

## **F. University 201**

Chapter 201: Enrollment Plan for 2021

June 16th.

Early morning.

Like any other day, Ding Yue woke up, went to the second cafeteria for breakfast, and then returned to his office in the Administration Building.

"Good morning, Principal Ding."

Just as he entered the office, he was startled by the sudden greeting from Wen Ruohan.

"You're here this early?"

Ding Yue glanced at the time. It was just a bit past eight in the morning.

Even for a secretary.

The usual time to start work should be after nine in the morning.

Wen Ruohan seemed really motivated.

"I woke up early and didn't have anything else to do after breakfast, so I came here. Do you have any instructions, Principal Ding? Would you like a milk tea? If you want, I'll go buy it right now."

Asked Wen Ruohan proactively.

"No, it's way too early for that, and I've just had breakfast." Ding Yue shook his head and declined.

He then sat down at his desk, turned on his computer, and asked: "By the way, how's the progress of uploading the food documentary 'A Bite of Xia Country' on Bilibili that I asked you to coordinate with the Film and Television School and the Propaganda Department?"

The task he handed over to her yesterday was the most important one in the last few days.

After all, the filming team of the Film and Television Academy seriously made 'A Bite of Xia Country' this time, trying it out to see the response. From this, they could basically infer whether this food documentary would be popular or not.

"Hm, Principal Ding, didn't you check the views?" Wen Ruohan blinked her sparkling eyes and asked.

"No."

"Principal Ding, I checked the views for our university's 'A Bite of Xia Country' on Bilibili early this morning and it's already over 2 million!"

Wen Ruohan said excitedly.

"2 million views?"

Ding Yue was somewhat surprised.

You should know that on Bilibili, 2 million views are quite a lot.

Because the number of views on Bilibili won't be inflated like on Penguin Video, if a video gets over a million views, it could be considered as getting some traction.

If a video exceeds ten million views, then it's undoubtedly popular on Bilibili. If it reaches tens of millions of views, it would be unimaginable and it could probably become hot beyond Bilibili's circle.

There are many popular remix videos on Bilibili that can get over ten million views.

However, Ding Yue heard that recently, a single-player game called "Black Myth: Wukong" was hot on Bilibili. Within two days, its views exceeded 20 million.

"Yes, yes, it already has more than 2 million views now, and there are also a lot of likes, coins, and favorites, and many comments in the comment area."

Wen Ruohan nodded rapidly, excitedly saying: "Hehehe, with this food documentary from our school's Film and Television Academy, we've made a good start, right? It's quite well-liked."

Upon hearing this, Ding Yue didn't answer, but instead took out his phone, opened Bilibili, and checked the first episode of the official video of Mist City Arts and Science University's 'A Bite of Xia Country'.

Views: 2.413 million!

Likes: 34,000!

Coins: 53,000!

Favorites: 11,000!

Bullets: 16,478!

Looking at these numbers, Ding Yue knew it was doing pretty well.

Dri-dri-dri!

Just as Ding Yue was checking Bilibili, there came a new message on Whatsapp.

It was sent by his sister Ding Xiaoyou.

Ding Xiaoyou: Harumph (hands on hips), Ding Yue, why did Mist City Arts and Science University post a food video late in the night? I felt so hungry while watching it that I ate loads of snacks. This morning when I weighed myself, I actually gained half a kilo! You're a jerk, Ding Yue!!!

Seeing this Whatsapp message sent by his sister Ding Xiaoyou, Ding Yue couldn't help but burst out laughing.

Because Ding Yue saw his sister Ding Xiaoyou's comment in the Bilibili video's comment section, saying she pulled out a lot of snacks while watching the video.

The likes for this comment by his sister Ding Xiaoyou were pretty high.

Combining the message Ding Xiaoyou had just sent him through Whatsapp, Ding Yue couldn't help but burst out laughing.

"Principal Ding, what are you laughing at?"

Wen Ruohan, the secretary by his side, asked curiously.

"Hahaha, it's nothing, it's nothing. Our school's food documentary 'A Bite of Xia Country' is quite popular, isn't it? It's time to start seriously putting together a promotion plan."

As Ding Yue muttered, he sent a Whatsapp message to his sister: "Is your scale broken? How could it only be half a kilo heavier? It should be at least three kilos heavier!"

Ding Xiaoyou: Ding Yue! Go away!!! (Angry emoji)

"Hahahaha!"

Ding Yue sent a voice message of him laughing loudly, then put his phone on the desk, turned on Bilibili on his computer, and checked the comments of the first episode of 'A Bite of Xia Country' to see how the netizens evaluated this food documentary.

[6034 comments]——

In the blink of an eye, the comment section had surpassed six thousand comments.

"I couldn't help my curiosity and decided to watch this documentary after all, even though everyone kept saying don't watch, it's toxic!"

"This is just too cruel. Posting a video at midnight is like releasing a toxin in the middle of the night, I was starving."

"This documentary is not bad at all."

"I've watched it three times already, when is the second episode coming out? @Mist City Arts and Science University"

"Hurry and update, seriously, I can't wait to watch the second, third, fourth, fifth, and countless more episodes."

"Honestly, this food documentary is of high quality, I can't believe it was filmed by teachers and students of the Film and Television Academy of Mist City Arts and Science University."

"A meticulously produced food documentary, thumbs up!"

"I'm starving, I'm going to get breakfast now, you guys continue!"

"I made a cup of instant noodles yesterday, then watched 'A Bite of Xia Country', the noodles in my hand instantly became more fragrant."

Ding Yue read numerous comments in the comment section, almost all of which were positive, it was hard to find any negative feedback.

Indeed.

When Ding Yue watched it yesterday, he couldn't find any significant flaws in it.

Being an audience member of 'A Bite of China' on earth in his previous life, even after watching 'A Bite of Xia Country' produced by the team of his own school's Film and Television Academy, he was quite impressed.

Therefore, the positive feedback from netizens was within Ding Yue's expectation.

While Ding Yue was reading the comments, Director Qi Chunsheng of the Academic Affairs Department entered his office.

"Is Principal Ding busy?"

Upon seeing this, Qi Chunsheng prepared to wait until Principal Ding had time before approaching him for a work report.

"Not at all, do you need something, Director Qi?" Ding Yue shook his head, closed the Bilibili webpage on his computer.

Now that he had gathered enough information, he knew that the food documentary 'A Bite of Xia Country' produced by the Film and Television Academy had been well received after its trial run on Bilibili.

So, they can continue production and participate in the National Documentary Contest with the finished work after August.

They could even try collaborating with the provincial television station or the NTS, bringing the food documentary 'A Bite of Xia Country' to a higher broadcasting platform.

If successful, it would be truly remarkable.

"Principal Ding, our Academic Affairs Department has finalized the 2021 admission brochure and I have brought it for you to review."

Qi Chunsheng came up and handed a brochure to Ding Yue.

Ding Yue took a look. The brochure was quite similar to the ones he had seen before, listing the achievements of Mist City Arts and Science University from the previous academic year.

Then it mentioned the various majors offered by Mist City Arts and Science University and the newly added ones.

Lastly, it welcomed prospective students to apply to Mist City Arts and Science University, and also invited students who failed the college entrance examination to realize their university dreams at Mist City Arts and Science University.

This is only Mist City Arts and Science University's second year since its establishment.

So, based on planning from the Academic Affairs Department, students who failed the college entrance examinations are still able to achieve their university dreams at Mist City Arts and Science University this year.

They just have to pay the tuition fee.

Meanwhile, some of the majors offered by Mist City Arts and Science University have adjusted their tuition fees based on their own circumstances.

"The college entrance examination students will be receiving their scores soon and then applying for college, right? How many students do we expect to admit this year?"

Ding Yue turned to Qi Chunsheng and asked.

"If we rely on the college entrance examination applications, we may not admit many students, but if we count on self-recruitment, we will certainly have more students than last year."

Qi Chunsheng explained.

Ding Yue understood what Qi Chunsheng meant.

He meant that if they relied on traditional admission through the college entrance examination, they might not attract many applicants since Mist City Arts and Science University is a private university and a new school at that.

Therefore, it depended greatly on how many students with good academic performance who could pass the college entrance examination they could attract to apply.

This highly depended on how attractive Mist City Arts and Science University appeared to these college-entrance-examination-passing students.

These students are undoubtedly more suited for cultivation than those who failed, as they have a better academic foundation.

The main source of new students for the 2021 academic year at Mist City Arts and Science University is actually via self-recruitment.

That is to say, as a private university, Mist City Arts and Science University welcomes students who failed the college entrance examination to come and study, regardless of their scores.

Just like the batch of over nine thousand six hundred students from last year.

"I see. Since our school's foundation is still not strong, few people would choose our school when filling out the college entrance examination application. So this year, we should mainly focus on self-recruitment."

Ding Yue agreed with Qi Chunsheng's statement.

"All right, Principal Ding, don't worry, I have everything under control when it comes to attracting students. I will handle the preparation carefully." As the head of the Academic Affairs Department, Qi Chunsheng is responsible for organizing the Admissions Office to carry out the 2021 enrollment plan.

Since the topic of this year's recruitment had been discussed, naturally the thing Ding Yue cared the most about now, was the ongoing expansion project of the campus.

He had visited the construction site once before.

The new library was mostly finished, and the remaining work was mainly the interior and exterior decoration.

Next was the dormitory building.

This was the most critical point.

Because without sufficient dormitory buildings, even if they admitted more students this year, those students would have nowhere to stay....

## Chapter 202: The Book Ship Library Rises from the Ground

The timing of the College Entrance Examination in 2021 was different from the previous year.

Last year, due to various reasons, the exam was postponed until July, whereas this year it was conducted as normal in June.

The exam has now come to an end.

Starting from mid-June, universities all over the country began preparing for college enrollments, especially the private universities that really racked their brains in recruiting students, because student enrollment is extremely important for them.

Without student enrolment, private universities would struggle to make money. If they can't make money, the amount of investment in the school would reduce, resulting in deteriorating educational quality and worsening reputation.

This is a vicious cycle.

For many private universities, this is a fatal blow. Nonetheless, many private universities often use a variety of methods, including deception, to attract students for enrollment.

For example,

There's a college in Mist City that was earlier exposed for using excellent dormitory conditions like quad rooms to bait students.

Lure students to enroll.

The university is a mediocre private institute. Students who choose it obviously value the dormitory environment.

However, during the publicity, the dormitory was already hyped up. They promised that as long as students registered, they would be allocated to double or quad rooms.

But the students discovered after they arrived at the school that the double or quad rooms promised during the promotion had been converted to congested and poorly conditioned six or even eight-person rooms.

There are actually many such private colleges around the country.

However!

Mist City Arts and Science University never does this.

If the dormitory is nice, it is nice, if the campus is big, it is big. There is absolutely no pretence.

The dormitories of Mist City Arts and Science University come at a clear price. Even the six-person rooms are pretty good.

But students can also choose to pay for better dormitories, such as quad, double, and even single-room apartments.

What's more.

New students in 2021 can live in the newly-built dormitory apartment building, which is absolutely super awesome.

Most importantly, Mist City Arts and Science University does not rely on dormitory conditions or environment to attract students.

The recruitment philosophy of Mist City Arts and Science University is to help a vast number of college entrance examination losers to realize their university dreams, while also welcoming high-performing students to study.

That's right.

Mist City Arts and Science University not only recruits students who failed the college entrance examination but also admits students who performed well!

Whether they can recruit these students is another issue.

What if some "reckless" students who scored 500-600 points in the college entrance examination apply for Mist City Arts and Science University?

In fact, the students that Ding Yue wants to recruit most are super academic achievers like his sister Ding Xiaoyou.

But this could probably only be a dream.

Speaking of which, his sister Ding Xiaoyou also took the College Entrance Examination this year. In her words, the exam was too simple.

Indeed, with the strength of Ding Xiaoyou, the difficulty of the examination papers is no longer a concern for her, she already started self-studying university courses.

Ding Xiaoyou is even stronger now than Ding Yue, who used the Study Buff Scroll. If she could come to his Mist City Arts and Science University and get the effects of the BUFF, wouldn't that be earth-shattering?

Unfortunately, all of the various study scrolls bought by Ding Yue in the system store can only be used on students of Mist City Arts and Science University.

If Ding Xiaoyou does not come to his Mist City Arts and Science University, Ding Yue will not be able to witness the birth of an unimaginably talented female student.

No, not right!

Once Ding Xiaoyou goes to college, with her interest in chemical energy, she may become a genius female scientist in the future.

However, Ding Yue guesses that Ding Xiaoyou is likely to choose Qinghua or Yancheng University.

After the college entrance examination, Ding Xiaoyou immediately went on a vacation, which was undoubtedly sponsored by her brother Ding Yue.

Going out for a trip won't cost much, this is the summer life a student, who has just finished the college entrance examination, should enjoy.

What Ding Yue looks forward to most now is whether his sister Ding Xiaoyou can win the highest score in Mist City this year and become the College Entrance Examination Champion.

The results will not be disclosed until late June, there's still more than a week left.

Anyway, Ding Xiao You's college entrance examination scores are not a concern at all, Ding Yue still needs to worry more about his own school's affairs.

The enrollment plan of Mist City Arts and Science University for this year is something that Ding Yue doesn't need to worry about personally.

After all, the school has so many faculty members and competent aides like Director Qi Chunsheng from the Office of Academic Affairs, which is obviously different from last year.

Ding Yue just needs to ensure that the 2021 enrollment plan is successfully completed, and then quietly encourage the progress and development of Mist City Arts and Science University.

After discussing the enrollment plan with Director Qi Chunsheng and delegating it to him, Ding Yue left the Principal's office and went to the construction site to check on the progress of the first phase of the university's expansion project.

It's been five months already.

The progress of the construction by Tianfu Construction Group seems to be good, the dormitory building has already risen from the ground.

The most iconic building, the Book Ship Library, has also taken shape. The sight of a huge ship ready to set sail, gives people a profound sense of grandeur from afar.

Once the library is completed, it is preliminarily expected to house more than 500,000 books, perhaps even more.

Ever since the rough establishment of Book Ship Library, many students from Mist City Arts and Science University always liked to stand from a distance and look at the profound building.

Not only that, but even the visitors who came to take photos in the hot pot restaurant with the campus landscape theme on the campus of Mist City Arts and Science University were also attracted to the soon-to-be-completed building.

"What kind of building is that?"

"I heard that it's the library of this university."

"Doesn't their school already have a library?"

"You probably don't know this, the library they previously had is the old one, and now they've constructed a new one."

"I remember seeing on Twitter trending that the design of this library was probably the one that was plagiarized by Shuisi County. In the end, Shuisi County apologized."

"Yes, yes, that's the one."

"This library looks quite huge and has a sense of momentum. It seems like it will look very good once it's constructed."

"I'll have to come back when the library's finished to take a picture!"

"I want to come as well."

When Ding Yue heard non-students and tourists who came for a photo tour discussing the Book Ship Library, he couldn't help but feel proud.

The construction of the Book Ship Library of Mist City Arts and Science University, which is truly something to be both proud and jubilant about.

After all, this is the winning design of the Hop Cup Best Creative Award.

Just as someone said earlier, when the Book Ship Library is officially completed, it is estimated to attract countless people to take photos.

Maybe it will become a new popular photo spot in Mist City!

By then, the bustling campus life in the University Town will definitely be in Mist City Arts and Science University, without a doubt.

Chapter 203: Science Winner of the College Entrance Examination in Mist City

It was late June.

The second semester of the first academic year at Mist City Arts and Science University was coming to a close.

The finals of various majors and departments had begun one after another.

Due to an incident of cheating being caught and sternly dealt with in last year's finals, the examination room discipline for this semester's finals was extremely strict.

The students were also quite disciplined, mostly relying on their own abilities for the finals.

As the principal, Ding Yue, just like last year, toured around various classrooms together with Qi Chunsheng, the dean of the academic affairs office, for the finals.

They didn't find anything unusual.

June 22nd.

Early in the morning, Ding Yue went to the advanced semiconductor physics laboratory to carry out the last experiment for this stage, together with Professor Zhou Wen, Professor Shen Congde and Professor Wang Shangzhong from Jiangnan University of Science and Technology.

If this experiment were to be completed successfully.

Then the technology of gallium nitride semiconductor material would have overcome a significant hurdle. They could then jointly publish a paper on this technological breakthrough to promote the progress of domestic semiconductor material technology.

However, today was the day when test results would start coming out nationwide.

Ding Yue was very concerned about his sister Ding Xiaoyou's results. But the results for Mist City would not be out today, rather they would come out tomorrow, on June 23rd.

In the advanced semiconductor physics laboratory.

When Ding Yue came, he immediately started the experiment with the three professors.

The gallium nitride semiconductor material has always been the direction of lifelong research for the three professors – Zhou Wen, Shen Congde, and Wang Shangzhong.

Moreover, Ding Yue always gave certain inspiration to the three professors in this aspect.

Therefore.

The experiment progressed quite quickly.

"Data verification."

"Verification is complete."

Time passed by every second.

Ding Yue had come early in the morning, and in a flash, when he lifted his head and looked out the laboratory window, he found that it was already getting dark outside.

But the experiment had to continue.

A lot of crucial data was about to be revealed, and only with these fresh and crucial experimental data could they prove that their direction of gallium nitride semiconductor material technology was correct.

Six-thirty in the evening.

Inside the dance training room of the arts department.

"Zhirou, haven't you also seen my brother? He doesn't answer phone calls or reply to Whatsapp messages, hmph!"

Ding Xiaoyou returned to Mist City after her vacation today. As soon as she returned, she came directly to Mist City Arts and Science University.

There was no one at home, her parents and older brother were all at Mist City Arts and Science University.

Therefore, Ding Xiaoyou directly claimed Mist City Arts and Science University to be her home. Especially since she used to directly come to Mist City Arts and Science University on weekends when she was still in her senior year of high school.

"I haven't heard anything from your brother today, he seems to have disappeared."

Lin Zhirou shook her head.

She had been busy training every day. As someone aspiring to become an artist under Feiyue Media, Lin Zhirou knew very well that she had to work hard to improve her professional skills.

Music and dance were Lin Zhirou's main focuses.

"Then let me ask sister Ruohan."

Ding Xiaoyou thought of her brother's secretary, Wen Ruohan, and called her immediately.

"Hello, Xiao You."

"Sister Ruohan, do you know where my brother Ding Yue went?" Ding Xiaoyou asked.

"Principal Ding, well, Principal Ding has been in the advanced semiconductor physics laboratory of the university since early this morning, and he hasn't come out yet."

Wen Ruohan answered.

Indeed, only Wen Ruohan knew where Principal Ding had gone because she ran into Principal Ding on her way to the principal's office this morning.

She originally thought that Principal Ding was also heading to the office in the administration building, but he was not. He was going to the university's advanced semiconductor physics laboratory to do an experiment with the three physics professors.

"Oh, I see. Your school even has an advanced physics lab, huh?" Ding Xiaoyou asked curiously.

"Yes, Principal Ding specifically set up an advanced semiconductor physics lab for the three professors from Jiangnan University of Science and Technology. Principal Ding wants to study some kind of egg+ materials tech with them, I don't really understand."

Wen Ruohan responded proudly, but she became confused when it came to that professional term.

Because Wen Ruohan, a secretary who studied literature, had no knowledge of gallium nitride semiconductor material technology.

"It's gallium nitride semiconductor material technology for making semiconductor chips. I read Ding Yue's graduation thesis last time. He could actually write such an impressive thesis. It seems he has made rapid progress this year!"

Ding Xiaoyou knew that.

Her brother had never been stupid, he just didn't focus on studies previously.

Now, after specializing in studying physics, it turned out that his progress was astonishing. Even Ding Xiaoyou couldn't help but admire her brother.

"Yes, yes, that's it. By the way, Xiao You, do you have any matter with Principal Ding? I'm currently waiting for Principal Ding outside the lab. If there's anything, you can tell me first. Once I see Principal Ding, I'll inform him immediately."

Wen Ruohan asked.

"It's nothing, I just want to tell him that I'm back from vacation. I bet he doesn't even know that I've returned!"

Ding Xiaoyou said unhappily.

"Are you sure there's nothing else?"

"Nothing."

"Alright then."

After hanging up the phone, Ding Xiaoyou cursed Ding Yue in her heart again.

Chapter 204: Mist City Science College Entrance Examination Champion

Humph!

As my brother, he doesn't care about his little sister at all. He didn't even tell me in advance that he was back from his trip today.

And the Mist City College Entrance Examination results will be announced tomorrow, yet he doesn't show any concern at all.

"Xiao You, it's alright. Your brother must be really busy. It's the end-of-term exam season at school, Principal Ding has a lot of other things to do, and he's also conducting experiments. Don't you think so?"

Lin Zhirou came over and comforted Ding Xiaoyou.

"Alright then."

Ding Xiaoyou shrugged.

"By the way, Xiao You, the National College Entrance Exam results should be out today, right? Have you checked yours? What's your score? You must have scored high, right? You're a super scholar after all!"

Lin Zhirou asked curiously.

She's finished with her training for the day and plans to go to dinner with Ding Xiaoyou later.

"Well, in Mist City, the results won't be out until tomorrow. We can check our scores at ten o'clock tomorrow morning."

Ding Xiaoyou answered.

It seemed she didn't care much about her College Entrance Examination results.

Indeed.

In the case of super scholars like Ding Xiaoyou, a random attempt at the test could still get her into Qinghua or Yancheng University, so she doesn't need to worry about scores at all.

Actually, Ding Xiaoyou was deliberating.

Whether she should go to Qinghua or Yancheng University.

Or should she really go to her brother's Mist City Arts and Science University and back him up?

If her brother's Mist City Arts and Science University really has world-class frontier laboratories in the field of biotechnology or chemical energy technology that she wanted to conduct in-depth research on, then Ding Xiaoyou might consider going there.

Otherwise.

Forget it since the reputation and strength of her brother's Mist City Arts and Science University are too low, it simply can't compete with Qinghua or Yancheng University.

"I didn't know the results in Mist City won't be out until tomorrow. But I feel that you, Xiao You, can definitely achieve good results. Which university are you planning to apply to?"

Lin Zhirou asked curiously.

She figured that if Ding Xiaoyou got over seven hundred points, she should be applying to Qinghua or Yancheng University, right?

Otherwise.

There wouldn't be any better universities in the country suitable for Ding Xiaoyou. It's not like she could go abroad for university, could she?

At this stage, Lin Zhirou doesn't think going abroad is a good idea.

"I'm not sure yet." Ding Xiaoyou shook her head.

She was still hesitant. In fact, after coming back from the trip today, Ding Xiaoyou was considering whether she should discuss with her brother, Ding Yue.

If her brother Ding Yue, who is very rich, is willing to build her a laboratory, then she would stay and work on building Mist City Arts and Science University with her brother.

Because Ding Xiaoyou feels that building a university into a first-rate institution, or even more powerful one, is much more interesting than going to a higher institution to study and conduct research.

"Xiao You, let's go have dinner." Lin Zhirou packed up her things and took Ding Xiaoyou's hand.

"Alright, alright, I asked my mom to cook braised pork for you. My mom's braised pork is really delicious!"

So the two left the dance training room of the Arts Department at Mist City Arts and Science University and headed for the second cafeteria.

Over at the Advanced Physics Laboratory.

Wen Ruohan had been waiting outside the laboratory until the flowers wilted.

Why hasn't Principal Ding finished his experiments yet?

It's already been a day!

The key thing is, Wen Ruohan's stomach is rumbling due to hunger.

So hungry.

"Maybe I should go have dinner first." Wen Ruohan muttered to herself.

Just then.

The laboratory door opened.

Principal Ding walked out. He was in his dedicated lab suit, looking even more handsome.

"Wen Ruohan, you didn't wait for me outside all day, did you?"

As soon as Ding Yue came out and saw Wen Ruohan still there, he couldn't help but ask curiously.

Wen Ruohan nodded earnestly.

Ding Yue was at a loss for words for a moment and walked ahead to the changing room to take off his lab suit.

"Principal Ding, your sister Ding Xiaoyou called me just now, asking where you were."

Wen Ruohan quickly told Principal Ding about Ding Xiaoyou's call to her earlier.

Upon hearing this, Ding Yue slightly furrowed his brows: "Oh? What did she say? Wait, isn't she supposed to be traveling? She's back already?"

"Yes, she's back. It seems that she was saying you don't care about her at all, even not knowing that her College Entrance Examination results are out tomorrow?"

Wen Ruohan covered her mouth and laughed.

"Oh no, you're right."

Ding Yue slapped his forehead, recalling that tomorrow, the 23rd of June, is the day the College Entrance Examination results would be released in Mist City.

His little sister took the exam this year. He wondered how many points she would score.

Could she become the College Entrance Examination Champion in science subjects in Mist City?

At this moment, Professor Zhou Wen, Professor Shen Congde, and Professor Wang Shangzhong also walked out from the Physics Laboratory and went to change their lab suits.

The faces of the three professors were full of smiles.

Just five minutes ago.

After a full day of experimenting and research, the three professors and Ding Yue finally obtained several key sets of data.

"Principal Ding, after we go home tonight, we'll sort out the experiment data that we're responsible for. Then we'll write the article, and it can be published in the national authoritative journal."

Professor Zhou Wen said to Ding Yue with a smile.

Ding Yue nodded: "That would be very hard for the three professors."

"It's not hard, it's not hard. We should be thanking you, Principal Ding. Despite your young age, you have such professional knowledge!"

Chapter 205: Mist City Science College Entrance Examination Champion

Professor Zhou Wen shook his head, expressing deep admiration for Ding Yue.

Their successful experiment and the resulting data sets were all thanks to Ding Yue's correct direction, which led to significant progress in the years of research by Professors Zhou Wen, Shen Congde, and Wang Shangzhong.

The use of GaN semiconductor materials in chip manufacturing was approaching closer and closer.

The technology of domestic silicon material chips was about to enter a new Chapter!

"You flatter me,"

Ding Yue replied humbly.

After all, Professor Zhou Wen was a veteran in the field of GaN semiconductor materials technology. It was only right to show some modesty in front of him.

After a brief chat with Professor Zhou Wen, the three professors left first.

Then Ding Yue and his secretary, Wen Ruohan, prepared to go to the second cafeteria for dinner.

What a coincidence.

Upon arriving at the second cafeteria, he spotted his sister, Ding Xiaoyou, and her classmate Lin Zhirou sitting together, eating what seemed to be a homemade dinner cooked by their mother, Zhang Yuping.

"I could smell mom's braised pork all the way from here!"

Ding Yue walked over to his sister Ding Xiaoyou and Lin Zhirou.

"Mom, could we have two more servings?"

Ding Yue quickly asked his mother to prepare two more servings of braised pork, as he and Wen Ruohan were starving.

"Humph, Mom, don't cook for him!" Ding Xiaoyou retorted huffily.

Zhang Yuping laughed as she saw the siblings starting their usual banter, then went into the kitchen.

"You're allowed to eat mom's braised pork, but not me?" Ding Yue rolled his eyes, glared at his sister Ding Xiaoyou, and then asked, "Weren't you out travelling? How come you're back so early?"

"I was just out for a bit and didn't find it that appealing, so I came back," Ding Xiaoyou replied unwillingly.

"Alright, alright, I didn't know you were back because I was busy with my experiments in the lab today. The results for Mist City's College Entrance Examination should be out tomorrow. Let me congratulate you in advance, future champion!"

Ding Yue teased his sister with a smile.

Ding Xiaoyou muttered, "How do you know I'll be the champion of the College Entrance Examination in Mist City?"

"Hahaha, if you don't come out on top, you might as well deny having a brother like me," Ding Yue laughed.

The brother and sister bantered back and forth, quickly creating a pleasant atmosphere. Then Ding Yue sat beside his sister Ding Xiaoyou, and they began to eat dinner together.

The braised pork made by their mother was fabulous.

Since Lin Zhirou was also here, Ding Yue chatted with her. They mainly discussed the release of her upcoming two songs and her summer vacation plans.

Ding Yue had given Lin Zhirou three songs.

The song "Confession Balloon" was released on the special date of May 20th and achieved impressive results, staying at the top of the New Song List for a month.

It was only dropped from the chart a couple of days ago.

This single song has already brought in over five million in revenue for Ding Yue's Feiyue Media. Lin Zhirou has also become wealthy thanks to this song.

Although as the singer, Lin Zhirou received a share of the song's sales, but most of the money was taken by the platform and Feiyue Media. Lin Zhirou didn't get much.

For example, if the song sold for ten million, Lin Zhirou might have received about a tenth of that, around one million.

Lin Zhirou still has two songs, "Fragrance of Rice" and "Blue and White Porcelain," which need to be released when the time is right. This year, Ding Yue's goal is to make Lin Zhirou the hit singer of the year, so the songs must be released one by one.

They can't be rushed.

Releasing them one by one definitely brings larger profits compared to releasing all three at once.

"Let's release the second song after the end-of-term exams, during the summer vacation. Which song do you intend to release next, 'Fragrance of Rice' or 'Blue and White Porcelain'?"

Ding Yue looked at Lin Zhirou and asked.

"'Fragrance of Rice', it has a touch of summer," Lin Zhirou thought for a moment and replied.

"Alright."

Ding Yue agreed that releasing 'Fragrance of Rice' as the second single was a good idea.

After discussing the release of the next two songs, Ding Yue asked Lin Zhirou about her plans for the summer vacation.

As the best-selling artist of Feiyue Media and the first breakout star from the Arts department of Mist City Arts and Science University, she should definitely receive some rewards from the school.

"How about this? What do you think about a global luxury cruise trip arranged by the school for your summer vacation?" Ding Yue suggested to Lin Zhirou with a smile.

After all, during the summer vacation, the school will also arrange luxury cruise trips for the members of the computing department and the team responsible for creating Big White, the robot model. So they might as well arrange one for Lin Zhirou at the same time.

"Wow, brother, does your school reward students with luxury cruises?" Ding Xiaoyou asked in astonishment.

"Yes, why, are you interested?" Ding Yue confirmed with a smile.

"Thanks, Principal Ding. It just so happens that I was planning on going out to relax during the summer vacation," Lin Zhirou accepted Principal Ding's arrangement and thanked him.

"Alright, let's wait for the school's arrangements then."

After dinner, Ding Yue went back to his apartment early to sleep and rest.

After all, spending the whole day in the lab was quite mentally and physically draining. He felt quite exhausted.

The next morning.

After arriving at his office, Ding Yue first turned on his computer and navigated to the page where he could check the results of Mist City's College Entrance Examination.

Chapter 206: Science Winner of the College Entrance Examination in Mist City

"We can check the scores in ten minutes."

Ding Yue muttered, he had earlier memorized his sister's exam number.

Bang!

The office door was kicked open.

The one who entered was Ding Xiaoyou.

In the entire Mist City Arts and Science University, only this girl dared to kick open Ding Yue's office door and walk straight in.

"Still mad at me? Don't take it out on the door, if it gets broken, it'll cost a lot to replace." Ding Yue turned to his sister with a smile.

"I didn't even kick it hard, just lightly nudged it open." Ding Xiaoyou grumbled, then moved to Ding Yue's side: "Are you going to check my scores now?"

"Yes, let's see how many points you got."

"Hehehe, Anyway, I'm sure it's more than you got." Ding Xiaoyou remembered that her brother only scored a little above two hundred in the College Entrance Examination last year.

She could not figure out how he managed such a low score, he is not a stupid person, otherwise, he wouldn't have achieved what he had till today.

And thinking back to last year, her brother was really bold, he built a university, the very Mist City Arts and Science University they were in right now, she still found it thrilling!

Ten o'clock quickly arrived!

The portal for Mist City's College Entrance Examination scores was now open.

Ding Yue entered his sister's exam number and clicked to check the score.

An impressive 741 points appeared on the screen!

"741 points! Holy shit!"

Ding Yue couldn't help but exclaim.

"Huh? 741 points? Isn't that impressive?" Even Ruohan was shocked when Principal Ding announced the score.

However, Ding Xiaoyou was rather calm, she shook her head and said: "Only 741? I'm still nine points short of a perfect score. Where did I go wrong? Hmm, it must be the essay!"

Indeed.

Upon looking at the individual subject scores, Ding Yue noticed his sister scored full points in every other subject, with only 141 points in Chinese Language, missing by nine points.

Only nine points away from the perfect score of 750!

The ranking of Mist City's College Entrance Examination scores were soon released.

Without a doubt.

Ding Xiaoyou's score of 741 for the College Entrance Examination made her the Science subject champion in Mist City! And this score was the highest so far in the history of the science subject!

Just like Ding Xiaoyou said, she was nine points short of a perfect score because her essay was not well written.

Ding Xiaoyou only scored 51 for her essay, for a question worth 60 points, this was just barely acceptable.

But she answered all the other examination questions correctly!

Even the Mist City Department of Education found it incredible how outstanding Ding Xiaoyou was, but they all wondered why she didn't write her essay well enough to get a perfect score?

Otherwise.

A perfect score of 750 in the College Entrance Examination could absolutely create a miracle!

However, a score of 741 was still incredibly impressive!

Not even ten minutes after Ding Xiaoyou's scores were released, there was already a call from the official Mist City Department of Education.

"Ding Xiaoyou, congratulations on achieving a great score of 741 and becoming the 2021 College Entrance Examination Champion for the Science subject in Mist City!"

Turns out, the official call from Mist City Department of Education was just to congratulate Ding Xiaoyou.

"Thank you."

Ding Xiaoyou gave a polite reply.

Shortly after accepting the congratulatory call, Ding Xiaoyou quickly received another call from the school.

Meanwhile, Ding Yue got on his phone and shared the good news with their mother, Zhang Yuping: "Mom, Xiaoyou scored 741 points. She is now the Science subject champion in Mist City!"

"I knew your sister could do it. Look at you, then look at your sister. This is such great news! We must have a celebratory dinner tonight, let's call all our relatives and friends!"

Zhang Yuping sounded delighted.

Truly a mother's love.

Having started a university and built such a huge business, her celebration of Xiaoyou being the Science subject champion, and comparing us, is just so... motherly.

"Great job, honey. Mom said we are having a dinner celebration for you tonight!"

Less than half an hour later, the headline news of Mist City was out. The title was...

Chapter 207: Joint Publication of National Authority Journal Papers

Ding Yue never expected that he would once again be trending today.

However, this time, it was thanks to his sister, Ding Xiaoyou.

With a score of 741 in the College Entrance Examination, Ding Xiaoyou successfully became Mist City's science champion and was one of the highest scores in recent years for the National College Entrance Exam for Science.

However, her score was not the highest in the history of the College Entrance Examination.

In previous years, there have been astonishingly high scores: 748 and even 749.

But in Mist City, her score of 741 was the highest in history.

So, right after the results came out, the education authority at Mist City made a quick phone call to congratulate Ding Xiaoyou on becoming the science champion.

Today's headline in Mist City was also promptly released—[College Entrance Exam Champion! The girl with a score of 741 is the sister of the Principal of Mist City Arts and Science University!]

In no time, netizens found out that Ding Xiaoyou, the science champion of the college entrance examination in Mist City, was the sister of Principal Ding of Mist City Arts and Science University!

This sibling duo was simply breathtaking!

Immediately, a heated discussion erupted on the internet.

[Mist City Local Forum]—

"Impressive! As expected of these siblings, one established a university, the other aced the College Entrance Exam!"

"Perhaps this is what other people's siblings are like!"

"Impressive! A score of 741, I didn't even get half that when I took the College Entrance Exam!"

"Are these siblings too powerful?"

"No wonder she could be the champion. Turns out her brother is the founder of a school!"

"I'm envious, this brother and sister duo, they're like characters straight out of a novel!"

"That's right, I heard the brother is also a top student."

"I heard the brother only scored a little over 200 on his college entrance exam."

"What do you know! Who cares about a score of 200 or so, he just didn't want to try hard, he built his own university, why bother getting a high score? It would be more enjoyable to just go with the flow on the Entrance Exam."

"That makes sense. Didn't the brother of the College Entrance Exam champion recently graduate early? Even his thesis received praise from professors at Jiangnan University of Science and Technology!"

"Amazing! These siblings must be time-travelers from a novel."

Initially, the news about Ding Xiaoyou's score of 741, making her the science champion of Mist City, only garnered significant local attention.

But soon after.

Because the news media mentioned the name of Mist City Arts and Science University, a popular school in the recent past, and included Ding Yue's name in the headlines, they invariably linked Ding Xiaoyou, the science champion of Mist City, with Ding Yue, the founder of a private university.

On TikTok and Twitter, the topic quickly gained momentum and went viral.

Twitter trending list #27 Mist City Science Champions siblings#

Twitter trending list #35 The College Entrance Examination Champion is the Principal's Sister#

And there was more than one trending topic!

Thanks to his sister, Ding Yue managed to earn quite a bit of fame for the Mist City Arts and Science University, which then converted into experience points.

However.

For sister Ding Xiaoyou, trending might not be a good thing.

Because starting from eleven o'clock, many media outlets began hounding her with phone calls for interviews as the Mist City science champion.

"Hello, Ding Xiaoyou, I'm a journalist from Guangcheng Metro News."

"Hello, Ding Xiaoyou, we are from Huaxia News."

"Hello, Ding Xiaoyou, would you be willing to accept an interview from us at Central Plains News?"

News outlets from all over the country wanted to interview this Mist City's science champion of the College Entrance Examination.

This was quite interesting.

After all, Ding Xiaoyou didn't score the highest in the National College Entrance Examination and become the national champion with her 741 score. She was only a Mist City science champion of the College Entrance Examination, yet so many media outlets wanted to interview her.

"So annoying, why are there so many phone calls!"

Ding Xiaoyou felt like her head was about to explode from answering so many phone calls.

If she simply switched her phone off, what if it's her friends, classmates, or relatives trying to congratulate her for being the science champion of the College Entrance Examination in Mist City?

But if she answered the phone, every call was from journalists wanting to interview her.

"You're now the science champion of Mist City, it's normal to receive a lot of calls from journalists and media outlets."

Ding Yue smiled and spoke to his sister.

As soon as Ding Yue finished speaking, the office phone rang.

"Hello, Principal Ding. This is Director Liu Hongxia from the publicity department, we've received lots of calls from various media outlets saying they would like to interview you and your sister. Do you want me to transfer these calls to your office?"

On the line, Director Liu Hongxia reported.

Just within the previous hour, Director Liu Hongxia's office received countless calls from various news media. Their objectives were all the same – they all wanted to interview Ding Yue and his sister Ding Xiaoyou.

These media outlets found it hard to get Ding Yue's contact information or office phone number, so they could only contact the publicity department of Mist City Arts and Science University, which was listed on the university's official website.

In the past, Ding Yue's office phone number was listed on the official website of Mist City Arts and Science University.

But because Ding Yue started receiving lots of random calls, he had his office phone number removed from the official website of Mist City's Arts and Science University.

He left the school's publicity department number on there, so if there was any matter, people could just get in touch with the school's publicity department.

"What the hell? Reject them all!" Hearing this, Ding Yue frowned and said.

"Alright, Principal Ding!"

After hanging up the phone, Ding Yue suddenly remembered that his sister Ding Xiaoyou was also receiving lots of media phone calls.

Chapter 208: Joint Publication of National Authority Journal Papers

Then it dawned on him.

No wonder!

The media all wanted to interview him and his sister, Ding Xiaoyou. It must be because of the trending topic: "The Science Champion of the College Entrance Exam and the Principal of Mist City Arts and Science University are siblings." They wanted to secure an exclusive interview.

However, Ding Yue didn't like such interviews. Xiaoyou hated them too. As such, he decided to decline all interviews with the press.

But why!

Why did so many media outlets want to interview him and Ding Xiaoyou?

Was it just because they were siblings, and he was both the principal of a university and the brother of the champion of the science section of the Entrance Exam?

Ding Yue, puzzled, checked out Twitter.

As expected!

Ding Yue began to see the signs.

Among the trending topics on Twitter, someone had started to control the narrative around him again.

Many people brought up his grades from last year's College Entrance Examination.

Correct.

A bit over 200 points!

Then they started to fuel the fire around Ding Yue and his sister, Ding Xiaoyou!

Twitter user 102456: "#ScienceChampionSiblingsfromMistCity have made me die laughing. The elder brother, Ding Yue, only scored a bit over 200 on last year's Entrance

Exam, while the younger sister got 741. This is the classic tale of a genius sister and a dumb brother, right? But here's the kicker - the older brother who only scored a bit over 200, managed to complete his university studies in one year and even published his graduation thesis. His sister scores 741 this year. This is all too good to be true!

Upon seeing this tweet by an account that was created just yesterday and with zero followers, Ding Yue couldn't help but laugh.

Was this idiot for real?

However!

Despite the baseless and erratic nature of this post, it garnered many likes, comments, and re-shares. Its popularity seemed to increase at an alarming rate.

Ding Yue figured someone must have paid to trend this post?

But even if it's meant to be hurtful, it should at least make sense.

What correlation does my score last year of a bit over 200 have with my sister's 741 score this year?

Are they insinuating that my achieving of a university degree and publishing a thesis in record time somehow paved the way for my sister's remarkable score this year?

What kind of logic is that?

However, from this post, it is clear that the main target is Ding Yue.

The ironic part is that people are really going along with this baseless Twitter narrative.

It can't be helped.

Netizens always love a topic with a hint of controversy.

"I am not trying to contradict, but I can't believe there's no connection between this sibling duo and education authorities!"

"It's definitely possible!"

"I feel like this tweet is just to slander. The Principal of Mist City Arts and Science University graduated on time and even published a thesis. That's fine. His sister scored 741 in the examination, which again is fine. The problem arises when these two facts merge?"

"The key may be that the College Entrance Exam Science Champion's brother only scored a bit over 200!"

"So what if he scored a bit over 200? Does it interfere with him opening up a private university? As long as he's got money!"

"Exactly, I feel like there are people who are just envious and can't stand seeing both siblings having talent!"

"Yeah, the elder brother only scored a bit over 200 points, but that doesn't mean he is incapable. He opened his own university, which is going well, and the sister is academically gifted scoring 741. There's no issue!"

"Haha, I feel like Principal Ding took the Entrance Exams just for the sake of it. He had already decided to create his own university, right?"

Upon reading the comments, Ding Yue was amused to find that many netizens were actually supporting him.

However.

Now that his low exam score was exposed, Ding Yue felt a bit uneasy at first.

After all, scoring a bit over 200 and then opening a university seems unbelievable.

Therefore, it wasn't surprising that it stirred up a debate. Ding Yue anticipated it.

What mattered was whether the education authorities would take notice of him?

But shortly after, Ding Yue dismissed the idea.

Because his university, the Mist City Arts and Science University, was fully accredited. Any necessary paperwork was already set in place. Therefore, he was not afraid of the education authorities probing into him.

At this time.

Mist City education authorities.

"Did you find anything?"

"We did. The Mist City Arts and Science University's paperwork is all in order, and was founded on the basis of Mist City Siyuan University. There is no problem!"

"Alright, got it."

The Minister of Education of Mist City, Xiao Wenxing, who was sitting in his office, had seen allegations about the credentials of Mist City Arts and Science University and the high score of 741 of Ding Xiaoyou online. This prompted him to have the university's paperwork checked for credibility.

After Xiao Wenxing's thorough investigation, all the paperwork and credentials of Mist City Arts and Science University were in order, and the score of Ding Xiaoyou was also valid.

This hence concluded the debate and cleared the rumors circulating online about Mist City Arts and Science University.

Mist City Arts and Science University is a well-performing private university that had emerged in the past year. The young principal, Ding, is also quite capable. Behind the university is the Feiyue Group with a registered capital of over 100 million.

Xiao Wenxing decidedly supports such private education institutions.

"Looks like it's time for me to pay a visit to Mist City Arts and Science University." Xiao Wenxing murmured to himself with a smile.

Chapter 209: Joint Publication of National Authority Journal Papers

...

Inside the Administration Building of Mist City Arts and Science University.

"Principal Ding, it seems like you've fallen for the online beat yet again."

Wen Ruohan was scrolling through Twitter during her free time when she noticed that Principal Ding had once again been incited by netizens.

If it had been before, Wen Ruohan would have been shocked and angry about such incidents.

However, she had grown used to Ding Yue being targeted and criticized online. It was not the first or second time this has happened.

Ding Yue seemed to be chatting with someone online.

Upon hearing what Wen Ruohan said, he chuckled, "I saw it earlier. These people just enjoy dragging me through the mud. It's not a big deal, in a couple of days, all these accusations will crumble on their own."

"What?"

Wen Ruohan looked absolutely perplexed.

Ding Yue didn't address or respond to this round of online incitement and ridicule directly.

That's because Ding Yue was soon to publish an academic paper in collaboration with Professor Zhou Wen, Prof. Shen Congde, and Professor Wang Shangzhong from Jiangnan University of Science and Technology.

The title of the paper was "The Application of Gallium Nitride in the Field of Semiconductor Materials", and they planned to publish it in a nationally recognized journal.

In this parallel world, research papers of scientific significance are usually published in such journals.

The authority of these national journals on science and technology is extremely high within the country.

After a full day's experimentation together with the three professors, Ding Yue collected the data from their experiments, and then started to pull late-nighters to work on the paper.

Finally, with the joint efforts of Ding Yue and the three professors, they successfully completed the paper, "The Application of Gallium Nitride in the Field of Semiconductor Materials".

Since Professors Zhou Wen, Shen Congde, and Wang Shangzhong were already reputable researchers in the field of semiconductor materials, Ding Yue was confident that the paper would be published in a nationally recognized journal.

The next day.

Early in the morning, Ding Yue received a call from Professor Zhou Wen.

"Hello, Professor Zhou."

"Principal Ding, we've been published, we've been published!"

"What?"

Ding Yue, being half-asleep, didn't catch what he said.

"Principal Ding, our paper 'The Application of Gallium Nitride in the Field of Semiconductor Materials' has been successfully published in a national journal!"

Professor Zhou Wen exclaimed excitedly.

"Really?"

Upon hearing this, Ding Yue immediately jumped out of bed, walked to the living room, and opened the laptop on the coffee table.

Accessing the website of the national journal.

Indeed, Ding Yue saw their research paper, "The Application of Gallium Nitride in the Field of Semiconductor Materials", a collaboration between him, Professor Zhou Wen, Prof. Shen Congde, and Professor Wang Shangzhong.

The publication of this paper signified the ushering of a new era for China's chip material technology.

"That's fantastic."

Ding Yue said excitedly.

Well, Ding Yue wasn't truly that excited, but he needed to sound thrilled while talking to Professor Zhou over the phone.

Ding Yue's goal wasn't just to have the paper published in a national journal, but to successfully develop gallium nitride semiconductor materials as a way to enhance chip

technology, and to establish a presence for Mist City Arts and Science University in the field of chips.

Ultimately, Ding Yue's goal was to create a super chip that could upgrade Big White to the level of an intelligent robot.

However.

At present, the semiconductor material technology Ding Yue and the three professors are researching is already an established technology internationally.

Instead, it's about the technology of chip manufacturing.

The production of chips is still closely related to the lithography machine.

As for the lithography machine, the situation is even more miserable at home. At present, we can't manufacture lithography machines, so our chip manufacturing is greatly controlled by foreign countries.

"Therefore, Principal Ding, our next goal is to create the first semiconductor device from gallium nitride materials domestically."

Professor Zhou Wen said with great anticipation.

Making semiconductor devices from gallium nitride materials has been the lifelong wish of Professor Zhou Wen.

Japan has already been able to manufacture semiconductor devices and even chips from gallium nitride materials, but due to the blockade of technology, there has been no progress in this field domestically.

Now.

After the relentless efforts of Professor Zhou Wen, Professor Shen Congde, Professor Wang Shangzhong, and Principal Ding, there has finally been a breakthrough.

The paper published today in a national authoritative journal, "The Application of Gallium Nitride in the Field of Semiconductor Materials", means that it is basically feasible to create semiconductor devices using gallium nitride materials.

"Good! Let's strive to make our first gallium nitride-based semiconductor device by the end of this year."

"Good!"

...

Haicheng.

Xia Science Institution Semiconductor Research Institute.

The Semiconductor Research Institute is a specific research institute under Xia Science Institution dedicated to the field of semiconductors. The chancellor, Meng Xueyan, is already 58 years old this year.

In a few years, Meng Xueyan will retire.

Originally.

Meng Xueyan thought he would not see the progress and development in the domestic semiconductor field before his retirement.

But what he never expected was that he saw the research results of Professor Zhou Wen, Professor Shen Congde and Professor Wang Shangzhong of the Physics Department of Jiangnan University of Science and Technology, as well as Ding Yue of the Physics Department of Mist City Arts and Science University.

That is, the paper "The Application of Gallium Nitride in the Field of Semiconductor Materials".

This paper alone is enough to attract Meng Xueyan's attention.

If Ding Yue's previous graduation thesis only pointed out a direction for the research of gallium nitride semiconductor materials technology and was not enough to catch Meng Xueyan's attention,

This paper has yielded abundant research results from experimental data, making Meng Xueyan feel that the technology of gallium nitride semiconductor materials has finally reached maturity.

This means that within one or two years, domestically, we will start using gallium nitride to make semiconductor device materials.

If we use gallium nitride to make semiconductor chip materials, the advantages will be stronger than silicon material semiconductor chips.

Meng Xueyan invited several old members of the Semiconductor Research Institute to discuss this.

Using the data given by this paper, they found that it is indeed possible to achieve the mature use of gallium nitride semiconductor materials technology.

"I know the old Zhou and old Shen of Jiangnan University of Science and Technology, who have always been committed to the research of gallium nitride semiconductor materials technology. We at the Semiconductor Research Institute haven't done much research in this field, as we have been focusing on silicon carbide research in the field of semiconductor materials."

One of the researchers analyzed.

"Chancellor Meng, the maturity of gallium nitride semiconductor material technology can enable our country's semiconductor field to make a good progress. This time, old Zhou and their team made a remarkable achievement."

One of the researchers affirmed the research conducted by Zhou Wen, Shen Congde and Wang Shangzhong. After all, the maturity of gallium nitride semiconductor materials

technology can indeed improve the current level of silicon material semiconductor technology.

"Yes, yes, old Zhou and Shen have finally realized their long-standing dream."

"But I've heard there's a young person in their team?"

Meng Xueyan nodded and said, "I've noticed, too. That young man is from the Physics Department of Mist City Arts and Science University. Do any of you know this university?"

Meng Xueyan, as a director of an institute under Xia Science Institution, knows many domestic universities that are excellent in the field of physics.

But as for Mist City Arts and Science University, he really hadn't heard of.

Chapter 210: Giving a Chance to Game Design Students

End of June.

Final exams for various departments and majors at Mist City Arts and Science University had successively ended.

Students switched into their summer vacation mode.

However, compared to the winter vacation, fewer people chose to go home during the summer vacation, with many opting to stay in school or remain in Mist City.

After all, Mist City was quite a nice city.

Quite a few students chose to travel, given that many students at Mist City Arts and Science University were financially well-off.

Because many students stayed at the school, and the campus's themed hot pot restaurant remained popular.

Ding Yue's mother decided to forego her vacation and continued to operate the cafeteria and hot pot restaurant on the campus.

As the head of the school's water and electricity maintenance team, Ding Jianjun, Ding Yue's father, led his team to maintain the school's water and electricity supply during the summer vacation.

As a result, the whole family of four spent most of the summer vacation at Mist City Arts and Science University.

The day after the end of term.

Ding Yue went to his office in the Administration Building. It was going to be a busy day.

As the principal, from today on, Ding Yue would start listening to the semester reports from various departments and review the teaching summaries of each department.

The first person to arrive at Ding Yue's office was the Dean of Academic Affairs, Qi Chunsheng.

Qi Chunsheng was primarily there to present to Ding Yue the teaching summary of the entire university for the semester, as well as the report on final exam results, etc.

"Principal Ding, this semester we have over 9,600 students, and only 7 students have failed their courses, reaching single digits," Qi Chunsheng reported, with a hint of pride.

After all, the improvement in teaching quality inevitably had something to do with him being the Dean of Academic Affairs, it could be considered one of his achievements.

"Very good. Last semester, the number of students who failed was in double digits, and this year it's in single digits. Will we be able to achieve a zero failure rate in another year or two?" Ding Yue commended, nodding in satisfaction.

Mist City Arts and Science University's teaching quality experienced two general improvements.

One was when Ding Yue provided students with studying buffs and teachers with teaching buffs, resulting in a significant improvement. Due to this, the faculty and students of Mist City Arts and Science University achieved commendable results in just one academic year.

Besides, the second improvement can be attributed to Qi Chunsheng, the Dean of Academic Affairs, who truly had expertise in teaching affairs.

"One of the students who failed left early due to a significant incident at home and missed the exam," Qi Chunsheng explained.

"Oh? In that case, we can practice humanized teaching. Having a major incident at home is already an unfortunate event," Ding Yue suggested, frowning slightly after hearing the news.

Qi Chunsheng quickly nodded, "Yes, Principal Ding, we at the Academic Affairs believe the same. Therefore, we decided to give the student a second chance to take the exam when the new school year begins, preventing him from losing scholarships or grants because of failing a course."

"Good, that's a good decision." Ding Yue nodded in approval of the humanized teaching practice implemented by the Academic Affairs.

"Moreover, the recruitment of faculty was conducted by the administrative personnel department this semester. They hired 247 lecturers and assistant teachers, 4 associate professors, 2 professors, and confirmed the list for Mist City Central Hospital. They also confirmed, thereby, we added 7 associate professors and 4 professors to the medical school."

Qi Chunsheng continued his report.

The university was actively expanding its faculty this semester.

After all, during the summer vacation, Mist City Arts and Science University will hold self-enrollment, and all students who register on the official website of Mist City Arts and Science University are basically eligible for one-click admission.

So apart from the over 9,600 students who are about to enter their second year, don't we expect at least another 12,000 students this year?

If we add them up, the number of students at Mist City Arts and Science University will exceed 20,000.

Therefore, the faculty also needs to be expanded correspondingly.

Even though many teachers from certain majors can simultaneously teach first-year and second-year students, and some professional courses overlap.

Despite that, with over 20,000 students, there have to be at least 500 teachers at Mist City Arts and Science University.

If we count other educational staff, there have to be at least 1,000, between 1,300 and 1,500 would be most suitable.

After all, from security guards to dormitory management, and then to logistics, sanitation, canteen, supermarket, water and electricity network maintenance and repair, a considerable number of people are required to serve all the students on campus.

"Be sure to do a good job in the orientation training of new teachers. Also, plan the course schedule reasonably according to the working time of the professors and associate professors in the medical school at Mist City Central Hospital," Ding Yue advised Qi Chunsheng.

It's particularly important to arrange the course times for the 11 doctors who came from Mist City Central Hospital to teach at our medical school.

After all, they are adjunct professors and not like most other teachers.

"You can rest assured about that, Principal Ding. We at the Academic Affairs will arrange it well," Qi Chunsheng nodded repeatedly, assuring him that there would be no problem with these arrangements.

"Excellent. Near this time each year, the workload for you at the Academic Affairs increases. I hope you can withstand it, and carry out all the teaching work smoothly and perfectly."
