

F. University 1681

Chapter 1681: First Stage Goal Successfully Achieved_2

Alphat personally presided over this bidding meeting. During the meeting, Alphat spoke about the bids from all the construction companies participating in the bidding and expressed great gratitude for their involvement.

After all, this is a grand project to build a new capital for the Pharaoh Kingdom. Without these construction companies, this project would be impossible to realize. The Pharaoh Kingdom itself does not have the capability to construct a modern metropolis and can only use money to invite large international construction companies to carry out the construction.

"Thank you very much to each construction company for attending the bidding meeting."

Alphat expressed sincere gratitude.

However,

Alphat did not announce which company had won the bid, which made the bosses of those big construction companies very anxious.

This is a project worth 60 billion dollars. If planned properly, it could even yield a profit of 10 billion dollars. For construction companies, this is undoubtedly a huge cake, so who wouldn't be tempted?

The bosses of Keweite, BuYige, American Bridge, Xia Country Construction Engineering Bureau, Wanxi Group, and Dahe Group all felt their hearts in their throats at this moment.

Peter from American Bridge was still confident, with a cigar in his mouth.

Adolph from Keweite Construction Company frowned deeply. Since Alphat still hadn't announced which construction company won, it seemed the situation was a bit complicated, indicating that the Pharaoh New Capital Management Committee was quite conflicted with many choices.

Given this situation, can Keweite Construction Company still stand out and win this project?

On the scene, only Ding Yue remained calm.

Because Ding Yue was full of confidence.

This bidding meeting would have no winner because Ding Yue knew long ago that there would be no victor. When he initially talked with Alphonse, Alphonse had already shown a longing for the "Oasis City Plan."

Therefore, after the Pharaoh New Capital Management Committee's discussions, Ding Yue believed they were bound to make a decision most beneficial to their kingdom, and this decision would definitely affect today's bidding meeting.

As for how it would be influenced, Ding Yue had also made a prediction.

Most likely, today, the Pharaohs would not choose a winning construction company and instead would announce a second open bidding meeting because Ding Yue knew that after Alphonse learned about Mist City Arts and Science University's black-tech research in environmental and botanical fields, he naturally became interested.

And the most reliable way to verify this authenticity is to personally visit Mist City Arts and Science University in Xia Country for an examination.

If a visit is required, that will need time. The way for the Pharaoh New Capital Management Committee to acquire time is to let today's bidding meeting end with no winner, announce a second open bidding meeting in a while, and utilize this gap to visit Mist City Arts and Science University for an examination.

"Principal Ding."

An Yujia, sitting beside Ding Yue, softly called out to Principal Ding as Alphonse was about to make an announcement.

Ding Yue remained calm.

As if everything was within Ding Yue's prediction.

"After research and decision by our Pharaoh New Capital Management Committee, I announce that this bidding meeting will have no company winning the bid. In a month, we will hold a second open bidding meeting, hoping that major construction companies can present plans that satisfy our Pharaoh New Capital Management Committee. Thank you all."

Alphat ultimately announced this result.

This was the result of a unanimous vote by all members of the Pharaoh New Capital Management Committee. Yes, it was announced that no company won the bid, and a second open bidding would be held in a month.

During this month, Alphat will personally lead some members of the Pharaoh New Capital Management Committee to visit Mist City Arts and Science University in Xia Country for an examination.

After the examination, the second open bidding meeting will, no matter what, determine which construction company will win the bid and begin the grand construction project for New Cairo City because the Pharaoh New Capital Management Committee cannot wait any longer. This month's time was squeezed out by them.

When Alphat announced this news, the bidding meeting scene was instantly in an uproar.

Good heavens!

Just when everyone was eagerly anticipating which construction company would win the bid, this happened?

Peter from American Bridge and Adolph from Keweite Construction Company were dumbfounded.

What's going on?

What happened?

These were the questions emerging in the minds of Peter and Adolph.

However.

When Ding Yue heard Alphonse announce this news, a smile inevitably appeared at the corner of his mouth.

As expected, it was exactly as he had predicted. Alphonse and the members of the Pharaoh New Capital Management Committee were ultimately tempted by the "Oasis City Plan."

Better to act than to be moved, and surely next, they will seek out Ding Yue to discuss the visit to Mist City Arts and Science University in Xia Country for an examination.

"Principal Ding, they're wavering."

An Yujia exclaimed excitedly.

"Yes, the Oasis City Plan is indeed very tempting for them."

Ding Yue replied with a light smile to An Yujia, "Miss An, Director Chen, if I'm not mistaken, Alphonse and the others will come to our Mist City Arts and Science University for an examination next, so let's prepare the relevant reception work when we return."

"Okay, Principal Ding!"

An Yujia nodded firmly.

This time, it seems Feiyue Construction Company really has a good chance of winning the New Cairo City construction project.

"Damn, what on earth is happening?"

Peter from American Bridge expressed angrily.

According to American Bridge's plan, the chance of winning the New Cairo City project was very high. Plus, he had already given Alphonse a sum of money. Although this sum wouldn't directly make Alphonse decide to hand the New Cairo City construction project to American Bridge, it would definitely have some influence.

Moreover, with such an excellent planning proposal from American Bridge, there's no reason for them not to win the bid this time!

"Why did this happen?"

Adolph from Kiewit Construction Company was also very puzzled.

But Liu Haicheng from Xia Country Construction Engineering Bureau took the result very calmly, muttering to those around him, "It seems the Pharaohs have high demands this time and are not very satisfied with the planning proposals from any of our construction companies."

Despite his calmness, Liu Haicheng still didn't know the real reason behind this; he just thought that the Pharaohs were not satisfied with any company's plans and wanted all companies to revise their proposals to participate again. After all, the Pharaoh is the client, and funding 60 billion dollars is no small amount.

Quickly, both American Bridge and Kiewit Construction Company, as well as BuYige Construction Company and others, came to the same conclusion as Liu Haicheng from Xia Country Construction Engineering Bureau.

"What a pity!"

"Our company's plan was so good, yet the Pharaoh isn't satisfied?"

"Well, they did put up 60 billion dollars; they're the big client!"

The representatives from major construction companies complained.

Reporter Liu Wenxin from Xia Country TV station also reported with surprise: "It's truly a pity. After discussions by the Pharaoh New Capital Management Committee, no company won the bid. It

seems that the Pharaoh has very high standards for the construction of New Cairo City, and even the proposal from our Xia Country Construction Engineering Bureau didn't meet their expectations."

"Whoa, no company won the bid?"

"The Pharaoh is standing firm this time."

"Well, they are the client after all."

"Even American Bridge didn't secure the project; it seems the Pharaoh is aiming for top-quality for New Cairo City this time."

"Just give it to our Xia Country Construction Engineering Bureau; I guarantee we can build any kind of international metropolis you want!"

"None of the construction companies' proposals satisfied the Pharaoh? The requirements must be really high."

Netizens watching the live broadcast began to humorously comment after learning the news.

Chapter 1682: This 60 Billion Project is Secure

The first phase goal of Feiyue Construction Company is to persuade the Pharaoh's New Capital Committee to abandon the various bids of the first public tender.

Now, it has been successfully achieved.

Just recently, Alphonse, the person in charge of the Pharaoh's New Capital Committee, officially announced that no company won the bid in this tender meeting, and a second public tender will be held a month later.

The CEOs of major international construction companies all think that the Pharaoh has high requirements for the construction of New Cairo City, so they ordered their teams to draft new planning proposals, striving to create a New Cairo City plan that would satisfy the Pharaohs.

However.

The magnates of these construction companies never expected that things were not as they assumed.

Everything was under Ding Yue's control.

After the tender meeting, Adolf, CEO of Keweite Construction Company, and Peter, CEO of American Bridge Company, both approached Alphonse. Alphonse used the excuse that "the Pharaohs need a New Cairo City worthy of six billion dollars" to brush them off.

Immediately after sidestepping Peter and Adolf, Alphonse came to see Ding Yue.

"Hey, Principal Ding, Miss An, Mr. Chen."

With excitement in his heart, Alphonse came to Ding Yue and the others.

"Alphonse, given the decision made by your committee at the tender meeting, I think you have recognized our Feiyue Construction Company's Oasis City Plan, right?"

Yu Jia said to Alphonse with a smile.

"Although we are longing for the Oasis City Plan you have devised, Miss An, we need to visit your Xia Country personally to inspect whether you truly possess the technology and strength outlined in your plan. If so, we would be glad to invite you to build an Oasis City for us; if not, then we apologize."

Alphonse candidly expressed his thoughts, which also represented the opinion of the Pharaoh's New Capital Committee members.

Upon hearing this, An Yujia, Chen Ping, and Wen Ruohan all smiled.

Everything seemed like it was orchestrated by Principal Ding, unfolding according to his arrangements. It has to be said that Principal Ding is truly amazing.

"Alphat, you're welcome to visit our Mist City Arts and Science University in Xia Country for inspection. When will you depart?" Ding Yue shrugged and smiled at Alphat, saying, "If possible, we could return together."

"OK, we need to complete some related procedures here, but it will be quick, approximately within three to five days."

Alphat nodded.

It would be ideal if he could directly travel from Pharaoh's Cairo City to Mist City in Xia Country with Principal Ding.

Ding Yue also thought, since the team from the Pharaoh's New Capital Committee is planning to inspect his Mist City Arts and Science University, it's preferable to travel back with them. Anyway, he and An Yujia, Director Chen Ping, and others are planning to return in a couple of days; waiting a bit longer wouldn't matter.

"Then I will extend a warm welcome to Alphat and team to visit our Mist City Arts and Science University for inspection."

Ding Yue said to Alphat with enthusiasm and a smile.

"I'm looking forward to it."

Alphat also said with a smile.

Alphat's statement was genuine; he is sincerely excited to visit Xia Country's Mist City Arts and Science University to see if it truly possesses such remarkable environmental and botanical technology. If it does, then he believes his New Cairo City, an Oasis City, might genuinely be realized. If constructed, it would become another miracle in the Pharaoh's country, no less than the pyramids, right?

Thus.

Five days later, six team members from the Pharaoh's New Capital Committee, led by Alpat, successfully obtained the necessary clearances through the green channel to visit Xia Country, and packed their luggage to find Ding Yue and his group.

The reason why the Pharaoh's New Capital Committee could efficiently process the relevant procedures this time is connected to the Xia Country's desire for their construction enterprises to secure the New Cairo City project. Whether it's the Xia Country Construction Engineering Bureau or Feiyue Construction Group, both are hopeful.

After both parties met at a hotel in Cairo City, they set off for Cairo City's airport.

On the way to the airport, and after boarding the plane, Alpat kept discussing the topic of New Cairo City, the Oasis City with Ding Yue and the others. Ding Yue also did his best to satisfy Alpat's fantasies about "Oasis City New Cairo City."

Believe that one day, Alpat's fantasy will become reality.

Flying from Pharaoh's Cairo City to Xia Country takes a long time due to the considerable distance. On the plane, it's impossible for Alpat to chat continuously with Ding Yue; eventually, upon feeling sleepy, Ding Yue took a nap.

After waking up, the plane was still flying.

Initially, according to Ding Yue's estimation, after a nap, they should have arrived in Mist City. Looking at the mechanical wristwatch, it turned out there were still at least three hours until the plane's arrival in Mist City.

Chapter 1683: This 60 Billion Project is Steady_2

It seems that during this period in Pharaoh's Cairo City, due to the time difference with Xia Country, the sleep and time difference have not been fully adjusted.

"It seems that I should try to travel less on long business trips in the future."

Ding Yue mused.

In the future, as long as Mist City Arts and Science University and Feiyue Group become stronger, many matters will not require me to personally go abroad for discussions. Instead, the others will come to Xia Country, to Mist City, to Mist City Arts and Science University to meet with me.

Currently, Mist City Arts and Science University and Feiyue Group are progressing towards this goal.

"Principal Ding, you're awake? We still have about three hours before we arrive in Mist City." Secretary Wen Ruohan noticed Principal Ding awoke from a nap while the others were still asleep and spoke softly.

"Yes, I know."

Ding Yue nodded: "Didn't you sleep?"

"I also slept for a while," Wen Ruohan replied.

On this flight from New Cairo City to Mist City, it's almost impossible for passengers not to take a nap because it's too far and takes a long time to fly, and surely sleeping is the best way to pass the time on such a long flight.

Besides, sleeping in luxury class is even more pleasant.

Wen Ruohan enjoys traveling on long business trips with Principal Ding, like the previous trips to Europe and this return trip from Pharaoh's Cairo City. Each time, she gets to travel in luxury class with Principal Ding, at his expense, which is just too delightful.

Three hours later.

The plane arrived at Mist City Airport. Wen Ruohan had already arranged for several Feiyue · Future New Energy Vehicles from the school to be at the airport, including Principal Ding's exclusive Feiyue · Future New Energy Vehicle No.0, the first Feiyue · Future New Energy Vehicle.

"Alphat, welcome to Xia Country. Get in, let's go back to the school."

Ding Yue warmly invited Alphonse to ride in his own Feiyue · Future New Energy Vehicle.

"Big White, enable the automatic driving mode."

After getting in the car, Ding Yue instructed Big White to automatically drive from the airport back to the school. This route was very familiar to Big White, and this Feiyue · Future New Energy Vehicle's auto-driving was controlled by Ding Yue's AI robot, Big White, making it far more advanced.

Of course, all other Feiyue · Future New Energy Vehicles also have the in-car intelligence "Big White", which is more than capable of switching to auto-driving, though not as advanced as Ding Yue's AI robot Big White. After all, Ding Yue's AI robot Big White is now nearly a "person" among AI robots, rather than a complex "machine".

"Oh, Principal Ding, this is the Feiyue · Future New Energy Vehicle, right? Is the auto-driving mode this reliable? Honestly, I've always wanted to buy a Feiyue · Future New Energy Vehicle, but since we already have two cars at home, my wife disagrees with purchasing another one, saying it's a bit excessive. Women are so troublesome."

Alphonse said enviously.

Alphonse had always heard about the practicality and smart technology of the Feiyue · Future New Energy Vehicle, especially when his friend told him how great this car is after purchasing it.

When Alphonse saw Principal Ding's Feiyue · Future New Energy Vehicle, he liked it even more.

"Of course, this car contains a lot of cutting-edge technology."

Ding Yue said proudly.

Currently, the Feiyue · Future New Energy Vehicle could be said to be a flagship of the Feiyue Group, establishing Feiyue Automobile as a globally renowned presence, surpassing the previously globally popular Tesla in international status.

After arriving at Mist City Arts and Science University, both Ding Yue's and Alphonse's delegations were drawn by the university's campus.

First, the size of this campus far exceeded Alphonse's imagination.

In Pharaoh Kingdom, there is no university with such a large campus as Mist City Arts and Science University, and the environment is excellent, with flowers, grass, and trees everywhere, and perfect harmony between the vegetation and architectural groups.

And upon entering Mist City Arts and Science University, one can see the magnificent library building — Bookship!

"Principal Ding, the environment of your Mist City Arts and Science University is really nice."

Alphonse exclaimed in disbelief.

"Alphonse, if your Cairo City's Cairo University needs a new campus in the future, you can also contact our Feiyue Construction Company. We will build you a beautiful university campus."

Ding Yue said calmly.

The most famous university in Pharaoh Kingdom is Cairo University. Currently, Mist City Arts and Science University's strength compared to Cairo University has both advantages and disadvantages.

There's no doubt that in the five major elite departments, Mist City Arts and Science University is definitely far superior to Cairo University, as its five major elite departments already possess world-class top-tier strength.

But Cairo University is not without its merits.

After all, Cairo University is one of the world's top 500 universities, with major faculties in engineering, medicine, science, literature, and law, holding considerable strength.

After leading Alphonse and his entourage to Mist City Arts and Science University, Ding Yue arranged accommodations for them at the newly built five-star on-campus hotel.

Alphat never expected that within Mist City Arts and Science University, there would be a pedestrian street mall as well as a five-star hotel; this university is just too luxurious.

No wonder this young Principal Ding is a figure on the Forbes Rich List.

The next day, Ding Yue took Alphat and the other members of the Pharaoh's New Capital Administrative Committee to the research base center of Mist City Arts and Science University.

"Alphat, this is the research base center of Mist City Arts and Science University. When outsiders enter our research base center, they must temporarily hand over their cell phones and other electronic devices for us to keep. Later, I'll personally take you into the research base center to let you examine the research achievements of our School of Environmental Science and Department of Botany."

Ding Yue explained the situation to Alphat.

During Ding Yue's attendance at the bidding conference in Pharaoh Cairo City, his School of Environmental Science and Department of Botany at Mist City Arts and Science University continued to send him good news.

One problem after another was solved, having achieved the optimization of desert soil, cultivation of drought-resistant plants, and application of super photosynthesis technology, among other breakthroughs.

These related cutting-edge technologies were developed by Mist City Arts and Science University through Ding Yue's investment of manpower, resources, and huge capital within a relatively short time.

It could be said to be a race against time in black technology development.

Fortunately, all progress has been relatively smooth. Before the construction of the Pharaoh's New Capital, New Cairo City, groundbreaking begins, it is certain that everything can be completely resolved and applied in the experimental construction of New Cairo City.

The New Cairo City of Pharaoh will be the experimental field of these cutting-edge technologies.

"Okay, Principal Ding."

Alphat naturally complied with the rules of Mist City Arts and Science University. After all, this is their place, and this is the research base center of Mist City Arts and Science University, a place involved in technological research, where you certainly can't just bring in electronic devices at will.

Soon, the staff at the research base center arranged sterile dust-proof suits and other gear for Alphat and his group. Once equipped, Ding Yue led Alphat and his group into the research base center of Mist City Arts and Science University.

About fifteen minutes later, Ding Yue and Alphat arrived in a large indoor sandbox, specially constructed a while ago to research desert greenery and desert environmental improvement.

After Alphat and his group observed the research outcomes from the School of Environmental Science and Department of Botany at Mist City Arts and Science University, Ding Yue could glean some insights from the expressions on their faces.

It seems that the six-billion-dollar project for Pharaoh's New Cairo City is now in the bag.

Chapter 1684: The Second Public Bidding Meeting

Mist City Arts and Science University.

In the research base center, a professor from the School of Environment was introducing Alphat from the Pharaoh Kingdom to the black technologies related to desert environment improvement, such as soil enhancement technologies.

Alphat exclaimed in amazement.

"Oh my god, Principal Ding, your Mist City Arts and Science University's research in environmental studies is simply incredible."

Alphat remarked with admiration.

"With various environmental improvements, I believe New Cairo City will be full of vitality in the future. This is a new breed developed with the genes of poplar trees, which we call [Desert No.1].

This tree species planted in desert environments is extremely drought-resistant, has a strong survival capability, and can grow large patches of green leaves."

Ding Yue further introduced to Alphonse a new species cultivated by the Mist City Arts and Science University's botany department, based on poplar, through appropriate technologies, yielding "Desert No.1" which is more drought-resistant and has much stronger growth capabilities than poplar.

"That's wonderful!"

Alphonse looked at the green plant growing in the sand in front of him, eyes full of hopeful light.

"In addition to Desert No.1, there are many other new species cultivated based on drought-resistant plants, which can be used in your New Cairo City's greening and landscaping."

Ding Yue continued smilingly speaking to Alphonse: "After the canalization project, New Cairo City maintaining oasis city status year-round is basically not a problem."

"If it can really be achieved, then I think we have no reason not to ask you to help us build New Cairo City for the Pharaoh."

Alphonse's words showed he was already quite satisfied.

"Do you have any works in the field of architecture?"

Alphonse asked next.

After touring Mist City Arts and Science University's research base center, Alphonse confirmed that the scientific technologies in environmental studies and botany mentioned by Principal Ding were indeed real, so now he only needed to confirm whether Feiyue Construction Company had the capacity to build a modern metropolis so that he could consider using Feiyue Construction Company to construct New Cairo City for the Pharaoh Kingdom.

"Perhaps internationally, our Feiyue Construction Company doesn't have any significant architectural works, but Alphonse, this very Mist City Arts and Science University campus you are in was built by our Feiyue Construction Company."

Ding Yue calmly stated.

Even though without national-level architectural works, this Mist City Arts and Science University campus is already enough.

"Really?"

Alphat asked in astonishment.

"Yes!"

Ding Yue confidently nodded in response.

When Alphat first saw the Mist City Arts and Science University campus, he felt it was brilliantly constructed. Not to mention the perfect coordination between greenery and architecture, there are many buildings that are eye-catching, especially the Book Ship Library seen right upon entering the campus.

From the architecture of this campus, the solid strength of Feiyue Construction Company is clearly evident.

Having architectural prowess and being able to implement the "Oasis City Plan," for Alphat, is simply perfect. No international large construction company can compare with Feiyue Construction Company's planning proposal for New Cairo City.

"OK, Principal Ding, please have your Feiyue Construction Company provide our committee with some documents to verify your construction capabilities, also, if the proposal for the Oasis City Plan could be more detailed, it would be even better."

Alphat expressed his anticipation.

Seeing Alphat speak this way, Ding Yue couldn't help but smile.

This is settled then!

Alphat's words indicate he's already mentally decided that the construction of New Cairo City should be given to his Feiyue Construction Company unless any construction company during the second public bidding session can surpass Feiyue Construction Company's "Oasis City Plan," otherwise, no one can alter Alphat's current thoughts.

"No problem."

Ding Yue nodded immediately, saying.

Alphat then continued to exchange views with the other committee members present.

In the end, all committee members were very satisfied with Feiyue Construction Company's "Oasis City Plan."

"Let Feiyue Construction Company help us create the oasis city New Cairo City; it's the best choice."

"I agree!"

"Their strength is too formidable."

"Alphat, what reason do we have to refuse?"

"Leave New Cairo City to them!"

Seeing the uniform thoughts and opinions of the committee members made Alphat feel deeply gratified.

After completing the tour of Mist City Arts and Science University's research base center and confirming that the university truly possesses the technological capabilities to transform desert environments, Alphat and the committee members paid a serious visit to Mist City Arts and Science University's campus.

Except for part of the old campus built previously, all other buildings were erected a few years ago, and the construction was completed by the current Feiyue Construction Company.

Chapter 1685: The Second Public Bidding Meeting_2

Therefore, taking a stroll around this campus is indeed meaningful for evaluating the construction capabilities of Feiyue Construction Company.

"This building is?"

Alphat arrived in front of the Fifth Canteen, looking at the unique style of the building in front of him, he asked.

"Alphat, this is the canteen of our Mist City Arts and Science University."

Ding Yue explained to Alphat with a smile.

"Oh, it's a canteen."

Alphat nodded.

"So, Alphat, would you like to taste some of our Xia Country's cuisine?" Ding Yue warmly invited.

Whenever foreigners come to Xia Country, they are invariably captivated by Xia Country's cuisine. Ding Yue had seen such examples too many times. As for this Alphat, Ding Yue also intended to let him taste Xia Country's cuisine and see if he could be hooked from the stomach directly.

Of course.

This is also an act of showing friendship because Xia Country's cuisine is not something you can easily enjoy in the Pharaoh Kingdom.

"Of course, coming to Xia Country, a nation with a long history and rich culture, I must taste Xia Country's cuisine. I've heard your Xia Country culinary culture is very ancient and profound?"

Alphat nodded and said.

Before this, Alphat didn't know much about Xia Country, only some information from the internet. After personally coming to Xia Country this time, the first thing he realized was that Xia Country's private universities are indeed formidable.

So next, Alphat was ready to delve into Xia Country's cuisine.

"Yes, Alphat, our Xia Country culinary culture is indeed ancient and profound, please come in."
Ding Yue invited Alphat and his group into the Fifth Canteen.

After understanding the dietary cultural differences of Alphat and his group, Ding Yue immediately found his mother, Zhang Cuiping, inside the Fifth Canteen.

"Son, are those foreigners?"

Zhang Cuiping glanced at Alphat and his group. They didn't look like American people or Europeans.

"Yes, people from the Pharaoh Kingdom."

Ding Yue nodded and said to his mother, "Prepare some classic Xia Country dishes to entertain them well. I'm discussing a deal worth six hundred billion with them."

"Six hundred billion!"

Zhang Cuiping was shocked to hear that.

Six hundred billion is a number Zhang Cuiping never imagined in her life; her canteen at Mist City Arts and Science University was nothing compared to six hundred billion.

"U.S. dollars!"

Ding Yue added.

If six hundred billion wasn't shocking enough, then adding the U.S. dollar currency unit, converting it would be several trillions. Zhang Cuiping nodded quickly, "Son, just wait and see, I'll call the best chefs in our canteen!"

"Alright!"

Ding Yue made an OK gesture and then left the task of preparing Xia Country cuisine to his mother and canteen chefs, while he continued to chat with Alpat and the others.

"Alpat, I think by now you may have a general idea after your evaluation. Whether you want to use our Feiyue Construction Company for building New Cairo City is entirely up to you. Whether or not you choose us, we remain friends."

Ding Yue said with a smile to Alpat.

"Oh, Principal Ding, I'm delighted to have a friend like you. Your Feiyue Construction Company perfectly meets our needs. I think when we return and hold a meeting, no one would be able to refuse having your Feiyue Construction Company build New Cairo City for us."

Alpat also made his position clear.

At least himself, and the other committee members present, are very willing to use Feiyue Construction Company to build New Cairo City. However, this matter cannot be completely settled just by their willingness.

After returning, they need to hold a meeting at the committee, and after the committee confirms, it needs to be submitted upwards. Once approved, it will be officially decided to use Feiyue Construction Company to build New Cairo City. Then it will move on to signing contracts, payment, commencement of work, and other processes.

Truth be told, Alpat is very much looking forward to that day.

In the following hour.

One Xia Country dish after another was served, and Alphonse and the committee members enjoyed a feast for the senses. After catering to their dietary differences, Xia Country's dishes captivated Alphonse and the committee members in every aspect of color, aroma, and taste.

"Principal Ding, your Xia Country dishes are really delicious!"

Alphonse gave a sincere review.

"Really? Then you are welcome to come to Xia Country often to taste Xia Country Cuisine." Ding Yue said with a proud smile.

"For sure!"

Alphonse nodded.

So, Alphonse and the members of the New Capital Committee of Pharaoh spent a week at Mist City Arts and Science University, thoroughly assessing the Environmental College, botanical technology research, and evaluating the construction strength of Feiyue Construction Company.

After Alphonse and his group returned to the Pharaoh Kingdom, they immediately convened a committee meeting, where after Alphonse and the group who went to Xia Country shared their findings, almost all committee members agreed to make Feiyue Construction Company's "Oasis City Plan" the blueprint for New Cairo City, the new capital of Pharaoh.

Thus, the New Capital Committee submitted this proposal upwards.

Mist City Arts and Science University and Feiyue Group have done everything they can, so next, they just wait for news from the Pharaoh side to see if they can secure the New Cairo City project. The final confirmation will be announced at the second public bidding meeting.

A month later.

Ding Yue, along with his team from Mist City Arts and Science University and Feiyue Construction Company, once again arrived in Cairo City of the Pharaoh Kingdom to participate in the second public bidding meeting.

During this month, whether it was the American Bridge Company, Keweite Construction Company, BuYige Construction Company, Dahe Construction Group, or the Xia Country Construction Engineering Bureau, all have optimized or replanned their New Cairo City proposals for the bid. They came to Cairo City once again with great ambitions, each aiming to win the contract for New Cairo City.

Due to the absence of successful bids at the first public bidding meeting, the interest in this public bidding meeting has increased significantly.

Numerous global netizens are following this public bidding meeting of the Pharaoh Kingdom, eager to see which construction company will win the contract to build the modern city of New Cairo City, a project worth six hundred billion U.S. dollars.

Xia Country's netizens are equally curious, and naturally, they hope that Xia Country's construction companies can win the New Cairo City project. Like the last time, most netizens support the Xia Country Construction Engineering Bureau because, in their eyes, the most powerful construction company in Xia Country is naturally the Xia Country Construction Engineering Bureau.

However, this time, Feiyue Construction Company is set to change that traditional view completely.

"Hello, viewers, welcome to the live broadcast room of Xia Country TV station. I am currently in Cairo City of the Pharaoh Kingdom. Here, a month ago, the New Capital public bidding meeting did not have a winning company. In this second public bidding meeting, let us see who can secure the New Cairo City century project?"

Xia Country TV station's live broadcast has commenced for this public bidding meeting.

A month ago, the scenes of the bidding meeting were still fresh in memory. This time, it is still those powerful international large construction companies competing, with Xia Country's representative being the Xia Country Construction Engineering Bureau.

"According to the New Capital Committee's statement, this public bidding meeting will officially determine the winning company. The construction of New Cairo City will then be handed over to this company. Our domestic Xia Country Construction Engineering Bureau will participate in this bid!"

Xia Country TV station journalists continue to report relevant information to netizens.

At this moment.

Ding Yue, along with An Yujia, Director Chen Ping, and others, had already arrived at the public bidding meeting venue.

Chapter 1686: An Unbelievable Outcome!

Pharaoh, Cairo City.

The venue for the bidding meeting is a replica of the first public bidding meeting a month ago, only this time it's even more popular. Perhaps it's because the previous bidding fell through, more people have started paying attention to this event.

Pharaoh's New Cairo City has become the "grand project" that countless global netizens are eager to see.

Some netizens say that Pharaoh is preparing to create a modern miracle, akin to the ancient pyramids; but many others argue that given Pharaoh's current capability, creating a modern miracle is virtually impossible.

It's essentially just about constructing a new administrative city a few dozen kilometers outside Cairo City.

Nonetheless, New Cairo City bears the expectations of many pharaohs; who wouldn't want their new capital to be magnificent, with complete infrastructure, and become an international metropolis?

"600 billion USD, although substantial, it's still unlikely to build an international modern metropolis like Magic City or New York."

"Just hand the project over to our Xia Country Construction Engineering Bureau, and we'll make it splendid for you."

"Trust in Xia Country Construction Engineering Bureau, the infrastructure powerhouse!"

"American Bridge Company is going all out this time, inviting the world's top architectural designers and city planners."

"Keweite Construction Company is also very strong."

"This is a competition among strong contenders, but I hope Xia Country Construction Engineering Bureau clinches the 600 billion project."

Global live streams are buzzing with netizens sharing their thoughts.

Today's public bidding meeting, the Pharaoh New Capital Management Committee has already stated that it won't be a repeat of the last time. This bidding will confirm a winning company.

As for which construction company will win the bid, the committee certainly won't reveal this in advance; it'll be officially announced at the public bidding meeting.

In Xia Country TV station's live broadcast.

Countless netizens are here cheering for Xia Country Construction Engineering Bureau, hoping they secure the 600 billion project of Pharaoh's New Cairo City.

There are also some cheering for Feiyue Construction Company, but the numbers are few. Most are cheering for Xia Country Construction Engineering Bureau because they see it as representing Xia Country's top construction strength.

Most of those supporting Feiyue Construction Company are students from Mist City Arts and Science University. Bear in mind, Mist City Arts and Science University has around 300,000 students.

"Principal Ding, we meet again."

Before the official start of the bidding, Alpat proactively approached to greet Ding Yue.

"Hello Alpat, looking forward to today's results."

Ding Yue replied calmly with a smile.

Alphat then nodded and greeted Liu Haicheng from Xia Country Construction Engineering Bureau.

To outsiders, Alphat greeting Ding Yue seemed procedural, as Alphat greeted the heads of every construction company.

However.

In Ding Yue's view, Alphat had almost decided the result by now. Ding Yue also understood that Feiyue Construction Company's "Oasis City Plan" was almost irresistible for the Pharaoh New Capital Management Committee.

"Viewers, indeed, this is Principal Ding, Principal Ding of Xia Country's Mist City Arts and Science University. He's here representing Mist City Arts and Science University's School of Architecture and Feiyue Construction Company in the New Cairo City public bidding meeting."

After seeing the comments in the live stream, a Xia Country TV station reporter introduced Principal Ding.

Because Principal Ding is quite a popular figure domestically.

Thus.

The Xia Country TV station live reporter approached to greet Principal Ding: "Hello Principal Ding, I am a reporter from Xia Country TV stationed in Pharaoh's Cairo City. Are you representing Feiyue Construction Company in this New Cairo City public bidding?"

Seeing a reporter from his own side, Ding Yue naturally nodded and replied with a smile: "Yes, Feiyue Construction Company is basically composed of graduates from Mist City Arts and Science University's School of Architecture, so I came for this public bidding meeting."

"Your Feiyue Construction Company has only been established for a few years. What preparations have you made to confidently participate in the New Cairo City project bidding?"

The reporter continued to ask.

It must be said, the Xia Country TV station's live reporter found the key to gaining viewership; the live stream audience numbers soared when Ding Yue interview segments appeared.

Many Mist City Arts and Science University students, upon learning that Principal Ding was interviewed live on Xia Country TV, flocked to watch the stream.

"Mist City Arts and Science University's School of Architecture and Feiyue Construction Company have made substantial preparations for this New Cairo City public bidding meeting. We earnestly designed the future development of New Cairo City for Pharaoh."

Ding Yue responded with a steady smile.

Chapter 1687: An Unimaginable Result! _2

"Principal Ding, how confident are you about this public bidding?"

The reporter asked again.

This question is a cliché, often asked whenever interviewing the head of a construction company.

"Personally, I am quite confident. I believe in our Mist City Arts and Science University School of Architecture and Feiyue Construction Company. They have worked very hard," Ding Yue nodded and answered.

Generally, when faced with such a cliché question, it's best not to answer directly. Because once you answer directly, do you say you're confident or not?

After all, in this public bidding, there are so many international major construction companies. If you say you're confident, others might say you're arrogant. If you say you're not confident, yet you still came to participate, and you're one of the only two construction companies from Xia Country, wouldn't that be underestimating your own company and overestimating others?

So often, when being interviewed by reporters or speaking in public, there's a lot of skill involved.

As for Ding Yue now, he's long become adept at handling such situations, having faced many big events himself.

"Then sincerely hope your Feiyue Construction Company achieves a satisfactory result in this public bidding," the reporter said politely.

In fact, to almost everyone, Feiyue Construction Company's participation in this public bid for New Cairo City was seen as merely showing up to boost their presence.

But who could know?

In this public bidding, Ding Yue's Feiyue Construction Company was indeed the most confident party.

"Thank you."

Ding Yue politely expressed his gratitude to the reporter from Xia Country TV station.

It's a pity that the reporter covering the live broadcast wasn't Bingbing. If it were Bingbing, Ding Yue would have gladly chatted with her a little longer.

This time it wasn't Bingbing covering the interview, which Ding Yue found perfectly normal. After all, Bingbing mostly conducts interviews and reports within the country. Whenever there's news related to Mist City Arts and Science University, Bingbing's presence is certain. You could say Xia Country TV station understands Mist City Arts and Science University very well. The university and the station have been close partners ever since their collaboration on "A Bite of Xia Country."

"Dear viewers, the bidding is about to officially start. Let's keep our attention on the outcome of this bid."

As time continued to tick by, after a brief meeting between the Pharaoh Kingdom's new capital management committee and various major construction companies, Alpat took the stage.

The representatives from major construction companies, media persons, and various industry insiders were all seated, maintaining order at the venue.

"Distinguished builders, media friends, business community colleagues, and industry friends, welcome to the second public bidding for our Pharaoh Kingdom's new capital, New Cairo City."

After greeting everyone, Alphonse gave a deep bow.

After all, it's the Pharaoh's project to build New Cairo City, and having so many attendees at the bidding is truly fortunate. It would be much more embarrassing if no one showed up.

"New Cairo City, a hopeful and futuristic city, plays a significant role in our Pharaoh's new administrative center planning. At the same time, New Cairo City will become one of the great miracles of this century."

Alphonse proudly introduced New Cairo City.

Indeed, New Cairo City will be the Pharaoh's most prosperous city in the future, and also the largest city domestically, bridging to international metropolises.

This is precisely why the Pharaoh is willing to spend 60 billion dollars to create such a new city.

"Today, major construction companies from around the world have gathered to openly bid for our New Cairo City project. We are thankful for each construction company that submitted a proposal for this bid. We were deeply touched by the submissions from these companies. Here, on behalf of the Pharaoh's new capital management committee, I thank you!"

Alphonse expressed sincere gratitude once again.

With so many international major construction companies present, participating in the bid signifies how widely New Cairo City has captured international attention as a grand engineering project.

Applause~

Everyone at the scene was very cooperative, immediately breaking into applause.

Next, the representatives of the major construction companies eagerly anticipated Alphonse announcing the results of the public bidding.

Which construction company will be fortunate enough to secure this 60 billion dollar project?

"After deliberation by our Pharaoh's new capital management committee, based on bid submissions, we have decided on one construction company to undertake the project for New Cairo City. It's a regret for those who participated in the bidding but did not win. Thank you for your efforts."

Alphonse first teased, indicating that a company had indeed won the bid, but didn't reveal which one, leaving a brief suspense.

Meanwhile, he expressed regret for those construction companies that didn't win.

Given so many international construction companies participated, yet only one could claim victory, it was indeed unfortunate for the rest.

"Now, let's move on to the exhilarating moment. I solemnly announce the winning construction company for the New Cairo City bid is..."

Alphonse was finally about to announce the result.

Everyone's heart was in their throat.

Bang! Bang!

Bang! Bang!

Bang! Bang!

Besides the sound of breathing, there was only the sound of nervous heartbeats at the scene.

Ding Yue was leisurely and calm, quietly watching Alphonse on stage. At this moment, unless there's an earth-shaking reversal, Ding Yue felt there was no suspense about the result.

"Let's congratulate the company from Xia Country..."

When Alphonse mentioned the company was from Xia Country, he suddenly paused.

At that moment, Xia Country Construction Engineering Bureau's Liu Haicheng's face lit up with a broad smile because when he heard it was a company from Xia Country, he had no doubt it was his Xia Country Construction Engineering Bureau.

"Damn! We got it!"

"Xia Country Construction Engineering Bureau is forever god!"

"Congratulations to Xia Country Construction Engineering Bureau!"

"Yes!"

"Nice, American Bridge, Kiewit, Bechtel, Dahe, Wanxi were all beaten by our Xia Country Construction Engineering Bureau."

"At this moment, Xia Country Construction Engineering Bureau is crowned!"

It's uncertain if Alphonse was doing it on purpose, trying to create suspense or reversal?

Seeing Alphonse stop halfway through his sentence, Ding Yue couldn't help but shake his head and smile.

However, from this half-sentence by Alphonse, it was already certain that a construction company from Xia Country had won the New Cairo City project, leaving American Bridge's Peter, Kiewit Construction's Adolf, and others visibly disappointed.

"Congratulations to Xia Country's Feiyue Construction Company for winning the New Cairo City project bid. Congratulations!"

After a pause, Alphonse finally announced the result!

It was Xia Country's Feiyue Construction Company!

At this moment, almost everyone was dumbfounded, stunned.

What the heck?

Not Xia Country Construction Engineering Bureau?

But a company named Feiyue Construction from Xia Country?

American Bridge's Peter was also confused. What kind of company is Feiyue Construction? In Peter's view, there was practically no such competitor.

However, the most bewildered was Xia Country Construction Engineering Bureau's Liu Haicheng.

What is this situation?

Who am I?

Where am I?

What's happening?

Liu Haicheng's mind was buzzing. It wasn't Xia Country Construction Engineering Bureau who won the New Cairo City project?

But Feiyue Construction Company?

That Feiyue Construction Company, which he didn't even think highly of?

Why?

Chapter 1688: Keweite Company's Doubts

Twitter trending rank #1# Feiyue Construction Company successfully secures the New Cairo City project#, popularity score 102697432!

Today.

Feiyue Construction Company, related to Mist City Arts and Science University, has made it to the trending list with high popularity, not only domestically but also on Twitter and YouTube internationally.

Netizens worldwide are curious about the origin of this Feiyue Construction Company from Xia Country.

Even the internationally renowned American Bridge, Keweite Construction Company, BuYige Construction Company, and Xia Country Construction Engineering Bureau have all been surpassed by this Feiyue Construction Company.

As a result.

Netizens have started exploring the background of Feiyue Construction Company. Upon investigation, it was discovered that Feiyue Construction Company is a subsidiary of Feiyue Group's construction industry, based on the Architecture School of Mist City Arts and Science University.

The Architecture School of Mist City Arts and Science University is quite famous domestically.

Looking at it this way, many domestic netizens expressed understanding, believing that a construction company based on such a strong Architecture School certainly has impressive innovation capabilities and strengths.

Succeeding in securing the Pharaoh Kingdom's New Cairo City project indicates that Feiyue Construction Company made considerable efforts and presented a New Cairo City planning and construction plan that satisfied the Pharaoh Kingdom greatly.

"Viewers, it's truly unbelievable. The company that clinched the New Cairo City six-billion-dollar project is not Xia Country Construction Engineering Bureau, but Feiyue Construction Company. As a company under Feiyue Group's building industry, Feiyue Construction Company emerged as a dark horse in the fierce competition among many international large construction companies."

Xia Country TV station's reporter said excitedly.

This is undoubtedly explosive news for this bidding event.

A construction company that no one favored or even noticed has emerged among numerous international large construction companies. How incredible is that?

At this moment, Alphonse stood on the stage, seeing the incredulous expressions of everyone below, feeling quite excited inside.

Announcing this news requires great courage, as the planning proposals from American Bridge, Xia Country Construction Engineering Bureau, and others were indeed excellent, but compared to Feiyue Construction Company's "Oasis City Plan," these international large construction companies' proposals for New Cairo City were not impressive at all.

"Alphonse, why Feiyue Construction Company?"

At this time, someone finally couldn't help it.

Adolf from Keweite Construction Company asked Alphonse why Feiyue Construction Company got the New Cairo City project.

This question is on the minds of many on the scene and countless netizens. The heads of those international large construction companies are certainly more eager to know why Feiyue Construction Company was able to win this six-billion-dollar New Cairo City project.

Facing the situation, Alpat knew that if he did not provide a reason that could persuade everyone today, this issue wouldn't be easily resolved.

After all, this result was truly unexpected.

No one saw it coming.

But Alpat and all individuals from the Pharaoh's new capital committee understood that Feiyue Construction Company's "Oasis City Plan" was unparalleled and incomparable.

Since that's the case, Alpat could only disclose and reveal Feiyue Construction Company's "Oasis City Plan."

At this moment, news media on site were extremely busy, with some heading to interview Feiyue Construction Company's Chen Ping and Feiyue Group's An Yujia, while others focused on the situation on site.

Media reporters noted that Alpat seemed poised to publicly announce Feiyue Construction Company's planning proposal at the bidding event, which was necessary to convince everyone. Consequently, all major media outlets wanted to see what kind of planning proposal Feiyue Construction Company presented that made the Pharaoh's new capital committee abandon internationally renowned construction giants like American Bridge, Keweite Construction Company, and Xia Country Construction Engineering Bureau, favoring Feiyue Construction Company, which seemed not so illustrious.

"OK."

Alpat nodded and said, "We will publicly disclose the general planning and construction proposal provided to us by Feiyue Construction Company for New Cairo City, please wait a moment."

After Alpat finished speaking, he immediately stepped down from the platform to communicate with the relevant staff members.

Shortly after, Alpat finished communicating with the staff and walked towards Ding Yue.

"Principal Ding, we will announce the Oasis City Plan you provided us, do you think that's alright?" Alphonse asked Ding Yue, inquiring about his opinion.

After all, the contract hadn't been signed yet, so it was certainly necessary to seek Principal Ding's opinion.

Ding Yue was not worried.

With Alphonse announcing globally that the winning company was his Feiyue Construction Company, the subsequent process was merely following the corresponding signing procedures.

Chapter 1689: Keweite Company's Doubts_2

If the Pharaoh New Capital Management Committee regrets it, it is likely to be ridiculed and disregarded by the world. How will the Pharaoh Kingdom stand in the world in the future?

"Hmm, okay."

Ding Yue nodded, expressing that there was no problem at all.

"Alright, since we've confirmed that your Feiyue Construction Company's planning proposal has won the bid, the next step is the signing process with our Pharaoh New Capital Management Committee. May I ask who in your team will be responsible for the signing matters?"

Alphonse then immediately began discussing the signing matters with Principal Ding.

Ding Yue focused his gaze on An Yujia beside him and gave her a slight nod.

An Yujia, receiving the signal from Principal Ding, also nodded slightly, indicating that she understood and would be handling the signing with the Pharaoh New Capital Management Committee, as she is the CEO of Feiyue Group, and Feiyue Construction Company is a subsidiary of Feiyue Group.

However, An Yujia still needed to bring along Director Chen Ping, as he is the general manager of Feiyue Construction Company, and for the signing, it was necessary for Director Chen Ping to sign and stamp the contract.

"Then Principal Ding, we will proceed with the signing process."

An Yujia and Director Chen Ping said to Principal Ding.

"Hmm, go ahead."

Ding Yue nodded in response.

Alphat immediately arranged for the members of the Pharaoh New Capital Management Committee to handle the signing matters with An Yujia and Chen Ping.

Then, a staff member came over to tell Alphat that they have prepared a general planning proposal for Feiyue Construction Company's bid, which is the general "Oasis City Plan."

To publicly disclose Feiyue Construction Company's planning proposal for the bid, it is definitely impossible to make all the detailed contents public, such as the specifics of desert improvement and plant research and development, which are considered advanced technologies. These materials are available to the Pharaoh New Capital Management Committee through Mist City Arts and Science University, Feiyue Construction Company, and Feiyue Group, and it was precisely because of this detailed data that the Pharaoh New Capital Management Committee ultimately chose Feiyue Construction Company for the bid.

Because individuals in the Pharaoh New Capital Management Committee knew that Feiyue Construction Company had the capability to implement the "Oasis City Plan."

"Then Principal Ding, I'm going."

After saying a word to Ding Yue, Alphat turned and walked towards the stage.

All eyes were on Alphat, and the conversation between Alphat and Ding Yue was also witnessed by many people. Media reporters also turned their cameras onto the two.

These two, could there be some unspeakable deal behind them?

After all, as Ding Yue is the principal of Mist City Arts and Science University and the mastermind behind Feiyue Group, a young billionaire, he might indeed have given considerable benefits to the Pharaoh New Capital Management Committee to secure this New Cairo City project.

Of course, this was part of the imagination and speculation in some people's minds.

More people, however, were still in astonishment, unable to believe that Feiyue Construction Company had secured the massive \$60 billion New Cairo City project.

"Everyone!"

Alphat on stage said, "In accordance with the requests of various major construction companies at the bidding meeting, we have also received the consent of Feiyue Group to now publicly present to everyone and our media friends the planning proposal of Feiyue Construction Company for New Cairo City."

After Alphat finished speaking, he nodded to the staff member beside the stage.

In the next second, on the large screen behind Alphat, the content of a projected PowerPoint appeared, showing Feiyue Construction Company's "Oasis City Plan."

It was with this Oasis City Plan that Feiyue Construction Company won this bidding meeting and successfully secured the New Cairo City project.

"Feiyue Construction Company has planned the new Cairo City for our Pharaoh Kingdom, calling it the 'Oasis City Plan.' According to the Oasis City Plan, the future New Cairo City will be transformed into an international oasis metropolis—an oasis city in the desert. Based on the detailed data provided by Feiyue Construction Company, we have determined that Feiyue Construction Company has the strength to complete this 'Oasis City Plan,' and the funding for this planning proposal is also within \$60 billion, fully meeting our bidding standards and highly anticipated by our Pharaoh New Capital Management Committee."

Alphat briefly explained Feiyue Construction Company's Oasis City Plan.

When the Oasis City Plan was presented to everyone, many people immediately realized.

To build the new Cairo City into an oasis city for the Pharaoh Kingdom?

For many major national construction company developers, this seemed impossible because the location chosen for New Cairo City is too harsh—essentially a desert area. Building a city similar to Dubai there would already be quite impressive, and this is not something that can be achieved with just \$60 billion!

But could Feiyue Construction Company's Oasis City Plan complete it?

This is simply unbelievable!

The most crucial point is that the Pharaoh New Capital Management Committee believes Feiyue Construction Company can do it. Haven't they considered that this might be just a pie in the sky?

It might even be a scam?

Peter from American Bridge Company found it utterly unimaginable how to possibly turn New Cairo City into an oasis city.

In fact, initially, some city designers at American Bridge Company considered turning New Cairo City into a city combining international and oasis elements, but once they calculated the budget, \$60 billion couldn't sustain it, so the American Bridge Company didn't even consider this proposal.

Yet, with such an Oasis City Plan, Feiyue Construction Company not only made it but also managed to compress the budget to within \$60 billion, leaving the Pharaoh New Capital Management Committee very satisfied.

This is quite embarrassing!

Things I can't achieve—how come you can?

Where exactly are you stronger than me?

This is something Peter simply couldn't comprehend—where exactly are you stronger than me?

"According to Feiyue Construction Company's Oasis City Plan, the future New Cairo City will be a green city—a very environmentally friendly city, a miraculous city standing in the desert, just like the miracles of the pyramids in our Pharaoh Kingdom!"

Alphat spoke with pride and excitement.

The audience was in awe.

Viewers worldwide watching this live broadcast exclaimed, "This idea is crazy," "Can this plan really be realized?" "Can a green oasis city be built with just \$60 billion?"

Domestic netizens, however, expressed that if it were the Xia Country Construction Engineering Bureau, it might not have been possible to realize such an Oasis City Plan.

But if!

If it were Feiyue Construction Company, then it's indeed possible, because behind Feiyue Construction Company is Feiyue Group, and behind Feiyue Group is a domestic university full of miracles—Mist City Arts and Science University.

And at Mist City Arts and Science University, anything is possible!

When revealing the Oasis City Plan, Alphat also mentioned, and it was displayed on the PowerPoint, that Feiyue Construction Company and Feiyue Group would provide a series of technical support regarding the Oasis City Plan.

This technical support is indeed very thoughtful.

If the technology is up to the mark, it is indeed possible to transform a desert into an oasis, and the location of New Cairo City is specifically suitable for canal introduction, meaning that ensuring water resources gives the possibility to build an oasis city.

As for technology, if you place it at Mist City Arts and Science University, it's indeed possible they could develop it there.

It's noteworthy that Mist City Arts and Science University is the privately funded university in the nation with the highest investment in teaching and research, even surpassing most public universities.

Many key universities, Double First Class Universities, cannot match Mist City Arts and Science University in terms of annual teaching and research funding due to having a massive international corporation like Feiyue Group supporting them financially.

The fame and prominence of Feiyue Group over the past few years may not have any company that can match it, right?

The once globally popular Tesla has become overshadowed under the impact of Feiyue Future New Energy Vehicles under Feiyue Group.

Chapter 1690: Spring Has Come for the Construction Workers!

No one could have imagined that the construction project for New Cairo City in the Pharaoh Kingdom would eventually be taken by Xia Country's Feiyue Construction Company.

Feiyue Construction Company's "Oasis City Plan" further silenced its skeptics. Everyone was genuinely impressed by Feiyue Construction Company's ability to outline the "Oasis City Plan".

However, some people still believe that it's impossible for Feiyue Construction Company to achieve New Cairo City's "Oasis City Plan" with just six billion dollars. If you don't believe it, just wait and see. If Feiyue Construction Company fails to complete New Cairo City's Oasis City Plan, it will undoubtedly be quite a spectacle.

Xia Country's online users still have great faith in Feiyue Construction Company.

Even those users who are not familiar with the specific capabilities of Feiyue Construction Company believe that if it could secure the New Cairo City project, it must have its unique strengths.

After all, even the Xia Country Construction Engineering Bureau isn't a match for Feiyue Construction Company this time.

Speaking of the Xia Country Construction Engineering Bureau, Liu Haicheng is now deeply regretting it. He truly wishes there was an undo key for him, and he desperately wants to slap himself twice for directly rejecting Feiyue Construction's partnership proposal back then.

Now, it's over, six billion dollars of the New Cairo City project is out of reach.

If he had agreed to join hands with Feiyue Construction Company at that time, then at the very least, the Xia Country Construction Engineering Bureau could have earned half of the money by now if they had taken on the Pharaoh's New Cairo City project.

"Sigh!"

Liu Haicheng kept sighing, regretting the decision to reject the partnership with Feiyue Construction Company back then.

"Mr. Liu, what's wrong with you?"

The secretary beside Liu Haicheng noticed his regretful look and asked curiously.

Is it just because the Xia Country Construction Engineering Bureau couldn't secure the New Cairo City project? Is he regretting that much?

"Nothing!"

Liu Haicheng sighed again, then shook his head and said.

At this time, a call came from Wang back home.

"Hello, Wang, I regret it now!"

After answering the call, Liu Haicheng said helplessly.

Because Liu Haicheng knew that Wang was calling to discuss something; Wang had tried multiple times to persuade him to pay attention to Feiyue Construction Company. Although he verbally agreed, he didn't follow Wang's advice.

If he had listened to Wang's advice back then, it wouldn't have led to the current situation.

"Ah, Liu, you are always like this, not taking others' advice to heart. Things have already come to this; what more can we say? Since Feiyue Construction Company has already secured the New Cairo City project, it means that next, Feiyue Construction Company will represent Xia Country to build this international project. Liu, my point is, we are all Xia Country construction companies, and if the Xia Country Construction Engineering Bureau can help them a little, we should try to help. Do you understand my meaning?"

Wang was calling not to criticize Liu Haicheng but to persuade him from a broader perspective. The Xia Country Construction Engineering Bureau can surely help Feiyue Construction Company.

After all, building such a massive New Cairo City by itself, Feiyue Construction Company will undoubtedly face pressures and challenges.

At this time, if the Xia Country Construction Engineering Bureau can lend a hand, both sides could establish a friendly relationship in the future. Wang believes that Feiyue Construction Company's potential is tremendous.

Moreover, from the perspective of the Xia Country construction industry, if they think a bit more broadly, they should support Feiyue Construction Company, provided that a certain level of "assistance" is needed by Feiyue Construction Company.

"Yes, Wang, I understand what you mean. I do have that level of vision."

After hearing Wang's words, Liu Haicheng firmly responded, "Feiyue Construction Company's scale is limited by the relatively small workforce they can deploy. This is indeed a significant pressure for the future construction of New Cairo City, but in this respect, our Xia Country Construction Engineering Bureau can help Feiyue Construction Company with labor dispatch."

Although Feiyue Construction Company is already large, it still fell short compared to the Xia Country Construction Engineering Bureau, especially in terms of manpower.

For example, the most direct construction manpower.

Even though Feiyue Construction Company has several subcontractor teams, the number of frontline construction workers under them is also sizeable, yet this number is still far from sufficient compared to what's needed for the New Cairo City's construction.

Ding Yue and An Yujia's plan for this issue was to recruit large numbers of workers only after securing the New Cairo City project to resolve this problem.

There is undoubtedly no shortage of construction workers domestically, but the prerequisite is to secure the New Cairo City project first before proceeding with mass recruitment; otherwise, recruiting large numbers in advance might backfire if the project isn't secured—then what would happen to those recruited workers?

"Alright then, Liu, make sure to pay some attention to this matter. Feiyue Construction Company's venture to build the Pharaoh Kingdom's New Cairo City is also an opportunity to showcase our Xia Country's construction prowess; it's beneficial for you, me, and everyone."
