

MY FINTECH EMPIRE

Chapter 12 [Let's lie down if you can't learn the skills of the boss]

When Fang Hong said it, it was natural and flat, as if it was a matter of course. Cao Chenghui even felt that it was a matter of course. After witnessing the boss's skill in making games with his own eyes, he had no doubts at all. .

Isn't it just a matter of eating the limit board every day for a month? For the boss, this is nothing more than a normal thing.

With the big A opening at 9:30.

Cao Chenghui also paid attention to the market situation. He entered the transaction code 600975, and the target name was Xinwufeng.

This stock entered the market with the boss yesterday, and today it also opened sharply higher by +5.31% at a price of 10.90 yuan. Fang Hong did not move after the market opened.

Cao Chenghui also remained silent, waiting for orders from the boss at any time.

As time passed, the stock opened higher and stepped back on the average price line, and then began to fluctuate all the way up, and finally hit the daily limit after 10 o'clock.

At the same time, Fang Hong immediately operated the trading account, and said without turning his head: "The board is cleared."

Cao Chenghui also followed up immediately, and said after a while: "Clearing and selling."

And Fang Hong also immediately opened a new stock that had just been added to the optional list, trading code 002165, Shenzhen's benchmark Hongbaoli.

This stock opened lower by about 0.5 percentage points this morning. After the market opened, it opened lower and moved higher.

"This ticket enters directly, but pay attention to dismantling it into loose orders and entering the market, don't set the price limit to sweep the goods." Fang Hong said immediately, and at the same time he began to enter the market. His current capital amount has reached 230,000 yuan .

At present, the main funds of this stock have not been moved, and the amount of energy per minute has not exceeded 100,000 yuan. Fang Hong's current amount of funds is copied in to sweep the goods, which will definitely affect the fluctuation of the stock price. , It is not a problem that it is enough to raise two or three percentage points in a short period of time.

The transaction price of the chips that change hands is not worth it.

At the same time, Cao Chenghui also divided the funds into twelve price declarations according to what Fang Hong said.

At about 10:10, Fang Hong's declaration was completed and all 18,000 shares were traded, with an average transaction price of 12.85 yuan, while Cao Chenghui's average transaction price was slightly higher, at 12.93 yuan.

After waiting for a few minutes, the stock price of Hongbaoli quickly rose to more than 4 percentage points.

Now Cao Chenghui is not as excited as he was in the first few days, but it is a basic operation to buy in and quickly rise, so there is no need to be excited.

But this feeling, Cao Chenghui directly said that it is really not too comfortable, the price rises immediately when buying, and it is all daily limit.

At 10:43, the main funds of Hongbaoli began to enter a stage of rapid increase, and both volume and price rose.

The stock price rose straight to 13.83 yuan two minutes later, an increase of +10.02% and hit the daily limit.

Fang Hong glanced at the account holding data:

【Hold the target: Hongbaoli (002165)】

【Number of shares held: 18000 shares】

[Average transaction price: 12.85 yuan]

[Current market price: 13.83 yuan]

[Market value of positions: 248,900 yuan]

[Profit and loss of the day: +37,600 yuan (+17.63%)]

[Floating profit and loss: +17,600 yuan (+7.62%)]

[Total assets: 249,300 yuan]

[Cumulative income: +263.14%]

...

Looking at the daily profit and loss data of the stock account, Fang Hong said with satisfaction: "Today, I made more than 17 points, which is not bad!"

Cao Chenghui on the side sighed and said: "Frankly speaking, I earn more than 15 points every day, and no one will believe it when I tell it."

Although Big A limits the daily price limit to only 10%, and it is a T+1 trading rule, Fang Hong made two profits on the same day by taking advantage of the opportunity of changing hands once a day through ultra-short days.

When the day is high, sell it to make the first profit, and then enter the next target on the same day. The daily limit of this ticket makes the second profit,

and the return rate of the day far exceeds the daily limit of 10 percentage points.

Then repeat the similar ultra-short handover operation the next day, and the profit also snowballs and expands rapidly, exponentially.

Hearing Cao Chenghui's emotion, Fang Hong also heard that what this buddy said was not meant to be flattering, but a feeling after he had really experienced it himself.

"If you say it, no one will believe it, so don't say it." Fang Hong said with a smile.

"Even if you allow me, brother, I won't go out and talk nonsense." Cao Chenghui said without hesitation, just kidding, after living for more than 30 years, it is natural to understand the reason why you need to be silent when you get rich.

Now Fang Hong is definitely a super short-term master in his eyes, no, he is a short-term god-level player. He can't figure it out. There are so many stocks in the entire A-share market, and there are only a dozen or so stocks with a daily limit. Six or seven.

He was able to catch a stop ticket every day. What surprised Cao Chenghui the most was that Fang Hong was able to sneak in before the stock's daily limit, and almost got the biggest profit of the day.

This is how the exaggerated profits of more than ten percent every day come from.

Before that, Cao Chenghui thought that by copying homework from the big guy, he could also learn a little bit of the big guy's skills. Even if he learned a tenth of it, he would benefit endlessly throughout his life.

However, Cao Chenghui has completely given up on this idea after following the boss to copy homework.

How to learn this short-term technique?

Cao Chenghui felt that even if the big boss taught by hand, he would not be able to learn.

Learn, learn ass!

Just lie down honestly, give up thinking in the brain, copy homework all the way with the master's godly operation, and it's over.

...

The following day, Wednesday 6 August.

The call auction is over, and the market will open in two minutes. Fang Hong said before the market opened: "When the market opens for shipment at 9:30, just hit the decisive point and sell at the limit price. Don't hesitate, otherwise the premium will not be much. ."

Cao Chenghui nodded repeatedly when he heard this: "Understood!"

With the opening of the big A, Hongbaoli, which opened more than two points higher, soared to +3.40% in the first minute or so of the opening. At this time, Fang Hongyan said concisely: "Clear and leave!"

Cao Chenghui also ran away immediately!

One minute before the market opened, the stock of Hongbaoli sold about 3.44 million yuan.

A minute later, Hongbaoli's share price couldn't hold on any longer, and it dived quickly.

And Fang Hong just sold it out, and after completing the change of all chips, he immediately clicked on another Shenzhen stock target Yue Media

(002181) that he added in the morning. When he declared the purchase, he said: "Split into three or four loose orders. If you enter this ticket, you are optimistic about going overboard."

Cao Chenghui nodded, and immediately began to apply for buying.

In the first three trading days, the target of Yue Media has gone out of the three-day and two-board market. Yesterday it fell by more than 7 points. This big negative line poured down, and retail investors basically surrendered.

Dare to be like Fang Hong when the stock price has not yet pulled up. There are almost no one who ambushes with a full warehouse before the promotion.

Anyway, Cao Chenghui didn't dare to play like this by himself, and now it's because there are big bosses around, which is another matter.
