

Godly Choice 221

Chapter 221: Bitcoin killer virus

On the screen of Wu Ke's laptop, a line like this appeared:

"Hello, your computer is under my control. If you don't want the data in your computer to be deleted, please pay me 100 bitcoins."

Seeing that the computer was invaded by a virus, Wu Ke and the entire Baiyun Technology Company employees were dumbfounded.

What the **** is going on? !

But the people who came to the press conference all laughed.

"What did Wu Ke say? Pioneer Strike is a super anti-virus and anti-plug software? Hahaha!"

"Slap on the spot, is this too cool?"

"Hahahaha, this company wants to laugh at me!"

"It's so dramatic, no, this silly company's silly operation I want to post on the Internet, so that silly friends will also have fun!"

"The company that makes anti-virus software was invaded by a virus, and it was still at the press conference... I dare not write such a movie script! Hahaha!"

"Wu Ke's face is green, so funny!"

Everyone laughed to their heart's content, Wu Ke fiddled with the computer on the stage with a dark face, but the virus had completely controlled the laptop. Even though Wu Ke had great abilities, it was absolutely impossible to save the computer.

"This company is too low." Fang Hao said mockingly, turning his head to look at Gong Qingyu, "Qingyu, do you know this bitcoin killer? This virus has been raging all over the world recently, and many people have been recruited. !"

Gong Qingyu shook his head.

Fang Hao was overjoyed, and quickly explained enthusiastically: "This virus is said to have been created by a super hacker alliance and spread through emails all over the world. The manifestation is like that. By locking the computer, it threatens the people who have been extorted. The lock is unlocked only after paying the money, otherwise all the data in the computer will be deleted!"

After a pause, afraid that Gong Qingyu would not understand, Fang Hao said: "This virus has become a Bitcoin killer. The so-called Bitcoin is a virtual currency popular on the Internet. It is produced through complex mathematical operations. There are only 21 million in the world. The fixed number will never increase or decrease!"

Gong Qingyu didn't say anything by default. A classmate asked curiously: "Is Bitcoin very valuable?"

Fang Hao took a gleeful glance at the stage, "As far as I know, a Bitcoin is worth 100,000 yuan!"

"My mother, one hundred thousand yuan? Wouldn't it be more expensive than gold!"

People around were exclaimed, and more people began to talk about the Bitcoin killer.

Some savvy IT programmers shook their heads helplessly. Baiyun Technology Company was unlucky.

The Bitcoin killer was created by a master in a top hacker league. No company has developed a method to crack it. If it is hacked, it can only pay for Bitcoin or reinstall the computer. There is no other way.

"What's the matter? Vanguard strikes did not defend against the virus?"

Li Yun stood up and walked onto the stage, asking calmly.

Wu Ke shrugged helplessly, "This computer belongs to the Propaganda Department, and there should be no Pioneer Strike in it, which caused an accidental hit."

An employee in his twenties embarrassed that he made a mistake in his work, so he went to get another computer.

"Hehe, that's the case."

The reporters in the audience understood that even the employees of Baiyun Technology did not trust this pioneer attack, so they did not open the software.

"Boss." Wu Ke looked embarrassed and couldn't wait to find a hole to drill down. I didn't expect so many accidents in this press conference!

Chapter 222: Demon Legion

"Ding, trigger the option event, please choose from the host:

Option 1: Ignore the Bitcoin Killer Virus and continue to hold the press conference with no reward.

Option 2: Find out the hackers behind the Bitcoin killer virus, reward justice value +1000, experience +100,000, wisdom and spirit +500, charm value +10, Wu Ke's loyalty will increase, and the loyalty of employees will increase significantly. Random purple gift bag*1, bonus Hu Xiaomeng's favorability degree, Gong Qingyu favorability degree +6.

Option 3: Get angry, scold the employees, and reward skills: incompetent furious, Wu Ke's loyalty drops. "

The system selects events again?

Hey, isn't this a benefit for him!

Li Yun patted him on the shoulder and said with a smile: "It's okay, it's better to say it's just right!"

"just?"

Everyone was taken aback, thinking that they had misheard, or that the chairman had been mad?

"Just to show the rescue computer function of Pioneer Strike."

Li Yun's eyes flashed, and he said in a cold voice: "The mere bitcoin virus, dare to provoke me, I am really impatient!"

Wu Ke couldn't believe it, "Boss, do you mean this computer is still saved?"

"Of course, it's easy!"

Everyone was stunned again, not knowing what to say.

Brother, you must have a degree of bragging. This is not a small virus. This is a super Bitcoin virus that has extorted millions of people around the world and has been reported by domestic and foreign media. Many security software experts are at a loss!

Do you think it's a virus created by a little white who has taught himself programming for three months?

Gong Qingyu looked at Li Yun with unblinking eyes, waiting for his performance.

"Don't believe it?" Li Yun smiled lightly and motioned to the employee to bring the new computer. "Then I'll show you on the spot. By the way, I will pick out the spreader of this virus. Well, let him go to the cell. It's been closed for a few years."

Li Yun's calm demeanor and mature and confident temperament calmed everyone present.

Whether it's bragging or really capable, it will be clear soon!

Country M, in a villa.

Nelson clearly saw the press conference and heard Li Yun's speech through the cameras and on-site recording equipment that he invaded and manipulated.

He is proficient in more than a dozen languages, and it is not difficult for him to understand Li Yun's words.

"Hahaha, it's so funny." Nelson's bearded face showed a mocking smile. "A high school student from Huang Xuanguo also wants to crack the virus made by the demon hacker army led by me, it's ridiculous!"

Nelson is not well-known in the real world, but in the hacker world on the Internet, he has a reputation comparable to the ***** monarch-Satan!

His nickname is Black Satan, which symbolizes his status as a disruptor of network rules and commander of the demon army.

There are a total of ten members of the Demon Legion, each of which is a top hacker. Some have invaded top websites, some have hacked top servers, and some have won global technology competition championships.

Each of them is a super hacker who is proficient in Internet technology.

And Nelson, the leader of this group of people, led them to develop a Bitcoin killer to provide a continuous source of funds for the Demon Army!

The world's top hackers gathered together to create this Bitcoin killer virus. How can a mere high school student crack it

Chapter 223: Grab control

To be honest, Nelson would never have noticed this small company if it weren't for someone to ask him for a shot with 10 million.

However, it's good to get the money twice.

Nelson sneered. He thought that Li Yun would contact him and make a quiet payment to let him unlock the control of the Bitcoin virus. Li Yun said to the outside that it was he who cleared the virus and made a fierce claim.

He sees a lot of the faces of people who start companies.

"Huh? Didn't contact me?"

Nelson looked at Li Yun in surprise, only to see that he turned on another computer. Isn't he convinced and want to try it?

"Haha, no matter how you test it, it's useless, no one in the world can crack my virus!"

There is a lively activity on Weibo again.

This conference has already received a lot of attention, and now the news that Wu Ke's computer has been hacked has made netizens laugh.

"I'm Cao, it's so dramatic!"

"Is it acting? It must be acting! This is too fun, hahaha!"

"I don't think it looks like it's acting. You see, Wu Ke's face is blackened to the bottom of a pot."

"Wu Ke now definitely regrets resigning from Nantian Group, 233."

"Baiyun Technology: Pioneer Strike is an anti-virus, anti-plug-in, anti-trojan horse software company. I am awesome, I am amazing, I have attracted a billion investment, I...was blackmailed by the virus? No, impossible! "

Wu Ke couldn't laugh.

The employees in the audience were extremely ashamed.

Only Li Yun remained calm and said:

"When your computer is completely controlled by a virus, any manipulation of yours will be rejected. If it is not connected to the Internet, and other networking methods are not turned on, you can only remove the hard disk and find a solution."

"But now that this computer is still connected to the Internet, it's much simpler."

"First, start Pioneer Strike, put the new computer and the old computer in the same local area network, and use the function of searching for computers in the local area network to find this controlled computer."

"Secondly, Pioneer Strike needs to confirm that you are the owner of the old computer and enter the administrator password-the old one is fine, as long as it is the password that the computer has used before."

"After confirming, then lightly click on the'remote control' function, and see, we have gained control of that computer!"

After Li Yun finished the operation, he projected the picture onto the white cloth for everyone to see clearly.

"what?!"

Nelson's eyes widened, shocked in his heart.

Li Yun actually broke through the defense of the virus and took back a small part of the computer's authority.

"Huh, even if you get some permissions, what can you do?"

Nelson calmed down, and even if the other party got control, it would be impossible to understand the Bitcoin virus.

He knows best about the virus he wrote. This virus is extremely stubborn and can continuously replicate itself. Even the operating system is contaminated. To clear it, you only have to enter a forty-six-digit complex verification code or completely format the hard drive .

Everyone in the banquet hall was dumbfounded, is this true?

Li Yun's tone was flat and said: "We can see that the data in the computer has not been deleted. We can remotely turn on the computer's Pioneer Strike to see how many viruses there are."

Pioneer Strike was activated. In an instant, Pioneer Strike broke through the control of the Bitcoin virus and replaced the blue-black blackmail screen with the software interface and displayed it in front of everyone.

"My Cao?!"

Everyone was stunned. Pioneer Strike actually regained control of the infected virus! !

Chapter 224: Nelson's shock

Nelson's eyes seemed to be protruding, "How is this possible?! How did he do it? The virus hasn't been cleared yet, it has forcibly taken over...I see!"

After thinking about it, Nelson gasped.

Pioneer Strike is also a kind of virus in a sense. Its control over computers is unparalleled. The virus he wrote by Nelson is inferior to it, so it was naturally squeezed out.

"No, it's impossible!" Nelson was going crazy. "Even if he gains control, he can't get rid of my...virus!!!"

He closed his mouth before he finished speaking, because there was nothing left to say.

"A total of 3521 files in the computer were infected by viruses," Li Yun clicked the mouse, "Perform virus removal work, complete!"

Huh, all the viruses were uprooted and the computer returned to normal without any damage.

"my God....."

Nelson slumped in his chair, completely desperate.

He could already imagine that the Bitcoin killer virus that cost the ten top hackers of the Demon Legion had been completely swept into the trash can.

A virus that has lost its power is a piece of unrecyclable garbage, no one will pay attention to it again!

But Nelson's nightmare is not over yet.

Li Yun took out his computer and smiled to everyone: "Just now it was just an appetizer. Next, I will show you the highlight: Tracking the spreader of the Bitcoin killer virus, announce it, and let the police around the world arrest them !"

"what?!"

Nelson jumped up and his chair hit the cabinet behind him with a loud bang.

But Nelson was already reluctant to sit down, tapping on the keyboard with his hands like flying, and began to contact the people of the Demon Legion.

"Quickly come out for me! The big thing is not good, someone is coming to trouble us!"

The members of the Demon Legion have never met each other, they are all connected on the Internet using the online chat function of a hidden forum.

"Cut, boss, what are you talking about? Which day no one of us will bother us? Is it FAI or Interpol this time?"

"That's right, who can find us? Hahaha!"

"Kate, Jesse, you listen to me, I promise God, this time the enemy is absolutely stronger than ever! He cracked our Bitcoin killer, and is ready to kill us, to trace our tracks!"

There was an instant frying pan in the chat group, and no one doubted Nelson's words this time.

They know the power of the Bitcoin virus best. They can crack this virus. The other side is undoubtedly a top expert, and may even be a joint action by dozens of experts.

But after learning about Li Yun's identity, the members of the Demon Legion were silent.

"Boss, are you sure that the other party is just a high school student?"

Nelson snorted coldly, "If you don't want to die, give me action, I don't want to repeat it a second time!"

"Well, let's play with him then."

Everyone reluctantly raised a trace of interest.

On the Internet, news of Pioneer's crackdown on the Bitcoin killer has blown across the Internet like a whirlwind.

There are millions of people who are being blackmailed by this virus. They all have their eyes on this place. There are also many people who are terrified and afraid of being infected by the virus. They are also very interested in this release. .

Before Li Yun started tracking the people behind him, the news was topped by a hot search on Weibo and spread throughout the entire IT security industry.

Chapter 225: Global attention

The security department of Baowutong Company, the network security department of Nantian Technology Group, Fruit Machine Group, Rainforest Company, Tiantian Security Company, etc., many of the world's top Internet companies have all noticed Pioneer's crackdown on this software.

In the 118-story Nantian Building, Su Tengyun listened to the secretary's report on Li Yun and Su Muxin's press conference. After a moment of silence, he asked, "Is there a live web site for this press conference?"

The secretary was stunned, and then quickly replied: "Yes, I will send it to you, the chairman!"

He was actually very surprised. Su Tengyun's time is very precious, every minute and every second is carefully calculated, and the daily schedule is fully arranged, even the rest time is accurate to the minute and second.

Even the press conference of his daughter's company, logically speaking, Su Tengyun would not pay attention to it.

After all, for Su Tengyun, he only needs one day to earn a billion investment amount, and Nantian Group's profits are terrifyingly high.

After opening the live broadcast, Su Tengyun glanced at the number of people in the live broadcast room. More than five million people are online, and the popularity is close to 100 million, which shows the degree of attention of this conference.

"It seems that it doesn't take three months for Li Yun's company to be valued at 10 billion yuan." Su Tengyun smiled, making the secretary stunned again.

The chairman...seems to be satisfied with Li Yun?

Satisfied with his son-in-law's performance?

Baowutong Company.

When Zhou Fuma learned of Pioneer's attack, he immediately called the vice president in charge of acquiring the company, "You go to buy this company and sign the contract immediately within 10 billion yuan, and you can negotiate slowly within 30 billion yuan. Intentions, arranged for me to meet with him, and I will have a chat with Li Yun in person!"

"Okay, Chairman!"

Inside the security company every day.

Many security experts looked at each other. They have been paying attention to the Bitcoin killer for a long time, but they have not been able to come up with an effective solution to crack the virus.

The outside world has begun to mock them as a soft-footed shrimp company and cannot prevent the virus at all.

"Go and get in touch with them." The president of the company, Xu Fenghua said bitterly, "Since you can't crack the virus, we can only buy other people's technology. In addition, the bonus for all staff will be cancelled this month!"

Can't crack the virus, still have the face to get bonus?

Xu Fenghua was very upset.

"President, how many million do we offer?" the secretary asked.

"How many billions?" The president of 365 company gave him a blank look, and said arrogantly: "How many billions can a small software be worth? Are you kidding? Just give out a few million!"

Everyone: "..."

Everyday Security Company is getting worse and worse. It's not without reason. The president is just a waste and doesn't pay attention to the news at all.

"Why don't you go?" Xu Fenghua exclaimed.

After a while, his female secretary whispered: "President, the first phase investment of Pioneer Strike is one billion yuan."

"One billion?!"

Xu Fenghua was shocked. For a small piece of software, the investment in the first phase was one billion? !

"It's true, the lead investor and founder is the daughter of Nantian Group, Su Muxin."

"...Nantian Group, Su Tengyun!!"

Xu Fenghua was completely dumbfounded, the gap between Su Tengyun and him was too big, and the two companies were not of the same order of magnitude.

—

In the banquet hall, more and more people came to watch. Wu Ke looked down from the stage, full of black heads, and even a few blonde reporters rushed over and pointed the camera at the one who was about to meet Chairman of the Bitcoin Killer Spreader Showdown.

Chapter 226: Nantian Company is also a broiler

Li Yun's expression was indifferent, ignoring the crowd in the audience, and while operating the computer, he explained the related knowledge of hacking and what he was doing on the spot.

"The first thing a hacker wants to hack into a computer is to get your IP address..."

"We want to anti-track hackers, we need to know the other party's intrusion channel, any intrusion will leave traces, even if it is deleted, the data will be stored in the computer hard disk for a period of time."

"I found it. The employee received an email from an unknown source, and he was recruited when he was curious about it."

"Unfortunately, he still doesn't know that the virus has invaded, and he didn't check and kill the virus."

The employee of the promotion department flushed with shame. It seems that this month's bonus is destined to miss him.

Li Yun continued to track down: "Simply search for the sender's IP, which is an address in the suburbs of Haihua City, Jiangsu Province, but I can be sure that he is just a broiler."

The so-called broiler is a computer or server controlled by hackers.

Hackers usually pretend to be intrusive, using countless springboards to manipulate other people's computer intrusions, and their own IP addresses are strictly hidden.

"There will also be traces of hackers in the broiler. It just so happens that I have tools on hand to simply analyze the source of the traces."

"I found it. The traces show that the upper-level IP address of this broiler is located in Nanxian..."

"The fourth broiler is very tightly guarded. It seems to be a company's server, but I can't help it... OK, it's done, its IP address is located..."

Li Yun paused, shrugged and smiled at Su Muxin, "In the server of Nantian Daxia."

"what?!"

Su Muxin jumped up and looked at him incredulously: "Brother Li Yun, you said that my company's server is considered a broiler?!"

Not to mention Su Muxin, even Wu Ke's eyes widened, with an expression of seeing a ghost.

As the world's top technology company, Nantian Group has strict internal defenses. There are more than a dozen physical firewalls, strictly restricting data access to the external network, and ordinary hackers cannot find a way to invade, and they are all blocked. NS.

As the former CTO of Nantian Group, Wu Ke is responsible for the overall safety of the company. In other words, the company's server is used as a broiler, and he bears an inescapable responsibility.

Although he has resigned, he was hacked when he was in office.

On the other side, Su Tengyun's majestic face, who was watching the live broadcast, went dark.

The server is treated as a broiler by hackers and used by hackers to attack others. This feeling is more uncomfortable than swallowing a hundred flies.

"Let me find out if there is such a thing right away!!"

Su Tengyun roared, and the secretary quickly called the network security department.

But until the phone rang, the people in the network security department were still confused, their servers became a broiler?

impossible?

So, they all ran to watch Li Yun's live broadcast to see what was going on!

At first glance, they were all shocked. Li Yun's current remote-controlled computer is not the network control terminal they are familiar with every day?

"Ahem."

Li Yun explained while operating the computer: "Mu Xin, don't blame me for hacking your server. I will help you remove the virus by the way... Tsk tsk, there are a total of more than 30,000 servers in your house controlled by hackers. It is estimated that The previous ddos attacks on these servers have been used as weapons."

Chapter 227: Track Miles

The so-called ddos attack refers to a means of hacker intrusion, the full name is: distributed denial of service attack.

This means that hackers control millions of computers around the world through the Internet, and at the same time launch attacks on the target, causing the target's network to be blocked and unable to respond to other requests.

For example, operating 10 million computers at the same time to refresh a company's website, launching an attack like a flood, making the website server exhausted to cope with these abnormal requests, leading to paralysis.

Li Yun shook his head helplessly, "The company's servers are much more powerful than ordinary users' computers. Therefore, many hackers will choose to build some servers as broilers. Big Mac!"

Wu Ke smiled bitterly, "My pot, I didn't expect hackers to be so rampant and so concealed that they were actually hidden under my nose."

The atmosphere at the scene became very weird.

They really don't know whether they should despise Nantian Group's safety facilities and rubbish, or they should praise Li Yun for being so awesome that even Nantian Group's servers can come and go freely!

Moreover, Li Yun was actually fighting with such a powerful hacker, which gave them a feeling of resignation.

Before it was Gong Qingyu and Li Yun, now it is Li Yun and the mysterious hacker. Both wars are really wonderful!

But everyone did not expect that the truly exciting has yet to come!

"The fifth broiler is located in a special province. This is a bridge connecting home and abroad. The hackers really set up a transfer station here."

"The sixth broiler is located in Kyoto, country R. Tsk tsk, this computer is too stuck. There are more than 3,000 viruses. There have been viruses from ten years ago to the present, which is too exaggerated! No, I have to Take a look at his computer."

Li Yun enthusiastically mapped the desktop of the R country computer onto the white cloth, and prepared to show it to the audience.

"Ah, Ya Miedie~~"

The cry of a woman resounded in the banquet hall. In an instant, thousands of people quieted down and looked at the disheveled woman in the picture. She was being threatened and forced by a man repairing a water pipe, preparing to...

"Cough cough cough cough!!!"

Li Yun almost squirted out his old blood. The dead otaku in country R, it's no wonder that there are so many viruses on the computer, and the original websites are all unhealthy and discordant!

Kill you!

"There was a slight accident, but the problem is not big, let's continue." Li Yun said sternly.

Su Muxin's cheeks showed a blush. The woman in the picture just now was wearing a bunny girl costume. Did Brother Li Yun hint to her?

Bunny girl... Su Muxin hasn't worn it yet, so I can order it later when I go back tonight. Next time I have a video call with Brother Li Yun, I will pass it to him!

Gong Qingyu's expressionless face, bunny girl or something, she has read a lot in comics a long time ago.

It's just that Li Yun's strength is beyond her expectation. Using hackers to roam freely on the Internet, like a sword fairy flying with a sword, no one can stop him!

"The twelfth broiler," Li Yun paused, moving meaningfully: "The Institute of Super Physics in Country Y."

Everyone was frightened again.

Nima, the Institute of Super Physics is controlled by hackers? !

If these high-energy particle accelerators or nuclear reactors were detonated by hackers, the damage would be too great!

Chapter 228: Turned to fight three thousand li

But the tracking is far from over!

"The 15th broiler, located in space."

"Space?!"

Everyone was dumbfounded, why did the space come out?

"It's space!"

Li Yun blew his whistle and exaggeratedly said: "It's a terrestrial satellite of country K. Tsk tsk, it is still a war satellite. The clarity is amazing!"

Wu Ke's heart jumped, cold sweat flowed down.

This is too exaggerated, right? The war satellites are controlled by hackers, and no one has discovered them yet!

No, it's not right!

Wu Ke looked at Li Yun in horror, "Don't put the picture..."

This Nima is a war satellite. Unauthorized invasion will cause international disputes, and may even be accused of deliberate provocation. If a war is caused, no one can bear the responsibility!

But Li Yun has already begun to act.

"Hehe, since it's here, let's take a look at the satellite picture, right?"

"it is good!"

Many onlookers were applauded because it was not too big to watch the excitement.

Li Yun took away the hacker's control and brought up the satellite image. The next moment, a clear and terrifying image appeared on the white cloth.

"This picture is...Mingyu Building?!"

"I, Cao, even saw the license plate number I parked downstairs!"

"It is said that the resolution of war satellites is one hundred times that of commercial satellites, and it can see a target 30 cm long. It seems that it is far more than one hundred times!"

"How do I feel shivering? When a war is really about to start, which one of the things on the ground can withstand the surveillance of satellites? Who can withstand the attacks of satellites and ground weapons?"

Everyone was stunned. Li Yun pointed the war satellite at Mingyue Building, and they could clearly see the license plate number.

Aiming at the Black Palace of Country M, you can see the flags flying in front of the door, aiming at a certain cruise ship on the sea, and even what brand of swimsuits are clearly reflected!

"No wonder hackers like satellites for dark warfare. This feeling of overlooking everything is really great!" Someone murmured, and everyone nodded in agreement.

Gong Qingyu looked at Li Yun with unblinking eyes. At this moment, he was stunned, Jianfeng pointed, invincible.

The enemy's defense was destroyed by him like paper. Soon, Li Yun tracked the thirtieth broiler and approached the enemy's base step by step.

"The 31st broiler, tusk, is the fruit machine company of country M. It turns out that the fruit machine headquarters has also fallen." Li Yun smiled at Wu Ke, "I guess the hacker discovered the security loophole in D331, which led to the global Internet The company has become their broiler."

"D331 security breach?" Wu Ke looked at him in surprise, feeling a lot better, at least not because the Nantian Group was hacked.

"It's a loophole I found myself."

Li Yun said lightly: "Located in a very low-level area, the unrepaired computer is almost equivalent to bare defense... Huh? The other party still wants to struggle? Ha ha, yes, let's fight inside the fruit machine's server!"

Everyone understood that Li Yun and the hacker behind the scenes met in the server of the fruit machine headquarters. No, it would be better to say that the server was the battlefield. The two sides immediately launched an invisible battle.

Country M, Fruit Machine Headquarters.

As the president of Fruit Machine Company, Marcos is holding a security meeting for all departments. The topic of discussion this time is the outbreak of the Bitcoin ransomware virus and how they should respond.

"President!!!"

At this moment, an assistant secretary opened the door of the meeting room out of breath, and hundreds of executives suddenly looked at her.

Chapter 229: Yijian was a millionaire

Marcos's face suddenly turned black, and he shouted coldly: "Did you not see that we are in a meeting? Could it be that the President came to our company in person to make you so impatient?!"

Everyone also showed unhappy expressions on their faces. As senior executives of Fruit Machine, every minute and every second is very important. Together, this group of people can make one hundred million a second. This is not an exaggeration. After all, The market value of Fruit Machine is as high as 20 trillion, the highest in the world! !

The profit of Fruit Machine can easily reach one trillion yuan a year. On average, it is no exaggeration to make tens of billions a day.

"General Manager, President!" The secretary assistant breathed a sigh, "The big thing is not good, our..."

"Naughty!!!"

Marcos yelled again: "Did you see that we are in a meeting? You wait for the finance department to settle the salary. Our company does not need an unreasonable person like you!"

The secretary assistant's face was sullen and pale, her legs trembled and she walked out with trembling legs. Halfway through, the sense of responsibility in her heart suddenly awakened her:

"President! What I want to say is that our company server was hacked, and it was hacked by two hackers. They are fighting inside our company server!"

"..."

Suddenly, there was dead silence in the conference room.

Marcos only feels that his heart is about to stop, and the server of the Fruit Machine Headquarters is used as a battlefield by two hackers?

Are they dancing?

"What you said is true?" Marcos fell in a cold sweat. As the president, he bears an inescapable responsibility for this matter. The next board of directors, how will he explain to the directors?

I'm afraid, the person leaving is not the assistant secretary, but him!

"It's true that our current server has been paralyzed, and users all over the world can't connect to the server. For every additional second, the loss will be hundreds of millions-this is what the security department told me!"

"Asshole thing!" Marcos was furious. "The meeting stopped, everyone returned to their posts, and immediately settle this matter for me!"

The Guoji server was used by hackers as a battlefield. Nearly 500 million users around the world were unable to connect to the Guoji server. The Guoji store was declared paralyzed, the Guoji music could not be opened, and the website did not respond.

All services, all terminated! !

An invisible storm swept the global network almost in a few breaths. Fruit machines, rain forests, ancient texts, search engines, and almost the world's top companies were all involved in this war.

Inside a villa in country M.

Since Li Yun started tracking his position, Nelson's cold sweat hasn't stopped, and the sweat has even flowed into his eyes, but Nelson can't even care about it. He can only use his vague sight to focus on a duel with Li Yun.

He was nervous to the limit, and was distracted for a second, and their demon army was about to be captured by Li Yun.

"The third broiler fell, the fourth broiler fell... the satellite fell, no, no longer!"

In a chat group on a certain forum, a member of the Demon Legion hurriedly shouted: "If you retreat, he will catch me. We will fight him in the fruit machine server and block all his attacks. !"

From the time Li Yun tracked down to the fifth broiler, the Demon Legion had already been in battle, and he did not dare to have any thoughts of despising Li Yun.

After Li Yun broke through the most important broiler, that is, the military satellite, all the hackers were on the verge of an enemy, tapping on the keyboard with their hands like flying, using their greatest strength to defend against Li Yun's tracking.

But now, there is no refund!

Chapter 230: Invisible war

In the fruit machine server that is invisible to everyone, a battle without gunsmoke is breaking out.

A total of three parties joined the battle.

On one side is the demon army led by Nelson. This group of hackers are bold, but with extremely high technical means. They can be called the world's top hackers gathered together, and their destructive power is amazing.

On the other side, there are hundreds of network security experts and professors from Guoji. They have comprehensive knowledge and are very proficient in the protection of various software and hardware.

But when hackers wreak havoc, this group of top security experts is still exhausted and burnt.

The last party is a senior high school student, Li Yun!

He faced the encirclement and suppression of the two sides alone. He not only had to track the traces of Nelson and others, but also avoided the traps and firewalls set by the security experts. Can't help it.

"No, I can't do it, boss, I was found by him!"

Suddenly, there was a scream from a person in Nelson's chat group, as if to remind them that the member of the demon army had been found by Li Yun.

In an instant, all the faces of the hacker corps were on one side, and everyone became self-defeating, and even their defensive actions were messed up a lot.

"Boss, I...I'm going to run away, goodbye!"

Another member was found his real body, and soon, the profile picture in the chat group dimmed, indicating that he had already started to run, and he did not dare to stay at home anymore.

"Boss, let's... fight it!"

"Yes, fight it, let's die together!"

"Let the whole world die together, anyway, we will all go to jail afterwards, and it doesn't care how many years have passed!"

Li Yun's pressing step by step made the members of the group completely desperate, and all of them showed their hideous faces.

Nelson rushed to his head and shouted: "Okay, then fight! Let all the broilers participate in the attack, paralyze the fruit machine's servers, and it is best to format all their data so that the other party can't find the way to track it. !"

"Yes, the boss is right. Let the other broilers become paralyzed, and see how he finds his way to track it down!"

"Publishing that loophole will make hackers all over the world stir up!"

"Hahaha, let's have a big fight!"

The rest of the Demon Legion responded in unison, mobilizing the broilers in their hands frantically to launch indiscriminate attacks on servers around the world.

Just like a fish pond, Li Yun, as a top predator, wants to find a big fish to swallow it in his stomach, but the big fish is not waiting to die. They choose to muddy the water in the fish pond so that Li Yun can't find where they are!

How many broilers do these eleven top hackers have?

No one can count the fact that even they don't know how many broilers they own. If they control a server, they can often control tens of thousands of computers. The number of broilers is simply terrifying.

"President, most of our 100,000 servers are running uncontrollably and frantically. They... are attacking the fruit machine shop!"

"Oh! My God, why is my computer stuck?"

"I'm Cao, I'm playing a game, I'm so stuck!"

"What's the situation? Why are so many things flashing on my screen?"

"Alert: Global ddos cyber attacks have affected nearly 300 million computers in more than 100 countries!"

The eyes of the Internet from all over the world have been attracted, and the Internet has instantly become incomparable, and many people who are playing games are crying.

Think about it, Nima's team is in a group, and the network is suddenly interrupted. Who can stand it?
