

F. University 1651

Chapter 1651: Advancing Again into Overseas Markets_2

Ding Yue and Director Meng Xueyan got along very well. Back when Ding Yue became an honorary academician at the Xia University Semiconductor Research Institute, it was Director Meng Xueyan who strongly supported him.

Now, seeing that Mist City Arts and Science University and Feiyue Technology have made enormous technological research achievements one after another, Meng Xueyan feels very happy.

Especially when Mist City Arts and Science University and Feiyue Technology announced that they had developed the 5nm chip process and lithography machine technology, Director Meng Xueyan was so excited that he couldn't sleep the whole night.

After all, as the director of the Xia University Semiconductor Research Institute, Meng Xueyan deeply understands how difficult and challenging the development of domestic semiconductor technology is.

"Director Meng, if there is anything our Semiconductor Research Institute needs from me, please feel free to let me know. I will certainly give it my all," Ding Yue asked Director Meng before leaving.

It is said, just said, that the institute has been able to retain fewer and fewer young researchers because of funding and management issues in recent years.

So Ding Yue thought about it to see if he could help.

After all, as a private enterprise and private university that has made significant contributions to the development of the domestic technology industry, it would surely not be a problem to accommodate some researchers from the institute, just depending on whether the institute has such difficulties.

"Xiao Ding."

Upon hearing this, Director Meng Xueyan wanted to say something but did not.

"Hmm, Director Meng, what do you want to say?"

Ding Yue listened attentively.

"Sigh."

Director Meng shook his head, hands clasped behind his back. After a moment, he chose to speak: "Xiao Ding, these past two years, our institute's development is indeed not as good as we imagined. Young researchers are all thinking of leaving, either going abroad or choosing new life paths. Watching this, I feel it's a pity."

"I've heard a bit about this."

Ding Yue nodded and said.

"Young researchers like you are extremely rare," Director Meng Xueyan said with emotion.

"Director Meng, how about considering further cooperation with Feiyue Technology on semiconductor projects? This way, young researchers at the institute could participate in project research at Feiyue Technology, and naturally, they could earn more money."

Ding Yue straightforwardly suggested to Director Meng Xueyan.

This is a good way to solve the current problem. Young researchers feel that the treatment at the institute is not good enough, after investing years of hard work through doctoral studies and engaging in scientific research only to find significant conflict and contradiction between research and real life.

To be blunt, it's actually about "money."

Young researchers earn from their semiconductor research but cannot afford houses or cars, and thus may not even marry, which naturally affects their state of mind.

The young researchers at the Semiconductor Research Institute are all outstanding in the semiconductor field, and if they can join Feiyue Technology to engage in semiconductor-related

research, they can surely shine and thrive, while also receiving the generous treatment and benefits offered by Feiyue Technology.

"Xiao Ding, you are quite straightforward."

Director Meng Xueyan looked at the young man before him and said, "This matter is not that easy, according to regulations, researchers at the institute are not allowed to easily associate with outside technology companies."

"Hmm... this is indeed a difficulty."

Ding Yue thought for a moment and said, "But Director Meng, if there's a problem, we should solve it. Currently, many contradictions and challenges face our scientific researchers, and the rise of Feiyue Technology can greatly alleviate or even solve this problem."

"There need to be relevant provisions in place."

Director Meng Xueyan sighed and said.

"In that case, suggest it to Yancheng," Ding Yue thought. Feiyue Technology could be of great help here; if regulations could be passed with a suggestion to Yancheng, then those young research graduates could represent the institute in joint scientific research with private companies.

"Xiao Ding, this is a good idea, but passing the relevant regulations is no easy task."

Director Meng Xueyan said earnestly.

"Yes, that's true."

Upon careful consideration, Ding Yue acknowledged that Director Meng Xueyan had a point. If regulations aren't established, Ding Yue had another solution: directly hiring young researchers from the institute.

At that time, researchers would only have a choice: either stay at the institute or apply to Feiyue Technology.

"Alright, Xiao Ding, concerning today's resolution from the meeting, you at Feiyue Technology need to execute it well. You can go back to your work now."

Director Meng Xueyan advised Ding Yue, "Make sure not to let the broad masses of Xia Country down."

"Absolutely!"

Ding Yue immediately felt the weight of responsibility.

After all, this is about the domestic 5nm chip setting foot outside the country and advancing into the global market. Whether it can be competitive internationally depends on the success of this order with the European Union Technology Company.

The last time Feiyue Group ventured into the overseas market, it was with Feiyue Future New Energy Vehicles, facing numerous challenges.

But fortunately, Feiyue Group overcame many obstacles and finally, through its own strong advantages, completely opened up the overseas market, now becoming a best-seller in the overseas market.

If it weren't for the teamed-up resistance from Benz, BMW, and the four rings, the global private car market might have been conquered by Feiyue Future New Energy Vehicles.

Currently, Feiyue Future New Energy Vehicles occupy about sixty percent of the market, while the remaining forty percent is barely maintained by the combined resistance of Benz, BMW, the four rings, and Tesla.

It has been more than a year since Feiyue Future New Energy Vehicles swept across the overseas market, and during this time, Ding Yue's fortune has skyrocketed, now ranking among the top on domestic and international billionaire lists.

This time, Feiyue Group will once again venture into the overseas market!

This time, it's not about the big products, but still closely related, as even Feiyue Future New Energy Vehicles cannot do without chips.

The large products related to chips are making waves in the overseas market; alongside the competition with overseas companies, it's now time for chips to step into the international market and compete.

"Director Meng, I'm leaving now, goodbye."

"Goodbye, Xiao Ding."

After bidding farewell to Director Meng, Ding Yue headed to the Semiconductor Committee building below.

At this point, Secretary Wen Ruohan was already waiting there.

"Principal Ding, how did the meeting go?"

Wen Ruohan immediately came forward, eagerly asking.

"Guess."

Ding Yue smiled calmly and said.

"That means it passed!"

Seeing Principal Ding's demeanor, Wen Ruohan knew it must have passed, otherwise, Principal Ding wouldn't look so relaxed, and there was no reason to disagree on such a matter. After all, it was an excellent opportunity for domestic science and technology chips to be showcased on the world stage.

"Let's head back to Mist City immediately and secure this 10 billion order, showing our compatriots how the 5nm chip researched by Mist City Arts and Science University can shine in the overseas market."

Ding Yue confidently said.

"Got it!"

Wen Ruohan was very happy, realizing she was right, the deal had been secured. Principal Ding was confident, which also made Wen Ruohan excited. She immediately took out her phone to book the flight: "Principal Ding, get in the car, we'll first go to the hotel to pick up our luggage, then head straight to the airport!"

"Alright."

Ding Yue nodded, then got into the car.

Following closely, Wen Ruohan also got in, driving to the five-star hotel they were staying at.

Chapter 1652: Principal Ding Personally Negotiates with Foreigners

Mist City Airport.

A national flight arrived at Mist City Airport, and in the first-class cabin of this international flight was a technology business magnate from Europe, the Executive Director of the European Union Technology Company, Owen.

"Owen, we have arrived at Mist City Airport."

Owen, who was sound asleep, was woken up by his assistant.

"Arrived?"

Owen opened his eyes, glanced around, still on the plane, but outside the cabin window, he saw the plane had landed at the airport. This flight departed from Germany in Europe, with the destination being Xia Country's Mist City Airport.

"Long-lost Xia Country, Andreas, do you know when was the last time I came to Xia Country?"

Owen stretched lazily, and asked his assistant Andreas with emotion.

"I don't know."

Andreas shook his head.

"That was fifteen years ago, back then I came to Xia Country for the acquisition of a tech company, but the acquisition deal failed later."

Owen said with a smile, then stood up.

Eudite, another senior executive of the European Union Technology Company in the first-class cabin, also stood up.

Eudite is mainly responsible for the purchase and procurement of chips in the European Union Technology Company. Initially, the company planned to have Eudite come to Mist City in Xia Country to negotiate chip procurement with Feiyue Technology.

However, considering Feiyue Group is an influential company internationally, and to ensure a smooth cooperation with Feiyue Technology on chip supply, Owen decided to personally come along with Eudite to negotiate.

"Owen, this journey is really far."

Eudite, just waking up, stretched lazily and was a bit dazed.

"Too far already? Eudite, you must know that this journey affects our European Union Technology Company's future status in Europe and even in the international market. If it doesn't work out, we have no fallback."

Owen glared at Eudite and said.

"I understand!"

Eudite quickly nodded.

"Let's go, oh by the way, Andreas, are we heading to Feiyue Group's headquarters or Mist City Arts and Science University?"

Owen turned to his assistant Andreas and asked.

"Owen, since we are discussing cooperation with Feiyue Technology, of course, we are going to Feiyue Group's headquarters?" Eudite shrugged and said.

"No no no Eudite."

Owen shook his head and said, "Eudite, I've told you before, when cooperating, we must understand our partners well. The Feiyue Group we are partnering with is closely linked to Mist City Arts and Science University."

"I remember Mist City Arts and Science University had previous cooperation with Swiss Zurich Federal Institute of Technology?"

Eudite asked.

"Owen, we are going to Mist City Arts and Science University. This is what CEO An Yujia of Feiyue Group said to us. We are going to Mist City Arts and Science University to discuss cooperation matters personally with Principal Ding."

Andreas answered.

"Principal Ding... who is this?" Eudite asked in confusion.

"This person is the principal of Mist City Arts and Science University, and also the helmsman behind the entire Feiyue Group, understand?" Owen was even somewhat doubtful of Eudite's ability to handle matters.

Wanting to cooperate with Feiyue Technology, you don't even know this?

Indeed.

Generally, people don't know Principal Ding of Mist City Arts and Science University is the helmsman behind this big company Feiyue Group, but if you take the time to understand, you can identify this information.

"So that's how it is."

Eudite said while rubbing his chin, holding his phone in his hand, he had already searched for some information about Principal Ding of Mist City Arts and Science University, and was immediately astonished: "What? Such a young person?"

"Indeed, a promising young guy."

Owen nodded and said.

At this moment, Eudite calmly remarked, "Such a young helmsman, it must be inheriting the family business, right?"

"Eudite, do not underestimate the young people of Xia Country."

Owen felt that Eudite was really underestimating this situation. Principal Ding is not that simple; to make Feiyue Future New Energy vehicles sweep through the international market, it requires Benz, BMW, and Audi, as well as Tesla from America banding together to barely resist Feiyue Future New Energy's expanding market.

Thus, Owen realized he couldn't underestimate Principal Ding, who controls the entire Feiyue Group from behind the scenes, his abilities are certainly not simple.

Therefore, Owen decided to come personally this time, rather than leaving the matter to Eudite, dealing directly with Principal Ding might lead to unfavorable negotiations.

Owen, Eudite, and Andreas, after deplaning, directly went to the parking lot. Andreas had already rented a car to head to Mist City Arts and Science University, but as soon as they exited the terminal building, An Yujia was already waiting there.

"Hey, Owen."

Upon seeing Owen, An Yujia immediately waved to greet him.

Having previously had several video calls with Owen, An Yujia recognized him. Since Owen, the Executive Director of the European Union Technology Company, came personally to negotiate cooperation, naturally, An Yujia should also extend the courtesy as a host, by coming to the airport to meet them personally.

"Miss An Yujia."

Upon seeing the excellently poised An Yujia in front of him, Owen stepped forward to give a greeting hug.

Chapter 1653: Principal Ding Personally Negotiates with Foreigners_2

"Welcome to Mist City, Xia Country, Owen."

An Yujia said with a smile to Owen.

"I didn't expect you'd come to the airport to pick us up." Owen had a pretty good impression of An Yujia, the CEO of Feiyue Group. He then introduced to An Yujia, "This is Judith and Andreas, who are in charge of chips at European Union Technology Company."

"Hello, Judith and Andreas."

An Yujia greeted the two of them.

"Owen, the vehicle is ready, let's go." An Yujia invited Owen and his group to head to the parking lot.

In the parking lot, two Feiyue · Future new energy vehicles had been prepared to receive Owen and his party. After putting the luggage into the car's trunk, An Yujia and Owen rode in one car, while Judith and Andreas took another. The two Feiyue · Future new energy vehicles slowly left the airport parking lot and headed straight for the Mist City Arts and Science University in University Town.

"Xia Country has really developed rapidly in recent years."

Owen looked at the cityscape of Mist City and couldn't help but remark.

"Oh? Owen, have you been to Xia Country before?"

Upon hearing this, An Yujia immediately gathered that Owen must have visited before, as his comment on the rapid development indicated.

"Yes, I visited fifteen years ago."

Owen nodded in response.

"At that time, Xia Country was indeed still in a phase of development." An Yujia said with a smile, "Actually, I only returned to Xia Country a few years ago myself."

"I know, Miss An, you were over in America before, right?"

Owen chatted casually with An Yujia.

"Yes."

And so, the two talked about many things on the way, avoiding the topic of chip supply cooperation, as both sides knew that the matter would be better discussed after meeting with Principal Ding at Mist City Arts and Science University.

For now, forming a good relationship was the priority.

Before long, the two Feiyue · Future new energy vehicles arrived at Mist City Arts and Science University.

An Yujia sent a message to Principal Ding, informing him that she and Owen from the European Union Technology Company had arrived.

At the administration building in the principal's office area.

After receiving An Yujia's Whatsapp message, Ding Yue asked his secretary Wen Ruohan and the AI robot Big White to prepare.

"Big White, let's make some tea."

Ding Yue instructed Big White.

Indeed, Ding Yue intended to host Owen, the executive director of the European Union Technology Company, in his principal's office.

His office was quite suitable for both school affairs and business meetings.

Besides.

Feiyue Group didn't actually have a building serving as its headquarters and even Miss An and others worked in this administration building.

As the newly constructed business building for Feiyue Group was yet to be completed, once finished, An Yujia and her team could move in and work at the Feiyue Building.

About ten minutes later.

Ding Yue heard the conversation between Miss An and the foreigners coming from the hallway.

"They've arrived."

Ding Yue said, standing up and walking to the door of his principal's office.

"Principal Ding."

Upon seeing Principal Ding, An Yujia approached and introduced, "Principal Ding, this is Owen, and these two are Judith and Andreas from the European Union Technology Company."

"Hello, Mr. Owen."

Ding Yue warmly greeted Owen.

After all, once this cooperation deal was secured, it would mean a billion-yuan partnership, so being enthusiastic was necessary.

"Hello, Principal Ding."

Owen came forward eagerly, reaching out to hug Ding Yue.

Ding Yue understood that this was typical European etiquette to hug.

"Please come in, Mr. Owen."

Ding Yue said in his rather fluent English to Owen.

During university, Ding Yue's English proficiency was quite good and had improved over time, making it easy to converse fluently with foreigners.

"Is this Big White?"

Upon seeing the robot in the office, Owen asked with a smile.

Big White's reputation was well-known worldwide, especially after "Super Combat Team" was released overseas, gaining decent box office results and lots of overseas fans.

"Yes."

Ding Yue nodded and replied with a smile.

"To be honest, Principal Ding, I'm a fan of Big White." Owen said with a smile, "At one point, our European Union Technology Company wanted to create a robot modeled after Big White, but later learned that Feiyue Group had already done so."

"Is that so."

Ding Yue was quite unaware that Owen was a fan of Big White.

But it was not surprising, a character like Big White was heartwarming, and many indeed adored it, including successful middle-aged individuals like Owen.

"It's an honor to be liked by you."

Big White chimed in.

"I've heard that Big White is the leading AI robot, and it's remarkable, even defeating Google's AlphaGo."

Owen looked at Big White, nodding in appreciation.

"Robots at Big White's level, we at European Union Technology Company can't quite manage."

Owen admitted sincerely.

As their company did have a robotics project and intelligent robots, but the current market was limited to Europe, expanding worldwide posed significant challenges.

After all, America also had formidable robots and even more so, Xia Country had ones like Big White.

Fortunately, Feiyue Group didn't seem to have immediate plans to introduce Big White to every household, otherwise, in the field of AI robots, Feiyue Technology would have no rivals.

"Your European Union Technology Company's robots and drones are quite impressive; currently, we at Feiyue Group do not plan to mass-produce AI robot Big White."

Ding Yue said to Owen with a smile.

"Ha ha ha ha, if Big White could enter every household, our European Union Technology Company could just exit the market." Owen also laughed heartily as he replied.

It was indeed true; if Feiyue Group's AI robot Big White hit the market and entered every household, companies like the European Union Technology Company focusing on robots could be on the brink of bankruptcy.

This visit of Owen to Xia Country to seek chips from Feiyue Group aimed to bring order profit to Feiyue Group while stabilizing European Union Technology Company's business.

"That's not quite right."

Ding Yue said calmly, "Owen, let's discuss business. This time, how many orders is your European Union Technology Company planning to sign with us? You should know that our cooperation with Feiyue Technology was only possible after overcoming many obstacles."

Ding Yue was hinting at Owen.

Owen naturally understood the current situation Xia Country faced in the world market, be it American or Island Electromechanical, or other high-tech industries, they all posed threats. What Principal Ding mentioned about numerous obstacles was indeed accurate.

"Mm-hmm."

Owen nodded, saying, "Principal Ding, I understand, so our European Union Technology Company will deliver an order worth billions over the coming years to Feiyue Technology."

"Really? Does European Union Technology Company have such a large market?"

Ding Yue remained calm as he asked.

"Principal Ding, don't you trust us?"

Owen spread his hands confidently and said, "In all of Europe, our European Union Technology Company's robots and drones hold an unshakable market position. I'm sure Principal Ding is well aware of this, and we've also expanded the market in Heizhou and other areas."

In terms of European Union Technology Company's strength, Ding Yue certainly understood thoroughly, his earlier words were just to probe a little.

Chapter 1654: What Bad Intentions Could I Have

"Principal Ding, a billion-yuan level chip order, I don't think you can resist."

Owen is direct.

The billion-yuan order is his leverage.

However, both parties know that the billion-yuan order refers to the order that will reach the billion-yuan level through years of cooperation, not a one-time billion-yuan order; that's not how business is done.

"Actually, it's just like that."

Ding Yue smiled and said.

Oh my!

With that statement, Ding Yue stunned Owen completely.

A billion-yuan order, and it's just like that?

What exactly is this young man thinking?

Even for a company group worth billions, or even trillions, a billion-yuan order is very significant, isn't it? Why does Principal Ding seem to treat the billion-yuan order lightly?

Still, it feels off; you're personally discussing it with me, which indicates that your Feiyue Group values it highly. Yet Principal Ding's words show indifference towards the billion-yuan order.

"Principal Ding, do you mean that our European Union Technology Company's billion-chip order is not important to your Feiyue Group?"

Owen asked.

"No, no, Owen, that's not what I meant."

Ding Yue shook his head, smiling.

Then what do you mean exactly?

This ambiguity left Owen at a loss.

Do you value this billion-yuan order or not value our collaboration with the European Union Technology Company?

Seeing Owen somewhat confused, Ding Yue felt quite satisfied internally.

This is exactly the result I wanted.

Using a mix of vagueness and realism to disturb your mindset, I, as Principal, have quite a few tricks up my sleeve. As long as I unsettle your mindset, the negotiation can proceed, allowing us to take a more proactive stance.

"OK, Principal Ding, I think you understand, even if we can't get the 5nm chips supplied by Feiyue Technology, our European Union Technology Company isn't without options. At worst, we can yield to Island Electromechanical, as long as we can secure 5nm chips."

The European Union directly played their trump card.

The meaning is clear: Are you going to cooperate with us or not? Will you take this order or not? If not, we'll turn to Island Electromechanical. Although there are conflicts between our European Union Technology Company and Island Electromechanical, for the survival of the company, we'll have no choice but to seek chips from Island Electromechanical, even if it means yielding.

"Owen, I believe you won't yield so easily. OK, let's discuss the specifics of cooperation. Due to export reasons, the price of our 5nm chips from Feiyue Technology will definitely be higher. Can you understand that, Owen?"

Ding Yue began to reveal his intention.

Exactly, the aim is to increase the price of Feiyue Technology's 5nm chips. The price shouldn't be held down just because they're domestic chips. In fact, because they're domestic, ensuring quality, and selling to European companies, we should maximize profits!

Foreign money must be earned!

Earn it aggressively!

"I can't understand; everyone knows that Xia Country's products aren't very competitive internationally. Compared to Island Electromechanical's 5nm chips, yours may not be mature enough. Principal Ding, you can't just raise prices like this, as Xia Country's saying goes... it's... it's..."

Owen couldn't quite recall Xia Country's idiom.

"Sit on the ground and raise prices!"

Ding Yue laughed and told Owen.

"Right, 'sit on the ground and raise prices.' You can't do that. This is a billion-yuan order."

Owen shook his head and said.

"Owen, this isn't sitting on the ground and raising prices. You say Xia Country's products aren't competitive; I disagree. Our domestic Feiyue Future New Energy cars, aren't they competitive in the international market?"

Ding Yue spread his hands, calmly speaking to Owen.

This guy left Owen unable to respond.

Talking about the competitiveness of Feiyue Future New Energy, it's truly strong. In the past decade, no product has emerged to dominate the market like it. It was even once boycotted and sanctioned by America and other countries.

"Our Feiyue Technology's 5nm chips are equally excellent, Owen. What's the price of chips from Island Electromechanical? Then consider the price from us."

Ding Yue raised his eyebrows and smiled at Owen.

Even if Ding Yue decides to raise the price for selling the domestic 5nm chips to the European Union Technology Company, it will still be more favorable than Island Electromechanical's. This Ding Yue must ensure, otherwise, there won't be much competition with Island Electromechanical.

Just as Owen said, Island Electromechanical does have mature technology. They've been producing and manufacturing 5nm chips for years, while Feiyue Technology's technology was developed over the past two years; it's relatively "new."

But new comes with new advantages and new drawbacks.

"Principal Ding, are you saying your chips will be cheaper than those from Island Electromechanical?"

Owen furrowed his brow and asked.

"Of course, the quality of Xia Country's products has always been high, with excellent value for money. I've always thought that companies like Island Electromechanical have led to inflated chip prices due to monopolizing production and manufacturing."

Chapter 1655: What Bad Intentions Could I Have_2

Ding Yue calmly said to Owen.

"As for the price, Principal Ding, I think we should have some room for further negotiation, don't you think?"

Owen still wanted to negotiate a slightly lower price to order Feiyue Technology's 5-nanometer chips.

After all, if the price can be reduced a bit, then more chips can be bought. A billion-yuan order is still a billion-yuan order, but if more 5-nanometer chips can be purchased, EU Technology Company can produce more robots and drones, which require chips, and thus make more profit.

In any case, Owen naturally had to discuss business from the perspective of EU Technology Company. They couldn't just accept whatever price Feiyue Technology set, right?

"Owen, do you think there's room for negotiation? I don't quite think so."

Ding Yue laughed and shook his head.

"No, no, no, Principal Ding, I think... well, we've talked quite a bit today, how about we continue tomorrow? Don't you plan to show me around Mist City Arts and Science University? I've heard it's the most impressive private university in Xia Country."

Owen suddenly changed the subject, implying he didn't want to continue discussing business today and would rather continue tomorrow.

Fair enough.

Such a big deal can't be settled with just a meeting and a short chat, right?

Ding Yue agreed to wrap things up for today and continue tomorrow. After all, Ding Yue was not in a hurry and had plenty of time and energy. If this order could be secured, it would be very important for both Mist City Arts and Science University and Feiyue Technology.

"Alright, Owen, we'll stop here for today and continue tomorrow. Since you want to see Mist City Arts and Science University, I'll take you on a tour, hahaha."

Ding Yue nodded with a smile and said.

"Thank you, Principal Ding."

Owen stood up.

Ding Yue also stood up and said to Big White, "Big White, let's go, we'll take Owen for a tour. Owen, it's been a while since you've been to Xia Country, right? A tour of Mist City Arts and Science University will show you what kind of strength Xia Country has now."

"Oh? Is that so?"

Owen asked with a smile, "Your Mist City Arts and Science University is quite capable, but compared to institutions in Europe and America, I think there is still some gap."

"Hehe."

Ding Yue responded with a chuckle.

After all, foreigners don't understand what 'hehe' means in Xia country.

Yes, our Mist City Arts and Science University does have a gap compared to those world-class universities, but rest assured, in less than ten years, our university will stand at the pinnacle of the world, becoming the most outstanding university on earth.

Wait and see!

"Let's go, Owen."

Ding Yue, accompanied by secretary Wen Ruohan and Miss An Yu Jia, along with his AI robot, left the office with Owen, Eudite, and Andreas, those three visitors from Europe.

After leaving the Administration Building, Ding Yue gave Owen a brief introduction to the campus of Mist City Arts and Science University before taking him on a tour.

The first stop was.

Book Ship Library.

"Wow, this building is very distinctive, like a battleship, very imposing."

Upon seeing the architecture of Book Ship Library, Owen couldn't help but marvel, "What kind of building is this? Was it designed by an international architectural design master?"

In Owen's view, such a magnificent and overwhelming building as Book Ship Library must have been designed by some well-known international architectural design master to be so inspirational at first glance.

"Hahaha, Owen, this building is one of the libraries at Mist City Arts and Science University. As for its designer, it's not an international architectural master but an architectural designer from our university."

Ding Yue said to Owen with a smile.

"What?"

Owen, upon hearing this, was utterly surprised.

This library building wasn't designed by a renowned architectural master? It was just designed by a university architectural designer from Mist City Arts and Science University?

Owen, having some understanding of architectural design, found the library building's design top-notch upon first glance.

"It's truly incredible."

Owen sighed and said, "Your university's School of Architecture is indeed impressive."

"To be honest, Owen, the School of Architecture is one of the top departments at Mist City Arts and Science University, comparable to the world's top architecture schools. I have such confidence."

Ding Yue spread his hands confidently.

"They all say Xia Country is a construction marvel. Now I see in architecture, your technology is quite impressive, even the design is this good, making me, making me, scratch what's the saying?"

Owen tried to recall a Xia proverb but couldn't remember it correctly.

"Look at it differently."

Ding Yue laughed and supplied the proverb for Owen.

"Yes, that's the expression. Principal Ding, your Xia proverbs are fascinating."

Owen gave a thumbs-up.

Owen is a foreigner who loves Xia proverbs. Ever since he first came to Xia and was introduced to these expressions, he's been captivated and always tries to use a few when conversing with people from Xia, though he often finds himself struggling to recall the exact phrases when needed.

"Principal Ding, may I go into the library to take a look?"

Owen turned and asked Principal Ding.

"Of course!"

Without even thinking, Ding Yue nodded, "This way."

With that, Ding Yue led Owen and his two European companions into the Book Ship Library of Mist City Arts and Science University.

As they entered the library, besides the dense shelves and books, there were rows of students quietly seated, with books and computers in front of them, and hardly any students had their phones out.

"So many students?"

Owen was stunned upon seeing this scene.

Goodness, Mist City Arts and Science University's library is so popular? Supposedly, Xia Country's higher education isn't ranked that high globally, yet a place like the library is so crowded?

This is more lively than many European university libraries.

"Owen, students at Mist City Arts and Science University love studying in the library. It's a sea of knowledge, after all."

Ding Yue said with a smile.

"Oh! I see, just now you told me this library is called Book Ship Library, is that right? The name fits well with the sea of knowledge."

Owen quickly understood.

It turns out that even the library's name is so meaningful.

"Yes, that's the idea."

Ding Yue nodded.

They toured the library briefly, knowing not to talk too much, since libraries require quiet.

After leaving the library, Owen couldn't help but express his admiration again.

Then, Ding Yue took Owen to see other parts of Mist City Arts and Science University and visited another Chinese-style building, the Archive, which Owen also adored.

Besides his love for Xia proverbs, Owen is also fond of Xia's traditional architectural culture.

"This library building has your country's traditional architectural style. I find it beautiful."

Owen looked up at the Archive Library and said, "And the name 'Archive' is very poetic."

"Historically, the 'Archive' is where all books are stored, and the Archive Library at Mist City Arts and Science University holds a million volumes from around the world, including professional, popular science, and fiction books."

Ding Yue briefly explained.

"Your Mist City Arts and Science University has truly surprised and astonished me," Owen remarked with appreciation.

Chapter 1656: Shocking Foreigners for a Whole Year

"Principal Ding, you have pandas on your campus?"

"Oh my god, the food at your canteen is so delicious. After Xia Country's idioms and architecture, I've fallen in love with Xia Country Cuisine. This hot pot is really tasty. How did you say that phrase again?"

"It's really great!"

"Ah yes, it's really great!"

Ding Yue took Owen, Eudite, and Andreas to visit the panda exhibit at Mist City Arts and Science University, then treated them to the culinary delights at the Fifth Canteen of the university.

After this, Owen and his friends were thoroughly impressed by the campus of Mist City Arts and Science University.

"I really love this campus."

Owen said directly.

Ding Yue could tell from a foreigner's tone whether they were sincere or just flattering, and it was clear Owen genuinely liked Mist City Arts and Science University.

"Owen, if you have time in the future, you're welcome to visit Mist City Arts and Science University often."

Ding Yue said enthusiastically to Owen.

Even though the business deals were not confirmed yet, as a potential future partner, it was important to show enthusiasm.

"Sure, sure, hahaha."

Owen nodded repeatedly.

He thought, if he ever has some free time in the future, he'd play around Xia Country more often. Every time he visits Xia Country, he would definitely come to Mist City Arts and Science University, stroll around the campus, have tea and chat with Principal Ding, which would be wonderful.

Owen greatly admired Principal Ding, not just for his steadiness in business negotiations, but also his personality, which showed Owen a different kind of young person from Xia Country.

Isn't that what "promising young person" refers to? Someone like Principal Ding?

Initially, Ding Yue planned to take Owen, Eudite, and Andreas to have Western food, as they were Europeans and must be more accustomed to Western cuisine.

However.

Owen expressed that since they were in Xia Country, they naturally wanted to eat Xia Country Cuisine.

Alright, since you said so, Ding Yue naturally took these three foreigners to the Fifth Canteen of Mist City Arts and Science University, where he arranged for the best chefs there to prepare a sumptuous Xia Country feast for Owen and the others.

Serving a dish from each of the eight major cuisines truly shocked Owen, Eudite, and Andreas.

They couldn't believe that Xia Country's cuisine had such variety, and each cuisine had different flavors, all of which were very delicious. It was absolutely incredible.

Unlike in Europe, where Western cuisine was more or less the same, regardless of country or region, with no significant differences.

But in Xia Country, it's different. As Xia Country is vast and rich, each region has developed its local specialties.

"These are the eight major cuisines of Xia Country."

Ding Yue briefly introduced the eight major cuisines to Owen.

"It's unimaginable that your Xia Country's culinary culture is so profound and historical, it's amazing!"

After hearing Principal Ding's introduction of the eight major cuisines, Owen couldn't help but exclaim.

Xia Country's culture is simply astonishing.

From idiom culture, to architectural culture, to food culture, whenever Owen learned about one, it filled him with a sense of awe and admiration.

"Principal Ding, at Mist City Arts and Science University, you can really feel many aspects of Xia Country's culture, it's remarkable."

Walking out of the Fifth Canteen, fully satisfied, Owen said contentedly to Ding Yue.

"See, I told you so."

Ding Yue smiled lightly and said proudly.

The essence of Xia Country's culture could indeed be seen in various aspects at Mist City Arts and Science University, as Owen mentioned, with architectural culture, culinary culture, etc.

Apart from traditional culture, the Mist City Arts and Science University campus also boasts advanced technology, which is crucial for humanity. In the past, Xia Country's technological level was indeed a step behind the developed countries of the world, but now, the technology being researched at the Mist City Arts and Science University's research base is at the forefront of the global standard.

So.

Ding Yue planned to take Owen, Eudite, and Andreas to visit the research base at Mist City Arts and Science University, to showcase the university's technological prowess.

"Hey, Owen, since we're full, let's head to the next stop."

Ding Yue said with a smile to Owen.

"Where to next?" Owen asked in curiosity.

"What do you think?"

Ding Yue smiled.

Owen, being somewhat clever, thought for a moment and then said, "Principal Ding, are you planning to show me your research achievements at Mist City Arts and Science University? I heard that your university has made numerous achievements in the field of technological research, wasn't your 5-nanometer chip technology developed by your university?"

"Yes."

Ding Yue nodded in response.

Owen had clearly done his homework, knowing that Xia Country's domestic 5-nanometer chip was developed at Mist City Arts and Science University.

"Then I'm very much looking forward to it. As everyone knows, Europe and America are the centers of global technology research. I wonder what level your technology research has reached here."

Chapter 1657: Shocking Foreigners for a Whole Year_2

Owen said with a smile.

Actually, saying this has a kind of boastful implication.

The technology level in Europe and America is indeed very high.

But sorry, that's the past. Once upon a time, you Europe and America had the leading technology in the world, you were like the pioneers, but now it's different, times have changed. Mist City Arts and Science University has already become the top existence in various technology research fields worldwide.

It's just that these European foreigners are unwilling to admit it.

Today, Ding Yue is going to show Owen what our Mist City Arts and Science University's research base center looks like.

"Let's go, Owen, I'll take you to see it."

After saying this, Ding Yue led Owen, setting out from the Fifth Canteen, heading towards the research base center of Mist City Arts and Science University.

The distance between the Fifth Canteen and the research base center isn't very far. If you walk, it won't take long. Otherwise, if it were far, Ding Yue would have called for a car right away, since at Mist City Arts and Science University, going from one place to another, if you walk, it might take about an hour. Who told Mist City Arts and Science University's campus to be so huge?

About ten minutes later.

Ding Yue, along with Owen and the other three foreigners, arrived at the research base center.

Over the past few years, Mist City Arts and Science University's research base center has constantly expanded. The building scale has been getting bigger, and there are more and more laboratories. Gathered here are all the top-notch technical research laboratories in various specialized fields.

"Brother?"

By chance, as Ding Yue just arrived at the research base center, he saw his sister Ding Xiaoyou walking towards him.

"Xiao You."

Seeing his sister Ding Xiaoyou, Ding Yue asked: "What are you doing here?"

"Shouldn't I be here? I'm just done with a set of data research in the laboratory, right? Brother, what about you? Foreigners huh?"

Ding Xiaoyou rolled her eyes and then glanced beside her brother Ding Yue. Well, there are actually three foreigners.

"Yeah, from the European Union Technology Company."

Ding Yue nodded and replied.

"European Union Technology Company? The Europe one?"

Ding Xiaoyou seemed to know about such a world top 500 company engaged in high technology: "Brother, your company really hooked up with Europe's tech companies huh? Planning to collaborate on drones or robots? I remember European Union Technology Company is into drone and robot industry, right?"

"Neither."

Ding Yue smiled, shook his head and said: "Their drone or robot industry doesn't conflict with ours, our drones primarily supply domestically, who told our drones to be so awesome."

"Then what are they doing at our Mist City Arts and Science University?"

Ding Xiaoyou asked, confused.

"Chips, of course."

Ding Yue shrugged and said: "European Union Technology Company fell out with America and Island Electromechanical, so they came to us to buy chips."

"Hahaha, buying chips, we should really rip off these foreigners well, considering how much hardship they gave us in the chip sector back then." Ding Xiaoyou laughed out loud, and then she asked: "Ah brother, they can't understand our Xia Country language, right?"

"Yeah, otherwise I wouldn't chat with you so brazenly."

Ding Yue smiled and nodded.

"Thank goodness."

Ding Xiaoyou let out a long breath, afraid that what she said just now was overheard by the three foreigners beside her.

"Hey, Ding Xiaoyou, who is this?"

Owen came forward, curious, asking Ding Yue.

"Owen, this is my sister." Ding Yue happily gave Owen a brief introduction.

"Hello!"

Ding Xiaoyou feigned innocence as she greeted Owen. This guy was just talking about ripping them off a moment ago, now she's reaching out to greet them. Truly, she's Ding Yue's sister, full of mischief.

"Bro, are you planning to show them our Mist City Arts and Science University's research base center, flaunt our muscle a bit?"

Ding Xiaoyou asked with a smile.

"Well said, little sis!"

Ding Yue nodded.

"Hehehe, then let me join in." Ding Xiaoyou also wanted to join the fun.

"Sure."

Ding Yue had no reason to refuse, especially since his little sister is also a super scholar, it would be great to show off a bit to Owen and the others, letting his sister take the spotlight. That would surely astound the foreigners!

"Hehehe."

Ding Xiaoyou happily stood beside her brother Ding Yue, then started chatting with Owen and the other foreigners.

It's undeniable, besides being brilliant in professional fields like chemistry and energy, Ding Xiaoyou's English skills outshined Ding Yue's, speaking it so fluently.

Thus, Owen quickly started chatting with Ding Xiaoyou, who's naturally friendly.

"Let's go."

Ding Yue led them into the research base center.

"Bro, let me be the commentator."

Ding Xiaoyou volunteered to be the commentator for Owen and these foreigners, explaining Mist City Arts and Science University's advanced technology research.

In fact, what various companies or universities are researching, or which leading technologies they have, generally doesn't have much secrecy necessity. After all, these technological research outcomes are often to attract investment or occupy the market, and most companies wish they could exaggerate their advanced tech research to the skies.

Rarely has a place been as low-key as Mist City Arts and Science University.

As Owen toured around the research base center with Ding Yue, combined with Ding Xiaoyou's passionate explanation, he couldn't stop being shocked by the advanced technology Mist City Arts and Science University is researching and mastering.

"Oh my, your Mist City Arts and Science University, Feiyue Technology's creativity is simply too strong."

Owen exclaimed in amazement, widening his eyes.

This tour showing Owen around Mist City Arts and Science University's research base center truly shocked the foreigners for an entire year.

"Principal Ding, it's truly unexpected that you possess such advanced technology and so many groundbreaking projects. Truly remarkable!"

Owen directly gave Ding Yue a thumbs up.

"Oh, it's okay."

Ding Yue humbly said.

In today's era of technological barriers, who can develop cutting-edge technology first can master market initiative.

Feiyue Future New Energy Vehicle is a great example, using brand-new graphene battery technology and powerful artificial intelligence technology, capable of beating Google's AlphaGo, hence why Feiyue Future New Energy Vehicle could rapidly blossom in the international market.

Owen knows this very well.

That's why he feels that Mist City Arts and Science University and Feiyue Group are truly impressive, developing and continuing to develop so many cutting-edge technologies, how much money must have been invested in this?

It should be noted, developing a cutting-edge technology requires at least billion-level investments since Owen and their company European Union Technology also engage in tech research.

However, what Owen doesn't know is, at Mist City Arts and Science University, doing tech research actually costs cheaper than any other tech research institution, company, and even country in the world.

Because technology and knowledge are readily available for Ding Yue, the lack is just in equipment, materials, and personnel, and personnel-wise there is hardly any shortage now since his Mist City Arts and Science University is continuing to cultivate them annually.

Today, Ding Yue just showed Owen part of the technology Mist City Arts and Science University is researching, mostly those likely to be used in the civilian market in the future.

Technologies like nuclear-powered engine won't be revealed by Ding Yue, nor by his sister Ding Xiaoyou, as Ding Xiaoyou is still researching nuclear-powered engine technology.

Since last time Ding Yue endowed his sister Ding Xiaoyou with nuclear-powered engine technology, Ding Xiaoyou has started delving into it, advancing through one batch of experimental data after another, now continuously progressing towards nuclear-powered engine technology.

Chapter 1658: The University that Brings Glory to the Nation

Three days later.

After various discussions between Ding Yue and Owen, the executive director of European Union Technology Company, today, they are finally going to settle the contract, and both parties are quite satisfied with the negotiation outcome.

On the side of Feiyue Technology, they agreed to supply European Union Technology Company with 5-nanometer chips for the next three to five years.

And on the part of European Union Technology Company, they guaranteed to order 10 billion yuan worth of chip products from Feiyue Technology in the next three to five years. Thus, for the first time in a true sense, Feiyue Technology's 5-nanometer chips are stepping out of the country.

In the past year or so, Feiyue Technology's 5-nanometer chips were supplied to domestic technology companies for the update and iteration of electronic products, and special batches of chips were also custom made for Xia Country's military field.

Domestic tech companies dealing with electronic products have completely gotten rid of the chokehold by foreign chips during this wave, thriving while relying on Feiyue Technology.

But for Feiyue Technology, just earning from these domestic companies is far from enough.

The chip prices that Feiyue Technology offers to domestic companies are indeed reasonable, and although reasonable prices still allow for considerable profit, selling to foreign parties would yield

significantly more revenue, and moreover, all the profits would come from foreigners, boosting Xia Country's home-grown technology!

This time.

This vision is finally about to be realized.

Just waiting for the contract to be signed.

"Principal Ding, it's a pleasure to cooperate with you, and I hope in the future, our European Union Technology Company can have more collaboration opportunities with your Feiyue Group, especially in the field of robotics."

Owen warmly shook hands with Ding Yue.

"Yes, looking forward to more cooperation opportunities."

Ding Yue nodded with a smile.

In reality, Ding Yue did not plan to collaborate with European Union Technology Company in the field of robotics, mainly because they are relatively mature in this area for the moment.

And the artificial intelligence robots he mastered were way too advanced, and in the short term, Ding Yue definitely would not apply them on a large commercial scale.

This time, the chip price offered to European Union Technology Company by Feiyue Technology was 2% cheaper than that offered to Island Electromechanical.

Don't underestimate this 2% price difference, because for European Union Technology Company's billion-yuan order, it means they can buy more chips.

"Principal Ding, here's the contract."

The secretary Wen Ruohan brought over the freshly printed contract and handed it to Principal Ding.

Principal Ding accepted a copy of the contract and began to examine it thoroughly.

Then Wen Ruohan handed a copy to Owen and Eudite each, both parties had to go through the contract carefully.

An Yujia signaled to Wen Ruohan and also requested a contract to examine meticulously; every clause in the contract had to be clearly written, leaving no room for carelessness, or else it would be a loss for Feiyue Group.

About ten minutes later.

Both parties had almost finished reading the contract.

An Yujia nodded to Principal Ding, indicating that every clause in the contract was consistent with what had been agreed upon in the past few days, with no issues at all.

"Owen, the contract is fine."

After reviewing the contract, Eudite said to Owen.

"So, Owen, if the contract is confirmed, shall we sign it now?"

Ding Yue asked Owen with a smile.

"OK, I've gone through it, and there's no problem with the contract. I'm very happy to cooperate with your Feiyue Group." Owen nodded, placed the contract on the conference table, and took out a pen he carried with him, starting to sign the contract.

On Ding Yue's side, he nodded towards An Yujia, signaling that she could start signing the contract with Owen and his team.

For Feiyue Group's contracts, they are mostly signed by An Yujia; Ding Yue does not personally sign the contracts, which is the rule set as the boss behind the scenes, granting An Yujia the greatest authority.

However, between An Yujia and Ding Yue, there is an agreement.

For major contracts, without Ding Yue's permission, An Yujia cannot sign independently.

"Yes."

An Yujia nodded slightly, then took out a pen and began to sign the contract as well.

After both parties signed the contract, the next step was to affix the company seals.

An Yujia stamped it with Feiyue Technology Company's seal because this order was signed between European Union Technology Company and Feiyue Technology, a subsidiary of Feiyue Group, not with Feiyue Group itself.

Only when signing cooperation deals with Mist City Government building and the like, do they use the name of Feiyue Group, while for other contracts involving specific products or projects, they are signed in the names of the various subsidiaries of Feiyue Group.

Slam!

An Yujia personally stamped the seal of Feiyue Technology Company!

Owen also stamped the seal of European Union Technology Company, after which both parties exchanged contracts and continued signing and sealing.

Both copies of the contract were completely signed.

Owen stood up, reached out to shake hands with Ding Yue, and said with a smile, "Principal Ding, Miss An, happy cooperation!"

"Happy cooperation!"

Ding Yue nodded slightly; the contract for this billion-yuan order was finally settled, and he breathed a sigh of relief.

These days, battling wits with Owen, preparing for every possible situation, ultimately brought about this successful order negotiation. Ding Yue believes this order for Feiyue Technology will bring substantial profits.

Chapter 1659: Universities Bringing Glory to the Nation_2

Similarly, Owen was also satisfied. After their efforts, they finally secured the chip order from Flying Leap Technology Company, and the price was even slightly cheaper than that of Island Electromechanical.

A mutually satisfactory result is indeed rare.

After the contract was signed, Owen breathed a sigh of relief.

Originally, European Union Technology Company was facing an unprecedented chip crisis. If the negotiation with Feiyue Group had failed, they would have been in a real dilemma.

If they had to turn around and humbly buy chips from America and Island Electromechanical, they would have not only had to lower their stance but also likely be heavily exploited by Island Electromechanical given the opportunity.

Fortunately, Feiyue Group was willing to cooperate with European Union Technology Company. Once they provided the 5-nanometer chips, European Union Technology Company's latest robot products could begin production and be launched into the European market.

"Owen, what's your plan next? Stay in Xia Country for a while longer or head back to resolve your European Union Technology Company's issues?"

Ding Yue chatted casually with Owen with a smile.

"Hmm... although our European Union Technology Company has faced quite a few challenges recently with many matters to resolve, having come to Xia Country, after visiting your Mist City Arts and Science University, I also want to see other places in Xia Country."

Owen thought for a moment and said.

"Alright, then I wish you a pleasant trip."

Ding Yue had nothing more to say, and the rest was just politeness.

"Okay, Principal Ding, it's a pleasure to meet a partner like you."

Owen opened his arms and gave Ding Yue a big hug.

"Oh, by the way, Owen."

Ding Yue suddenly remembered something and quickly said to Owen, "Regarding the publicity for our collaboration, European Union Technology Company needs to cooperate with us more."

"I understand, wasn't that outlined in the contract terms as well?"

Owen nodded.

This was indeed something Ding Yue had discussed with Owen. For their cooperation between Flying Leap Technology Company and European Union Technology Company on 5-nanometer chip supply, Feiyue Group and Mist City Arts and Science University are certainly going to promote it.

And since there will be publicity, European Union Technology Company's cooperation is indispensable.

"Then I'll take you back to the hotel."

Ding Yue said with a smile.

Afterwards, Ding Yue escorted Owen, Eudite, and Andreas back to the campus hotel at Mist City Arts and Science University.

The campus hotel at Mist City Arts and Science University is five-star level, and Owen and the others have been staying there quite satisfactorily. After returning to the hotel, they planned to rest for a day and then set off to explore other cities in Xia Country. After touring Xia Country, they would return to Europe.

After all, with the contract signed, the biggest crisis faced by European Union Technology Company has been resolved. Such a joyous occasion naturally calls for some relaxation and enjoyment of Xia Country's scenery.

After sending Owen and the others back to the hotel, Ding Yue returned to his principal's office.

An Yujia was still there at the time.

"Miss An, this order has earned us a lot at Feiyue Technology, especially since we're earning foreign money. Most importantly, through this order, we can promote our 5-nanometer chips from Feiyue Technology and compete with Island Electromechanical."

Ding Yue said to An Yujia with a hint of excitement.

"Yes, Principal Ding, this is indeed a transaction worth celebrating."

An Yujia also nodded with delight.

If the chip industry can continue to grow and enter the international market, the market value of Feiyue Group will rise further.

The future of this company indeed seems increasingly promising.

An Yujia even wondered if Feiyue Group might one day become the world's largest integrated high-tech industry company.

It used to be hard to imagine.

But now, An Yujia feels there's hope for that day to come, because behind Feiyue Group, there is Mist City Arts and Science University, a very intelligent Principal Ding, and strong support from Xia Country.

"The next two things: one is to continue expanding the manufacturing of lithography machines and chips, ensuring a stable supply of chips to European Union Technology Company according to the contract now that we've signed it."

Ding Yue began instructing An Yujia.

These matters don't require Ding Yue to personally oversee; entrusting them to An Yujia is sufficient.

"Yes, yes."

An Yujia nodded.

"The second thing is the promotion aspect. Let's put our best efforts into promoting it. Our chips stepping into the international market marks an exciting milestone. It's also a pinnacle moment for our domestic chip technology."

Ding Yue continued to instruct.

"Got it."

An Yujia nodded again.

These two tasks are indeed the priorities for Feiyue Group moving forward, and An Yujia took note, preparing to start the work once she returns.

Just a day later.

Feiyue Technology and European Union Technology Company simultaneously announced the conclusion of this billion-yuan chip order.

With Feiyue Group's prowess in generating hype and publicity on social media, this news quickly shot to the trending lists on major social media platforms. Even on the Feiyue Home Streaming Media platform, there were numerous hot topics of discussion.

On platforms like Twitter, TikTok, and Bilibili, major tech video bloggers were like they were on a sugar rush, eagerly and voluntarily promoting this billion-yuan order from Feiyue Group.

The reason these tech video bloggers were so enthusiastic was because this achievement truly exhilarated them.

Reflecting on the past, when Xia Country's major tech companies were often stifled by overseas countries' blockade on chip technology, leading to prolonged domestic chip supply crises, where many electronic products, even once developed, could not be produced.

But now, look at the present.

The times have truly changed.

Domestic 5-nanometer chip supply is assured, and not only that, but Feiyue Technology's 5-nanometer chips are entering the international market through this collaboration with European Union Technology Company.

On Twitter, this topic instantly soared to the top of the trending list.

It is undeniable that Bitch now seems to have grasped a new flow of popularity, as any news related to Mist City Arts and Science University and Feiyue Group garners massive reach and netizen interest.

"Wow, a billion-yuan chip order! It's something we once dared not even imagine."

"Foreigners are coming to buy our chips too?"

"Congratulations to Feiyue Technology!"

"Awesome, awesome!"

"Is this the power of domestic technology? We were once so weak in this area, but now we have truly stood up."

"It really feels incredible."

"Does this mean our domestic chip technology has ventured abroad?"

"Good! Entering the international market and starting to compete with Island Electromechanical and the others!"

"In terms of product quality competition, Xia Country is not to be feared at all."

"I'm laughing to death; now the pressure is on Island Electromechanical."

"I have to say, Feiyue Technology is really too strong, totally brilliant!"

"Feiyue Group is a true example for domestic companies."

"It's getting competitive, our domestic tech companies are starting to compete with the foreigners, beat them!"

"Thinking about Feiyue Technology earning foreign money with high-tech chip products makes my heart swell with joy."

"Finally able to earn foreign money in high-tech."

Netizens commented one after another, and this billion-yuan chip order exhilarated everyone, filling the hearts of compatriots with confidence.

At the same time, Feiyue Group, as a domestic tech company, was also widely liked by the netizens.

Some experts even predict that a company like Feiyue Group, which follows the path of technological innovation, will surely become the most influential company for Xia Country on the international stage in the future, possibly even matching the giants like Apple and Google!

Chapter 1660: What? Pharaoh Is Building a New Capital?

"Feiyue Group is really awesome!"

"Mist City Arts and Science University has really made a great achievement this time, hahaha."

"Domestic chips going abroad, starting competition in the international market, too strong."

"It's so exhilarating!"

In the principal's office of the administration building at Mist City Arts and Science University, Ding Yue was holding a phone, looking at various online comments from netizens, and couldn't help but smile.

"Haha, hehe."

Ding Yue, reading the comments, couldn't help but burst into laughter.

This wave, his Feiyue Group, and Mist City Arts and Science University really garnered a lot of praise!

"Principal Ding, why are you giggling?"

After Secretary Wen Ruohan finished her tasks, she saw Principal Ding laughing there and became curious.

"Huh?"

Ding Yue looked up at Secretary Wen Ruohan and asked, "Was I laughing? Xiao Wen, you must not have slept well last night and are seeing things."

Well, letting Secretary Wen Ruohan see him giggle was definitely something he couldn't admit to.

"Principal Ding, stop pretending, I saw you giggling with your phone just now. Are you in a relationship, hehe?"

Wen Ruohan asked with a smile.

"Ahem!"

Ding Yue coughed lightly, glared at Xiao Wen, and said, "Xiao Wen, mind your words. I'm usually so busy, where would I find time for a relationship?"

"Then why was Principal Ding giggling with his phone? Usually, when boys or girls do that, it's because they're in a relationship, maybe even an online one."

Wen Ruohan rolled her eyes and muttered.

"Stop imagining things."

Ding Yue replied, annoyed. He couldn't let Secretary Wen Ruohan misunderstand; otherwise, if she went around saying that Principal Ding was in a relationship, it would be a false accusation.

"I was just looking at netizens' comments online, seeing how more and more people trust and support our Feiyue Group and Mist City Arts and Science University. I was just happy, that's all."

Ding Yue had no choice but to admit that he was indeed giggling earlier and explained why.

"Is it because of our billion-yuan order with the European Union Technology Company? I've read many online comments recently, too. This time, it's truly impressive. Our domestic chips have gone abroad, advancing into the international market and even competing with Island Electromechanical. It's something to be proud of."

Wen Ruohan said proudly.

"Who wouldn't be proud?"

Ding Yue was in a very good mood.

This time, in the high-tech field, his Feiyue Group and Mist City Arts and Science University finally brought some credit to Xia Country. Hopefully, in the future, they can continue to catch up and even surpass the foreigners in other tech fields.

"But, we shouldn't be too proud."

Ding Yue smiled and said to Secretary Wen Ruohan, "Our Mist City Arts and Science University and Feiyue Group have a long way to go."

"Principal Ding, you're so humble."

Wen Ruohan said honestly.

"Ahem, that's the truth, where's the humility?" Ding Yue shrugged, then continued to look at the various praises online for Mist City Arts and Science University and Feiyue Group.

To be honest, seeing others praise Mist City Arts and Science University and Feiyue Group, Ding Yue felt really good.

Isn't it understandable? Who doesn't want to be praised for their contributions?

It's certainly better than those celebrities who are awkwardly acting or showing off and getting praised crazily by fans every day, isn't it?

"Principal Ding, Miss An is here, um, and Director Chen too."

Just as Ding Yue looked down to continue checking his phone, Secretary Wen Ruohan's voice rang out again.

"Principal Ding."

"Principal Ding."

The next second, the voices of An Yujia and Director Chen Ping came through.

"Hmm?"

Hearing his name called, Ding Yue looked up and saw An Yujia and Director Chen Ping entering the office and walking towards his desk.

It wasn't surprising for An to come seeking him out.

After all, Feiyue Group has so many things going on every day, and there are matters An Yujia has to report to Ding Yue or seek his advice and decisions.

But it had been a while since Ding Yue last saw Director Chen Ping. He knew Director Chen Ping was busy managing both the architecture department at Mist City Arts and Science University and Feiyue Construction Company under Feiyue Group every day.

"Miss An, Director Chen, take a seat."

Ding Yue saw them both coming to see him and thought it was most likely about something related to the architecture department or Feiyue Construction Company.

It was probably about Feiyue Construction Company.

After all, if it were just a matter concerning the architecture department, Director Chen Ping could come alone to see him; there wouldn't be a need for Miss An to come along as well. Since Miss An was here too, it was most likely concerning Feiyue Construction Company because, although Director Chen Ping manages and operates it, Feiyue Construction Company is a subsidiary of Feiyue Group, and the person in charge of Feiyue Group is An Yujia.

Of course, there's another possibility.

It could be that Director Chen Ping came to see him about the architecture department, and An Yujia came to see him about matters concerning Feiyue Group, and the two just coincidentally arrived together.
