

F. University 241

Chapter 241: Students Return Safely!

When Wen Ruohan received the call, her face instantly turned pale.

A buzzing noise echoed in her head.

"Secretary Wen? Secretary Wen?"

On the other end of the line was the voice of Zhu Youzhao, Dean of the Film and Television School, sounding extremely anxious.

"I...I'm here."

Wen Ruohan's forehead was already starting to perspire.

"Secretary Wen, please inform Principal Ding about this matter. I am rushing over there now."

The voice on the phone was Director Zhu Youzhao of the Film and Television School.

"Alright, alright, Director Zhu, please be careful too." Wen Ruohan said, then hung up the phone and hurried over to Principal Ding's side.

"Principal Ding, something bad has happened!"

"What?"

Upon hearing her words, Ding Yue furrowed his eyebrows slightly.

Every time Secretary Wen Ruohan sought him, it was either good news or a problem.

However, what Ruohan usually referred as a problem often didn't amount to much.

"What happened?"

Ding Yue asked urgently.

"Principal Ding, Director Zhu from the Film and Television School called me. According to him, the film crew responsible for shooting the sixth episode of 'A Bite of Xia Country' in Shu Province was caught in a downpour which led to a landslide and mudflow, and they are now trapped on the mountain, out of communication!"

Wen Ruohan quickly relayed to Principal Ding the information she just received from Director Zhu Youzhao.

"What!"

Upon hearing the news, the expression on Ding Yue's face froze.

"Yue, could something terrible have happened?" Xu Bin, who was standing nearby, immediately asked.

Ding Yue's mind was also buzzing.

If the university's filming crew encounters danger, as the principal, he naturally must give it his immediate attention.

"They haven't been reached yet?" Ding Yue calmed himself down and quickly asked.

"Not yet, Director Zhu has already left for Shu City."

Wen Ruohan replied.

"Teacher Li Shengbin, student Tong Yihang, please handle this matter here. I need to quickly deal with this other issue."

After Ding Yue finished speaking, he immediately left the Mechanical Engineering laboratory.

Once he quickly returned to his office in the Administration Building, Ding Yue checked the location of the school's filming crew and the circumstances surrounding their predicament.

Apparently,

This time, the university's filming crew was filming the last parts of the sixth episode of 'A Bite of Xia Country'. They were supposed to film several scenes related to a seasoning called "Sichuan pepper" in the mountains of Shu Province, but on their way back after finishing the shoot, landslides and mudflows had blocked their path.

Recently, Shu City had indeed been experiencing heavy rainfall, and various natural disasters had become frequent.

"There are no students injured or otherwise in any danger, right?"

Ding Yue urgently queried about this most crucial point.

"Director Zhu said that the last time he spoke with the filming crew, the only road out of the mountains had been destroyed by mudflows and landslides, so they had to retreat back to a small mountain town. They should still be safe in that town; it's just that we've lost communication with them."

Wen Ruohan reported the detailed situation again to Principal Ding.

"Well..."

"Yue, under such circumstances, there's nothing we can do to help." Xu Bin remarked helplessly after hearing the details.

Ding Yue booted up his computer and looked up relevant news.

The road maintenance department at Shu City was working to urgently restore the damaged road. Only once the road was cleared could the people in the small mountain town be evacuated and receive aid.

"Immediately contact the Blue Sky Rescue Team in Shu Province. Our university will fund the mission. The moment the road is cleared, they should move in to rescue our filming crew."

Ding Yue immediately issued this order.

In face of such a situation, this was the only thing Dénɡ Yì could do. After all, with the road destroyed, it depended on when the rescue team in Shu Province could clear the debris.

Once the road was cleared, a Blue Sky Rescue Team would enter the complex mountain area to locate the students from Mist City Arts and Sciences University.

That was Ding Yue's responsibility as the Principal of the university!

Beyond that, there was really nothing more that could be done; Ding Yue couldn't just fly over and find his students.

Since it was still heavily raining in that area and the situation was complex, anyone going there would only complicate matters more.

At this moment, Ding Yue's heart ached, filled with worry.

After all, these were his students; he hoped they wouldn't encounter any danger and could return safely to Mist City Arts and Sciences University.

As per Principal Ding's instructions, Wen Ruohan immediately got in touch with the Blue Sky Rescue Team in Shu City, and designated Director Zhu, who was already on his way to Shu City, to handle the specific communications.

"All the students must return safely!"

Ding Yue muttered, and then suddenly thought of another issue.

The shooting team trapped in the mountain town was responsible for filming the sixth episode of 'A Bite of Xia Country'.

Currently, they are out of contact.

However, according to the exclusive broadcast agreement signed with NTS, Mist City Arts and Sciences University was to timely deliver the final cuts of the fifth and sixth episodes of 'A Bite of Xia Country'.

The production of the fifth episode was almost complete.

But the crew hadn't finished filming the sixth episode, and due to the heavy rain and landslide, they were now trapped in a small mountain town!

Chapter 242: Students Return Safely!

This could very likely impact the shooting schedule of the sixth episode of "A Bite of Xia Country"!

"I have to come up with a solution for this one." Ding Yue mumbled to himself after giving the matter some thought.

"Principal Ding, is there anything else we need to take care of?"

Having just finished making a phone call, Wen Ruohan, who was standing next to Ding Yue, asked.

"We signed an exclusive broadcasting authorization agreement with NTS. Now that the students of the production team for the sixth episode of "A Bite of Xia Country" are trapped, we will be liable for breach of contract if the episode is not finished on time!"

Ding Yue said, furrowing his brows.

"What should we do then?" Wen Ruohan urgently asked.

"Yue, why not discuss with NTS? This incident can be classified as a natural disaster, something beyond our control." Xu Bin suggested.

"What happened? I heard some students from our school had an accident in Shu Province?"

At that moment, Huang Youjie rushed into the Principal's office, firing off questions the moment he stepped foot inside.

"Stop talking nonsense, what do you mean they had an accident? They're just stuck on a mountain because the road has been washed away and due to signal problems, we can't establish contact with them for now!"

Upon hearing this, Ding Yue spat thrice.

The students of Mist City Arts and Science University are the most precious individuals to him, nothing bad must happen to any of them!

What Huang was suggesting earlier carried bad luck!

"Ah, as long as they're okay. That's a relief." Huang Youjie, having jumped at shadows, relaxed upon hearing Ding Yue's explanation. He then quickly asked, "Does our school need to organize a rescue team?"

"Even if the school does organize a rescue team, what good would that do? Are we supposed to rush over now?" Xu Bin rolled his eyes at Huang Youjie.

"Principal Ding has already instructed me to contact the Blue Sky Rescue Team, and Director Zhu from the Film and Television Institute is on his way to Shu City. Once the roads are cleared, he will immediately lead the rescue team to aid our school's production team."

Wen Ruohan quickly explained the situation to Director Huang.

"Call the representatives of the other production teams of "A Bite of Xia Country" that are still on campus over." After some thought, Ding Yue instructed Wen Ruohan.

While rescuing the production team for the sixth episode of "A Bite of Xia Country" is critical, it is equally important to ensure the smooth production of the sixth episode.

Thus, Ding Yue decided to assign the other teams to shoot other local themes, so as to fill in for the segment on Shu Province that is currently missing from the sixth episode.

Subsequently, Ding Yue placed a call to Vice Director Liu Mei of NTS.

"Hello, Director Liu, this is Ding Yue, principal of Mist City Arts and Science University."

"Principal Ding?"

"Director Liu, do you know about the situation in Shu Province where the national highway there has been destroyed by a landslide, causing the entire mountain town to be isolated?"

"Yes, the news channel has reported it. Currently, the road department in Shu Province is doing its best to clear the road. However, due to the massive damage and the sheer size of the mudslide, it's proving challenging. What's going on, Principal Ding?"

Director Liu Mei curiously asked.

Since when did the principal of Mist City Arts and Science University develop an interest in this news?

"Well, our Film and Television Institute's production team, was there shooting the sixth episode of "A Bite of Xia Country". They were preparing to return when they found out that their way home was blocked due to the road destruction, which has also cut off all communication!"

Ding Yue quickly updated Director Liu Mei about the situation.

"Ah! Was anyone injured?" The first thing that occurred to Director Liu Mei was naturally to ask if anyone was hurt.

"Fortunately, as far as we know, no one was injured. Everyone has retreated back to the small town and are waiting for rescue. However, I'm concerned that this might delay the production progress of the sixth episode of "A Bite of Xia Country."

Ding Yue said, visibly troubled.

"It's fine, in such situations, the safety of the production team is the most important. As for the possible delay in the production of the sixth episode, if it's unavoidable, we may have to cut that episode. Principal Ding, do you have a better solution?" Director Liu Mei asked.

Ding Yue did have a better solution: "We've already completed more than half of the sixth episode. Just a small part remains, the part where they're stuck. For that, I plan to let other production teams choose a suitable location to provide the necessary footage for the remainder. If we work a little harder, I believe there shouldn't be any problem."

Upon hearing Principal Ding's proposal, Director Liu Mei let out a sigh of relief.

"That's good, then. Sorry for the trouble, Principal Ding. I hope the students return safely. Please remember to inform me when they do, alright?"

Director Liu Mei was genuinely concerned about the production team for the sixth episode of "A Bite of Xia Country".

NTS's news department had indeed received the news report, and their reporter stationed in Shu City was already on his way to the site of the road destruction.

Reportedly, it would be quite challenging and time-consuming to clear the road.

Even if they worked 24 hours non-stop, it could still take up to 48 hours at the earliest!

What was even more annoying was that the signal towers had likely been damaged during the storm, cutting off almost all communication with the small town in the mountains.

Chapter 243: Students Return Safely!

At Mist City Arts and Science University.

After Ding Yue called together the heads of the other filming teams from the Film and Television College, he explained the situation.

Tang Yuanhua was the first to say, "Principal Ding, under such circumstances, our team will definitely take up the responsibility!"

Immediately after, Meng Hao also said, "Principal Ding, our team can also help."

"In that case, your two teams should collaborate. Joint filming should increase our efficiency. Don't worry about the budget. My requirement to you is to choose content that aligns well with the theme of the sixth episode. Moreover, you must ensure the quality of the filming. Understood?"

Ding Yue expressed his high expectations to Tang Yuanhua and Meng Hao.

"Alright, Principal Ding, rest assured, we will surely put our hearts into the filming. We will use the existing footage from their sixth episode for corresponding filming."

Tang Yuanhua said with a determined look.

The sixth episode of 'A Bite of Xia Country' had a different film crew from the previous episodes and thus might have a different style.

However, the overall style must remain consistent.

Most of the sixth episode has been filmed. If the remaining part is not filmed properly, it would give out an end in a disappointing taste.

Therefore, Tang Yuanhua and Meng Hao need to follow the previous team's style as closely as possible for filming the sixth episode, and the quality must not drop.

Sometime later, Tang Yuanhua slowly raised his head and said to Principal Ding, "Principal Ding, once they've got news, can you let me know immediately?"

"Hmm?"

Upon hearing this, Ding Yue paused slightly, then nodded, "No problem."

Ding Yue could tell that Tang Yuanhua seemed particularly concerned about the film crew of the sixth episode. Although everyone was concerned, the expression on Tang Yuanhua's face indicated that it was more than just simple concern.

"Then Principal Ding, we will leave now."

Tang Yuanhua and Meng Hao were ready to leave the principal's office and rush to prepare for the reshooting.

"Meng Hao, wait a moment."

Ding Yue stopped Meng Hao.

His relationship with Tang Yuanhua was quite good. He should know about Tang Yuanhua's situation.

So Ding Yue asked Meng Hao, "Student Meng Hao, do you know why Tang Yuanhua is particularly concerned about the students in the film crew of the sixth episode?"

"Principal Ding, actually Tang really is more worried than us, because his girlfriend is in the film crew of the sixth episode."

"Oh, I see. When you go back, do comfort him. Tell him there's nothing to worry about. The school has dispatched the Blue Sky Rescue Team. As soon as the road is cleared, they will find them!"

Ding Yue patted Meng Hao on the shoulder and instructed.

"Yes, Principal Ding!" Hearing this, Meng Hao nodded and then left.

In the following put, they anxiously waited for news from Shu Province.

Just like the news had reported, the road rescue was extremely difficult and the progress was slow.

One day later.

Ding Yue was anxiously sitting in front of his office computer, watching the live broadcast of a frontline reporter from the NTS Television Station.

The road disaster relief was still in progress.

The situation in the small town deep in the mountains remained unknown. Most concerning was the weather forecast predicted continuing rainstorms, which could cause flooding in the low-lying areas of the town.

The outsiders were increasingly worried.

In these two days, this incident had made the news and trending topics.

The third day.

Finally, the frontline reporter from the NTS Television Station reported that the road was cleared. Due to the damage to the communication base stations and other facilities by landslides and other natural disasters, they had set up an emergency communication channel.

Ding Yue at the University was in contact with Director Zhu from the Film and Television College.

Director Zhu led the Blue Sky Rescue Team and rushed to the small town deep in the mountains as soon as the road was cleared.

Ding Yue called Zhu Youzhao every half hour.

Nineteen minutes after his last call, Zhu Youzhao called back.

"Hello, Director Zhu, what's the situation?"

As soon as Ding Yue answered the call, he immediately asked.

Wen Ruohan, who was standing next to Ding Yue, held her breath, fearing bad news.

"Principal Ding, the film crew has been found. Everyone is safe except for one person who has a minor cold. The low-lying areas of the town are flooded, and our crew has been staying in the high-level teaching building of the town's middle school for these past few days. They've moved resources like food from the supermarket there. In the town, there were no casualties!"

Zhu Youzhao promptly reported the latest situation to Principal Ding.

"Good, that's a relief. Director Zhu, after bringing the teachers and students of the filming crew to Shu City, make sure to give them a thorough check-up. Then bring everyone back safely!"

At that moment, Ding Yue finally felt relieved.

"Yes, Principal Ding! I will definitely bring all the teachers and students back safely!"

After hanging up the phone, Ding Yue's expression, which had been anxious and worried for the past few days, finally relaxed.

"Principal Ding, is everyone okay?"

Wen Ruohan asked curiously.

"Yes, everyone is safe. If everything goes as planned, they will be back safely tomorrow." Ding Yue replied with a happy smile.

"Then Principal Ding, should we have the school's publicity department announce it on the official school website? So, everyone at the school doesn't have to worry anymore." Wen Ruohan hurriedly asked.

Chapter 244: Students Return Safely!

In recent days, the entire school community had become aware of the situation where the filming crew of the Film and Television Academy's sixth episode of "A Bite of Xia Country" had been stranded.

Because Ding Yue expressed that such a thing could not be concealed, Director Liu Hongxia from the Propaganda Department was instructed to announce the matter on the official university website that day.

Now that they had finally received news of everyone's safety, it was naturally time to inform the entire school community once again.

"Alright, you can." Ding Yue nodded in agreement.

About ten minutes later.

Mist City Arts and Science University's official website read -

[Announcement]: Our Film and Television Academy team stranded in XX town, Shu Province due to heavy rains has now successfully made contact. Principal Ding and the school care greatly about this and have dispatched the Blue Sky Rescue Team, who have successfully located the team in the town. All members of the team are safe and in good health and are about to return safely. Please be rest assured, fellow students and teachers. Your concern these past few days is greatly appreciated.

Mist City Arts and Science University – July 3, 2021.

After this official announcement was made, the anxious hearts of the entire school community slowly commenced landing.

"Ah! They have finally been found and are okay!"

"That's great. I had been following the news every day, waiting for the roads to clear!"

"Principal Ding did a great job, he engaged the Blue Sky Rescue Team!"

"Indeed, Principal Ding truly cares about the welfare of us students!"

"Looking forward to their safe return!"

"To be honest, I've been so tense these past few days, genuinely scared that something awful would happen. But luckily, everything is fine!"

"They indeed had bad luck this time around. They were out filming when a sudden heavy downpour occurred, leaving them no time to evacuate."

"Right. Once heavy rain occurs in the mountains west of Shu City, possibilities of landslides and debris flows naturally arise. It's very easy to become isolated!"

In the school's student forums and various chat groups, many were warmhearted towards the measures taken by the school regarding the situation.

If it were any other university, they might not even know that their students had been stranded in a remote mountain town for several days.

Or even if they knew about the situation, they might still choose to conceal it and not make it public.

However, as soon as Principal Ding of Mist City Arts and Science University learned of the situation, he hired a rescue team and informed the entire school community, collectively waiting for the damaged roads to be cleared.

Once the roads were cleared, the school's rescue team immediately entered the remote mountain town and reached the stranded students and teachers.

When those stranded saw the school featuring the rescue team, their hearts must have been warmed, right?

The next morning.

Director Zhu Youzhao led the filming crew that had been located in the mountains, and they safely returned to Mist city by plane.

The moment they returned to the school by a bus arranged by the institution,

Many students had voluntarily organized a warm welcome for the filming crew who had safely returned to the school in front of the school gate.

Naturally, Ding Yue and the school leadership team were also present.

When the students on the bus saw this scene, they couldn't help but shed tears of emotion.

The students and teachers of the Film and Television Academy who had been stranded and had a close call this time never expected that their school would care about them so much during their isolation. It was ultimately the School Director, Zhu Youzhao, who led the rescue team to find them.

Although they didn't encounter any dangers while being stranded, and there was enough food in the town, and the student with a cold also had cold medicine,

The vehicle slowly drove to the school gate and then stopped.

Upon seeing this, Ding Yue stepped forward.

The teachers and students in the bus all looked towards Principal Ding.

"Welcome back to school, everyone. The school is a big family. Welcome home!"

Principal Ding stepped forward to the door of the bus and said this to the students who had safely returned.

At this moment, several girls couldn't help but tear up with emotion.

To them, Principal Ding was not only handsome at this moment, but he also gave them a sense of warmth!

Some even felt that their families didn't care about them as much as their school did...

Chapter 245: Live Unboxing - Big and White, called Big White?

Early July.

After experiencing the incident of the school filming team getting stranded in a small mountain town, Ding Yue found that his Mist City Arts and Science University seemed to carry more weight in the hearts of the students.

This time, both Ding Yue and the school's comforting concern for the students let the students see the warmth of their university.

Originally, Mist City Arts and Science University was very good to its students in many aspects, such as accommodation, dining, holidays, etc., which always gave the students a feeling of being at home.

Now,

Most of the students at Mist City Arts and Science University almost consider the school as their second home.

That is why so many people chose to stay in school during this year's summer vacation.

July 4th.

Today, Mist City Arts and Science University has an important task, which is to hand over ten Big White medical health robots to Mist City Central Hospital.

Due to the incident of Mist City Arts and Science University film crew being trapped that happened the day before, President Jiang Zhongbo of Mist City Central Hospital was very understanding and therefore postponed the delivery to today.

Meanwhile,

Not only is Mist City Central Hospital about to receive Big White, the medical health robot from Mist City Arts and Science University,

But so is someone else.

She is a lucky lady out of the tens of thousands of Twitter users.

"Hello everyone, I'm Flying Wheat Cake."

In the live stream on Bilibili,

There's a video titled[Unboxing the Big White medical health robot donated by Mist City Arts and Science University

Viewers: 124,786 people

120,000 people were watching the live unboxing of Big White by Miss Flying Wheat Cake.

This twin-tailed girl in her cute and adorable JK uniform has gained quite a few fans over this.

"Wow, I didn't know the lucky winner was so cute and beautiful."

"Adorable, I want to _____!!!"

"Envious. Miss, you're the world's first lucky owner of Big White."

"She is starting to unbox, so exciting."

"I never expected Miss Flying Wheat Cake to be so beautiful!"

"I can't wait for the unboxing."

"Host, have you finally received the health robot donated by Mist City Arts and Science University?"

"Honestly, when I was watching the National Science and Technology Innovation Exhibition and the National Robotics Competition, I felt this robot was truly mind-blowing!"

"With this robot, is health ensured?"

"Are you an idiot? This robot probably just monitors health conditions and when you are unwell, it could diagnose you immediately, propose treatment plans, or call emergency services when you have a heart attack."

"This robot seems crucial to the elderly."

"After it's available on the market, I will definitely buy one for my family, and also one each for my parents!"

"Start unboxing now, please."

"I can't wait to see Big White. Both Big White and Miss Flying Wheat Cake are so adorable!"

The comments in Miss Flying Wheat Cake's live stream kept flowing. Many viewers hurried her to unbox faster.

Because everyone wants to see Big White as soon as possible.

Even though everyone has already seen it on the live stream of the National Robotics Competition and the National Science and Technology Innovation Exhibition.

Within a few minutes, Miss Flying Wheat Cake had over 150,000 viewers in her stream.

The huge surge in popularity was something Miss Flying Wheat Cake never anticipated).

Not only did she receive a medical health robot from Mist City Arts and Science University, but she also gained popularity because of her unboxing live stream and became a popular creator on Bilibili!

Miss Flying Wheat Cake, who was always sharp-witted, already envisioned herself making a living as a Bilibili creator.

The plan was to create and upload daily content of Big White, she believed that the views would be really good.

Once she gains more followers, Miss Flying Wheat Cake can make a living as a Bilibili creator.

The thought of it made her very happy.

"Alright, let's unbox now. This is the package I picked up today. As we can see, it was shipped from Mist City Arts and Science University in Mist City. Hehe, I'm very excited."

Miss Flying Wheat Cake held a pair of scissors, ready to open the delivery box laid on the floor.

The delivery box did not look big, it was even smaller than a mini fridge or washing machine.

Miss Flying Wheat Cake picked up the scissors and started to cut the box.

Her roommates were very cooperative, especially the one who was in charge of filming. She seemed to have a knack for finding the perfect angle.

She always managed to perfectly capture both Miss Flying Wheat Cake's headlights and the unboxing process.

"Does this roommate understand?"

"At first, I thought I came here to watch an unboxing live stream, but now I've come to realize something!"

"Damn! This angle is perfect! Don't move. This angle is perfect!"

"What a white delivery box!"

"Such big scissors!"

"Brothers, charge for me!"

"This... True to its name, Big White is really big and white."

"Hang on, you LSP folks, did you come in to watch the unboxing and medical health robot Big White?"

"I admit I'm an LSP, but I really came in to watch the unboxing, who knew..."

"I'm ready, how about you, brothers?"

"Hahaha, damn, the bro who mentioned it earlier, you're really awesome!"

"I really came to see Big White!"

Somehow.

Even before the box is opened, the heat and audience numbers in the live broadcast room are soaring at a geometric rate.

Perhaps.

Is it because Big White is too attractive?

In the Principal's Office of the Administration Building of Mist City Arts and Science University.

Ding Yue is also watching Flying Wheat Cake's unboxing live stream.

"Principal Ding, we've prepared ten medical health robots, Big White, for Mist City Central Hospital, and they're already loaded onto the truck."

At this moment, Secretary Wen Ruohan came over and said.

Ding Yue felt Wen Ruohan coming behind him, and immediately subconsciously flipped his phone down.

Ahem.

Because of the angle and the image of the live broadcast just now, it's not suitable for a girl to see.

"Understood, after the people from Mist City Central Hospital come to take them, send the ten medical robots over."

Ding Yue nodded and said.

"Then, Principal Ding, when shall we go? Today, Mist City Central Hospital is hosting an inauguration ceremony for the pilot of medical health robot Big White. President Jiang Zhongbo specifically instructed us to attend."

Wen Ruohan asked hurriedly.

"Okay, I know about this, we will go directly with the transport truck when the time comes." Ding Yue said with a poker face.

Wen Ruohan felt that Principal Ding was acting a bit strange today.

"Principal Ding, what were you watching just now?" Wen Ruohan asked curiously.

"Ahem, nothing, it was just Flying Wheat Cake's unboxing live stream on Twitter."

Ding Yue wondered if the unboxing is done by now

The earlier camera angle should have ended, right?

So Ding Yue flipped his phone over and continued to watch the live stream.

But!

The screen was still the same!

Damn!

Does it take that long for you to open a delivery box?

DingYue complained in his heart, is this intentional? Is it!

"Ah!"

Wen Ruohan curiously leaned over and glanced at Principal Ding's phone screen, and the picture she saw was, well, quite something.

"Wow, this is so big and white."

"Big White is naturally big and white." Ding Yue nodded nonchalantly.

The two people's conversation seemed to be on different frequencies.

Wen Ruohan lowered her head again to look at her chest.

Feeling inferior...

About five or six seconds later, the camera finally shifted its angle, because Flying Wheat Cake finally used the scissors to open the delivery box.

"We can see that inside the delivery box packaging, there is a specially customized red cardboard box to contain the red box."

Flying Wheat Cake is pulling a red packaging box out of the delivery box while explaining.

Seeing as the medical health robot Big White is quite expensive, the packaging should reveal its noble price and protect it from impact.

So Mist City Arts and Science University specifically has a red packaging box for the medical health robot Big White.

Inside the red packaging box, there is foam protection on all four sides, and the red box of Big White is in the middle, which can better prevent impact.

However, as Flying Wheat Cake is opening the red packaging box, both she and nearly 200,000 netizens still do not know what's inside the red packaging box.

Meanwhile, the live stream screen.

Here it comes, here it comes.

That familiar angle again, that considerate roommate is back again...

Chapter 246: Hospital Pilot Test and Medical Insurance Card

The unboxing video of Bilibili's medical health robot, Big White, attracted countless netizens to watch.

Everyone wanted a soft, adorable robot like Big White.

But not everyone was lucky like Flying Wheat Cake.

She was the only person globally to own a medical health robot developed and manufactured by Mist City Arts and Science University.

For that reason.

This lucky lady transformed into a Bilibili uploader with countless fans.

Every day, she would interact with Big White, while donning cute little dresses, shoot a video, post on TikTok and Bilibili, and constantly gain followers. Her videos were super popular.

In addition to the medical health robot, Big White.

There were another ten medical health robots, which had been loaded onto vehicles at Mist City Arts and Science University.

Ding Yue, accompanied by his secretary Wen Ruohan, drove from the Administration Building to the department of mechanical engineering.

Since Tong Yihang and his group's global luxury cruise trip wasn't until mid-July, they were still at the university for the time being.

Just right.

Today, the ten medical health robots, Big White, were to be transported to Mist City Central Hospital, where a pilot test ceremony would be held. Following that, the ten medical health robots would officially begin operation at Mist City Central Hospital.

At this point, tech engineers familiar with operating the medical health robot Big White were needed on site.

No one could be more suitable than Tong Yihang and Liu Tiefei.

Before their departure for the global luxury cruise, they were temporarily in charge as the technical engineers for the pilot project at Mist City Central Hospital. During this time, they would train two other students, who would take over for them once Tong Yihang and Liu Tiefei left.

"Principal Ding, all ten medical health robots have been loaded onto the vehicles."

As soon as Tong Yihang saw Principal Ding arrive, he hurriedly gave a report.

The van was spacious enough for the ten medical health robots, Big White, considering Big White was an inflatable charging robot and wasn't very sizeable.

"Okay."

"This is Vice Dean Chen, who is in charge of the logistics at Mist City Central Hospital," Tong Yihang introduced a man around fifty years old standing next to him.

"Hello, Principal Ding."

"Hello, Vice Dean Chen."

"President Jiang Zhongbo is eagerly awaiting our arrival with the medical health robots at the hospital. Shall we depart now?" Vice Dean Chen shook hands with Principal Ding and suggested.

"Okay."

Ding Yue nodded, turning to get into the car.

Just then, he noticed a BMW 7 series and a Mercedes-Benz S-Class slowly driving up behind him.

Ding Yue was all too familiar with these two cars.

He picked up his Audi A8 on the same day as Huang Youjie and Xu Bin.

"What brings you two here?"

Ding Yue looked at Huang and Bin, who had just exited their cars, and asked with a smile.

"Didn't you say Big White is officially joining Mist City Central Hospital today? We wouldn't miss such a big event. Besides, there isn't much going on at the university anyway," Xu Bin shrugged and replied.

"Alright, let's hit the road."

The van drove ahead with the three luxury business cars following behind, slowly exiting Mist City Arts and Science University.

Then they entered the Ring Expressway, heading towards Mist City Central Hospital.

The citizens of Mist City had long known that Mist City Central Hospital would be receiving medical health robots from Mist City Arts and Science University today. Thus, early in the morning, the area outside Mist City Central Hospital was already crowded with people.

"Old Li, you came too?"

"Aunt Zhang, you're here as well."

"Uncle Chen, are you here to check your blood sugar?"

"I regularly come to the Central Hospital, but there are too many people. My son told me that the hospital will bring in new devices that can diagnose diseases by scanning."

"Yes, yes, yes, my grandson brought me here too."

"Grandpa Liu!"

Most of the crowd consisted of elderly people, but there were also quite a few younger people. Clearly, they were all here for the medical health robot, Big White.

After all, previous online reports and posts on Public Accounts had highly praised the medical health robot, Big White.

So, many people wanted to come to experience it themselves.

However, so far, only Mist City Central Hospital temporarily had a pilot testing collaboration with Mist City Arts and Science University involving the medical health robot, Big White.

That meant Mist City Central Hospital was the first and only testing location.

So, many people, whether they were sick or not, had come to Mist City Central Hospital. Some were eager to experience the medical health robot, Big White, while others were simply here to watch the excitement.

"Why haven't we seen the robot mentioned online yet?"

"I have no idea."

"Let's wait. The hospital said it would officially launch today."

"I feel like we came too early."

"Let's not enter the hospital lobby and hinder the patients who really need medical help."

"I intend to queue all day until I get to try it out."

More than an hour later, the convoy from Mist City Arts and Science University successfully drove in from the rear entrance of the hospital. The logistic staff from Mist City Central Hospital were ready to unload the vehicles.

President Jiang Zhongbo had long been waiting eagerly.

"Principal Ding, it's good to see you again."

President Jiang Zhongbo stepped forward with a benevolent smile and shook hands warmly with Ding Yue.

"It's been a while, President Jiang. Thank you for providing faculty resources for our medical college at Mist City Arts and Science University. I look forward to our future collaborations growing in number and quality."

Chapter 247: Hospital Pilot Test and Medical Insurance Card

Ding Yue felt that President Jiang Zhongbo was a decent person.

In the future, the Faculty of Medicine at Mist City Arts and Science University could cooperate more with Mist City Central Hospital.

"Great, I am looking forward to more collaboration with Principal Ding and Mist City Arts and Science University in the future."

President Jiang Zhongbo said with great delight.

Then Dean Jiang looked at the van, where the logistics department staff of the hospital were unloading box after box from the vehicle.

The boxes were externally wrapped, inside them were red packaging boxes, and inside those red boxes, the robot Big White was carefully packaged.

"Principal Ding, shall I take you to see where our medical health robot Big White will be working during the future pilot testing period?"

President Jiang Zhongbo knew that there would be some time before the unveiling ceremony of the pilot experiment would begin.

Hence he planned to give Principal Ding a tour of the Mist City Central Hospital.

Mist City Central Hospital covered a very large area, with one building shaped like an arc that spanned a great length. This building combined outpatient and emergency rooms, surgical departments, hospital offices, and wards into one comprehensive hospital building.

Additionally, there were two more buildings on the left and right, one of which was still part of the inpatient department, and the other was the logistics and dining hall building.

"Sure."

Ding Yue nodded in response.

He then followed President Jiang Zhongbo around Mist City Central Hospital, with his secretary Wen Ruohan, Huang, and Bin all trailing behind. Tong Yihang and his team were in charge of working with the logistics staff of the Mist City Central Hospital to unload the equipment.

The strength of Mist City Central Hospital was unquestionable.

It's the best hospital in Mist City and even one of the best in the southwest region.

If Ding Yue's Faculty of Medicine at Mist City Arts and Science University could establish a long-term relationship with Mist City Central Hospital.

The Faculty of Medicine at Mist City Arts and Science University would surely take off, developing rapidly and becoming a leader in medical education in both Mist City and the Southwest region.

Ideally, it would become a powerhouse on par with Mist City Medical University.

Of course.

The premise is that after this year's enrollment, many students would want to become medical students at Mist City Arts and Science University.

Truth be told, the benefits of the medical profession in the country are not that great.

This has deterred many potential medical students. Only those truly passionate about medicine and helping others would willingly enter the medical field and silently dedicate their lives to it.

In Ding Yue's view.

Medical students are pretty outstanding.

So if Ding Yue plans to focus on developing the Faculty of Medicine at Mist City Arts and Science University in the future, he'd definitely provide strong support, whether in the form of school scholarships or future employment opportunities for graduates.

If Ding Yue opened his own private hospital, the pay for doctors and nurses would be very generous.

After about half an hour walking around Mist City Central Hospital with President Jiang Zhongbo, it was almost time for the unveiling ceremony of the pilot experiment of the medical health robot Big White.

In front of the comprehensive building, on the large hospital square, Mist City Central Hospital had simply set up a platform.

At this moment, ten red boxes containing the medical health robots Big White were neatly arranged on the platform.

More and more people were gathering at the hospital square.

Apart from those who came specifically for the event, many hospitalized patients, feeling cheerful, also came over to see what was going on.

The unveiling ceremony of the pilot experiment of the medical health robot Big White officially kicked off with a few words from President Jiang Zhongbo of Mist City Central Hospital.

"Our hospital has established a partnership with Mist City Arts and Science University and has officially become the first trial test hospital for the medical health robot Big White. The Big White, which combines medical technology with convenience, will provide diagnostic services and treatment plans for everyone, enabling patients to diagnose efficiently and accurately!"

President Jiang Zhongbo detailed the primary functions of the medical health robot Big White.

It can scan patient data, analyze diseases based on scientific medical theory data, and then provide treatment plans based on the diagnosis.

"This medical health robot Big White is suitable for most common symptoms in dermatology, surgery, internal medicine, etc. If a diagnosis cannot be made or emergency treatment is required, please make sure to seek medical services in a hospital as soon as possible..."

President Jiang Zhongbo had quite a lot to say.

Everyone on the hospital square listened attentively.

Actually, everyone already knew the capabilities of the Medical Health Robot Big White: it can diagnose your condition, but obviously it can't perform emergency surgery because Big White is currently not advanced enough to perform emergency surgical procedures!

The purpose of using the medical health robot Big White in the hospital is mainly to facilitate the diagnosis of common diseases.

This could reduce the burden of year-round queueing in various departments of the hospital and also alleviate the difficulty of seeking medical services, which is a key issue.

"Dean Jiang, can we give it a try?"

"Can we test it?"

People in the crowd asked Dean Jiang curiously.

A few patients in hospital gowns were also eager to try the much-hyped medical health robot Big White.

"Principal Ding, what do you think, can we proceed?" Dean Jiang Zhongbo turned his head and asked Ding Yue.

Chapter 248: Hospital Pilot Test and Medical Insurance Card

Ding Yue on the stage immediately nodded: "Of course."

"Well, then we can let a patient come up and experience the medical care functions of Big White, the medical robot."

Dean Jiang nodded, then chose a patient who was using crutches and had a plaster cast on his leg.

This patient was carefully helped by the staff up to the stage.

At this moment.

Tong Yihang, under Principal Ding's instruction, activated a health robot, Big White.

"You can now stand in front of Big White, and then gently touch here, like touching the screen of a smartphone."

Tong Yihang was online, guiding the patient with the plaster cast on how to use Big White.

The patient did as Tong Yihang instructed.

"Hello, I am Big White."

Big White greeted the patient warmly.

"Scanning your health status."

"Scan completed, analyzing the disease based on the data."

"Hello, through scanning, I found that your left leg has a fracture. After the bone was set, it was not stable and prone to displacement again. Therefore, treatment was conducted using a small splint, plaster bandage, external fixation bracket, and traction

braking. You are currently in recovery, make sure to keep a good mood, Big White wishes you good health."

When Big White's diagnosis echoed, the crowd let out a gasp.

The patient with the fractured leg was also very surprised.

Big White not only diagnosed his fracture but also knew that his fracture had been treated and immobilized.

Indeed, it is a high-tech medical robot!

The man with the fractured leg was very excited in his heart, being the first patient to be diagnosed by the medical robot.

Moreover, Big White's voice is really nice, the man with the fractured leg even reached out, and with Tong Yihang's permission, he gently poked Big White.

That soft feeling was simply magical.

Plus, Big White told him to keep a good mood during the recovery period after the diagnosis, wow, it was warm.

The man with the fractured leg, a grown man, was touched by Big White.

Next, President Jiang Zhongbo selected another ordinary citizen who came to the hospital for treatment. After Big White's scanning and diagnosis, this was a patient with diabetes.

Big White gave the corresponding diagnosis, treatment plan, and medical advice, reminding the patient to follow the doctor's advice.

After the experiences of two patients, they were both very satisfied with Big White.

Mainly being diagnosed by Big White, under this warm and cute image, gives people a warm feeling. Big White's voice, appearance, and functions allow ordinary patients to diagnose their conditions conveniently and quickly, saving the trouble of queuing for registration.

Of course.

Combining Big White, the health care robot, with registration for medical treatment can make the hospital's medical efficiency even higher.

At this time, Ding Yue was on the stage holding the inauguration ceremony of Big White's pilot test with President Jiang Zhongbo.

As for Xu Bin, he was very busy, communicating with the technical staff of Mist City Central Hospital about the Medical Insurance Card System and charging system.

"Okay, you can install your electronic charging system and Medical Insurance Card System into the chip."

Xu Bin stated that this is not a big problem.

Because the ten health robots Big White, provided by Mist City Arts and Science University to Mist City Central Hospital, are all original models.

But to use them normally at the Mist City Central Hospital, it is certainly necessary to connect to the hospital's electronic charging system and the Medical Insurance Card System.

After all.

When patients use the medical robot Big White to diagnose the disease, once the diagnosis is made and a medical plan is written, there will, of course, be a charge.

Just like the registration for medical treatment requires a fee.

But this fee will certainly not be high, and you can use a medical insurance card.

"Okay, but to connect to our hospital's electronic charging system and Medical Insurance Card System, I need to coordinate with your technical staff."

The technical staff at the hospital nodded and said.

"I am."

Xu Bin smiled and replied.

For Xu Bin, this little thing is nothing, his computer technology has already reached a pretty high level.

"Hold on a moment."

After Xu Bin finished speaking, he walked towards where his car was parked.

In fact, Xu Bin was well-prepared, bringing his dedicated laptop equipment.

Before he came, Xu Bin thought that if Big White, the health care robot, was going to be tested in the hospital, it would have to connect to the hospital's electronic charging system and the Medical Insurance Card System.

Soon, Xu Bin brought his equipment over.

Then, with the help of the hospital's technical staff, he was ready to install the electronic charging system and the Medical Insurance Card System of Mist City Central Hospital into the chips of the ten health care robots, Big White.

"Your hospital's electronic charging system and Medical Insurance Card System are not complicated, it'll be quick."

As they watched Xu Bin operate rapidly on his computer.

The technical staff of the hospital were all stupefied.

The computer skills of this young man in front of them are truly impressive!

"Tiefei Liu."

Xu Bin called Liu Tiefei, because Tong Yihang was on the stage, so he had to instruct Liu Tiefei.

"Director Xu."

Liu Tiefei hurriedly came over and asked, "Do you need anything?"

The technical staff of the hospital was dumbfounded when they heard Liu Tiefei call Xu Bin Director, being this young and already a director?

Chapter 249: Hospital Pilot Test and Medical Insurance Card

Nothing beats good tech indeed!

"Connect this to the interface on Big White's chip," Xu Bin handed Liu Tiefei a transmission cable, instructing him accordingly.

"Yes, Principal Ding."

Liu Tiefei, being part of the core manufacturing team of the robot Big White, knew all about its interfaces and operations, making Xu Bin's detailed instructions unnecessary.

Liu Tiefei then went to the first medical robot and plugged the transmission cable into the chip interface.

From there, Xu Bin started loading the electronic billing system and the Medical Insurance Card System of Mist City Central Hospital onto Big White's medical chip through a console behind the stage.

"Iron, what's going on?" Tong Yihang, who was on stage, frowned and asked when he saw Liu Tiefei plugging in the transmission cable.

"Director Xu is loading the electronic billing system and the Medical Insurance Card System of Mist City Central Hospital onto our medical robot," Liu Tiefei whispered back his explanation.

Upon hearing this, Tong Yihang went over to Principal Ding and repeated what he had just been told.

After Ding Yue processed the information, he gave a slight nod before turning to President Jiang Zhongbo. "President Jiang, our technical staff are currently collaborating with your hospital's technical team to load your facility's electronic billing system and Medical Insurance Card System onto our medical robot, Big White. Once your operating systems are loaded, the robot can be used to treat patients regularly."

Having heard what Principal Ding had to say, President Jiang Zhongbo asked with a chuckle, "So you're saying that patients can directly use their medical insurance card for a diagnosis with Big White?"

"Yes!"

Ding Yue nodded in response.

Upon hearing this, President Jiang Zhongbo immediately spread the word that Big White could also accept medical insurance cards.

Xia Country's medical insurance policy is pretty great for examinations and minor illnesses, even for some major diseases. For the patients, the news that advanced medical equipment like a health care robot accepts medical insurance card for its services is undoubtedly a relief.

After the unveiling ceremony.

An hour passed and Xu Bin had successfully loaded the electronic billing system and the Medical Insurance Card System of Mist City Central Hospital onto ten of Big White robots.

With this...

The ten Big White medical robots are officially ready to start their test run at Mist City Central Hospital.

As per the hospital's plan, all ten Big White robots will be situated within the comprehensive building.

There will be ten Big White consulting stations.

This way, the concentration of patients will be dispersed, allowing the ten stations to efficiently serve the patients in conjunction with the outpatient departments daily.

"Aunt Zhang, did you bring your medical insurance card?"

"Let's go and have Big White check me up using my medical insurance card."

"I don't suspect that anything is wrong with my health, but I find this fun. Let's also go for a check-up."

"Grab your medical insurance card, let's head to Big White's consulting station!"

"You gotta admit, having this 'White' in Mist City Central Hospital has made things a lot easier."

"Oh no, Aunt Zhang might be diagnosed with diabetes..."

The crowd that initially gathered on the hospital square quickly dispersed towards the various consulting stations to get scanned by Big White.

This initial trial at Mist City Central Hospital will take at least a month.

Once the initial trial hits its targets, the hospital will then use the data from the trial to apply for Big White's medical device qualification from the national medical department.

Only after Big White qualifies as a medical device can it be sold commercially, otherwise, even if various national hospitals wish to buy the medical robot and have placed numerous orders, Ding Yue wouldn't be able to sell.

Therefore, the initial trial at Mist City Central Hospital is very important. Only once Big White qualifies as a medical device can it start generating revenue for Mist City Arts and Science University and the Feiyue Group.

However, Mist City Arts and Science University's main focus is on education.

Ding Yue is more interested in developing Mist City Arts and Science University.

As for the commercial aspects of products developed by the university's research projects, such as Big White, they are to be handled by the Feiyue Group, which backs Mist City Arts and Science University.

But Ding Yue doesn't really have an interest or a knack for dealing with the commercial economy of the Feiyue Group.

Therefore...

Ding Yue is considering that it's about time to hire a professional manager to take over the duties of the Feiyue Group...

Chapter 250: Elite Professional Manager Sister-Type

Mist City Central Hospital.

Cafeteria.

Ding Yue and his group from Mist City Arts and Science University, along with Jiang Zhongbo and his team from Mist City Central Hospital, were having lunch in the cafeteria.

Being honest.

The food at the Central Hospital's cafeteria fell a bit short compared to the fare at their own University's cafeteria.

After all, the University's cafeteria not only had Ding Yue's mother, Zhang Yuping, but also students specializing in culinary arts, making it natural that their meals were more delicious.

"Principal Ding, if your University has any advanced medical technology in the future, please remember us at Mist City Central Hospital," said President Jiang Zhongbo during their lunch.

"Of course, there is no problem with that."

Ding Yue nodded his head.

Generally, any medical research achievements or technological equipment that the University can contribute will require pilot testing.

And unsurprisingly.

Mist City Central Hospital is the best place for the University's Medical School to pilot test their innovations.

"Regarding the employment of your medical students after graduation, we at Mist City Central Hospital will also actively help you solve this issue," Jiang Zhongbo added.

That means, after the medical students of the University graduate and they need a job, they would be welcomed to intern at the Central Hospital.

If they perform well during their internship, they could be considered for a full-time job offer.

In this way,

Mist City Central Hospital can help the University improve its employment rate.

The importance of a university's graduate employment rate doesn't need much explaining.

Dean Jiang is a decent person, he is not solely concerned with the benefits of Mist City Central Hospital, he also considers the Medical School of Mist City Arts and Science University after establishing a cooperative relationship.

"Thank you, President Jiang," Ding Yue replied with a smile.

In reality, however.

Ding Yue was somewhat reluctant to give the Central Hospital the medical students that his school had trained.

That's because in the future, Ding Yue is planning to establish a private hospital of its own, either belonging to Mist City Arts and Science University or Feiyue Group.

At that time, they will definitely need a large number of medical talents.

"President Jiang, I am considering that within the next few years, our Mist City Arts and Science University, or my Feiyue Group, will establish our own subsidiary hospital. At that time, we need your guidance. I hope you wouldn't mind sharing your wisdom," Ding Yue suddenly said to President Jiang.

Hearing this, President Jiang nodded appreciatively, "Principal Ding, you have great ambition. Building a hospital is a major investment project, you really are a man of vision."

Actually,

President Jiang somewhat disapproved of private hospitals.

That's because private hospitals usually lack advanced medical technology, yet their fees are often very expensive, which can damage the reputation of the hospital.

However,

Well-run private hospitals are a different story.

Jiang Zhongbo firmly believed in Principal Ding. With his capabilities and foundations, he might truly establish a good private hospital in Mist City in the future.

By that time, the medical resources in Mist City would be even richer, which would definitely be good news for the citizens of Mist City.

"You flatter me, President Jiang. I just want to contribute to the medical issues of our Mist City, or even our country," Ding Yue said with a laugh.

What he said was one thing, but in reality, Ding Yue knew a hospital is a money-making machine, even more so than a literal money tree.

With his University's medical school, it would be foolish not to establish his own hospital to absorb the talented medical graduates his school was churning out.

After lunch,

Ding Yue discussed the upcoming trial of Big White, the medical robot, as well as applying for its medical device qualification with President Jiang.

In the next few days, Tong Yihang and Liu Tiefei from Mist City Arts and Science University would come to Mist City Central Hospital to provide technical guidance for the trial of Big White.

However, they were scheduled to go on a global luxury cruise in mid-July.

So, two other students from the University would replace them then.

The hospital was open to these arrangements and President Jiang even suggested that Tong Yihang and Liu Tiefei could train their technical guides.

As for the matter of applying for Big White's medical device qualification,

Once the one-month trial at Mist City Central Hospital was over, they could apply for this qualification from the national medical authorities.

Once they had the trial data from the Central Hospital, the chances of getting this qualification would increase significantly.

In the words of President Jiang, there's basically no problem.

In the afternoon.

Ding Yue left the Central Hospital with his team from the University and returned to the campus by car.

On the way, while driving, Ding said to Wen Ruohan, his secretary on the passenger seat, "Student Wen Ruohan,"

"Principal Ding, go ahead," replied Wen Ruohan.

Once Ding called out her name, it was a reflex for her to know that he had something to instruct her. It could be big or small.

Thus, as soon as she heard Principal Ding called her, she immediately perked up and paid full attention.
