

## F. University 761

### Chapter 761: Principal Ding's Huge Layout and Linkage

"In recognition of your hard work over the past six months, you've finally developed this satisfactory Feiyue Game Engine. Therefore, I've decided to establish the Feiyue Games Studio under the Feiyue Group. Pei Gou, are you interested in being the person-in-charge of this studio?"

Ding Yue extended his hand with a smile, giving Pei Gou a light pat on his shoulder, and asked.

Upon hearing this, Pei Gou was immediately overwhelmed with excitement!

Is this... an official invitation from Principal Ding?

"Principal Ding, I... I'm afraid I don't have the capabilities to manage a large studio." Pei Gou replied, modestly.

"The main responsibilities are just game development and operation. Don't you have confidence in yourself?"

Ding Yue said lightly with a smile.

Pei Gou didn't answer immediately. After about three to five seconds of silence, he firmly nodded and replied, "Principal Ding, since you trust me so much, I will give it a try. But will everyone else in our temporary studio..."

Ding Yue understood that, Pei Gou was asking whether the members of his temporary studio would also join Feiyue Games Studio.

Ding Yue nodded and said with a smile, "Of course, you guys are a team. Now that the first generation of Feiyue Game Engine is in place, I look forward to your development of the first high-quality, blockbuster game!"

Ding Yue placed great expectations on Pei Gou and the others.

With the development of science and technology, especially the continuous advancement of computer technology, the development of games must keep up with the pace of the times.

People are becoming more and more critical about the quality of games these days.

As a group of young people with a dream of gaming, Ding Yue naturally hopes that they can create a globally popular game based on the Feiyue Game Engine. This way, the profits that Feiyue Game Company can bring to the Feiyue Group would undoubtedly be considerable.

Upon hearing this, everyone was overjoyed and applauded for Principal Ding's good news.

"Principal Ding, if we are going to develop games, we might need more time and energy. Currently, we may not have enough people. Can I bring some more people from our game major when the time comes?"

Pei Gou asked Principal Ding, looking somewhat troubled.

"Once the Feiyue Games Studio is established, you will be the person-in-charge. These minor issues should be decided by you. As long as you think the student is capable, you can recruit them."

Ding Yue said with a smile.

Upon hearing Principal Ding's approval, Pei Gou felt reassured.

It was apparent that Principal Ding truly supported him. So, Pei Gou decided that he would roll up his sleeves and work hard to develop a game that excels in both visual effects and gameplay with his classmates.

"Thank you for your support, Principal Ding." Pei Gou expressed his heartfelt gratitude.

"Keep up the good work."

Ding Yue looked at Pei Gou earnestly and said, "The gaming market is broad but highly competitive. I don't want to see our domestic market dominated by companies like Penguin Games. Work hard, and who knows, you might bring down Penguin Games."

"Principal Ding, we will definitely work hard!"

Currently, the gaming market in Xia Country is dominated by a few internet companies.

For example, Penguin Games and Web Cloud Games etc.

Whether it's PC games or mobile games, these companies undoubtedly lead the pack. Most importantly, these companies are milking money from the gaming market without any scruples, implying that playing games without in-game purchases are not real gamers?

Essentially, they continuously find ways to extract money from players' wallets, creating a negative cycle in game development.

The Feiyue Games Studio that Ding Yue planned to establish, having the Feiyue Game Engine as a foundation, aims to produce nationally scarce 3A masterpieces.

However, to produce a 3A masterpiece requires optimization to allow a broader base of players with regular PC configurations access to the masterpiece, not to mention some degree of interactivity and innovation.

Otherwise, following overseas 3A masterpieces will ultimately weaken our competitiveness.

Therefore, Ding Yue eagerly looks forward to the kind of masterpiece game Pei Gou and his team will develop.

After examining the game engine developed by Pei Gou, Ding Yue returned to the office in the Administration Building and immediately began working on Feiyue Games matters.

Currently, under the Feiyue Group owned by Ding Yue, there are departments or studios like Feiyue Media, Feiyue Animation, Feiyue eSports, Feiyue Technology, Feiyue Logistics, and so forth.

With the addition of Feiyue Games Studio, the development model Ding Yue wanted to implement within Mist City Arts and Science University is gradually taking shape.

His university, Mist City Arts and Science University, serves as a cradle for nurturing talents.

On the other hand, Feiyue Group provides an opportunity for these elite university students from Mist City Arts and Science University to show their abilities.

"Secretary Little Wen, please call Miss An over." Ding Yue asked Wen Ruohan to summon An Yujia.

After all, An Yujia was responsible for the major affairs of the Feiyue Group. So, Ding Yue would need to brief An Yujia about the establishment of Feiyue Games Studio.

"Alright, Principal Ding."

About five minutes after Wen Ruohan contacted An Yujia, she arrived at Principal Ding's office.

Chapter 762: Principal Ding's Huge Layout and Linkage

"Principal Ding, you wanted to see me?"

An Yujia's office is in the same building as Principal Ding's, so she came over quickly.

"Sit, Big White, make tea."

Ding Yue beckoned his AI robot Big White to make a cup of tea for An Yujia.

Nowadays, Big White's tea-making skills are becoming more proficient.

That's how AI robots are, especially since Big White is a learning type humanoid brain logic robot, it can do things better through constant learning.

Like making tea.

Every time An Yujia comes to Principal Ding's office, she is most delighted to see the chubby, cute and charming robot, Big White.

"You've been busy recently?"

Ding Yue didn't immediately discuss official matters with An Yujia, but asked about her recent work situation.

"Yes, mainly because our Feiyue Technology has added a big chunk of the graphene industry. The manpower, physical resources and financial resources involved are immense, so I have been more concerned."

An Yujia nodded.

Lately, in order to busy herself with the graphene industry established by Feiyue Technology and Mist City Arts and Science University, An Yujia has been running around a lot.

The graphene factory is now being constructed in an orderly manner.

Tong Yihang and Luo Peng are also training professional technical personnel.

Everything is going smoothly as initially anticipated by Principal Ding.

"You have worked hard."

Ding Yue said with concern: "But there's another matter, I'm afraid I have to trouble you a bit more."

"Principal Ding, just say the word." Seeing Principal Ding wanted to talk business, An Yujia became serious: "I'm paid so much every year, so naturally I have to work more, especially with all the performance rewards."

An Yujia once calculated that her salary and benefits at Mist City Arts and Science University as CEO of Feiyue Group, were significantly more than when she was abroad.

Therefore, An Yujia naturally worked even harder.

"So, last year, I asked a group of excellent students in the game design major to make a gaming engine. Now, they have completed the gaming engine and it satisfies me, I think it's a piece of work that can open up the gaming market."

Ding Yue explained the situation to An Yujia.

After all, she may not be very clear about the task he gave to game design students to develop a gaming engine.

"Oh, I see."

Hearing this, An Yujia responded and nodded.

"So, I thought about establishing a formal game studio for them, named Feiyue Games Studio, under Feiyue Group. You will handle some of the studio's administrative personnel's preparatory work, what do you think?"

Ding Yue instructed.

A large studio, especially a game studio, is generally made up of two types of personnel.

Part of it is the core game design technical personnel, while the other part is administrative personnel, mainly responsible for organizing data and handling financial accounting and other affairs.

Game design personnel, of course, are known, that is Pei Gou and his team.

The other part, the administrative staff, will be the responsibility of An Yujia to recruit and arrange for Feiyue Games Studio.

In fact, the administrative staff of various departments or studios under the Feiyue Group are all served by excellent students from the administration-related majors of Mist City Arts and Science University.

This is also part of the internal cycle, not only technical elite students like Tong Yihang, Liu Tiefei's internal cycle, but also excellent students from administrative and business majors can be put to their best use.

"Alright Principal Ding, leave this matter to me. Actually..."

An Yujia smoothly took over Principal Ding's assigned task, but it seemed she wanted to say something more.

Ding Yue naturally picked up on this and immediately asked, smiling, "Miss An, is there something troubling you?"

"No, not really."

An Yujia shook her head and replied with a slight smile, "Here's the thing, Principal Ding. Looking at our current relationship and cooperative efforts between the Feiyue Group and Mist City Arts and Science University, I can see your grand blueprint and collaborative strategy. To implement these strategies and collaborations more effectively, I have a suggestion..."

As the CEO of Feiyue Group, An Yujia felt nothing but admiration for Principal Ding's planning and the results it had yielded, from the moment she started working with him.

However.

As Feiyue Group expanded, adding more and more departments and venturing into more fields, An Yujia felt it was time to consolidate these departments, to allow Feiyue Group to truly become a large multinational conglomerate in the future!

"Oh? Let's hear your thoughts."

Ding Yue asked with interest.

An Yujia, a person with sharp business acumen and outstanding capabilities, had an idea that certainly boded listening to and consideration.

"Principal Ding, the Feiyue Group currently owns several sectors like Feiyue Media, Feiyue Animation, Feiyue eSports, Feiyue Technology, Feiyue Logistics and the Feiyue Games you instructed me to establish. I think these sectors would eventually involve vast market regions. Therefore, I suggest creating subsidiary companies for each of these areas under our group for consolidated management."

An Yujia expressed her thoughts clearly.

What she proposed was upgrading these sectors that had clear market segments and business scopes, making them companies under Feiyue Group.

"That's a good idea."

Upon hearing this, Ding Yue nodded slightly, "Once the management structure of these companies is improved, the operational efficiency can be enhanced. Meanwhile, the Group can better oversee the development direction, facilitating better cooperation amongst them, right?"

After careful analysis, Ding Yue felt that An Yujia's proposal could indeed improve efficiency.

In contrast, having departments with clearly defined commercial domains under the same corporation seemed chaotic.

Once they form more complete companies, they would have more mature organizational structures, thus naturally enhancing efficiency.

More importantly, once these companies form a matrix, their cooperation can be executed efficiently under the commands of Ding Yue, the CEO of Feiyue Group.

"Precisely, Principal Ding." An Yujia nodded, then asked, "So, does this mean you support the proposed consolidation plan? If you agree, I will start the consolidation once I get back."

"Agreed!"

Ding Yue voiced his consent.

After the consolidation, the development directions of all companies became very clear. Feiyue Media Company mainly focuses on media, film, and entertainment.

As for the Flying Leap Technology Company, it is needless to say, it's one of the central pillars of the Feiyue Group.

Both the healthcare robot Big White and the graphene industrial system fall under Flying Leap Technology Company.

Feiyue eSports Company will further engage in electronic sports, participating in and hosting various large-scale eSports events.

Currently, Feiyue Animation is a studio, but when it grows stronger, it will eventually become a company.

Moreover, Feiyue Animation and Feiyue Media can work together seamlessly. The same applies to the upcoming Feiyue Games.

"Principal Ding, with the continuous construction and development of our Mist City Arts and Science University, more and more excellent students are being trained in various fields. The Feiyue Group will establish a complete system in each field in the future. By that time, people will be astonished at what a true global multinational corporation looks like. A corporation that not only specializes in one area but covers all domains. It's a challenging but exciting project!"

An Yujia said excitedly.

Needless to say, probably the only person who could see through Ding Yue's ideas so thoroughly was An Yujia herself.

"Hmm? Miss An, you mentioned cooperation earlier..."

Raising his eyebrows, a sudden idea flashed across Ding Yue's mind.

Chapter 763: The First Big Game!

"Principal Ding, what's up?"

An Yujia, noticing Principal Ding seems to have an idea, asked curiously.

"When you mentioned that every industry under the Feiyue Group can interact after setting up their respective companies, I suddenly thought of a new interaction project."

A smile crept up on Ding Yue's lips.

After inspecting Pei Gou's game engine, Ding Yue was extremely satisfied, so he urged Pei Gou and his team to hurry up and create a high-quality game using the "Feiyue Game Engine".

However, Pei Gou and his team have not yet decided on the type of game they will be creating.

A shooter game?

A fantasy magic game?

A Wuxia or Xianxia game?

An adventure domination game?

In short, there are numerous types of games on the market, only limited by your imagination; there is nothing that can't be created.

From online games and stand-alone 3A masterpieces to mobile games, game developers worldwide have a solid grasp of the gaming market.

Ding Yue had thought before, even with the powerful Feiyue Game Engine at Mist City Arts and Science University's disposal, it wouldn't be easy to carve out a path in the mature gaming market.

This is different from the graphene industry. The graphene industry belongs to the Blue Ocean Market, a market that is not yet fully developed.

Therefore, as long as the Feiyue Group and Mist City Arts and Science University take the lead, they can definitely make a substantial profit.

The gaming market, however, is different.

The existing game market competition is fierce, bordering on a bloody and brutal market situation, hence it's called the "Red Sea Market".

Many game studios of a certain scale find it difficult to survive the fierce competition for users.

If the games produced by Feiyue Games can't shake the current gaming market, they would likely face significant losses.

Ding Yue didn't want the first game made with the Feiyue Game Engine, which was developed by his Mist City Arts and Science University, to falter from the start.

They have to start off on the right foot!

So, Ding Yue thought it best to be cautious when deciding on the first game that Pei Gou and his team should create. At the very least, the game should be able to survive in the mature yet fiercely competitive gaming market.

Of course.

It would be great if they could make a big hit.

Just now, a word from An Yujia piqued Ding Yue's attention and sparked a new train of thought in his mind.

The word was— interaction!

What could a game interact with?

Without a doubt, films and novels. Some existing games on the market are adaptations of popular online novels, while some have been adapted from popular TV shows.

"Principal Ding, what's the new interaction project?"

An Yujia was extremely curious.

If it was some interaction projects from Mist City Arts and Science University, An Yujia would be satisfied by listening to it out of curiosity.

After all, she cannot intervene in the projects and affairs of Mist City Arts and Science University, which are primarily developed and expanded by Principal Ding himself.

But if it was about a project interaction of Feiyue Group, then An Yujia needs to take Principal Ding's novel interaction idea seriously.

Because if it's related to the Feiyue Group, An Yujia would have to put her heart into it when it's implemented.

"I just asked you to prepare for the establishment of a Feiyue Game Studio. Before this, I let Pei Gou and his team prepare to make the first game, but they haven't decided what kind of game they will produce yet. They have to decide on the theme and type of the game, but your word 'interaction' got me thinking of a great method."

Ding Yue laughed as he said this to An Yujia.

An Yujia was someone Ding Yue trusted. After all, she could see through his grand schemes, so he always shared his new ideas with her.

"A game... to interact with what? Animate comic, or film?" After hearing this, An Yujia took a moment to think and guessed it right.

"Exactly!"

Ding Yue smiled faintly and nodded: "It's a film, and what's more, I feel it's quite suitable. It's the sci-fi movie 'Wandering Earth' that Director Su Yangfan and his team are currently filming!"

Yes!

What Ding Yue had thought of was a collaboration between the currently filming "Wandering Earth" by Director Su Yangfan and the game.

One is a science fiction movie that Ding Yue is fully confident about. As long as it is well made, its performance upon release should not be poor.

After all, they have the right timing, geographical and social conditions.

Once the sci-fi movie "Wandering Earth" hits big, they can simultaneously launch the epic sci-fi game "Wandering Earth". The visual quality of the game, produced with the power of the Feiyue Game Engine, can absolutely trigger a sci-fi craze across the film and gaming industries!

Ding Yue felt a little excited thinking about this.

However, this involves two major project collaborations and a funding amount reaching hundreds of millions. The difficulty of perfectly executing the collaboration is indeed high.

If the sci-fi movie "Wandering Earth" unexpectedly bombs, it will have a significant impact on the game "Wandering Earth".

Similarly, if the game "Wandering Earth" turns out average, it will slightly backfire on the sci-fi movie "Wandering Earth".

Chapter 764: The First Big Game!

Despite all this though.

Ding Yue still wants to give it a try.

If successful, it would be a groundbreaking milestone in both film and game history!

"Principal Ding's idea is indeed bold. Before this, very few companies dared to create a video game while producing a film. Usually, a game or film is made once the other becomes popular,"

An Yujia admitted with admiration.

"Actually, the world view of Wandering Earth is very suitable to be turned into a game, allowing players to immerse themselves in and participate in that grand era of a wandering Earth."

Ding Yue still believes that Wandering Earth is very suitable to be made into a game.

However, the quality of the game must be guaranteed.

With the existence of the Feiyue Game Engine, it can ensure the game's quality.

Then comes playability.

After ensuring the graphics and other qualities of a game, playability becomes very important. What players need to do when entering the game, and what they can play becomes a core issue.

Regular AAA games let players undertake various quests according to the plot, unlocking various items and characters, adding a certain degree of playability along with diverse operations.

Ding Yue quickly calculated in his head. Wandering Earth tells the story of humans trying to save the earth from being destroyed by Jupiter's gravity. Under this background, there are actually many playable elements that could be developed.

"Principal Ding, why don't we call Pei Gou and the others over to discuss this?"

An Yujia immediately proposed.

"That works!" Ding Yue nodded.

At this point, the secretary Wen Ruohan swiftly called Pei Gou, informing him to bring the core members of the game studio to the principal's office immediately.

When Pei Gou received the call from Wen Ruohan, he thought principal Ding had left something unsaid during their previous meeting, so he hastily gathered his team and headed to the Administration Building.

"Let me contact Director Su." Saying this, Ding Yue brought out his cell phone and made a call to Su Yangfan.

"What is Principal Ding contacting Director Su for?" Wen Ruohan mumbled in confusion.

At this, An Yujia laughed and said, "Silly girl. Since they're planning to have Pei Gou and his team make a game about Wandering Earth, they have to first understand the world view, settings, and a series of information about Wandering Earth. Director Su is currently filming Wandering Earth, so naturally, he would be the best person to consult about the interpretation of Wandering Earth."

Hearing An Yujia's explanation, Wen Ruohan instantly understood.

In fact, what An Yujia said was not entirely correct. The person who understood Wandering Earth the best was not Su Yangfan, but someone else.

Su Yangfan was currently leading his team in filming Wandering Earth. With some scenes completed, shooting had already begun. If all goes well, Wandering Earth would be completed within the year.

Then came post-production, which would take some time.

After all, most of the scenes in Wandering Earth involved special effects. Post-production would involve creating these special effects, reshooting, voice-overs, editing, among other things.

"Hello, Principal Ding,"

"Director Su, are you busy?" asked Ding Yue with a smile after getting through to Su Yangfan.

"Mmm, yes, indeed. We're currently shooting. Everything is going smoothly, although, because I'm being rather strict, we end up reshooting the same scene several times until we achieve the effects I want."

Su Yangfan replied.

"Director Su, you've been working hard. Here's the thing, could you compile all the screenplay, prop details and other related elements of the current production and send them over to me?"

Ding Yue instructed.

"Principal Ding, you need these materials... Do you want to understand the specifics of our filming process?" Su Yangfan curiously asked.

"Not really. I'm planning to have the game department make a game. And this game is based on the Wandering Earth that you're currently shooting."

Ding Yue briefly explained the situation to Su Yangfan.

After all, he is the director of the movie "Wandering Earth." I want to make a game based on "Wandering Earth," so I definitely need to communicate with him.

This collaboration involves both the film and game industries, and Director Su is indeed an influential figure in the film sector.

"Oh, I see. Principal Ding, now that you mention it, I also think that "Wandering Earth" might indeed be suitable for game adaptation. However, dealing with science fiction and the grand scale of the movie could be challenging, even for us during our filming."

Director Su said, laughing.

"I see, but I think the game development team should be able to work it out."

"Alright, Principal Ding, I'll have my assistant prepare and send the materials to you right away."

"Great, Director Su, you can continue with your work."

After hanging up the phone, Ding Yue opened his computer and found a copy of the novel "Wandering Earth."

Taking into account the content of the novel and all the written material from their filming of "Wandering Earth," this could provide a good foundation for Pei Gou and his team to develop the game based on "Wandering Earth."

About ten minutes later, Pei Gou, along with Liu Lang, Zhang Tianming, Xu Hong, and Wang Kaiwei; the core members of their team, arrived.

"Principal Ding, do you have any new instructions for us?"

Pei Gou asked as soon as he entered the office.

"First, let me introduce you. This is Ms. An Yujia, CEO of the Feiyue Group. She will be responsible for setting up your Feiyue Games studio."

Ding Yue briefly introduced An Yujia to Pei Gou and his team.

If Pei Gou was to be appointed as the head of the Feiyue Games Studio, then An Yujia would be his superior in the future.

"Nice to meet you, Miss An!"

Upon hearing this, Pei Gou and his team greeted An Yujia politely.

Everyone knew that the Feiyue Group was the company behind Mist City Arts and Science University, and the source of all its funding. Although Principal Ding controlled the Feiyue Group, all business operations were run by Miss An.

Pei Gou and his team had been hoping to join Principal Ding's Feiyue Group. Principal Ding had previously agreed to establish a gaming studio under the Feiyue Group. The excitement hadn't subsided even now.

This was their first meeting with a senior leader, right?

"Please, have a seat. Would you like some tea?" Ding Yue gestured them to sit down and discuss.

"No need, Principal Ding."

"The reason I called you here is to discuss the first game project of our game studio. Although the formal setup of the gaming studio will take some time, have you guys thought about the development and production of your game?"

Ding Yue asked directly.

First, he wanted to see if Pei Gou and his team had any ideas. If they already had a clear game development plan, Ding Yue could hear their ideas and thoughts first.

However, Pei Gou, Liu Lang, and the others all looked somewhat lost.

"Principal Ding, though we all want to create a game that makes history, we currently do not have any concrete ideas or plans. But we did discuss a possible direction, that is adaptation."

Pei Gou answered, a little dispiritedly.

"Actually, adaptation is feasible."

Ding Yue nodded.

Seeing Principal Ding support the path of adaptation, Pei Gou suddenly perked up, "Then, Principal Ding, should we choose an IP for adaptation as soon as possible? However, if we choose popular IP, the starting price for copyright fees will be in the millions."

Once the issue of finding an IP for adaptation came up, Pei Gou lost his spirit.

Because popular IP adaptation involves high copyright fees!

"Why do you have to adapt the currently popular IP?" Ding Yue smiled and said, "The currently popular novel IPs may not be the best choice. I have a zero-cost IP that you can develop."

Chapter 765: Community of Shared Future for Mankind?

Free IP?

When Pei Gou heard this, he was dumbfounded.

IP adaptation rights cost money, albeit an unknown IP might only require a few thousand yuan for game adaptation rights.

But for slightly famous IPs, it would require millions in copyright fees.

As for the hot IPs, it goes without saying - it was rumored that a gaming company spent a whopping 20 million yuan just three months ago to purchase the rights for adapting a popular internet novel into a game.

"Principal Ding, you're not talking about Three Kingdoms or Journey to the West, are you?"

Pei Gou asked curiously.

The reason there are so many games related to Journey to the West or Three Kingdoms themes in the domestic gaming market is primarily because they are ancient works and their adaptation rights are open for anyone to use.

Therefore, many netizens are bombarded with all sorts of games with a Three Kingdoms theme online.

These games are clearly just cash grabs, the quality of which goes without saying. As for AAA masterpieces, there are none!

"Hahahaha."

At these words, Ding Yue couldn't help but burst into laughter, then said, "Pei Gou, do I look like the kind of person who would casually make a game using Journey to the West or Three Kingdoms themes just to make easy money?"

"Not at all!"

Pei Gou immediately shook his head.

Other students like Liu Lang and Zhang Tianming also shook their heads and laughed, saying, "Principal Ding has high aspirations, he wouldn't resort to such money grabs."

In their view, the establishment of Feiyue Games by Principal Ding was not about making money.

Because Principal Ding is already very wealthy, not to mention he would make a lot of money in the fields of healthcare robots and graphene. The gaming sector is just a small piece of the pie.

It seemed that Principal Ding was more likely trying to support the game design program at Mist City Arts and Science University, produce more excellent game designers, and save the somewhat distorted domestic gaming market!

This speculation sounded commendable, but in reality, whether it was Pei Gou, Liu Lang, or even Zhang Tianming they all actually shared these thoughts.

"Exactly."

Ding Yue smiled faintly and nodded, "Since we are making a game, let's put our hearts into it and create something high-quality and beyond players' expectations."

"Principal Ding is right!"

When Pei Gou heard Principal Ding say this, he fully supported Principal Ding's words, instantly becoming one of Principal Ding's die-hard fans.

Make games!

We should make truly high-quality games, not just casually churn out games to milk money, or design a game that constantly feeds off players' wallet!

Seeing the students suddenly becoming fiery passionate, Ding Yue felt their pure enthusiasm.

These young people want to improve the state of domestic games.

Ding Yue was very eager to see this.

"The IP I'm giving you guys is one that our Feiyue Group is currently developing. We've given it to the Film and Television students, who are developing it under the leadership of Director Su Yangfan."

Ding Yue casually told Pei Gou and the others.

It seemed that Pei Gou understood something, but Liu Lang, Zhang Tianming, and Wang Kaiwei were all confused.

Because as the students of Mist City Arts and Science University, they did not know that the university was currently filming a science fiction film called "Wandering Earth".

"Principal Ding, what's the IP?"

Liu Lang couldn't help but ask out of curiosity.

Seeing Pei Gou didn't immediately ask what the IP was, Ding Yue slightly knit his brows and looked at Pei Gou.

At this moment, Pei Gou thought for a moment and asked, "Principal Ding, I heard that the Film and Television Academy is shooting a science fiction film under the leadership of Director Su Yangfan. So you're saying you want us to make a science fiction game?"

When Liu Lang, Zhang Tianming, and Wang Kaiwei heard the words "science fiction game," their hearts couldn't help but tremble.

After so many years of game development, science fiction has always been a niche genre, which undoubtedly adds to the difficulty.

"Exactly!"

Ding Yue didn't conceal anything, he nodded and said, "It's a science fiction movie, we call it 'Wandering Earth'. You all must remember this name and keep it confidential. You understand, right?"

After Ding Yue gave the name "Wandering Earth", he seemed to realize something and quickly shot a preventative look at Pei Gou and Liu Lang.

After all, many movies undergo a certain level of commercial confidentiality during filming and at certain stages.

Non-official promotional news must be controlled. Otherwise, if competitors learn about it, it could put them at a disadvantage.

""Wandering Earth', the title sounds interesting. What does it represent? Does it mean the earth is wandering in the universe?"

"Liu Lang, earth." Zhang Tianming nudged his classmate Liu Lang next to him and laughed.

Because Liu Lang's name was homonymous with 'wandering' from "Wandering Earth", at first everyone thought Principal Ding was calling Liu Lang when he mentioned "Wandering Earth". Does that mean it's "Liu Lang's Earth"?

"Yes, wandering, not Liu Lang, as in your name." Ding Yue smiled faintly and continued, "Pei Gou, just as you said earlier, 'Wandering Earth' indicates that the Earth is wandering in space. However, there is a reason why earth is wandering in space."

Chapter 766: Community of Shared Future for Mankind?

Upon hearing Principal Ding's words, everyone – Pei Gou, Liu Lang, Zhang Tianming, Wang Kaiwei and even An Yujia who had not spoken much – were particularly curious. Why would the Earth want to wander in the vastness of space?

Isn't the Earth supposed to be firmly locked in the solar system, revolving around the sun?

If Earth wandered through the void of space, wouldn't humans be doomed to extinction?

All of a sudden, a flurry of thoughts filled their minds.

Seeing their shared curiosity, Ding Yue laughed and said, "The reason it's called 'Wandering Earth' is because a friend of mine wrote a science fiction novel with that title. This novel is suitable as a basis for a sci-fi film, and upon reflection, I believe it is also an excellent foundation for a sci-fi game. Thus, I would like you to develop a game that can be coordinated with Director Su's sci-fi film 'Wandering Earth'."

Seeing that Principal Ding had explained everything, Pei Gou immediately gave his assent, "Well, if that's what you suggest, Principal Ding, we'll follow your guidance!"

"No, no, no!"

Ding Yue suddenly shook his head.

It would not do for his subordinates to think that his word was ultimate and irrefutable. Such an impression would make him seem too arbitrary.

Even though Ding Yue could provide various resources acquired from the system, and good products from his previous life on Earth, he wasn't a god who knew everything. As a principal, there were things he hadn't considered.

His elite students – those he had groomed – had to play their part. They were not mere lackeys.

Pei Gou and the others immediately turned towards Principal Ding with a puzzled look.

"I personally consider 'Wandering Earth' apt for adaptation into a sci-fi game, but you are the technical professionals, so you also need to evaluate its suitability seriously."

Ding Yue spoke to them earnestly.

"But, Principal Ding, we aren't familiar with your friend's sci-fi novel, 'Wandering Earth', so we might..."

Pei Gou spoke hesitantly.

"Ha ha ha ha."

Ding Yue laughed out loud, then called his secretary Wen Ruohan over, saying, "Secretary Little Wen, bring the materials over."

Wen Ruohan immediately picked up a thick stack of printed materials and returned to Pei Gou and the others.

The stack contained a great deal of information related to the production of 'Wandering Earth', such as vehicle designs, weapons, and scene sketches, sent over by Director Su Yangfan's team.

These documents were divided into three parts. After receiving the documents from Director Su, Wen Ruohan had them printed in three separate copies.

"These are some settings, worldview, framework, and even perfected systems pertaining to 'Wandering Earth', as well as some of the sci-fi technologies and equipment used, and the original novel 'Wandering Earth' written by my friend!"

As Wen Ruohan handed out the materials to Pei Gou and others, Ding Yue briefly explained what they entailed.

Pei Gou and the others were quite intrigued. They began to read the materials that Secretary Little Wen handed them earnestly as soon as they received them.

Knock, knock, knock!

"Since the materials and novel contain a lot of content, you can read it slowly after you get back. I'll first share with you the points about 'Wandering Earth' that I think make it highly suitable as a game."

Ding Yue tapped on his desk, bringing the attention of Pei Gou and his team, who were immersed in the materials and the novel, back to him.

The young men immediately looked up, ready to continue listening attentively to Principal Ding.

"First of all, this is a sci-fi game with disaster elements. Science fiction sets the overall backdrop, as does dystopia. Still, disasters can be used to create compelling game narratives, right?"

Ding Yue began his enthusiastic discussion with the guys.

Hearing Principal Ding's explanations and questions, Pei Gou quickly got into the zone. After a thoughtful pause, he nodded and said, "Mm, the disaster element can indeed be utilized in the game core as an attraction, only that for science fiction..."

While Pei Gou agreed with Principal Ding about how disaster is a compelling creative element for game-making, he found that science fiction might not be quite appropriate, given his understanding of domestic games.

"Is this not the limitation of your vision?"

At this point, An Yujia suddenly interjected.

Everyone's gaze unanimously turned towards Miss An.

Even Ding Yue was looking at An Yujia, seemingly suggesting that she had understood what he wanted to say.

Upon receiving Principal Ding's supportive gaze, An Yujia continued to address Pei Gou and others, "Pei Gou, this is why Principal Ding mentioned the idea of collaborating with Director Su's science fiction movie 'Wandering Earth'.

Current domestic science fiction movies are not very mature and are far from reaching their peak, which also means there is a vast potential that can be tapped into.

The science fiction movie 'Wandering Earth', created by Director Su and his team, carries the responsibility of uncovering the potential of the science fiction market. When the time comes, will you be afraid that players wouldn't buy your video game 'Wandering Earth' which shares the same name with their science fiction movie?"

An Yujia's words indeed made Pei Gou, Liu Lang, Zhang Tianming, and others understand completely.

"So that's how it is. Principal Ding, your thoughts are really advanced and impressive," Pei Gou couldn't help but admire Principal Ding.

That's because Miss An also mentioned that the idea of interconnecting the movie and the game was proposed by Principal Ding.

Looking at it this way, it seems there indeed is a possibility of it being feasible!

"Their collaboration could promote each other," Ding Yue said nonchalantly with a smile to Pei Gou.

"I understand, Principal Ding," Pei Gou quickly responded with a nod.

"So the disaster science fiction, when developed into a game, especially a high-quality game, has an enormous potential. The players would become ordinary characters in the game, striving to save Earth from destruction. The process can be designed and extended according to the movie's script, the main focus, however, should be on the playability of the game, right?"

Ding Yue continued to explain earnestly.

"Indeed, the playability of the game is crucial. Many overseas AAA titles do indeed have beautiful visuals, but the gameplay may not be that commendable, which is also a reason why some of the AAA titles flop and do not sell well."

Pei Gou affirmed earnestly.

"In 'Wandering Earth', there is a key element that I find interesting. I wonder if you could incorporate it into your game."

Ding Yue thought of a key content in 'Wandering Earth'.

"Oh? Principal Ding, what is it?"

Pei Gou was eager to know immediately.

Having heard so much from Principal Ding, Pei Gou suddenly became deeply intrigued by the science fiction world of 'Wandering Earth' that Ding Yue was talking about.

"The community of shared future for mankind!"

Ding Yue calmly stated, "Whether it's in the novel or in the science fiction movie created by Director Su, I believe the concept of the community of shared future for mankind will be a significant part."

"The community of shared future for mankind?"

Liu Lang who was sitting beside Pei Gou furrowed his brows, seemingly not understanding what the term suggested.

At this point, Pei Gou elbowed Liu Lang and said: "You don't know what the community of shared future for mankind means?"

"I've never heard of it," Liu Lang shook his head.

Ding Yue immediately explained, "The community of shared future for mankind in 'Wandering Earth' essentially means that all human beings globally are working towards the same goal; to preserve human civilization and the survival of Earth. That's essentially what it means, as long as you understand."

Ding Yue had already made it very clear.

Given Pei Gou and Liu Lang's comprehension skills, there should be no problem understanding it, right?

Even though Liu Lang and Zhang Tianming expressed that they understood the concept of "the community of shared future for mankind",

But!

What's the relationship between this term and the making of a video game?

"This..."

Pei Gou muttered hesitatingly: "It seems more suitable for a concept in online gaming?"

## Chapter 767: It's Time for the College Entrance Examination Again

At the beginning.

Whether it was Ding Yue or Pei Gou, when discussing turning "Wandering Earth" into a game, they subconsciously defaulted to making it into a AAA title.

However.

When Ding Yue mentioned the community of shared future for mankind shown in "Wandering Earth".

Pei Gou thought about it, wouldn't this concept suit better for an online game?

"An online game?"

Hearing this, Ding Yue couldn't help falling deep into thought.

"Gou, how can this be suitable for an online game?" Even Liu Lang, Pei Gou's old partner, was starting to doubt.

"Pei Gou, do you mean...letting players from all over the world participate in this mission to save Earth?"

Ding Yue frowned, and asked Pei Gou softly.

Pei Gou nodded, but quickly frowned in distress: "Principal Ding, I was just saying casually. If we make it an internet game, the server would be a big problem, and to reach the graphics level of a AAA title would also require a lot of cost."

"Don't we have our own Feiyue game engine? In theory, we shouldn't worry about graphics."

Ding Yue thought about it. The difficulties Pei Gou mentioned probably boiled down to the server. Online games must have a powerful server.

"Wait, Pei Gou, Principal Ding, you mean making an online game where all participating players strive for a single goal, to save Earth?"

Liu Lang had just glanced over the rough plot of "Wandering Earth", and based on Principal Ding and Pei Gou's conversation, he had a general idea of their intent.

This kind of game mode seems to have never existed before.

Currently, most online games worldwide are primarily competitive games or RPGs.

But Principal Ding and Pei Gou just mentioned creating a "Wandering Earth" online game, without fights or competitions, or leveling up.

All players join the game, devised by game designers, to save Earth, sharing in the gameplay experience of a community with a shared future for mankind.

This sounded unbelievable.

But it also seemed interesting.

"Principal Ding, what do you think about this direction?" Pei Gou asked Principal Ding expectantly.

"It's great."

Ding Yue immediately nodded.

Undoubtedly, designing the game as an imminent disaster, but as players join, everyone can through constant effort, whether by collecting materials or mastering repair techniques in the game.

The players have only one goal, to repair all damaged engines on Earth and resolve the crisis of Earth colliding with Jupiter!

Ding Yue even started to look forward to this kind of gameplay.

This is absolutely a game mode that has never existed before worldwide. Its originality could be said to be maxed out.

"Pei Gou, after you guys go back, you can try to make it. No need to worry about servers or production costs, I will be your strong backing."

Ding Yue reassured Pei Gou and his team.

He encouraged Pei Gou to lead his game design students from Mist City Arts and Science University, to bravely create a unique game.

"Alright!"

Seeing Principal Ding's staunch support for his idea, Pei Gou nodded readily, confidently saying, "Principal Ding, rest assured, I won't let you down."

"Why do I suddenly feel excited and overwhelmed? I can't wait to start working on this game!"

Liu Lang exclaimed excitedly.

Zhang Tianming and others also felt their blood boiling. After understanding Principal Ding and Pei Gou's core idea for the online "Wandering Earth" game, they also thought the idea was very daring and innovative.

In the current monotonous game market, countless gamers were desperate for a new style of game.

Just like when League of Legends was booming, and eSports was popular, the survival game "PUBG" was born and also had a period of popularity.

"Principal Ding, we will go back and start planning then." Pei Gou was eager to start planning the design of the "Wandering Earth" game.

"Hmm, okay."

Ding Yue nodded. Since Pei Gou and his team wanted to have a go at "Wandering Earth", he would of course support them fully.

Just as Pei Gou and Liu Lang were about to get up and leave with all the materials on "Wandering Earth", Ding Yue seemed to remember something.

"Hold on."

Ding Yue called out to Pei Gou and the others.

"Principal Ding, is there anything else?" Pei Gou turned his head and asked in confusion.

"The College Entrance Examination is coming soon. After it's over, our Mist City Arts and Science University will launch a new round of enrollment promotion."

Ding Yue said seriously to Pei Gou and his team: "I just thought about it. Since we already have the Feiyue Game Engine and are planning to promote it, why not take the opportunity? Wouldn't this attract more students who love game design to our game design major?"

Chapter 768: It's Time for the College Entrance Examination Again

Once Ding Yue said this, Pei Gou immediately understood Principal Ding's intentions.

"Okay, Principal Ding, as soon as we get back, we will start working on a text copy!"

"Okay, you guys should head back and get started."

After Pei Gou's team returned, they set to work. Firstly, they made a promotional video for advertising their game design major after the College Entrance Examination, and then began the preparation and design for the online game "Wandering Earth".

After all, creating a high-quality game is not something that can be completed in a few months. It could take at least a year and a half, and even up to three to five years.

Some AAA games even take many years just for polishing, before achieving their final success.

Meanwhile, in a short period, An Yujia also quickly set up Feiyue Game Studio for Pei Gou and his team.

In early June, the day of the College Entrance Examination arrived.

The administrative office and all departments and majors of Mist City Arts and Science University began to actively prepare for this year's admissions.

Each department and major hopes to attract more students in September.

The brief College Entrance Examination quickly came to an end.

Universities all over the country moved quickly to advertise their colleges, each using clever marketing strategies to attract the attention of Exam Students.

The number of students who took the College Entrance Examination this year exceeded ten million.

Mist City Arts and Science University, run by Ding Yue, initially anticipated around forty thousand new students, but it is possible there might be even more.

In order to attract high-achieving Exam Students, after a round of admissions reforms, Mist City Arts and Science University also actively participated in the post-exam admissions promotion.

Pei Gou and his team from the game design major, with the aid of the Feiyue Game Engine, produced a video.

This video aimed at promoting student recruitment, as well as announcing the birth of the Feiyue Game Engine to the nation, and even to the world.

The morning of June 9th.

Mist City Arts and Science University, on official social media accounts on various platforms, almost simultaneously announced the development of a globally leading game engine by their school's game major!

The moment this news was released, gamers all over started to widely follow the university.

On Twitter——

[Mist City Arts and Science University]v: Love games, be ambitious and enter the field; big news! Through the combined efforts of teachers and students from our gaming design major, we have developed a game engine called "Feiyue Engine". This game engine is powerful, and globally leading! Let's take a look at the test footage of the Feiyue Game Engine! [Video]——For a higher quality video, please go to Bilibili.

(Retweets: 12k), Comments (17.5k), Likes (49k)

Without a doubt, leveraging the strong propaganda and funding power of the propaganda department of Mist City Arts and Science University, the blog post quickly trended and was seen by more netizens.

Not only on Twitter, TikTok, Bilibili, and other platforms, were all part of Mist City Arts and Science University's propaganda campaign.

Especially on Bilibili, the moment Mist City Arts and Science University's test footage of the Feiyue Game Engine was released, it stirred up a frenzy.

In just one hour, the number of views exceeded 1 million, and the likes, coins and collections were rapidly increasing.

Even the staff at Bilibili's back-end data center were stunned. It was their first time seeing a video submission garner such high view counts, likes, coins, collections in such a short period.

Of course, barrages and comments were also rapidly increasing.

"Did you guys hear? Mist City Arts and Science University developed the most advanced game engine in the world!"

"When did this happen?"

"It was officially announced this morning."

"Isn't the Unreal Engine the best game engine?"

"The world's most advanced game engine, isn't that the Unreal Engine 5?"

"I think there's a test video of the game engine designed by Mist City Arts and Science University on Bilibili."

"Do you have a link? I'll take a look."

More and more young people heard about this from their friends and opened the Bilibili App to review the test footage of this so-called domestically produced game engine.

On Bilibili.

[First! Test Footage of China-Made Feiyue Game Engine! Developed by Mist City Arts and Science University!]

This video has been viewed over 1.4 million times.

The entire video is roughly 12 minutes long. When you start it, it's filled with lines of screen comments!

"Holy shit!"

"Damn, that's awesome!"

"It looks so damn good in 4K!"

"Holy crap!"

"Isn't the graphics too damn realistic?"

"When I switched to full screen, I thought I was looking at actual footage, but you're telling me this is game graphics?"

"Awesome!"

"Damn! We have such an awesome game engine domestically?"

"I have seen the graphics of Unreal Engine 5 before, felt very realistic, but how do I feel this is even more realistic?"

"Awesome! This could compete with Unreal Engine 5, right?"

"If the game produced has this quality of graphics, I have to play!"

"My graphics card is on fire!"

Most of the comments and barrage on Bilibili were utterly stunned!

Initially, people didn't have high expectations, since Chinese game developers and engine makers always hyped, leading worldwide and all, netizens were not at all surprised anymore.

But when the first group of viewers clicked in, they were completely blown away!

The word-of-mouth effect kicked in and the internet effect was fully on, attracting more viewers to Bilibili to see this 4K video.

The videos that Mist City Arts and Science University posted on Twitter and TikTok were mostly in 1080 quality, even if the graphics were realistic, they seemed insufficient because of the 1080 quality.

However, on Bilibili, Mist City Arts and Science University released the only 4K footage of the Feiyue game engine's actual performance.

In the words of netizens, they thought they were looking at real-life footage.

The video began with urban scenes, which almost made it hard for viewers to distinguish whether the urban scenery was real or not.

It wasn't until a few minutes later when the scene switched to a fantasy magic themed setting, that viewers realized, holy shit, this is a video game?

In addition to the urban and fantasy magic scenes, the latter part of the video included scenes from a variety of genres, including science fiction and historical settings.

All of these scenes appeared incredibly realistic, but everyone knew that the scenes from the science fiction and fantasy magic genre are obviously fake because they couldn't possibly be real.

"The game's visual effects are too realistic, holy shit!"

"The sound effect, graphics, lighting, and physical effects are all top-notch!"

"I'm a game engine developer, to be honest, if this footage is really the actual test performance of the Feiyue game engine, without any special enhancements, it could compete with the Unreal Engine 5, or even surpass it."

"For real, when Unreal Engine 5 came out, I had the feeling that I were looking at actual scenes when I saw the footage, but there were still places where it was obvious that they weren't actual scenes. But I'm sold by this footage, it's genuinely brilliant!"

"It's like watching 3D IMAX in a cinema!"

After viewing the test footage of the Feiyue game engine released by Mist City Arts and Science University, some netizens with a wealth of experience and expertise in game engines and graphics gave high praise.

In addition, some netizens reacted that this was the game engine developed by the Game Design Department of Mist City Arts and Science University, and immediately exclaimed how awesome!

"Holy crap! Is the Game Design program at Mist City Arts and Science University that powerful?"

"Developed their own game engine? It's domestically produced?"

"If it's truly domestic, then it's simply the pride of the domestic game engine industry!"

"I want to be a game designer in the future, and I was wondering which school was powerful in game design. Now it seems that Mist City Arts and Science University is one of my choices."

"Don't stop me, I'm going to Mist City Arts and Science University to study game design!"

"Mist City Arts and Science University seems to be pretty strong these past two years."

"Here's a friendly reminder for those who are interested in studying game design, be cautious, unless you're not worried about your hair, then please pursue your passion!"

## Chapter 769: The Construction of the Modern Ecological Agriculture Garden

With the conclusion of this year's College Entrance Examination.

Universities all over the country have begun their crazy recruitment process.

However, a particular private institution frequently tops the trending topics and has become the hot topic of conversation among netizens and current prospective students.

That's right.

This private university is none other than Mist City Arts and Science University.

A private institution that, in the past year, has garnered numerous achievements, so much so that it is gradually becoming the top-ranked private university in Mist City and could potentially attain the standing of tier-one universities in the city.

Most importantly, from the national level to the city of Mist City itself, the government offers excellent policy benefits to Mist City Arts and Science University.

Not to mention, Mist City Arts and Science University announced a significant breakthrough in the graphene sector earlier this year, undoubtedly giving confidence to many students wanting to study energy majors.

In the domestic field of chemical energy majors, Xiamen University and Fudan University are among the most prestigious, but their admission scores are very high.

Thus, some college entrance exam students who can't enroll in Xiamen University or Fudan University are making the chemical energy major at Mist City Arts and Science University their first choice.

At this time, all the departments and majors of Mist City Arts and Science University have begun their recruitment propaganda.

The major of game design and development, naturally, needs no further explanation. The actual game graphics designed with Feiyue Game Engine have amazed many netizens.

Even, many netizens refer to it as the "gem of domestic game engines". It's an accolade indeed.

In a professional forum, a post discussing the Feiyue Game Engine developed by Mist City Arts and Science University is gaining significant attention.

"What do you think about the Feiyue Game Engine developed by the game major of Mist City Arts and Science University?"

"Thank you for the invitation. I just disembarked from an aircraft carrier in Inner Mongolia. I watched the actual graphics demonstration of the Feiyue Game Engine on Bilibili. Let me share my thoughts.

1. If this is real, I'd say the game design and development of Mist City Arts and Science University is truly top-notch!

2. Personally, I think the displayed graphics are on par with Unreal Engine 5.

3. Everyone knows how good Unreal Engine 5 is, and the Feiyue Game Engine could even outshine it.

4. I agree with the statement that it's the 'gem of domestic game engines'!

5. I just want to say again, Mist City Arts and Science University rocks!

6. How much money has this private university invested? It's impressive how much it has achieved in a few years? (Personal curiosity)."

"Thank you for inviting. As a professional game engine developer, I would say achieving the level of the Feiyue Game Engine, like Mist City Arts and Science University did, is not something every team can do. The difficulty is indeed high, but they've made it. I am willing to call them the strongest domestic game engine development university!"

"I don't know much about it, but I saw this post and wanted to ask, I really want to study game engine development and game design and development, can I apply to Mist City Arts and Science University?" (47 comments)

Opened comments—

"Go for it!"

"The game design and development department at Mist City Arts and Science University really packs a punch once it strikes."

"Brother, I am a game design major, I'm in my third year and will graduate next year. The game design major at our school is also good, but considering the situation, if you want to learn top-notch technology and skills, Mist City Arts and Science University is indeed a good choice. And of course, you're welcome to be our school's alumnus."

Besides the major in game design.

Some popular departments and majors from Mist City Arts and Science University have a great reputation. They are highly welcomed by students who have passed the score line for undergraduate studies and wish to study at Mist City Arts and Science University.

These include Mist City Arts and Science University's School of Architecture, Department of Mechanic, Computer Science Department, Medical School, Law School, Film School, Art Department, Animation Design and Production major, etc.

These are some of the popular traditional disciplines at Mist City Arts and Science University, including premier majors like the departments of mechanics and computer science.

Besides the traditional departments, there are also non-traditional ones, those new departments established when Mist City Arts and Science University was founded, that are quite popular.

Such as the Esports Department.

And also the Institute of Traditional Chinese Studies and the Culinary Arts Department, etc.

You may wonder why the Esports Department is a popular one. Apart from the fact that esports itself is a hot topic, another important reason is the remarkable performance of Mist City Arts and Science University's FY team in the Spring Match.

Since the opening of the Spring Match, the FY team has been a dark horse, defeating veteran powerhouse teams from the LPL one after another.

However, in a few matches at the beginning of May, due to some family issues that Qian Yu, an FY team member, was dealing with, and also his relationship was not going very well at that time, the starting lineup had to be adjusted, which slightly impacted the team's performance.

Regardless, the FY team still made it to the playoffs as the second seed with three losses during the regular season of the Spring Match.

In the playoffs, Qian Yu from FY team returned with refreshed vigor, continuing the dark horse streak with his teammates and pushed their way into the final.

Oddly enough, in the final of the Spring Match playoffs, the FY team's opponent happened to be their old rival QD.

These two teams had a fierce showdown when FY first debuted.

Chapter 770: Completion of the Modern Ecological Agriculture Garden

At that time, QD team underestimated the enemy, leading to a crushing defeat.

The QD team had several matches with the FY team subsequently. Although FY didn't win all of them, they gained the upper hand.

The forthcoming playoff finals, scheduled for two days from now, have drawn the attention of many young esports lovers.

Many young men, who didn't fare well in the College Entrance Examination but have a strong passion for esports, want to experience what it's like to major in esports at Mist City Arts and Science University.

Looking at the enrollment marketing and feedback from all departments and majors of Mist City Arts and Science University, this year's enrollment is expected to be better than anticipated.

Yancheng.

In a posh residential area.

"Son, although you didn't perform well in College Entrance Examination this year, your mom and I can pay for you to go overseas for university where the environment might be better," a middle-aged woman addressed her son in the living room.

"Nah, I'm not going abroad." The young man shook his head, "What's so good about abroad? It's chaotic over there."

"Then, you might as well retake the exam next year if it comes to the worst," the middle-aged man suggested.

"No retakes!"

The young man shook his head again, "Repeating a year is a complete waste of the precious time of life. How many years can one afford to lose."

"If you don't want to study overseas or retake the college entrance exam, then what's your plan?" The middle-aged woman was anxious.

The young man smiled and said to his mom, "Mom, I've decided which university I want to attend."

"You've decided? But your estimated score this year is short of the cut-off points for undergraduate courses from previous years."

The middle-aged woman isn't adverse to allowing her son to choose a domestic university, since the public undergraduate universities in the country aren't that bad after all.

However, the problem is that his performance in the college entrance examination this year was less than satisfactory. There is a high possibility that he may not be admitted. What will he do if he doesn't receive an admission notice? You can either spend a lot of money to get a diploma from an overseas university and then return as a sea turtle, or retake the exam next year and strive to score well next time.

Yet, the son is unwilling to choose either of the two options.

The middle-aged woman who had been doting on her son didn't know what to do.

"I enjoy tampering with electronic machinery, and the Mechanical Department of Mist City Arts and Science University seems to be the perfect fit for me."

When the young man mentioned the Mechanical Department of Mist City Arts and Science University, his eyes lit up.

"Mist City Arts and Science University?"

The middle-aged woman was taken aback, then muttered, "What kind of university is this? It seems like an undergraduate university. Son, our scores won't meet the threshold."

"No! No! No! Mom, Mist City Arts and Science University is not a public university, but a private one. It's relatively new, but it does offer undergraduate, and even postgraduate programs."

The young man said excitedly.

"Mist City Arts and Science University? I've heard of it." The young man's father suddenly said, "Isn't it the one that made substantial breakthroughs in the field of graphene recently? I heard it is highly valued by the state."

"Is there such an impressive private university?" The middle-aged woman was baffled.

Her basic conception is that private universities in her country are all diploma mills whose degrees are hardly worth the paper they're printed on. It'd be better to spend extra money to get a degree from a foreign university.

"At first, I also thought Mist City Arts and Science University was some sort of unimpressive institution, but I later learned that it's quite impressive. Although it can't compete with some of our country's prestigious Double First-Class universities, some majors at Mist City Arts and Science University have proven their worth, such as the Electronic Machinery that our son is interested in."

The middle-aged man strongly agreed with his son's choice this time.

He knew that the Mechanical Department of Mist City Arts and Science University is very impressive. After all, the extremely popular Medical Health Robot, Big White, was produced by the collaborative effort of the Mechanical Department, Medical Department and Computer Department of Mist City Arts and Science University.

"Really?"

The middle-aged woman still looked incredulous. Could a private university really be that amazing?

"You don't believe it. I'll show you the news, and you'll know that Mist City Arts and Science University is not ordinary."

The middle-aged man took out his phone and looked up news from March, when the country heavily supported the graphene industry of Mist City Arts and Science University, and the Xia Country Academy of Sciences also affirmed the significant results of Mist City Arts and Science University in the field of graphene.

The middle-aged woman was shocked when she saw the news. Gosh, even the Xia Country Academy of Sciences highly praised Mist City Arts and Science University.

Upon reflection, Mist City Arts and Science University seemed like a good choice?

She was indeed ignorant.

"Also, haven't you been particularly fond of watching the food documentary 'A Bite of Xia Country' recently?"

The middle-aged man continued to speak.

"Yes, I feel the show was produced excellently, providing a detailed introduction to the cuisine of various places in Xia Country. Each time I watch, it makes me hungry."

The middle-aged woman nodded in agreement.

"Actually, 'A Bite of Xia Country' was produced by the Film and Television Academy of Mist City Arts and Science University. A friend from my television station told me this."

"Isn't it a documentary from NTS?"

"What do you know? It was shot by Mist City Arts and Science University, and then NTS bought the broadcasting rights and aired it on NTS."

"Really? That's impressive."

The middle-aged woman exclaimed.

"Son, your mom supports you. Choose the university and major you like. That's more important than anything else!"

After learning that Mist City Arts and Science University seemed genuinely impressive, the middle-aged woman immediately encouraged her son.

"Thanks mom and dad, tuition is around thirty to forty thousand per year, plus various necessities when school starts, and living expenses... how about you give me a total of one hundred thousand yuan?"

The young man shrugged and joked.

"Okay! Dad will give you an additional ten thousand to help you find a girlfriend in college!"

"Dad, if I want to date, ten thousand might not be enough."

"Then mom will give you another ten thousand!"

...

In the meantime, at Mist City Arts and Science University.

Director Qi Chunsheng of the Academic Affairs Office would report to Principal Ding almost daily about student recruitment and the end-of-semester arrangements.

After all, it was already June. The college entrance examination had ended, and universities would begin their final examinations in mid or late June, followed by the summer vacation.

The same went for Mist City Arts and Science University.

However.

At this time, apart from focusing on the LPL season finals that would be held in two days, Ding Yue was most concerned about how the biomedical engineering project of his medical school was progressing.

According to Professor Yang Kaining, they should have some results by June.

This made Ding Yue very excited.

Since May, Principal Xu Dongcheng of Westlight University, a friend of his, would call him occasionally to inquire about the progress of the biomedical engineering project.

Whether 3D biological printing technology could be successfully implemented in clinical medicine would depend on their experimental research achievements.

Ding Yue had learned about the results of an experiment conducted at the end of May, but they were not very satisfying.

"Principal Ding, preparations for the end of the semester exams are almost complete in all departments. The exams will start next week. The test goal for this semester is a zero failure rate. Furthermore...the recruitment publicity situation of our colleges and ..."

Ding Yue did not really need to listen carefully to Director Qi Chunsheng's speech.

What he thought about was the biomedical engineering project.

The phone rang at that moment!

Ding Yue picked up the phone unconsciously:"Hello."

"Principal Ding, this is Jia Nong."

When he heard it was Jia Nong, Ding Yue was a bit disappointed.

Because what he was looking forward to the most was a call either from Professor Yang Kaining or the head of the medical college, Bai Liwei.

"Director Jia, what can I do for you?" Ding Yue asked casually.

When Director Jia Nong contacted him, it was probably about the activity of the College of Agriculture and Forestry helping the countryside?

For Ding Yue, this was also a system task, it's just that it had not been completed yet because the students from the College of Agriculture and Forestry had not yet finished their community service in the countryside.

"Principal Ding, the modern Ecological Agriculture Garden with a hundred acres, which you approved for our College of Agriculture and Forestry to build, has been completed. Would you like to come and take a look?"
