

Jagged 1381

Chapter 1381

On the battlecruiser 'Blücher', Lieutenant General Otto Schneewendt and Major General Abraham stood on the bridge, watching the light cruiser 'Kitakami' burning and sinking. Through the binoculars, one can clearly see that in the middle of the fire, one after another, the sailors of the island nation jumped into the sea like dumplings. In their eyes, there was no pity for this, but complete indifference.

"General, it's over! We have wiped out the islanders' lightning strike formation. However, the light cruiser sunk by us is really insane. A round of lightning strikes can actually release dozens of torpedoes. They killed two light cruisers and two destroyers at once. If they were approached by the opponent, the consequences would be unimaginable!" Major General Abraham said.

Lieutenant Admiral Otto Schneewendt nodded. The island navy's light cruiser specialized in lightning strikes, coupled with spear torpedoes, has indeed become a very terrifying killer. Especially in the case of night battles, once it gets close, the consequences will be very serious. Think about it, dozens of torpedoes rushing towards your own capital ship formation quickly, it is undoubtedly very terrifying, enough to make your scalp numb.

"Send a telegram to the aircraft carrier! The next battle will be their turn." Lieutenant General Otto Schneewendt said.

"Yes, General." Major General Abraham nodded.

"General, can we send some destroyers or light cruisers to chase after the main fleet of the islanders? In this way, we can also point out the target location for the aircraft carrier formation. It is not necessary to let the carrier-based aircraft take off after dawn to search The location of the island nation's fleet. If you're lucky, you might be able to find out the location of the island nation's navy's aircraft carrier in one fell swoop." The boy Abraham suggested.

"Well, let's do this! Send two light cruisers and two destroyers, divide into two formations, and follow the island fleet closely. After dawn, inform us of the location of the island fleet." Lieutenant General Otto Schneewendt said .

"Yes, General."

Two German light cruisers and two destroyers formed two formations, and quickly chased in the direction of the island fleet, and soon disappeared in the darkness. As long as you find the location of the island nation's fleet and launch an attack after dawn, the island nation's fleet will undoubtedly pay a heavier price, which will further expand the German Navy's achievements in this naval battle.

On board the "Aries" aircraft carrier of the German Navy's Pacific Fleet, Lieutenant General William Canaris, the commander of the aircraft carrier formation, and Major General Berger, the chief of staff, also stayed up all night without rest.

For the aircraft carrier formation of the German Navy's Pacific Fleet, the South China Sea is undoubtedly a dangerous sea area, which may be attacked by the enemy at any time. Especially after

the first aircraft carrier team of the combined fleet of the island nation's navy entered Subic Bay, the German navy had to be more vigilant.

Although, the German navy still has the advantage now. However, when I think of the shipyards in the mainland of the island country, they are building aircraft carriers and capital ships. Once those aircraft carriers enter service, this will put great pressure on the German Navy. Especially after two of the four aircraft carriers in the Indian Ocean Fleet were sunk, their pressure increased.

If the other two aircraft carriers of the Indian Ocean Fleet can be repaired as soon as possible and re-entered into service, relatively speaking, it will be able to relieve them a lot of pressure. However, according to the most conservative estimate, it will take several months. They were seriously injured in the previous sneak attack by several "Amagi-class" battlecruisers of the Japanese Navy.

"General, a telegram from the capital ship formation!" A communications officer handed the telegram to Vice Admiral William Canaris.

Lieutenant General William Canaris couldn't help laughing after reading the telegram.

"The capital ship formation did a good job. They killed two capital ships, two light cruisers and ten destroyers from the islanders. However, they themselves were struck by lightning from the islanders and lost four light cruisers and five destroyers. The islanders The capital ship formation of the fleet is fleeing northward, and the capital ship formation has given up pursuing. In other words, the rest of the battle will be left to us!" Lieutenant General William Canaris said.

"General, if we dispatch carrier-based aircraft, we shouldn't have much problem killing the islanders' capital fleet. However, we have to be careful about the islanders' aircraft carriers. The four aircraft carriers of the islanders' first aircraft carrier team, and have already left Subic Bay. You don't need to think about it, they must be in the South China Sea at this moment, maybe they are searching for our location now." Major General Bogle Shudu.

Lieutenant General William Canaris nodded. The four aircraft carriers of the Island Navy's 1st Aircraft Carrier Squad are indeed noteworthy. The four island nation aircraft carriers, the aircraft carrier 'Ibuki' and the aircraft carrier 'Hodaka', carry up to 91 carrier-based aircraft. The "Kurama" aircraft carrier and the "Togakushi" aircraft carrier also carry as many as 90 carrier-based aircraft. The four aircraft carriers add up to a total of 362 carrier-based aircraft. This is undoubtedly a considerable force.

In contrast to the German fleet's "White Sheep" aircraft carrier and the "Taurus" aviation, each can only carry 103 carrier-based aircraft. Adding up the two ships, there are only 206 in total. Compared with the four aircraft carriers of the Japanese navy, there are 156 fewer aircraft carriers. This is undoubtedly a very terrifying gap. If the fleet is attacked by as many as 156 carrier-based aircraft, then the final result may only be sunk.

"The battleship formation has sent cruisers and destroyers to track the islanders. It would be great if we can find their aircraft carrier formation. We can attack their aircraft carrier formation first. If we can't find them, then The only thing is to strengthen the air defense." Lieutenant General William Canaris said.

Major General Berger nodded: "General, we may allow the 5th Aviation Group to support a batch of our fighter planes. Nothing else is needed. We only need to dispatch a group of fighter jets to **** the fleet

after we release the carrier aircraft. .The best is their FW-190 fighter jets. In that case, it is enough to deal with the threat of the island navy's carrier-based aircraft."

Lieutenant General William Canaris couldn't help but shine, this is undoubtedly a good way. With the reinforcements of the Air Force, their air defense can undoubtedly be guaranteed. In this case, even if the aircraft carrier team of the navy of the island country cannot be found, there is no problem with its own safety.

"Contact the Air Force immediately, we need their reinforcements!" Lieutenant General William Canaris immediately made a decision.

Chapter 1382

The capital ship team of the island nation's naval task force is evacuating the team northward. Neither Lieutenant General Takasu Shiro nor Major General Suzuki Yoshio went to rest. This night was destined to be a sleepless night for them.

The capital ship team of the island nation fleet lost two capital ships, two heavy mine cruisers and ten destroyers in the team tonight. This is undoubtedly a big loss for them. Although, they also achieved certain results, sinking four light cruisers and five destroyers of the German fleet. However, compared to their losses, this victory is nothing at all.

Right now, Takasu Shiro and Major General Suzuki Yoshio are still waiting. Waiting for the final news of the Thunderbolt formation. Although both of them knew very well that even if the light cruiser "Kitakami" led two destroyers to launch a lightning strike against the German fleet and succeeded, they would definitely not be able to escape the pursuit of the German fleet. Therefore, in their hearts, they have already subconsciously counted these three warships as battle damage. The only variable is probably whether the lightning strikes of these three warships can be successful and whether they can sink the capital ship of the German fleet.

Whether it is Lieutenant General Takasu Shiro or Major General Suzuki Yoshio, they all hope that their lightning strikes will be successful. In that case, the outcome of this naval battle might be different.

However, they are destined to be disappointed. Although Masao Ueno and the others have already tried their best. However, it was very difficult to sink the capital ship of the German Navy under heavy protection. Although the light cruiser "Kitakami" launched a charge, the final result was still sunk. And after the German fleet is prepared, it is not so easy for their lightning strikes to work again.

"Your Excellency, Commander, this is a telegram from Masao Ueno!" The communications officer walked over with a serious face.

After Lieutenant General Takasu Shiro read the telegram, his expression became very ugly. Because, this telegram is clearly a telegram.

Masao Ueno claimed in the telegram that they were besieged by the fleet of the island nation, and the warships were being hit continuously. However, they are still charging towards the capital ship formation of the German fleet. As for whether it can be successful, it depends on the blessing of God Amaterasu.

"Suzuki-kun, Ueno-kun and the others may have failed. We don't have a battleship capable of sinking the Germans." Lieutenant General Takasu Shiro said.

"Your Excellency, Commander, then we may have to rely on General Nagumo's 1st Aircraft Carrier Squadron." Major General Suzuki Yoshio said.

Lieutenant General Takasu Shiro nodded: "Send a telegram to Nagumo-kun and tell him our losses. In addition, I hope that the aircraft carrier team can take off carrier-based aircraft and provide us with air defense cover. Next, we may be attacked by the Germans." attack by carrier-based aircraft."

"Hi, Your Excellency Commander." Major General Suzuki Yoshio replied.

At this moment, the four aircraft carriers of the 1st Aircraft Carrier Squadron of the Japanese Navy are sailing in the sea area more than 100 kilometers north of the capital ship formation of the Japanese Fleet. Lieutenant General Nagumo Chuichi and Major General Kusakaka Ryunosuke also had no news. They are waiting for the telegram from the capital ship team.

If the capital ship team can complete the task and destroy the defense line of the German 226th Infantry Division in one fell swoop, then they will be done. The fleet can then retreat north and return to Subic Bay. That would undoubtedly be safer.

Lieutenant General Nagumo Chuichi was somewhat reluctant to join the army team. After all, the South China Sea was too dangerous for them. The fighter planes of the German Air Force and Navy can pose a great threat to them.

"Your Excellency, a telegram from the battleship fleet!" A communications officer walked into the island and reported to Lieutenant Admiral Nagumo Chuichi.

Lieutenant General Nagumo Chuichi took the telegram and read it carefully. However, soon his face became very serious.

"Your Excellency, Commander, has the battleship fleet failed?" Rear Admiral Saika Ryunosuke asked.

Lieutenant Admiral Nagumo Chuichi nodded: "Yes, they failed. Not only that, but also suffered heavy losses. The battleships 'Suruga' and 'Omi' were sunk. In addition, 'Kitagami' and 'Oi' The two heavy mine-equipped cruisers HMS were also sunk. In addition, ten destroyers were lost. And the result they achieved was nothing more than the sinking of four German light cruisers and five destroyers."

Major General Kusakaka Ryunosuke also frowned after hearing this. Obviously, this is undoubtedly a big loss for the navy of the island country. The capital ship formation failed to complete the task, on the contrary, it suffered heavy losses, which further weakened the strength of the island nation's navy.

"Your Excellency, the capital ship formation has not been able to complete the task. If this is the case, we may be under great pressure." Rear Admiral Kusakaka Ryunosuke said.

"Yes, I believe that the German aircraft carrier is probably already preparing to launch an attack, and they will never give up a chance to severely damage us." Lieutenant General Nagumo Chuichi has always believed in his intuition.

"Your Excellency, Commander, no matter what, we must ensure our own safety. With the Navy suffering heavy losses, the four aircraft carriers of the 1st Aircraft Carrier Squadron are undoubtedly our main force. In the coming naval battle, it may be very difficult for us to defeat the Germans. As long as we can preserve our strength, we will be able to suppress the Germans after the subsequent aircraft carrier enters service," said Major General Kusakaka Ryunosuke.

Lieutenant Admiral Nagumo Chuichi nodded, and the German Navy did have many aircraft carriers to serve in the future, even though they were all modified aircraft carriers. But the number of carrier-based aircraft carried is still very impressive. Once in service, this will greatly increase the strength of the island nation's navy, and it will definitely not be difficult to surpass the German navy.

"That's true. However, we can't give up the chance to defeat the Germans because of this! After dawn, release a batch of carrier-based aircraft to search for the location of the German aircraft carrier or capital ship. The rest of the carrier-based aircraft, Be ready to take off at any time. In addition, the fleet pays attention to air defense!" Lieutenant Admiral Nagumo Chuichi said.

"Hi, Your Excellency, Commander. However, General Takasu wants us to launch carrier-based aircraft to defend them." Major General Kusakaka Ryunosuke said.

"Let the Army Air Corps be responsible for the air defense of the capital ship team. We don't have many carrier-based fighter jets, so we can't waste any more." Lieutenant Admiral Nagumo Chuichi said.

Compared to providing air defense cover for the battleship fleet, Lieutenant Admiral Nagumo Chuichi preferred to find the German Navy's aircraft carrier formation, and then take the initiative to launch an attack and win in one fell swoop.

Chapter 1383

Time passed bit by bit, and the night gradually faded away under the passage of time.

At six o'clock in the morning, it was already dawn in the southern part of the South China Sea.

On the aircraft carriers "Aries" and "Taurus" of the German Navy, a carrier-based aircraft that has been filled with fuel and loaded with ammunition is taking off in an orderly manner.

The carrier-based BF-109 fighter took off first, followed by the carrier-based dive bomber and torpedo attack aircraft.

In view of the fact that the number of carrier-based aircraft of the two aircraft carriers is seriously less than the four aircraft carriers of the island navy. Therefore, the carrier-based aircraft dispatched by the German Navy this time almost did their best. Except for the backup aircraft, the rest of the carrier aircraft will depart in two waves. As for the air defense of the fleet, it is handed over to the fleet's own air defense firepower and the fighter force of the 5th Aviation Group.

Among the three fighter wings under the 5th Aviation Group, one wing is equipped with FW-190 fighter jets. Now, there are two FW-190 fighter jets deployed to the airport in western Borneo. After carrying the auxiliary fuel tank, these FW-190 fighter jets can stay over the fleet for a long time. Once attacked by the enemy's carrier-based aircraft, these FW-190 fighter jets can definitely make the incoming enemy pay a heavy price. After all, the air combat capability of the FW-190 fighter is stronger than that of the carrier-based BF-109 fighter.

Two aircraft carriers, the first wave took off 36 carrier-based BF-109 fighter jets, 36 dive bombers and 24 torpedo attack aircraft. A total of ninety-six carrier-based aircraft rushed towards the capital ship fleet of the retreating island nation navy.

At the same time, the light cruisers and destroyers of the German Navy are still searching for the aircraft carrier team of the island navy. Once the aircraft carrier fleet of the navy of the island country is discovered, these carrier-based aircraft can be notified of changing the combat order as soon as possible through radio equipment. At that time, they will change their attack targets and give priority to attacking the aircraft carriers of the island nation's fleet. After all, the German Navy paid more attention to those aircraft carriers than those capital ships.

After the first wave of carrier-based aircraft takes off, the second wave of carrier-based aircraft will also be transported from the hangar to the deck, and then continue to take off. It's just that this is at least an hour later than the first wave of carrier-based aircraft.

"General, the capital ship formation of the islanders is about 350 kilometers away from us. After the carrier-based aircraft takes off, it can launch an attack in an hour." Rear Admiral Berger reported.

Lieutenant General William Canaris nodded: "I hope to find the aircraft carrier formation of the islanders before launching an attack on the capital ship formation of the islanders! If we can solve the aircraft carrier of the islanders in one go, then we will We can seize the initiative in the Pacific Ocean."

"It depends on luck!" Major General Berger said.

Indeed, in such a naval battle, luck undoubtedly played a large factor. In addition to sending light cruisers and destroyers to search for the location of the aircraft carrier fleet of the island navy, the German fleet also took off seaplanes to focus on searching the northern waters. Under such a high-density search, the aircraft carrier team of the island navy obviously cannot hide. However, everything takes time.

"Where are the fighter jets of the Air Force? When will they appear?" Lieutenant General William Canaris asked.

After deciding to release all carrier aircraft, the fleet's air defense is very weak. At this time, the support of the air force is particularly important.

"General, the air force fighters will arrive in half an hour. A group of 36 FW-190 fighters. Another group of 36 FW-190 fighters will come to replace the fighters of the previous group before they run out of fuel." Major General Berger said.

Hearing the news, Lieutenant General William Canaris felt relieved.

At the same time, the first aircraft carrier team of the Japanese navy is also taking off carrier-based aircraft. In order to find the location of the German fleet, they also released a lot of seaplanes. However, in order to increase the search range, the island nation also took off some Zero fighters for the first aircraft carrier team for reconnaissance. These Zero fighters, after carrying auxiliary fuel tanks, can reach a range of 3350 kilometers, which is very suitable for use as a reconnaissance aircraft.

However, there are not many Zero fighters on the four aircraft carriers of the 1st Aircraft Carrier Squadron of the Japanese Navy. So not many take off. They also bear the air defense needs of the

aircraft carrier team itself, as well as **** the carrier-based aircraft. Even the air defense of the battleship fleet is done by requesting the Army Aviation.

The four aircraft carriers of the Japan Navy's 1st Aircraft Carrier Squadron, the 'Ibuki' aircraft carrier and the 'Hodaka' aircraft carrier, carried a total of 91 carrier-based aircraft, including 16 Zero fighters and 24 Nine-Nine carrier-based aircraft. Explosive strike aircraft and 51 Type 97 carrier-based attack aircraft. The 'Kurama' aircraft carrier and the 'Togakushi' aircraft carrier carried 90 carrier-based aircraft, including 24 Type Zero fighters, 33 Type 99 carrier-based bombers and 33 Type 97 carrier-based attack aircraft. machine.

It can be seen that the combat concept of the aircraft carrier of the navy of the island country is to attach importance to attack and despise defense. But in fact, if the number of fighters is too small, once the carrier-based fighters are lost, the bombers and attack aircraft will only become the targets of massacres by the enemy's carrier-based fighters. Therefore, on the aircraft carriers of the German Navy, there are relatively more fighter jets.

Of course, this is the different concept of the application of aircraft carriers by the navies of the two countries, and it is almost impossible to change them in a short period of time. Only after passing the test on the battlefield can we prove who is right and who is wrong.

At this moment, over the capital ship formation of the navy of the island country, a fighter jet of the Army Air Force that took off from the Philippine Islands is escorting them. Although, there are as many as 36 of those one-type fighters. But Lieutenant General Takasu Shiro and others who were protected did not feel at ease at all. They doubted that once they encountered an attack from the German Navy's carrier-based aircraft, would these Type 1 fighters really be able to withstand it? If they can't resist it, they have to rely on their own anti-aircraft firepower.

On the battleship 'Mutsu', Lieutenant Admiral Takasu Shiro was trying his best. Unless the fleet could be truly safe, otherwise, he had no idea of resting at all.

At this time, the radar officer reported that a large number of aircraft groups were found.

"Notify the Army Aviation Corps that the German carrier-based aircraft is coming, ready to fight!" Lieutenant General Takasu Shiro shouted.

Because the air detection radar of the navy of the island country has a detection range of only 200 kilometers. For the German Navy's carrier-based aircraft fleet, it only takes half an hour. However, the island army aviation still has time to prepare.

Chapter 1384

"The Germans are coming, prepare to fight!" the commander of the island army air force ordered.

The radio equipment conveyed his orders to the ears of every pilot. In the past, island country aircraft were reluctant to install radio equipment on every aircraft. However, with the support of the Americans, everything will be different. Moreover, after installing radio equipment, it is conducive to the transmission of orders, and it is also very helpful for the improvement of combat power.

The 36 Type 1 fighters speeded up one after another and rushed towards the direction of the German carrier-based aircraft group. They must intercept the German Navy's carrier-based aircraft group as far away as possible. Only in this way can the safety of the navy's capital ship fleet be ensured.

"Your Excellency, Commander, our Type 1 fighter jets are probably no match for the advanced German carrier-based fighter jets. The carrier-based jet fleet deployed by the Germans is too large. There are nearly a hundred of them, and the number of **** fighter jets must be very large. ." Major General Suzuki Yoshio was a little worried.

Lieutenant Admiral Takasu Shiro nodded. The performance of the Type 1 fighter could not be compared with the carrier-based BF-109 fighter of the German Navy. The maximum speed of a fighter jet is only 492 kilometers per hour, which is a lot worse than that of the BF-109 fighter jet. In terms of firepower, the Type 1 fighter is only equipped with two 12.7mm aviation machine guns. The German BF-109 fighter jets are equipped with two 20mm cannons and two 12.7mm aviation machine guns. Coupled with the rate of climb and the like, the Type 1 fighter is also at a disadvantage. Once there is an air battle between the two sides, the result can be imagined.

"Command the fleet to switch to the air defense combat state! In addition, send a telegram to the Army Aviation Corps, telling them that the German carrier-based aircraft group has arrived, and we need more air support. Send a telegram to the aircraft carrier team as well." Lieutenant General Takasu Shiro ordered.

If the Army Aviation can send more fighters to support them, and the aircraft carrier team can also dispatch a group of carrier-based fighters, then their safety may be guaranteed.

"Hi, Your Excellency, Commander!" Major General Suzuki Yoshio immediately went to send a telegram.

"Attention, attention! The planes of the islanders are coming up, ready to fight!" The commander of the first German carrier air group issued a combat order.

"Squadron 1 and Squadron 2 attack the Japanese carrier-based aircraft, Squadron 3 covers dive bombers and torpedo attack aircraft to penetrate!"

"Understood!" The pilots replied one after another.

The 24 carrier-based BF-109 fighters of the two squadrons began to accelerate towards the 36 Type 1 fighters of the Japanese Army Air Force. Although their number is only two-thirds of the army aviation of the island country. But they didn't pay attention to the backward fighter jets of these islanders at all. The performance of the fighters on both sides and the quality of the pilots have already determined the outcome of this air battle.

"Boom boom boom!"

The German carrier-based aircraft, which had a high altitude advantage, launched an attack first. 24 carrier-based BF-109 fighter jets dived down from high altitude and launched an attack. The dense rain of bullets swept towards the aircraft fleet of the Japanese army aviation unit.

"The Germans have launched an attack, disperse!" the commander of the Island Army Air Force ordered.

But under the attack of the German carrier-based aircraft, the island country army aviation has lost a lot of fighters under the unpreparedness. Several Type I fighters were hit by the cannons of the German carrier-based aircraft and disintegrated directly in the air.

Like the Zero fighter, the Type 1 fighter has undergone weight reduction in order to pursue endurance. So much so that Type 1 fighters are light fighters. The body structure is naturally not that strong. The power of the 20mm machine gun is not small, and it directly shreds these Type 1 fighters.

The remaining fighter jets dispersed quickly to avoid being attacked by German carrier-based aircraft.

"Forget about these German fighters, attack their bombers first!"

Under the command of the commander, the remaining Type 1 fighter jets all rushed towards the dive bombers and torpedo attack aircraft of the German carrier-based fleet, trying to get rid of these targets that pose the greatest threat to surface warships first.

However, the German carrier-based BF-109 fighter jets chased them behind.

"Boom boom boom!"

A BF-109 fighter bit a Type I fighter, the 20mm cannon fired, and several shells hit the tail of the Type I fighter, smashing the entire tail of the fighter. The fighter plane dragged black smoke and fell towards the sea. After falling on the sea, it fell into pieces directly.

The air battle became fiercer. The German BF-109 fighter jets almost pressed down on the first fighter jets of the Japanese Army Air Force, and one fighter jet was shot down continuously.

Although the island army aviation wants to prioritize the elimination of German dive bombers and torpedo attack aircraft, they simply cannot do it. On the periphery of these dive bombers and torpedo attack aircraft, there are also BF-109 fighter jets for protection. Not to mention that they have to face the pursuit of the German BF-109 fighter jets. Many pilots of the army aviation of the island country only knew how to run for their lives, and they simply didn't care about attacking the German dive bombers and torpedo attack planes.

"Baga! This is not acceptable! If this continues, we will all be shot down by the Germans." Said a squadron leader of the island country's army aviation.

"There is no way, the performance of the German fighter jets is too advanced, we simply cannot compete with them."

"Damn it, we must find a way to shoot down the German dive bombers and torpedo attack aircraft, otherwise, the navy's battleship fleet will be finished!"

"The navy's capital ship was sunk, what does it matter to us? Why should we die for the navy?"

At the juncture of threatening their own lives, many pilots of the Army Air Force of the island country began to quarrel.

None of them are willing to give up their lives in order to protect the Navy's warships.

"Okay, shut up! This is the order of the superior, we just need to obey it! Now, continue to fight. Even if you are shot down, you must ensure the safety of the navy's capital ship team!" the captain ordered.

With no other way, the pilots of the Army Air Force of the island country could only grit their teeth and continue fighting. However, the entire air battle was almost completely one-sided.

The fighter jets of the Army Air Force of the island country were shot down continuously, while the carrier-based aircraft of the German Navy suffered very small losses. It often takes several Type 1 fighter jets of the Army Air Force of the island country to be shot down before one BF-109 fighter jet is shot down. The losses of the dive bombers and torpedo attack aircraft were very small.

When all 36 Type I fighters of the Army Air Force of the island country were shot down, the carrier aircraft of the German Navy only lost four BF-109 fighters, one dive bomber and one torpedo attack aircraft.

Chapter 1385

On the aircraft carrier 'Ibuki', the deck is already full of carrier-based aircraft ready to take off. The other three aircraft carriers are also full of carrier-based aircraft. In addition, in the hangar below, a carrier-based aircraft is also ready to take off. It's just that after the planes on the deck take off, these carrier-based planes will be sent to the deck by elevators to take off for combat.

"Your Excellency, the capital ship team has sent a telegram. The Germans dispatched nearly a hundred carrier-based aircraft to attack them. At present, 36 Type 1 fighter jets of the Army Aviation Corps have gone to meet the enemy. However, the situation is not optimistic. General Takasu hopes that we can launch a group of carrier-based fighter jets to support them." Major General Kusakaka Ryunosuke reported.

Lieutenant General Nagumo Chuichi thought for a while, and then shook his head: "There is no need to take off carrier-based aircraft to reinforce them, we cannot expose our position because of this. If the Germans are attacked by this, the consequences will be more serious." It's serious."

"But, Your Excellency, Commander. If we don't rescue the capital ship team, what will Commander Yamamoto say?" Major General Kusakaka Ryunosuke was a little worried. Because this is very likely to lead to the annihilation of the capital ship team.

"As long as we can destroy the German aircraft carrier formation, we will be able to win! As for the others, I believe Commander Yamamoto will understand!" Lieutenant General Chuichi Nanyun has obviously made a decision.

"Hi, Your Excellency, Commander." Major General Kusakaka Ryunosuke had no choice but to say no more.

"The German carrier-based planes attacked the capital ship fleet from this direction. This also means that their aircraft carrier may be located at this position. Mr. Caolu, we can't wait any longer. Take off the first wave of carrier-based aircraft immediately." Aircraft, focus on searching in this direction! After discovering the German aircraft carrier, launch an attack immediately!" Lieutenant General Chuichi Nagumo ordered.

Although it was only possible to roughly guess the location of the German Navy's aircraft carrier, Lieutenant Admiral Nagumo Chuichi still didn't want to wait any longer. If he waited any longer, he was worried that he would lose his chance.

Major General Kusakaka Ryunosuke nodded: "We can wait until the fleet arrives at that location before launching a search. We will definitely be able to find out the location of the Germans."

Immediately, Lieutenant General Nagumo Chuichi issued an order for the carrier-based aircraft to attack.

On the aircraft carrier 'Ibuki' and 'Hodaka', each took off 8 Type Zero carrier-based fighter jets, 12 Type 99 carrier-based bombers and 24 Type 97 torpedo attack aircraft. On the "Kurama" aircraft carrier and the "Togakushi" aircraft carrier, 12 Type Zero carrier-based fighter jets, 16 Type 99 carrier-based bomber aircraft and 16 Type 97 carrier-based attack aircraft took off.

The carrier-based aircraft that took off from these four aircraft carriers include a total of 40 Type Zero carrier-based fighters, 56 Type 99 carrier-based bombers and 80 Type 97 carrier-based attack aircraft, for a total of 176. This is undoubtedly a very large fleet. If they discovered the location of the German Navy's aircraft carrier formation and then launched an attack, so many carrier-based aircraft would be enough to submerge the German Navy's aircraft carrier.

Of course, the air defense firepower of the German Navy's aircraft carrier formation is very powerful. In addition, there is the protection of the Army's FW-190 fighter jets. It is not so easy for the carrier-based aircraft of the Japanese Navy to sink the German Navy's aircraft carrier.

On the other side, the first wave of carrier-based aircraft of the German Navy has already begun to attack the capital ship fleet of the island navy.

"Your Excellency, Commander, all the fighter jets of the Army Air Force have been shot down, and the German attack is about to begin." Major General Suzuki Yoshio looked serious.

"Is there any news from the Army Aviation and the aircraft carrier?" Lieutenant General Takasu Shiro asked.

"Your Excellency, Commander, the Army Aviation claims that they don't have many fighter jets, so they can't help us with our request. As for the aircraft carrier, there is still no news!" Major General Suzuki Yoshio reported.

"Baga! Are they going to die without saving them?" Lieutenant General Takasu Shiro cursed. He believes that no matter how difficult it is for the Army Aviation, it is undoubtedly very simple to squeeze out dozens of fighter jets to support them. Although Army Aviation losses were high, they could easily be replenished. Now, the Army Air Corps clearly didn't want to come to support them anymore. After all, the carrier-based fighter jets of the German Navy are too powerful. If they come to support them again, they may lose more fighter jets.

As for the aircraft carrier team, Lieutenant General Takasu Shiro did not believe that Nagumo Chuichi Middle School would send fighter jets to support them. He believed that Lieutenant Admiral Nagumo Chuichi must be deliberately searching for the location of the German Navy aircraft carrier.

"Now we can only rely on ourselves, order the fleet, we must resist the German attack. Otherwise, we will all be sent to the sea by the Germans to feed the fish!" Lieutenant General Takasu Shiro ordered.

"Hi, Your Excellency, Commander." Major General Suzuki Yoshio also knew that they might have reached the most critical juncture this time. One bad move could wipe out the entire army.

"Boom! Boom! Boom!"

The anti-aircraft guns of the battleship battleship of the island nation's navy started shelling, and the 127mm anti-aircraft guns fired at the distant German fleet. The battleship "Mutsu", the battleship "Ise", and those heavy cruisers and light cruisers are all equipped with a lot of anti-aircraft guns. From 127mm anti-aircraft guns, to 40mm anti-aircraft guns, 25mm anti-aircraft guns and 13.2mm anti-aircraft guns. Formed far, middle and near anti-aircraft firepower.

However, in the face of the dispersed German carrier-based aircraft group, it is undoubtedly very difficult for the anti-aircraft firepower of the island nation's fleet to hit these extremely high-speed carrier-based aircraft.

"Boom!"

A dive bomber was a little unlucky and happened to be hit by a 127mm anti-aircraft gun shell. Although the body structure of the German Navy's carrier-based dive bomber is very strong. However, it still couldn't hold a large-caliber anti-aircraft gun shell.

Under the blow of this anti-aircraft artillery shell, the dive bomber was directly blown to pieces. The pilot was also killed on the spot.

"Be careful to disperse, fighter jets suppress the anti-aircraft firepower of the islanders, and dive bombers and torpedo attack planes look for opportunities to launch attacks! This time, we must kill all the warships of the islanders!" The commander of the German carrier-based aircraft ordered.

A large number of German carrier-based aircraft spread out and rushed towards the battleship of the island nation's battleship.

"Boom boom boom!"

The anti-aircraft guns of the island nation's main team fired desperately, and shells exploded in the sky, leaving clouds of black smoke. The current battle has reached the point of life and death. Both sides went out of their way to attack in order to be able to keep themselves.

Chapter 1386

On the aircraft carrier 'Ibuki', Lieutenant Admiral Chuichi Nagumo was watching the departure of the carrier-based fleet. The huge fleet of 176 carrier-based aircraft will become their most advantageous weapon, sinking the German Navy's aircraft carrier formation in one fell swoop, and winning this naval battle for them.

"Takasu-kun, I hope you can hold on! In order to win, I must put the sinking of the German aircraft carrier first!" Admiral Chuichi Nagumo said secretly in his heart.

In Lieutenant Admiral Nagumo Chuichi's view, the capital ship formation with only two capital ships left, even if it is lost, is not a big deal. After all, neither the battleship "Mutsu" nor the battleship "Ise" can compete with the capital ships of the German Navy at all. Only the aircraft carrier is the real main force of future naval warfare. If the aircraft carrier of the German Navy can be sunk and the advantage of the island navy over the aircraft carrier can be ensured, the possibility of the island navy's subsequent victory will be very high.

Besides, the four Yamato-class battleships will be in service soon. At that time, the navy of the island country will have the most powerful battleships in the world. Even if the battleships "Mutsu" and "Ise" are missing, it will not have much impact on the navy of the island country. Not to mention that Lieutenant General Takasu Shiro and the others might not be so badly lucky, they might be able to survive this catastrophe. In this case, the navy of the island country will be able to gain a greater advantage.

Not far from the Island Navy's 1st Aircraft Carrier Squadron, a long pipe is rising from under the sea. This is the periscope of a submarine.

"I found the islanders' aircraft carrier team, and all four aircraft carriers are here." The captain showed a smile on his face. After finding the location of the islanders' aircraft carrier, this naval battle seems to have won half of the battle.

"Sir, do we want to send a telegram? If we send a telegram, the islanders will definitely notice it. At that time, we will definitely be besieged by the islanders." An officer said.

"There is no other choice, send a telegram immediately. Then, flee here immediately!" The captain immediately made a choice.

"Yes, sir!"

The submarine's communications crew immediately began sending telegrams. Today's German submarines can send telegrams as long as the periscope sticks out of the sea. Compared with the past, they need to float up to send telegrams. This is undoubtedly much more convenient, but at the same time it is also much more concealed.

However, sending a telegram not far from the aircraft carrier team of the island navy will certainly not escape the monitoring of the island navy. Even before the telegram was sent, it was discovered by the navy of the island country.

"Your Excellency, Commander, we have heard a radio signal that there may be a German submarine nearby." An officer reported.

"What? German submarines? Damn it, find them and sink them!" Lieutenant General Chuichi Nagumo's face suddenly turned black like the bottom of a pot.

The position is exposed, which means that they are about to be attacked by the carrier-based aircraft of the German Navy. This is undoubtedly very dangerous for the first aircraft carrier team of the Japanese navy.

Several destroyers of the navy of the island nation immediately rushed to the location of the German submarine.

"Quick, is the telegram finished? Dive immediately!" The captain saw this scene through the periscope and immediately issued an order.

Fortunately, the telegram was finally sent before the island destroyer arrived, and the submarine began an emergency dive. Soon the submarine dived to a depth of fifty meters and fled.

After the destroyer from the island country arrived, they did not find the target, so they had to throw a circle of depth charges indiscriminately. In the case of no effect, it can only be left alone.

"Your Excellency, the German submarine was not destroyed. Our position may have been exposed." Major General Kusakaka Ryunosuke reported.

Lieutenant General Nagumo Chuichi's expression suddenly became even uglier.

"Order our carrier-based bomber and carrier-based attack aircraft to take off! The first wave of reinforcements. The remaining fighters stay and prepare for air defense!" Lieutenant General Nagumo Chuichi ordered.

"General, if we don't send fighter jets to **** our bombers and attack planes, I'm afraid we will suffer heavy losses." Major General Kusakaka Ryunosuke reminded.

"If the first wave of aircraft can attack the German aircraft carrier formation, the German fighter jets will have no chance to intercept us. The rest of the fighter jets must stay to prevent the German carrier aircraft from attacking us!" Nan Nan Lieutenant General Yun Zhong insisted.

"Hi, Your Excellency, Commander!" Major General Kusakaka Ryunosuke nodded.

Subsequently, the carrier-based aircraft of the 1st Aircraft Carrier Squadron of the Japanese Navy began to take off again. It's just that all the Type 99 carrier-based bombers and Type 97 carrier-based attack aircraft took off this time.

From four aircraft carriers, 56 Type 99 carrier-based bombers and 80 Type 97 carrier-based attack aircraft took off. After these planes took off, they immediately flew in the direction where the first wave of fleets flew.

The rest of the Zero fighters stayed and prepared to provide **** for the aircraft carrier team.

Aboard the aircraft carrier "Aries" of the German Navy. Lieutenant General William Canaris and Major General Berger are waiting for the report from the fleet. The first wave of the fleet to take off has already begun to attack the capital ship fleet of the island navy. The second wave of aircraft is also ready to take off.

"Your Excellency, Commander, the first wave of fleet is estimated to be enough to cause heavy losses to the islanders' capital ship fleet. If the second wave of fleet launches another attack, it will be enough to sink them all." Rear Admiral Berger said.

Lieutenant General William Canaris nodded: "Unfortunately, the aircraft carrier of the Islanders has not been discovered yet. It would be great if the aircraft carrier of the Islanders can be sunk!"

At this moment, a communications officer walked in with a happy face.

"Report, one of our submarines has found the location of the island nation's aircraft carrier. Four island nation aircraft carriers are all there!" The communications officer reported.

"What? Found the islanders' aircraft carrier?" Lieutenant General William Canaris looked happy.

"Yes, General!"

"Very good, order the second wave of aircraft to take off immediately, and target the first aircraft carrier team of the island nation's navy! This time, we must destroy the island nation's aircraft carrier and send them all to the sea to feed the fish!" William Canaris said will order.

"Yes, General,"

The carrier-based aircraft on the aircraft carriers "Aries" and "Taurus" of the German Navy immediately began to take off. In order to inflict heavy damage on the first aircraft carrier team of the island navy in one fell swoop, all the remaining carrier-based aircraft on the two aircraft carriers took off.

Chapter 1387

"Da da da!"

A carrier-based BF-109 fighter jet is firing on a "Fubuki-class" destroyer of the island navy. The bullets from the aviation machine guns strafed the destroyer's anti-aircraft gun positions, shooting sparks one by one.

"Ah!" The screams kept ringing out, and sailors from island countries were shot.

Four dive bombers took the opportunity to attack the aircraft carrier. They swooped down from a high altitude to attack, and dropped heavy aviation armor-piercing shells at a height of only 500 meters from the sea.

Although, the destroyer 'Baiyun' sailed very fast and evaded it in time. However, among the four aerial bombs weighing 500 kilograms, one still scored a hit.

Under the effect of acceleration, the heavy aerial bomb possessed extremely high kinetic energy, and easily smashed through the deck of the destroyer 'Baiyun'. The bomb exploded inside the battleship, and the violent explosion tore apart the hull of the destroyer 'Baiyun'.

Sea water poured into the hull frantically, and soon the destroyer sank into the sea.

After the destroyer 'Baiyun' was sunk, the German Navy's carrier-based aircraft group began to attack the warships inside. The light cruiser "Tama" suffered heavy damage under the siege of four dive bombers and four torpedo attack aircraft of the German Navy. Two heavy aviation armor-piercing projectiles made this light cruiser with a displacement of 5,100 tons almost lose its combat effectiveness. After a 533 mm heavy torpedo hit the waterline of its midship, it directly gave it a fatal blow.

When the light cruiser "Tama" was lying on the sea and struggling like a dead fish. The carrier-based aircraft of the German Navy have already launched attacks on other warships.

"Baga! Anti-aircraft fire! The Germans are about to attack us." The captain of the "Ise" battleship, Omori Sentaro, roared loudly.

The outer **** warships were sunk one after another by the German Navy. This undoubtedly put great pressure on the core battleship 'Ise'. Although the 10 twin-mounted 25mm anti-aircraft guns and a large number of anti-aircraft machine guns on the battleship "Ise" are all firing. The anti-aircraft firepower on the other **** warships was also firing. However, it is still very difficult to hit those carrier-based aircraft. Their anti-aircraft firepower seems dense, but because the anti-aircraft firepower of these warships was modified later. Although the number of anti-aircraft guns and anti-aircraft machine guns is quite large, there are not small defects in their composition. As a result, there are not small loopholes in their anti-aircraft firepower.

The carrier-based aircraft of the German Navy can often take advantage of those loopholes to attack the warships of the island navy.

"Boom boom boom!"

A dive bomber of the German Navy was hit, and the battleship fell to the sea with thick smoke. The pilot jumped out immediately. However, it is difficult to say whether he can survive. After all, it is a full 400 kilometers away from the German fleet. After the battle, even if the German fleet sent seaplanes to search and rescue, they might not be able to save them.

The heavy cruiser 'Ashigara' became the target of the German Navy's carrier-based aircraft group. This heavy cruiser stood in front of their route of attacking the battleship 'Ise'. Although the carrier-based aircraft of the German Navy can bypass this battleship and directly attack the battleship 'Ise'. However, it will inevitably suffer heavy losses under the blow of its anti-aircraft firepower. Only by sinking it and completely opening the passage can the battle damage be effectively controlled.

"Woo!"

Accompanied by the piercing roar, several dive bombers have already started to attack. Under the heavy anti-aircraft fire of the heavy cruiser "Ashigara", several dive bombers have already started dropping bombs.

Several aerial bombs hit the heavy cruiser 'Ashigara' almost at a vertical angle.

Although the heavy cruiser "Ashigara" avoided a lot, two aerial bombs still scored hits.

In addition, the torpedo attack aircraft of the German Navy also launched an attack. As a result, the heavy cruiser "Ashigara" was quickly damaged. Under the circumstances that it is difficult to protect itself, there is naturally no way to provide fire support to the battleship 'Ise'.

The carrier-based aircraft group of the German Navy finally successfully opened the channel to attack the battleship 'Ise'.

Eight dive bombers began to dive at the same time. At the same time, four more torpedo attack aircraft launched an attack.

"Aerial bombs, dodge quickly!"

Eight aerial bombs weighing 500 kilograms slammed into the battleship 'Ise' fiercely.

The huge "Ise" battleship, like a bison, bumped into the sea, trying to avoid these deadly bombs.

However, it still failed to succeed.

A total of three bombs hit the battleship 'Ise'. The 135 mm thick deck armor still cannot withstand these aviation armor-piercing shells dropped from high altitude. The bomb exploded after penetrating the deck armor.

The violent explosion caused a devastating blow to multiple compartments of the battleship "Ise". It even includes core compartments such as the power compartment.

There was also an aerial bomb that exploded underwater less than ten meters away from the battleship 'Ise'. After the bomb exploded, the powerful water pressure tore the underwater armor of the battleship 'Ise'. Although the side armor of the battleship "Ise" was as thick as 305 millimeters, it still couldn't resist it. The underwater armor was torn apart and a big hole was blown out.

Immediately afterwards, the attack of four heavy aviation torpedoes also arrived. The battleship "Ise" seemed to be unlucky, and two torpedoes scored hits. This caused two large holes to be torn in the side waterline armor of the battleship 'Ise', and sea water poured into the battleship frantically.

The battleship 'Ise' at this moment has been severely damaged. The battleship was leaking water everywhere, burning, and even the engine room was destroyed. It can be said that the fate of this battleship has been doomed.

Subsequently, the dive bombers of the German Navy launched another round of attacks. Eight dive bombers dropped the remaining bombs. This time the battleship 'Ise' could no longer evade. This directly resulted in seven of the eight bombs being hit.

Explosions continued to sound on the battleship 'Ise'. Soon, this huge battleship with a displacement of 40,000 tons sank into the sea.

When the battleship 'Ise' was besieged, the situation of the battleship 'Mutsu' was not much better. It's just that the battleship "Mutsu" seems to have better luck. Although it was also severely damaged, there is no danger of sinking for the time being.

Chapter 1388

The battleship 'Mutsu' is burning, billowing thick smoke straight into the sky. The sailors dragged the water dragon and rushed to the fire, trying to put out the fire. However, the German fighter jets were shooting with aviation machine guns, and sailors were constantly being killed.

A large hole was blown out by a torpedo in the sideboard. After the damage control personnel worked hard, they found that there was no way to plug the hole. As a last resort, you can only choose to close the watertight compartment to avoid too much seawater entering. But even so, the hull was found to be tilted to a certain extent.

However, fortunately, the core cabin of the battleship "Mutsu" was not damaged. Otherwise, the consequences will be even more serious.

"Are there still bombs and torpedoes? Continue to attack, we will sink this battleship soon!" the commander of the German carrier aircraft asked.

"I've run out of bombs!"

"My torpedo was fired before."

The torpedoes and bombs of the German carrier fleet have been used up. With no other way, the German Navy's carrier-based fleet could only return.

"Go back immediately, reload the bombs and torpedoes, and then launch an attack to kill the warships of the islanders!" The commander ordered.

"Yes, boss!"

The German carrier-based fleet had to turn around and return, preparing to return to the aircraft carrier to refuel and add ammunition.

The capital ship team of the island nation's navy breathed a sigh of relief after seeing all the German carrier-based aircraft groups leave.

"Your Excellency, the German carrier-based aircraft group has left." Major General Suzuki Yoshio looked like he was alive after a catastrophe.

Actually, sailors from many island countries have such expressions. Under the fierce attack of the German carrier-based fleet, they almost died in the sea. It is undoubtedly a very lucky thing to survive.

"The Germans just used up the bombs and torpedoes. They will come back soon. Command the fleet and turn immediately!" Lieutenant General Takasu Shiro ordered.

He didn't know whether he could escape the pursuit of the German Navy's carrier-based aircraft this time. However, in order to survive, you still have to prepare as much as possible. In that case, there may be a chance of survival.

"Hi, Your Excellency, Commander." Major General Suzuki Yoshio immediately went to give the order.

Looking at the surviving battleship, Lieutenant Admiral Takasu Shiro wanted to cry. Not only did they lose the battleship 'Ise', but the battleship 'Mutsu' was also severely damaged. In addition, some cruisers and destroyers were lost.

The heavy cruiser 'Nachi' and the light cruiser 'Isuzu', which provided air defense protection for the battleship 'Mutsu', were both sunk. Coupled with the losses in the naval battle last night, the battleship of the island nation's naval task force has almost disappeared in name only.

However, fortunately, the German Navy's carrier-based fleet never returned and did not pursue them again. Because they have more important targets. That is the 1st Aircraft Carrier Squadron of the Japanese Navy. After the first wave of carrier-based aircraft returned, they refueled and loaded ammunition, and then took off to attack the island navy's No. 1 aircraft carrier team.

When the capital ship fleet of the island navy was attacked by the German carrier-based aircraft group. The 176 carrier-based aircraft that took off from the island's navy's No. 1 aircraft carrier team continued to head south, searching for the location of the German Navy's aircraft carrier formation.

It's just that they didn't know that the sea search radar on the German Navy's aircraft carrier had already discovered this huge fleet.

"Nearly 200 carrier-based aircraft, the islanders' aircraft carrier team has really lost their money!" Lieutenant General William Canaris had a very ugly face after learning of this situation.

Although, he is very confident in the air defense force of his own aircraft carrier battle group. But he knew that if he was a little careless, it might lead to the destruction of the entire fleet.

"General, the first batch of FW-190 fighter jets of the Air Force has run out of fuel and has returned. The second batch of FW-190 fighter jets will arrive soon to provide us with air defense protection." Major General Berger said.

"Can the 36 FW-190 fighter jets completely intercept the nearly 200 carrier-based aircraft of the islanders?" Lieutenant General William Canaris asked.

Master Bogle fell silent for a moment, and he also knew that this was impossible. However, all their own carrier-based aircraft have been dispatched. In addition to the air defense cover of the air force, only the fleet's own air defense firepower is left. Facing the large-scale attack of the carrier-based aircraft of the Japanese navy, their fleet's air defense firepower can certainly shoot down many carrier-based aircraft of the island country. But it is conceivable that under the attack of the islanders' carrier-based aircraft, they will definitely suffer heavy losses.

"General, what should we do now?" Major General Berger asked.

"The islander's carrier-based aircraft is still more than 300 kilometers away from us. It will take at least 40 to 50 minutes for them to arrive. Send a telegram to the Air Force, and we need their emergency reinforcements!" William Carter Lieutenant General Naris ordered.

"Yes, General." Major General Berger immediately went to send a telegram.

After receiving the return call for help, the 5th Aviation Group immediately began to scramble fighter jets. At various airports, fighter jets that were ready to take off began to take off one after another, heading to the sea to intercept the carrier-based aircraft fleet of the island navy.

The German Air Force's BF-109 fighter jets are also very fast, and they can completely intercept the island country's carrier-based aircraft fleet before they can kill them.

Although, among the fighters of the 5th Aviation Group, currently only 5 squadrons of BF-109 fighters are ready to take off. But these planes took off immediately, and then accelerated to the battlefield.

Other fighter planes also began to prepare nervously for takeoff. They also hope to fly more fighter jets to provide the Navy with tighter protection.

Based on the performance of the fighter jets of the Luftwaffe, whether it is the BF-109 fighter or the FW-190 fighter, the performance can crush the Zero fighter of the Japanese navy. Even if the low-altitude dogfighting performance is not as good as the Zero fighter. However, under reasonable tactical arrangements, if the Zero fighters we fight are unable to fight back, then there is no problem.

Although the number of constructions taken off by the navy of the island country is very large, under the interception of a large number of fighter jets of the Luftwaffe, the carrier-based aircraft of the navy of the island country will inevitably suffer heavy losses. It is hard to say how many carrier-based aircraft can finally break through the interception of the Luftwaffe's fighter jets. However, the only thing that is certain is that the island nation's carrier-based aircraft fleet, which has suffered heavy losses, may hardly pose a great threat to the German Navy's aircraft carrier formation.

Lieutenant General William Canaris learned that the 5th aviation group scrambled to take off 60 BF-109 fighter jets from 5 squadrons to intercept the island country's carrier-based aircraft group at sea. And while more fighter jets were taking off one after another, his heart finally returned to his stomach.

Chapter 1389

The first wave of 176 carrier-based aircraft launched by the 1st Aircraft Carrier Squadron of the island nation's navy is still flying south. Because they don't know the exact location of the German aircraft carrier, they need to search and move forward.

The forty Type Zero carrier-based fighters escorting the fleet are not only responsible for escorting 56 Type 99 carrier-based bombers and 80 Type 97 carrier-based attack aircraft. At the same time, he was responsible for searching for the location of the German aircraft carrier.

This makes the island country's carrier-based air fleet very open, and the speed of going south is not fast.

And this gave the German fleet more preparation time. It can allow the Luftwaffe to send more fighters to the battlefield.

The carrier-based aircraft group of the island country is completely under the detection of the German Navy's air search radar. Under the guidance of the air search radar, the fighter planes of the Luftwaffe can rush directly to the target.

It was the 36 FW-190 fighter jets of the Luftwaffe that went to intercept the island nation's fleet first. Although, compared to the huge size of the island nation's fleet of 176 aircraft, they appear to be much smaller. However, these Luftwaffe pilots were not afraid, but excited and excited.

"I'm about to encounter the island nation's fleet, all squadrons pay attention, give priority to attacking the island nation's bombers and torpedo attack aircraft, and get rid of them all!" The captain ordered.

"Understood, sir!" The pilots all replied.

In the case of the heavy losses of the army aviation of the island country, the pilots of the 5th Aviation Group of the German Air Force have not been able to reap the results for a long time. Now, the island navy has sent so many planes to die, which makes them very excited and excited. After all, whether it is shooting down the aircraft of the island country's army aviation force or the plane of the island country's naval aviation force, it is considered a victory. In comparison, it is easier to shoot down those bombers and torpedo attack aircraft.

In order to seize the attack altitude, these FW-190 fighter jets all stay at an altitude of 10,000 meters. Although at this altitude, due to the thin air, the performance of the fighter will be greatly

affected. However, once it starts to attack the enemy downwards, the potential energy is converted into kinetic energy, and the fighter can gain great speed. The high speed allows them to quickly break away from contact with the enemy after launching an attack, and then climb to a high altitude to re-launch the attack. After all, it is a very unwise choice to fight with the islanders' fighter planes at low and medium altitudes.

"Attack!"

Following the order of the captain, 36 FW-190 fighter jets of the German Air Force took the lead in launching the attack. They swooped down from a high altitude and rushed directly at the carrier-based aircraft group of the island navy, just like a tiger rushing at a flock of sheep.

"Boom boom boom!"

FW-190 fighter is equipped with more powerful firepower. There are two 12.7 mm aviation machine guns in the nose. The two wings are equipped with a 30mm cannon and a 20mm cannon respectively. Generally speaking, large-caliber cannons are prepared for heavy bombers. However, when not fighting heavy bombers, it is even easier to deal with those ordinary bombers.

One after another, the Type 99 bomber and Type 97 attack aircraft of the Japanese navy were attacked by surprise, and the beaten ones disintegrated in the air. Break into pieces and fall to the sea.

"Germans! Damn it, spread out!"

At least twenty island nation carrier-based aircraft were shot down in this round of attacks. This is undoubtedly a big blow to the huge island nation fleet.

"The fighter jets entangled the Germans, and the bombers and attack planes continued to move forward. The German planes came from that direction, and their aircraft carrier must be in that direction!" The carrier-based aircraft commander of the island navy ordered.

Forty Zero fighter jets pounced on the FW-190 fighter jets of the Luftwaffe, trying to intercept them and **** their own bombers and attack planes away.

However, in terms of speed, these Zero fighters are much worse than the FW-190 fighters of the Luftwaffe. When they rushed towards the FW-190 fighter jets of the Luftwaffe aggressively, those FW-190 fighter jets had already begun to climb.

"Baga! Damn German, don't try to run!"

A Zero fighter is chasing a FW-190 fighter and wants to shoot it down. When the FW-190 fighter accelerated to climb, the Zero fighter also climbed.

However, when the altitude got higher and higher and reached 8 kilometers, the engine of the Zero fighter began to have problems.

Several abnormal noises came, and the rotating propeller suddenly stopped working.

"Baga! My engine stalled, what's going on?" the island pilot yelled in horror.

The engine stalls, which means the aircraft will lose power. After losing power at an altitude of 8,000 meters, the plane will fall directly. At this height, if it falls on the ground, it will probably fall directly into a pile of meat paste.

"Restart the plane quickly! Otherwise you will die!" The captain's voice appeared in the earphone.

However, the pilot worked hard for a long time, but still failed to restart the engine.

With no choice but to parachute, he watched his plane fall into the sea.

"Stupid islanders!" The pilots of the German Air Force couldn't help laughing after seeing this scene.

They are qualified to be proud of the advanced performance of their fighters. It is indeed a pleasure to bully these islanders with such an advanced fighter.

"It is forbidden to climb compared with the German aircraft! Our aircraft performance is not as good as theirs. Once it climbs to a high altitude, the aircraft's engine is prone to failure!" The commander of the island nation's naval air force ordered.

This order is full of helplessness. Who made the performance of their aircraft so much worse than that of the Germans? This is something that these pilots can't change even if they try their best.

Although, the pilot's personal flying skills can play a big role in air combat. However, if an ace pilot flies a biplane and goes into an air battle with a TA-152 pilot driven by a novice pilot, the TA-152 fighter will definitely win in the end. In the case of a large disparity in aircraft performance, the pilot's flying skills cannot make up for this huge gap.

The 36 FW-190 fighter jets of the German Air Force, with their advanced performance, massacred the carrier-based fleet of the island navy. After they got rid of the pursuit of the Zero fighters by their speed, they directly attacked the Type 99 bombers and Type 97 attack aircraft.

In front of the FW-190 fighter jets, the Japanese Navy's Type 99 bomber and Type 97 attack aircraft are no opponents at all. One after the other was shot down. The pilots of the Luftwaffe, relying on the performance of the aircraft and their skilled flying skills, massacred the carrier-based aircraft of these island navies. It is estimated that many German air pilots will be promoted to become ace pilots after this battle!

Chapter 1390

The 36 FW-190 fighter jets of the German Air Force are much smaller in number than the carrier-based aircraft fleet of the Japanese navy, but they are like no one in the land, wantonly killing those carrier-based aircraft of the Japanese navy.

Whether it is the Type 99 carrier-based bomber or the Type 97 carrier-based attack aircraft, neither is the opponent of the FW-190 fighter of the German Air Force.

Although the 99 Ship Explosion and the 97 Ship Attack also have self-defense weapons, the three 7.7mm aviation machine guns and one 7.7mm aviation machine gun are undoubtedly very weak. It is undoubtedly very difficult to shoot down Luftwaffe fighters with such firepower. Unless the bullet

directly penetrated the cockpit of the aircraft and hit the pilot. Otherwise, it would be almost impossible to shoot down a Luftwaffe fighter plane.

"God! These islanders' fighter planes are too easy to shoot down! I have a feeling that I will definitely become an ace pilot today!" A Luftwaffe pilot said in surprise.

"Idiot, be careful behind you, a Zero fighter is biting you, dive quickly and get rid of him!" The squadron leader's voice came from the headset.

The pilot did not dare to neglect, and immediately began to dive.

"Da da da!" At this time, the Zero fighter also opened fire. The bullet almost flew past the plane, which made the German pilot feel lingering fear.

The Zero fighter seemed unwilling to let go of this opportunity, and followed the German fighters and began to dive.

However, when a fighter plane dives, it bears a very large force, which requires a very strong body structure. Otherwise, the aircraft is in danger of disintegrating in the air.

Zero Combat In order to increase the range and enhance the maneuverability, aluminum alloy and other materials are widely used in the aircraft. This certainly reduces the weight of aircraft, has increased flight range, has also strengthened maneuverability. However, the body structure of the aircraft is not strong. In the case of a high-speed dive, it is very easy to disintegrate.

This Zero fighter is currently in such a state. In order to shoot down the German fighter, he simply ignored the performance of his fighter. It was only when the plane made a clicking sound that it woke him up. However, it is too late.

This Zero fighter disintegrated directly in the air, turned into pieces, and fell towards the sea. The pilot parachuted for the first time. But in this vast South China Sea, if you want to escape, it will undoubtedly be very difficult.

The commander of the carrier-based aircraft of the navy of the island country had to order the fighter pilots to prohibit rapid dives.

It can neither climb up with a German fighter, nor can it dive and chase a German fighter. This is undoubtedly a great restriction for the carrier-based fighter pilots of the island navy. What made them restrained made them even more unable to compete with the fighter jets of the Luftwaffe. In many cases, I can only watch the German Air Force fighters shoot down their carrier-based aircraft.

While the battle was in full swing, the BF1-09 fighter jets of five squadrons of the Luftwaffe were rushing to the battlefield at high speed.

"Hey, guys, you killed so many island country planes! Anyway, leave us some soup!" said a squadron leader of the Luftwaffe.

"Shit, what are you guys doing here?"

Although the number of carrier-based aircraft fleets of the navy of the island country is quite large, in fact there are only so many. The more fighters the Luftwaffe had in combat, the less success each aircraft could achieve.

"Haha! You guys, don't try to take advantage of one person. Everyone! This is a good opportunity to get the results!"

Sixty BF-109 fighter jets rushed to the battlefield, which undoubtedly dealt another heavy blow to the island navy's carrier fleet.

"Asshole! Why are there so many German planes coming again? Don't we have to find the German aircraft carrier, so all our carrier-based aircraft have to be lost?" Said the carrier-based aircraft pilot of the island nation's navy speechlessly.

Under the attack of the FW-190 fighter jets of the German Air Force, they have lost dozens of carrier-based aircraft. Now, there is another large group of BF-109 fighter jets, which will undoubtedly further increase their losses. When the German Navy's aircraft carrier is found, it is very difficult to say how many carrier-based aircraft they will have left. If it is not done well, there will not even be one left. In that case, how did they go about sinking the aircraft carrier of the German Navy?

The performance of the BF-109 fighter is weaker than that of the FW-190 fighter. However, for the carrier-based aircraft of the Japanese navy, it still has an overwhelming performance advantage. Especially those ninety-nine ship explosions and ninety-seven ship attacks, they can only be slaughtered.

After these BF-109 fighter jets joined in, the loss rate of the island navy's carrier-based aircraft began to soar.

On the aircraft carrier "Aries" of the German Navy, Lieutenant General William Canaris and Major General Berger have been watching the air battle on the front line. Although they cannot see the battlefield, they can accurately understand the movement of the battlefield through radio signals.

When they learned that sixty BF-109 fighter jets had arrived on the battlefield and began to massacre the carrier-based aircraft of the island navy, the faces of the two finally looked a little better.

"It seems that the islanders' carrier-based aircraft are no longer a concern. The fighter pilots of the Air Force are enough to deal with them." Lieutenant General William Canaris said with a smile.

"Yes, General. Fortunately, we have the support of the Air Force. Otherwise, it would be very difficult for us to deal with so many carrier-based aircraft of the islanders." Major General Berger said.

"Our number of aircraft carriers is still too small. While ensuring the defense in the Pacific Ocean, we must also take into account operations in the South China Sea. Some are not enough. After the two aircraft carriers of the Indian Ocean Fleet are repaired, the situation may be better. Lieutenant General William Canaris said.

Rear Admiral Berger nodded. When the German Navy was unable to send the main force to the Pacific Ocean, they were indeed under a lot of pressure.

"General, our first wave of fleet is returning. They have sunk one battleship of the Islanders and severely damaged one!" an officer reported.

"Very well, the aircraft carrier is ready to recover the carrier-based aircraft." Lieutenant General William Canaris ordered.

"General, after refueling the first wave of aircraft and adding ammunition, will they continue to attack the islanders' capital ship fleet or their aircraft carrier fleet?" Major General Berger asked.

Lieutenant General William Canaris thought for a while, and then said: "Attack the islanders' aircraft carrier team! Compared with the islanders' battleships, their aircraft carriers pose a greater threat to us!"

Major General Berger agrees with this. Although the carrier-based aircraft of the island navy suffered heavy losses, if those aircraft carriers are not destroyed, the threat to the German navy will still exist.
