

F. University 1431

Chapter 1431: Accumulated a Pile of Treasure Chests, Enjoy Opening Them _2

Actually, in this world, virtual reality technology has already seen some decent development, such as VR glasses, but such technology is not yet mature and has not widely entered into people's daily lives.

Moreover, the current virtual reality technology has only touched the surface. To truly achieve a technological standard like the Metaverse, there is still a long way to go.

But.

The virtual reality technology that Ding Yue obtained from opening the Level 3 University Treasure Chest is a very comprehensive one, encapsulating all the challenges of virtual reality technology.

"With this virtual reality technology, can't I start building my Metaverse? What's Mark Zuckerberg compared to this, haha!"

Ding Yue suddenly felt rather excited.

You see, to realize the Metaverse, Zuckerberg even renamed his Facebook Company to Metaverse Company.

It shows that Metaverse is one of the future directions of development.

Competition in the Metaverse field in the future will also be very intense.

However.

Ding Yue still faced an issue: although he had the virtual reality technology, and with time, Mist City Arts and Science University could create virtual reality worlds and games, how could he make the gaming experience more comfortable for the players?

Surely just relying on visual effects isn't enough.

Clearly, that wouldn't work.

In fact, what's still needed is a certain level of biometric simulation technology so that the human body can receive certain sensory effects from objects in the virtual world; only then does it become a true virtual reality.

Thinking of this, Ding Yue's heart surged with excitement.

Mist City Arts and Science University seems to have a new prospect for technological development — yes, that is virtual reality technology, and further building the Metaverse.

Imagine, in the future, humans will have both virtual and real worlds, within the virtual worlds, unconstrained, doing whatever they want, and even conducting various scientific experiments in the virtual Metaverse world that cannot be done in reality. Once the related technology is mature enough, all of this can be realized.

The more he thought about it, the more excited Ding Yue felt, his blood seemed to be burning inside.

"Open the system marketplace interface!"

With a slight motion in his mind, Ding Yue switched his system interface to the system marketplace.

Then, Ding Yue directly used the search function to look for biometric simulation technology products in his system marketplace.

Sure enough, Ding Yue managed to find it.

Item—

[Biometric Simulation Technology]

Price: 10,000 points!

The price is high, but for Ding Yue, wanting to buy it is still very simple since he has saved up quite a lot of points over the years.

"Buy it!"

Without another word, Ding Yue spent 10,000 points and purchased the biometric simulation technology in the system marketplace.

Next, as long as he combines the appropriate computer electronics technology, virtual reality technology, and biometric simulation technology, his Mist City Arts and Science University might indeed be able to create the Metaverse virtual world that Ding Yue wants.

"The Computer Science Department possesses top-notch computer electronics technology. I just need to endow the Virtual Reality and Biometric Simulation technologies to the department, and they can start researching in this direction."

Ding Yue had already begun to plan his Metaverse Plan.

Thinking of this, Ding Yue immediately picked up his phone and sent a Whatsapp message to his buddy Xu Bin: "Bin, come to my apartment room quickly!"

Over there, Xu Bin was having a date with his girlfriend. Seeing the message from Ding Yue, he instantly told his girlfriend to cancel their date and then drove straight back to Mist City Arts and Science University to find Yue.

Because Xu Bin knew that Yue wouldn't use such urgent tone to message him unless there was something very important to discuss.

Therefore, for Xu Bin, choosing his brother's important matter was definitely a priority, considering his girlfriend, well, there are plenty of opportunities for dates, right?

Ding Yue's plan is, first to endow the virtual reality technology to his buddy Xu Bin, then propose the Metaverse plan to him, which will certainly influence Xu Bin to quickly master the virtual reality technology bestowed upon him.

Next, by holding a mobilization conference in the Computer Science Department or something similar, and then endowing the virtual reality technology to all the excellent students of the department, as to how much they could master, it would depend on their specific talents.

Through this, once the virtual reality technology was bestowed to the Computer Science Department, Ding Yue could start his own Metaverse Plan.

Maybe we can start with a game.

Speaking of games, Ding Yue instantly thought of his Feiyue Games studio. They have the Feiyue Engine, which, if combined with virtual reality technology, couldn't be more perfect.

Thus, Ding Yue decided to bring in Pei Gou, who specializes in gaming, and introduce virtual reality technology to them as well!

If Mist City Arts and Science University were to develop the Metaverse, it would become a leader in the field. Even companies like Facebook, and others who have joined the Metaverse field, could only follow behind.

While waiting for Xu Bin to arrive, Ding Yue regained his composure and glanced at his two remaining level 4 University Treasure Chests. Instantly, the anticipatory feeling of opening the chests surged within him.

From 9 level 3 University Treasure Chests, a highly useful virtual reality technology was unveiled.

Who knows what kind of cutting-edge technology the two level 4 University Treasure Chests could reveal?

"Open a level 4 University Treasure Chest!"

Ding Yue decided to open each of the two level 4 University Treasure Chests one by one, adding to the suspense.

"Would you like to open a level 4 University Treasure Chest?"

The system asked.

"Open it, open it for me!"

Ding Yue said excitedly.

The level 4 University Treasure Chest in front of him burst into a golden glow; Ding Yue stared directly as it opened.

Ding!

"Congratulations Host for opening a level 4 University Treasure Chest, you've obtained top-notch film editing technology!"

Ding Yue was instantly baffled? ? ? ?

Really!

Is this it?

Just this as a reward?

This is a level 4 University Treasure Chest! Before, it always revealed groundbreaking technology, but it seems like this time it was a letdown.

Top-notch film editing technology, what do I need this for? While I may not need it directly, my film academy could use it, but this technology doesn't seem particularly outstanding—it could, at best, allow the faculty and students over there to elevate their film editing skills to their peak.

Ding Yue still preferred things like groundbreaking technology.

"It seems my luck is not so good, I had only two level 4 University Treasure Chests and now I've wasted one."

In Ding Yue's view, a level 4 University Treasure Chest that yielded this top-level film editing technology was indeed a waste.

"Sigh."

Ding Yue drew a deep breath, preparing to leverage his lucky dog fortunes. The next level 4 University Treasure Chest couldn't be another waste; otherwise, Ding Yue might not be able to sleep tonight.

Looking at the system interface showing the remaining level 4 University Treasure Chest, Ding Yue gritted his teeth and decided to open it!

"Open the remaining level 4 University Treasure Chest!"

Ding Yue said.

As the level 4 University Treasure Chest burst into golden light, Ding Yue watched anxiously, eager to see what great item would emerge from this box.

Ding Yue felt he had never been this nervous and anticipatory while opening a box before.

Ding!

"Congratulations Host for opening a level 4 University Treasure Chest, you've obtained [Nuclear (Fission) Engine Design Drawings and Technology]!"

The air instantly turned a bit stagnant and silent.

Ding Yue was stunned in place, and it took a long, long time before he came back to his senses.

He confirmed that he had not seen wrong, nor heard wrong.

It was really nuclear power engine technology!

Chapter 1432: Nuclear Power Engine Technology!

"Damn!"

Ding Yue exclaimed on the spot and even rubbed his eyes to make sure he wasn't seeing things.

He opened a Level 4 University Treasure Chest and actually got [Nuclear (Fission) Engine Design Drawings and Technology]. This thing is something not easy for a regular tech company to produce.

Even many countries can't manage it, including the current Xia Country, which finds it hard to apply mature nuclear engine technology to top fields like spacecraft, aircraft carriers, and nuclear submarines.

In today's world, only America which possesses a good number of nuclear-powered aircraft carriers can use mature nuclear engine technology on aircraft carriers.

"This thing can even be obtained?"

Ding Yue, astonished, took a deep breath, feeling that the system's treasure chest was truly full of surprises.

Just when he opened [Top-notch Film Editing Technology] a moment ago, Ding Yue was a bit upset because it's somewhat a trivial item, only useful for the students in the School of Film and Television.

But then, he opened [Nuclear (Fission) Engine Design Drawings and Technology] immediately after, which made him feel like he was elevated from the ground to the clouds.

"I definitely won't be using this [Nuclear (Fission) Engine Design Drawings and Technology] myself."

Ding Yue, stroking his chin, started pondering on the [Nuclear (Fission) Engine Design Drawings and Technology] he just unlocked.

Clearly, the best application areas for this kind of nuclear engine technology are large machinery such as spacecraft, aircraft carriers, and submarines. For his own usage, the cold fusion energy device his sister Ding Xiaoyou developed was already enough.

So.

Ding Yue thought for a moment, the best would be if such a valuable thing like [Nuclear (Fission) Engine Design Drawings and Technology] was developed by his own Mist City Arts and Science University and then offered for national use.

This was the best application Ding Yue could think of.

Although it couldn't commercialize into earning huge money for his Mist City Arts and Science University, contributing to the national effort was also a very good thing.

Especially, a nuclear-powered engine developed from this [Nuclear (Fission) Engine Design Drawings and Technology] for use on aircraft carriers would indeed become a major asset for the nation.

"This wave of opening the chest still has its gains."

Ding Yue mumbled. He slightly organized the items he obtained today from the University Treasure Chest.

Among them.

Virtual reality technology surely has the most promising prospects for Mist City Arts and Science University and Feiyue Group.

As for top-notch film editing technology, it can only go to the School of Film and Television. Hopefully, it can be well utilized there to produce excellent film and television works one after another.

Then there is [Nuclear (Fission) Engine Design Drawings and Technology]. Although it might not bring much benefit to Mist City Arts and Science University and Feiyue Group, it would still gain

certain recognition and acknowledgment for Mist City Arts and Science University at the national level.

Ding Yue had plans for these valuable items.

He aimed to put them to their best use, hoping to achieve the best outcomes, which is something he looked forward to.

Therefore.

Ding Yue decided to first realize his vision of the "Metaverse".

As major companies globally are already planning for the future of the Metaverse, Ding Yue knew he had to hurry. To gain an edge in the market with Metaverse technology unique to Feiyue Group before clashing with other powerful international companies head-on.

This was also like the recent global artificial intelligence robot battle, confronting the famous Google Company. Fortunately, they won, dramatically boosting the reputation of both his Mist City Arts and Science University and Feiyue Group.

...

The next day.

Ding Yue got up early.

After opening the University Treasure Chest the day before, he had quite a few plans and strategies formulated in his mind.

So, after finishing his morning routine, Ding Yue called his secretary Wen Ruohan, along with bringing the AI robot Big White, ready to head to his office in the Administration Building.

Today Ding Yue planned to gather the people from Mist City Arts and Science University's Game Design and Production major and Pei Gou and others from the Feiyue Games studio, along with Xu Bin from the Computer Department, altogether to discuss ideas about creating the Metaverse.

Meanwhile, taking this opportunity, handing over the [Virtual Reality Technology] he unboxed yesterday to them would enable Mist City Arts and Science University and Feiyue Group to take significant strides into the real Metaverse!

However.

Just as Ding Yue was stepping downstairs, he ran into his sister Ding Xiaoyou.

"Xiao You, what are you doing here?"

Upon seeing his sister Ding Xiaoyou at the entrance of the apartment building, Ding Yue curiously asked.

"I'm looking for you."

Ding Xiaoyou replied.

"Looking for me?"

Ding Yue looked at his sister Ding Xiaoyou with a puzzled face, and after thinking for a moment, he asked again: "What are you looking for me for?"

"Giggle."

Ding Xiaoyou just giggled, then hopped up like a little bunny, leaned in, and whispered softly, "Bro, can you lend me some money?"

Chapter 1433: Nuclear Power Engine Technology! _2

"Just this matter?"

Ding Yue, upon hearing this, spread his hands and said with a smile: "Is there really a need to find me in person? A phone call wouldn't do? Go on, how much do you need?"

Ding Xiaoyou coming to ask for money was something Ding Yue had long been accustomed to. Even before he founded Mist City Arts and Science University, his sister, Ding Xiaoyou, would always ask him for some pocket money. Ding Yue was always quite generous to his sister; if she asked for pocket money, he would definitely give it.

Now that he had founded Mist City Arts and Science University and achieved great success in many fields, he was rather wealthy, so there was hardly any hesitation when Ding Xiaoyou needed some money.

Moreover,

Ding Yue had previously given his sister, Ding Xiaoyou, several large sums of capital, which she didn't squander but instead invested in her own energy experiment enterprise.

Not sure if it's the same this time.

"It's a bit much."

Ding Xiaoyou smacked her lips and said.

"What do you need it for?"

Seeing this, Ding Yue knew it couldn't be a small amount - definitely not tens of thousands or even several millions yuan.

"I need it for a research project."

Ding Xiaoyou replied.

"So how much do you need?"

"This amount."

Ding Xiaoyou then held up a finger.

"Ten million, huh? Sounds like a nice research project," Ding Yue said nonchalantly, smiling. Seeing his sister hold up one finger, he assumed it was ten million. He thought to himself that it was nothing, so he might as well just give it to her—having money is that capricious.

"No, not that."

Ding Xiaoyou shook her head and said.

"Not ten million, could it be one billion?" Ding Yue suddenly widened his eyes and muttered, "That's a lot of money to burn."

Before, even Ding Xiaoyou's research projects, including the cold fusion energy device, hadn't required such a high development cost, especially since many technologies were transferred from Ding Yue himself.

"Right, a small goal."

Ding Xiaoyou nodded, using the Internet buzzword "a small goal," which represents a billion, a term that her brother, Ding Yue, had once used.

"As long as it's useful for you, there's no way I wouldn't give it to you!"

Ding Yue immediately agreed without a second thought.

One billion; perhaps Ding Xiaoyou could give back one thousand times that amount.

Besides,

The cold fusion energy device that his sister Ding Xiaoyu previously facilitated for him was worth more than one billion, not to mention the massive market created by the earlier graphene battery.

One billion clearly can't measure the value of his sister, Ding Xiaoyou.

"Thank you, big brother, hehe, here's your breakfast."

Ding Xiaoyou had kept her other hand behind her back until now, which had puzzled Ding Yue, but it turned out she was holding his breakfast all this time.

"Goodness, you're actually bringing me breakfast so proactively, that's rare indeed."

Ding Yue joked.

"Have I brought you breakfast few times in the past?"

Ding Xiaoyou immediately rolled her eyes and retorted.

"That was only because our mom told you to bring me breakfast," Ding Yue directly glared at his sister Ding Xiaoyou, the two siblings seemingly about to bicker again.

"Like it or not."

Ding Xiaoyou had already gotten the money from her brother, and her a moment ago sincere and obedient demeanor suddenly turned cheeky.

"You, you..."

Ding Yue couldn't be bothered to say more to his sister Ding Xiaoyou, when suddenly he remembered the [Nuclear (Fission) Engine Design Drawings and Technology] he acquired yesterday. If anyone could manage it at Mist City Arts and Science University, it would probably be his sister Ding Xiaoyou, who was involved in energy.

In the entire Mist City Arts and Science University, or even across the country and the world, who else has the talent and strength of his sister Ding Xiaoyou? She was even capable of creating a reactor like Iron Man's.

So, the nuclear power reactor involved in the [Nuclear (Fission) Engine Design Drawings and Technology], upon mastering the related technology and knowledge, Ding Xiaoyou would probably have no problems with it.

"Granting [Nuclear (Fission) Engine Design Drawings and Technology], grantee, Ding Xiaoyou!"

After Ding Yue pulled up his system panel, he thought to himself.

The next second.

A pale golden light flew out from his system panel and burrowed into his sister Ding Xiaoyou's body.

She definitely wouldn't feel anything in the short term.

But Ding Yue estimated that, after transferring the [Nuclear (Fission) Engine Design Drawings and Technology] to his sister Ding Xiaoyou, it wouldn't be too long before she might reach a breakthrough in nuclear power engine technology during an experiment, or perhaps at some moment in her daily life.

"Alright, I've got work to do, off to the office. As for that money, I'll have finance transfer it directly into your laboratory's dedicated account."

Ding Yue no longer delayed with his sister Ding Xiaoyou and said while holding his breakfast.

"Okay, hehehe."

Ding Xiaoyou didn't say much more and left straight away after sorting things out.

"Xiao Wen, contact the finance department and allocate a billion yuan for the energy experiment fund."

Ding Yue directly instructed his secretary Wen Ruohan.

"Yes, Principal Ding."

"Also, have you notified Pei Gou and the others?" Ding Yue asked again.

He was going to the Principal's office in the Administration Building later to meet with Pei Gou and his group.

The start of the Metaverse would inevitably begin with virtual reality games; only with virtual reality games can people be attracted to participate in the plan for the Metaverse.

"Mhm, I've already notified them. They will come to the office at 9 in the morning."

Wen Ruohan nodded and replied.

"Good."

After speaking, Ding Yue took out his phone and called Xu Bin.

Ding Yue didn't have his secretary Wen Ruohan notify Xu Bin to come over; he would call him himself.

"Hey Yue bro."

After the call connected, a languid voice seemed to come through the phone.

Judging by this, he definitely hadn't fully woken up yet.

"Still sleeping? Hurry up and get up, and come to my office later."

Ding Yue directly increased his volume, shouting loudly.

"Eh... What's the matter? Surely our computer systems haven't been hacked again," Xu Bin said lazily over the phone.

"What are you talking about? I have something important to tell you. Hurry over."

After speaking, Ding Yue immediately hung up the phone.

As for his good buddy Xu Bin, Ding Yue knew him too well. If Ding Yue guessed correctly, Xu Bin was probably throwing off the covers and scrambling to get ready to head to his Principal's office.

Indeed it was so.

Xu Bin had originally planned to sleep in a bit longer.

But hearing Yue brother's "hurry over", his sleepiness vanished instantly. Since Yue brother had asked him to come quickly, it must be something important, and Xu Bin couldn't afford any delay.

"Yawn."

Yawning, Xu Bin immediately threw off the covers and headed to the bathroom to wash up.

...

On the way back to her laboratory, Ding Xiaoyou was pondering something.

It was about the energy source she wanted to research, one more powerful than the cold fusion energy device.

If a cold fusion energy device could power a mech or the like, then the more powerful energy would undoubtedly be true nuclear energy.

Nuclear fusion energy was out of the question for the time being; it was too difficult. Achieving controlled nuclear fusion would mean that humanity could truly enter a new era of civilization.

So, what could be considered was nuclear fission energy.

Although Xia Country's nuclear fission energy was also fairly mature, using nuclear fission energy as a power source for some devices was technically very difficult. Apart from nuclear weapons, Xia Country used nuclear fission mainly for power generation.

"Hmm?"

As Ding Xiaoyou thought, it seemed as though a path cleared before her eyes, as if she had grasped something. A myriad of thoughts were like a road that seemed to be smooth sailing, but she needed to continuously verify it herself.

So.

Ding Xiaoyou quickened her pace and hurried toward her laboratory.

Chapter 1434: Look How Excited This Student Is!

Mist City Arts and Science University.

In the office of the Principal in the Administration Building.

Ding Yue was there early in the morning, having breakfast and waiting for people from the Computer Science department and the game studio to come over.

From the Computer Science department, mainly Xu Bin.

And from the game studio, it was Pei Gou and his team.

Ding Yue planned to directly grant Xu Bin and Pei Gou the [Virtual Reality Technology] he obtained from opening the University Treasure Chest, and then start arranging matters related to the Metaverse.

However, it was still early, neither Xu Bin nor Pei Gou and the others had arrived yet.

"Principal Ding, where are you planning to go after this semester ends, during the summer vacation?"

In the office, secretary Wen Ruohan took the opportunity to chat with Principal Ding since there were no pressing work matters at the moment.

"I'm so busy usually, where would I find the time to travel?"

Ding Yue spread his hands and said with a smile: "But I'm curious, Xiao Wen, where do you usually go for vacations during summer or winter breaks?"

Although Wen Ruohan is his personal secretary, she generally has vacations during the winter and summer break, because apart from being Ding Yue's private secretary, she also holds another role as a student at Mist City Arts and Science University.

"Uh, I've already visited the places I wanted to in the past few summers."

Wen Ruohan rested her chin on her hand, muttering: "I don't know where to go this year, if it really comes to that, maybe I'll just stay at the university and work."

"Hahaha."

Hearing this, Ding Yue laughed loudly, remarking: "Xiao Wen, cherish your college days at Mist City Arts and Science University, by this time next year, you will have officially left Mist City Arts and Science University."

Even though Wen Ruohan is now Ding Yue's full-time secretary, she still primarily identifies as a student. Following the graduation of the first batch of students from Mist City Arts and Science University, Wen Ruohan will finally shed her student identity.

"Principal Ding, I am actually quite content with my student life at Mist City Arts and Science University."

Wen Ruohan said with a smile.

In fact, Wen Ruohan could never have imagined that an ordinary girl like herself could one day become the secretary of a billionaire boss before even graduating, with a considerable annual salary, as if undergoing a complete transformation.

All this started from her choice to attend the newly established and then unremarkable Mist City Arts and Science University.

Wen Ruohan had witnessed the rapid development of Mist City Arts and Science University over the years, even participating in the university's development and construction.

"That's great."

Ding Yue nodded with a smile, stating: "If our university can leave every student with wonderful memories, then our school is indeed a success."

As Ding Yue and his secretary Wen Ruohan were having breakfast and chatting, a figure appeared at the office door.

"Yue, did you want to see me?"

The first to arrive was Xu Bin, and Ding Yue could even see a trace of sleepiness still on his face.

"Mm-hm, what were you up to last night?"

Ding Yue asked with a smile.

"Cough, I wasn't up to much." Xu Bin coughed lightly, then came over to Ding Yue's side and asked, "What's up?"

"It's related to your computer technology."

Ding Yue said with a light smile.

"Oh?"

Upon hearing Yue mention that it was related to his expertise in computer technology, Xu Bin instantly became very interested and immediately asked, "What is it? What is it?"

Just as Ding Yue was about to speak, two more people arrived at the office door.

These two were from the game major at Mist City Arts and Science University, but also the main leads of Feiyue Games studio, Pei Gou and Liu Lang.

"Principal Ding, did you need us?"

After Pei Gou entered the office, he asked.

"Yes, yes, come in, have a seat," Ding Yue said with a smile to the two.

The original intent of inviting these two was to grant them [Virtual Reality Technology], and to discuss the plans of Mist City Arts and Science University and Feiyue Group in delving into the Metaverse, so there was no need to be too formal or reserved.

Pei Gou and Liu Lang knew Principal Ding's personality well; approachable and friendly, so both found their way to the couches in the office.

"System, grant [Virtual Reality Technology] to Pei Gou, Liu Lang, and Xu Bin."

Ding Yue pulled up his system panel, then used the [Virtual Reality Technology] he gained from opening the University Treasure Chest on Pei Gou, Liu Lang, and Xu Bin.

The familiar flow of light appeared, and then it entered into the bodies of the three men in an instant.

This scene was all too familiar to Ding Yue because whenever he granted his students or teachers at Mist City Arts and Science University with related BUFFs and technological knowledge, it was always this kind of scene.

"Today, I've called you here primarily after some consideration; I've decided that our Mist City Arts and Science University and Feiyue Group will venture into a brand new field, an advanced field that many global technology companies are also involved in."

Ding Yue said solemnly to Pei Gou, Liu Lang, and Xu Bin.

Chapter 1435: Look How Excited This Student Is! _2

"Oh?"

Xu Bin immediately widened his eyes and asked, "What advanced field?"

Since it was related to his computer science major and also a globally advanced field, Xu Bin was definitely enthusiastic about it, especially since technology companies from around the world were ready to explore this field, which made Xu Bin even more interested.

"Metaverse. Are you already familiar with this concept?"

Ding Yue asked calmly to the trio.

The reason for his calmness was that the concept of the Metaverse had already been quite popular, and unsurprisingly, Xu Bin, Pei Gou, and Liu Lang must have heard of it.

For a moment, Ding Yue felt his question might have been somewhat redundant.

"Metaverse!"

Upon hearing this, Pei Gou immediately exclaimed excitedly: "Principal Ding, the Metaverse is a very cutting-edge concept, and it wouldn't be easy to actually implement."

"Yes, yes, yes."

Xu Bin also nodded and said, "It involves VR-related technology."

"What, do you not have confidence in yourselves?" Ding Yue still looked calm and asked the three, "The technology of the Metaverse is essentially just virtual reality, and at the core of virtual reality technology is still computer technology, which I trust you guys excel at."

"Principal Ding, even if computer technology is the core, virtual visuals and sensory experiences are still very challenging," Liu Lang said with a somewhat disheartened tone.

The technology related to the Metaverse, although familiar to them, seemed somewhat unrealistic.

Ding Yue felt that Liu Lang seemed to have little faith in the Metaverse technologies, but Pei Gou was different; this student seemed thrilled upon hearing about the Metaverse.

"Yue, I'm certainly up for the challenge."

Xu Bin immediately declared confidently, "Our computer team will definitely give it our all."

For what Yue wanted to accomplish, Xu Bin would do everything within his capabilities and commit fully.

"Good!"

Ding Yue nodded firmly and said, "The school and the company will spare no effort; no matter how much research funding and resources are needed, we will give it our all; rest assured about this."

Seeing Principal Ding's resolute confidence seemed to restore some of Liu Lang's confidence as well, for there seemed to be nothing Principal Ding wished to do that couldn't be done.

Liu Lang had seen the wonders that Mist City Arts and Science University and Feiyue Group had achieved over the years.

"Principal Ding, really? When do we start launching the Metaverse?" Pei Gou asked eagerly, "Are we starting from the gaming aspect?"

It must be said that Pei Gou was rather clever, knowing that Principal Ding had summoned him to discuss future plans about developing the Metaverse, it certainly had to relate to his gaming expertise.

"Hehe, look how excited our Pei Gou is."

Ding Yue chuckled and said, "The Metaverse is a huge concept; it cannot be rushed, and nothing can be achieved overnight. We have to take it step by step."

Ding Yue was not someone who irrationally pursued speed. To truly build a Metaverse, it required steady and secure steps, not like some international companies that hype concepts to boost their stock prices!

Ding Yue didn't need to engage in stock trading, as every industry under him genuinely provided convenience and forged the future for people, not just to harvest wealth through public listings.

Whether it's A-shares or Xiangjiang stocks, or even Nasdaq in America, Ding Yue would never choose to take his companies public!

"Yue is right."

Xu Bin nodded and said, "Indeed, we can start by attempting to create a Metaverse world from the gaming aspect."

"That's why I called Pei Gou and Liu Lang over."

Ding Yue smiled lightly and said, "Xu Bin, your computer team here will mainly be responsible for the related technical hardware support, while Pei Gou's team will take care of building the virtual world."

This division of labor is based on Xu Bin, Pei Gou, and Liu Lang's respective areas of expertise.

"Regarding hardware technology support, are we doing virtual glasses or virtual gaming cabins?"

Xu Bin was very interested in this and immediately asked.

Even though Xu Bin is unparalleled in computer programming, which one could say he has no rivals in the world, he is still very keen on computer hardware, especially those futuristic elements.

For instance, virtual glasses or virtual gaming cabins, these definitely involve the related hardware technology of future computers.

"As for virtual glasses, there are already many mature VR technologies globally, but due to cost and other reasons, they haven't reached a stage where they can be universally used."

Ding Yue touched his chin and said, "However, now that many major international tech companies, such as the well-known Facebook, Amazon, Apple, Google, Microsoft, and domestic Penguin, are attempting to enter the Metaverse field, it means that the cost reduction speed will be very fast."

Xu Bin could actually understand what Ding Yue meant.

As long as substantial capital is invested in this field, the costs can be rapidly reduced, which is quite evident.

"In that case, shall we directly work on virtual cabins?"

Xu Bin said excitedly.

The so-called virtual cabins refer to a device where you can lie down and enter a virtual world, typically seen in novels or science fiction movies and TV shows.

"If we have the technical capability, it's not impossible; we could even make the virtual cabins more realistic."

Ding Yue nodded calmly speaking to Xu Bin.

All three of them were excited, but only Ding Yue was very calm.

To Pei Gou and Liu Lang, Principal Ding's tranquil and composed demeanor truly fitted that of a leader.

"Make virtual cabins!"

Xu Bin's tone was very firm, as he spoke excitedly, "Ever since long ago, I have been wondering if gaming cabins could become a reality. Now it seems, we need to continue striving together to make it possible. Depending on Penguin and the like, it probably won't happen in this lifetime."

Many boys, when they were young or teenagers, thought about such gaming cabins that would allow them to immerse themselves completely in games.

As technology continues to advance, they realize as they grow up, that achieving such gaming cabins might be a once-in-a-lifetime endeavor.

Xu Bin felt the same, so when he heard Ding Yue say it wasn't impossible to invest a significant amount of funds to develop gaming cabins, he was extremely excited.

"But come to think of it, you guys already have a lot on your plates. Do you have the bandwidth to handle this?"

Ding Yue suddenly asked.

Both Xu Bin and Pei Gou had plenty on their hands.

What's more, Xu Bin was also involved in the semiconductor lithography machine experiment project.

Pei Gou also had a game project, such as the previously set Eastern Xianxia game project using the Feiyue Engine, aimed at creating a Xianxia game beloved by players in Xia Country.

Caught by Principal Ding's question, Pei Gou and Liu Lang were stunned.

Only Xu Bin seemed stress-free and said, "Yue, you can rest assured. The projects I'm handling are nearly done, even our most important project is problem-free. So, I definitely can spare some time now, Pei Gou, how about you?"

Ding Yue knew that the most important project Xu Bin mentioned was the lithography machine experiment project at Mist City Arts and Science University.

Pei Gou and Liu Lang looked at each other, then said firmly, "We can too!"

Ding Yue looked at both Pei Gou and Liu Lang, shaking his head, "If it really doesn't work out, you can put the game project on hold for now."

Having made a very successful game before, Pei Gou and Liu Lang had achieved both fame and wealth, so Ding Yue no longer insisted on them continuing to produce blockbuster games. If they could find time to work on the Metaverse, it would naturally be better.

Chapter 1436: Advancing into the Overseas Market!

"Principal Ding, we can use the Feiyue Game Engine to create virtual reality games, but if we want to embark on the Metaverse Plan, then which specific genre should we focus on for creating the virtual game?"

Pei Gou asked Principal Ding seriously.

Now, filled with confidence, he is determined to create a virtual reality game and use it as the foundation to realize Principal Ding's Metaverse Plan.

However, when it comes to deciding the specific direction for the virtual reality game, Pei Gou was at a loss.

It was definitely a decision for Principal Ding to make.

After all, it involved Principal Ding's Metaverse Plan, and the Metaverse Plan, naturally, had to be linked with the real world.

Although Pei Gou couldn't fully comprehend what the Metaverse was, he did have some understanding.

That is, things within the Metaverse can be traded in the real world; the "economy" earned in the Metaverse can also be utilized in reality.

Put simply, the Metaverse is a complement to the real world within the virtual network.

"The Metaverse Plan is the second world for humanity in the virtual world; hence it should be connected to or even resemble the real world. So, I think the setting should be modern, right?"

Ding Yue pondered as he stroked his chin.

"Right, I think so too."

Xu Bin, standing beside, expressed his agreement with Yue's view.

Pei Gou also nodded and said: "Indeed, that way, the immersion will be stronger. In terms of virtual game graphics, I think our Feiyue Game Engine should pose no problems. Now it all depends on the virtual game capsules and the hardware on Director Xu's side."

"This is no simple project."

Xu Bin smiled, looking at Pei Gou.

"In summary, work hard. Let me know if you need any funding or resources. And remember, the Metaverse Plan cannot be achieved overnight; we'll take it slow."

Ding Yue smiled at the two and said, "Manage the division of labor well; I await your results."

At this moment, whether it was Xu Bin, Pei Gou, or Liu Lang standing aside, they all began to be influenced by the [Virtual Reality Technology] that Ding Yue had just mentioned, and some good ideas were starting to form in their minds.

Once these ideas were fully conceived, they would be ready to go back and start implementing them.

"Don't worry, Yue!"

Xu Bin was full of confidence.

Pei Gou said with a serious face, "Principal Ding, our Feiyue Games studio will give it our all."

"Very good."

Ding Yue nodded, finished giving his instructions, and let them get back to their tasks.

After sorting out the most urgent matters at hand, they could find time to start working on the "Metaverse Plan".

Once Xu Bin, Pei Gou, and Liu Lang had left, Ding Yue felt completely "empty".

Next, he only had to wait for the good news from Xu Bin and Pei Gou; all he had to do was provide the funding, and the rest was not his concern.

So.

What to do next?

Although the end of the semester was approaching, with Director Qi Chunsheng handling the end-of-term affairs, and An Yujia taking care of the company matters, Ding Yue, for a moment, didn't know what else he should do.

"Never mind, I'll go see Gungun."

Ding Yue thought it over; since he had nothing else to do, he might as well visit the panda base on the north side of the school and see the two pandas at Mist City Arts and Science University.

Thinking of this, Ding Yue raised his head and said to his secretary Wen Ruohan: "Xiao Wen, shall we go see Gungun?"

"Gungun?"

Wen Ruohan was caught off guard and took a moment to react.

Wondering who Gungun was.

But soon, Wen Ruohan understood and promptly nodded, "Sure, sure."

Although the two Gunguns in the school weren't far away, Wen Ruohan, who is always busy working alongside Principal Ding, had not visited them many times. Gungun, who wouldn't like them?

"Then let's go."

Ding Yue gave a casual smile and then called over his artificial intelligence robot, Big White: "Big White, let's go."

So Ding Yue, along with his secretary Wen Ruohan and the AI robot Big White, walked out of his principal's office, ready to go downstairs and drive his Feiyue Future New Energy car there.

Even though it wasn't far, driving was still faster. Furthermore, Ding Yue quite liked driving his Feiyue Future New Energy car, for its intelligent driving made the experience extraordinarily enjoyable.

"Principal Ding."

As Ding Yue was descending the stairs, he happened to run into An Yujia at the stairway corner, and she called out to him. Her tone indicated that she was likely there to look for Ding Yue.

"Miss An, what's up?"

Ding Yue asked.

"Are you heading out, Principal Ding?" An Yujia inquired.

"Mhm, the office was feeling stuffy, so I was preparing to take a stroll around the school. Why, does Miss An have something to report to me?"

Ding Yue asked further.

"Mhm mhm."

An Yujia immediately nodded and spoke: "Principal Ding, I do have some matters to report to you."

Chapter 1437: Advance into the Overseas Market! (Subscription Requested)_2

"Sure, why don't we walk and talk?" Ding Yue smiled, "We were just about to go see those two Gunguns."

"Sounds good."

An Yujia didn't see any issue with it. As long as Principal Ding didn't mind, moreover, it was Principal Ding himself who suggested that they could stroll and report at the same time.

So, Ding Yue led An Yujia downstairs, next to his Feiyue · Future New Energy car.

Even though Big White was rather white and plump, getting into the Feiyue · Future New Energy car was no problem at all.

Plus, with An Yujia sitting in the passenger seat and secretary Wen Ruohan sitting in the back with Big White, it didn't feel too crowded; the space seemed quite comfortable.

"Let's set off to the panda base."

After Ding Yue got into the car, he started his Feiyue · Future New Energy car, then directly activated the voice control and switched on autopilot mode.

The car started moving slowly.

And then, Ding Yue no longer needed to pay attention to the driving.

Because the car could plan the route to the panda base by itself.

"Miss An, what would you like to report to me?"

Ding Yue then asked An Yujia.

"Principal Ding, the team at Feiyue Group responsible for Feiyue · Future New Energy cars' overseas market has conducted market research. By considering our car factory's current production capacity and domestic demand, we've concluded that our Feiyue · Future New Energy cars are ready to enter the overseas market."

An Yujia directly reported this to Principal Ding.

Feiyue Group's Feiyue · Future New Energy cars are doubtlessly the most profitable and best-selling products. Since the start of the year, each month's sales have been at least several hundreds of thousands.

At first, Ding Yue didn't plan to consider overseas markets; when the Feiyue · Future New Energy cars were first introduced, it took a very long time for domestic consumers to even get their cars.

But now things were different.

Domestic sales would inevitably decrease over time, not increase. After all, if sales have surpassed one million in the first month, many popular car brands struggle to sell that many in a year.

Furthermore, the price of Feiyue · Future New Energy cars isn't exactly cheap, not something you can buy for just over 100,000 yuan, so the market is not infinitely large to begin with. At this point, most domestic buyers who wanted and could afford a Feiyue · Future New Energy car have already purchased one. Though sales will definitely continue each month, the production at Feiyue Future New Energy car factories is now sufficient.

For example, Feiyue Car Factory could initially mass-produce 10,000 cars per day, which amounts to 300,000 yuan a month. And now, as the scale is continuously expanding, monthly output will increase, gradually fulfilling domestic orders.

And domestic sales in the past one or two months will certainly be below 300,000 yuan.

As a result, there is surplus production capacity, making it an appropriate time to venture into the overseas market.

With the capabilities of Feiyue · Future New Energy cars, no competitors in the domestic market can match them, and the same is true in the overseas market.

Even Tesla, which is very popular overseas, cannot compete with the current Feiyue · Future New Energy cars in terms of new energy vehicle performance or other aspects.

"Is it time to enter the overseas market?"

After hearing An Yujia's report, Ding Yue asked seriously and earnestly.

This matter is no small affair for Feiyue Group. It equates to exporting domestically produced new energy vehicles, which could not only earn foreign exchange but also strengthen Xia Country's new energy vehicle brand.

You have to realize.

For many years now, the general perception has been that domestically produced cars are always "inferior" to imported car brands. Despite domestic car brands relentlessly progressing over these years, there still remains a significant gap compared with foreign car brands.

Whether it's luxury brands like Mercedes-Benz, BMW, and Audi, or even ultra-luxury brands like Porsche, Ferrari, Lamborghini, and Rolls-Royce, they are all out of reach for domestic car manufacturers in Xia Country.

If Feiyue Future New Energy vehicles can make a name for themselves in the overseas market, then the automobile brands of Xia Country, especially the new energy vehicle brands, will undoubtedly become world leaders.

In fact, from the perspective of new energy vehicle technology, Feiyue Future New Energy vehicles are indeed the most top-notch and advanced globally. Currently, no other automotive company can manufacture a vehicle that can rival Feiyue Future New Energy vehicles.

"Principal Ding, we can't say that the timing is perfect, but we can say that the time has started to come. As long as we are prepared here, we can enter the overseas market at any time. My visit this time is to bring Principal Ding the relevant research information. Whether to enter the overseas market and when to do it, that's for you to decide," An Yujia said with great certainty.

Seeing this, Ding Yue smiled and said: "Since Miss An thinks the timing is right, then let's start preparing. According to your research, how popular are Feiyue Future New Energy vehicles in the overseas market?"

An Yujia immediately took out her phone, opened YouTube, and handed it to Principal Ding: "Principal Ding, take a look. This is the review video of Feiyue Future New Energy on YouTube by Feiyue Group. The views are close to one hundred million already, and the comment section is very lively, and that's without any promotion at all."

That is to say, this YouTube review video about Feiyue Future New Energy vehicles has not had any advertising by Feiyue Group. Just like this, it already has tens of millions of views, and it's approaching one hundred million. This shows that its popularity on YouTube is not low.

If we were to place some advertisements or step up our promotional efforts overseas, it's likely that we could create a significant wave in the new energy vehicle market.

"Really?"

Ding Yue took An Yujia's phone and looked at the relevant data.

It does seem quite popular.

This indicates that Feiyue Future, a domestically produced new energy vehicle, is indeed receiving widespread attention and welcome, both at home and abroad.

This means there's a great chance of success in the overseas market.

If Feiyue Future New Energy vehicles become super popular in the overseas market, then this vehicle will become a globally recognized legend, making automotive history.

"Yes, I didn't expect it to be so effective without any promotion," An Yujia said with a smile: "With this momentum, our sales in the overseas market should go smoothly. Principal Ding, when do you think we should officially enter the overseas market?"

"That depends on how much time you need to prepare," Ding Yue asked.

"Our related teams in the company were actually set up two months ago, and at the car factory, we've also prepared the necessary surplus, so we can quickly move into operation and sales in the overseas market," An Yujia confidently stated.

Hearing this, Ding Yue was quite pleased, it seemed that Miss An had been preparing for a while, and was even ready by now.

Ding Yue liked this kind of efficiency.

After all, entering the overseas market is something that needs to be done sooner or later, so it's much better to prepare early than to rush at the last minute.

"What about after-sales service?" Ding Yue inquired.

In the overseas market, sales and operations as well as after-sales service are all crucial elements.

"The after-sales team has also been formed," An Yujia answered immediately.

"Hahaha, worthy of Miss An," Ding Yue burst into laughter instantly: "I really like your efficiency in handling matters."

Chapter 1438: Export, Earn Money from Foreigners!

Ever since the end of the National University Sports Games and the AI Robot Battle, time seems to have flown by.

Mist City Arts and Science University's teaching operations have been running smoothly and in an orderly fashion.

With the hard work of faculty and students, various scientific research experiments at Mist City Arts and Science University have also been progressing neatly and systematically. In the blink of an eye, we've reached the end of the semester for the first half of the year.

Come the end of the term, every seat in the Mist City Arts and Science University library is taken.

All three libraries are packed full from morning to night every day. The students' zeal for learning and knowledge has filled Ding Yue with great satisfaction.

Looking at universities worldwide, perhaps none could compare to the avid curiosity for learning exhibited by the students at Mist City Arts and Science University.

Of course, this is surely due to the study buff Ding Yue has endowed upon them.

During the end-of-semester exams, various departments and disciplines at Mist City Arts and Science University have conducted assessments one after another.

Beyond traditional subjects, the newly founded National Academy, Culinary Arts Department, and eSports Academy had unorthodox end-of-term exams. Ding Yue was quite pleased with the end-of-term exam content arranged for these departments and disciplines, as it summarized how well the students had learned their professional knowledge throughout the semester.

With the Academic Affairs Office overseeing the end-of-semester tests, Ding Yue did not have to personally expend effort monitoring this task.

During this period, Ding Yue's main concern has been the overseas market expansion of Feiyue Group's Feiyue · Future New Energy Vehicles.

After Miss An reported to Ding Yue about the market expansion efforts, Ding Yue instructed her to focus on the preparations. Miss An had already made a series of preparations in advance, which brought Ding Yue considerable joy.

Now.

As the overseas launch of Feiyue · Future New Energy Vehicles is imminent, Ding Yue is not quite sure what kind of success it will achieve.

Although he knows Feiyue · Future New Energy Vehicles are quite popular overseas, whether the foreigners will take to it remains uncertain.

They still need to be tested by the market.

That day, just after Ding Yue finished discussing relevant matters with Miss An, responsible for operating the Feiyue Group, they decided to set the overseas launch date for Feiyue · Future New Energy Vehicles on July 1st.

Shortly after Miss An's departure, Director Qi Chunsheng from the Academic Affairs Office came to report on the end-of-semester test activities for this term.

Since the end-of-semester tests were mostly complete, the majority of the 80,000-plus students at Mist City Arts and Science University had left the campus, either returning home, traveling, or taking up summer part-time jobs, embarking on their joyous college summer vacation.

"Principal Ding."

After arriving at the principal's office, Director Qi greeted Principal Ding.

"Director Qi, you're here to report on the end-of-semester test activities, right? Come, have a seat."

Upon seeing Director Qi Chunsheng, Ding Yue cheerfully spoke.

Immediately, Secretary Wen Ruohan quickly brought a chair over in front of Principal Ding's desk.

Normally, this kind of treatment was primarily reserved for Director Qi Chunsheng, given his senior age and the fact that his health was not as good as other department heads; surely, it was important to take good care of Director Qi Chunsheng.

"Yes, Principal Ding, this term's end-of-semester tests at Mist City Arts and Science University went very smoothly. Over the past few years, there would sometimes be one or two incidents of cheating, but this term, our students adhered to the examination regulations exceptionally well, with not a single student cheating."

Director Qi Chunsheng reported to Principal Ding on the discipline in the examination halls.

These were standard updates in a work report.

"Uh-huh."

Upon hearing this, Ding Yue nodded in contentment, "This phenomenon is excellent. It's important that our students understand that knowledge they've gained over the semester is what truly enriches them. Our students at Mist City Arts and Science University are doing really well. So, what is the situation with course failures this year?"

"Principal Ding, that's actually the main point I wanted to discuss with you today. This year, Mist City Arts and Science University has a zero failure rate; all students have earned their credits for this semester's courses."

Director Qi Chunsheng said with a smile.

"Hahaha, that's excellent! Our students at Mist City Arts and Science University never fail to make us proud!"

Ding Yue laughed out loud.

Indeed, it was a joyful occasion.

A zero failure rate, with no one failing any course and everyone obtaining their credits, is quite a remarkable achievement for a university. Even though many universities adopt lenient measures for failing grades, typically passing students unless they perform exceedingly poorly.

But Mist City Arts and Science University is different. The rigorous attendance during lectures and strict grading of final exams reflect the stringent standards set by Ding Yue at the founding of Mist City Arts and Science University.

After all, when Mist City Arts and Science University was established, it mostly admitted students who had failed the College Entrance Examination. If the school had not strictly controlled their academic performance, how could the students eventually succeed?

Chapter 1439: Export, Earn Money from Foreigners! _2

Today, it has been proven that Mist City Arts and Science University's strict control over examinations and graduation thresholds is very correct. It allows every student of Mist City Arts

and Science University to lay a solid foundation during their university years. Thus, after graduation, when they step into the fiercely competitive society, they will also possess tremendous competitiveness.

And the stronger employment competitiveness of Mist City Arts and Science University's students after graduation is also very beneficial for the university. It can greatly enhance the corresponding reputation of Mist City Arts and Science University. Eventually, more and more parents and students will trust Mist City Arts and Science University.

"Principal Ding, I believe that with such teaching arrangements and the students' performance, by the time they graduate, they will definitely have great competitiveness in society."

Director Qi Chunsheng was also very happy.

Having struggled in the education industry for so many years, it was the first time in his life that he saw such outstanding university students, and moreover at the twilight of his career, just before leaving his educational post, he witnessed how excellent the students of Mist City Arts and Science University were.

"Director Qi, that's the reason our university exists,"

said Ding Yue proudly.

Then, Ding Yue asked, "By the way, Director Qi, how is the preparation for this year's summer graduates' internships going?"

"Principal Ding, thanks to Miss An's contact and arrangement, now many large domestic companies are willing to provide internship positions for our Mist City Arts and Science University's related majors. With the development of Feiyue Group, a number of internship positions can also be provided. In this manner, the internship issues of essentially the first batch of over nine thousand students have been resolved. We have already arranged a batch, and the Educational Affairs Office plans to divide it into four batches. The second batch will be arranged during the summer vacation, the third batch after school starts in September. For the fourth batch, if there are no suitable intern positions available, these students will need help to find internships themselves."

Director Qi Chunsheng reported this matter very seriously to Principal Ding.

"Then, what percentage does the fourth batch represent?" Ding Yue asked next.

With over nine thousand students in the first graduation batch of Mist City Arts and Science University, it's impossible to provide internships for all. There will inevitably be some students who can't find internships.

For this group of students, they will have to find internships on their own, but the university will certainly provide strong support.

The percentage of such students is crucial.

If the percentage is too high, it would indicate that Mist City Arts and Science University's relevant work is still not good enough.

"Principal Ding, rest assured, the percentage of these students is not high—just over a hundred individuals from very unpopular majors. We just can't find corresponding internships for them."

Director Qi Chunsheng immediately replied.

"Ah... that's good, that's good."

Ding Yue, hearing this, felt it was quite satisfactory.

If it's just over a hundred people, then the school helping them, even if they have to search for some internships in society, wouldn't be too difficult.

Thus, the internship issues of the first batch of university graduates from Mist City Arts and Science University would basically be completely resolved.

"Principal Ding, if there are no other matters, may I go back to my other duties?"

After completing the relevant end-of-term work report, Director Qi Chunsheng did not want to disturb Principal Ding anymore.

"Yeah, good, Director Qi, you should also not overwork yourself, especially when it comes to the end of the term—you get very exhausted. Take care of your health."

Ding Yue advised Director Qi Chunsheng.

In Ding Yue's view, a person like Director Qi Chunsheng was no longer just someone who does miscellaneous tasks. Such detailed and trivial tasks can completely be handled by other assistants in the Educational Affairs Office. For Mist City Arts and Science University, Director Qi Chunsheng can become an important person responsible for stabilizing teaching work development, like setting teaching policies.

After all, Director Qi Chunsheng was of advanced age and had undergone life-saving surgery.

Ding Yue knew that Director Qi Chunsheng could be regarded as one of the first batch of core figures of Mist City Arts and Science University, and he would definitely take responsibility for his future, because Director Qi Chunsheng's remaining life is almost firmly bound with Mist City Arts and Science University.

In the upcoming period, quite a few students from Mist City Arts and Science University completed their semester studies and left the school for the summer vacation.

In the blink of an eye, the time has come to July 1st.

Today is the day when the Feiyue Future New Energy vehicle, developed by Mist City Arts and Science University and Feiyue Group, officially enters the overseas market.

Starting from last night, there has been discussion on this topic, of course, including the public opinion effects arranged by Miss An Yujia.

This kind of discussion is actually more heated overseas, while domestically, it naturally forms heat, because the Feiyue Future New Energy vehicle is the first domestic car that has officially gone international with an absolute advantage and is being exported. For the people from Xia Country, it is a very honorable thing, especially for the car companies in Xia Country, it is very confidence-boosting.

"Wow, the Feiyue Future New Energy vehicle is finally going to the overseas market, huh."

"Is this considered a milestone for our domestic cars?"

"New energy vehicles are the correct way, and the Tesla market abroad is very vast, I wonder if we can challenge Tesla this time."

"Excuse me for being frank, ever since I bought the Feiyue Future New Energy vehicle, I realized that Tesla is really trash."

"Tesla indeed dominates the overseas market, but I believe in Feiyue Future!"

"I was a Tesla car owner, and I used to think Tesla was pretty good, but then I bought a Feiyue Future and realized, what trash Tesla truly is!"

"Feiyue Future New Energy vehicle is forever godlike!"

"Our domestic cars are going to be exported, amazing, amazing."

"Domestic glory!"

"Our domestic cars have finally stood up."

"I have to say, Feiyue Future really is the god among domestic cars!"

To the domestic netizens, the Feiyue Future New Energy vehicle developed by Feiyue Group and Mist City Arts and Science University is the "god" among domestic cars because no domestic car has ever achieved such large monthly sales.

Nor has any domestic car dared to enter the overseas market and compete with the many internationally renowned car brands there.

The key point is, everyone's confidence in the Feiyue Future is very high, because it surpasses Tesla in all aspects, and therefore, this vehicle entering the overseas market and being exported will inevitably earn a lot more foreign exchange!

In the past, it was usually foreign high-tech companies, such as Apple, Tesla, etc., importing to Xia Country to earn Xia Country people's money.

But this time it's different.

This time in the new energy vehicles sector, it is Xia Country's Feiyue Future New Energy making a strong export, earning foreigners' money.

How could Xia Country's netizens not be excited about this change?

Some even call this a great moment!

Meanwhile, in the Principal's office of the Administration Building in Mist City Arts and Science University, Principal Ding Yue is also scrolling online, reading various interesting comments from netizens, while waiting for news about Feiyue Group's Feiyue Future New Energy vehicles entering the overseas market.

After all, everything is operated by Miss An Yujia, he only needs to wait for the news behind the scenes.

Around nine fifty in the morning, the figure that Ding Yue has been eagerly anticipating finally appears at the office door.

That's right, it's the person in charge of this Feiyue Future New Energy vehicles going overseas, Miss An Yujia.

"How is it, Miss An? What's the situation now?"

Ding Yue asked impatiently.

Chapter 1440: Going Crazy, The Choice of Consumers Around the World!

"Miss An, how is it going? Has the presale for the overseas market officially started?"

Upon seeing An Yujia arrive at his principal's office, Ding Yue immediately asked.

After all, the venture of Feiyue Future New Energy cars into the overseas market is currently of utmost importance, and whether it could become an instant hit in the overseas market depends on today's presale results.

Before this, Feiyue Group had already opened the official presale channels in the overseas market successively.

The main markets include North America, Europe, Japan, Russia, and Southeast Asia, all of which have great consumer potential.

"Principal Ding, the presale in Japan, Korea, and other regions has started; data will be fed back in five and ten minutes. In North America, Europe, and other areas, the presale will officially start at noon today, followed by Southeast Asia, Russia, and other regions," replied An Yujia.

Due to the global time differences, the startup times for presales also vary.

The initial presale arrangement was for regions closest to Xia Country such as Japan and Korea, where the nations are developed, and undoubtedly have strong consumption capabilities.

"If it's in Japan, I'm afraid we will face strong competitors or obstacles like Feng Ben, won't we?"

Ding Yue analyzed after hearing this.

Japan also has renowned automobile manufacturers, such as the famous Feng Ben Auto Group.

Old powerhouses like Feng Ben Auto Group began the journey to new energy vehicles many years ago and have achieved good results.

If Xia Country's Feiyue Future New Energy cars enter the Japanese market, Feng Ben Auto Group will certainly not sit still.

"Indeed, this is certain. But our entry of Feiyue Future New Energy cars into the Japanese market is legitimate and lawful. If Feng Ben Auto Group wants to do something to us, the most they can do is

perform some underhanded tricks behind our back," An Yujia nodded in agreement with Principal Ding's analysis.

After all, Feng Ben Auto Group and most of the foreign companies in Japan aren't usually up to any good.

However, An Yujia still believes that with the strong performance and cost-effectiveness of Feiyue Future New Energy cars, they will undoubtedly be popular in the Japanese market.

Imagine.

With the same amount of money, one can buy a darling loaded with cutting-edge technologies globally, or buy a pile of trash; what would you choose?

As long as there's nothing wrong with your reasoning, I guess everyone would choose the former, right?

Exactly.

Feng Ben Auto Group's new energy cars are nothing but trash in front of Feiyue Group's Feiyue Future New Energy cars!

"Let's see."

Ding Yue mused: "As long as our products are solid, even if Feng Ben Auto Group or some foreigners in Japan play tricks, there's nothing to fear."

"Yes, indeed."

An Yujia spoke in agreement.

With that, Ding Yue waited, full of anticipation, for five minutes.

Before long, An Yujia received the presale data from Japan and Korea for Feiyue Future New Energy cars, five minutes after they had launched.

"Principal Ding, the presale data is out."

An Yujia immediately showed the data excitedly to Principal Ding: "In Japan, the five-minute presale reached 6,738 units, and in Korea, the five-minute presale reached 5,071 units!"

When Ding Yue saw the data, a delighted smile blossomed on his face instantly.

Although it was just presales of a few thousand units, the population base of Japan and Korea was clearly incomparable to that of Xia Country. If it were in Xia Country, the presales would have already exceeded ten thousand within five minutes.

And yet, in Japan and Korea, Feiyue Future New Energy cars had already achieved such sales volume just five minutes after launching, which was quite impressive.

"It seems that consumers make the same choices everywhere."

An Yujia couldn't help but remark.

Even before Feiyue Future New Energy cars launched in the overseas market, there were many negative articles on the internet overseas continuously attacking Feiyue Future New Energy cars. But now that it's officially launched, the saying 'the people's eyes are sharp' is clearly manifested.

"This is a good start."

Ding Yue said with a smile: "Following this trend, it seems that Feiyue Future might become the national car of Japan and Korea in the future, right?"

"Absolutely," replied An Yujia happily.

"Of course, although the trend is favorable, we must still provide the corresponding services, including after-sales and ensuring vehicle supply for presale, all services must be well-managed, you understand?" reminded Ding Yue to Wen Ruohan.

Although Feiyue Future New Energy cars are excellent and competitive, as a product, after-sales service must be guaranteed.

"Rest assured, Principal Ding, Feiyue Group has established an after-sales department for the overseas market. No matter what issues arise with the vehicles, we will provide perfect after-sales service," An Yujia promptly replied.

"Very good."

Ding Yue nodded in satisfaction. With An Yujia handling these matters, he was much more at ease.
