Chapter 1411: Fully Armed, Big White Armor _2

In the rest area of Google Company, Larry Page saw that his Alpha Dog had gained an attacking advantage and decided to micro-manage it.

At Google, upon hearing his boss's instructions, Jim Lee immediately commanded Alpha Dog to adopt a fast and fierce attacking move, attempting to hit Big White with continuous strikes.

Sure enough.

After the punch-out with Big White, Alpha Dog immediately tried to disrupt Big White's calculation and analysis at a very fast speed, then released attack signals from multiple directions.

Faced with such a situation, Big White was not panicked at all.

Eventually, as Alpha Dog sped towards him, Big White simply broke into a run, avoiding a direct confrontation with Alpha Dog.

"Hahaha, damn, Big White actually ran away."

"This running away is quite clever."

"Alpha Dog is too fierce; Big White doesn't want to play with it."

"It's too cute when running."

"Is this the legendary 'if you can't beat them, run'?"

The live audience was directly amused by this scene.

Originally, the two AI robots were engaged in fierce combat, but in a blink of an eye, the style changed, turning into a chase scene.

"Come on, if you dare, don't run."

"Is this a running robot?"

"Run if you can't win?"

"Big White is too cowardly."

Foreigners immediately seized the opportunity to mock Big White in various ways.

Although Big White ran away to dodge Alpha Dog's attacks and looked quite cowardly, the show's effect was maximally enhanced.

There was a reason why Big White avoided facing Alpha Dog's attacks directly, as it had calculated that its body's hardness was no match for Alpha Dog's aerospace-grade composite metal, so it couldn't sustain multiple contact attacks, or else its body would likely be shattered by Alpha Dog.

"Big White, run to the sidelines and prepare your armor!"

Ding Yue gave instructions to Big White.

"Okay, Principal."

After responding, Big White continued running towards the edge of the Central Sports Ground, the area designated for AI robots from Mist City Arts and Science University to rest. There, a red metal box holding Big White's armor had been placed from the beginning of the Go competition until now.

Finally, it was time to make use of it.

What can you do?

After all, Alpha Dog's body material is indeed harder than Big White's, being aerospace-grade composite metal used even in aviation equipment and rockets.

Even if using high-tensile ceramic matrix composites, which are strong aviation materials, they still fall short compared to aerospace-grade composite metals.

After all, aerospace-grade composite metal is a material that can withstand traveling through the atmosphere and into space.

Both Big White and Alpha Dog moved very quickly.

In the blink of an eye.

Big White had already reached the playground.

Alpha Dog also chased after him, but Big White was well-prepared, immediately braked sharply, then took the opportunity to kick as Alpha Dog rushed over.

This kick had quite a flavor of a National Arts master.

Bang!

Alpha Dog couldn't react in time and was kicked about ten meters away by the suddenly stationary Big White.

However, Alpha Dog was strong too, being kicked by Big White's sudden move without falling to the ground but instead standing firmly.

"Big White Armor, activate!"

At that, Ding Yue gave the command.

Beep!

A green light lit up on the huge red metal box.

Immediately after, the red metal box automatically opened.

Big White then leaped up, jumping straight into the red metal box.

"What's happening?"

"Did Big White just jump into the box?"

"What's going on?"

"What is that big red metal box?"

"It looks kind of cool."

"Big White, this is the perfect time to counterattack, don't hide."

When the audience saw Big White dive into a big red metal box, they were extremely anxious.

Just moments ago, he abruptly braked then turned around and kicked Alpha Dog flying, gaining the upper hand. It was time for a counterattack, yet Big White actually jumped into this huge red metal box and hid?

"Come on, get ready, the BGM is starting, yes, yes, yes, use our Super Combat Team's BGM!"

Ding Yue was beyond excited.

Because Big White was about to make an appearance wearing the Big White armor.

This was the first time Big White would appear in front of the public wearing the Big White armor.

Operated by the staff at the Mist City University of Arts and Sciences Central Stadium, the familiar song—"Immortals" started playing!

And it was the original version sung by Jia Wenbo!

That's right.

Jia Wenbo, a music student at Mist City Arts and Science University, whose rendition of "Immortals" as the theme song for Super Combat Team, had once been popular all over the place.

"What's going on?"

"Why is there music playing now?"

"Isn't this Big White's Super Combat Team theme song, 'Immortals'?"

"I absolutely love this song."

"Wow, they are directly playing the song to cheer on Big White?"

Boom!

Just when everyone was puzzled about why Big White was hiding and suddenly a song "Immortals" began to play, accompanied by a roaring sound.

A figure in red and white, plump in stature, leapt out from that huge red metal box!

Big White!

Made his appearance!

And it was Big White wearing the red armor!

The moment Big White jumped out of the red metal box, countless cameras immediately focused on him, and under the global live broadcast, many exclaimed.

"Holy shit! So cool!"

"Ah! Big White!"

"What the hell, isn't this the armor from the movie?"

"So cool!"

"He transformed!"

"So he went to put on the armor!"

The audience finally realized that Big White jumping into the red metal box wasn't to avoid and give up the fight, but to put on armor.

This set of armor, which appeared in the movie "Super Combat Team," was very eye-catching. Once Big White put it on, his combat ability soared, he could even fly.

Who would have thought, in reality, Mist City Arts and Science University actually created such a set of armor for Big White, and it looked absolutely cool!

Dressed in the red armor, Big White transformed from a clumsy, naive AI robot into a slick battle robot in a snatch.

"Bring it on!"

Big White even struck a classic Bruce Lee pose, signaling Google Company's AI robot Alpha Dog to fight!

Fully armed and armored, Big White was incredibly dazzling at that moment, probably amazing viewers all over the world watching the live broadcast.

"We see that Big White has put on his signature equipment, the Big White armor, a set of armor I believe everyone is familiar with, yes, the one that appeared in the animated movie 'Super Combat Team'. Mist City University of Arts and Sciences, after countless developments and investing a lot of money, also created a set for Big White!"

Huang Youjie was commentating live on site.

"Holy crap, they actually made that Big White armor from the movie?"

"That's freaking awesome!"

"Mist City Arts and Science University is forever legendary!"

"No shit, a university that won the National Science and Technology Awards, how could they not be awesome?"

"This is too strong!"

"I just want to know, how much did it cost to make this set of Big White armor?"

"Armored Big White looks absolutely stunning, blow away Alpha Dog!"

This Big White armor set, even the widespread students of Mist City Arts and Science University didn't expect it, as they had never heard about it, not to mention the netizens and viewers of Xia Country.

In fact, Ding Yue also had the mechanical engineering team quietly work on this Big White armor, and at the same time, another suit of armor.

That's right.

The Iron armor that Ding Yue always wanted, he referred to it as Iron One.

However, due to the sudden challenge match, Ding Yue had the mechanical engineering team prioritise Big White's armor first, the design for Iron Suit No.1 is still not yet completed...

Chapter 1412: Sonic Boom! Alpha Dog Gets Smashed

With the theme song "Immortals" of "Super Combat Team" blasting through the entire Central Sports Ground,

the roar of the audience surged wave upon wave.

For Big White made his appearance wearing red armor, shocking and thrilling everyone!

This "sci-fi" style Big White armor, only seen in the movie "Super Combat Team," was incredibly brought into reality by Mist City Arts and Science University's research and development.

However.

There was one doubt in the minds of the audience and netizens.

That is, can this set of Big White armor really do what it did in the movie "Super Combat Team"?

This doubt.

Would be revealed in the upcoming intense battle between Big White and AlphaDog.

Upon witnessing Big White decked out in the new armor, the staff from Google Company were momentarily taken aback.

"White Fatty is still White Fatty, even clad in red armor, he's still White Fatty!"

Jim Lee from Google Company sneered, then ordered AlphaDog to continue its assault on Big White, with the fastest speed and strongest attack power, even wielding a metallic hammer weapon.

"We see, after Big White from Mist City Arts and Science University donned armor, AlphaDog from Google Company also brought out its equipment, a massive metal hammer that looks extremely formidable."

Huang Youjie delivered an enthusiastic commentary.

The audience had their hearts in their throats.

Despite Big White being armored, AlphaDog from Google Company seemed truly ferocious, especially with the huge metal hammer in hand – wouldn't just one blow shatter Big White to pieces?

More than that.

AlphaDog's speed was also incredibly fast, almost reaching its hundred Feet speed test levels, and in the blink of an eye, it was already in front of Big White.

This time, AlphaDog didn't bother with Thai Boxing-style fighting tactics against Big White.

It just swung that massive hammer down with deadly intent.

Cloaked in armor, Big White quickly dodged AlphaDog's hammer strike.

With such high speed and a ferocious hammer blow from AlphaDog, and still Big White could dodge – clearly, Big White's evasion skills were maxed out.

After Big White evaded AlphaDog's ferocious hammer attack, it launched a counter-attack with a punch!

Duang!

The sound of that punch was a clear and violent collision of metal against metal.

Your AlphaDog is made of aerospace-grade composite metal, and so is my Big White's armor now, our hardness is on par, and without an absolute advantage, AlphaDog can no longer gain the upper hand against Big White.

With that punch, Big White sent AlphaDog reeling back several steps.

"F*ck! The brutal sound of metal on metal, that's so freaking satisfying!"

"Thrilling!"

"This is the kind of robot battle I wanted to see."

"If Big White punched me like that, wouldn't it just shatter my bones?"

"Shatter your bones? You truly don't understand the power of machinery!"

"Big White, counter-attack!"

"Big White's combat power has soared with the armor on!"

"Go Big White!"

The Mist City Arts and Science University's student audience was more excited than ever, especially seeing Big White counter-attacking AlphaDog effectively.

And most importantly.

Big White was no longer afraid of a head-on assault from AlphaDog.

"Damn it, I will crush you!"

Jim Lee was furious, knowing his job was on the line if he couldn't defeat Mist City Arts and Science University's AI robot, Big White.

Consequently.

Under Jim Lee's direction, AlphaDog launched another frenzied attack on Big White.

AlphaDog, holding its massive metal hammer, began to spin rapidly, creating what seemed like a metallic tornado.

"Holy moly, is AlphaDog from Google Company unleashing a special move?"

Huang Youjie was excitedly providing his commentary.

"Damn, that's fierce!"

"What the hell is this move?"

"Destroying heaven and earth?"

"Swinging the big metal hammer, ahahaha!"

"The guy talking about swinging the big hammer, you've really made me lose it."

"It looks like AlphaDog is panicked and resorting to a big move."

Watching AlphaDog's attack, which was unclear what move it was, the audience was amazed – AlphaDog really knew how to put on a show.

Big White remained unfazed in the face of his opponent's fierce momentum.

As AlphaDog, spinning the metal hammer, leaped into the air, it seemed to be preparing for a devastating aerial hammer spin attack to defeat Big White.

"It's flying up now?"

Huang Youjie exclaimed as he watched AlphaDog: "So high."

When AlphaDog soared to mid-air, suddenly, two wing-like appendages sprouted from the middle of Big White's back armor.

Whirr!

Activated was the cold fusion power source within Big White.

In an instant, Big White's power source was exceedingly plentiful.

Keep in mind, this is the power of cold fusion, much more potent than your average battery, even surpassing the energy of chemical fuels.

Chapter 1413: Sonic Boom! Alpha Dog Gets Smashed _2

Pale blue flames sputtered from the sides of Big White's wings, and thrusters were ejecting the same pale blue flames beneath its feet.

"Damn! Taking off?"

"This is way too cool, isn't it?"

"It's like a scene from a sci-fi movie has come to life."

"Get rid of the words 'like a,' please!"

"You mean the scenes in movies are becoming reality?"

"Does Mist City Arts and Science University have such kickass scientific research strength now?"

"To fly? How much energy and power would that require?"

Everyone was stunned.

Whether it was the students of Mist City Arts and Science University, the Xia Country netizens watching the livestream, or even those foreigners on the international web, they were all flabbergasted at this scene.

This was no longer the capability for mechanical jumping.

This was straight-up the ability to fly!

That's right!

After Big White donned the armor, in conjunction with the cold fusion energy device, it gained the ability to sustain flight.

Today.

Taking advantage of this AI robot challenge, Mist City Arts and Science University was going to show the world their real technological strength!

The reason for doing this.

Ding Yue had plans.

With the global attention so high on this AI challenge, they must seize the opportunity to showcase the true strength of Mist City Arts and Science University – not only to make the university's reputation international but also to establish it as a powerhouse of technological prowess in everyone's mind.

Originally, Ding Yue was planning on keeping it low-key at first.

But now that AI robot Big White had been pushed into the global spotlight by Google Company's maneuvers, there was no longer any reason to be low-profile.

Boom!

A low roar from the power engine thundered at the Central Sports Ground.

"Damn! It really is awesome!"

Xu Bin exclaimed.

As one of the creators of Big White, Xu Bin never imagined that Big White could one day take to the skies.

And Ding Xiaoyou, who had been low-key beside Ding Yue, couldn't help but reveal a slight smile at this scene.

Big White's ability to fly was thanks to Ding Xiaoyou's cold fusion energy device, meaning a great part of Big White's demonstrated power was due to Ding Xiaoyou's contribution.

This made Ding Xiaoyou extremely proud and delighted.

If the cold fusion energy device could be further advanced and matured in the future, there would be many applications, including the crucial field of space exploration!

"Hey Bin, have you ever thought about how awesome it would be if we could fly like Big White?"

Ding Yue asked Xu Bin with a smile.

"Holy shit, Yue, what do you mean?" Xu Bin, upon hearing this, was hugely surprised.

"Wait until it's done, then I'll tell you, hehehe."

Ding Yue left Xu Bin in suspense.

After all, if his Iron Suit No.1 was built successfully, it would absolutely dazzle everyone.

However.

Ding Xiaoyou glanced at her brother, seemingly guessing what Ding Yue was thinking.

On the sports ground.

The moment Big White took off with its powerful equipment, cheers erupted everywhere.

Google's AlphaGo had jumped high into the air, planning to strike Big White from above, but unexpectedly, Big White soared up.

Swoosh!

Just as Big White slowly ascended, its speed suddenly increased.

The audience could barely see more than a blur!

Bang!

A loud metallic crash resounded mid-air, and it seemed as if the audience could see sparks flying due to the metal collision.

At this moment, some cameras with steady capture got the shot of Big White's collision with AlphaGo.

In reality.

It wasn't a collision, but Big White flying towards AlphaGo, who was swinging a huge metal hammer in mid-air, and then it delivered a fierce punch. It was precisely because of this punch that the intense sparks were produced, as witnessed by the audience.

With this punch, AlphaGo was directly shot by Big White to an even higher altitude.

Then Big White continued to ascend, reaching an incredibly high altitude!

"Is this still a fight?"

"Holy shit, I'm dumbfounded!"

"Big White is way too powerful!"

"Big White from the movies has come to reality, this is fierce!"

"This is definitely a weaponized artificial intelligence robot, right?"

"As long as you have the money, you can make an AI robot even stronger!"

"This power, this speed, it's absolutely amazing."

"Isn't this speed too fast? Could it possibly exceed the speed of sound?"

Boom! Bang!

Indeed, just as the on-site audience exclaimed in astonishment, a sonic boom completely blew everyone away at the Central Sports Ground, and they all saw Big White breaking the sound barrier!

This scene is often only seen in fighter jet flight.

That's breaking the sound barrier!

"Sound barrier!"

"Holy fuck!"

"Hiss! That's loud, what happened?"

"What? Broke the sound barrier?"

"Damn! Isn't that just too cool?"

"With sufficient power, breaking the sound barrier is pretty normal, isn't it?"

When Big White's flight speed instantly broke the sound barrier, everyone was stunned.

Then, high in the sky, Big White descended from above like a command from the heavens, directly slamming Google Company's Alpha Dog from the air to the ground with a tremendous crash, kicking up a plume of dust, and soon after, everyone saw a crater formed on the soccer field.

"Big White is really ruthless."

Xu Bin said with a laugh and a cry.

"Yeah, making such a big crater in the soccer field, now we'll have to spend money to fix it, what a wastrel."

Ding Yue also shook his head and said.

The folks from Google Company were already frozen in place, not moving.

Completely astonished.

"Boss, we... we can't detect Alpha Dog's signal anymore."

Jim Lee nervously told his boss Larry Page.

The signal from Alpha Dog is gone.

What does that mean?

It means Alpha Dog has completely gone kaput, from an artificial intelligence robot to a heap of scrap metal.

Inside the crater on the soccer field.

Big White slowly walked out of the crater, hands on hips, seemingly declaring his victory to everyone.

And in the crater on the soccer field, Google Company's Alpha Dog had indeed become a pile of scrap metal, buzzing noises emanating from it, occasionally accompanied by sparks flying, and then it started smoking.

This time.

Alpha Dog was genuinely smashed to bits by Big White, totally smashed to bits.

According to the challenge agreement between Google Company and Mist City Arts and Science University, any damage to the AI robots during the challenge would be borne by both parties respectively.

It was precisely because of this clause in the challenge agreement that Ding Yue directly told Big White to show no mercy. If Alpha Dog could be smashed, it must not be allowed to leave Mist City Arts and Science University in one piece.

It might have arrived as a robot claiming to be the best AI in the world, but upon departure, all that's left is a pile of scrap metal.

"What?"

Larry Page's face was one of utter disbelief.

Today's AI challenge has completely overturned Larry Page's perception.

He thought that his Google Company's AI robot was the most top-notch in the world, but today, right before his own eyes, it was smashed by Mist City Arts and Science University's AI robot, Big White.

Not to mention the cost of constructing Alpha Dog, which reached several millions dollars, just the impact of this AI robot challenge, for Google, was immensely huge.

The foreigners supporting Google's Alpha Dog on the international web were all dumbfounded at this moment.

Especially when the live broadcast camera focused on the Alpha Dog in the soccer field's crater, fizzling, sparking, and falling apart, the worldview of the foreigners was shattered.

They couldn't believe it.

Alpha Dog was actually blown up!

At the Central Sports Ground, everyone was almost silent for several seconds, truly astounded by this scene.

Chapter 1414: Google Company Takes a Heavy Hit

...

Xia Country Times—

[AI Robot Challenge, Big White Wins!]

...

In an instant, the whole net was full of news and topics about the results of the AI robot challenge, with the hottest undoubtedly being that Google's AlphaGo got hammered by Big White.

Especially with the pictures and videos from the scene, the visual effect was simply explosive.

Both domestically and internationally, everyone was shocked by the outcome of this AI challenge.

Xia Country netizens frequently said before the challenge began that Big White would hammer AlphaGo, and unexpectedly, Big White really did smash AlphaGo to bits.

"Big White is the eternal god!"

"Holy shit! So violent!"

"Big White is too fierce, Google must be regretting challenging Big White now, right?"

"I said from the start, Google should stick to developing its own AI robots, why bother leeching off Big White's popularity? Enjoying it now, aren't they?"

"Big White could even break the sound barrier, this could definitely be a combat robot, right?"

"This is so satisfying to watch!"

"Come on, foreigners, tell me, whose AI robot is the most awesome in the whole world?"

"Hahaha, guys, I've transported some comments from foreign networks for everyone to see."

"I'm dying of laughter, the foreigners on the foreign networks are truly wailing."

"Now a lot of foreigners have started to admit that Big White is the strongest AI robot."

"I saw a big shot on the foreign networks saying that Big White's power source must be extraordinary, definitely not graphene batteries."

"With this fight, Big White has become a legend abroad."

"Big White's Twitter account surged by several millions of followers!"

Today's AI robot challenge might be the most explosive news of the year, or even in recent years globally.

The world's leading internet tech company, Google, was surprisingly defeated by a private college in Xia Country, and the loss was so devastating that their own AI robot AlphaGo got hammered into a pile of scrap metal.

After the challenge, facing the extremely high topic heat worldwide, Google outright refused all journalist interviews.

At this moment, Larry Page is already in self-isolation.

Throughout Google, there's an overwhelming feeling of being utterly deflated.

After hearing the news, another company founder, Sergey Brin, was also long unable to calm down, and when The Wall Street Journal from America wanted to interview Sergey Brin about the matter, he refused.

After Sergey Brin had calmed his emotions, he took out his phone and called Larry Page.

"Hello, Sergey."

Larry Page's tone of voice when answering the phone seemed somewhat subdued.

"Larry, how could this happen? How could Mist City Arts and Science University's AI robot Big White be so powerful?" Sergey Brin asked incredulously.

"I didn't see it coming either."

Larry Page said helplessly: "Sergey, this incident has a significant impact on our AI robot planning and an immense impact on the company."

"Looks like we have no choice but to abandon the AI robot product plans."

Sergey Brin also spoke helplessly.

Originally, Google had grand ambitions, which was to use the heat created by AlphaGo and Google's advanced technology to build the future of the robot era.

Because in Google's view, the future will inevitably be an era with robots everywhere since robots can do many things, even those that humans cannot do.

From a commercial standpoint, AI robots are undoubtedly a very promising direction, from military to commercial to civilian use, eventually becoming household AI robots in every home – the market is immensely vast.

This time Google initiated the AI robot challenge to consolidate AlphaGo's position, making it possible to smoothly carry out the plans for the AI robot market in the future.

However, what Google couldn't imagine was that their confidence would be thoroughly shattered by Mist City Arts and Science University's AI robot Big White.

"Are we just giving up like this?"

Larry Page asked, not willing to accept this.

But, Larry Page clearly understood, what can one do with reluctance?

This AI robot challenge saw Big White from Mist City Arts and Science University thoroughly crush Google's AlphaGo in all aspects.

If we can't compete with Xia Country on a technical level, what can we use to compete with them in the future?

Perhaps, after this incident, the only advantage Google has over Xia Country's AI robots is chips?

After all, AI robots need chips.

"What else can we do? We've been hit hard this time." Sergey Brin said with a sigh.

Chapter 1415: Google Company Takes a Heavy Hit _2

"Sergey, if artificial intelligence robots are to develop, they must have excellent chips. What is Xia Country's weakness? Isn't it chips? I think we still have a chance."

Larry Page suddenly ignited a bit of fighting spirit.

"You mean, to impose greater sanctions on Xia Country's chips?" Sergey Brin seemed to understand his old friend's meaning.

As long as there are global restrictions on Xia Country's chips, even if Xia Country wants to develop the artificial intelligence robot market, it would be very difficult.

"Although this restricts Xia Country's Feiyue Group from growing their artificial intelligence robots, the impact on us is also not enough to support continuing this plan."

Sergey Brin, while approving of this method to strike the opponent.

But thinking about their own situation, it seems that Google Company still has to give up, or temporarily suspend the development plan for artificial intelligence robots.

"Alright, I agree to put aside the artificial intelligence robot development plan for now, but by doing so, our loss is really too great." Larry Page had no choice but to agree with Sergey's suggestion.

"That's also inevitable, tomorrow our Google Company's stocks will see a huge drop," Sergey spread his hands helplessly.

"After I return, I will personally explain to the board."

Larry Page was very aware that this bankruptcy of Google Company's artificial intelligence robot development plan was largely his responsibility.

"Larry, don't be discouraged. Without the artificial intelligence robot industry plan, we still have the Metaverse Plan."

Sergey Brin tried his best to comfort his old friend.

Google Company's future has determined two major development strategies, one being the artificial intelligence robot development plan, and the second is the Metaverse Plan.

Metaverse is a very hot concept, America's Google, Facebook, Amazon, and other companies are all trying to create so-called Metaverses, with the most active undoubtedly being Facebook's Mark Zuckerberg, who even changed the name of his company for it.

...

In Xia Country, Mist City Arts and Science University.

Night is about to fall.

But in Mist City Arts and Science University's Central Sports Ground, tens of thousands of live spectators are still here, cheering for today's winner of the artificial intelligence robot challenge, Big White.

In this moment, Big White is absolutely cool and awesome.

Many media TV stations have come to interview Principal Ding of Mist City Arts and Science University, but because there were too many media outlets, Ding Yue thought about it and finally decided to accept interviews only from NTS.

And the reporter from NTS responsible for the interview, naturally, is Bingbing.

After Mist City Arts and Science University announced Big White's victory in the artificial intelligence robot challenge, Ding Yue asked Big White to stand in the very center of the Central Sports Ground to pose for photos and memorabilia from spectators from all over the country and even from abroad.

Various media reporters, and livestreamers alike, all focused their cameras on Big White.

Tonight, the topic of Big White from Mist City Arts and Science University is likely to dominate the night, even hotter than when EDG won the League of Legends Worlds.

Meanwhile at Google, after Google's staff took away the "remains" of Alpha Dog, they have not appeared again. Even when many domestic media TV stations wanted to interview Google's Larry Page, they were directly rejected by him.

At the VIP stand of the Central Sports Ground.

Beautiful reporter Bingbing from NTS has come over, ready to interview Principal Ding live.

"Viewers, I'm going to interview Principal Ding from Mist City Arts and Science University now, to see his views on Big White defeating Google's Alpha Dog, follow me."

Bingbing, with her sweet smile, called over the cameraman and walked towards Principal Ding.

"Principal Ding, NTS's reporter Bingbing has come for the interview."

Wen Ruohan, the secretary beside Ding Yue, reminded him.

"Okay, I know."

Ding Yue smiled and nodded. Currently, many people were around him, lots of students from Mist City Arts and Science University who were at the site had also gathered around, wanting to celebrate the school's artificial intelligence robot defeating Google's Alpha Dog and many were especially curious about why Big White was so powerful today.

"Hello, Principal Ding."

After approaching, Bingbing greeted Principal Ding with a smile.

"Hello."

Ding Yue also smiled and accepted Bingbing's interview.

"Principal Ding, congratulations on Mist City Arts and Science University's artificial intelligence robot Big White defeating Google's AlphaDog. What would you like to say at this moment?"

Bingbing asked directly.

"Here, I just want to say, when it comes to artificial intelligence robot technology, you have to believe in Mist City Arts and Science University, believe in Xia Country." Ding Yue replied with a light smile, his words carrying clear implications.

It was a message to the world that when it comes to artificial intelligence robotics, Mist City Arts and Science University and Xia Country are the best — challenge us if you dare!

"Ha ha ha, such a calm response from Principal Ding, yet it's filled with arrogance."

"Xia Country is the strongest!"

"The Big White of Mist City Arts and Science University will forever be the legend!"

"Let the whole world know who's the ultimate in artificial intelligence robotics!"

"Big White is going to take the world by storm now."

"With the most unadorned tone, speaking the most brash words in the world."

"Finally, one day, our Xia Country's technology can also be the most advanced and top-notch in the world, sob sob sob."

"Teary-eyed, moved, Xia Country is awesome! Mist City Arts and Science University is awesome!"

In the live stream, dense barrages of comments floated around as the netizens of Xia Country felt proud and honored for Mist City Arts and Science University, especially since today's AI robotics challenge saw them defeat even America's Google Company.

From now on, no one would dare to challenge Mist City Arts and Science University or Feiyue Group in the field of AI robotics.

"Principal Ding, since our AI robotics technology is the most advanced and leading in the world, will your school and company plan to introduce these AI robots to the market and usher in the era of robots that people are anticipating?"

Bingbing asked again.

This is a question many people are concerned about.

After this highly acclaimed AI robotics challenge, will Mist City Arts and Science University and Feiyue Group take this opportunity to fully open the AI robot market?

After all, AI robotics are highly anticipated in the future market.

"What I want to say is, the era of intelligent robots that netizens are eagerly anticipating has actually already started appearing around us, hasn't it?"

Ding Yue replied to Bingbing with a smile.

"What do you mean by that?"

Bingbing seemed not to grasp the true implication of Principal Ding's words.

"In our daily lives, hasn't Big White already integrated into it? In hospitals, in community health clinics, we can see Big White everywhere, and in the future, our Big White will enter thousands of households."

Ding Yue explained with a smile.

The Big White mentioned here, of course, refers to Feiyue Group's medical health robot Big White, not the top-notch AI robot Big White that Ding Yue has.

Indeed, the medical health robot Big White is an AI robot as well, just not as impressive as Ding Yue's Big White.

"As for a Big White like mine, it's definitely not very realistic due to its high cost. Perhaps just one of its batteries could be worth a small fortune."

Ding Yue said with a light smile, referring again to his own AI robot Big White.

It would be basically impossible for everyone to own such a Big White, not only because of the high cost but also because Ding Yue wouldn't manufacture many of them, as having too many powerful AI robots would eventually lead authorities to have a serious talk with him.

Chapter 1416: The Cost is Too High, Not Worth It!

Xia Country.

Southwest Military Industrial Equipment Department.

In an office, when Chen Wei heard this news, he suddenly stood up from his office chair, his eyes wide open like big copper bells: "What?"

"Commander, the entire internet is buzzing with news and topics about the artificial intelligence robots from Mist City Arts and Science University, and it's not just within the country, it's incredibly hot overseas as well."

Assistant Zhang, working under Chen Wei, explained.

"Did you just say that at the competition site, the artificial intelligence robot from Mist City Arts and Science University could fly and even achieved supersonic speed?"

Chen Wei was more interested in this.

"Yes, there's a video."

Assistant Zhang immediately took out his mobile phone and handed it to Chen Wei to watch.

Chen Wei looked closely and saw in the video, the artificial intelligence robot Big White from Mist City Arts and Science University, wearing red armor, flying in midair. During its attack on Google Company's artificial intelligence robot Alpha Dog, it indeed broke the sound barrier, reaching supersonic flight.

Breaking the sound barrier to achieve supersonic flight is actually not new to Chen Wei.

After all, as the commander of the Southwest Military Industrial Equipment Department, Chen Wei had seen a lot. Whether it was military fighters or other flying equipment of the military district, reaching supersonic speed was not an issue at all. Almost every day during fighter jet training, there would be instances of breaking the sound barrier.

However.

What surprised Chen Wei was that an artificial intelligence robot from Mist City Arts and Science University was actually capable of achieving supersonic flight.

With the technological prowess of Mist City Arts and Science University, allowing a robot to fly was not surprising, but making a robot achieve supersonic speed during combat.

The energy propulsion technology implied in this, could it really be that simple?

Could it be using something similar to the engines and fuel of supersonic fighter jets?

That's not very realistic though.

After all, the engines of supersonic fighter jets are so big, it's impossible to install them in a small artificial intelligence robot.

"Interesting."

Chen Wei stroked his chin, muttering: "Now that artificial intelligence robots can achieve supersonic flight, the military application value is quite substantial."

"Commander Chen, you're right, if this is used for our individual soldiers in combat, the effect would certainly be incredibly powerful."

Assistant Zhang said excitedly: "Individual soldier flight combat could become a reality."

"It seems, I need to have a talk with Principal Ding."

Chen Wei's lips revealed a hint of a smile.

As the commander of the Southwest Military Industrial Equipment Department, Chen Wei was truly delighted that a privately-owned higher education institution like Mist City Arts and Science University, willing to spend money on investing in scientific research, had emerged in the southwest region.

Because when it comes to high-tech products, the first field of application is undoubtedly the military.

After all.

If many high-tech products are to be applied on a large scale, the cost might be extremely high for an initial period of time, and only the military sector could afford such high costs.

Once the relevant technology matures, it can then be utilized in the civilian sector.

"Right, should I contact Principal Ding now?"

Assistant Zhang nodded.

"No need, I'll personally call Principal Ding."

Officer Chen Wei shook his head and immediately took out his mobile phone, calling Principal Ding of Mist City Arts and Science University.

...

Over at Mist City Arts and Science University.

Ding Yue was in the midst of an interview with Bingbing, a beautiful reporter from NTS.

Suddenly his phone rang.

"Oh my, excuse me, can I take a call?"

Ding Yue took out his phone to check. Initially, he thought to continue with the interview if the call wasn't too important and to return it after the interview was over, but upon a careful look.

Wow.

Goodness.

It was Officer Chen Wei from the Southwest Military Industrial Equipment Department. How could he not answer the call?

That was someone from the military.

And moreover.

Ding Yue guessed that if he was not wrong, Officer Chen Wei from the Southwest Military Industrial Equipment Department was contacting him because there must be a military order coming!

Who would make Mist City Arts and Science University's scientific research, which has been quite powerful these past years, highly suitable for early application in the military sector?

"Hello, Officer Chen, good evening."

Ding Yue answered the phone and greeted warmly.

"Haha, Principal Ding, congratulations."

Officer Chen Wei said with a smile.

It seemed that Officer Chen Wei must also know about Mist City Arts and Science University's victory in the challenge match against Google Company's artificial intelligence robot.

"Hey, what's there to congratulate."

Ding Yue said modestly.

"Your Mist City Arts and Science University's artificial intelligence robot Big White has defeated Google Company's AI robot Alpha Dog. Isn't that worth a congratulation? Now, your Big White from Mist City Arts and Science University, it's one of the top artificial intelligence robots in the world."

Officer Chen Wei stated clearly.

"Where, where, it's just some toys," Ding Yue said with a laugh.

A superior artificial intelligence robot, goodness, turns into a toy in Principal Ding's mouth?

I don't believe you one bit.

Officer Chen Wei also laughed and said: "Principal Ding, where on earth are there toys as amazing as that? I heard that your Big White has acquired a flying function and has even achieved supersonic flight."

Chapter 1417: The Cost Is Too High, Not Worth It! _2

"Cough cough, this really was an accident; we never imagined that Big White would exert such strong power after exhausting all its energy."

Ding Yue continued to speak modestly.

What Ding Yue meant here was that Big White achieved supersonic flight because it expended all of its energy. In reality, however, such a breakthrough to supersonic speed was as effortless as the cold fusion energy device letting out a tiny fart.

"Principal Ding, it's not very convenient to talk over the phone. We from the Southwest Military Equipment Department are very interested in your Big White from Mist City Arts and Science University. Can I come and discuss it with you in more detail?"

Officer Chen Wei suddenly became more serious and said.

"Sure, coming over now?"

"It's definitely a bit late now. How about tomorrow?"

"Fine."

Ding Yue did not refuse.

It would be quite improper to refuse someone like Officer Chen Wei.

Also, Ding Yue was well aware that Officer Chen Wei's request for a detailed discussion was nothing but a desire to obtain some of the technology from Mist City Arts and Science University's artificial intelligence robot Big White and apply it to the military sector.

Though possible.

Ding Yue was not in favor of it.

Big White, the AI robot, had taken a significant amount of effort and funds to create. The cost was truly too high. Even if it had some practical utility for military use, it was still not cost-effective.

These were things not suitable to discuss over the phone, so Ding Yue planned to clarify them when Officer Chen Wei visited Mist City Arts and Science University the next day.

After finishing the call with Officer Chen Wei.

Ding Yue then turned to NTS's beautiful female reporter Bingbing, and with a smile asked, "Reporter Bingbing, shall we continue with the interview?"

"Uh-huh, there are a few more questions."

Bingbing replied with a sweet smile and a nod.

"Then let's continue." Ding Yue continued with the interview by NTS.

The main content of Bingbing's interview was about the future prospects of the artificial intelligence robot Big White, such as its current applications in the field of medical and health care and future applications in daily household and other areas.

The interview ended after about ten minutes.

"Principal Ding, ever since I started covering Mist City Arts and Science University, I've realized it's really a treasure trove of news. In just a few years, your university progressed from an obscure private institution to one that has achieved international recognition. Is there any secret behind this?"

Bingbing asked with a laugh.

This question was not part of the interview, but something Bingbing had always wanted to know.

"Ha ha ha ha, Reporter Bingbing, want to know?"

"Yes, I was even thinking about doing an in-depth report on Mist City Arts and Science University. I believe I really need to conduct a thorough interview with you, Principal Ding."

Bingbing nodded and replied cutely.

"Sure, but I'm out of time now. There are still quite a few things I need to deal with on the scene. How about tonight? You could come to my apartment room tonight and give me a good deep interview?"

Ding Yue said with a smile.

"That would be fine."

Bingbing promptly replied.

Good fellow.

Xu Bin and Huang Youjie standing nearby, seeing Yue, directly invited the beautiful reporter Bingbing for an in-depth interview at his place, knew what was going on. That's Yue for you!

"Oh right, Reporter Bingbing, tonight Mist City Arts and Science University has a celebration party. Don't forget to come with the NTS crew."

Ding Yue reminded her.

"Got it, hee hee hee."

Bingbing nodded and then went off with the cameraman to cover some other live reports.

At this moment, Xu Bin and Huang Youjie approached and joined Ding Yue.

"Good fellow, Yue, I can tell now, Bingbing is almost your little fangirl," said Huang Youjie, with a look that seemed to have an indescribable meaning.

"Is it?"

Ding Yue responded with a serene smile and said, "Maybe it's because I have quite the charm."

"Ha ha ha ha, Yue, why not take the opportunity to win her over?"

"Win over what?"

"You know what I mean."

"I... seem to kind of get it now."

After saying that, the three burst into laughter together.

After the challenge match between Mist City Arts and Science University's AI robot Big White and Google's AlphaGo ended, the sky had already darkened.

After the event concluded.

Ding Yue took Xu Bin, Huang Youjie, and others with him to attend the celebration party tonight.

After all, defeating Google Company was definitely a moment worth celebrating.

"Yue, do you think we should invite people from Google Company over?" Xu Bin came up with a bad idea during the celebration banquet.

"Wow, wanna add insult to injury?"

Ding Yue naturally understood what Xu Bin meant.

But as arrogant and unbridled as Google Company was before, now they are just as embarrassed, a case of karma.

"No need to invite them. According to our logistics team, Mr. Larry Page and his team left the scene and went back to the hotel to pack up and left overnight."

Huang Youjie said, sipping his drink and munching on peanuts.

"Really?"

Hearing this, Ding Yue thought it was genuinely amusing.

Initially, Google Company came to Xia Country and to his Mist City Arts and Science University to challenge Big White with great momentum, only to sneak away with their tails between their legs.

Now.

The National University Sports Games had ended, and so had the Artificial Intelligence Robot Challenge.

This semester, there didn't seem to be any major events left for Mist City Arts and Science University. What followed would just be regular teaching duties, which could be left to Qi to manage. As long as there were no problems with the school, Ding Yue would not interfere with Qi's teaching arrangements.

So.

This semester, the most important thing for Ding Yue was undoubtedly the development of his Iron Suit No.1.

Whether he could transform and experience being Iron Man depended on the Mechanical Engineering Department.

Reality is different from the Marvel world; the Marvel world has all kinds of villains, and after Tony Stark became Iron Man, he could fight villains to save the world.

But Ding Yue had no villains to fight.

This time spending a fortune on the cold fusion energy device combined with the Iron Suit was solely for Ding Yue to pursue this "dream."

After all.

Which man wouldn't want to wear a cool Iron Suit and become Iron Man?

Therefore.

At the celebration party, Ding Yue approached his sister Ding Xiaoyou.

"Xiao You."

Ding Yue thought for a moment. To experience being Iron Man, the cold fusion energy device needed to be made smaller. The one installed on Big White was a bit too big, seriously affecting the aesthetic.

"What's up?"

Ding Xiaoyou saw her brother coming over and was sure he wasn't holding in any good news, which she was very aware of regarding her brother.

"Take a look at this."

Ding Yue pulled a blueprint out of his pocket.

On it was a sketch of a cold fusion reactor.

"Hehe, little sis, check it out. Can your cold fusion energy device be made as small as this?"

Ding Yue asked with a smile.

The construction of Iron Suit No.1 had already started, with the AI Big White ready to go.

The only thing missing to become Iron Man was a suitably-sized cold fusion reactor.

Ding Yue had not revealed to his sister his plans of creating an Iron Man suit.

Seeing her brother take out a design drawing the size of a fist for a cold fusion device, a hint of skepticism flashed in Ding Xiaoyou's eyes: "Bro, what do you need such a small cold fusion energy device for?"

"Ah, don't ask about that, just tell me if it can be made, okay? Money isn't an issue." Ding Yue didn't want to disclose his Iron Man plan.

"I can, but I'm not going to make it for you."

Ding Xiaoyou said, pouting her lips.

Ding Yue: ??????

"Bro, just tell me, are you secretly working on something fun?" Ding Xiaoyou asked with her hands spread.

Since Big White was equipped with a cold fusion energy device and from the chat between brother Ding Yue and Xu Bin today, Ding Xiaoyou felt like there was something fun her brother was hiding from her.

At this, Ding Yue was taken aback.

Uh!

It seems like little sis is about to negotiate terms with him.

Chapter 1418: I Want One Too, Get Me One

Ding Yue felt that his sister, Ding Xiaoyou, seemed to have figured out that he wanted to do something fun.

This steel armor suit, for Ding Yue, was indeed a "toy".

Who let Ding Yue be rich?

Ding Yue didn't like luxury houses, fancy cars, or luxurious watches, so naturally, he started working on steel armor suits that interested him. Moreover, all the necessary conditions were already met, like the cold fusion energy device, artificial intelligence, mechanical manufacturing, and so forth—his own Mist City Arts and Science University had it all.

Then, how regrettable would it be not to realize a real-life Iron Man?

Speaking of which.

Ding Yue actually had another plan, that in this Parallel World, America didn't have Marvel's Iron Man and such. So, if he really managed to create Iron Man, not only could he satisfy his own craving, but he could also create a cultural entertainment project.

Just like Big White and its animated movie "Super Combat Team."

"Xiao You, what other fun stuff can I do? Just doing some tech research."

Ding Yue still tried to give a casual response to his sister Ding Xiaoyou.

But it seemed to be of no use.

Ding Xiaoyou rolled her eyes and muttered, "Ding Yue, do you think I believe you?"

Goodness, she even called my full name directly.

It seemed that sister Ding Xiaoyou was not so easy to fool or evade; no surprise, since Ding Xiaoyou was a genius girl, very sharp indeed.

"Alright then."

Ding Yue spread his hands helplessly, prepared to share his "Iron Man" toy plan with his sister.

After all, she was his own sister, and one of Iron Man's main three elements, the cold fusion energy device, was created by his sister Ding Xiaoyou, so she was partly to be credited too.

Iron Man's main three technologies naturally are the cold fusion reactor, artificial intelligence, and the steel armor suit. Only when these three come together can you get a real Iron Man.

Originally, it was actually after sister Ding Xiaoyou created the cold fusion energy device in her laboratory that Ding Yue had the idea to craft and experience Iron Man.

Considering all these factors, and since sister Ding Xiaoyou had already noticed some clues, Ding Yue decided it was best to come clean to her.

"Come on, tell me, tell me."

Ding Xiaoyou was already keen.

The cold fusion energy device is so powerful; what fun stuff does brother want to do with it?

Firstly, Ding Xiaoyou could rule out commercialization because, at present, it is awfully difficult to commercialize the cold fusion energy device, and it would massively impact Feiyue Group's graphene battery industry.

Simply put.

The cold fusion energy device is much more amazing than graphene batteries; if commercialized, wouldn't it be like hitting our own graphene battery brand?

You should know, Feiyue Group's graphene batteries are booming in development, with factories continuously increasing and orders gradually gathering from all over the country and even the world.

Which battery-needing company wouldn't want to use Feiyue Group's graphene batteries?

"You know, the cold fusion energy device can release enormous energy. Big White's impressive performance today also couldn't have been possible without the cold fusion energy device. Little sis, have you ever thought about us making an armor similar to Big White's, then wearing it ourselves, and using the cold fusion energy device, wouldn't that allow us to achieve free flight?"

Ding Yue shared his thoughts with his sister, Ding Xiaoyou.

"Wow!"

Ding Xiaoyou suddenly brightened up at the idea.

If people could fly like Big White, freely soaring in the sky, that indeed seemed really fun.

"But... doesn't our country have airspace regulations?" Ding Xiaoyou shrugged her shoulders and muttered, "Many places even have drone flight restrictions."

Uh!

Ding Yue suddenly didn't know what to say.

Goodness, little sister, why bring this up of all things?

Indeed, in the cities of Xia Country, many places have flight restrictions, and the places where drones can fly are becoming fewer and fewer.

"While the cities have flight restrictions and airspace regulations, we can go to remote areas to fly."

Ding Yue calmed down and then said.

"Can it really fly?"

Ding Xiaoyou asked somewhat skeptically, "If it really can fly, that would indeed be pretty cool."

"Big White is already flying, isn't he? So why can't we?"

Ding Yue spread his hands.

"So, big brother, are you planning to build a set of flying armor?" Ding Xiaoyou finally understood her brother Ding Yue's plan.

"Flying armor sounds so crude, I prefer to call it steel armor suit, after all, it's made of metal and covers all around." Ding Yue said, and pulled up a sketch stored in his phone to show Ding Xiaoyou: "Look, just like this."

Ding Xiaoyou took a close look, and was momentarily stunned.

After about three to five seconds, Ding Xiaoyou's eyes widened, and she reached out toward her brother Ding Yue, almost like a freeloader, and said: "This, I want one too, make one for me!"

Hearing his sister Ding Xiaoyou's words, Ding Yue instantly thought of that meme of a freeloader.

Chapter 1419: I Want One Too, Get Me One As Well _2

So, girls like Iron Suits as well, it seems no one can resist the huge temptation of Iron Suits.

Since Ding Yue has already come clean with his sister, Ding Xiaoyou, there wasn't much else to say, he nodded right away and said: "Okay, Xiao You, as long as you can make a cold fusion energy device of this size for me, I'll get you a set of Iron Suit too."

"Heeheehee, sure, no problem!"

Ding Xiaoyou's face instantly showed a joyful smile, and she even gave her brother an OK sign, then had another drink with him, although Ding Xiaoyou was drinking fruit beer.

Actually, getting another set of Iron Suit for his sister, Ding Xiaoyou, wasn't really a big issue.

Once the first Iron Suit is designed and manufactured, the second suit will be much easier. Although it would require quite a bit of money to buy materials and to pay Tong Yihang and Liu Tiefei from the Mechanical Engineering Department their corresponding rewards, money is the least of Ding Yue's concerns.

"Xiao You, although I agreed to make you an Iron Suit as well, you must remember, the Iron Suit can only be used for the experience, and not for anything else, understand?"

Ding Yue also specifically reminded his sister, Ding Xiaoyou.

Iron Suit + artificial intelligence + cold fusion energy device, that's practically Iron Man from the movies. In the real world, for ordinary humans, it's enough just to have a blast with it once in a while; definitely it's not to be used for other purposes, otherwise, the consequences were something Ding Yue didn't want to imagine.

"Of course I know."

Ding Xiaoyou nodded, saying.

"That's good."

After another drink with his sister, Ding Xiaoyou, Ding Yue then went over to where Tong Yihang and Liu Tiefei from the Mechanical Engineering Department were.

Tonight's celebration banquet definitely couldn't happen without them.

Not to mention that Tong Yihang and Liu Tiefei were amongst the creators of Big White, but also the armor of Big White was made by the team led by Tong Yihang and Liu Tiefei.

As long as it's about steel machinery manufacturing, giving it to Tong Yihang and Liu Tiefei's top-notch team meant there would absolutely be no problems.

Next, Ding Yue asked them to start working on his Iron Suit No.1.

For this, Ding Yue especially gave Tong Yihang and Liu Tiefei's team a huge bonus at tonight's celebration banquet, which was named under the justification of Big White defeating Google Company's Alpha Dog. Naturally, Tong Yihang and his team accepted it.

Afterward, Ding Yue instructed them to get the other set of "armor" he asked for made as soon as possible.

"Principal Ding, don't worry, we'll be able to build the other set of armor by the end of this semester at the latest."

Tong Yihang assured Principal Ding with confidence.

"Very good, thank you for your hard work."

Ding Yue nodded happily.

Indeed, every year Tong Yihang and Liu Tiefei's workload was quite substantial. Apart from participating in the precision mechanical processing area of the lithography machine experiment project, Ding Yue would also occasionally ask them to work on some new projects.

Despite this, Tong Yihang and Liu Tiefei were still very willing to work under Principal Ding.

After all, Principal Ding paid them very well.

Everyone was very happy at the celebration party that evening.

Not only the people from Mist City Arts and Science University, but also netizens from the entire Xia Country were incredibly happy.

Because on this day, Xia Country's artificial intelligence robot technology became the top in the world, even defeating the Google Company, which undoubtedly boosted the morale of the People from Xia Country.

Until the next day, the news and topics related to Big White defeating Google Company's Alpha Dog were still trending, and this hot topic could last for several more days.

And this event would be talked about joyfully by the People from Xia Country for a long time.

Because Ding Yue had quite a bit to drink at the celebration banquet last night and was quite happy about it, he was a bit confused by the end and was eventually taken back to his apartment room to sleep and rest by Big White and secretary Wen Ruohan.

He slept straight through till noon.

When he woke up, the glaring sunlight was already shining into the bedroom through the floor-to-ceiling window; Ding Yue squinted his eyes and pulled up the covers to hide himself again.

"Principal, Chen Wei has been calling you several times."

At this time, Big White went up to the awakened Principal Ding to notify him of these important missed calls.

"Hmm?"

Ding Yue was first a bit groggy, but when he realized the name Chen Wei, he immediately sobered up: "Is it Officer Chen Wei from the Southwestern Military Industrial Equipment Department?"

"Yes, Principal."

Big White responded.

Uh-oh!

Well, this is awkward. I told Officer Chen Wei last night over the phone that he would come over this morning to discuss things about Big White. I didn't expect to have drunk a bit too much last night and slept in until now, leaving Officer Chen Wei hanging, did I?

"Where is Officer Chen Wei right now?"

Ding Yue quickly asked.

Ding Yue knew that if he didn't answer a call, sometimes Big White would take the call for him and tell the caller what he was up to.

"Principal, Officer Chen Wei said he is waiting at the school for you to wake up," Big White answered.

"Still at the school?"

Upon hearing this, Ding Yue instantly threw off the covers and got out of bed to start washing up.

Since Officer Chen Wei was still at his Mist City Arts and Science University, then it was settled - they must meet today.

"Big White, get ready. After I finish washing up, we'll go meet Officer Chen Wei. Oh, right, and first give Officer Chen Wei a call,"

Ding Yue said to Big White while brushing his teeth.

Since having Big White, Ding Yue started living a uniquely intelligent life of his own. Big White could help him with anything, and not to mention having a personal secretary like Wen Ruohan made life extremely comfortable.

Knock, knock, knock!

"Principal Ding, are you awake?"

Suddenly, there came a knock at the door.

Ding Yue was all too familiar with this knocking sound; it was his secretary, Wen Ruohan.

Every time Ding Yue overslept, Secretary Wen Ruohan would come to knock on his apartment door.

"Big White, go open the door,"

Ding Yue instructed.

"Okay, Principal."

Big White moved to open the door while also calling Officer Chen Wei.

"Hello, good morning—no, I mean, good afternoon, Big White," Wen Ruohan greeted cheerily upon seeing Big White open the door.

"Good afternoon, Student Wen Ruohan."

Big White returned Wen Ruohan's greeting.

Meanwhile, Officer Chen Wei's call was connected.

"Hello, Principal Ding, you're finally awake?"

On the other end of the line, Officer Chen Wei's voice could be heard.

"Oh dear, I'm really sorry, Commander Chen. I got a bit too merry last night and had a few drinks with the folks. Please forgive me."

Ding Yue said, feeling rather embarrassed.

Having stood up Officer Chen Wei for a morning appointment was definitely his fault.

"It's no big deal. After arriving, I took a tour around your Mist City Arts and Science University. As it turns out, I have some matters to discuss with you. Where shall we meet later, Principal Ding?"

Officer Chen Wei didn't mind being put off that morning and asked.

"How about we have lunch first? It seems about the right time for it. My treat. What do you say we eat at the canteen?" Ding Yue said with a laugh, "The food at our university's canteen is no worse than that at your military base."

"Sure."

Officer Chen Wei agreed without hesitation.

It was indeed time for a meal, and since Principal Ding was offering to treat, Chen Wei didn't hesitate to accept. After all, he had been put off that morning, so this lunch could be seen as compensation.

"Alright then, Commander Chen, let's meet at the Fifth Canteen. You should be able to find it, right? If you can't, just ask some students or a staff member to guide you there,"

Ding Yue said with a chuckle.

His Mist City Arts and Science University was simply too large, and at this moment, he had no idea where within the school Officer Chen Wei could be, so it was simpler to agree to meet directly at the Fifth Canteen.

"Okay, Principal Ding, see you in a bit."

Chapter 1420: Military Industry Talent Recruitment Plan

Inside Mist City Arts and Science University campus, students were bustling about.

Some students were sleeping in their dormitories.

Some students were dating.

Some students were heading to the Book Ship Library.

Every single one of them was living their youthful university life.

Fifth Canteen.

It was mealtime now, and Fifth Canteen was the most crowded for its food was top-notch amongst all the canteens at Mist City Arts and Science University.

However.

Due to the limited space of Fifth Canteen, it couldn't accommodate more than eighty thousand people at once. So at Fifth Canteen, it was all about who arrived early to enjoy the tasty and affordable food.

"Wow, so many people,"

At the entrance of Fifth Canteen, Officer Chen Wei, who had rushed over hoping that Principal Ding would treat him to lunch, couldn't help but marvel at the sight of the throng.

"Yes, Commander, this is much livelier than our military district's canteen,"

Deputy Officer Zhang remarked emotionally beside him.

"When we were studying at the military academy, we never saw such a scene,"

Commander Chen said with a wry smile, "Let's wait for Principal Ding here."

"Okay."

Deputy Officer Zhang nodded.

After a short while, Ding Yue arrived at Fifth Canteen with Big White and his secretary Wen Ruohan.

From afar, Ding Yue spotted Commander Chen and his aide amidst the crowd at the entrance of Fifth Canteen. Despite being surrounded, their military bearing was outstanding and commanding, making them easy to recognize.

"Commander Chen, sorry to keep you waiting."

Ding Yue quickly came forward to greet Commander Chen and extended his hand for a handshake.

"Principal Ding, it's been a while since we last met. We've only just arrived."

Commander Chen Wei smiled and shook hands with Principal Ding.

The two had worked together before and had met each other. Commander Chen, once you got to know him a bit, did not seem as stern as he appeared.

Moreover, since Ding Yue was not one of Commander Chen's subordinates, Commander Chen was quite respectful and polite to him.

"Please, Commander Chen, allow me to show you the dining experience of our Fifth Canteen at Mist City Arts and Science University. Hahaha."

Ding Yue laughed heartily as he invited Commander Chen and Deputy Officer Zhang into the canteen.

Upon reaching Fifth Canteen, Ding Yue had his own principal's dining access. After all, he was the principal of Mist City Arts and Science University and the owner of the canteen was his mother, Zhang Yuping.

However, Ding Yue wouldn't normally use his special access except when he wanted to enjoy his mother's cooking.

But today was an exception—there were too many people, and Commander Chen's time was precious. So Ding Yue bypassed the student queue and used his principal's dining access to get everyone served with food.

At the table.

After some initial small talk, Ding Yue and Commander Chen Wei quickly moved onto the main topic.

"Principal Ding, robots like your university's artificial intelligence robot Big White have quite useful practical applications for our military field,"

Commander Chen Wei got right to the point.

When he called Principal Ding the night before, today's visit was mainly to discuss this matter.

After all, with Mist City Arts and Science University's top-notch global AI robot like Big White, the southwestern military equipment sector was naturally tempted. They were considering starting cooperation to order or acquire Big White as military equipment.

But Ding Yue had long made up his mind about this.

Putting together all the very best of the relevant technology from Mist City Arts and Science University, the cost of producing Big White was simply too high. Even if it had practical uses like what Commander Chen mentioned, it was still an uneconomical option for military purposes.

"This is indeed true, our Big White is extraordinary,"

Ding Yue mentioned while glancing at Big White beside him.

At this moment, many students from Fifth Canteen were gathering around to see Big White, as it had become a globally renowned AI robot. Many people in the country had become fans of Big White, not to mention the students at Mist City Arts and Science University.

Whenever Principal Ding visited Fifth Canteen, he would bring along Big White, so the students knew that Big White had essentially become his personal AI robot. Wherever Principal Ding went, Big White was with him.

"Indeed, Big White is remarkable. The technology it uses must be the best of the best, right?"

Commander Chen Wei asked with a smile.

"Of course, the technology used in Big White is the pinnacle of Mist City Arts and Science University's technological research. For that reason, Commander Chen, I believe Big White isn't suitable for use in the military equipment field,"

Ding Yue nodded, speaking earnestly.

"Why so?"

Commander Chen Wei frowned upon hearing this, "Big White would be very suitable for our individual soldier combat, and for special operations, it's a perfect fit."

"It may be suitable, but Commander Chen, have you considered the cost? The cost is too high. I've done some calculations. If the military equipment division wants to employ such technology, it will likely require a significant sum. For a purely military use like Big White's, the cost-effectiveness is too low. It would be better to use drones. Oh, that's right, Commander Chen, our drone program at Mist City Arts and Science University has developed a new batch of drones. Would you like to order some?"
