

F. University 781

Chapter 781: Top Microsurgery Physician

Haicheng Central Hospital.

In a unique private room, the young Xu Meijia is holding her cellphone, recording her video diary on her illness.

Xu Meijia wishes that through her disease video diary, she can encourage many others who are suffering like her.

She still holds hope and confidence in life. She wishes that countless people like her, must also keep their faith, facing each day with a strong mindset.

Not only does she record videos about her condition, Xu Meijia also live streams, letting her fans see her tenacity.

Xu Meijia actually had already amassed a following of 200,000 on Bilibili as a food blogger before she became ill.

"Hello, everyone."

Xu Meijia started a live stream on Bilibili today.

"Today I am recording a hospital vlog. I am also gonna live stream and chat with y'all. I am ever so grateful for you guys accompanying me all these years."

Xu Meijia announced to her fans with a smile.

"I've watched all of your videos. Keep going, you'll get better."

"Such a beautiful lady, you'll be alright."

"Let's go!"

"You're so strong. We are all with you."

"Meijia, I've been following you since you only had a few hundred fans. Till now, from when you started as a food blogger, helping those in need, to when you became ill, even during your illness, I've seen a strong and positive girl living her life. Your courage and strength are inspiring us all."

"Wonder if you've found a compatible liver for the operation?"

"I've heard that a 3D bioprinter is about to be developed here. Is it Mist City Arts and Science University? Please hold on. I have hope."

Xu Meijia, maintaining her infectious smile, replied to the barrage of comments: "Thank you all for your caring and support. To answer the netizen who just mentioned the 3D bioprinter in Mist City Arts and Science University: it's actually nearly complete now. And I have some excellent news for all of you - I have agreed to be the first patient to volunteer and participate in the clinical trial stage for the 3D bioprinter."

Xu Meijia cheerfully informed her fans.

When Professor Yang Kaining, originally from Swiss Zurich Federal Institute of Technology initially returned to China to join Mist City Arts and Science University, news about the 3D bioprinter started to spread.

Today, Mist City Arts and Science University has overcome all the challenges, and only await the clinical trials. The news about this has also been gradually leaked.

After all, this is advantageous for the reputation of Mist City Arts and Science University.

"Really? Are you participating in the clinical trial?"

"Meijia, stay strong. I believe you can make it."

"Wow! Mist City Arts and Science University are awesome! They developed a 3D bioprinter."

"Didn't you know? I heard that they invited Professor Yang Kaining from the Swiss Zurich Federal Institute of Technology to co-develop it."

"Wow! The Swiss Zurich Federal Institute of Technology? No wonder it's so impressive!"

"Incredible. Is Mist City Arts and Science University collaborating with the Swiss Zurich Federal Institute of Technology?"

"Allegedly, they just paid to invite a professor from the Swiss Zurich Federal Institute of Technology. It's not as exaggerated as everyone says."

"Anyway, I wish the host will have a successful operation and safely return."

"Yes, yes, yes. It is our hope and wish."

In Xu Meijia's Bilibili live stream, every blessing from netizens was heartwarming.

And Xu Meijia's courage also inspired more and more people. Some patients like her who also needed surgery, were motivated by Xu Meijia's bravery.

The most important part:

From Xu Meijia, these patients learned that a domestic university and a top overseas university team were developing a 3D bioprinter.

This technological discovery would be the gospel for these patients who needed organ transplants.

After all, many of these patients often cannot find suitable donor organs, thereby missing their best chance for surgery. As a result, they are eventually forced to leave this world.

Once the 3D bioprinter from Mist City Arts and Science University is officially released, these patients will no longer have to wait painfully for donor organs. They can directly use the 3D bioprinter to create a perfect organ match.

On the internet,

Many doctors and professors have highly praised the 3D bioprinter technology of Mist City Arts and Science University, considering it to be a meaningful achievement in medical application.

Initially, many doctors and professors were skeptical about the 3D bioprinter, at least doubting that a private university like Mist City Arts and Science University could develop it?

But when they learned that the School of Medicine of Mist City Arts and Science University was closely related to Mist City Medical University and Mist City Central Hospital, and that they had invited the biologist Professor Yang Kaining from Zurich Federal Institute of Technology, their doubts instantly vanished.

...

On the side of Mist City Arts and Science University,

The key participants in biomedical engineering of the 3D bio-printer at the medical college, including Professor Yang Kaining, have all made preparations for the clinical stage at Mist City Central Hospital.

Dean Jiang Zhongbo of Mist City Central Hospital is fully supporting the clinical phase of the 3D bio-printer project at Mist City Arts and Science University.

Moreover, the project has started gaining attention from the National Pharmaceutical Association along with various local medical experts and professors.

After all, the 3D bio-printer is a globally advanced medical device, highly precise and technologically sophisticated, with a wide range of applications for patients in need of organ transplantation. Potentially, they could benefit from the technology this device offers.

It is a very meaningful endeavor. As medical practitioners, we naturally support it wholeheartedly.

Ding Yue, as the president of Mist City Arts and Science University, is coordinating all matters related to this clinical phase.

The team from the medical school of Mist City Arts and Science University led by him will print a bio-liver for the patient volunteer Xu Meijia.

At the same time,

Mist City Central Hospital will provide the best surgical team to perform a liver transplantation surgery on patient Xu Meijia.

Ding Yue is acutely aware.

Should this trial succeed, the reputation of the medical school at Mist City Arts and Science University will skyrocket.

By that point, there will inevitably be an increasing number of students enrolling to study medicine at the university. This makes the clinical surgery incredibly important.

Ding Yue has repeatedly visited Mist City Central Hospital. Today, without any major affairs to deal with at school, he visits the Central Hospital again.

In the dean's office of the hospital,

"Xiao Ding, it's surprising that in a span of one year, there are new medical achievements from your medical school at Mist City Arts and Science University."

President Jiang Zhongbo has a fresh memory of the previous incident with the medical health robot, Big White.

Ever since Mist City Central Hospital introduced the medical health robot Big White, it's been much easier for citizens to seek medical consultation.

With the help of Big White, more time can be saved for doctors in various departments to treat critically ill patients.

As a result, not only the public has benefited, but the hospital's efficiency has also improved significantly.

At present, all of the large and small hospitals in Mist City, apart from the Central Hospital, have equipped themselves with Big White.

Even some busy street community health service centers have purchased Big White from the Feiyue Group, using it to diagnose daily illnesses for the community residents.

President Jiang Zhongbo recalls that it's only been a year since the wave of Big White medical health robots swept through, and now there is the invention of another advanced medical device, the 3D bio-printer, from Mist City Arts and Science University's medical school.

This shows that the research and development capabilities of the medical school at Mist City Arts and Science University are quite impressive.

Ding Yue, modest as always, smiles faintly and said to President Jiang Zhongbo: "President Jiang, the development of this 3D bio-printer wouldn't have been possible without our Central Hospital and Medical University."

"I've heard from Director Shi and others that it's due mainly to the intelligence of those in your medical school at Mist City Arts and Science University. Otherwise, relying solely on our hospital, we wouldn't have developed the 3D bio-printer."

President Jiang Zhongbo, not trying to take any credit, said,

Although many of the physicians and professors involved in this biomedical project are from Mist City Central Hospital, they are also teachers at the medical school of Mist City Arts and Science University. In particular, it's rumored that Gu Yong and Lu Qingyan from the university significantly contributed to developing the 3D bio-printer technology.

Therefore, Dean Jiang is very clear about this.

"Dean Jiang, we're about to enter the clinical trials phase. How are the preparations at our hospital?" Ding Yue asked, after they both finished their mutual praises.

"We have prepared the best surgical team from our hospital, but there's another piece of good news for you, Xiao Ding."

Dean Jiang Zhongbo, with a warm smile, said.

"Oh?"

Ding Yue furrowed his brows, asking, "President Jiang, what is it?"

"After learning about our hospital's upcoming clinical trials of 3D bio-printing technology, Professor Sheng Simiao from Yancheng contacted me, saying he could make a contribution to this significant clinical stage in the medical field."

Dean Jiang Zhongbo informed Ding Yue earnestly.

"Professor Sheng Simiao?"

Ding Yue felt that the name sounded familiar.

However, Ding Yue is not a computer with an all-encompassing knowledge on every aspect. He doesn't know every influential person in different fields.

But Ding Yue is positive that Sheng Simiao must be a top-tier figure in the medical field. Otherwise, President Jiang wouldn't have told him about it at this point in time.

Moreover, this name seems familiar because Ding Yue once knew a person called Sun Simiao, who was referred to as the "King of Medicine" in ancient times.

Since Dean Jiang mentioned this medical professor named Sheng Simiao, it's evident that he must be an important figure.

"Xiao Ding, Professor Sheng Simiao is a top-rated physician in surgical medicine, particularly in microsurgery, where he is a national benchmark."

Dean Jiang Zhongbo praised.

Chapter 782: Prayers from a Million Netizens

Ding Yue immediately took out his phone and looked up this Professor Sheng Simiao that President Jiang Zhongbo mentioned.

He's a leading expert in microsurgery in the country.

And organ transplantation surgery belongs to microsurgery, such operations are extremely precise, and they immensely challenge the surgeon's skills.

Mist City Central Hospital also has excellent microsurgeons, but if Professor Sheng Simiao could come, that would naturally be the best thing.

"So, Dean Jiang, shall we invite Professor Sheng to come and be the chief surgeon for this clinical surgery?"

Ding Yue nodded and said.

"I think the same, compared to the doctors in our hospital, Professor Sheng Simiao is indeed better."

Dean Jiang Zhongbo also nodded and said, "That's why I agreed with Professor Sheng Simiao. He is already on the plane to Mist City."

"Great!"

Upon hearing this, Ding Yue was overjoyed, immediately saying, "After Professor Sheng arrives, let me handle the subsequent arrangements."

"That would be a great help, Xiao Ding."

"No trouble at all," Ding Yue shook his head, then turned to his secretary, Wen Ruohan, and said, "Book a good hotel nearest to our Central Hospital for Professor Sheng."

"Yes, Principal Ding."

Wen Ruohan replied.

The reason Ding Yue said to book a good environment was because after Professor Sheng Simiao arrived in Mist City, the surgery would most likely not be arranged for a few more days.

After all, Xu Meijia is still at the hospital in Haicheng and hasn't been transferred here yet.

Therefore, after Professor Sheng Simiao arrives, he will need a quiet and good environment for rest. A luxurious hotel might not necessarily be the best choice, but a good environment is indeed very important.

"When can the Principal Xu's daughter be transferred here?"

Dean Jiang Zhongbo was very concerned about this clinical surgery, so he asked about Xu Meijia's situation.

"Barring any surprises, she can be transferred here tomorrow." Ding Yue answered, "Principal Xu has chartered a plane specifically for his daughter. Meijia's current condition is not very promising. So after she arrives, we need to get ready as soon as possible."

"Alright." Dean Jiang Zhongbo said seriously, "We are fully prepared on our side, what about the 3D bio-printing procedure?"

"The plan is as follows: after Meijia is transferred to our hospital, we will first scan the organ she needs and match the data with the previous data. The liver organ will be printed

out using the 3D bio-printer provided by our Mist City Arts and Science University, and then the surgery will be performed within 24 hours."

Ding Yue outlined the workflow to Dean Jiang Zhongbo.

"Alright."

Dean Jiang Zhongbo nodded.

At this moment, Ding Yue was about to ask if the approval from the drug authorities had come through yet, because this clinical trial was approved by Mist City Central Hospital.

Once the approval comes through, it means that the national drug authorities have given a response to Mist City Central Hospital.

When the Dean Jiang Zhongbo's office assistant walked in from outside, "Dean Jiang, Principal Ding, you are here as well. Good news, the approval from the drug authorities has come through, allowing us to carry out this clinical surgery."

The assistant immediately handed the document to Dean Jiang Zhongbo.

After Dean Jiang looked at it, he passed it to Ding Yue.

The approval from the drug authorities was basically a foregone conclusion because Xu Meijia, the patient, had signed the-

"Now that the approval from the drug authorities has come through, we just wait for Principal Xu to bring his daughter over." Ding Yue said, reflecting on the situation.

Mist City Central Hospital is ready, and Ding Yue's team from the College of Medicine at Mist City Arts and Science University is also ready.

The approval from the drug authorities has also been granted.

As soon as Xu Meijia is transferred, a doctors' expert conference can be held to set the time for the clinical surgery.

Meanwhile.

Far in Haicheng.

As soon as Xu Dongcheng returned to Haicheng, he rushed to Haicheng Central Hospital to visit his daughter and told her about the transfer.

When Xu Dongcheng arrived outside his daughter's ward, he saw people outside the ward and even someone holding a video camera.

"Who are you?"

Xu Dongcheng was quite sensitive at this moment, with people gathered outside his daughter Xu Meijia's ward, he naturally had to be on guard.

The assistant was also on high alert at this sight.

"Hello, may I know if you are Mr. Xu Dongcheng?" The female reporter holding the microphone approached Xu Dongcheng and asked when she saw him.

"I am."

Xu Dongcheng nodded, then asked, "Are you people from a TV station? What are you here for?"

"Hello, Mr. Xu, we are reporters from Haicheng TV Station. Your daughter's livestreams and video logs on Bilibili touched many people, and she has passed along positive energy with her strength and bravery. We want to interview her."

The female reporter kindly explained.

"I'm sorry, my daughter is currently hospitalized, she will not be accepting any interviews, please do not disturb her."

Xu Dongcheng directly refused the TV reporters' request for interview.

Because Xu Dongcheng knew that his daughter now needed a good environment, needed to keep her morale high, and couldn't be disturbed too much.

An interruption wouldn't be beneficial for his daughter Xu Meijia, as it could indirectly affect her health condition.

"But Mr. Xu...your daughter has already accepted our interview. She said that after she finishes her live stream later, she'll agree to our interview."

The female reporter spoke with a tone of helplessness.

The reason they were waiting outside the ward was because Xu Meijia was currently doing her live stream on Bilibili.

She said she could do the interview as soon as her live stream ended.

"Oh?"

Upon hearing this, Xu Dongcheng furrowed his brow, then walked forward, gently pushing the door open and entering the ward.

"Dad!"

When Xu Meijia saw her father enter, she happily called out.

"Are you streaming?"

Xu Dongcheng gently asked after entering.

"Yes, dad, Bilibili's viewers are super concerned about me, look, they're even greeting you on the barrage."

Xu Meijia moved the phone screen in front of her father.

Xu Dongcheng took a look and saw that his daughter's live stream comments were filled with messages like "Hello Uncle Xu", "Uncle Xu, Meijia will get better", "Uncle Xu, let's fight this battle with Meijia" and the like.

"Thank you, everyone."

Seeing the Bilibili users' kindness, Xu Dongcheng expressed his sincere gratitude.

Xu Dongcheng knew that his daughter Xu Meijia loved sharing her hobbies and food on Bilibili. Even after falling ill, she persisted in chronicling her battle with the disease on Bilibili.

"The TV reporters outside are saying they want to interview you, did you agree?" Xu Dongcheng quickly asked his daughter.

"Yes. They are from Haicheng TV Station. They said they saw me trending and wanted to interview me. I thought I could inspire others with my strength and courage, so I agreed."

Xu Meijia simply nodded in response.

"How is your health holding up?" Xu Dongcheng naturally respected his precious daughter's decision.

He was just worried about her health.

The doctor who had followed Xu Dongcheng said: "Mr. Xu, Meijia's condition has been quite good these past few days."

"Good."

After hearing the doctor's words, Xu Dongcheng was reassured.

Doctor Liu hesitated for a moment, but still decided to ask, "Mr. Xu, I heard that you are planning to let Meijia undergo a clinical procedure involving 3D bioprinting technology?"

"Mmm, Doctor Liu, are there any problems with this?" Xu Dongcheng quickly looked at Doctor Liu and asked.

"There's no problem. But if she's going to Mist City for this 3D bioprinting technology clinical procedure, I suggest that she be transferred as soon as possible. Meijia is doing better these past few days, I worry that she won't handle the disruption of transferring between two cities well if we do it later."

Doctor Liu suggested.

"Mmm, I just got back from Mist City. They're ready there, I was actually here to prepare for Meijia's transfer."

Xu Dongcheng quickly nodded.

If the doctor suggests moving within these two days, Xu Dongcheng would not hesitate.

"Alright, then I will proceed to do the necessary paperwork." Upon finishing his words, Doctor Liu turned around to start processing Xu Meijia's hospital transfer.

"Dad, are we going to Mist City right away?"

Xu Meijia asked joyfully.

"Yes, it's a bit late today, you rest up tonight and tomorrow we go to Mist City." Xu Dongcheng gently rubbed his daughter's head, affirming his words with a nod.

"Right, you mentioned trending earlier. What trend? You started trending?" Seeing the mood in the ward turning a bit somber, Xu Dongcheng promptly changed the subject, asking his daughter about some non-crucial matters.

"Yes, I streamed on Bilibili today and after recording my vlog video, many Bilibili users saw it and started trending. Millions of netizens are praying for me and wishing me luck with this surgery."

Xu Meijia continued to respond cheerfully.

Having so many netizens wishing her well made Xu Meijia very happy. Even before her illness, Xu Meijia enjoyed communicating with netizens online, she had hundreds of thousands of followers on both Bilibili and Twitter.

"I am truly grateful for all the well-wishes sent to my daughter, thank you!"

After hearing this, Xu Dongcheng felt somewhat moved, he expressed his gratitude to the audience in his daughter's live stream room.

He also indirectly expressed his gratitude to those netizens who have been sending well wishes to his daughter.

The interest of these netizens was not just limited to providing support to the brave girl, Xu Meijia.

Because this time it involved the clinical trial of 3D bioprinting technology.

If successful, organ transplant surgery in the country and even globally could become more convenient. Most importantly, the problem of organ sources can be almost resolved and cost might even be reduced.

However, if the trial fails, the result would obviously not be what anyone wanted.

Online.

No matter whether it was on Zhihu, Twitter, Bilibili, TikTok or even in various chat groups, many netizens were discussing both the matter concerning Xu Meijia and the 3D bioprinting technology from Mist City Arts and Science University.

More and more attention was gathering here...

Chapter 783: After Recovering from My Illness, I Want to Go to Mist City Arts and Science University

Mist City Airport.

A special flight arrives.

There is only one passenger on the plane, because this passenger's father has chartered the aircraft with a large sum of money, specifically to deliver his daughter to Mist City.

Upon arriving at Mist City Airport, a special vehicle arranged by Mist City Arts and Science University escorted the passenger to Mist City Central Hospital.

These two days, countless internet users are constantly paying attention to this passenger's situation.

The passenger is Xu Dongcheng's daughter, Xu Meijia.

Due to an interview conducted by Haicheng TV Station with Xu Meijia, the interview report attracted even more internet users to take notice of this strong and brave girl who was battling against illness and refusing to succumb to her fate.

In addition, the past few days have seen a high level of interest in Mist City Arts and Science University's 3D bio-printer technology, with many people paying attention. Therefore, more and more netizens are following Xu Meijia's situation and sending blessings her way.

It's worth noting that, due to the involvement of the 3D bioprinter — a technological product in the medical equipment field that's drawing a lot of attention - stocks in the healthcare sector are on the rise these two days.

If only the Feiyue Group were publicly traded, its stocks would probably have already hit the daily trading limit given the immense appeal of the 3D bio-printer.

One major surge in stocks in the healthcare sector happened previously thanks to Mist City Arts and Science University.

Indeed!

It was associated with the medical health robot developed by Mist City Arts and Science University.

When the medical health robot first came out, the influence on healthcare stocks wasn't very significant. But once the medical health robot from Mist City Arts and Science University was officially put into production and entered large-scale hospitals, stocks in the healthcare field started to rise.

However, since Mist City Arts and Science University's medical health robot didn't cooperate with any healthcare company, the stock prices returned to normal after a surge.

Three thirty in the afternoon.

Mist City Central Hospital.

Three cars slowly drove into the hospital parking lot. These three luxury cars were undoubtedly driven by the three leaders of Mist City Arts and Science University: Ding Yue, Huang Youjie, and Xu Bin.

After getting off their cars, they went straight to the office of President Jiang Zhongbo.

"President Jiang, I heard that Mei Jia has been transferred. Where is she?"

Ding Yue came this time naturally to visit the daughter of Principal Xu Dongcheng, Xu Meijia, since her current situation was closely related to Mist City Arts and Science University. Even her future and life were entirely entrusted to Mist City Arts and Science University.

"Xiao Ding, you're here. Follow me, I'll take you there."

Upon seeing Ding Yue, President Jiang Zhongbo rose and led them to the special ward where Xu Meijia was staying.

This was a ward specially prepared by Mist City Central Hospital for Xu Meijia with expert physicians guarding around the clock, always monitoring Xu Meijia's condition.

In the meantime, Mist City Central Hospital was also actively preparing for the surgery.

"The girl arrived at noon today, and I personally arranged for her to stay in the prepared ward." As President Jiang led Ding Yue and the others out of his office, he said.

Just then, a doctor in a white coat came over. He looked like he was in his fifties, but appeared in good health.

Upon seeing the doctor, Ding Yue couldn't help but frown.

He looked familiar.

He seemed very similar to a picture he had seen online, and Ding Yue soon realized that he had only searched for one person on the internet during the past two days.

That was Professor Sheng Simiao!

A top microsurgery doctor, a well-known professor from Yancheng Medical University, and a leading figure in the field of surgery.

"Professor Sheng."

As soon as President Jiang saw Professor Sheng Simiao, he warmly greeted him.

"President Jiang."

Professor Sheng Simiao came forward and said to President Jiang directly, "I just went to check on the girl's condition. She is currently relatively stable. If her condition remains good, it will be very suitable for surgery."

Professor Sheng Simiao arrived at Mist City Central Hospital yesterday. At that time, Ding Yue had already returned to the university, so they hadn't met.

However, the hotel where Professor Sheng stayed in Mist City was arranged by Ding Yue's secretary Wen Ruohan. Plus, Ding Yue had mentioned that all expenses for Professor Sheng's party during their stay in Mist City would be reimbursed by Mist City Arts and Science University.

After all, Professor Sheng Simiao came to Mist City Central Hospital to perform an organ transplant surgery for Xu Meijia.

"That's good. Oh, by the way, Professor Sheng, let me introduce you. This is Principal Xiao Ding from Mist City Arts and Science University."

President Jiang nodded slightly, then immediately introduced them, realizing that it was the first time Professor Sheng and Principal Xiao Ding had met.

"Nice to meet you, Professor Sheng. I've long heard about you."

Upon seeing this, Ding Yue immediately stepped forward, warmly shaking hands and greeting Professor Sheng Simiao.

"Principal Ding... You certainly live up to the reputation of being young and promising. Your medical school at Mist City Arts and Science University really makes us old folks in the medical field look at you in a new light."

Looking at Ding Yue, Professor Sheng Simiao showed a face of admiration and satisfaction.

Professor Sheng Simiao heard about Mist City Arts and Science University as early as the beginning of this year, when the country announced that the university had made a major breakthrough in the field of graphene. The news then was quite high-profile.

Chapter 784: After Recovering from My Illness, I Want to Go to Mist City Arts and Science University

At that time, I was quite impressed that a private university could have such impressive research capabilities. It certainly was not simple and must have required substantial financial investment.

A few days ago, upon learning that the Medical College of Mist City Arts and Science University had achieved significant results in 3D bioprinting technology with Professor Yang Kaining from the Swiss Zurich Federal Institute of Technology, Professor Sheng Simiao became extremely excited.

3D bioprinting technology has always been at the forefront of global scientific research. It was remarkable that it was eventually developed by a domestic private university in collaboration with a top professor from the Swiss Zurich Federal Institute of Technology.

"Professor Sheng, your praise is too kind," Ding Yue said modestly. "I am profoundly grateful that Professor Sheng can take the lead as the surgeon on this occasion."

"It is my duty. After all, this is the clinical stage of 3D bio-printing technology. The impact is significant, and that girl is very strong and courageous. I cannot ignore it,"

Professor Sheng Simiao nodded in agreement.

"Professor Sheng, I'm thinking of taking Principal Ding to see the girl. Why don't you join us, and on the way, you can talk about some details of the surgery?"

President Jiang Zhongbo invited Professor Sheng Simiao to join them.

"Sure."

Even though Professor Sheng Simiao had just returned from over there, seeing that Jiang Zhongbo and Principal Ding were going, and they also called him, he didn't feel good about declining.

At this moment.

In the special ward, Xu Dongcheng was guarding his daughter almost around the clock.

"Dad, don't forget you promised that after I recover, we're going to Iceland to see the Northern Lights."

Xu Meijia sat cross-legged on the bed, talking happily with her father about her plans after recovery.

Her father, a million netizens, and Principal Ding had all given Xu Meijia hope for life.

She firmly believes she can recover. This time, it's just a small "surgery".

Seeing his precious daughter maintaining such a positive order, Xu Dongcheng's mood improved considerably.

"Of course, when have I ever not kept my promises?" Xu Dongcheng clasped his daughter Xu Meijia's hand, nodding.

"Going to Iceland to see the Northern Lights?"

At this moment, a voice came from the entrance of the ward.

"Principal Ding!"

Xu Meijia recognized the visitor by the voice.

Although they had never met in person, she had heard this familiar voice many times through video calls.

Ding Yue walked into the ward, followed by President Jiang Zhongbo and Doctor Sheng Simiao.

"Is this our first official meeting?"

Ding Yue smiled at Xu Meijia.

"Yes, indeed." Xu Meijia quickly nodded. "Principal Ding, thank you. Thank you, Mist City Arts and Science University."

"Xu, you can't really neglect your daughter's wish to see the Aurora in Iceland."

Principal Ding playfully reprimanded Xu Dongcheng.

The mood in the ward suddenly became more relaxed, and Xu Meijia covered her mouth in giggles.

It had been a long time since Xu Dongcheng had seen his daughter laugh so happily.

It must be because she saw her idol Principal Ding.

She had said that Principal Ding was her idol. Not only was he good-looking, but at such a young age, just two or three years older than her, he established Mist City Arts and Science University and developed it so well.

"After you recover, there's one important thing to remember."

Principal Ding reminded her with a smile.

"I haven't forgotten. After I'm discharged from the hospital, the first place I want to go is Mist City Arts and Science University."

Xu Meijia replied happily.

"You're very welcome!"

At that moment, Huang Youjie applauded in welcome.

"Oh, this is Director Huang from our Mist City Arts and Science University, and this is Director Xu." Having heard Huang speak up, Ding Yue introduced them briefly.

"I want to see the Book Ship Library and have a tour there. Plus, I've decided on something..."

Xu Meijia said, looking even more cheerful.

"Huh? What's going on?" inquired Xu Dongcheng out of curiosity, who was standing nearby.

"Guess."

Xu Meijia teased him a little.

"I guess... Oh, you mischievous girl, how could I possibly guess?" Xu Dongcheng quickly shook his head, showing the universal sign of "I surrender, I won't guess".

"Heehee."

Xu Meijia cut the banter, suddenly spoke seriously, "Dad, Principal Ding, after I recover from my illness, I want to go to Mist City Arts and Science University to study my favorite subject, fashion design, and ... oh yes, I'll study medicine as well."

"You're most welcome! We look forward to it!"

Upon hearing her words, Ding Yue laughed and said, "Your father told me you have excellent grades. I'm sure you'll achieve great things at Mist City Arts and Science University."

He spoke the truth.

Ding Yue and Xu Dongcheng had previously discussed Meijia, who was a real top student. As the daughter of Principal Xu Dongcheng, she'd always had access to the best educational resources.

So, there's no doubt that such a top student would soar high after arriving at Mist City Arts and Science University!

Take Ding Yue's sister Ding Xiaoyou for example.

With the academic boost they received at Mist City Arts and Science University, it was only natural for top students like her to achieve great things.

"Girl, are you planning to take two majors?" Xu Dongcheng asked, looking at his daughter.

"Yes."

Xu Meijia nodded, "I must study medicine, and fashion design has always been my dream. Isn't it quite normal to study two majors at university?"

Well said for a top scholar!

Most people wouldn't be able to say this without sounding unrealistic; only real top scholars could have that kind of confidence.

"Well then, let me formally welcome you, on behalf of the Fashion Design and Medicine departments."

Ding Yue laughed and said.

Who knows, perhaps Xu Meijia could become a celebrated fashion designer and physician after she comes to Mist City Arts and Science University.

It's understandable that she wants to study medicine.

After all, it was medical science that gave her hope, and she can't be described as having been 'saved' just yet since the surgery has not been completed.

However, it was indeed the 3D bio-printing technology of Mist City Arts and Science University's School of Medicine that gave Xu Meijia this opportunity.

"Some renowned physicians and professors are not only doctors. Some of them are writers, some are musicians. Xiao Xu, we welcome you to join the medical community in the future."

At this time, Professor Sheng Simiao kindly smiled and said to Xu Meijia.

"Hehe, with Professor Sheng as my role model, I'll certainly work hard." Xu Meijia nodded earnestly.

Today in the hospital room, everyone smartly avoided talking about any clinical surgery matters with Xu Meijia.

The atmosphere in the ward was very harmonious.

Ding Yue and Xu Meijia had a long chat, learning that this girl was very fond of Mist City Arts and Science University.

She even considered Mist City Arts and Science University as an ideal university. Though it wasn't a 'Double First Class' institution and not a public one in the country, it still held a unique charm for her.

Ding Yue thought carefully.

Once Xu Meijia's health recovers after the surgery, he would personally prepare a special acceptance letter for her. This would allow her to fulfil her dreams of entering Mist City Arts and Science University, where she could continue learning and shape her future.

Of course, all this is dependent on the success of Xu Meijia's surgery.

But Ding Yue naturally had faith that it would be successful.

There was no reason for it not to be.

The nation's top medical professors and Professor Sheng's team had already held a meeting. The liver organ printed by Mist City Arts and Science University's 3D bio-printer perfectly matched Xu Meijia's needs.

So, the only remaining issue was the surgery itself.

But for Professor Simiao and his top-notch team, organ transplantation was almost a surefire success.

Therefore, Ding Yue remained optimistic about Xu Meijia's surgery.

After visiting Xu Meijia, Ding Yue held another meeting at Mist City Central Hospital with President Jiang Zhongbo, the hospital team, his own university's medical team, Professor Yang Kaining's team, and other experts from all over the country present online.

They finalized the time for the surgery.

It would be two days later.

Chapter 785: Start Organ Transplant Surgery!

"Good day, everyone. I'm Bingbing, a reporter from NTS. Today, a unique organ transplant surgery will be held at Mist City Central Hospital."

In front of the main entrance of Mist City Central Hospital.

The news team from NTS is conducting a live broadcast, aired from the NTS newsroom.

The reporter on the scene is named Wang Bingbing.

A quite beautiful female reporter, fervently nicknamed "Bingbing Wife" by netizens, who apparently were fed too many peaches.

However, to be honest, reporter Wang Bingbing is truly beautiful. Her light makeup during interviews and reports far surpasses many heavily made-up "beauties".

"I believe everyone recently paid close attention to the 3D biological printer developed by teams from the Mist City Arts and Science University's Medical School, Mist City Medical University, Mist City Central Hospital, and the Swiss Zurich Federal Institute of Technology. Today, for the first time, it will print biological tissue organs, used for a patient's surgery.

This patient, in the prime of her life, has inspired us through her strength and courage. Let's all step into Mist City Central Hospital and examine firsthand the specifics of today's surgery."

After Wang Bingbing finished speaking, she led the cameraman towards Mist City Central Hospital.

Today is the day of Xu Meijia's surgery. The fact it is covered by the NTS newsroom live demonstrates its significant impact.

The most important thing is that this news can convey hope and strength to the vast audience.

In addition to this, the report can also cover the globally advanced medical equipment, the 3D biological printer from the Mist City Arts and Science University Medical School.

A few days ago, the news that Xu Meijia would undergo the first organ transplant surgery using an organ printed by the 3D biological printer received a lot of attention online.

Tens of millions of netizens prayed for Xu Meijia.

They hope she can successfully complete this organ transplant surgery and recover, once it's successful, it implies that the 3D biological printer from the Mist City Arts and Science University achieved victory clinically. This would be the gospel to patients who need organ transplant surgery in the future.

Many national institutions and departments have placed great emphasis on this surgery. Even the National Pharmaceutical Department sent people to observe.

Doctors and experts from all over the country have held several expert meetings prior to the surgery.

Headed by Professor Sheng Simiao, a microsurgical surgery expert from Yancheng, and several domestic biomedical experts, they have repeatedly confirmed whether the liver organ printed by the 3D biological printer from the Mist City Arts and Science University perfectly matched Xu Meijia's data.

Ultimately.

The liver organ printed by the 3D biological printer at the Mist City Arts and Science University perfectly matched Xu Meijia's liver needs.

All of this was performed by the most top-tier teams.

Professor Yang Kaining and his team, along with the team from the Mist City Arts and Science University's Medical School, was responsible for printing the liver organ with the 3D biological printer.

Professor Sheng Simiao and his team, along with the team from the Mist City Central Hospital, was responsible for performing the organ transplant surgery on Xu Meijia.

Everyone today was quite nervous.

However, as the lead surgeon, Professor Sheng Simiao had already adjusted to his best surgical condition today.

The surgical prowess of Professor Sheng Simiao was enough to ensure that the process of the surgery would be near-perfect, without any issues.

Allowing Xu Meijia to successfully complete the organ transplant surgery in the end.

At ten o'clock in the morning, outside the operating room.

Ding Yue, Huang Youjie, Xu Bin, Principal Xu Dongcheng, and President Jiang Zhongbo, as well as others, were all waiting outside.

Professor Shi Chuanming from the Mist City Central Hospital, Director Bai Liwei from the Mist City Arts and Science University's Medical School, students Gu Yong and Lu Qingyan, Professor Yang Kaining, all of them were responsible for monitoring the liver data throughout.

"Principal Ding, Director Bai's news, the liver has been sent into the operating room."

Next to Ding Yue, his secretary Wen Ruohan came over to report the latest situation.

The liver to be transplanted to Xu Meijia, printed out by the 3D biological printer of the Mist City Arts and Science University, had already been sent into the operating room.

Inside the operating room, Professor Sheng Simiao and the others are ready.

"Has Meijia entered the operating room?"

Principal Xu Dongcheng asked anxiously.

At this moment, the most nervous, the most worried one, was probably Principal Xu Dongcheng.

After all, the one lying on the operating table was his own daughter. If any accident occurred, it would mean that his daughter's life had come to an end.

However, Xu Dongcheng never holds such thoughts.

In Xu Dongcheng's heart, he still believes that his darling daughter, Xu Meijia, can complete the surgery smoothly, and eventually recover.

"Meijia is about to enter the operating room, Principal Xu doesn't need to worry."

Wen Ruohan explained to Principal Xu Dongcheng.

"Oh, okay."

Xu Dongcheng nodded his head, although he didn't seem nervous or worried on the surface, he was somewhat worried and tense deep down.

Right at this moment, Bingbing and her cameramen from NTS arrived.

"Principal Ding, President Jiang, has the operation started?"

After approaching, Bingbing quietly asked Ding Yue and Jiang Zhongbo.

"It's about to start."

Ding Yue answered.

He glanced at this reporter from NTS, quite good-looking, isn't she?

Upon a closer look.

Oh boy.

Isn't she the famous reporter from NTS, Wang Bingbing, who's quite popular online? She's the one doing the news report today.

Chapter 786: Start Organ Transplant Surgery!

"May I do a news report here and conduct a brief interview with Principal Ding, Dean Jiang, and Principal Xu?"

Wang Bingbing asked, still keeping her voice low.

After all, this is a hospital, and not far ahead is the entrance to the operating room. It's only natural to speak softly here.

Ding Yue glanced at President Jiang Zhongbo and Principal Xu Dongcheng. Seeing that neither of them refused, he nodded and smiled, "Sure, but this is outside the operating room. Shall we go over there for the interview?"

Ding Yue suggested.

Wang Bingbing agreed immediately, leading Principal Ding and President Jiang Zhongbo to a hall nearby. Then she had the cameraman ready to start the interview.

In no time at all, the NTS cameraman was ready, linking to the NTS news studio.

"Okay, start!"

With Wang Bingbing's command, she professionally dived into her role as a journalist. "Hello, audience, we are currently outside the operating room of Mist City Central Hospital. In front of me are Principal Ding Yue from Mist City Arts and Science University, Dean Jiang Zhongbo from Mist City Central Hospital, and Mr. Xu Dongcheng—Mei Jia's father, who will be undergoing surgery today."

Wang Bingbing was doing a live broadcast, so she first introduced the three figures in front of her to the audience.

In the NTS live studio—

"Wow, these three big shots are standing right here."

"Principal Ding is really young."

"Amazing. Today we are waiting with NTS, Principal Ding, Dean Jiang, and Mr. Xu for the results of the surgery. We believe Mei Jia's surgery will surely be successful!"

"Bingbing just interviewed three big shots in one go."

"Dean Jiang Zhongbo looks so friendly. I seem to recall that when the medical health robot Big White from Mist City Arts and Science University was launched, Dean Jiang Zhongbo was a big supporter, wasn't he?"

"I heard that the Medical School of Mist City Arts and Science University and Mist City Central Hospital are closely linked."

"Yes, yes, yes, many professors and teachers from the Medical School of Mist City Arts and Science University are actually medical experts from Mist City Central Hospital."

"Fight on, Mist City Arts and Science University! Fight on, Mist City Central Hospital! Countless netizens are awaiting good news today."

The number of online viewers watching the live broadcast was increasing.

On Twitter, several trending topics related to today's surgery using 3D bioprinting technology showed up, but they were not at the top of the list yet.

Most likely, the rankings would shoot up once the hospital announced the success of the surgery.

"Principal Ding, can you briefly discuss the 3D bioprinter with us?"

Reporter Wang Bingbing first interviewed Ding Yue.

"Uh huh."

Ding Yue nodded, then looked into the camera and said, "A 3D bioprinter is a device capable of manufacturing medical devices, tissue engineering scaffolds, and tissue organs under the guidance of digital 3D models, based on principles of additive manufacturing and the localized assembly of biomaterials or cellular units."

"To put it more specifically, this machine reads in a 3D model reconstructed or designed from medical imaging data, discretizes the model into several layers, and then the computer

controls the print head to print layers one by one. The printing of "biological ink" composed of biological tissue cell materials is used to complete this. We continually repeat this process until we finish printing the 3D tissue precursor. Then, the cells start to reorganize and merge, forming a new biological cell tissue structure."

Ding Yue had completed his homework in advance.

Ding Yue knew the principles of the 3D bioprinter quite well. After all, he could be considered a top student. This wasn't too difficult for him.

"It sounds quite complicated."

"Of course, how else would it be considered high-tech?"

"So it's like a printer, right?"

"I feel like it's not as complicated to understand as it sounds. It's like a printer, except this printer designs biological cells and uses biological ink to print."

"I know each word but when they're put together, I don't understand what they mean."

Netizens commented that Principal Ding's explanation was too "professional".

But it couldn't be helped.

After all, in a news event covered by NTS, Ding Yue couldn't explain what a 3D bioprinter was using layman's terms, right?

Actually everybody can understand what a 3D bioprinter is—it can print bio-tissue and organ materials needed in medicine.

They're more familiar with 3D printers which can print all kinds of things, even cars as reported in the news before.

And getting the idea of a 3D bioprinter, which is simply combining 3D printing and biology, isn't that hard to understand.

After interviewing about the 3D bioprinter, Wang Bingbing asked, "Principal Ding, Dean Jiang, how long is this surgery estimated to take?"

"Due to the complexity of this surgery, it's usually more complicated than standard organ transplants." explained President Jiang Zhongbo. "The operation will roughly take five to seven hours."

Considering this is an organ transplant involving microsurgery and bio-organs printed by the 3D bioprinter, the lengthy duration is understandable.

"It's been reported that the chief surgeon for this operation is Professor Sheng Simiao, the leading figure in the field of microsurgery in our country, is that correct?" Wang Bingbing continued to ask.

"Yes, we're very thankful that Professor Sheng Simiao could perform the surgery this time. We have great confidence that Professor Sheng and his team can successfully complete it."

President Jiang Zhongbo nodded and answered.

"Holy shit! The chief surgeon is actually Professor Sheng Simiao!"

"Awesome, Professor Sheng Simiao is the best microsurgeon in our country."

"Well, with Professor Sheng leading the surgery, I am relieved."

"What's the big deal about this Professor Sheng?"

"Of course, in the realm of organ transplants and microsurgery in our country, no one would dare claim to be first if Professor Sheng Simiao says he's second."

"No wonder so many people are watching this surgery today. Even the chief surgeon is the best in the country, impressive."

The netizens who didn't know that Professor Sheng Simiao was the chief surgeon were all reassured about the successful completion of the surgery after the report.

After all, Professor Sheng Simiao is the guarantor of a successful surgery.

Meanwhile, inside the operating room.

Xu Meijia was already lying on the operating table, anesthetized.

Professor Sheng Simiao, along with his professional team, began the surgery. Time seemed to stretch in the operation room.

Yet Professor Sheng Simiao remained composed, although this was a complex transplant procedure involving a new liver source for the patient, he was by now accustomed to such scenarios and was ready to go.

What made this operation different from the thousands that Professor Sheng Simiao had conducted before, was that the organ to be transplanted was printed by a 3D bioprinter, and that was about it.

In fact, a liver source printed by a 3D bioprinter was even better because it perfectly matched Xu Meijia's liver from every angle.

It was as if Xu Meijia's healthy liver had been replicated, which made the procedure easier to manage.

Surgery is grueling work. Sweat started to form on Professor Sheng Simiao's forehead, but it was promptly wiped off by someone nearby.

In an operating room environment like this, everyone had to be on high alert.

Professor Sheng Simiao's team was a professional surgical team. Facing such a surgery, everyone was showcasing their best and most dedicated selves.

The operation was ongoing under tense conditions...

Apart from those in the hospital like Ding Yue, countless netizens were anxiously waiting for the five to seven hours to come to an end.

Chapter 787: Surgery Completed, Tears in Eyes

Outside the operating room.

Ding Yue found time to be passing painfully slow.

A few hours felt more like several years.

Previously,

Ding Yue had always felt that time flew by, given the years that had passed since he established the Mist City Arts and Science University.

It had been three years now.

However, waiting outside the hospital operating room, anxious for the surgery results, it felt like time had slowed down. In truth, time couldn't really slow down unless influenced by a black hole.

It was merely psychological.

Principal Xu Dongcheng, too, perceived time to be crawling even more slowly. It had been hours of wait with still no results from the operation room.

Undoubtedly, it was a kind of "torture" for him.

The continuous torment of not knowing whether his daughter's surgery would succeed.

"Principal Xu, it's already afternoon. The surgery should be nearing its conclusion. Everything will start to get better."

Seeing Principal Xu Dongcheng's nervous expression, Ding Yue initiated a casual chat with him.

Today was too important a day.

Yet, in spite of this, Ding Yue could only try to maintain a positive mentality.

"Principal Ding, the operation will go smoothly, right?"

A nervous Principal Xu Dongcheng tightly gripped Ding Yue's hand, his voice shaky with anxiety as he asked.

"Of course."

Ding Yue nodded and smiled, before saying: "The liver printed by the 3D bio-printer matched Mei Jia's liver perfectly, which indicates that there won't be an issue in this respect. And the surgery is being performed by world-renowned microsurgery specialist, Professor Sheng Simiao, so that too shouldn't pose a problem.

Upon hearing Principal Ding's words, Xu Dongcheng's anxiousness settled down a bit.

"It'll be fine, yes, it will definitely be okay, the surgery will certainly go smoothly." Principal Xu Dongcheng started to "self-hypnotize" himself after calming himself down.

"Ha ha."

Ding Yue couldn't resist laughing, saying, "Principal Xu, you have turned superstitious. We have to believe in science."

"Yes, yes, believe in science!"

Upon hearing Ding's words, Principal Xu Dongcheng immediately came to his senses, realizing that it was science and technology, not some supernatural power, that brought hope to his daughter, Xu Meijia.

If it wasn't for Mist City Arts and Science University's 3D bio-printer, his daughter might not have found a suitable liver, let alone have an operation.

If that were the case, his daughter Xu Meijia perhaps wouldn't have made it through this year.

Once the operation is completed successfully, she will essentially receive a new, healthy liver that perfectly matches her physical condition. This eliminates the likelihood of "post-operative complications" associated with organ transplantation.

In other words, if Mei Jia's operation is successful today, she will become a healthy girl hereafter.

Thinking of this, a smile unconsciously spread across Principal Xu Dongcheng's face.

He was already imagining the wonderful life he could have with his daughter once she recovered and regained her health. First of all, he would definitely take his daughter to see the northern lights in Iceland.

Then, after the summer vacation, his daughter could finally fulfill her wish to study at Mist City Arts and Science University.

Relying on his relationship with Principal Ding, ensuring that his daughter received an acceptance letter shouldn't be a problem, right?

Moreover, Principal Ding had already promised his daughter that he would prepare an admission notice for her.

"Think more about the happy moments with your daughter in the future." Ding Yue laughed.

"How do you know what I'm thinking?"

An astonished Xu Dongcheng turned around to look at Principal Ding and asked.

Uh...

Ding Yue indicated that he was merely trying to console him. He didn't possess any sort of psychic powers.

At this very moment, on the internet,

lots of netizens were waiting for news on Mei Jia's surgery.

Since Mei Jia's organ transplant surgery requires several hours and today is a regular working day,

the netizens who are keenly following Mei Jia's 3D bio-printed surgery updates mostly had to attend their regular jobs.

They could only check their phones during work breaks for any new developments, or visit the live broadcast room of NTS.

However, even by the afternoon, the netizens were yet to receive news about Mei Jia's successful completion of the surgery.

At such a time,

various kinds of intense discussions started cropping up on some forums.

Some were worried, could Mei Jia successfully complete the surgery?

Others raised doubts: Is the 3D bio-printer at the Medical School of Mist City Arts and Science University genuine? Could the bio-tissue organs they print truly replace the body's organs and save lives?

No doubt, for the general public, such doubts are quite normal.

People didn't really question whether the Medical University of Mist City Arts and Science University's 3D bio-printer was "rubbish," considering even the National Pharmaceutical official acknowledged it, and it involved Professor Yang Kaining from Swiss Zurich Federal Institute of Technology.

Now, even Professor Sheng Simiao has come personally to perform an organ transplantation operation on Mei Jia.

By this, it can be discerned that the 3D bio-printer of Mist City Arts and Science University surely has some merit.

However,

without any final surgery results, people started various discussions while waiting.

On some forums—

[Let's be real, is the 3D bio-printer of Mist City Arts and Science University's Medical school truly mature? So much time has passed and Mei Jia's surgery results haven't been announced. Could it be that...]

Chapter 788: Surgery Completed, Tears in Eyes

This post has attracted a lot of attention from netizens.

Some of them comment that they will continue to wait since it's quite normal for an organ transplant surgery to take a long time.

Some, influenced by the post, also begin to contemplate whether the biological tissues and organs printed by the 3D bio-printer of the Medical School of Mist City Arts and Science University might not be compatible with the patient's bodily condition, and thus, complications may have arisen during the surgery?

All in all, netizens are fully flexing their imaginations even before the facts emerge.

"Why is everyone discussing so much? Isn't it better to just quietly wait for the results to come out?"

"I still hope that Xu Meijia's surgery can be successfully completed. After all, such a good girl, it would be such a pity if she were to leave us like this."

"Advanced technological medical companies around the world have not yet announced that 3D bio-printers can be used in the medical field and yet, a private university in our country has done it. Do you guys believe this? I guess it's half-finished at best, just a part of a marketing scheme."

"Are you an idiot upstairs? Does marketing involve the approval of the National Drug Agency, Professor Sheng Simiao, and the participation of so many from the Mist City Central Hospital? "

"To the one who mentioned marketing, how did your brain form?"

"Damn, the guy upstairs has a point, and it scares me to think about it. Now they've gotten so much attention, but in the end, even if the surgery fails, the Medical School of Mist City Arts and Science University can blame the surgery instead of the 3D bio-printer."

"Why are your thoughts all so pessimistic?"

The netizens were engaged in intense discussions, each expressing their own views.

Meanwhile, at the Mist City Central Hospital.

In the operating room.

Professor Sheng Simiao instructed the surgical team to perform the last step for Xu Meijia - suturing.

This girl now has, installed inside her body, the first ever 3D bio-printed liver in human history.

That's right!

The liver inside her body was printed by the 3D bio-printer of the Medical School of Mist City Arts and Science University. Of course, although it was printed, it would not affect its original liver functions in any way.

"How are the vital signs?"

Professor Sheng Simiao asked someone nearby.

"Everything is normal, the heart rate is slightly low, but it should return to normal soon."
The person replied immediately.

Everyone in the operating room was part of the professional surgical team led by Professor Sheng Simiao.

During the entire operation, the main surgeon performing the liver transplant was Sheng Simiao himself. As for the suturing and other tasks, they were performed by dedicated surgeons to reduce Sheng Simiao's physical exertion during the surgery.

After all, a surgery that lasts for several hours can be very physically exhausting.

"Let's observe for a few more minutes."

Professor Sheng Simiao was still on edge.

Although he had successfully transplanted the 3D bio-printed liver into Xu Meijia, he was still worried about the occurrence of any adverse reactions.

So close observation during the surgery was very important.

Five minutes later.

"Professor, everything is normal, we are successful with the operation."

The student doctor of Sheng Simiao said excitedly.

"Good, operation completed!"

Professor Sheng Simiao finally breathed a sigh of relief.

He has finally lived up to the expectations of millions of people watching this surgery.

With that,

Professor Sheng Simiao turned and walked out of the operating room.

The rest of the team began to take care of Xu Meijia's post-operative care.

This surgery was quite successful for Xu Meijia, but for Professor Sheng Simiao, there were small regrets.

Because this surgery almost broke Professor Sheng Simiao's surgical duration record.

Beep!

The light outside the operating room suddenly switched from red to green.

"The surgery is over!"

Someone who noticed the change in the light at the operation room entrance exclaimed immediately.

Upon hearing that, everyone turned their gaze towards the operating room door.

At this point, Xu Meijia was under anesthesia and unconscious. She was not wheeled out from the operating room. Instead, she was taken directly to her special ward through a special passage.

After all, Xu Meijia is an extremely unique patient. Therefore, Mist City Central Hospital has opened a special surgical route and ward for her throughout this process.

"Professor Sheng, how did it go?"

When Principal Xu Dongcheng heard that someone was announcing the completion of the surgery, he was ecstatic and rushed up to ask while grabbing Professor Sheng Simiao's hand.

Ding Yue and President Jiang Zhongbo were also eager to know the outcome of the surgery and thus turned their eyes towards Professor Sheng Simiao.

At this moment, there was a smile on Professor Sheng Simiao's face. He nodded and said, "The surgery went smoothly and was a perfect success!"

When these words from Professor Sheng Simiao came out, cheers erupted from everyone outside the operating room.

Principal Xu Dongcheng was crying with joy.

He held Professor Sheng Simiao's hand emotionally, weeping and saying, "Thank you, Professor Sheng. I really can't thank you enough. Thank you, Principal Ding, thank you, Dean Jiang, thank you everyone, thank you, everyone!"

At this moment, Principal Xu Dongcheng knew that there were so many people he needed to thank.

Professor Sheng Simiao personally performed the surgery on his daughter, and President Jiang Zhongbo provided the best resources at Mist City Central Hospital for his daughter.

NTS broadcast warm wishes from internet users for his daughter.

Most importantly, Principal Ding.

It was the 3D bio-printer from the Medical College of Mist City Arts and Science University led by Principal Ding that gave his daughter, Xu Meijia, a chance to reincarnate.

Without the 3D bio-printer from the Medical College of Mist City Arts and Science University, none of this would have been possible.

"Principal Ding, the surgery was successful. It was successful. Thank you so much!" Principal Xu Dongcheng directly hugged Ding Yue into his arms.

Ding Yue could vividly feel Principal Xu Dongcheng's excited breathing as he sobbed.

However...

Being hugged by a man in his forties felt strange!

"Congratulations, congratulations."

Ding Yue didn't know what to say to the emotional and crying Principal Xu Dongcheng, so he could only utter congratulations.

Indeed, it was a cause for celebration because Principal Xu Dongcheng's precious daughter had gotten a second chance at life. This was such good news; how could it not be celebrated?

The faces of all the people outside the operating room, including NTS's reporter, Wang Bingbing, were all filled with joyful smiles.

Everyone's wish was for Principal Xu Dongcheng's daughter, Xu Meijia, to finish the operation smoothly and ultimately recover.

Now that the wish had come true, recovery after the surgery was just a matter of time.

"Hello, audience friends. This is Wang Bingbing, a reporter from NTS news live room, live from Mist City Central Hospital with the most recent report. According to the Chief Surgeon, Professor Sheng Simiao, the patient Xu Meijia's surgery is completed and it was very successful!"

Wang Bingbing immediately relayed the latest results of the surgery to countless online followers who were closely following this news through NTS's live broadcast.

"Let's celebrate together!"

"I knew it, haha, I was sure it would be successful!"

"Holy cow! The surgery was successful! Mist City Arts and Science University is awesome! Professor Sheng Simiao is awesome! Mist City Central Hospital is awesome!"

"What joyous news!"

"Does this mean that organ trafficking will basically stop now?"

"The good news for patients needing organ transplantation surgeries has arrived."

"Admittedly, the successful surgery signifies the success of Mist City Arts and Science University's 3D bio-printer. This is a significant event in the field of medicine!"

"Congratulations to Principal Xu, Principal Ding, and Ms. Meijia!"

"To be honest, I feel quite emotional at this moment. I am an old fan of Meijia on Bilibili. I started following her when she only had over a thousand fans. Seeing the news about Meijia's successful surgery, I am truly tearful!"

Chapter 789: Huge Social Reputation

[NTS Official]v: Breaking news: At 3:42 pm today, the clinical operation of 3D biological printing of biological tissues and organs at Mist City Central Hospital successfully ended.

The surgery was flawless. Let us congratulate @Mei Jiaer on her new life and wish her a speedy recovery. #To learn about 3D biological printers, please click here#.

Shares (5.7w), Comments (11.9w), Likes (23.4w)

On Twitter.

The latest news has been jointly released on Twitter by NTS official, NTS, Mist City Arts and Science University's official, Mist City Central Hospital's official etc.

A patient that millions of netizens are praying for, Xu Meijia, has undergone several hours of surgery at Mist City Central Hospital.

Successfully, the biological liver source printed by the 3D biological printer developed by the Medical College of Mist City Arts and Science University was transplanted.

And the operation was smooth!

After the netizens learned of this news, it was undoubtedly a carnival, and the heat of the topic quickly rose to the top of Twitter's trending list.

Actually.

The related topic has been hung on the Twitter trending list for several days before.

Everyone was looking forward to the successful completion of the surgery. Although there was a lot of discussion, there was no final result yet, so it was not on the top of the trending list.

However, when Mist City Central Hospital announced the successful completion of Xu Meijia's operation and NTS broadcasted it live, the netizens finally boiled over.

Because the thing that everyone was paying attention to finally had a result, and it was a very satisfying result!

The first trending topic continued from the afternoon to the completion, and the heat continues to rise without any sign of decline.

At seven o'clock in the evening, the Twitter trending chart directly crashed.

At this time at Twitter headquarters, Bitch immediately ordered his subordinates to repair the server. If the server is not repaired within five minutes, there's no need to come to work tomorrow.

So.

Programmers immediately demonstrated their skills and quickly restored the high-pressure operation of Twitter.

Right!

Twitter's traffic tonight simply exploded.

Not only that, major forums and major video platforms also exploded due to the topic of the emergence of a 3D biological printer that saved Xu Meijia's life.

The phone of Mist City Arts and Science University was also blown up.

"Hello, this is Mist City Arts and Science University, how can I assist you?"

The customer service at Mist City Arts and Science University official consultation was overwhelmed with calls.

"Your Mist City Arts and Science University is really awesome!"

Beep beep beep!

The person on the other end of the phone said this and then hung up.

Not only that!

Most importantly, what Ding Yue was most concerned about was that because NTS broadcasted the entire surgical procedure in the afternoon.

By the time of the NTS official news broadcast at 7 o'clock this evening, a minute was specifically allocated to report the incident of today.

After all, NTS news reporters have already arrived at Mist City Central Hospital for on-site reports, and the final surgery went smoothly.

Therefore, the news broadcast in the evening must highlight the report.

Tonight, the names of Mist City Arts and Science University, Professor Sheng Simiao, Mist City Central Hospital, Professor Yang Kaining, 3D biological printer, etc., have directly become high-energy hot words!

NTS news broadcast—— "This afternoon, a heart-stirring surgery from Mist City Central Hospital initiates countdown to the application of 3D biological printing technology in the medical field. It is reported that this organ transplant operation performed at Mist City Central Hospital has for the first time used a 3D biological printer to print biological tissue organs. The product beautifully matched the patient's needs, bringing new hope for patients who couldn't find matching organs for transplant surgery..."

With the report of NTS news broadcast, the popularity of the 3D biological printer and the Medical College of Mist City Arts and Science University soared once again after seven o'clock in the evening.

Then.

The server at Twitter's headquarters, which had just been repaired, once again collapsed due to the surge in traffic.

...

Mist City Central Hospital, in the ward.

Xu Dongcheng, in high spirits, is holding his daughter Xu Meijia's hand, looking at her sleeping face, can't describe how fortunate he is in his heart.

In the past one or two years, Xu Dongcheng was worried every day. He was afraid that his daughter would leave him because he couldn't find a suitable liver source.

Luckily, he knew Principal Ding of Mist City Arts and Science University. And the Medical College of Mist City Arts and Science University was so amazing that they developed a 3D biological printer.

Thinking back, when Xu Dongcheng first found out that Mist City Arts and Science University has a 3D biological printer, he couldn't believe it.

"Xu, now Mei Jia is waiting for recovery, how do you feel?"

Ding Yue is also in the ward, sitting next to Xu Dongcheng, with one hand resting on Xu's shoulder, asking with a smile.

There is indeed a big age gap between them, but as Ding Yue gradually matured, he became very close to Xu. They called each other brothers.

And their relationship is indeed good.

"It's... very happy."

Xu Dongcheng couldn't help but feel moved, he said, "It's as if I had a dream. When I woke up from the dream, all the good things were still there."

It must be said, Principal Xu Dongcheng's description is quite artistic.

"Yeah, all the good things are still there. You're going to have your good life in the future." Ding Yue nodded and said.

Chapter 790: Massive Social Reputation

Soon after, Ding Yue turned his head and glanced at his secretary, Wen Ruohan, asking softly, "So, has everything been sorted out for Professor Sheng and the others?"

"Mm-hmm, Director Huang and Director Xu personally sent Professor Sheng and Professor Yang to their hotel to rest," Wen Ruohan quickly responded with a nod.

Earlier in the day, Professor Sheng Simiao had performed surgery for several grueling hours, an undoubtedly exhausting task. Therefore, Ding Yue arranged for them to rest at the hotel.

Just as Wen Ruohan finished speaking, Xu Meijia, who was lying on the hospital bed, slowly opened her eyes.

"Xu, she's awake."

Upon seeing this, Ding Yue promptly nudged Principal Xu Dongcheng, who was relishing in the hope of a brighter future for his daughter.

"Jia, you're awake," Xu Dongcheng asked tenderly, his excitement evident as he gently held his daughter's hand.

"Dad."

Xu Meijia's soft utterance of the word "dad" resonated deeply with Xu Dongcheng.

Even Ding Yue, standing nearby, was deeply moved by the scene.

Feeling a flash of pride, he couldn't help but remember that a young girl, in the prime of her life, was saved by a 3D biological printer developed by Mist City Arts and Science University.

Truth be told, it was indeed Ding Yue who "saved" her. After all, he had obtained the 3D biological printing technology from his system. Without it, Xu Meijia would likely have lost her life at the tender age of eighteen.

So, looking at the father and daughter reunited in front of him, Ding Yue felt, apart from their joy, a hint of pride.

Properly employed technology, he thought, truly had the capacity to save lives.

"How do you feel?"

Xu Dongcheng softly asked about his daughter's condition after she woke up.

"I don't feel too much."

Xu Meijia blinked her eyes and replied, "Dad, how did my surgery go?"

Having just woken up, she was yet to be briefed on the success of her surgery.

Xu Dongcheng's face beamed with fatherly affection as he nodded and assured her, "Mm-hmm, everything about the surgery went smoothly. We succeeded. You just need to stay in the hospital for a while longer for recovery, then you can get back to being healthy."

Upon hearing her father affirm the success of her surgery, a youthful and innocent smile enveloped Xu Meijia's face.

"Doctor, now that Jia is awake, could you please check on her?" Xu Dongcheng promptly asked the doctor, who had been by his daughter's side 24/7.

After all, Dongcheng could afford to have a doctor accompany his daughter around the clock, observing her post-surgery conditions at all times.

The doctor examined the relevant medical equipment before nodding in confirmation. "Mr. Xu, everything is steady as of now. The anesthesia is waning. She might experience some minor discomfort due to the surgical stitches, but it shouldn't be a major concern."

Relieved by the doctor's words, Xu Dongcheng was completely at ease.

"You should stay here for a while and focus on your recovery," Ding Yue patted Xu's shoulder, advising, "Principal Xu, thank you."

Xu Meijia raised her head and softly replied, "Ding Yue, thank you."

She was aware.

Without Principal Ding's Mist City Arts and Science University, she would not have had this opportunity for surgery. The 3D biological printer of Mist City Arts and Science University was indeed her lifesaver.

Ding Yue nodded slightly and then chuckled, "Once you recover, you are more than welcome to join us at Mist City Arts and Science University."

"Mm-hmm."

Hearing that she could attend Mist City Arts and Science University once she recovered made Xu Meijia feel extremely optimistic.

"Ding Yue, you should stay and take care of Meijia here, and I will return to my tasks at the university," sensing that Xu Meijia needed some rest after the surgery, Ding Yue prepared to head back to his university. The university was currently busy with the admission period, and the construction of the new 5000 acres campus was in its final stage. There were plenty of things awaiting his attention there.

"Alright, Principal Ding, you can return to your responsibilities. Once Meijia is discharged, I will make sure to bring her over to express our gratitude."

Xu Dongcheng understood Ding Yue's commitments and nodded in agreement.

"If there's anything we can assist with, don't hesitate to tell me, Xu. After all, this is Mist City. I must show good hospitality," he said.

"Thank you, Principal Ding."

After that, Ding Yue bid farewell with his secretary Wen Ruohan, Principal Xu Dongcheng, and Xu Meijia, and then left the ward.

"Dad, Principal Ding really is a good person. His status as my idol has been elevated even more, hehehe," said Xu Meijia jubilantly.

As a young girl, Xu Meijia didn't idolize typical pop stars, but rather a man like Ding Yue who was the president of a private university.

"Principal Ding truly is remarkable," Xu Dongcheng couldn't help but sigh.

Xu Dongcheng originally thought his Westlight University was already quite impressive within the realm of private institutions.

Only in the past two years did he realize the meaning of the phrase 'the new wave pushes the old,' as Mist City Arts and Science University — under the leadership of Principal Ding — was making leaps and bounds in its development and construction.

Just like this time with the 3D biological printer's biomedical engineering project, Principal Ding managed to invite Professor Yang Kaining from the Swiss Zurich Federal Institute of Technology to collaborate.

This was something Xu Dongcheng would have found very challenging to accomplish.

"Principal Ding, shall we return to the university now?"

After leaving the ward, Secretary Wen Ruohan asked Principal Ding.

"Hmm."

Ding Yue thought about it. All the tasks for the day were done. His team at Mist City Arts and Science University's Medical College had collaborated successfully with Professor Sheng Simiao's team to complete a clinical surgery with the 3D biological printer.

It was time for him to return to the university and handle the follow-up matters.

"Principal Ding."

As Ding Yue and Secretary Wen Ruohan approached the elevator, a voice came from NTS reporter Wang Bingbing.

"Bingbing?"

Ding Yue looked at Wang Bingbing and asked in confusion, "What's up?"

"Principal Ding, are you leaving?"

"Yes, I have a lot of work waiting for me at the university." Ding Yue nodded in confirmation.

"Can I come along with you?" Wang Bingbing blinked her sparkling eyes and asked with a smile, "We've come to cover the clinical surgery with the 3D bioprinter. Now that the surgery is successful, we'd like to explore Mist City Arts and Science University, which developed the 3D biological printer. Could you take us along, Principal Ding?"

"Of course."

Without thinking, Ding Yue agreed.

After all, she was a reporter from the NTS. If she wanted to visit his university and do a coverage, it was undoubtedly good news!

How could Ding Yue refuse?

And with Wang Bingbing, such an attractive journalist, making the request, Ding Yue could hardly resist.

So, the NTS reporter's team joined Ding Yue and stepped into the elevator.

"Principal Ding, did you know? After the successful surgery, Mist City Arts and Science University and the 3D biological printer have become the focus of millions of netizens."

Wang Bingbing couldn't resist making conversation with the handsome Principal Ding.

This impressive young principal was said to be a graduate student in the Physics Department of Qinghua University. It was amazing.

"Oh, really?"

Ding Yue asked with feigned calm.

"Yes, Principal Ding, the netizens' approval of our Mist City Arts and Science University is very high."

Secretary Wen Ruohan, standing next to him, excitedly nodded in agreement.

On hearing this, Ding Yue instantly checked his university's ["University Social Status"] in his system panel. Indeed, the data had sky-rocketed and seemed to be on the verge of reaching universal recognition.

This was undoubtedly a positive development for Mist City Arts and Science University.

The more such events occurred, the more Mist City Arts and Science University's social status and influence would rise, prompting people to see that the university's future and potential were infinite!
