

F. University 381

Chapter 381: Singularly Favored by Principal Ding?

"Right, look, Zhao Chi and his team are also here. I heard they've been in touch with several construction companies this year. Have you heard about it?"

Cui Hai whispered into Liu Chuanjie's ear.

"There's such a thing?"

Liu Chuanjie was not too concerned about Zhao Chi's affairs as he had been busy studying diligently throughout the past semester.

By now, Liu Chuanjie had almost mastered all the related knowledge of four-year university architecture studies.

That is to say, barring any surprises, Liu Chuanjie could apply to take the exams early this year, earn all the necessary credits, and then graduate early.

"That's right, Zhao Chi is planning to smoothly collect all credits this year and then talk with several construction companies. After his early graduation, he will likely start job hunting."

Cui Hai gossiped.

"That's a good thing. I also plan to see if I can get enough credits this year, finish my thesis, and then apply for early graduation."

Liu Chuanjie said with a smile.

However, Liu Chuanjie did not interact with the outside construction companies like Zhao Chi did.

Although, after winning the Hop Cup Best Creative Award, many construction companies had reached out to Liu Chuanjie.

However, most of these construction companies simply wanted to use Liu Chuanjie's "Hop Cup Best Creative Award" as a gimmick.

Therefore, Liu Chuanjie did not consider these smaller construction companies and rejected them all.

He was still a student, and his studies took precedence.

Moreover, Liu Chuanjie believed that there should still be a need for him in the school. Now, Principal Ding had already started planning the second phase of the school extension project, therefore an opportunity was on its way.

"You guys are all so exceptional. I checked my progress, and it might be a bit risky this year. I might be able to get all my credits, but for my graduation thesis, I think I might need to wait until next year. This means I could finish my university studies a year in advance, wow...I can't even imagine!"

Before Cui Hai came to study at Mist City Arts and Science University, he never dared to imagine that he could graduate early.

Just to comfortably complete the four-year university and receive his diploma was already an impressive feat.

However, the moment Cui Hai stepped onto the campus of Mist City Arts and Science University, he felt a kind of magic.

It made him extremely enthusiastic towards his studies, and the university architecture knowledge didn't seem so difficult.

It was worth mentioning that every time Cui Hai returned home for vacation, he had no interest in studying, and just wanted to play games all the time.

But once he returned to the university, Cui Hai conscientiously reduced his game time, spending more time in classes and studying in the library.

Otherwise, Cui Hai wouldn't have the confidence to claim that he could complete his undergraduate architecture studies a year in advance.

"The learning atmosphere of the school is too good, and none of us are stupid. As long as we work hard, we will see results."

Liu Chuanjie said with a smile to Cui Hai.

"Makes sense, when you think about it, we're not much different from those students majoring in Architecture at key universities." Cui Hai was quite confident.

Indeed, it was Mist City Arts and Science University that gave them confidence, and it was also their own efforts that built up their confidence.

Just as Liu Chuanjie and Cui Hai were chatting, at the entrance of the meeting room, Principal Ding brought Director Chen Ping over.

Consequently, Director Huang and Director Xu, as well as Principal Ding's secretary were also present.

"Hello, Principal Ding!"

The students from the School of Architecture stood up and greeted Principal Ding one after another.

"Hello students, sit down."

After responding, Principal Ding signaled the students to sit down and then took his place at the head of the conference room.

After that, Director Chen Ping and Huang Youjie, Xu Bin all took their seats.

"If I remember correctly, the last time we met in this conference room was when we decided on the Book Ship Library, wasn't it?"

Principal Ding recalled the previous year.

It was also in this conference room when Principal Ding met the students from the School of Architecture, among them familiar faces.

Such as Liu Chuanjie and Cui Hai. They, without any need for further introduction, were the ones who designed the Book Ship Library as a team.

Now, the Book Ship Library is the landmark building of Mist City Arts and Science University.

Therefore, the architecture students that Principal Ding valued the most were Liu Chuanjie and Cui Hai.

Of course, there was another familiar face. That was Zhao Chi. Principal Ding still remembered that Zhao Chi's design was a "Archive Library" in the style of an ancient building. However, because the design was slightly inferior to the Book Ship Library, Zhao Chi's Archive Library was not selected in the end.

In fact, Principal Ding quite liked Zhao Chi's Archive Library. It had a strong sense of classical inheritance.

"Student Zhao Chi."

Principal Ding looked at Zhao Chi and called his name with a smile.

Hearing this, Zhao Chi immediately stood up and seemed a bit nervous, "Pr... Principal Ding, yes, I'm here."

"What are you nervous about? Relax. I invited you here to give you another opportunity to exercise your professional abilities."

Principal Ding smiled, motioned for Zhao Chi to relax, and then continued, "By the way, Zhao Chi, didn't you design an 'Archive Library' during the library architecture collection activity last year?"

Chapter 382: The Unique Favor of Principal Ding?

Zhao Chi immediately nodded and said, "Yes, that's right."

"Good, the school may also build another library, and for this third library, I've considered using a classical architectural design!"

As soon as Ding Yue arrived, he surprised Zhao Chi with his suggestion.

Ding Yue did not want the design of the Archive Library to contrast too starkly with the other modern buildings at Mist City Arts and Science University. Therefore, he had an idea; why shouldn't his university include a group of ancient buildings?

This ancient architectural complex could include the Archive Library, student dormitories designed with an ancient exterior, and even a school park designed like an ancient garden.

If such an ancient architectural complex could be built, it might even become a small filming base for historical dramas.

This was just an initial idea for Ding Yue.

But when the topic of Zhao Chi's Archive Library was brought up, this idea burst forth like a geyser, unstoppable and growing with each thought.

Actually, Ding Yue's idea might not be impossible to implement.

The Mist City Arts and Science University has 5000 acres of educational land. The area of 5000 acres is vast, and a part of it can certainly be set aside to construct the ancient architectural complex that Ding Yue imagines.

"Principal Ding, are you serious? The school is going to build another library using my design?"

At this moment, Zhao Chi was overjoyed, his heart thumping wildly in his chest.

Originally, Zhao Chi assumed that if he couldn't contribute to the school in any way this time, it would mean that the school didn't need him. Therefore, Zhao Chi had decided to find a job at a construction firm right after obtaining his graduation certificate.

However!

As soon as Principal Ding stepped into the conference room, he mentioned him and directly adopted the design of the Archive Library from last year.

It should be noted that Zhao Chi was very proud of his design for the Archive Library from last year.

"Yue, are we going to build another library?"

Huang Youjie leaned in and asked in a low voice.

Currently, Mist City Arts and Science University already has two libraries, the old library and the Book Ship Library.

Normally, having two libraries in a university is already considered a luxury.

So our Principal Ding still wants to build another library?

Incredible!

"Yeah Principal Ding, do we need to build another library?" Director Chen Ping of the School of Architecture was also surprised to ask.

"That's correct."

Ding Yue nodded, and then said, "I estimate that even if we combine the old library and the Book Ship Library, they wouldn't be enough for our future students at Mist City Arts and Science University."

Huang Youjie and Chen Ping might not quite understand Ding Yue's statement.

However, Ding Yue knew it very clearly.

Every year, the new students enrolling in the Mist City Arts and Science University have a group study buff applied by Ding Yue. With this study buff, there is a strong love for learning in the campus of the university.

This is why the students at Mist City Arts and Science University are very proactive in their studies and there is a strong study atmosphere on campus.

As such, apart from attending classes, the library is undoubtedly the best place for the students at Mist City Arts and Science University to study.

In the future, the number of students at Mist City Arts and Science University will gradually increase each year, and it's likely that two libraries won't be enough.

This is the reason why Ding Yue wants to build a third library at Mist City Arts and Science University.

"Is the capacity of the Book Ship Library not big enough?"

Chen Ping asked curiously.

In Chen Ping's view, Mist City Arts and Science University already has a large new library in the Book Ship Library, and an old library as well. Aren't these enough for the students at Mist City Arts and Science University to use?

"Director Chen, if you have the time, you can go and check out our library. Even though the new students are still in military training, the library is already quite crowded. Once the military training ends, you can imagine, the Book Ship Library will be packed with people every day."

Ding Yue answered with a confident smile.

No one understands more than Ding Yue how much the students at his university love to frequent the library.

That's right!

In Mist City Arts and Science University, Ding Yue is the king of understanding!

"Thank you, Principal Ding! Thank you, Principal Ding!"

Upon hearing Principal Ding's decision to adopt his design for the Archive Library, Zhao Chi was so excited that he bowed in thanks.

"Zhao Chi, in fact, your design for the Archive Library is really good. Last year, it's true that I wanted to build the Book Ship Library first, but that's okay, it's just a matter of priority."

Ding Yue said, smiling at Zhao Chi.

Zhao Chi had a confident look on his face. He decided that in the coming days, he and his team would further refine the design of the Archive Library, perfecting every detail.

"However..."

Ding Yue suddenly made a reversal.

When Zhao Chi heard the words "However" from Principal Ding, his heart skipped a beat.

Could there be another unexpected change? Principal Ding isn't going to discard his design for the Archive Library, is he?

"However, Zhao Chi, you and your team's task is not just limited to the Archive Library. This time, I want all students from the School of Architecture to participate in the expansion project of Mist City Arts and Science University. As excellent architecture students, I have more assignments for you."

Chapter 383: Singularly Favored by Principal Ding?

Ding Yue suddenly spoke with a serious expression.

Anxiously, Zhao Chi looked at him, brimming with anticipation.

The principal, Principal Ding, bestowed a new task on him - was he favored by the principal this year?

Cui Hai never expected that since Principal Ding came into the meeting room, his attention would be mainly on that fellow Zhao Chi.

He and Liu Chuanjie weren't even noticed by Principal Ding at all?

To be frank, Cui Hai was a tad envious, jealous, and sour at this moment, as his relationship with Zhao Chi was not on particularly good terms.

He threatened Zhao Chi in this meeting room just last year.

After all, he and Liu Chuanjie's team were the designers of the Book Ship Library. By rights, they should be considered as the best architectural students in the school.

But Principal Ding handed the task of the second phase of the school expansion project to the team of Zhao Chi, not to his Liu Chuanjie.

"Okay, Principal Ding. Just speak freely!" Zhao Chi never expected that not only would Principal Ding adopt his design for the Archive Library, but there were also other tasks for his team. He was thrilled.

Over the last year, due to the high reputation of Liu Chuanjie and Cui Hai, he had almost lost his confidence.

In fact, in terms of talent in architectural studies, Zhao Chi is no worse than Liu Chuanjie. He could at least compete on the same level.

In the first year of architecture school, besides Liu Chuanjie and Cui Hai earning scholarships, Zhao Chi also received one.

"The school plans to create an ancient architectural complex based on your design of the Archive library. This will include dormitory buildings and literature teaching buildings. Can your team handle it?"

Ding Yue asked Zhao Chi seriously.

"Yes! Principal Ding, we definitely can!" Zhao Chi didn't even think before nodding in response.

Ancient cultural architectural design was Zhao Chi's strong suit, and his favorite field. Principal Ding's choice of him was definitely not a mistake.

"Good. Director Chen Ping will communicate with you about the specific buildings your team will need to design."

Upon seeing Zhao Chi's enthusiasm and confidence, Ding Yue nodded with satisfaction.

Although Ding Yue wasn't as familiar with Zhao Chi's team as he was with Liu Chuanjie's team, Director Chen Ping had told him more than once that Zhao Chi's team truly had talent.

After concluding his words, Ding Yue finally turned his gaze towards the silent Liu Chuanjie and Cui Hai on the right.

They must be looking forward too, right?

After all, Ding Yue, after coming in, took Zhao Chi's Archive Library design straight away, as well as giving him the design task for an ancient architectural complex.

Could it be inferred from the look on Cui Hai's face that he was a little bit disgruntled?

"Liu Chuanjie, Cui Hai, and the rest of the Architecture students, you are the best of Mist City Arts and Science University's Architecture Division. As I said earlier, we hope that everyone can participate in the school's expansion project this time, so you all have a task too."

As Ding Yue's voice trailed off, Cui Hai and Liu Chuanjie quickly perked up, asking very actively, "Principal Ding, what can we design?"

"The school wants to build two stadiums, one to serve as a central sports ground, and another central sports stadium next to it."

Ding Yue decided to assign the task of designing two landmark buildings - the Central Sports Ground and the Central Sports Stadium to Liu Chuanjie and Cui Hai's team.

After all, in terms of grand architectural designs, Liu Chuanjie and Cui Hai's team had more experience.

Chapter 384: Immediately Besieged on All Sides!

While Ding Yue was still in the conference room, explaining to architecture students about the expansion of the campus buildings.

Online discussions about Rentang Health Robot and Mist City Arts and Science University's medical health robot, Big White, had begun.

The reason why netizens started paying attention to this issue, and why its popularity continued to rise, was all due to a lengthy post by a Twitter user with the ID "Flying Wheat Cake". The user revealed that the Rentang Health Robot, which was sold for 200,000 yuan by Rentang Medical Technology Group, was a counterfeit!

Once this lengthy post was released, it instantly caused an uproar.

Xu Jia was unable to endure the trap set by Rentang Medical Technology Group any longer. She had fallen into it, and her roommate's grandmother had become a victim. Thus, Xu Jia, with a burst of righteous fury, aggressively posted the article, exposing and criticizing Rentang Medical Technology Group's counterfeit health robot.

"What, really? How dare they counterfeit medical health robots?"

"When it comes to health, counterfeiting is absolutely intolerable!"

"Is this the lucky user who won a Big White robot from Mist City Arts and Science University?"

"What's happening? I am utterly confused. Can anyone tell me what's going on?"

"Counterfeiting and selling counterfeits?"

"LOL, you just say anything. Rentang Medical Technology Group also launched their own health robot, and you say theirs is fake? Are you saying only Big White is the genuine health robot in this world? Hilarious!"

"I think you just want to stir the pot."

"My grandfather bought a Rentang Health Robot and it works great. It's not inferior to Big White!"

"Rentang Medical Technology Group sells their robots for a clear price of 200,000 yuan. They didn't force anyone to buy. Are you from the Price Bureau or something?"

"Disgusting Tweeter, be careful or you'll be arrested for spreading rumors."

Very quickly, in the comments section of Xu Jia's lengthy Twitter post, the sentiment changed and a lot of "people" began attacking Xu Jia.

Some said that Xu Jia was spreading rumors, some said she was causing trouble, and others said she was talking nonsense just to attract attention!

When Xu Jia saw these comments, she was completely dumbfounded and infuriatingly shocked by them.

"Ahh!!! Don't these people have brains? Truly infuriating!"

After reading through the comments on her post again, Xu Jia stomped her foot in anger!

"Jiajia, don't be angry. I feel like the people criticizing you in the comments are paid internet trolls. Didn't the comments start off positive, with everyone accusing Rentang Medical Technology Group?"

Xu Jia's roommate, Xiao Zhang, rushed to soothe her emotions.

At the beginning, Xu Jia's lengthy Twitter post received a great deal of criticism towards Rentang Medical Technology Group for their shameless and unethical behavior.

However, how could the comments' sentiment have changed so drastically in less than half an hour?

The hot comments were almost all criticisms of Xu Jia, and these comments even received over ten thousand likes.

This was too exaggerated.

Meanwhile, at Mist City Arts and Science University.

Ding Yue had just left the meeting room and was preparing to go to the Book Ship Library to meet Luo Peng who came from Dingli Group.

However, as soon as Ding Yue stepped out of the meeting room, his secretary Wen Ruohan approached him: "Principal Ding, you should quickly check out what's happening on Twitter."

"Huh?"

Upon hearing this, Ding Yue frowned and curiously asked, "What happened?"

"It's about Miss Flying Wheat Cake. After she realized that she had been tricked by Rentang Medical Technology Group, she couldn't tolerate it and posted a lengthy Twitter post revealing Rentang Medical Technology Group's counterfeit medical health robot."

Wen Ruohan briefly explained to Principal Ding what had been trending on Twitter.

This matter indeed involved Mist City Arts and Science University, so as soon as Wen Ruohan saw it, she thought of quickly informing Principal Ding.

"That's good news!"

Upon hearing Wen Ruohan's words, a smile involuntarily appeared on Ding Yue's face.

Originally, to attract attention and sanction Rentang Medical Technology Group and Dingli Group online, a spark was needed, but Ding Yue was worried about how to find that spark.

Surprisingly, Miss Flying Wheat Cake took the initiative to fan the flames!

Ding Yue felt like giving her a thumbs-up!

Once this matter becomes a hot topic online, Ding Yue will seize this opportunity to let the legal team of Mist City Arts and Science University start suing Rentang Medical Technology Group and Dingli Group.

Lawyer Huang and his legal team from the university have been itching for action, all their preparations and materials are ready, just waiting for Ding Yue's command.

"Now that the discussion is heating up online, should we start the lawsuit?"

Huang Youjie, who was by Ding Yue's side, looked at him and asked after hearing what secretary Wen said.

Huang Youjie and the members from the Law School couldn't wait to prosecute Rentang Medical Technology Group and Dingli Group. This battle was a great opportunity for the Law School to prove its mettle.

"Hmm, it's about time." Ding Yue nodded his head and said.

"But Principal Ding, Miss Flying Wheat Cake seems to be severely criticized online!" Wen Ruohan quickly added.

"What?"

Upon hearing this, Ding Yue was stupefied.

Chapter 385: Immediately Besieged on All Sides!

Something's off!

'Flying Wheat Cake' was the first to expose Rentang Medical Technology Group's fake Health Robot Big White. How did she end up being savagely ridiculed?

Wasn't it due to 'Flying Wheat Cake's' revelations that netizens collectively began tirade of verbal condemnations against Rentang Medical Technology Group and Dingli Group?

Ding Yue took out his phone and checked the trending topics on Twitter immediately.

Indeed, he saw 'Flying Wheat Cake's' long Twitter post at the seventeenth place on Twitter's Trending list.

However, when Ding Yue saw the comments below, he realized she was indeed being severely bashed.

"These people criticising 'Flying Wheat Cake', they are not making any sense at all! She clarified everything in her Twitter post or don't they bother to read it?"

Ding Yue shook his head and a thought flashed through his mind.

Perhaps those who criticised 'Flying Wheat Cake' were not real netizens. It's very possible they were part of a hired reputation management prop-up team from Rentang Medical Technology Group!

Given Rentang Medical Technology Group's malicious, unethical conduct, there is indeed a possibility that they'd hire such a team to discredit 'Flying Wheat Cake'.

Sure enough!

Soon, Ding Yue saw Rentang Medical Technology Group's official Twitter account refuted the declaration by 'Flying Wheat Cake', threatening to pursue their right to take legal action against her for spreading rumours!

Only after seeing this activity from Rentang Medical Technology Group's official Twitter account, did Ding Yue truly understand their shamelessness.

Firstly, everything in 'Flying Wheat Cake's' long Twitter post was the truth!

Secondly,

When Huang Youjie saw the post from Rentang Medical Technology Group's official Twitter account, he laughed and said that if Rentang Medical Technology Group had any confidence, they would directly sue 'Flying Wheat Cake' for libel instead of threatening to reserve the right to take legal action.

"Huang, be prepared to sue and seek to freeze the assets of Rentang Medical Technology Group and Dingli Group."

Ding Yue calmly told Huang Youjie.

Mist City Arts and Science University had fully prepared for this strike against Rentang Medical Technology Group and Dingli Group a week ago.

And it was going to be a fatal strike!

This time, Rentang Medical Technology Group must have invested a lot of money in their fake Health Robot Big White, and Dingli Group had been producing round the clock.

At this time, Mist City Arts and Science University would drag them into the mud with legal action. As the university owned all the patents for Big White's technology, if the Rentang Medical Technology Group used even one related technology, then in this lawsuit, justice would side with Mist City Arts and Science University.

There was no doubt that Rentang Medical's Health Robot, whether it was the medical chip or robot manufacturing technology, had all been passed on from 'Flying Wheat Cake's' Big White!

"Good! Finally, we can get them done with!"

Huang Youjie spiked his palms together, making a snapping sound. He had been itching to start this lawsuit for a while now.

Huang Youjie quickly assembled the legal team of the Mist City Arts and Science University.

Ding Yue immediately asked the school propaganda department to officially announce the lawsuit against Rentang Medical Technology Group and Dingli Group!

Soon enough.

Liu Hongxia, the director of the propaganda department of Mist City Arts and Science University, complied with Principal Ding's instructions, composed the post content, and then used the official account of the University to announce on Twitter, TikTok and various major self-media platforms, that the University would sue the Rentang Medical Technology Group.

[Mist City Arts and Science University]v: We have found that Rentang Medical Technology Group has purchased a medical health robot 'Big White', developed by our university, from 'Flying Wheat Cake'. They have adopted plagiarised technology, copied and forged it, severely infringing our technical patents and rights of 'Big White'. Our legal team is formally suing Rentang Medical Technology Group and Dingli Group!

Shares (2.7w), Comments (3.9w), Likes (7.1w)

The post on Mist City Arts and Science University's official Twitter account instantly exploded on the internet, sparking an all-out condemnation of Rentang Medical Technology Group and Dingli Group.

Some netizens even revealed that their senior family members had indeed bought one Rentang health robot for 200,000 dollars.

Not only was the Rentang health robot extremely similar to 'Big White', its functions were substandard in comparison, and one netizen even comically referred to it as a heap of 200,000 dollars' worth of 'scrap metal'!

Some netizens even dug up previous damaging revelations about the Rentang Medical Technology Group!

In reality, Rentang Medical Technology Group was viewed as an unethical company peddling fake pharmaceuticals disguised as health care products. Yet this company had managed to still stand tall, year after year!

Incredible!

Haicheng, Dingli Group.

When Liu Guanghui became aware of the news online, he got very nervous and hurriedly called Xu Wei.

"Hello, President Xu, have you seen the online news? Mist City Arts and Science University is suing us, what should we do?"

Liu Guanghui and Xu Wei privately manufactured and sold a knock-off medical health robot to the elderly, thinking that Mist City Arts and Science University would never notice it.

By the time Mist City Arts and Science University discovers their act, Dingli Group and Rentang Medical Technology Group would have made huge profits.

Chapter 386: Immediately Besieged on All Sides!

Even if we were sued by Mist City Arts and Science University at that time, it was just a litigious matter, and even if we lost the lawsuit, it was okay. We would just pay some compensation and that would be the end of it.

Such matters were easy to handle in Xia Country. Xu Wei, in particular, had a lot of experience with this. There was a time when his Rentang Medical Technology Group had taken out a competitor using similar tactics.

That was about six or seven years ago, when the Rentang Medical Technology Group copied a very popular medical product of the time. They took the initiative and, with the cooperation of the Dingli Group, seized the market first, ultimately causing the company that invented the medical product to not even get a sip of the soup.

There was a lawsuit that time as well, but the Rentang Medical Technology Group had already made a killing. The lawsuit dragged on for a long time, finally leading to the bankruptcy of that company.

It was precisely because of that experience six or seven years ago, that Liu Guanghui chose to cooperate with Xu Wei and imitate the health robot, Big White, from Mist City Arts and Science University.

After all, this health-related product was incredibly popular.

Unable to acquire the rights, Xu Wei finally decided to go down the path he took six or seven years prior, cooperating with Liu Guanghui. With their product launched before the widespread availability of Big White, the Rentang Medical Technology Group had a good market to sell, especially since elderly people were very keen on health robots.

However, what Xu Wei and Liu Guanghui hadn't expected was for Mist City Arts and Science University to find out so soon.

Moreover, Xu Wei hadn't expected that a mere "Flying Wheat Cake" would dare to expose his actions online!

"Did you see that? How did Mist City Arts and Science University get wind of the news so quickly? And they even have evidence to sue?"

Xu Wei was completely baffled.

In theory, even if Mist City Arts and Science University found out that emulated a health robot product, the most they could do was condemn them. After all, how would Mist City Arts and Science University know that their Rentang Health Robot has infringed the patented technology of Mist City Arts and Science University's Big White?

Could it be that they're suing just for imitation? For counterfeiting?

"Yeah! How did Mist City Arts and Science University learn that we infringed their patented technology?"

Liu Guanghui was also very puzzled.

Originally, Xu Wei had anticipated that if Mist City Arts and Science University found out, he would use the excuse of similar products to play a game of "Tai Chi" with Mist City Arts and Science University in order to drag out time. By the time that the dust settled, the Rentang Health Robot, produced by him and the Dingli Group, would have sold out.

Once the money was earned, there would be no problem handling this matter, whatever it was.

But now, the most important thing was!

The Rentang Medical Technology Group had just started selling a batch of Rentang Health Robots, and more products were awaiting orders in the Dingli Group's warehouse, ready for those elderly people to purchase.

And the result?

They've actually been sued by Mist City Arts and Science University today?

The most crucial thing is, now that Mist City Arts and Science University has announced the lawsuit on its official web page, can they still sell their Rentang Health Robot?

After all, the one that's popular online is Mist City Arts and Science University's Big White and not their Rentang Health Robot.

"President Xu, what should we do now? Continue to ship?" When it comes to decision-making, Liu Guanghui still chooses to listen to Xu Wei.

Because Xu Wei has many ideas, and also because it was Xu Wei who planned to do this from the beginning.

"We..."

Just as Xu Wei was about to tell Liu Guanghui about their next plan, one of his managers rushed in frantically.

"Don't you know how to knock?"

Xu Wei was already very irritable. Seeing this manager rush in suddenly made him bellow with anger.

"President Xu, something bad happened, the higher-ups, the higher-ups are coming to inspect us!" The manager said nervously and uneasily.

"What higher-ups? Dare to inspect us?"

Xu Wei asked, frowning.

"The Medicine Administration!"

The manager hurriedly replied.

"Haha, the Medicine Administration is merely a formality. I already knew about this. I know people in the Medicine Administration!" Xu Wei laughed, preparing to continue talking to Liu Guanghui about their next plan.

"President Xu, no, not the local Medicine Administration, it's ... it's ... the National Medicine Administration!"

Boom!

Upon hearing this, Xu Wei felt like he had been struck by lightning.

"How is that possible, how did this involve the National Medicine Administration?"

Xu Wei was dumbfounded.

If the National Medicine Administration came to inspect his Rentang Medical Technology Group, they would definitely find something!

The most important thing was, with Xu Wei's power, there was no way he could stop the National Medicine Administration from inspecting his Rentang Medical Technology Group.

"President Xu? President Xu? What happened? What's going on? President Xu?" Over the phone, Liu Guanghui asked in confusion.

"Liu... This time things have blown up, you better be prepared."

At that moment, Xu Wei's mind went blank, and he didn't know how to handle the situation.

What confused Xu Wei the most was, how did Mist City Arts and Science University manage to get the National Medicine Administration to inspect his Rentang Medical Technology Group?

...

In reality, at Mist City Arts and Science University.

When Ding Yue met Luo Peng at the Book Ship Library, Luo Peng handed Ding Yue a USB stick. Inside it was all the evidence Luo Peng could provide about the Dingli Group's infringement and theft of the patented technology of Mist City Arts and Science University's Big White.

Chapter 387: Immediately Besieged on All Sides!

Meanwhile, Ding Yue received a call from President Jiang Zhongbo of Mist City Central Hospital.

The moment President Jiang Zhongbo learned about the Rentang Health Robot incident, he contacted Ding Yue and confirmed that Rentang Medical Technology Group infringed on the patent technology of Mist City Arts and Science University with their health robot product from a technical perspective, and most importantly, the quality could not be guaranteed.

The accusation of "fake health robot" was not far off mark.

Full of righteousness, President Jiang Zhongbo expressed his willingness to help Mist City Arts and Science University protect the patent rights of their medical health robot, Big White.

With President Jiang Zhongbo's support, the National Medicine Administration could prepare to investigate Rentang Medical Technology Group.

The National Medicine Administration was gearing up for an investigation into Rentang Medical Technology Group.

Meanwhile, Mist City Arts and Science University was resorting to legal action against Rentang Medical Technology Group.

Inside the company, because of the heated discussion on Twitter causing even their PR team to struggle, the public condemnation of Rentang Medical Technology Group tanked the large volume of orders for the Rentang Health Robot they had manufactured.

Even if the elderly wanted to buy Rentang Medical Technology Group's health robot, their children would immediately stop them once they learned about the incident online!

Many orders for Rentang Medical Technology Group were cancelled on a large scale!

It was like they were besieged on all sides.

The next day, Rentang Medical Technology Group's funds were frozen. Xu Wei, seeing the situation deteriorate, prepared to flee.

This was something Xu Wei couldn't shoulder. Once the National Medicine Administration completes their investigation on his Rentang Medical Technology Group, he would likely end up behind bars!

"Amy."

Xu Wei promptly called his assistant.

"President Xu."

"Get me a flight to America!"

"President Xu, where to? New York or Los Angeles?" Amy, his assistant, asked.

"Anywhere will do!"

Xu Wei agitatedly tugged at his collar, his mind racing with anxiety at this point.

If he doesn't leave soon, he'd probably end up in prison.

...

Mist City Arts and Science University.

Ding Yue was scrolling through Twitter, enjoying the various criticisms and denunciations against Rentang Medical Technology Group.

All Ding Yue could do was sue Rentang Medical Technology Group and sink them into a legal morass.

Then with the evidence provided by Luo Peng, hopefully, they could freeze Rentang Medical Technology Group's funds.

This alone could deal a heavy blow to Rentang Medical Technology Group.

What Ding Yue hadn't expected was that the righteous President Jiang Zhongbo would actually lend a hand.

As the President of Mist City Central Hospital, Jiang Zhongbo's connections were far beyond what Ding Yue could match.

Add to the fact that Rentang Medical Technology Group has long been infamous as medical equipment company, it was a ticking time bomb ready to explode.

In the past, there were sparks, but they were too small. When the local Medicine Administration checked on Rentang Medical Technology Group, Xu Wei could easily handle it.

But then, with President Jiang Zhongbo's intervention.

The National Medicine Administration decided to establish an investigation team specifically for Rentang Medical Technology Group.

"Hahaha, Yue, great news! Great news!"

Just as Ding Yue was scrolling through Twitter, Huang Youjie rushed in excitedly from the door.

"What great news? Was Xu Wei arrested?"

Ding Yue looked up to ask.

Huang Youjie froze for a moment, "Yue, how did you know?"

"I was guessing!"

Just then, Ding Yue had made a casual guess. Had he really guessed correctly?

"Exactly, Rentang Medical Technology Group's health products caused trouble, the family members called the police, and many consumers who bought the Rentang Health Robot also called the cops accusing Rentang Medical Technology Group of fraud. The police arrested Xu Wei on his way to the airport."

"Huh, that guy was planning to run away?" Ding Yue scoffed: "Hmph... serves him right!"

Chapter 388: Drafting the Project Proposal for Photolithography Machine

On the evening of September 5, Mist City Arts and Science University.

The atmosphere was lively in the principal's private room at the campus-themed hotpot restaurant on the third floor of the second dining hall.

Ding Yue was treating two mechanical engineering high-flyers from Qinghua University to the hottest and tastiest campus-themed hotpot at Mist City Arts and Science University.

"Here, on behalf of Mist City Arts and Science University, I welcome your arrival!"

Ding Yue raised a glass of wine and clinked it with Luo Peng and Su Beilin.

"Thank you, Principal Ding."

Luo Peng and Su Beilin expressed gratitude for Principal Ding's warm reception.

In this private room, besides Ding Yue, Luo Peng, and Su Beilin, there were also An Yujia, and Ding Yue's sister, Ding Xiaoyou.

Ding Xiaoyou was purely there to enjoy the free food and drink.

Huang Youjie, Xu Bin, and Wen Ruohan were also in attendance. After all, dining on hotpot is much more festive and atmospheric with a larger crowd.

The fact that Mist City Arts and Science University could deliver a fatal blow to Rentang Medical Technology Group this time was due largely to the help of President Jiang Zhongbo and Luo Peng.

As a mechanical engineer for Dingli Group, Luo Peng joined Ding Yue's Feiyue Group and Mist City Arts and Science University immediately after leaving Dingli Group.

This dinner tonight was to welcome Luo Peng and Su Beilin.

At first, Ding Yue thought Luo Peng was the only one joining, but as it turned out, it was buy one get one free as Luo Peng had brought another mechanical engineer from Dingli Group who also graduated from Qinghua University's mechanical department.

This made Ding Yue incredibly pleased.

"Principal Ding, Su Beilin and I are both very fond of the medical robot Big White. We are joining Mist City Arts and Science University in the hope of participating in the Big White project."

Luo Peng said to Ding Yue, bubbling with excitement.

Through this exchange with Principal Ding, Luo Peng could tell that Principal Ding was a young man who favored talent and was way younger than he was - inconceivably so.

Word had it that Principal Ding was working with people like Professor Zhou Wen from Jiangnan University of Science and Technology, on researching Gallium Nitride semiconductor materials at Mist City Arts and Science University.

What a genius!

"Of course, we at Mist City Arts and Science University warmly welcome you. I guarantee you both will be satisfied with the salary and benefits. Oh, and what kind of work did you used to do at the Dingli Group?"

Ding Yue asked curiously.

"We just entered the Precision Machinery Department this year, mainly cooperating with Guoxing Technology on photolithography machine mechanical processing."

Su Beilin replied.

Oh?

Upon hearing this, Ding Yue's eyes lit up!

Photolithography machines?

Surprisingly, Luo Peng and Su Beilin were both talents in the field of photolithography machine precision mechanical processing?

This was an entirely unexpected surprise that made Ding Yue's heart flutter.

This excitement was not for the beautiful young ladies, but for the high-end talents.

A few days ago, Ding Yue had opened a level 3 University Treasure Chest, from which came photolithography machine manufacturing techniques.

This technique is for manufacturing photolithography machines, which are core devices for manufacturing chips!

After opening the photolithography machine manufacturing technique from the [Level 3 University Treasure Chest], Ding Yue was worried about how to proceed.

After all, the manufacturing of photolithography machines involves a lot of areas, including precision mechanical processing, optoelectronics, computer technology, and material chemistry.

In fact, for fields like precision mechanical processing, computer technology, and material chemistry, Ding Yue could select talent from his own Mist City Arts and Science University to do the work.

For example, for precision mechanical processing, he could let Tong Yihang and Liu Tiefei try. Even though Tong Yihang and Liu Tiefei are outstanding talents from the mechanical department of Mist City Arts and Science University and have even manufactured the robot Big White.

But for the precision mechanical processing of photolithography machine, they might be out of their depth.

However!

The arrival of Luo Peng and Su Beilin was indeed unexpected. They are both engaged in the field of precision mechanical processing for photolithography machines at Dingli Group?

It's well-known that Dingli Group is one of the top mechanical processing companies domestically, and their collaboration with Guoxing Technology on photolithography machines is quite normal.

However, this time Dingli Group is likely going to suffer because they are implicated in the Rentang Medical Technology Group's incident.

With Luo Peng and Su Beilin filling the gap in precision mechanical processing, if they can bring on Tong Yihang and Liu Tiefei to work on the precision mechanical processing of the photolithography machine, is it possible to make progress in that?

If Ding Yue gives them enough time and applies the corresponding technology BUFF effect, he feels maybe there might be a breakthrough in the field of photolithography machine manufacturing techniques within one or two years?

If Luo Peng, Su Beilin, Tong Yihang, and Liu Tiefei are in charge of precision mechanical processing, then for the computing technology field, Ding Yue can choose Xu Bin and the computer department's genius student Chen Jun.

Then comes the field of material chemistry.

What a coincidence!

Ding Yue glanced at his sister, Ding Xiaoyou, who was eating and drinking for free.

Although his sister Ding Xiaoyou wants to research energy chemistry, she would definitely have no problem in the field of material chemistry.

The only thing left is optoelectronics.

In fact, optoelectronics is the name of a comprehensive technical discipline, and the processing of light into electricity is called optoelectronics.

Chapter 389: Drafting the Project Proposal for Photolithography Machine

Optoelectronics, based on photoelectron science, is a technical discipline that integrates the use of optics, precision mechanics, electronics and computer technology to solve various engineering application problems.

As the information carrier is extending from the electromagnetic spectrum to the optical spectrum, optoelectronic science and opto-mechatronics technology concentrate on the optoelectronic information industry such as optical information acquisition, transmission, processing, recording, storage, display, and sensing.

To manufacture a photolithography machine, optoelectronics is a core field.

The dinner table tonight, which was filled with hotpot, could be said to be a gathering of talented elites from Mist City Arts and Science University.

Luo Peng and Su Beilin, both graduates of Qinghua University's mechanical department, have joined Mist City Arts and Science University. With the BUFF effect given by Ding Yue, they can go even further.

There's no need to mention my younger sister, Ding Xiaoyou.

After Ding Yue applied the best personal learning buff to himself, he could barely be on par with his sister, Ding Xiao You.

And Ding Yue has already applied the best personal learning buffs available in the system mall, namely the Scroll of Talents and Skills and the Profound Knowledge Scroll, to Ding Xiao You. It is estimated that Ding Xiao You will be the top talent in the academic or scientific research field of Mist City Arts and Science University in the future.

In addition to Luo Peng, Su Beilin and Ding Xiaoyou, there is also himself and Xu Bin, who has a very high level of knowledge in computer technology.

Now, they can all be called geniuses in their respective areas of expertise.

The most important thing is!

All the majors they are involved in are related to photolithography machines!

His!

Thinking of this, Ding Yue couldn't help inhaling sharply, was it fated that he got the lithography manufacturing process technology by opening a [level 3 University Treasure Chest]?

Otherwise, how could all of this be such a coincidence?

It seems that the heavens have prepared for me to undertake a photolithography machine experimental project at Mist City Arts and Science University!

Ding Yue secretly thought in his heart.

After thinking about it, Ding Yue came back to his senses, excitedly turned to Luo Peng and Su Beilin and asked again for confirmation: "Are your majors related to the photolithography machine?"

Seeing Principal Ding so excited, Luo Peng promptly nodded and said: "Yes, Principal Ding, Su Beilin and I, during our time at Dingli Group, participated in the engineering work related to Guoxing Technology's precision mechanical processing of photolithography machines."

"Alas, if only our country had an advanced photolithography machine!" Ding Yue suddenly sighed and said.

"Research it then."

At this point, Ding Xiaoyou, his sister, also gave him a helping hand, whether intentionally or unintentionally.

Ding Yue's sigh was actually intentional, it was meant to stir up the fighting spirit of Luo Peng and Su Beilin.

At this moment, Ding Yue applied the lithography manufacturing process technology he got from the [level 3 University Treasure Chest] to Luo Peng and Su Beilin.

Ding!

"Prompt: The two targets are neither students nor teachers of the Mist City Arts and Science University, so they cannot be endowed with the relevant technology!"

Suddenly, a prompt from the system sounded in Ding Yue's mind.

"Oh, right!"

Ding Yue almost forgot, the technology he obtained or the items he redeemed from the system store can only be used on students or teachers of Mist City Arts and Science University.

Obviously, Luo Peng and Su Beilin have graduated from Qinghua University for quite some years now, and they are not currently students of Mist City Arts and Science University. So, if he wants to give them [Lithography Manufacturing Process Technology], they have to become professors at Mist City Arts and Science University.

This is simple.

If Luo Peng and Su Beilin are willing to become lecturers in the Mechanical Department of Mist City Arts and Science University, then Ding Yue can use the [Education Qualification Card] on them.

"Buy two [Education Qualification Cards]."

Ding Yue moved a little in his mind.

Ding!

"Congratulations Host for successfully using 2 reputation points to buy 2 [Education Qualification Cards]."

With these two [Education Qualification Cards], Ding Yue still needs to confirm whether Luo Peng and Su Beilin are willing to join Mist City Arts and Science University as teachers. Otherwise, he cannot use the [Education Qualification Cards] on them.

"Xiao You, the photolithography machine is not so easy to research. Our country's photolithography machine technology is still at the 28-nanometer and 14-nanometer level."

Luo Peng shook his head helplessly.

At this point, Su Beilin also said with a sigh: "Alas, foreign semiconductor technology is already at the 5-nanometer level, and even rushing to the 3-nanometer process technology."

As for the photolithography machine technology in semiconductor manufacturing processes, foreign countries are indeed far ahead, but China is urgently catching up.

Guoxing Technology is given the hope of the rise of domestic chips!

However.

Catching up with the advanced technology in this area from foreign countries is not easy at all.

"How do you know if you don't try? By the way, Luo Peng, Su Beilin, since you guys have come to Mist City Arts and Science University, why don't you teach our Mechanical Engineering students in your spare time? With talented mechanical engineers like you, I believe our Mechanical Department at Mist City Arts and Science University will become stronger and stronger!"

Ding Yue extended an invitation to Luo Peng and Su Beilin.

Luo Peng was stunned, but at this moment, An Yujia nodded at him, indicating that he could accept.

Luo Peng was rather embarrassed, worried that he wouldn't be capable of teaching the students at Mist City Arts and Science University's Department of Mechanical Engineering.

In fact, some of the teachers in the Mechanical Department of Mist City Arts and Science University do not have as good qualifications or knowledge capability as Luo Peng and Su Beilin, who graduated from the Mechanical Department of Qinghua University.

Chapter 390: Drafting the Project Proposal for Photolithography Machine

"Principal Ding, let us be teachers?" Su Beilin asked unconfidently, "I worry that I may not be up for this daunting task."

Ding Yue laughed and shook his head, "In fact, both of you are probably more capable than ninety percent of the teachers in the Mechanical Engineering Department at Mist City Arts and Science University!"

"Ah, well then, okay."

Since Luo Peng sincerely came to join Principal Ding, he could not refuse such an invitation from Principal Ding.

"Alright!" Su Beilin also agreed.

Luo Peng and Su Beilin knew that Mist City Arts and Science University was a privately-run university. It is connected with Ding Yue's Feiyue Group. Becoming educators for the Mechanical Engineering Department at the Mist City Arts and Science University was also considered as officially joining Principal Ding's university.

"Come, let's have another drink, welcome aboard!" Ding Yue laughed, lifting a glass of wine, and took a sip with Luo Peng and Su Beilin.

Ding!

"Congratulations, Host, on successfully using the [Education Qualification Card] for Luo Peng and Su Beilin!"

Using the opportunity created by the wine, Ding Yue provided both Luo Peng and Su Beilin with the educational qualifications. From now on, both of them will be part of the faculty at the Mist City Arts and Science University.

Once that step was completed,

Ding Yue could confer Luo Peng and Su Beilin with the [Lithography Manufacturing Process Technology].

After infused with [Lithography Manufacturing Process Technology], it means, as they are Mechanical Engineering professionals, they could rapidly grasp the technical aspects of precision mechanics processing in the [Lithography Manufacturing Process Technology].

Similarly, if Ding Yue confers the [Lithography Manufacturing Process Technology] upon himself, at most, he can grasp technical knowledge related to photolithography optics, but he would fail to grasp other parts of [Lithography Manufacturing Process Technology], including precision mechanics processing, computer technology, material chemistry, etc.

This is the "specialization" in technology!

If Ding Yue bestows the technology to a student, whose major is unrelated to the areas covered by photolithography, it would be equivalent to drawing water with a bamboo basket—virtually useless!

Ding!

"Congratulations to the Host on successfully conferring Luo Peng and Su Beilin with [Lithography Manufacturing Process Technology]!"

Along with Ding Yue's operations,

He finally conferred the [Lithography Manufacturing Process Technology] he earned from the level 3 University Treasure Chest upon Luo Peng and Su Beilin.

Ding!

"Congratulations, Host, on successfully conferring [Lithography Manufacturing Process Technology] to Xu Bin."

Ding!

"Congratulations, Host, on successfully conferring [Lithography Manufacturing Process Technology] to Ding Xiaoyou."

Ding Yue directly conferred the [Lithography Manufacturing Process Technology] to the talented individuals present in the room.

"We just spoke about photolithography machines. I think we should try and build them ourselves. Domestic photolithography development needs talents like you. You don't have to worry about the financial aspect. I can provide the funds for R&D!"

After completing the technology transfusions, Ding Yue brought up the idea of developing photolithography machines again.

Although the research and development of photolithography machines may take quite a while,

They at least have to make a start.

Just like the Big White robot project.

The project that was set up last year only started showing results after a year.

Ding Yue estimated that after setting up the photolithography machine experiment project, it would be very difficult to have any gains without at least three to five years.

"Principal Ding is right, if we don't try, we'll always be left behind!" After being conferred the [Lithography Manufacturing Process Technology], Luo Peng suddenly gained some confidence.

Luo Peng didn't know where this surge of confidence came from—it just suddenly appeared! Furthermore, Luo Peng felt that he had gained a new understanding of photolithography precision machinery processing technology, and felt that if he delved into it, he might make a breakthrough!

Just like Luo Peng, Su Beilin also felt the same way!

"Principal Ding, to research and produce photolithography machines, that's going to cost a lot of money!" After having a sip of wine, Su Beilin felt a surge of enthusiasm.

"Money isn't a problem!"

Ding Yue waved his hand generously.

If they could truly realize domestic advanced-process photolithography machine production, they would definitely receive state support. Ding Yue thought, perhaps he could complete the "National Technology Award" requirement needed to upgrade Mist City Arts and Science University to [Well-known], which was indeed quite a challenge!

By then, Mist City Arts and Science University will start the upgrade to [Well-known].

Picturing this, Ding Yue got a little excited.

"Yue, I support you!"

Xu Bin also felt he could contribute his skills in the computer technology aspect of photolithography machine research and development to the Mist City Arts and Science University.

"Hmm."

Ding Xiaoyou looked at her brother and slightly nodded.

Undoubtedly, her talented sister would definitely support her brother. Also, if her brother's Mist City Arts and Science University needed her, she was willing to devote some of her energy to it.

That's because Ding Xiaoyou knew that photolithography machines' research and development would also involve the field of material chemistry.

Ding Yue, upon seeing Luo Peng, Su Beilin, Xu Bin, and his sister Ding Xiaoyou supporting his idea, knew that it must be the effect of him conferring them the [Lithography Manufacturing Process Technology].

An Yujia, while watching these young people, felt that they were energetic and ambitious. They were ready to do the improbable task of building photolithography machines. However, considering Luo Peng and Su Beilin's experience in working on photolithography projects at the Dingli Group, it might just be possible.
