

F. University 351

Chapter 351: Academic Overlord Totem!

"Good afternoon, Director Wu."

Liu Ping greeted Director Wu politely.

"Director Wu, this is the student I mentioned earlier, Liu Ping, who is good at Tenon-Mortise Craftsmanship. He primarily studies law, but I believe that Tenon-Mortise Craftsmanship can be considered his secondary specialty."

Ding Yue introduced Liu Ping to Wu Changdao once again.

He had mentioned Liu Ping earlier while discussing traditional craftsmanship majors at the Institute of Traditional Chinese Studies with Wu Changdao.

"Tenon-Mortise Craftsmanship is indeed one of our Xia Country's distinct traditional crafts, but the number of people who still retain this skill is dwindling, isn't it?"

Wu Changdao couldn't help but sigh.

"True," Ding Yue agreed, then turned to look at the Tenon-Mortise Luban Lock held in Liu Ping's hand with curiosity. "Liu Ping, have you finished making this Tenon-Mortise Luban Lock?"

It was clear that the Tenon-Mortise Luban Lock in Liu Ping's hand was now completed.

"Yes, I worked on it in my dormitory after returning and made the last few parts. Now, this Tenon-Mortise Luban Lock is completed."

Liu Ping held his Luban Lock and approached Ding Yue's desk. "Principal Ding, I've decided to give this Tenon-Mortise Luban Lock to you. I hope you can accept it. I also want to thank you for your help and encouragement."

The sincerity in Liu Ping's eyes was undeniable. From his arrival at Mist City Arts and Science University last night till today, Principal Ding had helped him considerably, even allowing him to spend a night in his apartment.

His grandfather had always taught him to be grateful and reciprocate kindness.

Without much to offer in return to Principal Ding, Liu Ping decided to give him the completed Luban Lock. He intended to work hard at Mist City Arts and Science University and strive to make a name for himself. He considered this as a way of repaying Principal Ding.

Understanding Liu Ping's sincerity and earnestness from his gaze, Ding Yue smiled and accepted the Luban Lock from Liu Ping. "Alright, as it's a handicraft gift from you, Liu Ping, I accept it."

Ding Yue placed the Luban Lock he received on his office desk. It fit quite well with the surroundings.

"Liu Ping, I asked you here for another reason. We would like you to promote Tenon-Mortise Craftsmanship. Our Institute of Traditional Chinese Studies at Mist City Arts and Science University has decided to establish a major focusing on Traditional Tenon-Mortise Craftsmanship."

Ding Yue told Liu Ping with a smile.

Upon hearing this, Liu Ping was thrilled inside.

He never imagined that he could contribute towards the establishment of a new major at the university. Initially, Tenon-Mortise Craftsmanship was just a niche traditional craft he had inherited from his grandfather.

Considering that Mist City Arts and Science University would create a major to study it, it showed that the university valued traditional crafts greatly.

"Principal Ding, most of our traditional craftsmanship majors at the Institute of Traditional Chinese Studies have very few students. Some majors only have one or two students. Does it not seem too scattered if we establish all?"

Wu Changdao had been wanting to bring up this issue with Principal Ding for a while.

"Tell me your thoughts then," Ding Yue asked for Wu Changdao's opinion.

"After discussion, we at the Institute think that we can merge traditional crafts such as woodcarving, tenon-mortise, pottery, weaving, paper cutting, etc., into one traditional crafts major and set relevant courses. What do you think, Principal Ding?"

Wu Changdao voiced his and the Institute's other teachers' thoughts.

Upon hearing this, Ding Yue considered it briefly, feeling that Wu Changdao made a good point.

The number of students in traditional craftsmanship majors indeed couldn't compete with the popular National Arts. So, it made more sense to establish all as one traditional crafts major.

"That's a good idea. We should focus the resources but not compromise on teaching quality, understand?" Ding Yue agreed with Wu Changdao's idea.

If a specific traditional craft attracts more students in the future, it could be separated into an independent major at that time.

For the time being, it was better to amalgamate, enabling effective use of resources.

Ding Yue spent the afternoon discussing the Institute's matters with Wu Changdao in his office, and the afternoon passed by unconsciously.

After having dinner in the evening, Ding Yue went back to his apartment.

Huang and Liu Ping, the new law student, had become close in just one day.

In Huang's words, Liu Ping seemed to have a natural talent for studying law and had an impressive foundation. He knew many provisions of the Criminal Law even before the formal classes had started.

This showed that Liu Ping had done a lot of legal studies before coming to enroll.

Indeed, during Liu Ping's summer holiday, the only thing he was interested in doing after work at the construction site was reading a law book and memorizing various legal provisions.

Given Huang's evaluation of Liu Ping, Ding Yue thought that Liu Ping would undoubtedly become an outstanding talent in law studies, just like Huang, once subjected to the Study Buff.

Speaking of the Study Buff, Ding Yue realized he needed to prepare for it.

Just like the previous year, the best opportunity to use it would be at the Military Training Mobilization Conference when all the new students gathered together. Ding Xiao could redeem the Study Buff Scroll from the system mall and use it on all the students.

Chapter 352: Academic Overlord Totem!

As for how much a student's learning efficiency and brain development can be improved, it depends on each individual's situation.

After all, the effect of the study BUFF scrolls varies for each person.

Swipe!

Ding Yue was leaning on the couch in his apartment, a thought initiated the system interface.

Then entered the system shopping interface.

Since Ding Yue has now upgraded the level of Mist City Arts and Science University to "Minor Achievements", in the "Minor Achievements" level system store, Ding Yue can buy some higher-level items that increase study BUFFs.

In the previous level store, Ding Yue only bought the Junior Focus Scroll and Junior Scroll of Wisdom Light.

"Now that it has reached the Minor Achievements level, I should be able to buy intermediate scrolls, right?"

Ding Yue muttered, and looked for items that could give students study BUFFs in the Minor Achievement level system store.

However,

Ding Yue searched for a long time, but he did not find the Intermediate Focused Scroll or the Intermediate Wisdom Light Scroll he wanted.

Suddenly, Ding Yue found out.

It turns out that this item in the Minor Achievement system store doesn't go by this name.

"Academic Overlord Totem?"

Ding Yue finally found what he wanted.

This item named "Academic Overlord Totem" has similar effects to the Focused Scroll and the Light of Wisdom Scroll, and it even possesses some other effects.

Ding Yue checked out this "Academic Overlord Totem".

Item: "Academic Overlord Totem"

Price: 200 Reputation points

Effect: After using this totem, it covers the entire Mist City Arts and Science University campus. Anyone studying or reading on campus will gain passive effects such as [Concentration], [Light of Wisdom], and [Unrestricted Imagination]. The strength of these effects vary for each individual!

Duration: 4 years

Note: Students who already have study BUFF effects do not benefit from this totem effect!

After viewing the details of this "Academic Overlord Totem" item, Ding Yue decided to buy it.

Once you buy this thing, it would directly stand in the Mist City Arts and Science University, covering the entire campus, and its duration is 4 years.

Four years is roughly the complete time from enrollment to graduation.

Current second-year students who were influenced by the Junior Focused Scroll and Junior Scroll of Wisdom last year do not enjoy the effect of this "Academic Overlord Totem".

Indeed, in any case, old customers have no rights at all!

This is also true for the Mist City Arts and Science University.

This means that if Ding Yue buys this "Academic Overlord Totem", the new students of this year will be able to enjoy richer study BUFF effects. No, more precisely, they would be enjoying Overlord buffs.

As for how much ability these students, most of whom failed the college entrance examination, can show after the buffs are applied, it depends on their own efforts and fate.

Like Tong Yihang and Liu Tiefei, through their persistent study, combined with the effect of the study BUFF, they became the most outstanding students in the mechanical department from last year's cohort.

"I want to buy the [Academic Overlord Totem]!"

With a slight movement of his mind, Ding Yue said to the system.

Ding!

"Host, you are about to use 200 reputation points to purchase the Academic Overlord Totem merchandise. Do you confirm to pay and proceed with the purchase?"

The system prompt sounded in his mind.

"Confirm purchase!"

Ding Yue didn't hesitate at all.

Ding Yue can afford 200 reputation points, and this "Academic Overlord Totem" is something that Ding Yue must use after recruiting the freshmen.

Otherwise, the freshmen Ding Yue recruited into Mist City Arts and Science University would definitely be 99.9% academic dregs!

The only academic overlord would probably be his sister, Ding Xiaoyou.

Chapter 353: Fake Medical Robot

August 24th.

In an old neighborhood in Haicheng.

An old lady is bragging to the other seniors around her that she obtained a private health robot through her inside connections.

"Did you really manage to buy a health robot?" A white-haired but energetic old lady curiously asked.

Wang Cuifen nodded proudly, "Of course, my son's classmate works at a large pharmaceutical company, he got hold of an internal purchase privilege. People haven't even started selling it publicly yet."

"Your son is really good to you."

"I've wanted a medical health robot for a while, it's quite stylish, and it has great functions too."

"But I haven't heard that Mist City Arts and Science University's medical health robot Big White is formally in production and sales yet?"

An old man raised his doubt.

Wang Cuifen glared at this old man, "What would you know! My health robot is made by a big company, it was not cheap."

"How much for one?"

"Yes, yes, how much?"

"Is it useful?"

"I heard it can diagnose any disease, and can even treat you when you get sick?"

"That's exaggerated, it's supposed to provide treatment plans."

"Oh yes, yes, treatment plans, treatment plans, curing diseases still requires going to the hospital."

"Cuifen, how much is a health robot?"

Seeing so many people around her eagerly asking her, Wang Cuifen felt greatly satisfied, then she responded: "200,000 per unit!"

"200,000, it doesn't seem that expensive."

"I think it's a bit expensive."

"Think about it, when you suddenly fall ill at home, the health robot can call 120 for you right away, and even find medicine for you to take. I think 200,000 is worth it."

"Only 200,000, my son's annual salary is already 800,000, I will let my son buy one for me."

"Are you still using your son's money? My retirement money plus savings is enough for me to buy one."

"Old Li, I can't compare with you."

"I bought a set of health products that can prevent and treat diabetes, and several pairs of health-care shoe pads last year. Look at me now, don't I look energetic?"

"We're getting old, so we need to pay attention to our health. Spending 200,000 to buy a health robot to ensure health, I think it's worth it!"

Due to the promotion of the Rentang Medical Technology Group among the elderly, the Rentang Health Robot has already penetrated the hearts of the elderly.

These elderly people thought that the Rentang Health Robot was the popular health robot Big White they had heard about online. Even their children had been praising that health robot before.

So many elderly men and women who didn't know the truth were deceived by the promotion of the Rentang Medical Technology Group.

In reality, the health robots that were being produced on the Dingli Group's production line at that moment were all cheap knockoffs of the Big White.

They had changed the appearance a bit, changing Big White's polyvinyl alcohol fiber body into a white metal shell. Many functions were also discarded due to cost and technological constraints, turning into a simplified version.

It's fair to say that Dingli Group's manufactured health robots were simply humorous scams created to deceive the elderly, under the label of "health robots".

Just like all the health-care products that the Rentang Medical Technology Group had been selling to the elderly for many years.

They claimed the products could prevent and treat heart diseases, bone proliferation, and even prevent cancer. They were actually very cheap products but were sold at a high price.

What was most important was that many elderly men and women who didn't know the truth actually spent a lot of money to buy a bunch of those products.

It's because of this successful marketing experience that the Rentang Medical Technology Group was planning to make a fortune again by riding on the trends from Mist City Arts and Science University's medical health robot, the Big White!

Luo Peng, a mechanical engineer of the Dingli Group, had decided to "defect" to the Feiyue Group because he could not stand the collusion between his company and the Rentang Medical Technology Group.

With the Rentang Medical Technology Group's constant propaganda among the elderly, countless elderly men and women were being indoctrinated daily and waiting to buy the health robot priced at 200,000 yuan each.

Moreover, the Rentang Medical Technology Group had already started presale.

The number of pre-orders on their official website had already exceeded 30,000 machines.

In fact, those who were able to pre-order on the official website were the sons and daughters of those elderly people.

They were also deceived, thinking that the Rentang Health Robot of Rentang Medical Technology was the same as the medical health robot of Mist City Arts and Science University, or at least it was a health robot authorized by that technology, otherwise, why would it be sold at a high price of 200,000 yuan?

In addition to online pre-sales, sales representatives from the Rentang Medical Technology Group also signed a large number of pre-purchase agreements offline with elderly folks all over the country.

Meanwhile, on the production line of the Dingli Group, they were working overtime to mass-produce the Rentang Health Robot.

Every single unit is filled with massive profit, which is the powerful motivation driving them to do such a thing!

In Xu Wei's office, he was on the phone with Liu Guanghui from the Dingli Group.

"President Xu, how many orders are you planning to ship in the first batch?" Liu Guanghui asked about the situation so he could adjust his company's production accordingly.

If the amount is substantial enough, the Dingli Group can fully suspend all other production lines temporarily, and devote them completely to the production of orders for Rentang Medical Technology Group's health robots.

"We should be looking at about 200,000 orders." Xu Wei said with a smile: "And this is just the beginning. I estimate that our elderly folks in China could deliver us more than 500,000 orders!"

"200,000 orders, with each health robot costing 200,000, this..."

Liu Guanghui didn't dare to do the math.

Besides the low production cost and material cost of about 7,000 or 8,000 yuan, and sales cost, the profit within these is still very handsome.

And his Dingli Group could also rake in huge profits from it!

In fact, Ding Yue had some grasp of the production situation at the Dingli Group through Luo Peng.

Through the production situation of the fake Big White robots by Dingli Group, Ding Yue could also infer the sales situation at the Rentang Medical Technology Group.

With the Dingli Group's powerful manufacturing capacity, it would not be long before the Rentang Medical Technology Group would sell a large number of these knockoff health robots.

Ding Yue was ready to seize the opportune moment to deliver the deadliest blow to both the Dingli Group and the Rentang Medical Technology Group.

However, these days, Ding Yue was most concerned about the registration status of the new students at his Mist City Arts and Science University.

The total number of new student enrollments on the first day, August 23, was about 13,000.

It didn't reach the target number for the system task, but this was not a big issue, or to be exact, there was no issue at all, because student registration would continue for several more days.

On August 24, according to Qi Chunsheng, the head of the Academic Affairs Office, the total number of new student registrations was about 6,000.

The number of new student registrations for the first and second days already exceeded 15,000. Ding Yue successfully fulfilled his [2021 Enrollment Task] target, but he did not receive a reward on August 24, because the reward would only be issued after the task was successfully completed.

After confirming he had accomplished his [2021 Enrollment Task], Ding Yue was no longer worried, and even started to look forward to the [Level 3 University Treasure Chest] in the task reward, of course, along with one billion yuan in school funding and 1,000 reputation points.

Besides these, the tuition and accommodation fees paid by new students after registration is also a very substantial income.

Last year, with more than 9,600 students, they received about three billion yuan. The number of students this year has more than doubled, so Ding Yue estimated that this year's new student tuition and accommodation fees, Mist City Arts and Science University should be able to receive around seven or eight billion yuan.

Then, the 9,600 second-year students would need to pay their 2021 tuition and accommodation fees, which would be about three billion yuan!

Adding this all up, they could comfortably rake in over ten billion yuan from their student leaks this year!

And this is only the situation when there are just two grades of students. After two years, when all four grades of students are accepted at Mist City Arts and Science University - first, second, third, and fourth year students - Ding Yue didn't dare to even think about how much tuition and accommodation fees alone would be.

Although these funds would be taxed, Xia Country in this parallel world did provide significant tax benefits for private education.

About three thousand people reported successively on August 25 and 26.

On the morning of August 27.

In the principal's office in the Administration Building.

Qi Chunsheng, the head of the Academic Affairs Office, was reporting the detailed registration situation of new students to Principal Ding.

"Principal Ding, as of last night, our school has officially admitted 22,761 students this year, among which the enrollment numbers for the Computer, Mechanical, Architectural, E-sports, Medical, Physics, Chemistry, Law, Art, Film and Television, and Institute of Traditional Chinese Studies have significantly increased compared to last year."

"In addition, the number of students in most other traditional specialties has also generally increased quite a bit."

Ding Yue didn't listen very carefully to Qi Chunsheng's report, because he could look at the data reports from the Academic Affairs Office later.

What Ding Yue was most concerned about right now was his enrollment task reward.

At this moment, a familiar system prompt finally sounded in Ding Yue's mind.

Ding!

"Congratulations, Host, for successfully completing the [2021 Enrollment Task]."

"Congratulations, Host, for receiving the [2021 Enrollment Task] reward: Reputation Points +1000, School Funds +100 million yuan, [Level 3 University Treasure Chest +1]."

What Ding Yue had been most looking forward to, naturally, was this [Level 3 University Treasure Chest]. This is the highest level University Treasure Chest that Ding Yue has received so far.

He was wondering what good items can be drawn from inside it...

Chapter 354: Photolithography Machine Manufacturing Technology

Item: [Level 3 University Treasure Chest]

Type: Education tool

Usage: Opening a [Level 3 University Treasure Chest] will give you ample rewards!

Looking at the item in his system inventory shining with a faint silvery light called the [Level 3 University Treasure Chest], Ding Yue could not help but feel a bit excited.

It was his first time opening a Level 3 University Treasure Chest.

"Whew."

After taking a deep breath, Ding Yue made a slight mental command.

Ding!

"Congratulations Host for opening a [Level 3 University Treasure Chest]. You have obtained—the technology for manufacturing photolithography machines!"

Upon hearing the reward notification of the treasure chest, Ding Yue was a bit taken aback.

Holy crap!

The [Level 3 University Treasure Chest] really lived up to its title, producing better items as it leveled up.

Technology for manufacturing photolithography machines!

This technology was amazing! Only a handful of global enterprises could master the manufacturing technology for photolithography machines. Most importantly, Xia Country couldn't develop their photolithography machines.

This technology was extremely important both domestically and globally because chips are produced by photolithography machines.

The more advanced the photolithography machine, the more advanced the chips it can lift.

What a coincidence.

At this stage, Ding Yue and several professors from Jiangnan University of Science and Technology are researching GaN semiconducting materials.

Once successful, GaN semiconducting materials can be used to substitute silicon to manufacture chips, which will greatly enhance the chips' performance.

Although he got the photolithography machine manufacturing technology from the [Level 3 University Treasure Chest], it was only the technical knowledge. Developing a sophisticated photolithography machine was not as easy as it seemed.

Most importantly, this technology obviously could not be applied to one single person.

Because photolithography machines involved multiple professional fields such as optoelectronics and mechanical engineering, material chemistry, etc.

If his school, Mist City Arts and Science University, were to master this photolithography machine manufacturing technology, it would require countless human and material resources. Most importantly, it's possible that they still might not surpass ASML Company!

Therefore, Ding Yue needed to be careful about using the photolithography machine manufacturing technology when he opened it out of the [Level 3 University Treasure Chest].

He must ensure that his Mist City Arts and Science University excelled in optoelectronics and material chemistry. Then, he could use this photolithography

machine manufacturing technology to create a photolithography machine experiment project.

"Principal Ding? Principal Ding?"

Just as Ding Yue was thinking about how he would use the photolithography machine manufacturing technology he'd just acquired, he heard Director Qi Chunsheng of the Academic Affairs calling for him.

"Hmm."

Ding Yue responded, temporarily closing his system interface and looking at Qi Chunsheng.

"Then I'll take care of it."

Qi Chunsheng said.

However, Ding Yue was a bit confused. He had been too focused on the photolithography machine manufacturing technology just now. He seemed to have missed exactly what Qi Chunsheng had previously said. He only remembered that he started by reporting the enrolment of this year's freshmen to him.

"What did you just say?" Ding Yue asked, frowning slightly as he looked at Qi Chunsheng.

Qi Chunsheng hesitated for a moment, then said, "Principal Ding, I just said that I'll go contact the Mist City Military Art College. We need over two hundred instructors since we'll be conducting military training in a few days."

Uh...

Ding Yue indeed did not hear Qi Chunsheng mention anything about military instructors just now.

However, now that it was brought up, Ding Yue instructed, "Alright. If we need two hundred military training instructors, then get a hundred men and a hundred women. And we'll still partner with the Mist City Military Art College."

"Yes, Principal Ding." Qi Chunsheng nodded quickly.

Last year, Ding Yue found a hundred military academy students from the Mist City Military Arts College to conduct military training for his university's freshmen.

This year, the enrollment in Mist City Arts and Science University exceeded 22,000 students, so they obviously needed far more military training instructors, more than double.

Fortunately, the Mist City Military Art College could provide enough instructors, as long as Mist City Arts and Science University paid the right amount.

Ding!

"Congratulations Host for getting a University Task - [2021 Freshman Military Training]."

"[2021 Freshman Military Training] task: Successfully complete the 2021 Freshman Military Training plan. Reward: Reputation points +100."

The reward for this year's military training task seems to be a little less!

Moreover, compared to last year's military training task, the difficulty seems to be much less because last year's task required a satisfactory rate from students. Only after reaching the satisfaction rate would the military training task be considered complete.

But this year is much simpler.

They just need to successfully complete the military training.

Ding Yue was pondering over why the difficulty and reward of the same military training task would drop. It should be that the system thinks that he is no longer focusing on military training when building Mist City Arts and Science University, right?

After all, Mist City Arts and Science University has gradually gotten on track this year. Last year, when he was just transitioning a fake university into a real one, military training was very important.

If that's the case...

Then as long as this year's military training is completed smoothly, Ding Yue will no longer focus on it, as there are still quite a few things he needs to push forward.

For instance, his sister Ding Xiaoyou's energy chemistry lab, the animated film "Super Combat Team" which is slated to premiere on National Day, and the ongoing preparations for heavy hits against the Dingli Group and Rentang Medical Technology Group.

Since the day before yesterday, Luo Peng from the Dingli Group started providing An Yujia with relevant evidence and documents.

Therefore, Ding Yue had Huang Youjie form a legal team with teachers and students from Mist City Arts and Science University's Law School, prepare the materials, and proceed with the lawsuit against the Rentang Medical Technology Group and Dingli Group.

In the office, after Director Qi Chunsheng left, Ding Yue dialed a number to the principal's office at the Mist City Military Art College.

They had a brief chat about the training instructors, it was mainly just to keep the communication open.

The specifics could be left to Director Qi Chunsheng to handle.

Then Ding Yue stood up, ready to stroll around the building and to activate the [Academic Overlord Totem] he'd purchased from the system mall.

Because after the new students finished registering, over twenty-thousand of them would familiarize themselves with the campus for a few days, and from September onwards, they'll participate in new student military training.

So Ding Yue guessed that the place they'd want to visit most these few days, would be the Bookship Library.

"Principal Ding, where are you going?"

Secretary Wen Ruohan followed quickly after seeing Principal Ding head towards the office exit.

"Going for a stroll."

Ding Yue casually responded to Wen Ruohan.

The two just left the administration building and immediately saw Ding Xiaoyou not far away coming towards them.

"Yo, isn't this our Valedictorian Ding?"

Ding Yue had not seen his sister Ding Xiaoyou for a long time, and started jesting the moment they met.

The two siblings often act playfully like this.

"Where are you guys heading to?" Ding Xiaoyou asked curiously when she saw her brother Ding Yue coming down the stairs.

"Just going to have a look around the campus. By the way, Xiao You, how's the progress on the installation of equipment for the energy chemistry lab?"

The moment Ding Yue saw his sister Ding Xiaoyou, he immediately thought of the energy chemistry research lab equipment that cost 145 million yuan.

This was the college entrance gift Ding Yue specially prepared for his sister Ding Xiaoyou!

"It should be installed in about a week. Ha ha ha, I'm so excited. I will be able to start the experiment projects I want to do."

Ding Xiaoyou answered excitedly.

"Hey, wait a minute, aren't you starting your research experiment even before school starts?" Ding Yue was taken aback and asked his sister.

"Can't I? I enrolled in energy chemistry, but I have already self-studied all the courses in the energy chemistry major."

Ding Xiaoyou answered while shrugging.

"You've...self-studied everything?" Ding Yue stared at Ding Xiaoyou, wide-eyed.

Wen Ruohan was dumbfounded. The academic overlord is indeed the academic overlord. The school term has not even started, yet she has already self-tutored all the knowledge required for her major in college?

"Or else, what do you think I was doing in the library the whole summer vacation, reading 'Starting From a Fake University'?"

Ding Xiaoyou couldn't help but roll her eyes.

The knowledge content of a four-year university energy chemical engineering major was not difficult for an academic overlord like Ding Xiaoyou, who was also a science and technology college entrance exam national scholar.

"You really are my sister!" Ding Yue gave a thumbs-up to his sister Ding Xiaoyou.

After Ding Yue used a personal learning BUFF on himself, it took him nearly a school year to cram four years worth of physics knowledge into his head.

But his sister was different.

She was able to grasp all the knowledge required for a four-year major in energy chemistry in just two months of summer vacation.

Ding Yue suspected that his sister must have been self-studying while preparing for the college entrance examination in her senior year, right?

With such a strong academic overlord, Ding Yue could not imagine what the effect would be if he applied a learning buff to his sister Ding Xiaoyou!

Wait a minute!

Ding Yue came out of the office preparing to use the [Academic Overlord Totem], but if he used this [Academic Overlord Totem], could he still use a personal BUU on his sister Ding Xiaoyou?

This situation has not occurred before.

Because the [Academic Overlord Totem] is obviously meant for all the freshmen of Mist City Arts and Science University, and it does not affect the old students.

The BUFF for the second-year students is still the [Junior Focus Scroll] and [Junior Scroll of Wisdom Light] used last year.

In other words, after he uses the [Academic Overlord Totem] now, his sister Ding Xiaoyou will also be affected by the learning BUFF of the Academic Overlord Totem.

But Ding Yue wanted to give her a personal version, because the personal version is more expensive and naturally has better effects.

Just like himself, and Huang Youjie and Xu Bin, the effect of the personal version items is obviously more potent than the group version.

"When using the [Academic Overlord Totem], can I prevent certain students from enjoying the effects of this totem?"

Ding Yue asked the system.

"This situation falls under the usage authority of the [Academic Overlord Totem], Principal Authority, √."

Chapter 355: Your Own Logistics Department

As the Principal of Mist City Arts and Science University, Ding Yue has the authority to set up the use of props.

So, Ding Yue directly removed his little sister Ding Xiaoyou's name from the coverage of the [Academic Overlord Totem].

In other words, Ding Xiaoyou will no longer be able to enjoy the collective benefits of the [Academic Overlord Totem].

"Resetting is complete, implement the [Academic Overlord Totem] prop."

With Ding Yue's slight intent.

Ding!

"Congratulations on successfully using the [Academic Overlord Totem] prop."

As the system's prompt sounded, the [Academic Overlord Totem] item in the inventory turned into a faint golden light beam and shot into the sky.

Ding Yue was the only one who could see this, his younger sister Ding Xiaoyou and his secretary Wen Ruohan had no idea what was going on.

They only saw Ding Yue looking up at the sky, wondering what he was watching?

Ding Yue looked up at the faint golden light that shot into the sky, and then it changed for a moment, forming a small golden dragon that was hovering above Mist City Arts and Science University.

"Wow, has it turned into a golden dragon totem, symbolizing that everyone at Mist City Arts and Science University strives to be as powerful as a dragon?"

Ding Yue simply speculated.

"Ding Yue, what are you looking at?"

Ding Xiaoyou saw her brother Ding Yue gazing at the sky for a while, so she looked up herself.

Except for the blue sky and white clouds, there wasn't anything else, right?

"Do you see that cloud? Doesn't it look like a monkey?" Ding Yue casually pointed to a cloud and laughed, and then went on ahead.

Ding Xiaoyou and Wen Ruohan who had been left behind were staring at the cloud Ding Yue was pointing at.

Where is the monkey?

After Ding Yue implemented the [Academic Overlord Totem], every freshman who was in Mist City Arts and Science University, except for Ding Xiaoyou, were slowly influenced by the totem which started to improve their learning efficiency and brain functionality.

Inside a four-person dorm.

"Bro, wanna play a game?"

"Sure, LOL?"

"Let's log in!"

The roommates agreed in an instant.

At this moment, a spectacled roommate muttered, "Playing games is such a waste of time, let's go to the library and read some books, and pre-study our major reading list?"

The other three roommates, who were originally planning to play the game, as if enlightened, agreed, "Yes, yes, let's head to the library. Reading there is so nice!"

The spectacled roommate was stunned. He was only making small talk, but his roommates took it seriously?

And so, hand in hand, shoulder to shoulder, the four of them happily headed towards the Book Ship Library.

And such rooms were not a rare sight.

No one knew why, but after the freshmen registered at Mist City Arts and Science University, they started feeling the strong academic atmosphere on the campus and everyone encouraged them to study more.

Most of the freshmen accepted by the Mist City Arts and Science University were academic underachievers in the College Entrance Examination.

But most academic underachievers are not slow learners; instead, they are unwilling to learn. Once they get the motivation to study and their learning efficiency increases with their intelligence levels, given enough time, they can definitely turn into academic overachievers from underachievers.

Even if they can't turn into academic overachievers, the university's four-year major course is certainly not a difficult problem for them.

Compared with the previous scrolls, the [Academic Overlord Totem] that Ding Yue used provides higher minimum and maximum benefits in both the "Concentration" and "Light of Wisdom" aspects.

Therefore, Ding Yue had high expectations that the 2021 freshmen would produce many outstanding talents after the official start of the school.

The day after the new students' registration at Mist City Arts and Science University ended, a large number of students visited the Book Ship Library.

In addition to sophomores, fresh-faced junior students also flocked to the Book Ship Library.

"Senior, you are also reading this book?"

A newly enrolled male student noticed a beautiful senior and started chatting with her.

Thus, every day in the Book Ship Library, scenes of junior men chatting up senior women, senior women flirting with junior men, senior men asking juniors for their Whatsapp, junior women flirting with senior men, senior men with junior men cough cough...

After a stroll around the campus, Ding Yue found that the 2021 freshmen quickly fit into the Mist City Arts and Science University.

They were new and curious about everything in the school.

Ding Yue believed that in the next few years, if the circumstances work in favor of the students, the freshmen would quickly regard Mist City Arts and Science University as their second home, just like the 2020 batch did.

Back in his apartment, Ding Yue redeemed two individually targeted study buff props for Ding Xiaoyou in the system's store.

This was the best individually targeted study buff scroll Ding Yue could redeem at his current level.

[Scroll of Talents and Skills] and [Profound Knowledge Scroll]. These two scrolls not only improve Ding Xiaoyou's learning efficiency but also enhances her research ability.

From the horizontal and vertical aspects, they have both strengthened Ding Xiaoyou.

Given that Ding Xiaoyou herself is a super academic overachiever, she will certainly produce excellent results in her chosen professional field after Ding Yue adds the two study buffs.

Chapter 356: Your Own Logistics Department

Ding Yue was unexpectedly looking forward to it.

In the future, if he could make achievements in the field of physics and his sister could do the same in her beloved field of energy, the two siblings would be direct role models at the Mist City Arts and Science University.

When other students followed suit, Mist City Arts and Science University would naturally become more and more powerful.

Ding Yue's first five-year goal is for Mist City Arts and Science University to become a privately-run university as reputable as a key university.

Even better would be if there was a chance for them to become a national key development privately-run university.

After the freshman registration at Mist City Arts and Science University ended, in the following days, once the freshmen acquainted themselves with the environment, military training would begin.

In the meantime, Ding Yue and several others from Jiangnan University of Science and Technology, led by Professor Zhou Wen, continued with their experiments on gallium nitride semiconductor materials in the lab. They strove to apply gallium nitride semiconductor materials to chips by the end of this year.

On August 29, Mist City Arts and Science University's medical health robot, Big White, officially obtained medical equipment qualification.

This led to the Feiyue Manufacturing Department under Feiyue Group officially starting to produce Big White on the production line.

The students of the Mechanical Engineering Class of 2020 are in charge of producing Big White. Under the guidance and training of the Tong Yihang-Liu Tiefei team, they have a certain mastery of the technology for making Big White. Combining the Tong Yihang-Liu Tiefei team's technical group for mechanical processing, ten Big Whites can be produced a day.

August 30th.

The production line for Big White at Mist City Arts and Science University officially started operations. Mechanical engineering students came to the training base in succession and began to manufacture exquisite Big Whites for the school.

The monthly salary for each student during the period of manufacturing Big White was over ten thousand yuan!

"Principal Ding, starting from yesterday when we got the medical equipment qualification for Big White, big hospitals all over the country have contacted me, hoping to place orders for Big White," said Miss An as she entered Principal Ding's office in the Administration Building while he was writing a follow-up report on the gallium nitride semiconductor material experiments of the past few days.

"Oh? How many robots do they want?"

Ding Yue looked up at An Yujia and asked.

"Here is the order form I have arranged. Hospitals in Yancheng and Haicheng require the most, with each needing hundreds. Following that are the hospitals in Guangcheng, Shencheng, Hangcheng, all of which have large order quantities. We also have a good amount from our own Mist City and Shu City," An Yujia said, handing the order sheet to Ding Yue.

Ding Yue glanced over the order form and as expected, once Mist City Arts and Science University's Big White received its qualifications, orders from major hospitals all over the country swiftly came in.

"Let's prioritize the orders from our local hospitals in Mist City first. Speaking of which, how many more does the Mist City Central Hospital need?"

Ding Yue had a clear plan of giving priority to nearby orders.

Since his school was located in Mist City, it was necessary to fulfill the orders of the hospitals in Mist City first, especially the Mist City Central Hospital, which had a cooperation agreement with Mist City Arts and Science University.

Previously, they had already delivered 10 Big Whites for trial use, but that was hardly enough for a big hospital like the Mist City Central Hospital.

"The Mist City Central Hospital needs 50 Big Whites," An Yujia replied.

Just as An Yujia finished, Ding Yue's phone rang.

How coincidental! They were just discussing the matter of the Mist City Central Hospital and now the hospital's President, Jiang Zhongbo, had called.

"Hello, Dean Jiang,"

Ding Yue answered the call.

"Principal Ding, are you busy?"

"Not really. Dean Jiang, do you need something?" Ding Yue thought it was likely Jiang Zhongbo was calling about the order of Big Whites the Central Hospital needed.

"Principal Ding, congratulations on obtaining the medical equipment qualifications for Big White. Our hospital still has a high demand for it, so we contacted Miss An at Feiyue Group and placed an order for 50 units," Dean Jiang Zhongbo indeed said.

"Dean Jiang, don't worry. We will definitely prioritize supplying the orders from our local hospitals. And naturally, the Central Hospital will be the top priority,"

Ding Yue replied immediately without thinking.

"Hahaha, thank you, Principal Ding,"

"There's no need for formalities, Dean Jiang. It will take us about five days to deliver 50 Big Whites," Ding Yue informed President Jiang Zhongbo.

"Five days... Does that mean your current daily output is only 10 units?" President Jiang Zhongbo asked surprised.

"Yes, due to the complex manufacturing technology of Big White and to control the price from skyrocketing, Feiyue Group has established its own production line and currently, our daily output is indeed 10 units,"

Ding Yue honestly replied.

"Principal Ding, why don't you look for a contract manufacturer?"

Chapter 357: Your Own Logistics Department

"For the healthcare robot Big White, I think it's better if we manufacture it ourselves."

When it came to finding a mechanical manufacturing contractor, Ding Yue thought of the Dingli Group first.

Obviously, it was absolutely impossible for Ding Yue to cooperate with Dingli Group.

"Right, then Principal Ding, our hospital is waiting for those 50 healthcare robot Big Whites."

"Sure, Dean Jiang."

The order for 50 healthcare robot Big Whites from Mist City Central Hospital is currently priced at 100,000 each by Ding Yue.

That's an order worth five million. If one hospital orders five million, there are currently at least hundreds or even more hospitals across the country actively placing orders with the Feiyue Group.

Once it is gradually promoted in the future, even county-level hospitals may be equipped with the healthcare robot Big White to facilitate the public's medical treatment.

And there are over a thousand county cities in Xia Country alone!

Not to mention that there are a lot of hospitals in each province, and in the provincial capital cities. When healthcare robot Big White is widely used, even community clinics can have one.

In this way, not only will the people enjoy the benefits of convenient and quick diagnosis of daily illnesses, but Ding Yue's Feiyue Group can also sell a considerable number of Big Whites.

After hanging up the phone, Ding Yue turned to An Yujia and said, "Ms. An, the 50 Big Whites from Mist City Central Hospital are our first batch of orders, followed by other local hospitals in Mist City, then Yancheng and Haicheng, and then the hospitals in big cities like Guangcheng and Shencheng."

"Understood."

After hearing Ding Yue's words, An Yujia nodded. "I've already found a logistics company to cooperate with to perfect the delivery service for Big White."

"Well done."

Upon hearing this, Ding Yue felt that An Yujia was indeed a professional. He hadn't even considered the problem of delivering Big White after production.

Indeed.

When one Big White after another comes out of his Mist City Arts and Science University, and needs to be delivered to hospitals in cities across the country, he can't just make them come pick it up in person, right?

Therefore, at this stage, the Feiyue Group can only cooperate with other logistics companies to improve the delivery services for Big White.

"For the problem with logistics transportation, we can establish our own logistics department," Ding Yue murmured, stroking his chin.

"What did you say, Principal Ding?"

An Yujia didn't catch what Principal Ding was murmuring.

Ding Yue gave it some thought, his Mist City Arts and Science University did have a logistics management major. If they could cultivate talent in logistics management, perhaps the Feiyue Group could have its own Feiyue Logistics in the future.

"I was thinking, instead of entrusting the logistics delivery of our products to other logistics companies, why doesn't our Feiyue Group establish our own logistics department?" As Ding Yue said this, he looked at An Yujia and smiled.

An Yujia frowned, "But Principal Ding, if we establish our own logistics department, the initial cost will be quite high."

An Yujia's point was clear, cooperating with a logistic company would keep cost low within a certain period.

If they were to establish their own logistics department in the Feiyue Group, the initial investment would be high. Moreover, they would need a lot of excellent logistics management professionals to manage the logistics department.

"Money is not a problem. Besides, we are not trying to do express delivery like Shunfeng. We're just establishing an internal logistics department, so we won't be constrained by people, and we will make a profit." Ding Yue shrugged.

Establishing a logistics express delivery service like Shunfeng or other types would be a tough endeavor, even with considerable funds.

However, the logistics company Ding Yue wanted to establish, wasn't this type and didn't need to compete for the express delivery market.

It was simply to solve the product logistics problem within the Feiyue Group.

And once the Feiyue Group has its own logistics department, wouldn't students from the logistics management major at Mist City Arts and Science University have a place to work after graduation?

Seeing that Principal Ding said money wasn't a problem, An Yujia agreed that the Feiyue Group should indeed have its own logistics department.

So An Yujia nodded, "Well, since that is the case, Principal Ding, I also agree that we should have our own logistics department."

"Well, Student Wen Ruohan, which department does our university's logistics management major belong to?" Ding Yue turned his head and asked Wen Ruohan.

"Principal Ding, it's in the School of Economics and Management." Wen Ruohan immediately answered.

An Yujia understood what Principal Ding meant. Mist City Arts and Science University has a major in logistics management, so they can train their own personnel.

If the logistics department of the Feiyue Group were established, the students of the logistics management major at Mist City Arts and Science University could directly work at Feiyue Logistics upon graduation, right?

That wouldn't just solve the talent demand problem, but also the employment problem of the students in that major.

An Yujia thought to herself, Principal Ding really is a genius.

"The School of Economics and Management? Then have the dean of the School of Economics and Management come see me." Ding Yue hadn't paid much attention to the School of Economics and Management at his Mist City Arts and Science University.

Chapter 358: Your Own Logistics Department

Ding Yue had spent most of his time over the past academic year focusing on the Mechanical and Computer Departments, as well as the Art and Film Department, leaving him with little attention to the School of Economics and Management.

Indeed, many of the majors in the School of Economics and Management align with the talent needed by Ding Yue's Feiyue Group. These include Accounting, Economics, Finance, International Trade, Business Management, Marketing, Tourism Management, International Economics and Trade, Economic Investment, Insurance, Statistics, Audit, International Finance and others.

"Principal Ding, speaking of the School of Economics and Management, I went to our Economics and Management School at Mist City Arts and Science University a few days ago and identified several students studying Accounting and Marketing. I plan to hire them for our company."

"Absolutely agree!" Ding Yue replied, nodding approvingly.

It seems that An Yujia has deeply understood the strategy of developing the internal cycles of the Mist City Arts and Science University, and has started to recruit the talents needed by his company from the University. Good job!

Wen Ruohan already dialed Director Chen Tao of the School of Economics and Management.

Then, Ding Yue added to Wen Ruohan: "Ask the Director of the Department of Management to bring over the two top-performing students from the Logistics Management major for the past year."

Ding Yue thought it would be better to get it all done at once, seeing if the two outstanding students of Logistics Management indeed have remarkable skills.

If they do, Ding Yue planned to use the talent from his school to form the logistics department of the Feiyue Group.

More so, it could be directly named "Feiyue Logistics", which represents speed - one of the most crucial elements of logistics.

"Alright, Principal Ding."

Wen Ruohan nodded, quickly dialing the number.

"Hello, Secretary Wen."

Chen Tao was a bit surprised. Why would the secretary think to call him?

After all, as the dean of the School of Economics and Management, Chen Tao's work performance has always been average and conscientious.

The department he headed was not as impressive as the Mechanical Department, the School of Architecture, the Computer Department, or the E-sports School.

Most importantly, even if he wanted to stand out, he lacked the opportunity.

So, Chen Tao never drew Principal Ding's attention.

But today!

The secretary of the principal called him. Could it be that a significant task was dropping onto his shoulders?

Chen Tao was bewildered and somewhat excited.

"Director Chen, Principal Ding wants you to bring the two best students from the Logistics Management major of the School of Economics and Management to his office."

On the phone, Secretary Wen was very clear about what she wanted.

Chen Tao took a deep breath and replied excitedly, "Okay, okay! Secretary Wen, I'll bring them right away!"

After hanging up the phone, Chen Tao quickly contacted the teacher of the Logistics Management major, asking him to notify the top two students right away.

"Director Chen, you wanted to see us?"

Zhu Fei and Liu Yue, the students from the Logistics Management major, came into Chen Tao's office.

"Zhu Fei, Liu Yue, come with me."

Chen Tao took a look at the two students, stood up, and walked out of his office, heading towards the Administration Building.

Zhu Fei and Liu Yue promptly followed.

"Director Chen, where are we going?" Zhu Fei asked curiously.

"Principal Ding wants to see you. I assume it's related to your major. Perhaps the school requires something in this field, like setting up a logistics station. This could be an excellent opportunity for you guys to showcase your abilities."

Chen Tao wasn't exactly sure why Principal Ding wanted to see these two top students from the Logistics Management major.

But with a simple guess, he was convinced it must relate to their major.

"Zhu Fei, do you think Principal Ding's Feiyue Group is ready to manufacture 'Big White', the University's medical healthcare robot, and needs logistics to distribute it to hospitals nationwide? Maybe they want to set up a logistics department, so they called us over for some advice?"

Liu Yue speculated.

Chapter 359: You Go Ahead, If I Go I am Really Capable!

In the Principal's office at the Administration Building.

Zhu Fei was stunned, wondering how Liu Yue knew that Principal Ding had called them over to discuss the establishment of the Feiyue Group's logistics department?

Liu Yue claimed it was a wild guess.

And it appeared he hit the nail on the head, correctly guessing why the logistics department was being set up.

Because the school had officially started production of the medical health robot, Big White, as of today.

For a considerable period in the future, the robot will be supplied to various hospitals across the nation, which requires logistic support.

Students at Mist City Arts and Science University are aware. As a private institution, the university is backed by Principal Ding's Feiyue Group.

With its vast scope, Principal Ding's Feiyue Group provides opportunities for students - even those yet to graduate - to find a job related to their major.

Graduates from the mechanical engineering department, in particular, had reportedly signed employment contracts with the Feiyue Group.

Some students from animation design and production had joined the Feiyue Animation Studio and participated in the production of the animated film "Super Combat Team".

This was clearly a paid gig!

Therefore, Zhu Fei and Liu Yue wondered if an opportunity in their field of logistics management had come their way?

Considering the many logistics management questions Principal Ding asked, it seemed so.

If Principal Ding's Feiyue Group really intended to establish a logistics department, Zhu Fei and Liu Yue felt they might be in the running.

After Ding Yue posed several questions, he found that Zhu Fei and Liu Yue had solid expertise in logistics management.

On top of their foundational knowledge in engineering, they were familiar with regulatory laws and possessed a solid understanding of modern logistics management theory. They were skilled in applying information system techniques and methods with strong capabilities in logistics management, planning, and design.

Their credentials made them promising candidates for high-level modern logistics management positions.

They evidently needed an opportunity for practical operations, which Ding Yue was ready to offer them.

This was the chance to establish a logistics department for the Feiyue Group.

Ding Yue glanced at An Yujia. She gave Ding Yue a look that meant "OK", indicating her approval of Zhu Fei and Liu Yue's performances.

"Mr. Zhu Fei, Mr. Liu Yue, it seems you've learnt a lot in the past year. No wonder you're the finest students in your Logistics Management program. Have you received your scholarships for last year?" Ding Yue asked Zhu Fei and Liu Yue, grinning.

Mentioning the names Zhu Fei and Liu Yue, Ding Yue realized the coincidence - the new logistic department he's planning to set up was called Feiyue Logistics.

And their names combined form the pronunciation 'Fei Yue'!

The resemblance amused him.

"Yes, I received the school scholarship!" Zhu Fei nodded.

Liu Yue also nodded immediately: "I received it, too."

At Mist City Arts and Science University, only the students with the best academic performance could receive the scholarship.

Indeed, in this private university initially filled with underperforming students, only the most diligent who emerged as remarkable could be awarded a hefty scholarship.

However, the scholarship might be withheld from excellent students who have violated school regulations during the school year. Ding Yue believes that a scholarship should be based on both outstanding academic and personal conduct. An academically brilliant student with poor moral character might pose a danger to society in the future if they were groomed.

However, only a few students at Mist City Arts and Science University had been disciplined over the school year, so there weren't any excellent students who broke the rules.

"Alright, since both of you are top students in logistics management, the principal will grant you two an opportunity for growth."

Upon hearing Principal Ding's words, Zhu Fei and Liu Yue were ecstatic.

Even Director Chen Tao from the School of Management shared their excitement. After all, this was the first time the School of Management was given an opportunity and a promising outlook by Principal Ding.

Chen Tao understood that whatever resources the departments of arts, film and television, mechanical engineering, architecture, computer science, law, and medicine got, it was all because Principal Ding had seen potential in them, allowing them to become leading departments at Mist City Arts and Science University.

In order to develop, each department at a private university would certainly need the board's support!

Departments that Principal Ding was willing to foster, like mechanical engineering and computer science, had recruited many freshmen that year, and their education funds would most likely rank first in the years to come.

Therefore, Director Chen Tao looked forward to some attention and consideration from Principal Ding.

While the achievements of the School of Management may not compare with those from the departments of mechanical engineering, computer science, and medicine, if they successfully establish the Feiyue Group's logistics department as instructed by Principal Ding, he may be pleased enough to allocate more funds to the School of Management in the future.

Chapter 360: You go ahead if you can, I am really capable if I proceed!

Moreover, the income of each department head is also tied to the department's achievements.

Although Chen Tao thought that Principal Ding's remuneration was already quite generous, the department heads, such as Director Cao Guowei of the Mechanical Department, Director Liu Wei of the Computer Science Department, and Director Chen Ping of the Architecture Institute, who had made outstanding achievements, received very high performance bonuses.

"Now the Feiyue Group affiliated to our school needs to set up a logistics department. If you can accomplish this, it will greatly assist your studies, and even your future development. If you perform excellently, I might even let you participate in managing the logistics department."

Ding Yue held high hopes for Zhu Fei and Liu Yue.

"Uh huh, thank you, Principal Ding. Thank you Principal Ding for giving us this opportunity!" Zhu Fei nodded his head with excitement."

"Thank you, Principal Ding!" Liu Yue similarly thanked him.

"Don't rush to give thanks yet. Are you confident you can complete this? If you're not confident, I'll have to consider whether or not to keep you on."

Ding Yue shrugged his shoulders, asking calmly.

"We're confident!"

Zhu Fei was full of confidence. He then looked at Liu Yue, who also quickly nodded and said, "Principal Ding, I'm confident too!"

"Good. For specifics, go find Miss An. The planning and other matters for the building of the logistics department should be reported directly to her."

Ding Yue decided not to directly intervene in the logistics department's affairs. As this belonged to the Feiyue Group Company, it would be handled by Miss An.

Zhu Fei and Liu Yue both turned to look at Miss An who appeared stern and imposing, and were instantly struck by her authoritative demeanor.

In reality, An Yujia was not any sort of boss. She was merely an employee of Principal Ding.

"Principal Ding, should we...should we go back to planning the logistics department?" Zhu Fei asked carefully.

"Go ahead."

Ding Yue gave a slight nod of his head.

Then Chen Tao took Zhu Fei and Liu Yue away from the principal's office.

When they were going downstairs, Chen Tao seriously imparted a lot of instructions to Zhu Fei and Liu Yue, such as to take this opportunity seriously and work hard. He even used Tong Yihang, Liu Tiefei, and Yang Jie as examples.

Indeed.

From the perspective of the students of Mist City Arts and Science University, Tong Yihang and Liu Tiefei were already very successful. They had signed an employment agreement with Principal Ding's Feiyue Group before even graduating, and they were not ordinary employees, but technical leaders of the project.

This made many students envious because Tong Yihang and the others had obtained jobs that many people might not get even after many years of graduation!

Inside the office, Ding Yue gave An Yujia a few instructions, then let her go busy herself.

Just as Ding Yue was about to continue writing his physics experiment report, Wen Ruohan carefully came over and asked, "Principal Ding, you won't have anything urgent later, right?"

"Hm?"

Ding Yue glanced at Wen Ruohan, asking in confusion, "What's the matter?"

"Hehe, if nothing's going to happen, can I leave first?" Wen Ruohan scratched her head and asked with a smile.

Ding Yue felt that Wen Ruohan was up to something, because the tone she used to say those two sentences was a bit off.

If she usually had something to do, she would go straight away or just tell him briefly, not like now where she made a special point to ask if he had anything urgent going on.

"Wen Ruohan, be honest, what are you going to do?" Ding Yue looked at her as if he had seen through her plans.

But of course, Wen Ruohan confessed immediately, "Hehe, Principal Ding, just now I saw in a Whatsapp group that the Food and Beverage Department is hosting the 2021 Campus Chef Competition. There are a lot of tasty foods that you can eat for free, so I... I was thinking about going over to take a look."

Originally, Wen Ruohan wanted to say that she wanted to go and eat, but it seemed inappropriate, so she decided to say that she would go take a look.

"There's such an event?"

A question mark appeared above Ding Yue's head, but after thinking about it, he realized that he might have been informed by Director Qi Chunsheng but didn't pay much attention to it.

After all, Ding Yue didn't have the time to focus on every intra-departmental competition or activity organized by different departments.

But now that Wen Ruohan mentioned it, Ding Yue found himself interested.

In any case, he had already interrupted his work on the physics experiment report, so he could focus on it again in the afternoon or tomorrow.

Upon hearing from Wen Ruohan that the Food and Beverage Department was having a Campus Chef Competition, the craving in Ding Yue's stomach was immediately triggered.

"Principal Ding, you didn't know about it?" Wen Ruohan assumed that Ding Yue knew, but in fact, she didn't know about it at the beginning either. She only found out about it when she checked her Whatsapp group while Ding Yue was talking with those two students from the Logistics Management Department.

"I didn't pay much attention. But now that you say it, I want to go have a look. Let's go!"

After saying this, Ding Yue put his computer to sleep and stood up.

"Hahaha, okay."

Seeing that Principal Ding also wanted to go have a look, Wen Ruohan enthusiastically followed behind him.

The Campus Chef event hosted by the Food and Beverage Department was held outside Dining Hall One, in the small square.

Turns out, when Ding Yue and Wen Ruohan arrived, they found many students gathered there. From a distance, they could smell the various delicious foods.
