudden silence in the Principal's office. This is the first time Wen Ruohan, as the principal's secretary, had seen Principal Ding this angry.

Chapter 142: Film and Television Academy, Knowing Shame Then Becoming Brave  
Inside the Administration Building, in the big conference room.

"Heard Principal Ding is quite mad?"

"I heard too. Director Zhu showed the first episode's sample cut to Principal Ding, and got scolded terribly."

"Really? Is Principal Ding's requirement that high?"

"To be honest, our documentary is really poorly made. I have seen the first episode's sample cut, it's bad!"

"Didn't the team in charge of the first episode act all high and mighty? Feeling the chill now, aren't they?"

"I feel like the shooting approach is wrong."

"Exactly, I said from the start that this shooting plan isn't going to work."

"I heard Principal Ding has already put all shooting on hold. He wants a reshoot."

The students were having various discussions in the conference room.

The "A Bite of Xia Country" crew consisted of five teams in total, involving dozens of students and teachers from the Film and Television Academy.

The shooting team was divided into three groups, one group for the first episode, and the two remaining groups each responsible for two episodes of the remaining four.

With post-production crew included, the team size was quite large.

Soon, Zhu Youzhao arrived at the conference room with Tang Yuanhua, Meng Hao, and others.

Everyone looked at Director Zhu. His face looked pretty grim, probably because he had just been scolded by Principal Ding.

"Everybody, take your seats in the conference room. Principal Ding is coming soon."

A teacher said, maintaining order in the conference room.

Meanwhile in the Principal's office.

Ding Yue managed to calm his fury after downing a can of cola.

"Brother Yue, I heard that the Film and Television Academy's documentary is not to your satisfaction?"

Huang Youjie entered his office. As the Logistics Director, he had provided assistance to the film crew and rushed over as soon as he heard the news.

"What kind of crap did they shoot!"

Ding Yue hadn't spouted such words in front of Director Zhu and the students earlier, but now he didn't hold back.

"Director Huang, I just watched it with Principal Ding. It's really bad!" Wen Ruohan didn't think Principal Ding was being derogatory.

Because it really was bad.

There was almost no highlight.

The only highlight might be the few beautiful shots at the beginning, which were praised by Principal Ding, but beyond that, there was nothing else.

If they want to compete for any awards with this kind of food documentary.

That would be plain daydreaming or simply making a fool of themselves.

And if it was broadcasted, it would certainly be heavily criticized by netizens.

Fortunately, Principal Ding pre-screened the film and directly asked the Film and Television Academy team to reshoot "A Bite of Xia Country".

If things still don't work out, it can only be said that the current batch of students and teachers from the Film and Television Academy is deficient. They would have to wait for the new students in September and give it another shot.

"I'm pissed off. From the scriptwriting to shooting, there are problems everywhere!" Ding Yue began to analyze the issues with the Film and Television Academy team after calming down a bit.

The script was definitely not adequate.

Secondly, the method of shooting was not appropriate. It failed to emphasize the integration of food with local environment and diet culture.

"Let's go. The entire team of "A Bite of Xia Country" is in the meeting room now."

Huang Youjie patted Ding Yue's shoulder, speaking up.

As a result, Ding Yue got up, directly heading for the conference room. Huang and his secretary Wen Ruohan also followed him.

When Principal Ding arrived at the big conference room, every teacher, student, and Director Zhu in the room didn't dare to make a sound.

Ding Yue swept his eyes over the several dozens of people in front of him.

The Film and Television Academy's team this time was so large, but they couldn't even make a decent food documentary.

This truly disappointed Ding Yue.

Look at the Arts department. Lin Zhirou alone won the championship of the National College Student Art Festival Music Competition.

Then look at the Mechanical department. A team of four and a teacher managed to make the Big White robot Ding Yue wanted.

And the Architecture department. Liu Chuanjie and his team designed such an excellent [Bookship] library project, winning the Hop Cup Best Creative Award.

Now look back at the Film and Television Academy.

So many people, but what they gave Ding Yue was a pile of crap!

Ding Yue knew that they must all know he was mad. Therefore, he wouldn't lose his temper or anything at this meeting.

This meeting.

It was mainly about giving the Film and Television Academy's team a chance to reshoot "A Bite of Xia Country".

After all, he still had some hope for the documentary winning awards.

As long as they make a good film and win an award, Ding Yue could earn a University Honor.

And if he accumulates three such honours, he could fulfill one of the conditions to upgrade to [Well-known].

"To be honest, when I saw the first episode of the food documentary you all made, 'A Bite of Xia Country', I was really disappointed."

Ding Yue said to everyone in the meeting room in a very dejected tone.

Whether students or teachers, or even Director Zhu, everyone was seriously listening to Principal Ding.

"Principal Ding, I'm sorry, we didn't make a film that satisfies you." At this moment, Tang Yuanhua stood up and apologized to Principal Ding.

"No, no, no, you don't owe me anything."

Ding Yue shook his head, saying, "You are letting yourselves down."

The entire room fell silent.

At this point in Ding Yue's speech, there was a [Junior Guidance Card] in the items section of the system interface in front of him.

"Use."

With a slight mental command, Ding Yue applied this [Junior Guidance Card] onto the teachers and students in the conference room.

Only in this way could they deeply remember what he said today.

Ding Yue did this hoping to give the teachers and students of the film and television academy a chance to reshoot 'A Bite of Xia Country', hoping they could achieve the effect Ding Yue wanted.

"The shooting of 'A Bite of Xia Country' was your first opportunity to produce a documentary since admission, a very good chance for you all to improve yourselves, but you didn't seize it properly."

Ding Yue continued, "Have you thought about where the problem lies?"

After saying this sentence, Ding Yue sat down without saying anything more.

The meeting room became very quiet.

And the silence seemed to last a long time, as Principal Ding no longer continued speaking.

In such quietness, finally, some students began to reflect on the problems within the 'A Bite of Xia Country' production team.

Tang Yuanhua thought for a moment, clenched his teeth, stood up, looked at Principal Ding and said, "Principal Ding, during our shooting, we didn't focus on unified production, but rather, each member wanted to show themselves, resulting in fluctuations in the quality of the work."

Hearing Tang Yuanhua say this, the members responsible for the first episode of 'A Bite of Xia Country' all bowed their heads in silence.

"Principal Ding, the biggest problem with our team is the lack of internal coordination." At this moment, the student Shen Ling suddenly stood up and said.

As Shen Ling said this, the other teachers and students started to whisper amongst themselves.

Seeing this, Ding Yue guessed that Shen Ling had pointed out the crux of the problem—the reason why the quality of the film produced by the Film and Television Academy team wasn't good enough mainly lies in the lack of internal coordination.

Too many internal ideas.

If they can't achieve unity, it definitely won't work.

"Well said, it seems you've finally reflected on your problems. Let me tell you about the problems with your film, and what kind of 'A Bite of Xia Country' needs to be made to be considered acceptable."

Ding Yue was about to explain to them the 'A Bite of Xia Country' he envisioned.

Thanks to the effect of the [Junior Guidance Card], the Film and Television Academy team should be able to grasp his meaning.

"The narration voiceover needs to be rich and magnetic!"

"The picture must be exquisite and layered. When shooting food, you can use a variety of techniques to evoke the audience's desire to eat."

"The post-production editing, don't you look at the finished product to see if it's good or not?"

"I hope you can truly make a 'A Bite of Xia Country' that satisfies me and the audience, otherwise, this project will have to be cancelled!"

Ding Yue pinpointed all the key issues.

At the same time, he warned the film and television academy team that, if given another chance and they still can't make a good food documentary, then the college will have to cancel this project.

This panicked Zhu Youzhao.

No projects established in the school and for each department had ever been cancelled before.

The Film and Television Academy certainly does not want to be the first to experience that!

Being the first to do so would be criticized by other departments in the school. If they can't do it right this time, the Film and Television Academy may no longer be taken seriously by Principal Ding.

"Alright, reflect on this when you return. I look forward to the re-filming of the first episode of 'A Bite of Xia Country'."

After Ding Yue finished speaking, he turned around and left the conference room.

Tang Yuanhua, Meng Hao, Shen Ling, Sun Kaiping and other students all deeply reflected on their thoughts.

Zhu Youzhao also realized.

This time, the Film and Television Academy must pull together, put in a hundred times the effort, and take the reshooting of 'A Bite of Xia Country' very seriously.

"After each group goes back, rewrite the shooting plan. After submitting the shooting plan, all unqualified ones will be returned for rewriting. Those in charge of post-production must strictly control the quality of the post-production, and those responsible for the shooting budget must also strictly control it!"

Director Zhu sternly said to all members of the team.

"Principal Ding has given us another chance, do you all really want others to think that all of us in the Film and Television Academy are useless?"

At this point, Meng Hao stood up, saying to all the students with a serious face.

It has to be said that he is very good at rallying emotion.

For a while, the students responded all at once.

"No!"

"If we mess up the shooting again, our Film and Television Academy will really lose face!"

"Can everyone pull together?"

"Yes!"

The students of the Film and Television Academy this time, seemed to finally know shame before courage.

Chapter 143: Ding Yue's Thesis Defense

News of Principal Ding's anger quickly spread around the campus of Mist City Arts and Science University.

Many students knew about it.

The reason for Principal Ding's anger was his dissatisfaction with the work of the film school, feeling a sense of frustration akin to trying to change iron into steel.

As a result, Principal Ding was giving the Film and Television Academy another opportunity.

After the whole school learned about this situation in the Film and Television Academy, no students mocked or ridiculed the academy.

Instead, in the school's forum and in Whatsapp groups, students encouraged their peers in the Film and Television Academy to learn from their shame and strive for improvement, aiming to create a food documentary that would satisfy Principal Ding.

Mist City Arts and Science University's official forum—

[Film and Television Academy, keep going! I believe you can definitely learn from your shame and become more resilient!]

[Principal Ding really cares about you at the Film and Television Academy, otherwise he wouldn't have given you another chance.]

[Please put your hearts into creating a piece of work that will make Principal Ding happy. He is doing all of this for your own good.]

[Failing once is not scary. What's scary is being afraid to face failure. Go, Film and Television Academy!]

When Ding Yue took a break from writing his thesis in his office, he checked the official forum of the university and noticed that students were encouraging and supportive of the Film and Television Academy.

This made Ding Yue quite content.

It showed that the students of Mist City Arts and Science University had a strong sense of unity and shared school pride.

After returning from their previous meeting, the faculty and student teams of the Film and Television Academy indeed started to reflect deeply and learn from their mistakes.

They wrote one after another of voiceover scripts, carefully selected the best ones, and let Principal Ding review them personally.

To this point, Ding Yue had seen quite a few good drafts of voiceover scripts.

Apart from that,

The Film and Television Academy was taking serious preparations including filming plans. Even the budgeting costs were no longer extravagant as before.

The latest budget provided by Zhu Youzhao to Ding Yue for the reshooting of the first episode was cut by a full 800,000 yuan compared to the previous budget.

Ding Yue knew why the cost was so much less.

Because the previous budget of one million two hundred thousand yuan included the purchase of quite a lot of filming equipment.

This time for the re-shooting, these costs no longer needed to be included. A budget of only 400,000 yuan would be needed for the production team to go to Yunnan Province and Guizhou Province for re-shooting.

After browsing the official forum of the university, Ding Yue left and continued writing his thesis.

After fully digesting the [GaN Gallium nitride semiconductor material technology], writing "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials" was easy for Ding Yue.

If conditions permit, Ding Yue could even research the technology of gallium nitride semiconductor materials in China.

If mature utilization of gallium nitride semiconductor materials is possible, there would be a significant improvement compared to silicon material semiconductors.

The domestic chip industry would also make a leap in development.

Ding Yue only hoped that his thesis would have a certain promoting effect on the development of gallium nitride semiconductor materials domestically.

After another three days,

Ding Yue finally finished his thesis "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials".

Then, he applied for the defense of his graduation thesis.

Thesis defense is an organized, prepared, planned, and evaluated form of formal review of the thesis.

This time, it would be carried out by professors from the relevant departments who will form the defense committee.

Included in this committee were the Head of the Physics Department, Pang Jianbo, leading faculty member Wang Lei, and Chen Junwen and others from the Physics Department.

Because this thesis defense was somewhat peculiar, Ding Yue had made sure to remind the defense committee not to consider his position as the principal during the evaluation.

They should treat it as a regular student's thesis defense.

At ten in the morning,

Director Pang Jianbo and Wang Lei had already arrived at a classroom in the Boxue Building.

Soon, they would be discussing the graduation thesis "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials" by Ding Yue.

Actually, Director Pang Jianbo and Wang Lei had already read this thesis.

There was no question about its professionalism.

The extent of Principal Ding's knowledge in physics is very high. However, what surprised Wang Lei was Principal Ding didn't choose a graduation thesis in the field of particle physics, but rather in the field of materials physics.

Gallium nitride semiconductor materials naturally fall under the category of materials physics. Wang Lei isn't particularly experienced in that field, but Head of the Department Pang Jianbo has a solid background in the field of materials physics.

At the moment, Pang Jianbo was feeling very excited.

Because after he read Principal Ding's thesis, he found that research in the field of gallium nitride semiconductor materials might be able to make a breakthrough based on the methods Ding proposed in his thesis.

Research on gallium nitride semiconductor materials in Japan is quite advanced compared to China. If China can also make a breakthrough, it would be like a significant booster rocket for the development of the semiconductor industry!

Ten minutes later, Ding Yue arrived at the door of the classroom.

The secretary, Wen Ruohan, following behind him halted.

Because it wasn't appropriate for her to join Principal Ding's thesis defense.

"Principal Ding, I will wait for you at the door." Wen Ruohan finished speaking, and handed a cup of bubble milk tea in her hand to Principal Ding.

"Alright, if the defense takes too long, go do whatever you want. You don't have to wait for me here."

After Ding Yue finished speaking, he walked into the classroom and chose a seat in the center.

As instructed by Principal Ding, the defense committee treated Principal Ding's defense as if it were a regular student defense, so Pang Jianbo turned to Ding Yue.

"Let's start."

In fact,

Pang Jianbo had not fully understood Ding Yue's thesis. He even hoped to discuss some of the difficulties around gallium nitride semiconductors with Principal Ding through this defense.

Normally,

At the defense, the student is first allowed to outline their thesis title and the reasons for choosing the topic in about 15 minutes, and introduce the main arguments, evidence, and writing experience of the thesis in detail.

Pang Jianbo and teacher Wang Lei strictly followed the graduation thesis defense process.

Ding Yue fluently summarized his thesis title and the reasons for selection, and also introduced the arguments, evidence, and writing experience of the thesis.

For most students, the graduation thesis defense would be somewhat nerve-racking, as it relates to whether they can successfully graduate.

But Ding Yue was not nervous at all.

He even calmly took two sips of bubble milk tea.

After Ding Yue finished his summary, the lead defense teacher, Director Pang Jianbo, asked Ding Yue questions about his graduation thesis.

Usually three questions are asked.

After the teacher's questions are asked, some schools allow the student to independently prepare for 15-20 minutes and then answer on the spot.

Some schools stipulate that students must answer immediately after the lead defense teacher asks questions, in the form of "question and answer", either in dialogue form or the lead defense teacher asks three questions at one time, and the student answers one by one in order after understanding them clearly.

In addition, the lead defense teacher and other defense teachers can interject appropriately at any time based on the student's specific answers.

Ding Yue was very fluent in his response to these three defense questions.

The third question was the most difficult one about the application of gallium nitride semiconductor materials posed by Director Pang Jianbo.

Ding Yue had a discussion with Director Pang Jianbo about this issue, and Director Pang Jianbo unexpectedly found himself greatly benefited from it.

"That's right, in this way, the deadlock of gallium nitride semiconductor materials would be broken instantly!"

Pang Jianbo said, as if he suddenly understood.

After a while, Pang Jianbo calmed his excitement and asked Ding Yue, "Principal Ding, your thesis is highly professional. Professor Zhou Wen from Jiangnan University of

Science and Technology is a friend of mine. He has been doing research in the field of semiconductor materials in recent years. Can I show him this thesis?"

"Of course."

Ding Yue shrugged, indicating that there was no problem.

Moreover, when Ding Yue heard that Pang Jianbo mentioned that his teacher Zhou Wen is Professor Zhou Wen, especially when he mentioned the word 'professor', a light flashed in his eyes.

Mist City Arts and Science University has recruited three professors so far.

One of the professors is Liu Gongcheng, a civil engineering professor that Ding Yue invited from Carp City.

The other two were poached from two schools in Mist City at a high price by the school administration.

In other words,

Ding Yue now needs two more professors to complete the [University Professors] task.

The task [University Professors] has a rewards of 100 reputation points and a level-2 [University Treasure Chest].

Ding Yue was looking forward to this level-2 [University Treasure Chest].

Therefore, at this moment, Ding Yue had his eyes on the professor Zhou Wen mentioned by Director Pang Jianbo.

"That would be great. I believe this thesis can be of great help to Professor Zhou Wen's research on semiconductor materials."

Pang Jianbo said excitedly.

"So, is the graduation thesis defense over?" Ding Yue looked at Director Pang Jianbo and teacher Wang Lei.

Director Pang Jianbo quickly nodded and said: "Congratulations, Principal Ding, your graduation thesis has successfully passed the defense."

Applause erupted,

All members of the defense committee were applauding.

Because,

This is the first student from Mist City Arts and Science University to pass the graduation thesis defense.

He is also the principal of Mist City Arts and Science University.

As the principal of Mist City Arts and Science University, Ding Yue was the first to pass the graduation thesis defense and is about to receive his diploma.

This will definitely be an exemplary action for the students.

Wen Ruohan, outside the classroom, heard the teachers' applause from the classroom. She cautiously peeked in from the doorway.

It seemed that the defense committee teachers were very satisfied with the defense by Principal Ding?

At this moment, Pang Jianbo immediately took out his mobile phone. After got permission from Principal Ding to show the graduation thesis to professor Zhou Wen, he prepared to book a flight ticket to Jiangcheng, Jiangnan Province.

## Chapter 144: Questioning the Graduation Thesis

After successfully completing the defense of his graduation thesis.

Ding Yue finally felt a sense of relief, as his Bachelor of Science degree was almost in his hands.

This was just the first step for Ding Yue to enhance his qualifications.

Ding Yue still had to take the postgraduate entrance examination to hold higher qualifications. Only in this way, could Ding Yue, the principal, stand his ground.

Currently, Mist City Arts and Science University was not very famous among the universities nationwide.

However, with Ding Yue's continuous construction and development, Mist City Arts and Science University would surely have its day of fame.

By then, Ding Yue, the young principal, would naturally receive more attention.

And if at that time Ding Yue, who didn't even have a bachelor's degree, still happened to be the so-called "rich second generation", he would not only be looked down upon by the principals of other universities.

Even the image of Mist City Arts and Science University would be dragged down by him, the principal.

After the defense, Ding Yue left the Boxue Building and headed to the teaching building of the Art Department.

Because yesterday Ding Yue received a message from Lin Zhirou, saying that she had finished recording three songs, and if Principal Ding had time, he could listen and see if there were any better suggestions.

"Mr. Principal, did you pass your thesis defense?"

Wen Ruohan, who was following Ding Yue, kept asking curiously all the way.

"Guess."

Ding Yue smiled and deliberately teased Wen Ruohan.

"Hmm, I guess Principal Ding must have passed the thesis defense smoothly. I heard applause outside the classroom just now."

After finishing her words, Wen Ruohan asked again, "Principal Ding, am I right?"

"You're right, you're right, you're so smart."

Ding Yue, with an amused look, shook his head, finding Wen Ruohan an interesting girl.

She is efficient in handling matters, but in conversations, she always shows her naive and adorable side.

Yet, she has long legs like an older sister or mentor.

"Mr. Principal, you're too amazing. You have completed all university courses and passed the graduation thesis in just one academic year!"

Wen Ruohan realized that Principal Ding was definitely a genius and super academic achiever.

"If you work hard, harder and even harder, you could do it too."

"I can't do it. It would take me at least two to three years to finish all the four-year university courses."

Wen Ruohan shook her head, lacking confidence in herself.

For outstanding students, if they want to finish the four-year university credits ahead of schedule and apply for early graduation, it would definitely take a lot of time and energy.

Therefore, many top students who could finish their studies ahead of schedule often choose not to do so.

Because in addition to academics, there are four years of university life. This is a worthy part of life, which more top students wouldn't want to miss.

While talking about university studies, they unconsciously arrived at a recording studio in the art department.

Lin Zhirou and several other students from the school were busily working there.

During this period, Lin Zhirou has been striving to improve herself, while also recording the songs "Fragrance of Rice", "Confession Balloon" and "Blue and White Porcelain".

Since she was pursuing quality rather than speed, the recording of the three songs took Lin Zhirou a long time.

Currently, they were all recorded, and the other students, classmates of Lin Zhirou in the music class, were helping her with post-production work.

After Ding Yue arrived, he became the first audience to enjoy the three songs recorded by Lin Zhirou.

...

Jiangnan Province, Jiangcheng.

Jiangcheng University of Technology, inside an office.

Professor Zhou Wen was entertaining a visitor, who was a friend of one of his proud students.

"So, you're saying that the paper was written by your principal at Mist City Arts and Science University?"

When Professor Zhou Wen first heard what Pang Jianbo said, he was quite puzzled.

Because Pang Jianbo mentioned that this was a student's graduation thesis, and then said it was written by the principal. What was the connection between the two?

After a thorough understanding, he realized that Ding Yue, the principal of Mist City Arts and Science University, was very young, and held both identities of a student and a principal.

"Yes, our Principal Ding majored in physics in college, and his accomplishment in the field of physics is very high."

Pang Jianbo nodded and said, "Professor Zhou, I also graduated from a master's program in physics, and have some understanding of semiconductor materials. I think Principal Ding's graduation thesis may have certain effects on the research and development in the field of semiconductors in our country."

"If you rate it so highly, Teacher Pang, then I would really like to take a look at this masterpiece by your Principal Ding."

Professor Zhou Wen's temples were already grizzled.

He took a pair of reading glasses out of an eyeglass case from the drawer of his office desk.

At the same time, Pang Jianbo also took out the paper version of "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials".

In fact, Pang Jianbo could have simply sent an electronic version directly to Professor Zhou Wen, saving himself a trip.

But, Pang Jianbo worried that sending it digitally might not get a response, there was a chance that Professor Zhou Wen would not read it.

Now by bringing a printed version of Principal Ding's thesis and having a friend mention it to his professor, Professor Zhou Wen should at least take a look at the paper.

For Professor Zhou Wen, a thesis written by a university student about gallium nitride and semiconductor materials, he initially did not want to spend much energy reading or researching it.

Unless it was a research paper written by a graduate student, only then would Professor Zhou Wen consider it worthwhile to read.

But since Pang Jianbo has come all the way, and his own star pupil has also mentioned the matter, he could not ignore it.

Therefore, Professor Zhou Wen received Pang Jianbo.

"Professor Zhou, this is Principal Ding's thesis," said Pang Jianbo, handing him the thesis respectfully.

After all, Professor Zhou Wen holds a certain position in the field of physics research; he is a physics professor at Jiangnan University of Science and Technology.

In Xia Country, Jiangnan University of Science and Technology ranks high among the domestic universities, particularly in the science and technology category.

Professor Zhou Wen accepted the thesis from Pang Jianbo, preparing to invest some time to review it.

In fact, Professor Zhou Wen only needed to see a part of it to determine its quality.

"About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials," Professor Zhou Wen looked at the title of the paper, and then skimmed through the rest.

About five minutes later.

Professor Zhou Wen's expression became increasingly serious, occasionally his brows furrowed tightly.

A few minutes passed.

Professor Zhou Wen stood up from his chair, walked to his desk, and opened his computer to confirm something.

Pang Jianbo on the side was very puzzled, wondering what Professor Zhou Wen was doing.

"If we follow this logic..."

As Professor Zhou Wen delved deeper into the paper, he seemed to have a revelation.

Although the paper does not directly promote the maturity of gallium nitride in the field of semiconductor materials, it provides a clear path or direction for domestic research on gallium nitride semiconductor materials.

"Good, good, this is a good paper!" Prof. Zhou Wen praised, his wrinkled face showing a look of excitement and joy.

"Professor Zhou, what's the matter?"

Pang Jianbo couldn't help asking out of curiosity.

"Teacher Pang, this thesis of Principal Ding, it's really good. It can play a big role in allowing us to find our own way in the field of gallium nitride semiconductor materials in domestic research," Professor Zhou Wen said excitedly, then picked up his office phone: "Shen, you and Wang need to come to my office immediately."

Upon hearing this, Pang Jianbo felt Professor Zhou Wen's high regard for Principal Ding's thesis.

Because the Shen and Wang that Professor Zhou Wen called were most likely also physics professors at Jiangnan University of Science and Technology.

At this moment.

Ding Yue was in the recording studio of the Art Department building, discussing with Lin Zhirou about the release of the songs "Fragrance of Rice", "Confession Balloon", and "Blue and White Porcelain".

"I suggest releasing them one by one, this way it can create sustained popularity for you."

"Well, let's go with Principal Ding's idea."

Given that each song, once officially released on the music platform, will undoubtedly generate impressive numbers.

Releasing them one by one would keep the buzz going, maximizing the benefits for Lin Zhirou and Ding Yue's Feiyue Media.

"Principal Ding, something's wrong."

Just as Ding Yue and Lin Zhirou were discussing the release of these songs, Wen Ruohan suddenly shouted.

"Hmm? What's the matter? You're making a mountain out of a molehill."

Ding Yue turned around to see Wen Ruohan, who was holding her phone and seemed to be doing something.

"Principal Ding, you, you've been questioned by netizens." Wen Ruohan raised her head with indignation, saying, "These netizens are too much. How dare they say that about Principal Ding!"

"What happened?"

Ding Yue had no idea what had happened. He quickly walked over, and after reaching Wen Ruohan's side, he bent down to examine the content on her phone.

After reading it, Ding Yue finally understood what was going on. No wonder it made Wen Ruohan so angry.

Wen Ruohan was looking at Twitter, and she saw a post questioning the graduation of the Principal of Mist City Arts and Science University, which meant questioning her own thesis defense.

The post had already received over a thousand comments.

Over a thousand comments would indicate considerable attention, if it continued to ferment, it might even become a trending topic on Twitter.

There was also a related discussion thread where more and more people were posting related comments, naturally increasing its heat.

"I thought it was a big deal, just relax, it's not a big deal." Ding Yue was calm and said with a smile.

"What? Principal Ding, you think it's not a big deal?" Wen Ruohan was dumbfounded at Ding Yue's reassurance.

Chapter 145: Semiconductor Advanced Laboratory

Initially.

The news of Principal Ding's successful graduation thesis defense just circulated among the students of Mist City Arts and Science University.

The students all saw Principal Ding's diligent effort in studying professional knowledge as a model.

But for some reason.

The news quickly spread online.

Ding Yue, who serves both as a principal and a student, completed four years of university coursework and even passed the graduation thesis defense within a year.

Could there be any shady business?

It's obvious.

The rhythm is easily led, you only need to question whether the principal definitely opened a back door for himself.

And so, the online narrative was led in this direction, with growing netizens beginning to question the authenticity of Principal Ding's graduation thesis and whether the school made it easy for him to complete four years of university coursework in just one year.

Such topics are often the ones netizens most love to discuss.

"Principal Ding said he wanted to graduate early, and all the teachers understood."

"Did he really earn four years' worth of university credits in one school year?"

"What's the big deal about someone graduating from their own school?"

"I heard that Principal Ding studied physics."

"To be fair, I actually know a university student who completed all their credits within a year and then applied for early graduation."

"Actually, many academically successful students can do this, right?"

"Indeed, the knowledge learned in four years of university isn't hard, it's really easy for academically successful students. Only seminars at a postgraduate level, or even further at the doctoral level are hard, at that time the main focus is on difficult research."

"Come on, let's see Principal Ding's graduation thesis."

"All I can say about this is 'amazing,' whether there was any shady business involved, we dare not ask, we dare not say, huh."

"Mist City Arts and Science University is a private university, right? This kind of scandal is normal."

"Maybe Principal Ding just registered a major, didn't have to study at all, and the school simply let him graduate."

There are all kinds of comments online.

Anyway, after Wen Ruohan saw this, she was very angry. These "wise" netizens don't know anything, but they question Principal Ding, which is absolutely reprehensible.

Ding Yue, on the other hand, doesn't care at all.

He genuinely completed his university coursework and wrote his graduation thesis "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials". These are all real things, which the "wise" netizens on the internet cannot deny, right?

Rather than wasting time on these people.

Ding Yue might as well do some things that are beneficial for him and the school, such as checking on how the production team of the film school's "A Bite of Xia Country" is preparing.

Or determining when the song recorded by Lin Zhirou, a student of the Art Department, will be officially released.

And also the progress of Feiyue Animation Studio's production of the movie "Super Combat Team".

Alternatively, consider adding two more professors to the school to complete the [University Professors] system task.

However.

Although Ding Yue is not affected by the online criticism, students like Wen Ruohan, after their anger, all rushed to uphold Principal Ding's reputation.

Especially Xia Qing, a student of the Physics Department. Last semester, he, like Principal Ding, has taken early exams for many physics courses.

In Xia Qing's view, he hopes to learn all the knowledge and experiments of physics in two to three years, then obtain the credits and write his thesis, and apply for early graduation.

He believes that Principal Ding is much better than him. Every course exam and physics experiment that Principal Ding does is genuinely passed, and Principal Ding often discusses quantum mechanics in physics with him.

Now that Ding Xiao is being questioned, Xia Qing simply can't sit still.

Just as the doubters online were making noise.

Ding Yue received a phone call that was unsurprising.

The call came from Professor Zhou Wen of Jiangnan University of Science and Technology.

On the phone, Professor Zhou and Ding Yue discussed his graduation thesis.

As Zhou Wen discussed the content of gallium nitride and semiconductor materials with Ding Yue, the professor realized that Ding Yue had a deep understanding of gallium nitride and semiconductor materials.

"Your thesis has actually exceeded the scope of a regular university graduation thesis and can even be used as a master's thesis."

Professor Zhou Wen was highly impressed by Ding Yue's thesis "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials".

"Thank you for the recognition, Professor Zhou."

Ding Yue said modestly.

As a professor of physics, Professor Zhou has spent his entire life researching semiconductor materials. His praise is undoubtedly the highest commendation.

"Principal Ding, a few professors and I have always been researching semiconductor materials in the direction of gallium nitride semiconductors. Now, your thesis is of great significance to our research."

Professor Zhou said truthfully.

"If we can contribute a bit to your research in the field of semiconductor materials, it would be an honor for me and for Mist City Arts and Science University."

Ding Yue humbly stated.

In fact, when Ding Yue wrote the paper in the field of semiconductor materials, he deliberately included some influence on domestic semiconductor material research.

This way, highly regarded professors who are conducting research in this area domestically could be attracted.

Take Professor Zhou Wen, for example.

In fact.

The [GaN Gallium nitride semiconductor material technology] that Ding Yue mastered can replace silicon materials to produce semiconductor devices, as long as there is a corresponding lab.

What Ding Yue is thinking about now is how he can get Professor Zhou Wen to come to his Mist City Art and Science University?

Would it be based simply on an article?

That's obviously impossible.

"Got it!"

After thinking for a moment, Ding Yue finally had an idea.

After upgrading the Mist City Art and Science University to the [Minor Achievements] level, he received an advanced laboratory as a reward, didn't he?

Ding Yue hadn't been using this [Advanced Laboratory]. Once he used it, the system would immediately provide his Mist City Arts and Science University with an advanced laboratory.

The type of the lab and the disciplines covered can be decided by Ding Yue.

This reward is very valuable.

Therefore, Ding Yue hasn't rashly used it, but plans to put it to good use when the right opportunity presents itself.

Isn't the right opportunity here?

As a professor who studies semiconductor materials, if Mist City Art and Science University has an advanced laboratory that could attract Professor Zhou Wen, he might come.

Most importantly.

If Ding Yue gives the system-rewarded [Advanced Laboratory] a semiconductor advanced research laboratory definition.

Then perhaps, given time, by investing more resources and talent, they could develop a world-leading cutting-edge chip?

Maybe the real intelligent chip that Ding Yue wants to make for Big White is also possible to develop.

Bearing these thoughts in mind, Ding Yue feels it's worth it.

"Professor Zhou, if you are very interested in researching Gallium nitride semiconductor materials, why not come to our Mist City Art and Science University to discuss it in greater depth with me? In addition, our university has a very advanced suite of equipment for currently studying Gallium nitride semiconductor materials, which forms our semiconductor materials research laboratory. Do you have any interest in that, Professor Zhou?"

After Ding Yue finalised his idea, he extended an invitation to Professor Zhou.

"Really? Does Mist City Art and Science University have such an advanced laboratory?" Professor Zhou Wen asked incredulously.

"Yes, as long as you are willing to spend money, Mist City Art and Science University is a private university, but in the field of semiconductors, it is worth spending money.

However, the laboratory is already set up, but we still lack professional talents like you, Professor Zhou."

Ding Yue continued to coax him.

"I see, then I am really interested, how about I find some time to come take a look?" Professor Zhou Wen said he was very interested.

Actually, he was really excited.

Professor Zhou Wen, in his fifties nearing sixty, and the other two professors at Jiangnan University of Science and Technology, have always been committed to the research of Gallium nitride semiconductor material technology domestically.

Now it seems that they finally see some hope of breakthrough.

Of course, he wouldn't want to miss this opportunity.

"Welcome, our Mist City Arts and Science University warmly welcomes your visit, Professor Zhou!" Ding Yue said excitedly.

The two talked a lot, but the topic always revolved around the field of semiconductors.

The call lasted for over forty minutes. After hanging up, Ding Yue felt somewhat reassured.

Because from the call, he could sense to some extent Professor Zhou Wen's longing for the advanced semiconductor lab that Ding Yue mentioned.

So next, all Ding Yue needs is a high-level laboratory for semiconductor research.

"System!"

Ding Yue directly pulled up the system interface.

Then he switched to the items tab.

He selected that [Advanced Physics Laboratory] and confirmed his use.

Because this [Advanced Physics Lab] can be customised according to discipline and major.

This led Ding Yue to designate it as Physics-Semiconductor Materials Research Laboratory, and then there was an option about where to place this physical semiconductor materials research laboratory.

A virtual sandbox appeared before Ding Yue's eyes.

This virtual sandbox was actually the current campus of Mist City Arts and Science University, where various buildings, such as teaching buildings, experimental buildings, dormitories, libraries, etc., were displayed.

"One of the experimental buildings has always been empty, right? Let's put it there."

In the end, Ding Yue selected a laboratory building and decided on the location to house the Physics-Semiconductor Materials Research Laboratory.

"Ding! Congratulations to the host for using the [Advanced Laboratory] to get a Physics- Semiconductor Materials Research Laboratory!"

Upon hearing the system's prompt.

Ding Yue immediately went to that lab building and found the location where his lab was placed.

Opening the door and stepping inside.

A brand-new and fully equipped Physics Lab appeared right before Ding Yue's eyes.

## Chapter 146: Three Professors, Making a Fortune!

Jiangnan University of Science and Technology.

Professor Zhou Wen consulted with two other professors at his school and decided to embark on a trip to Mist City Arts and Science University.

To see the semiconductor research laboratory described by Ding Yue.

In the domestic research environment, unless part of the National Science Institution, it's difficult to possess advanced global research equipment.

Jiangnan University of Science and Technology is renowned for its technical and engineering programs domestically.

But in physical semiconductors, despite its reputation, Jiangnan University of Science and Technology lacks the nowadays global cutting-edge research equipment and laboratories, largely due to the prohibitive costs of such laboratories and whether the investment will yield returns.

Domestically developed Silicon Material Semiconductor technology is maturing, and chip production is gradually stabilizing, hence there is often little investment in this area.

After all, the strategy once adopted was, if it can't be made, buy it; if it can't be bought, rent it.

But when you can't buy or rent, problems arise, and you're left strangled.

Furthermore, foreign countries have already begun research on more advanced chip technology.

Professor Shen and Professor Wang from the Physics department of Jiangnan University of Science and Technology came to Professor Zhou Wen's office.

The three conducted an in-depth inquiry into Ding Yue's paper once again.

Eventually, Professor Zhou Wen had one of his students purchase three tickets to fly to Mist City two days later.

On the morning two days later.

Ding Yue got up early, freshened up, and went to the second dining hall for breakfast.

Today he is going to pick up Professor Zhou Wen from the airport, and Professor Zhou Wen is also bringing two other Professors, Shen and Wang, from Jiangnan University of Science and Technology.

This excited Ding Yue tremendously.

Three professors coming all at once.

If ultimately Ding Yue can invite all three professors to teach and conduct experimental research at Mist City Arts and Science University.

Wouldn't that be wonderful?

Task [University Professors] would be accomplished in one go.

Therefore, Ding Yue was definitely going to make a formal occasion of it today, personally going to the Mist City airport to pick them up, and then bring Professors Zhou, Shen, and Wang to visit the Physical Semiconductor Materials Research Laboratory at Mist City Arts and Science University.

When he got to the dining hall, Ding Yue saw his secretary, Wen Ruohan.

Yesterday Ding Yue had already instructed Wen Ruohan in advance to get up early for breakfast today before heading to Mist City airport.

Wen Ruohan got up quite early, even earlier than Ding Yue arriving at the dining hall for breakfast.

"Good morning, Principal Ding."

Upon seeing Principal Ding, Wen Ruohan, lively and cute as an elf, greeted him.

She has so much energy getting up so early?

Impressive!

"Good morning." Ding Yue said, yawning.

Getting up early often makes one feel lethargic.

It's now six twenty in the morning, not many students are at the dining hall for breakfast yet.

Can't help it; it's so early.

However, compared to Ding Yue and Wen Ruohan, the uncle and auntie workers in the dining hall get up even earlier.

Because they have to wake up early to prepare the food, steam buns, and so on for breakfast.

"Son, why did you get up so early today?"

Mother Zhang Yuping, seeing her son dining in the cafeteria so early for the first time, came up curiously to ask.

Her son usually gets up late, even as late as ten or eleven on weekends for breakfast.

But today he's up so early. There must be something afoot with this unusual behavior.

So Zhang Yuping decided to inquire.

"I have to go to the airport to meet some important University Professors later." Ding Yue explained.

"Ah, picking up Professors."

Zhang Yuping muttered, nodding her head, and didn't ask much else, turning back to her work.

"What the heck, Yue, you got me up this early, do you know how late I stayed up last night organizing that 'Comprehensive Legal Solutions' you wanted?"

At this moment, Huang Youjie, rubbing his sleepy eyes, walked over to Ding Yue.

"Among the three professors and the students they're bringing, my car alone definitely won't be enough. We had to get you involved." Ding Yue shrugged and said, smiling.

"Uh, even the two of us won't be enough."

"How is it not enough? One car can hold three people. Two cars are just enough for six people, aren't they?"

At this point, Wen Ruohan was left dumbfounded.

What about me?

Quickly, Ding Yue realised: "Oh right, Xiao Wen is supposed to go with me as my secretary."

"Hahaha, then why not give Bin a call?" Huang Youjie laughed out loud.

No other way around it.

When Principal Ding Yue goes out, he can't just leave his secretary behind. If only two cars are available, then it indeed wouldn't be adequate.

So, Ding Yue took out his phone and dialed Xu Bin.

"Hello, Yue. What time is it that you're giving me a call~"

On the other end of the line, Xu Bin spoke in a groggy voice.

"Meet at the second cafeteria in ten minutes!" After saying this, Ding Yue hung up the phone.

As expected.

Nine minutes later, Xu Bin arrived at the entrance of the first floor of the second cafeteria.

"Hahahaha!"

Seeing Xu Bin, Huang Youjie couldn't help but laugh heartily.

It's bad enough to suffer alone.

Good brothers should suffer together. Hahaha!

"Yue, you got me up this early just to have breakfast with you? You can't be serious, bro?" Xu Bin walked over, saw everyone having breakfast, and couldn't help but complain.

"It's not that simple as just having breakfast." Ding Yue calmed himself down and said, "After breakfast, you're coming with us to the airport."

"What are we going to the airport for?"

"Of course, to pick people up. There are some professors coming from Jiangnan University of Science and Technology, they've come to visit our school. Don't we have to pick them up?"

"Yeah, we should."

Xu Bin nodded and then went to the window to get a breakfast set before returning: "Isn't this weird? We have Huang, aren't two cars enough?"

"Sorry, but they're not enough hahaha!" Huang roared with laughter.

Seeing that Bin had the same "experience" as himself, Huang was obviously delighted.

After having breakfast, Ding Yue, Huang Youjie, Xu Bin, and secretary Wen Ruohan headed to the ground floor of the Administration Building and set off for Mist City Airport.

The distance from the University Town of Mist City to Mist City Airport is really too great.

It was barely light when they set off at six o'clock in the morning.

By the time they reached Mist City Airport, the sun was already high in the sky.

"Huang, have you prepared the three apartment rooms that I asked you to prepare?" While waiting for the arrivals, Ding Yue asked Huang about the logistics arrangements.

After all, three professors were coming to visit the labs at Mist City Arts and Science University, it was not feasible to let them book hotels on their own.

It should be no problem for the school to arrange accommodations.

Plus, the living conditions at the school's apartments were no worse than those at hotels.

"Don't worry, Yue, the staff had already arranged everything yesterday afternoon."  
Huang signalled with an OK gesture.

The flight from Jiangcheng to Mist City had now landed, Ding Yue saw it was the one Professor Zhou Wen was on.

Since Ding Yue hadn't seen Professors Zhou Wen, Shen and Wang before, even though he had photos of them, he still let Wen Ruohan hold up a sign.

The sign read "Welcome, Professors".

Very quickly, tourists started coming out of the arrivals gate in groups, and Ding Yue spotted his targets.

The targets were easy to identify, three professors in their fifties or sixties and three young men.

The three professors were from Jiangnan University of Science and Technology. It was clear that they were graduate advisers and would definitely bring their most promising students.

Indeed, each of the three young men was pushing one or two pieces of luggage.

"Professor Zhou!"

Ding Yue waved to them.

Professor Zhou looked up and saw the prominent pickup sign and the young man waving at him.

This young man was familiar to Professor Zhou, who had seen the photo Pang Jianbo had shown him and knew this was Principal Ding from Mist City Arts and Science University.

He was the man who wrote "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials".

Seeing Professors Zhou Wen, Shen Congde, and Wang Shangzhong, Ding Yue felt as if he had struck it rich.

After all, he initially planned to recruit only Professor Zhou Wen.

Now Professor Zhou has brought two other professors with him.

If all three professors could be recruited, the Physics department of Mist City Arts and Sciences University would undoubtedly take off, and it would help Ding Yue accomplish his [University Professors] task smoothly.

"Principal Ding."

"Professor Zhou, Professor Shen, Professor Wang, hello. I've finally been able to meet you all." Ding Yue warmly went forward and shook hands with the three professors.

"Please come this way. We have cars ready." Huang Youjie beckoned to the three young men behind the professors.

They were the most promising graduate students of the three professors.

So, as advisors, the three professors would usually take their students everywhere they went.

After greeting the three professors, everyone left the terminal and walked to the parking lot.

The three Audi, Mercedes, and BMW cars were impressive enough. This was why Ding Yue decided to buy three cars for them when Mist City Arts and Science University was first established.

Upon opening the trunks of the three cars, they stuffed their luggage inside.

Then they allocated who would ride in which vehicle, each professor and their students each got a car. The three cars were just enough.

Professor Zhou and his student rode in Ding Yue's Audi A8.

"I heard that your hot-pot in Mist City is famous. I have to try it during this visit." Professor Zhou started a conversation with Ding Yue after getting in the car.

"Hot-pot? I will definitely arrange that for you." After saying this, Ding Yue turned to Wen Ruohan in the co-driver's seat and said, "Notify the school's hot-pot restaurant to prepare a table for tonight."

"Principal Ding, is it the famous campus-themed hot-pot restaurant in your school?" Hearing this, the graduate student next to Professor Zhou asked with excitement.

#### Chapter 147: From Passive to Active

On the way back to Mist City Arts and Science University from Mist City airport.

Professor Zhou Wen and Ding Yue had plenty to talk about. Apart from some topics about the Mist City Arts and Science University, what they discussed the most was gallium nitride semiconductor technology.

Of course.

And that much-anticipated advanced physics lab for semiconductor research, which Professor Zhou Wen looked forward to.

By the time they arrived at the Mist City Arts and Science University, it was past one in the afternoon.

Ding Yue quickly arranged for a luncheon to entertain the three professors.

The students of the three professors, being young, were highly interested in a campus hotpot restaurant at Mist City Arts and Science University.

After all, this hotpot restaurant had already become a famous Internet sensation.

However, it was beyond the three elderly professors, including Zhou Wen, why a hotpot restaurant would be so popular.

"Professor, this is a famous internet-famous hotpot restaurant. Many young people come here to post on Twitter," explained one of Professor Zhou's students.

"Oh, is the taste good? I heard that in Mist City, it's a waste not to try the authentic hotpot,"

Professor Zhou Wen replied with a laugh.

"Professor Zhou, rest assured. This hotpot restaurant at our university has the authentic Mist City flavor. I have already arranged for tonight, and you can experience it then,"

Ding Yue confidently said.

He believed that the taste of the campus hot pot restaurant would surely win over Professor Zhou's tastebuds in the evening.

Upon hearing that they could taste the popular campus hotpot in the evening, the three students of the professors were quite excited.

After all, they, as young people, knew how hard it was to eat in this popular campus hotpot restaurant, sometimes it takes a whole day to queue up.

After having lunch.

Everyone took a short break.

Then Ding Yue led Professor Zhou Wen, Prof. Shen Congde, and Professor Wang Shangzhong to the laboratory.

All three professors were looking forward to seeing how advanced this physics and semiconductors laboratory that Ding Yue had mentioned was.

As a private university, as long as the funds were sufficient, they could have such a cutting-edge laboratory, which was clear to Professor Zhou Wen and the others.

Mist City Arts and Science University was just such a wealthy university. It was rumored that they had even spent 150 million yuan on a new library.

"Professors, welcome to the semiconductor research lab of the Mist City Arts and Science University's Department of Physics."

Ding Yue sincerely invited the three professors to the entrance of the laboratory, and then everyone put on overshoes and entered the laboratory.

As soon as Professor Zhou Wen entered the laboratory, he was excited to see the latest semiconductor research equipment from countries all over the world.

Following that, Professor Shen Congde and Professor Wang Shangzhong also entered. The various equipment in the laboratory caught the eyes of the three professors.

This lab was enough to be called an advanced one, as its equipment was among the top worldwide. It was no easy feat to have such a physics lab for semiconductor research.

The three professors knew that this lab was comparable to those of the National Science Institution involved in semiconductor material research.

For Professor Zhou Wen, who had been pursuing semiconductor-material research all his life, this was like a magnet, and he was the metal piece.

"Principal Ding, the cost of this laboratory must not be small, right?" Professor Zhou Wen asked excitedly.

Ding Yue calmly smiled and said, "Professor Zhou, our Mist City Arts and Science University is committed to serious education and research innovation. No matter how big the investment, we are willing to make it!"

Ding Yue's words deeply touched Professor Zhou Wen.

Isn't this the spirit needed in education? Especially for private universities like Mist City Arts and Science University.

Nowadays, there are too many private universities making money.

Even some public universities are gradually declining.

Ding Yue said so, but in fact, he did not spend a penny on this advanced laboratory, because it was a system reward.

For Ding Yue, the road to education was just that smooth.

As long as he completed the system's tasks or college development events, he would always get some unexpected reward.

At this moment, Professor Zhou Wen felt a strong urge to carry out semiconductor material research in this lab.

However.

He didn't know how to propose this to Principal Ding.

Another thing was, Zhou Wen was currently a professor at Jiangnan University of Science and Technology. As a relatively well-known public university, he couldn't easily switch to Mist City Arts and Science University.

However, it didn't matter, as someone at Professor Zhou Wen's level could serve as a professor at Jiangnan University of Science and Technology while also being a professor at Mist City Arts and Science University. This didn't actually conflict.

Of course.

This required one precondition.

That is, there must be some connection between Jiangnan University of Science and Technology's Department of Physics and Mist City Arts and Science University's Department of Physics, such as a cooperative research relationship or similar.

This precondition wasn't a big problem.

Since Zhou Wen could apply to Jiangnan University of Science and Technology. Though not the dean of the Department of Physics at Jiangnan University of Science and Technology, Zhou Wen still had influence.

What's more, both Professor Shen Congde and Professor Wang Shangzhong would definitely support him.

The biggest question was whether Principal Ding was willing or not.

After all, they had a very advanced laboratory for physics and semiconductors, whether they were willing to share was indeed up to Principal Ding.

After all, this is a private university.

Since they are here for a visit, Professor Zhou Wen decided to focus on touring around, and as for the matter he just thought of, it would be better to discuss it with Principal Ding at an appropriate time.

Being in his late fifties to early sixties, Professor Zhou Wen certainly understands the ways of the world.

That's why,

Right now, he was only focused on carefully visiting this treasure-like advanced physics and semiconductor materials laboratory.

Professor Shen Congde and Professor Wang Shangzhong were in the same condition.

From the moment they entered, it was as if they had found a massive treasure.

Unfortunately, this treasure was not theirs.

But their desire for the treasure was tremendous.

Because their field of research is semiconductor materials, and they had not made any significant breakthroughs for a long time.

The present research on gallium nitride semiconductor materials is a good direction for breakthroughs.

However, due to their lack of a laboratory to implement the use of gallium nitride semiconductor materials, they could only sigh in frustration.

But now, such a lab was right in front of them, and they were standing right inside it.

Every piece of equipment in the lab is what they have been longing for.

The visit lasted nearly two hours as the three professors and Ding Yue discussed and explored various lab equipment in relation to gallium nitride semiconductor materials.

For a moment, the lab was full of a vibrant academic exchange atmosphere.

Only Wen Ruohan was yawning non-stop.

As a student majoring in secretarial studies, how could she understand the discussions between Principal Ding, a physics major, and three physics professors?

Knowledge of natural sciences was essentially a sedative for Wen Ruohan!

"Ah~"

Wen Ruohan kept yawning.

The key issue was that she had to ensure her yawns were not too obvious, otherwise, if Principal Ding noticed, he would certainly criticize her.

Even if Principal Ding didn't see it, if the three professors did, it could also potentially be considered rude behaviour.

Finally, the chat and tour with Principal Ding and three professors ended.

Wen Ruohan initially thought she had escaped from her drowsy torment, but reality proved that Wen Ruohan was being overly optimistic.

Professor Zhou Wen proposed to have a more in-depth discussion about the paper in Principal Ding's office.

Of course, Ding Yue agreed.

So with no choice, Wen Ruohan had to follow Principal Ding and the three professors back to the principal's office.

The first thing Wen Ruohan did when she returned to the principal's office was to brew a cup of Principal Ding's finest tea for the three professors.

Then they moved onto more than two hours of academic discussion on physics.

Wen Ruohan was going crazy!

It looked like Principal Ding planned to discuss with the three professors for the entire afternoon.

But why,

Why was she the one suffering? She couldn't understand anything they were discussing and had to pretend to be knowledgeable by standing next to Principal Ding.

Wu Wu Wu

Ding Yue, on the other hand, was more than happy to engage in various academic discussions in the field of semiconductors with the three professors.

Because doing so allowed Ding Yue to fully demonstrate his knowledge reserve, and let the three professors know that he was not simple.

Sure enough,

Ding Yue's goal was achieved.

During the discussion, the three professors praised Ding Yue more than once as the most outstanding physics student they had ever seen, even better than their postgraduate students.

No wonder he could write the paper titled "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials".

The irony was,

While Ding Yue was repeatedly praised by the three professors of physics here,

On the Internet,

Netizens were doubting Ding Yue's thesis defense passionately.

After the academic discussion on the field of physics and semiconductors was more or less wrapped up, Ding Yue complained to the three professors about the online scrutiny his graduation thesis was subjected to.

"Principal Ding, it's hard to believe that an outstanding new talent in physics like you would be doubted in this manner by netizens," Professor Shen Congde said in disbelief.

That's when Professor Wang Shangzhong explained, "On the Internet, especially on Twitter, the literacy rate is quite low, which may be why Principal Ding is being attacked and questioned."

"Wouldn't this damage your reputation, Principal Ding?"

Professor Zhou Wen sighed reluctantly and shook his head. Perhaps if he spoke out about this matter, it could help Principal Ding against the attacks and doubts of netizens. He pulled out his phone and made a phone call...

Chapter 148: Big White's Law Chip

On Twitter.

A post from the official account of the Physics Department at Jiangnan University of Science and Technology on Twitter caused a significant reversal in netizens' doubt on Principal Ding of Mist City Arts and Science University's thesis.

And it even became a trending topic.

Twitter Trending Topic #27: Jiangnan University of Science and Technology and Principal Ding's Thesis.

[Jiangnan University of Science and Technology Physics Department] v: Our Professors Zhou Wen, Shen Congde, and Wang Shangzhong from the Physics Department stated that the thesis titled "About the Development and Application of Gallium Nitride in the Field of Semiconductor Materials" written by Principal Ding of Mist City Arts and Science University, has played a crucial role in promoting and inspiring semiconductor

material research. The three professors are actively engaging in related academic exchanges with the Physics Department of Mist City Arts and Science University.

Likes(1.9k), Comments(9723), Retweets(1.1k)

This tweet from the official account of Jiangnan University of Science and Technology Physics Department left those who had been questioning Ding Yue's thesis utterly discredited.

"Hm? Where are those who kept criticizing him? Come out and apologize!"

"I'm dying of laughter, some netizens, probably didn't even graduate from middle school, are criticizing a university student's thesis."

"Awesome! The Physics Department of Jiangnan University of Science and Technology is quite impressive. If it can gain the recognition of three professors, then it is definitely worthy!"

"I saw many students of Mist City Arts and Science University saying that their Principal Ding is pretty good. I knew the matter wouldn't be that simple."

"I want to ask those who doubted Principal Ding, does your face hurt now?"

"In this case, it seems that Principal Ding is indeed very capable."

"Jiangnan University of Science and Technology, my alma mater. People who get approval from our alma mater can't be bad."

As doubts have suddenly turned around.

Those netizens who cynically criticized Ding Yue, questioning Ding Yue are now like tortoises with their heads in their shells, not daring to show up.

In the end, this event concluded with Ding Yue and Mist City Arts and Science University gaining a wave of popularity.

Seven-thirty in the evening.

As it was approaching May and gradually entering summer, the night fell later and later.

It was only around seven-thirty that it started to get dark which is the perfect time to start the night life in Mist City.

In Mist City, the best choice for nighttime activities, without a doubt, is hot pot.

As always, the campus hot pot shop on the third floor of the second canteen still has long queues lined up.

The hot pot shop will operate until the early hours of the morning.

In consideration of foodies who eat hot pot late, Mist City Arts and Science University is planning to build a hotel within the campus.

In this way, those tourists who stay late for hot pot can directly check into the in-campus hotel of Mist City Arts and Science University.

The idea is a perfect business opportunity.

Thus.

In the first batch of expansion projects at Mist City Arts and Science University, a campus hotel has been added, which is also handed over to the students of the Architecture Design major at Mist City Arts and Science University to design.

Ding Yue invited Director Pang Jianbo of the Physics Department, Professor Wang Lei, Huang and Bin, along with the three professors and their students for hot pot in the evening.

During the meal.

Professor Zhou Wen stated that this was the best hot pot he had since his fifty-odd years.

The students of the three professors are also very satisfied. They managed to eat the trending campus hot pot without queuing which is simply fantastic.

Besides.

Professor Zhou Wen took the opportunity to discuss with Principal Ding about the cooperation between the Physics Departments of the two universities during the hot pot meal.

"Principal Ding, your Physics Department has a laboratory, our Jiangnan University of Science and Technology Physics department has several of us old folks and a group of energetic postgraduate students. If we could collaborate in the research on the technology of Gallium Nitride Semiconductor Materials, I believe we can surely make significant achievements!"

Professor Zhou Wen said while munching on hot pot.

Upon hearing this, Ding Yue smiled and nodded, "Professor Zhou is right, but how should we collaborate?"

In reality, Ding Yue had a cunning plan in mind, waiting for Professor Zhou to bring up this matter.

Because Ding Yue's objective was to bring Professors Zhou Wen, Shen Congde, and Wang Shangzhong from Jiangnan University of Science and Technology over to Mist City Arts and Science University to teach.

Establishing a cooperative relationship between the Physics Departments of Jiangnan University of Science and Technology and Mist City Arts and Science University would allow the three professors to legitimately come to Mist City Arts and Science University, while simultaneously maintaining their positions at Jiangnan University of Science and Technology.

Perhaps this is the ideal state imagined by Professor Zhou Wen.

Ding Yue indicated that he can accept this arrangement.

As long as Mist City Arts and Science University has enough allure to keep the three professors, it doesn't matter if they are also affiliated with Jiangnan University of Science and Technology. That's because they will spend a significant amount of their time and energy at Mist City Arts and Science University.

"Your school can establish a teaching partnership with our Physics Department at Jiangnan University of Science and Technology. In this way, we can communicate, cooperate, and develop in the field of physics."

Professor Zhou Wen said earnestly.

However.

Ding Yue fell into deep thought.

Of course, this deep thinking was just a facade for the benefit of Professor Zhou Wen and the others.

"Does Principal Ding have any concerns, or do you think it's not suitable to cooperate with Jiangnan University of Science and Technology?"

Professor Zhou Wen watched as Principal Ding sighed in contemplation, then he asked curiously.

"No, no, no, that's not it, I'm thinking, our Physics Department at the Mist City Arts and Science University is still lacking in core teaching strength. Relying solely on Director Pang and Teacher Wang, it will be difficult to expand into many fields in the future."

Ding Yue raised his head, looking at Professor Zhou Wen and shaking his head.

What he meant was that the Physics Department of Mist City Arts and Science University needed more teaching faculty. If Jiangnan University of Science and Technology could provide it, then cooperation would be simple.

Professor Zhou Wen naturally understood Principal Ding's intentions and immediately laughed, saying, "Principal Ding, don't worry, Professor Shen, Professor Wang and I are essentially graduate mentors now at Jiangnan University of Science and Technology and we have plenty of time. We can come to Mist City Arts and Science University to help you out. What's more, our lab is at your university, so it's convenient, why not?"

"In that case, are the three professors willing to come to our Mist City Arts and Science University?"

A light appeared in Ding Yue's eyes, and he asked with a smile.

"I don't know if Principal Ding would welcome us?"

"Welcome, of course, welcome!"

Ding Yue's expression and tone were both quite excited.

In fact.

All this was under Ding Yue's control. Professor Zhou Wen, Professor Shen Congde, and Professor Wang Shangzhong had all seemingly walked into a trap he had set for them.

That night, the three professors and their students enjoyed their hotpot dinner immensely.

The next day, the three professors agreed to return to their university as soon as possible to discuss the matter of cooperation between the physics departments of the two universities.

Ding Yue then saw off the three professors at the airport.

When he returned to the university and sat down in his office chair, Ding Yue finally let out a sigh of relief.

Previously, when inviting Professor Liu Gongcheng from Carp City Architecture University, he had had to expend a lot of energy, including taking a special trip to Carp City.

And now.

This round, he had the opportunity to secure three professors all at once, completing the [University Professors] task in one fell swoop. How could Ding Yue not be excited?

However.

Right now, Ding Yue still couldn't be 100% sure.

After all, Professor Zhou Wen had said that they were going to discuss with their university about establishing a cooperative relation with the Physics Department of Mist City Arts and Science University.

If Jiangnan University of Science and Technology disagreed, then this would be a difficult issue, indeed.

They couldn't really ask Professors Zhou Wen, and the others to resign from Jiangnan University of Science and Technology and make a job switch, could they?

After all, they were all in their fifties, having been at Jiangnan University of Science and Technology for decades. Besides the question of whether Jiangnan University of Science and Technology would let them go, there was also the question of whether the three professors themselves would be willing to leave.

After all, Jiangnan University of Science and Technology was a key university. Switching to a lesser-known private institution would probably be hard for people in the industry to accept.

Therefore.

Ding Yue decided to wait for the news.

Calm down.

It would be best if the two universities could reach a cooperation agreement, but if they couldn't, then he'd think of something else.

Just as Ding Yue was contemplating the matter of recruiting professors.

Suddenly, Huang called him.

"Huang, what's up?"

"Yue, I've got some good news for you." On the other end of the phone, Huang Youjie was playing coy.

"What? Don't tell me you guys in the Law Department have already compiled Big White's legal solution?"

Ding Yue made a wild guess.

"Holy shit! Yue, how did you know? You're well-informed! I was going to surprise you with it. I had planned to tell you last night, but you were caught up talking with the three professors, so I didn't mention it. Of course, I also forgot because I had a few drinks, hahaha."

Huang Youjie exclaimed in surprise.

"Really? I was just guessing." Ding Yue was a bit surprised.

"Yes, we've compiled the 'Comprehensive Legal Solutions'. You know, my classmates in the Law Department and I have worked day and night on this. We're all exhausted." Huang Youjie complained.

"It's been hard on you guys, rest assured, the university will reward you!" After saying this, Ding Yue immediately asked, "Have you given the 'Comprehensive Legal Solutions' to Bin and his team yet?"

Since the 'Comprehensive Legal Solutions' have been compiled, the next step would be to have the Computer Science Department start writing the program for them.

"An hour ago, we sent it to Bin and his team." Huang Youjie replied.

"Good, and one more thing, remember to apply for a patent for the 'Comprehensive Legal Solutions'. This is the fruit of your hard work in the Law Department, after all."

Ding Yue suddenly remembered the earlier infringement on their patent and reminded Huang to apply for patent protection.

In the Parallel World's Xia Country, patent copyright protection is taken very seriously.

Like the medical chip previously, Ding Yue had already instructed the Computer Science Department to apply for a patent, and it was currently under review.

As soon as the programming for Big White's legal chip starts, a patent will be applied for it as well.

Chapter 149: The Nemesis of the Outlaw Zhang San

One week later.

The laboratory where Tong Yihang's mechanical engineering team is based.

Today, a second test will be carried out on Big White, different from the last test.

The last test was concerned with the medical chip.

This time, it's about the legal chip. The computer science team worked tirelessly day and night and finally completed the programming for the legal chip.

Why so quick this time?

From what Xu Bin said, programming the legal chip seemed to be much easier and have more regular patterns than that of the medical chip.

Therefore, it only took seven days for Xu Bin, Chen Jun, and the rest of the computer science team to translate the seemingly gigantic "Comprehensive Legal Solutions" into the chip's program.

As one of the participants in this "project," Huang Youjie naturally came to the mechanical engineering laboratory with Ding Yue today.

He was eager to witness what Big White, the robot that uses the legal chip, would look like.

Inside the lab.

Other than Ding Yue and his secretary Wen Ruohan, there were four members from the mechanical engineering team, Xu Bin and Chen Jun from the computer science team, and Huang Youjie and several teachers and students who participated in the compilation of "Comprehensive Legal Solutions" from the Faculty of Law.

Whether it is Big White the health care robot or Big White the legal education robot, they are both products of full cooperation among several faculties. Today, they will witness the second test of Big White here.

Beep!

Along with Teacher Li Shengbin walking to the red charging box, squatting down and pressing the start button, a beep sounded.

Since Big White runs on lithium batteries, it usually consumes electricity very quickly.

There's no better solution to this at the moment unless Big White is fitted with a super battery, which would increase its weight significantly.

That's why Big White is usually in a state of hibernation and charging while in the lab.

Hiss hiss hiss~

Big White started to inflate again.

As Big White was inflating, its body gradually enlarged. Then it stood inside the red box, looking at the people in front.

But since Big White currently didn't possess any chips, it couldn't execute any program or communicate with anyone.

"Big White looks so adorable."

Today is the first time Huang Youjie has seen Big White, and he was instantly attracted by its cute appearance.

That being said, Ding Yue hasn't met anyone who found Big White unattractive so far.

Big White's appearance is undeniably a success, which is why Ding Yue chose to make a robot that, while simple like Big White, is hugely appealing.

At this moment, Xu Bin stepped forward with the legal chip in his hand.

He lightly tapped the place on Big White where the chip was to be inserted. The chip slot extended out, and Xu Bin inserted the legal chip. The slot retracted, showing a green light.

This indicated the successful insertion of the legal chip and that Big White could start running it.

"How should we test this legal chip?"

Tong Yihang curiously asked.

As someone who witnessed the testing of the medical chip on Big White last time, he was very curious about how to test the legal chip.

"Oh right."

Xu Bin also seemed a bit taken aback.

For the health care robot last time, they could fake a small injury on Wen Ruohan's arm. But this time, dealing with legal issues, they seem unable to figure out a way to test the legal chip robot.

Seeing this, Wen Ruohan, now prepared, quietly took a couple of steps back in case Principal Ding used her as a guinea pig again.

"Student Wen Ruohan."

Ding Yue called out to Wen Ruohan.

This almost frightened Wen Ruohan.

"Ah? Principal Ding? Not again, why always me?" Wen Ruohan pouted, looking pitiful.

"Huh? I didn't say it's you." Ding Yue replied with a light smile, holding out his hand: "Give me the phone."

Upon hearing this, Wen Ruohan breathed a sigh of relief and quickly handed her phone to Principal Ding.

When they entered the mechanical engineering lab earlier, Principal Ding had handed his phone to her while putting on shoe covers, so his phone was currently with Wen Ruohan.

"For a law-based robot, it's better to let a professional do the testing," Ding Yue said, taking out his phone and opening Whatsapp.

"So, it's my turn?" Huang Youjie took the initiative to step forward and stood in front of Big White.

Big White looked at Huang Youjie and greeted him kindly: "Hello, I'm Big White!"

This time, Big White simply greeted, after all, it is now running on a legal chip, not a medical chip like last time, so saying "I'm your healthcare assistant" would obviously be inappropriate.

This was something that Xu Bin and the others, as the chip's programmers, were well aware of.

"Big White, come, recite our country's 'Criminal Law' for everyone."

Huang Youjie amusingly said to Big White.

Big White then began to recite our country's criminal law, one provision after another.

"Book One, Chapter One, the mission, basic principles, and scope of application of the Criminal Law.

"Article One, Purpose of Legislation, In order to punish crimes, protect the people, according to the constitution....."

Everyone looked at Huang Youjie, sighing in disbelief.

That's it?

That's it?

That's it?

You're actually letting Big White memorize criminal law?

"This kind of testing won't do, Huang!" Xu Bin shook his head and said.

Such testing can't reveal Big White's functionality in law or legal knowledge. Is it just supposed to dryly recite legal articles?

At this time, Ding Yue found Professor Luo Xiang's Whatsapp account and sent a message to him.

Now that Big White has a legal chip, it's time to make an excuse to chat with Professor Luo.

"Professor Luo, do you have time? We've created a legal robot in our school, can you help us review it?"

Ding Yue specifically mentioned "legal robot", aiming to pique the interest of Professor Luo Xiang, the Law Professor.

However,

No reply came from Professor Luo Xiang for quite some time after Ding Yue sent the message.

Ding Yue wasn't in a rush either; he held his phone in his hand for the moment and then raised his head to Huang, "Off with you, your way of testing won't help."

After saying this, Ding Yue emulated Professor Luo's tone, and said to Big White, "Big White."

At his words, Big White lifted its head, paused its mechanical recitation of the criminal law articles, and looked at Ding Yue.

"Stop reciting for now."

Ding Yue's words were essentially a termination command.

Because Big White has not been programmed with any unique user commands yet. Meaning, any commands given by anyone present will be identified and executed by Big White.

Sure enough.

Big White stopped and said, "Okay."

"Big White, if the outlaw sneaked into my house when no one was home and took a Fruit Phone worth thousands of yuan, has the outlaw committed a crime? If so, what crime?"

Ding Yue thought of a random case and asked Big White.

Upon hearing this, Big White's black pupils rotated slightly and then it replied after a short pause, "The outlaw's actions constitute a crime, classified as burglary!"

"The theft of public or private property worth between three thousand yuan and thirty thousand yuan, three hundred thousand yuan and five hundred thousand yuan are respectively considered as "large amount", "very large amount", "particularly large amount" as stipulated in Article 264 of the Criminal Law."

Everyone was enlightened by the Q&A between Principal Ding and Big White.

Testing this way was the correct method.

Moreover, Principal Ding even brought out Professor Luo's notorious outlaw. Big White's response was well-structured, squarely based on the legal solution program coded into the legal chip.

"Good going, Big White!"

"This is interesting indeed. Take a look at how Principal Ding does it, Huang." Xu Bin glared at Huang.

Huang scratched his head, finally realizing this was indeed a feasible approach.

Because when they compiled the Comprehensive Legal Solutions, they would judge the case based on the legal text. This program was also written by Xu Bin into the chip.

"Our Big White is the nemesis of outlaws now!" At this point, Tong Yihang said excitedly.

"Looks good."

Ding Yue nodded slightly, then said contentedly, "However, this is just the simplest test. There's another one, though I'm not sure how to conduct it."

After saying this, Ding Yue fell into thought.

Because Big White should not just be a simple legal robot with case analysis capability. Another function has to be manifested.

That is to acquire people's behavior within its scanning range through the hyperspectral lens.

If any illegal or criminal activities occur, Big White will issue a legal warning, and dial the police hotline.

This is the essence of the legal robot Big White.

"Principal Ding, what else do we need to test?" Teacher Li Shengbin asked curiously.

"We need to test Big White's ability to warn against criminal behaviors. But we don't have any illegal criminal behaviors here."

Ding Yue answered.

"Let's simulate one." Huang Youjie suggested.

"Hmm, that's what I was thinking too." Ding Yue nodded, then scanned the lab.

The space was a bit confined and not suitable for simulation.

So Ding Yue had them bring Big White downstairs to the plaza in front of the building.

Next, Ding Yue asked Xu Bin to find a "weapon".

After a while, all Xu Bin found was an iron pipe.

"Principal Ding, this is all I got."

Xu Bin originally wanted to find a kitchen knife.

Chapter 150: Professor Luo, When Can We Cooperate?

In front of the Mechanical Department teaching building plaza.

A crowd of people surrounded the adorable robot, Big White, obeying Principal Ding's instructions and prepared to simulate a "crime" scene.

"Come on, Huang, you can be the suspect. Take this iron rod."

Ding styled Huang Youjie.

Huang Youjie stepped forward, took the iron rod from Xu Bin, and then commented, "Principal Ding, do I really look like a bad guy?"

"Yes!"

Everyone unanimously replied.

Now that they had a suspect, they needed a "victim".

So Ding Yue scanned everyone present. The person who looked most like a victim seemed to be... Xiao Wen.

"Wen Ruohan."

Ding Yue smiled and finally turned his gaze to Wen Ruohan, who was off-guarded and relaxed.

Upon hearing Principal Ding calling her name, Wen Ruohan shuddered and knew something bad was about to happen.

"Among the people here, you seem to be the only one who fits the victim profile, haha." Ding Yue laughed heartily, strode over, and patted Wen Ruohan gently on her shoulder.

Wen Ruohan couldn't help wondering why Principal Ding always targeted her.

"Principal Ding, will there be danger?" Wen Ruohan cautiously asked.

Ding Yue shook his head: "How could there be any danger? We are only simulating a scene. Besides, Huang knows his limits. You just need to simulate a crime scene."

After he finished speaking, Huang Youjie asked, "What kind of crime scene should we simulate?"

"Robbery?"

Xu Bin suggested.

"That works. You can chase Wen Ruohan with this rod, and she can run and shout for help."

Ding Yue roughly outlined the plot.

Huang Youjie and Wen Ruohan both listened intently as the two of them were about to perform next.

Surprisingly, everyone was looking forward to this simple robbery crime simulation. They wanted to see how well Director Huang and Secretary Wen could perform.

Just then, Ding Yue finally received a Whatsapp message from Professor Luo Xiang.

Professor Luo Xiang: Oh? A law robot?

Seeing Professor Luo's reply, Ding Yue quickly typed: "Yes, Professor Luo. Our university's Mechanical Engineering and Computer Science Departments, along with the Law school, have jointly developed a law robot. Do you have any suggestions for us?"

After the patent infringement incident last time, Ding Yue added Professor Luo Xiang, and the two of them chatted.

Now that Mist City Arts and Science University has finally developed the legal chip and made the legal robot Big White, he can talk more with Professor Luo Xiang.

Professor Luo Xiang: That's interesting. May I see it?

Professor Luo Xiang was indeed a bit interested in the law robot mentioned by Principal Ding. Since it was related to his teaching and law, he was interested in anything related to the law.

Plus, the last time Professor Luo Xiang had live-streamed about the patent infringement case, Principal Ding had given him many gifts and brought him more popularity.

So Professor Luo Xiang had a great impression of Principal Ding.

"Sure, Professor Luo, are you free to video chat with me?" Ding Yue hurriedly asked.

Professor Luo Xiang: OK, no problem at all.

Before Ding Yue could make a video call on Whatsapp, Professor Luo Xiang took the initiative to call.

Ding Yue hurriedly answered the video call, waved his hand and greeted, "Hello, Professor Luo."

"Hello, Principal Ding."

"Professor Luo, this is our legal robot developed by Mist City Arts and Science University. His name is Big White."

As Ding Yue spoke, he moved the camera to focus on Big White, who stood there like a big simpleton.

"Come on, Big White, greet Professor Luo Xiang."

Ding Yue gave Big White an order.

"Hello, Professor Luo, I am Big White!" Big White raised its polyvinyl alcohol fiber hand and greeted Professor Luo Xiang on the camera.

Professor Luo Xiang rarely saw such robots. At first glance, he found Big White, whom Principal Ding had talked about, quite adorable.

Now it even greeted him, confirming that it indeed was an intelligent robot developed by Mist City Arts and Science University.

Professor Luo Xiang: Hello, Big White.

After the greeting, Ding Yue explained to Professor Luo Xiang why Big White was a legal robot: "Because we have installed a legal program chip in Big White, so it can scan and judge the things happening around and analyze whether they are illegal or in violation of the Public Security Administration Punishments."

"This function seems pretty good." Listening to Ding Yue, Professor Luo Xiang felt it was quite novel.

"We are about to test it. You can watch, Professor Luo."

After Ding Yue finished speaking, he asked Huang Youjie and Wen Ruohan, "Are you two ready?"

"Yes, we are ready." Huang Youjie nodded.

Wen Ruohan looked at Director Huang nervously, "Director Huang, I run slowly. Don't charge at me and hit me."

"Hahahaha." Everyone couldn't help but burst into laughter upon hearing this.

Even Professor Luo Xiang, who was in a video call with Ding Yue, couldn't help but laugh uncontrollably.

What a lovely girl this one is.

"Alright, don't worry, it's only a simulation, a simulation." Ding Yue said and pushed Wen Ruohan away, instructing her to move a bit further.

Wen Ruohan walked about ten meters away.

Then Ding Yue turned to Huang Youjie and said, "Huang, you can start now."

"Ok, fine." Upon hearing this, Huang Youjie nodded and then acted like a fierce robber, raising the iron stick in his hand, and charging towards Wen Ruohan, who was ten meters away.

While charging towards Wen Ruohan, Huang Youjie also shouted, "Stop! Don't run away!"

"Ah!!! Help!!! Robbery!!!"

Wen Ruohan did quite well, she immediately got into character and ran disorderly all over the place. After running in a circle, she ran in Big White's direction.

"Big White, look over there!"

Ding Yue reminded Big White.

Big White followed the direction pointed out by Ding Yue, and instantly, his cute robot head turned serious.

Scanning.

Voice collection!

"Help! Robbery!!!" Wen Ruohan continued screaming, running nonstop.

Big White quickly picked up the ongoing "robbery" and a red warning appeared in his eyes.

"Robbery is in progress, it is recommended to call the police. Dialing the police number now..."

On the electronic screen in front of Big White, an emergency call to the police was already being made.

At the same time, Big White shouted at Huang Youjie, who was committing the "crime" using a loudspeaker method, "Criminal suspect, stop, you are committing a crime. According to Article 263 of our country's Criminal Law, robbery is an act of forcibly taking public or private property by using violence, coercion or other methods, with illegal possession as the purpose. It can be punishable by death at most!"

Big White listed the penalties for robbery to the suspect, with the promise of the death sentence, which certainly would be a deterrence for the suspect committing the crime.

"Professor Luo, at this time, if the suspect still does not stop, then Big White will step in and put a stop to it!"

Ding Yue explained to Professor Luo Xiang in the video call.

As expected.

Following the pre-set storyline, after hearing Big White's legal warning, Huang did not halt his act of "robbery" and continued to chase after Wen Ruohan.

At this point, Big White instantly charged forward.

Because of Big White's robust braking system, although he usually bounces around in a slow and adorable manner, when needed, his braking system allows him to run faster than a normal human.

Sure enough, a white figure rushed forward.

Bang!

Big White stood in front of Wen Ruohan, and with one punch, knocked Huang Youjie down.

"Whoa, isn't that kind of overreacting?"

After being knocked down by Big White, Huang Youjie got up from the ground, rubbed his cheek and grumbled, "Principal Ding, you didn't tell Big White to be gentle. He almost knocked my teeth out."

It was a grave situation for Huang Youjie.

Big White continued to scan Huang Youjie. His iron stick had fallen to the ground, and Huang Youjie showed no intent to continue with the mock "offense", so Big White didn't take any further action against him.

"Wow. Big White is a bit of a badass!"

"Hahaha, Director Huang is really unfortunate."

"Big White can prevent crimes. Impressive! Impressive!"

"How about that, isn't our Computer Department's program awesome?"

The students in the crowd praised Big White's "crime-stop" capabilities.

Even Professor Luo Xiang was stunned and exclaimed: "Principal Ding, does Big White also have crime prevention functionalities?"

Ding Yue nodded with a smile, "Yes, indeed. First, when Big White detects any illegal criminal activities, it will issue a legal warning or call the police. If legal warnings and police calls do not work, and the victim needs help, Big White will step in to prevent the crime!"

After hearing Ding's explanation, Professor Luo Xiang became even more interested in this cute and chubby robot.

Mist City Arts and Science University has created such an interesting robot.

"Principal Ding, your robot is quite impressive," Professor Luo Xiang commended.

"Hehe. If our legal assistant robot Big White gets a compliment from Professor Luo, it's a big thing for us. By the way, Professor Luo, if you have the time, why not work with our Big White?"

Ding Yue seized the opportunity to bring up collaboration with Big White to Professor Luo Xiang.

If Professor Luo Xiang agrees, his understanding of Big White would increase substantially, bringing Mist City Arts and Science University closer with him.

They've already discussed so much.

Ding Yue believed that there should be no reason for Professor Luo Xiang to reject now, right?

"Collaboration? Is that appropriate? In the video, Professor Luo Xiang suddenly hesitated.
