

Jagged 1671

Chapter 1671

Terry Percy, the 3rd Division of the German Marine Corps has completely taken control of this place. The British infantry brigade stationed here had very weak resistance after the German marines landed. And soon fled here, and the remaining troops surrendered to the Germans.

The 3rd Division of the German Marine Corps, using the pier at Tripe West, began a massive landing. Before long, more than 20,000 people from the 3rd Division of the Marine Corps and their equipment will all go ashore.

"General, our 1st Regiment has already started to attack St. John's. Soon, the 2nd Regiment will join the attack when it goes ashore," said Major General Pals, commander of the 3rd Division of the Marine Corps.

Admiral Ernst von Busch nodded: "The 4th Marine Division will start landing in the afternoon. In addition, the 6th Marine Division and the 7th Marine Division are expected to arrive tomorrow night. Our five Marine Divisions, They will all be driven to Newfoundland."

"General, there is no problem in taking Newfoundland. The fighting power of these British is really rubbish. We have naval guns and carrier-based aircraft fire support, and we can easily defeat them." Pars There was a smile on the major general's face.

Admiral Busch nodded, and he also thought that the combat effectiveness of the British army was very bad.

"Arms control take St. John. There is a medium-sized port there. After taking it, the rest of the troops can go ashore better." Admiral Busch said. After all, the remaining marine divisions, as well as the engineering units of the future Air Force and a large amount of technical equipment, all need to be transported by the port. Tripesy's port is too small for expansion to be possible. On the contrary, St. John's can be regarded as a relatively good port.

"Yes, General." Major General Pars nodded.

New Brunswick, the Nova Scotia Peninsula, Prince Edward Island and Cape Breton Island, across the Cabot Strait from Newfoundland across the sea. These areas can also be regarded as areas where the British army is heavily deployed.

After the German army landed on Newfoundland, the entire British Army went crazy. A group of generals of the British Army began to quickly deploy troops from the above-mentioned areas, and rushed to Newfoundland for reinforcements.

The Cabot Strait is only tens of kilometers wide, and it would not take much time for the British army to transport troops across the strait to Newfoundland. Of course, the premise is that the German army did not stop it.

On the afternoon of November 23, the first batch of reinforcements sent by the British army to Newfoundland set off from Cape Breton Island. Hundreds of merchant ships headed for Newfoundland under the protection of dozens of cruisers and destroyers. On these merchant ships, the strength of two infantry divisions and one armored division of the British Army was loaded.

In the sky, there are hundreds of P-51 fighter jets from the Royal Air Force escorting them.

It can be seen that in order to prevent the attack of the German Navy's carrier-based aircraft group, they have done their best.

However, it is obviously impossible for the German side to allow the British to land so many reinforcements on Newfoundland.

Just as the fleet had just passed the center line of the Cabot Strait, the carrier-based aircraft group of the German Navy rushed over. Fifteen carrier-based FW-190 fighter squadrons took off from the eight aircraft carriers of the carrier formation of the German Navy's home fleet and rushed to the battlefield.

Although, after the air search radar of the Royal Navy discovered the attacking German carrier-based aircraft group, it immediately instructed the escorting P-51 aircraft group to intercept. And more P-51 fighter jets took off from the rear airport to the battlefield.

But unfortunately, it was still too late.

The fierce air battle exploded immediately, and the German Navy's carrier-based fleet had 15 squadrons of carrier-based FW-190 fighters, reaching 180. In terms of quantity, it has an absolute advantage. In terms of fighter performance and pilot technology, it is also at an advantage. This makes the battlefield completely one-sided. The carrier-based fleet of the German Navy severely damaged the British Air Force as soon as they fought, causing them heavy losses. And, the fighter group of the British Air Force was quickly dispersed.

Immediately afterwards, the dive bombers and torpedo attack aircraft of the German Navy appeared.

Hundreds of dive bombers and hundreds of torpedo attack aircraft began to attack.

"Boom boom boom!"

Although, the escorting fleet began to shoot at the air with anti-aircraft guns and anti-aircraft machine guns to cover the huge fleet. However, it didn't work at all. The number of escorting warships was so small that they could not organize a favorable air defense at all.

"Woo!"

The dive bombers of the German Navy began to dive, making a terrifying roar that made people have to cover their ears.

The heavy aerial bomb hit a merchant ship heavily.

The fragile deck of the merchant ship was blasted through at the beginning. The bomb exploded inside the merchant ship.

"Boom!"

The violent explosion immediately severely damaged the merchant ship, not only destroying the interior of the merchant ship. Even the hull of the ship was blown through.

The sea water began to pour into the merchant ship crazily, and the British soldiers on the merchant ship were transferred into the sea like dumplings.

Although the sea water is cold at this time, they don't want to sink into the sea together with the merchant ship.

A torpedo attack plane dropped a heavy torpedo on a merchant ship at a distance of 500 meters.

Soon, the heavy torpedo kissed the side of a merchant ship.

Among the violent explosions, a large hole was blown out of the side of the merchant ship. Sea water poured into the hull crazily.

The defensive power of merchant ships is not as good as that of warships. There is no perfect watertight compartment either. So, soon the hull capsized and sank into the sea.

Under the attack of the dive bombers and torpedo attack aircraft of the German Navy, those merchant ships could not resist at all. The fragile merchant ship was easily hit by aerial bombs and aerial torpedoes. And one after another was sunk.

The soldiers transported on the merchant ship either took the initiative to jump into the sea to escape, or sank into the sea with the merchant ship. But in fact, no matter which path you choose, there is no way out.

The icy Atlantic Ocean will swallow their lives.

"Damn, we can't go on like this, otherwise, we will be killed by the Germans soon!"

Although the British saw such a crisis, they had nothing to do.

By the time the follow-up fighter jets of the British Air Force arrived, the dive bombers and torpedo attack planes of the German Navy had completed their mission and fled. What was left was a messy sea. A large number of merchant ships are burning and sinking, and the sea is full of soldiers who jumped into the sea to survive. Many of them have been frozen and lost their lives.

The two infantry divisions and one armored division dispatched by the British Army lost their lives before they reached Newfoundland.

Chapter 1672

"Bastard, we can't go on like this. In less than half an hour, we lost two infantry divisions and one armored division. We can no longer send reinforcements to Newfoundland until the Air Force gains air supremacy." If that's the case, you're going to die." Minister of War David Magson cursed after learning of the loss of troops.

Air Force Minister Baron Cyril Neville's face suddenly became very ugly.

"The Royal Air Force has done its best. Our fighter planes are not as good as the Germans, and the quality of the pilots is not as good as the Germans. In order to protect the army from landing, we have lost hundreds of fighter jets!" Baron Cyril Neville looked angry .

The scale of the British Royal Air Force was originally small, with only a total of more than 2,000 aircraft. Among them, the number of fighter jets is only half, and the rest are search and reconnaissance planes, transport planes, bombers and so on.

Lost 10% of fighter planes and pilots in one air battle, which is already a serious blow to the Royal Air Force.

Lord of the Admiralty Pound Dudley Sir said nothing. With the disastrous defeat in the Atlantic naval battle, Sir Pound Dudley's right to speak has been compressed to a very low level.

Churchill frowned tightly.

"Your Excellency, Baron Neville, if the Air Force attacks with all its strength, is it possible to ***** air supremacy from the Germans?" Prime Minister Churchill asked.

"Your Excellency, this is impossible. With our strength alone, it is impossible to defeat the Germans. The German fleet is gathering in Newfoundland. Soon, they will have more carrier-based aircraft into the battle. Our fighter performance and pilot quality are seriously inferior to the Germans. Unless the Americans fully support us, otherwise, it is impossible for us to seize air supremacy." Baron Cyril Neville said.

Churchill knew that the longer the delay, the worse it would be for them. What is currently appearing in Newfoundland is only the home fleet of the German Navy. But soon, the German Navy's Atlantic Fleet and Mediterranean Fleet will also arrive. At that time, Britain will be even more unfavorable.

"Is there any other way?" Prime Minister Churchill asked.

"Your Excellency Prime Minister, we may be able to use the night time to transport troops to Newfoundland. Moreover, the route of transporting troops is not only in the Cabot Strait, but also extends to the entire Gulf of St. Lawrence. In this case, our chances of success Much bigger," suggested Sir Bond Dudley.

Prime Minister Churchill thought about it and felt that this was a suggestion worth adopting.

"Gentlemen, what do you think?" Prime Minister Churchill asked.

David Magson and Baron Cyril Neville both nodded, and using the cover of night to send troops to Newfoundland seems to be the best choice.

"Well, the Army will find a way to send more troops to Newfoundland tonight. Tomorrow morning, launch a counterattack. The Air Force will attack with all its strength and compete with the Germans for air supremacy. And send out bombers to bomb the Germans. At that time, Let the U.S. Army Air Corps also come to support us. We must do our best to defeat the Germans in Newfoundland. Otherwise, we will be in big trouble." Prime Minister Churchill said.

"Yes, Your Excellency the Prime Minister." Everyone replied.

Although, they knew very well that Prime Minister Churchill was preparing them to do their best. But everyone knows very well that the situation is urgent now, so they can't help but try their best. Otherwise, the country might not even exist. These people hold great power, but their fate is tied to Britain. If even Britain ceased to exist, they would naturally have no power at all.

On the night of November 23, the British Army planned to send five additional infantry divisions and one armored division to Newfoundland in one go. This is already the largest force

that the British Army can send to Newfoundland while ensuring that other defenses do not go wrong.

These troops, aboard merchant ships, under the protection of naval cruisers and destroyers, crossed the Gulf of St. Lawrence and headed for Newfoundland.

However, that night, when it was just dark, the artillery formation dispatched by the German Navy's home fleet entered the Cabot Strait under the cover of night.

Although, the Cabot Strait is no longer the main route for the British Army to Newfoundland. Because this route is relatively more dangerous. However, there is still an infantry division taking this route.

"Boom! Boom! Boom!"

When the sea search radar on the German naval artillery formation found the target, a night battle began.

The six heavy cruisers, 9 light cruisers and 16 destroyers of the German Navy's artillery formation used powerful firepower to attack the British Army's transport fleet.

Although, the escorting British Royal Navy fleet launched a heroic counterattack. However, they are outnumbered.

In addition, the cutting-edge warships of the Royal Navy have almost lost in naval battles. Most of the warships left now are second-rate warships. This made the British Navy easily defeated in this naval battle.

Warships were sunk one after another, and those merchant ships fled in a hurry. However, the speed of merchant ships was originally much worse than that of warships. This made them have nowhere to escape under the attack of the German Navy's artillery formation.

"Boom! Boom!"

A merchant ship was hit by several light cruiser 150mm artillery shells in succession. The entire merchant ship was riddled with holes and leaks everywhere. Soon, the merchant ship was severely damaged and sank into the sea.

The destroyers of the German Navy took the lead, entered the fleet, and used naval guns to attack these merchant ships.

Although, the destroyer's 105mm naval gun, and other smaller caliber artillery, are not very powerful. But for these merchant ships with little defense, they are still lethal.

Under the attack of these destroyers, the merchant ships conscripted by the British Army were sunk one after another. Countless officers and soldiers of the British Army sank into the sea together with the sunk merchant ship.

When the news of the German fleet breaking into the Gulf of St. Lawrence spread, the fleet of the British Army in the entire bay was even more fried. They desperately wanted to retreat, or to speed up to Newfoundland.

However, this night is destined to be the night of slaughter for the German Navy. The bombardment formation of the German Navy is killing in the Gulf of St. Lawrence. Countless merchant ships were sunk by them, and even the British Army inevitably suffered heavy losses.

Chapter 1673

"Boom! Boom! Boom!"

A heavy cruiser of the German army is firing fiercely. Although it is night and the visibility is not high, the outline of the British merchant ship can barely be seen clearly.

However, under the influence of factors such as the aid of the artillery sighting radar and the relatively short distance, it was still easy to achieve a hit.

The shells of the 210mm main gun easily tore apart the hull of the merchant ship. Amidst the cries of the British soldiers, the merchant ship gradually sank into the sea.

"Damn it, launch the torpedo and stop the Germans!" The captain of a British destroyer ordered with a black face.

They must find a way to stop the massacre of the Germans in the Gulf of St. Lawrence. Otherwise, the British Army will pay a huge loss. At that time, let alone resist the German attack in Newfoundland. I'm afraid we can't even defend Canada itself.

"Yes, sir!"

The destroyer quickly launched a torpedo, but unfortunately, not only did it fail to achieve any effect, but instead put itself in it.

In order to guard against attacks by torpedo boats and submarines of the British Navy, the German Navy's fleet kept sailing at high speed after entering the Gulf of St. Lawrence. Although this will have a certain impact on the hit rate, it is a good protection for your own safety. Even if the British army launches a lightning strike, it is difficult to hit the German warship sailing at high speed.

The artillery formation of the German Navy entered the Gulf of St. Lawrence from the Cabot Strait, and then sailed out of the Gulf of St. Lawrence from the Bell Strait. Along the way, the British Army, which attempted to cross the sea to reinforce Newfoundland, suffered heavy losses.

Five infantry divisions and one armored division, more than half of the troops died in the Gulf of St. Lawrence. The remaining half landed in the Gulf of St. Lawrence, and the other part retreated to Canada. This also means that the British worked hard all night, not only suffered heavy losses, but also sent less than 20,000 people to Newfoundland.

At this time, nearly two divisions of the German Marine Corps have already landed. And, the 3rd Division of the German Marine Corps is attacking St. John's. Once the 3rd Division of the Marine Corps takes St. John's, other units of the German Marine Corps will land on Newfoundland sooner.

British Army Secretary David Magson felt like crying after receiving the loss report.

"Your Excellency Prime Minister, we paid tens of thousands of losses, and finally sent less than 20,000 people to Newfoundland. Such a loss ratio is really too big. If this continues, we may pay even more. At that time, not only will they not be able to defend Newfoundland, but they will also be unable to defend the mainland because of the loss of too many troops." David Magson suggested.

Several divisions have been lost one after another. Such a loss was already unbearable for the British Army. After all, Britain is no better than the United States now, and their army is far from comparable to the US Army in terms of size. The loss of several infantry divisions in succession has made David Magson very distressed.

Prime Minister Churchill frowned. He didn't agree with giving up like this. However, he also knows that the current loss is very large, and if it continues, their loss will become greater and greater.

"Look at today's battle first, and then talk about it!" Prime Minister Churchill said.

Because there were not many troops landing on the island, the British army originally planned to launch a large-scale counterattack. But now it has to be postponed.

But the postponement of the British offensive does not mean that the German offensive will be delayed.

Although St. John is 50 kilometers away from Tripe West, the 3rd Division of the German Marine Corps arrived at St. John on November 24. With a large number of trucks and armored vehicles ashore, the maneuvering speed of the German Marine Corps is no slower than the mechanized units of the German Army.

Although the British Army also has an infantry division stationed in St. John, the German Marine Corps is not afraid at all.

That afternoon, after the German Navy's artillery formation and carrier-based aircraft fired on St. John's for an hour, the 3rd Division of the German Marine Corps officially launched an attack on St. John's.

Dozens of amphibious tanks, with the cooperation of hundreds of armed helicopters, launched an attack on the British positions. Following the tanks were the infantrymen of the Marine Corps. In the sky, there are dozens of fighter jets and dive bombers supporting them.

Although, the 3rd Infantry Division of the British Army has been operating in St. John for a long time, and has built a lot of fortifications.

But under the powerful firepower of the German army, these fortifications have been damaged a lot.

Coupled with the joint attack of German tanks and armed helicopters, they were even more unable to resist.

Some anti-tank fire points, before they had time to fire, or only had time to fire one or two shots, would be spotted by German helicopters and then hit by rockets.

It is precisely because of this that the British army was unable to form a powerful counterattack during the battle. Their line of defense was easily torn apart by the Germans.

"General, the German offensive is too fierce. Our defense line has been torn apart by German tanks. It is estimated that they will hit our headquarters in a short time." The commander of the 2nd Division of the British Army told Campbell The Lieutenant General reported.

"What? The battle started less than two hours ago, and we can't resist it?" Admiral Campbell's face was very ugly, as if it was difficult to accept such a result.

"General, the Germans not only received fire support from naval guns on the sea, but also a large number of carrier-based aircraft to provide them with air support. In addition, the Germans also have dozens of tanks and a large number of helicopters. We don't have it. The air force can't guarantee our air superiority, so we naturally can't resist the German attack." The major general said helplessly.

Although Lieutenant General Campbell knew that the Germans were very powerful, once the Germans landed in Newfoundland, it would be difficult for them to defend. However, he did not expect that they would lose St. John in such a short period of time.

"General, let's evacuate St. John's and go to the west. We still have enough troops there, and it is easier to get support." The major general suggested.

Lieutenant General Campbell thought for a while, then nodded.

Immediately, the British army attempted to escape here before the German army completely captured St. John's. Unfortunately, the German advance was too fast. So that only a small number of troops of the infantry division of the British army managed to escape. The rest of the troops were surrounded. Moreover, they fell into the hands of the Germans before they even had time to blow up the port of St. John.

Chapter 1674

The German army's attack on St. John's won in less than half a day, which greatly exceeded the expectations of the German generals. After all, St. John's is the largest city on Newfoundland. Among other things, the port and various facilities here are very much needed by the German army.

"General, the British are really vulnerable. We took St. John's easily. Now, the British can only hold on to the western part of the island. At least, now the entire Avalon Peninsula has fallen into our I have it." Rear Admiral Pals, commander of the 3rd Marine Division, reported excitedly.

Ernst von Busch Admiral nodded, he was very satisfied with the victory of the 3rd Marine Division. Of course, this was completely within his expectations.

After all, the combat effectiveness of the German Marine Corps was already higher than that of the British Army. In addition, they also received strong fire support. Among other things, the fire support provided by the navy's naval guns and carrier-based aircraft, as well as a large number of armed helicopters, is enough to crush the British. If the Marine Corps cannot easily defeat the British under such circumstances, it will really be a failure.

"Let the 4th Division launch an attack on the west of Newfoundland. The 5th Division has also begun to land. Starting tomorrow, the 6th and 7th Divisions will also start to land. This time, we must take Newfoundland within a week. Finland!" Admiral Ernst von Busch ordered.

"Yes, general. However, general, I don't think it is necessary for the 6th and 7th divisions to land in St. John's. Their heavy equipment can be landed in St. John's. But other troops can directly land in the western city of Newfoundland. With the support of our powerful fleet firepower and carrier-based aircraft firepower, the British can't resist our attack at all. Instead of letting the troops advance along the rough road, it is better to launch a landing operation directly from the sea. In this case, the speed It will also be faster and easier," Major General Pars suggested.

Admiral Ernst von Busch thought about it, this is indeed a very good way.

Now there are not many British troops on Newfoundland. One infantry division and one infantry brigade were wiped out by the Germans successively. Even if the British took the risk of sending reinforcements to Newfoundland, there were not many of them. In addition, the German Marine Corps has an absolute advantage in firepower. This allowed the German troops to easily defeat the British troops stationed on the island no matter where they landed.

And, as the Atlantic Fleet and the Mediterranean Fleet rushed to Newfoundland, the German Marine Corps was able to obtain stronger fire support. In addition, in the previous battles, the performance of the British Army was so bad that it was simply vulnerable. This also made General Ernst von Busch determined to adopt this suggestion.

Beginning on November 25, the 6th and 7th Divisions of the German Marine Corps landed in the north and south of Newfoundland successively. These forces landed with the assistance of powerful fleet fire and carrier aircraft. The British army on Newfoundland couldn't resist at all, and was easily defeated by the German army.

The current British development of Newfoundland is very low, and only the coastal areas are inhabited. The hinterland deep in the island is almost no man's land. This also made the German army occupy the entire Newfoundland Island after capturing the coastal area.

The British troops stationed in Newfoundland were either wiped out by the Germans, or they chose to flee back to Canada at night.

On November 27, the entire island of Newfoundland fell into the hands of the German army. Two days faster than the expected speed of the German army.

That night, Marshal Manstein, Minister of War and Chief of the General Staff of Germany, together with Marshal Raeder, Minister of the Navy, and Marshal Albert Kesselring, Minister of the Air Force, reported the good news to Emperor Qin Tian.

After learning that the German marines had occupied Newfoundland, Qin Tian also seemed very happy.

"It seems that even though it was completely defeated in the last world war, the combat effectiveness of the British Army has not improved much, and it is still so weak!" Qin Tian sighed.

"Your Majesty, the combat effectiveness of the British Army may not be strong, but the main reason is that our Marine Corps is too powerful. This makes the British vulnerable." Marshal Manstein said.

Hearing such words, Qin Tian couldn't help laughing.

"So, gentlemen, now we have occupied Newfoundland. The first phase of the battle can be regarded as a victory. So, what do you plan to do next?" Qin Tian asked.

"Your Majesty, the Air Force's engineering force has landed on Newfoundland and has begun to expand the two airfields on the island. And, we are starting to build more airfields. We have already planned to send two fighter jets from China to Newfoundland. Finland, take on the air defense of Newfoundland. In this way, the navy's aircraft carrier formation can be liberated." Marshal Albert Kesselring said.

Qin Tian nodded, now Newfoundland's air defense and air support are heavily dependent on the aircraft carrier formation. This also restricted the German Navy's aircraft carrier formation to the waters near Newfoundland. If the Air Force can take over the air defense of Newfoundland, it will undoubtedly free up the aircraft carrier formation.

"The progress of the Air Force's airport construction on Newfoundland really needs to be accelerated. Although we caught the British and Americans by surprise this time, they have already reacted. Next, I am afraid there will be a big battle to be fought. So, Our strategic bombing of the United States must also be launched as soon as possible." Qin Tian said.

"Yes, Your Majesty." Marshal Albert Kesselring replied.

"Your Majesty, the commander of the Marine Corps, Admiral Busch, has proposed a new plan. He believes that the combat effectiveness of the British Army is vulnerable. Although the US military has begun to send reinforcements northward. However, due to the weather, it has not yet been able to reach the front line. Therefore, Admiral Busch believes that we, the United Kingdom, seize this opportunity and launch another landing operation. Starting from Newfoundland, we will capture Cape Breton Island and Prince Edward Island. Even, if the conditions are ripe, we can further capture In the northern part of the Nova Scotia peninsula, build a bridgehead on the mainland of Canada. In this way, after our army arrives, we can use this as a base to quickly advance to the mainland of Canada." Marshal Manstein said.

Qin Tian's eyes fell on the map hanging on the wall. After the German army launched its attack on North America, the map on the wall was replaced by a detailed map of North America.

"Are you sure of success?" Qin Tian asked.

"Your Majesty, I am sure." Marshal Manstein replied.

"Then go do it!" Qin Tian chose to support.

Chapter 1675

Cape Breton Island and Prince Edward Island, next to Canada. In particular, Cape Breton Island is only separated from the Nova Scotia Peninsula by a strait of about one kilometer. If the German army can capture Cape Breton Island, it will undoubtedly be much easier for them to land further on the Nova Scotia Peninsula.

After Kaiser Qin Tian approved the launch of the landing operations on Cape Breton Island and Prince Edward Island, the German army was busy again. The five marine divisions of the German Marine Corps in Newfoundland were all in action. In addition, the 1st Army, which has arrived in the theater, is also ready for battle.

This time, the British Army has deployed heavy troops on Prince Edward Island and Cape Breton Island. It will be very difficult to completely occupy these two islands with just a few marine divisions. What's more, once the Germans launch an attack, the British will definitely work hard. They will continue to put reinforcements on the battlefield. This will further increase the difficulty for the German army to capture these two islands.

Therefore, if the German army wants to successfully capture these two islands, and even go further to the Nova Scotia Peninsula, they must prepare more troops.

Fortunately, the other two armies of the German Army Group A, namely the 4th Army and the 10th Army, are about to arrive on the battlefield. The General Staff even planned to incorporate the later formed 25th and 26th Army into Army Group A.

In addition, Army Group B and Army Group C will also participate in the offensive after the war has entered a stable stage. Many of Germany's vassal states are also gearing up.

After the demise of Russia, those slave countries that followed the German army to defeat Russia on the Russian battlefield received a lot of benefits. Once Germany can defeat the United States and Britain this time, they will definitely be able to gain more benefits.

Marshal Bromberg, the commander of the German Army Group A and the commander of the 1st Army, set up his headquarters in Tripesy. After his arrival, he has become the supreme commander of the German army in this battle. The three major fleets of the navy will also fully cooperate with them in combat.

"Your Excellency, Marshal, when the 4th Army arrives, we can start attacking. The British have deployed more than 100,000 people on Prince Edward Island and Cape Breton Island respectively. But if we can invest in two Army Groups to launch Offensively, it would be very easy to defeat them," said Marine Corps Commander Admiral Ernst von Busch.

Marshal Bromberg nodded: "The 4th Army will arrive in two days. However, the Marine Corps will need to launch an offensive first to seize the beachhead. It will be easier for the Army to land after that."

"Your Excellency, Marshal, this is the duty of the Marine Corps, and we will definitely complete the task." Admiral Ernst von Busch patted his chest and promised. The mission of the Marine Corps is to launch a landing operation. In this regard, they are experts, much more proficient than the Army.

Afterwards, Marshal Bromberg discussed with the commanders of the Navy's Home Fleet, Atlantic Fleet, and Mediterranean Fleet, and confirmed that the Navy's fleet will fully support them in the next offensive. This made Marshal Bromberg make relevant preparations.

The date of the attack on Prince Edward Island and Cape Breton Island was placed on November 30. At this time, the 4th Army has arrived. With the addition of the five divisions of the Marine Corps, the number of German troops that can be used for attack in Newfoundland has reached 500,000.

Although, compared with the strength of the British Army, the German army is completely at a disadvantage. Before the war, the British Army maintained a size of one million troops. Now, the British Army has also begun a crazy military expansion. Seeing that their army size is

about to expand to two million. It's just that most of the recruits have not undergone systematic training, and they haven't even assembled enough weapons and equipment, let alone participating in actual combat. It is also conceivable what kind of performance it will have once it is sent to the battlefield. Therefore, these recruits can't be counted on for a while.

Now the main forces of the British Army are concentrated in Prince Edward Island, Cape Breton Island, Nova Scotia, New Brunswick, and Quebec City.

After the German army completely occupied Newfoundland, the British Army obviously did not have the strength to recapture the island. Especially in the absence of command of the sea and the air, launching a counterattack to Newfoundland at this time is completely death. In previous battles, the British army had already lost hundreds of thousands of people. Whether it is the generals of the British Army or Prime Minister Churchill, they are reluctant to let the troops be wasted in vain.

"Your Excellency, the current situation is very unfavorable to us. After the Germans captured Newfoundland, they continued to increase their troops there. According to the intelligence obtained by our reconnaissance plane, the Germans may have assembled dozens of people in Newfoundland. There are tens of thousands of troops," said Minister David Magson.

Prime Minister Churchill frowned tightly, and the German army sent troops to Newfoundland on such a large scale. Obviously there is only one purpose, and that is to prepare for further attacks.

Once the preparations of the German army are completed, they will inevitably re-launch the offensive. This is undoubtedly a great challenge for the British Army.

"Once the Germans attack, where will they attack?" Prime Minister Churchill asked.

"Your Excellency, once the Germans attack again, Prince Edward Island, Cape Breton Island, Nova Scotia, and New Brunswick will all be the key targets of the Germans. Fortunately, we are here More than half a million troops have been assembled in several places. If the Germans really launch an attack, they can barely resist their attack." David Magson said.

"Can it really be resisted?" Prime Minister Churchill was not so relieved about this. After all, on the island of Newfoundland, the British Army was vulnerable to the German Marine Corps.

"Your Excellency, Prime Minister, we will do our best. However, the Germans' combat effectiveness is indeed very strong. Especially in the case of receiving a large amount of fire support from the sea and the air, it is very difficult for us to resist their attack." David Magson said.

Prime Minister Churchill nodded. The German army's combat effectiveness was already very strong. Coupled with the German army's superiority in sea and air, the British Army was no match for the German army.

"Your Excellency Magson, I know that it is very difficult to fight the Germans. But now we have no choice." Churchill said.

"Gentlemen, I have to admit that before the Germans attacked Newfoundland, I fantasized that the Germans could fight the Americans desperately in the Caribbean. This is very useful for preserving our strength. After all, now The British Empire is not what it was 30 years ago. It is very difficult for us to accumulate such a small fortune.

However, now that the Germans have captured Newfoundland. Then, we will undoubtedly become the first target of the Germans to be eliminated. This leaves us with no choice. If you want to keep the British Empire, you have to fight the Germans, or even fight the Germans desperately. Only in this way can we possibly continue to preserve our country. Otherwise, our country will cease to exist! "

Churchill said to the marshals and generals of the British Army, Navy and Air Force with a serious face.

All the generals nodded again and again. If they could, they certainly didn't want to go to war with the Germans. The Germans are too tough, even stronger than the last world war. This makes many people full of fear about Germany. They are ahead, and they also hope that the Americans can be at the top. In this way, they can preserve their strength.

But unfortunately, who made the Germans choose to attack Newfoundland? That made the battle inevitable. As Prime Minister Churchill said, if you don't want the British Empire to be destroyed, you must fight the Germans desperately.

"I know that our enemy is very powerful. With our strength, it is not enough to fight against the Germans. However, we must try our best to resist the German attack. Our American allies will also do their best to assist us. Yes. The combination of our two countries may not be without strength against the Germans. After all, this is North America, and this is our home field. We have a great advantage." Prime Minister Churchill said.

"Yes, Your Excellency Prime Minister. We are now expanding our military strength. Once our army is expanded to two million. And our American allies can expand their army to ten million. In that case, on the battlefield in North America, we will occupy a huge advantage. If it goes well, it is not impossible to defeat the Germans on the North American battlefield." Sir Cyril John de Frere said.

"As long as the Americans don't want to use us as cannon fodder and our two countries can unite, it is entirely possible to defeat the Germans." Baron Ironside also said.

The other generals also nodded repeatedly.

"Very well, it would be best if everyone is confident. I believe that at such a critical juncture, the United States will no longer have reservations. After all, this battle is not only related to our life and death, but also to the life and death of the United States. No matter what, the Americans will do their best just like us." Prime Minister Churchill said.

"Gentlemen, the 1st Army of the U.S. Army is almost here. The 2nd Army they dispatched is already on the way. It's all due to the **** snowstorm, which has greatly affected the railway capacity. Otherwise, the U.S. Army will easily We will send more reinforcements to arrive. In that case, we will have enough strength to deal with the Germans." David Magson said.

The generals of the British Army, Navy and Air Force are very concerned about the support of the United States. They know very well that without the support of the United States, it is impossible for them to confront Germany. Therefore, the support of the United States is very important to them, and it has even become a source of confidence in confronting Germany.

"Your Excellency, General Marshall has arrived." The secretary reported.

"Everyone, let's end the meeting here. Your Excellency Magson, Sir Defrier and Baron Ironside stay here, and everyone else returns to their posts." Prime Minister Churchill ordered.

"Yes, Your Excellency the Prime Minister." All the generals, those who were not named, left the meeting room.

Soon, General Marshall, Chief of Staff of the US Army, and Major General Eisenhower, Chief of Operations of the US Army Staff, walked into Prime Minister Churchill's office.

"Your Excellency, Chief of Staff, welcome to Toronto." Prime Minister Churchill said with a smile.

"Your Excellency, Prime Minister, I am very happy to come to Toronto as a guest. But if I change the time, I am afraid I would be more happy to enjoy the beautiful scenery of Toronto. But unfortunately, I don't have that time and mood now." Admiral Marshall said.

"Blame those **** Germans! If it weren't for them, what's wrong with world peace?" Prime Minister Churchill cursed.

"Yeah, blame the Germans!" Admiral Marshall also sighed.

"Your Excellency Chief of Staff, the Germans are massively increasing their troops to Newfoundland. It is very likely that they will continue to attack. However, it may be very difficult to stop the Germans with our army alone. Therefore, we need the United States. The Chinese side can send us more reinforcements," said Prime Minister Churchill.

"Your Excellency, there is no problem. We have already dispatched the 1st Army to Canada, and the 2nd Army is about to leave. The follow-up 3rd Army and 4th Army will also set off soon. However, this The **** weather has greatly affected the marching speed of our army. Therefore, before our large troops arrive, I am afraid that the British side will need to do their best to resist the German attack." Admiral Marshall said with some helplessness.

This is not that the United States wants to borrow a knife to kill people. At this juncture, they have no longer cared about being cautious. Once Britain collapses, they will have to deal with the Germans alone, which is definitely not what they like to see. Therefore, the United States also hopes to fight side by side with the British and defeat the Germans.

Prime Minister Churchill nodded, he knew that Admiral Marshall was telling the truth.

"Your Excellency, Chief of Staff, we are ready to fight the Germans desperately. But the Germans are too strong. Therefore, even if we work hard, we may not be able to withstand their attack." Prime Minister Churchill said.

"Yes, Your Excellency Prime Minister. Not only you have to work hard, but we also have to work hard." Admiral Marshall said.

"Your Excellency Chief of Staff, I hope that your country can send more troops to reinforce us as soon as possible." Prime Minister Churchill said.

"Of course, we will do our best." Admiral Marshall said.

"After the arrival of your country's 1st Army, we hope to be able to deploy to the Nova Scotia peninsula. There, I am afraid that it will become the main target of the German attack."

Admiral Marshall nodded with a serious face.

Chapter 1677

On November 30, the German army first launched an attack on Cape Breton Island.

At 6 o'clock in the morning, before dawn, the 15 capital ships of the German Navy's Atlantic Fleet and Mediterranean Fleet were divided into three formations and launched a fierce bombardment to the scheduled landing site.

These three landing sites were all carefully selected by the German Marine Corps. They are New Waterford and Port Morion in the northern part of Cape Breton Island, and Louisburg in the eastern part of Cape Breton Island.

In this landing operation, the German Marine Corps will dispatch three marine divisions at one time to land on these three landing sites. If it goes well, then join the troops of the Army's 1st Army and 4th Army. If it doesn't go well, the other two divisions of the Marine Corps will also be involved in the landing operations.

Of course, in the opinion of Admiral Ernst von Busch, commander of the Marine Corps. The British should not be able to withstand the attack of the German marines. They can not only get fire support from naval guns on the sea, but also air support from carrier-based aircraft units. The strength of the Marine Corps' own amphibious fleet is also not weak. In addition, the Air Force also deployed a ground attack aircraft wing on Newfoundland. This will allow them to get more fire support in their attack on Cape Breton Island.

"Boom! Boom! Boom!"

On the sea, the capital ship of the German Navy is pouring shells on the landing site. Although, the capital ship formation of the home fleet was completely lost. The capital ships of the Atlantic Fleet and the Mediterranean Fleet are both capital ships equipped with 380mm main guns. In terms of power, for example, the capital ships of the local fleet equipped with 410mm main guns are weaker. However, this is still not something the British troops stationed on Cape Breton Island can resist.

The shells of the large-caliber naval guns exploded on the beach, shaking the sky, as if the whole island was trembling. Every shell exploded, leaving a large crater on the beach. And the defensive positions of the British Army became fragmented under the fierce shelling of these battleships.

The heavy cruisers, light cruisers and destroyers of the German Navy also joined in. Started to bombard the British positions on the coast with heavy artillery fire. They all hope to use powerful artillery fire to clear the way for the landing of the Marine Corps.

In the waters south of Newfoundland, the aircraft carrier formations of the three major fleets of the German Navy are also operating in this waters. The deck is full of carrier aircraft. Once the front-line air search radar detects British or American fighters, they will immediately take off to fight.

The headquarters of the British defense force on Cape Breton Island is located in Sydney, which has the same name as Sydney in Australia.

When the German fleet began to bombard the British positions violently, the British troops on the front line called the headquarters one after another.

Admiral Wavell, commander of the defense of Cape Breton Island of the British Army, was awakened immediately. In fact, Sydney is only ten kilometers away from New Waterford. The sound of the battleship's main guns could be faintly heard even at such a distance.

"General, the German attack has begun. Our units at New Waterford, Port Morion, and Lewisburg have all been heavily bombarded by the German heavy-caliber naval guns. The troops are now suffering heavy casualties. The fortifications built are also being destroyed. The troops on the front line need reinforcements." A major general reported to Admiral Wavell.

Admiral Wavell nodded: "Order the troops on the front line to prepare to resist the German landing. Especially the 3rd Armored Division. Once the order is issued, they must attack immediately. Also, send a telegram to Toronto and tell them that we Under attack by the Germans, we need more support!"

"Yes, General." The general immediately went to make arrangements.

The British Army has deployed heavy troops on Cape Breton Island. In addition to the 10 infantry divisions, there was also an armored division. The total force is as high as 150,000 people. You know, the entire Cape Breton Island is only 10,000 square kilometers. Deploying so many troops is already quite dense.

It's just that Admiral Wavell knows that once the German army launches a fierce attack, these troops alone are obviously not enough. Therefore, when the German army just started to attack, he began to ask for reinforcements.

When the news that the German army began to attack Cape Breton Island was reported to Toronto, the Secretary of War David Magson immediately ordered the British troops on the front line to prepare for battle. Especially the British army on Prince Edward Island must be especially vigilant against the German attack. At the same time, David Magson also ordered the British troops on the Nova Scotia peninsula to prepare for reinforcements on Cape Breton Island.

With the US 1st Army on its way to the Nova Scotia peninsula, it has greatly eased the dilemma of the British Army's shortage of troops. They now have enough troops to reinforce Cape Breton Island.

At the same time, the British Royal Air Force also received an order from Prime Minister Churchill to compete with the Germans for air supremacy. The remaining shore-based aircraft of the British Navy will also participate in the battle for air supremacy. Also, wait for an opportunity to attack German warships on the sea with dive bombers and torpedo attack aircraft. As long as the German navy can be severely damaged, the fire support received by the German

army during the landing operation will be greatly reduced. This is of great help in resisting the German attack.

The bombardment of the battleship formation of the German Navy lasted for a full hour.

The British defensive positions at New Waterford, Port Morion, and Lewisburg were almost plowed by the German navy with artillery fire. The fortifications that the British army painstakingly built were blown to pieces during the fierce shelling. The British troops stationed in these places suffered heavy losses under the fierce German shelling.

Just after 7 o'clock in the morning, Admiral Ernst von Busch, commander of the German Marine Corps, gave the order to attack.

For a while, the 5th, 6th, and 7th Divisions of the German Marine Corps began landing in New Waterford, Port Morion, and Fort Lewis respectively. The 3rd and 4th Divisions of the Marine Corps are on standby on the sea, ready to reinforce the front line at any time.

The 1st Army and 4th Army of the German Army have also been uploaded. As long as the Marine Corps can gain a firm foothold on Cape Breton Island, they will immediately set off and land on Cape Breton Island, becoming the main force against the British army on the island.

Facing the German attack, the British army on the island will naturally fight back. For them, they must try their best to resist the German attack. Otherwise, once the German army captures Cape Breton Island, Britain will be even more dangerous.

Chapter 1678

The attack of the German Marine Corps is still the cooperation of helicopters and landing craft. Trying to use such a three-dimensional offensive method to tear through the defense of the British army in one fell swoop and occupy the beachhead. Even took New Waterford, Port Morion and Lewisburg.

Port Morion, this is the main port in the northern part of Cape Breton Island and the largest port except Sydney. Originally, Sydney should have been the first choice for the German army to land. Unfortunately, Sydney is located at the mouth of the Sydney River on the island, in the fjords. The British army has deployed heavy troops here, and if they attack rashly, they may suffer heavy losses. Therefore, the German army hopes to capture Port Morion during this landing operation. In this way, a large number of heavy equipment of the German Army can go ashore more easily.

Thirty-six armed helicopters skimmed the sea and rushed towards Port Morion.

In the sky, besides these armed helicopters, there are dozens of carrier-based aircraft that have already launched an attack first.

On the sea surface, hundreds of landing craft rushed towards the beach like arrows leaving the string, drawing obvious water marks on the sea surface.

"Boom!"

A dive bomber dropped a heavy aerial bomb weighing 500 kilograms onto the British army's position, and the bomb exploded with a loud noise. At the same time, a huge crater was left on the beach.

"God! The Germans are attacking, open fire and kill them all!" The British commander on the front line issued an order.

Defending Port Morion is the 14th Infantry Division of the British Army. They were on the beach, deploying a brigade of infantry. The artillery brigade is located in the rear, ready to provide artillery support to the front after the battle begins.

It's just that, unfortunately, the position of this artillery brigade was discovered by the German reconnaissance plane before the battle started. Therefore, when the warships of the German Navy opened fire, they focused on this place. The 36 155mm howitzers and 36 105mm howitzers of this artillery brigade were almost destroyed, and there were not many left at all.

It can be seen that the firepower of the entire British Army's 14th Infantry Division has undoubtedly been greatly weakened.

You must know that although the infantry divisions of the British Army are not large, they only have about 13,600 people. But the equipment is not weak. The artillery brigade is equipped with 36 155mm heavy howitzers and 36 105mm light howitzers. There is also a cavalry regiment equipped with 28 light tanks. In terms of weapons and equipment alone, it is not even much worse than the German Army.

Of course, the combat effectiveness of the two sides is not the same.

"Da da da! Boom boom boom!"

The surviving British machine guns and mortars on the position began to fire.

The shell exploded on the sea, and some unlucky landing craft got shelled. Even mortar shells are a deadly threat to the landing craft of the German Marine Corps. Once hit, the marines on the entire landing craft will hardly have a way out.

Fortunately, the British army's counterattack was suppressed by the German army as soon as it started. Several dive bombers launched an attack, directly blowing up the British counterattack firepower with heavy aerial bombs.

The armed helicopters that followed immediately used rockets to burn the British army's position into a sea of flames. The British army, which was lucky enough to survive the heavy German shelling, once again suffered heavy losses under the heavy firepower of the German army.

"Asshole, report to the division headquarters, we need reinforcements!" A Brigadier General ordered.

The commander of the 14th Infantry Division of the British Army responded correctly as early as the battle had just begun. Immediately ordered another infantry brigade to rush for reinforcements. However, on the way to the beach, they were attacked by German air forces. 12 carrier-based FW-190 fighter jets, 12 dive bombers and 12 torpedo attack planes carrying aerial bombs bombed and strafed them. This infantry brigade with a strength of only more than 3,000 suffered heavy losses under the German air strikes. Crashed before reaching the beach. A large number of British soldiers fled in embarrassment. Not to mention continuing to perform missions and rushing to reinforce the front line.

This also left the British army defending the beach in isolation.

When the German army's general-purpose helicopters and transport helicopters performed the airborne landing under the cover of armed helicopters and carrier-based aircraft, the British army's defense line began to fall.

Although the British army deployed troops to encircle and suppress these marines. However, with the support of aerial firepower, the British army could not eliminate the German troops who landed on the position, and instead made their own losses continue to increase.

At the same time, the marines in the landing craft also rushed to the beach, and began to flank the British army with the airborne troops.

When more and more marines went ashore, the strength of the British troops stationed on the beach was constantly weakening. Even, large areas of positions have been lost.

Not only the 14th Infantry Division of the British Army stationed in Port Morin was unable to parry under the attack of the German Marine Corps. The British troops stationed at New Waterford and Lewisburg were also unable to withstand the attack of the German marines.

This three-dimensional landing method of the German army has once again achieved success.

"General, the 14th Infantry Division, the 15th Infantry Division and the 16th Infantry Division have all sent telegrams for help. Their troops have suffered heavy losses from the German attack and are about to lose their hold."

Admiral Wavell's face suddenly became very ugly. He looked at his watch. It was only half an hour since the Germans landed. The troops on the front line couldn't hold on any longer. If this continues, how long can the British troops on Cape Breton Island last under the fierce German attack?

"Order the troops on the front line to stick to their positions. Without an order, they are absolutely not allowed to retreat without authorization!" Admiral Wavell ordered.

"Yes, General. However, the German air superiority is too great. They dispatched a large number of carrier-based aircraft to attack our positions, and there are also a large number of helicopters to assist the landing force. Under the attack of superior firepower, the loss was very large."

Admiral Wavell nodded: "Telegram to Toronto again, telling them that if we cannot seize air supremacy, we will soon be defeated by the Germans."

"Yes, General."

In fact, the Royal Air Force has already acted. Under the order of Prime Minister Churchill, the Royal Air Force can be regarded as taking out all its assets. More than four hundred P-51 fighter jets and P-47 fighter jets are ready to take off. Under the order of the Minister of the Air Force, all these fighter planes took off and headed to Cape Breton Island to face the German Navy's carrier-based aircraft group and seize air supremacy.

On the battleship "Bavaria" of the German Navy, the air search radar is working. After the bombardment of Port Morion came to an end, several capital ships were still cruising in the nearby waters. On the one hand, it is ready to provide fire support to the Marine Corps at any time. On the other hand, it acts as a mobile radar station on the sea.

The German Marine Corps aggressively attacked Cape Breton Island, and it was impossible for the British to fail to respond. In order to compete with the German Navy and Air Force for air supremacy, the Royal Air Force will definitely participate in the war.

"Dididi!"

Suddenly, a siren sounded from the radar warning device. On the radar display screen, dense dots of light appeared.

"Report, I found that a large number of enemy fighter planes are rushing towards the battlefield." The radar soldier immediately reported to his superiors.

After Newfoundland fell into the hands of the German army, in order to avoid the loss of its own air force, the Royal Air Force evacuated almost all its fighters to the west of New Brunswick and Quebec.

Fortunately, the performance of the air search radar equipped on the warships of the German Navy is not bad, and it can detect the fighter planes of the British Air Force taking off in time.

The battleship 'Bavaria' immediately reported the matter to the flagship.

As a result, the aircraft carriers of the three major fleets of the German Navy began to take off carrier-based fighter jets one after another, preparing to meet the Royal Air Force. At the same time, the Luftwaffe units at Newfoundland Airport also began to take off fighter jets, preparing to meet the Royal Air Force.

The Luftwaffe dispatched to Newfoundland is the 1st Aviation Group. The 11th Fighter Wing, the 12th Fighter Wing and the 15th Ground Attack Wing have all moved to Newfoundland. The remaining 13th Fighter Wing and 14th Dive Bomber Wing will not be able to enter until the airport is expanded.

However, even the strength of two fighter wings and one ground attack wing is already very strong. In particular, the two fighter wings were the first units of the Luftwaffe to be equipped with new fighter jets.

As the German Air Force's TA-152 fighter jets began mass production, the troops preparing to be put into the North American battlefield gave priority to replacing this more advanced fighter jet than the FW-190 fighter jet. Although, the FW-190 fighter jets already had an advantage against the US Army Air Force and the British Air Force. But the performance of the TA-152 fighter is more advanced. It can be said that this fighter has developed to the pinnacle of the propeller fighter. Putting this fighter on the battlefield will definitely shock Germany's enemies.

"Guys, prepare to take off to meet the enemy. The 11th Fighter Wing and the 12th Fighter Wing each take off a brigade. Let the British take a good look at how powerful the most powerful air force in the world is!"

"Yes, sir!" The pilots replied one after another.

Subsequently, one after another TA-152 fighter jets took off from the airport. Because the TA-152 fighter is equipped with a more powerful liquid-cooled engine, the front of the fuselage looks a little slender. But this kind of aircraft is very fast, with a maximum speed of more than 760 kilometers. If you can even say it, it is definitely the fastest fighter jet in active service.

"Your Excellency, the British Air Force has dispatched. They dispatched at least 400 fighter jets to compete with us for air supremacy." A staff officer reported to Marshal Bromberg.

Marshal Bromberg frowned: "Can the navy and air force ensure our air supremacy?"

"Your Excellency Marshal, there should be no problem."

Marshal Bromberg was relieved.

At 7:50 in the morning, the air battle broke out over Cape Breton Island. The 21 aircraft carriers of the three major fleets of the German Navy each took off a carrier-based FW-190 fighter squadron to face the 400 P-51 fighters and P-47 fighters of the Royal Air Force. The two fighter brigades equipped with TA-152 fighter jets that took off from the airport on Newfoundland also rushed to the battlefield.

Although, the Royal Air Force still has an advantage in the number of fighter jets. They have nearly seventy more fighter jets than the German Navy and Air Force. However, the result of the air battle was completely one-sided.

P-51 fighters and P-47 fighters can be regarded as fighters with excellent performance. But in front of the German FW-190 fighter jets, they are all at a disadvantage. Not to mention the TA-152 fighter with more advanced performance. Coupled with the gap in the quality of pilots, the Royal Air Force is completely at a disadvantage in combat.

"Boom boom boom!"

A TA-152 fighter jet dived down from a high altitude, and the cannon on the nose fired. Several shells roared past and hit a P-47 fighter jet.

The P-47 fighter jet instantly became a fireball and fell to the ground.

The TA-152 fighter jets of the Luftwaffe also have very powerful firepower. The aviation machine guns have been canceled and all machine guns have been replaced. The nose is equipped with a 30mm cannon with 90 rounds of ammunition. On the wings on both sides, a 30mm cannon and a 20mm cannon are installed respectively. Among them, 175 rounds of 20mm machine guns are prepared.

This makes the firepower of the TA-152 fighter jet very powerful, especially for dealing with the enemy's heavy bombers.

Even though the body structure of the heavy bomber is very strong, in front of the large-caliber cannon, it still has only one life to be torn to pieces.

"God! What kind of plane is that? It's going too fast, and it's climbing too fast!" A British Air Force pilot watched as his wingman was torn to pieces.

"Are the Germans equipped with a new aircraft? How can we live with this!" Another RAF pilot complained.

Facing the FW-190 fighter jets of the Luftwaffe, they no longer have any advantage at all. Now the Germans are actually equipped with a more advanced fighter jet, which makes them even more dead.

"Da da da! Boom boom boom!"

Aviation machine guns and machine guns fired crazily, tracer bullets pulled out bright lines. It is clearly visible even in broad daylight.

Fighters were shot down continuously, and white umbrella flowers appeared in the sky.

"Your Excellency, Marshal, our fighter force has been suppressed, and the loss is very large!" A general reported to Air Force Minister Baron Cyril Neville.

Baron Cyril Neville's face is very ugly. The British Royal Air Force is not strong in the first place. The deployment of 400 fighter jets to participate in the attack of air supremacy is equivalent to taking out their old background. If you continue to invest, it is tantamount to pressing the coffin board up.

But now, what other options do they have?

"Order the 8th Air Force and the 9th Air Force to join the battle. We must defeat the Germans and seize air supremacy!" Baron Cyril Neville ordered.

"Yes, Your Excellency the Marshal!"

"Telegram the US Army Air Corps, we need reinforcements! Otherwise, the Royal Air Force will be wiped out soon."

Chapter 1680

Over Cape Breton Island, the battle between the British Royal Air Force and the German Navy and Air Force has become more and more intense, even more eye-catching than the ongoing war on the ground. Hundreds of fighter planes from both sides fought fiercely over this island with an area of only 10,000 square kilometers, and fighter planes were shot down almost every moment.

Port Morion, the German Marine Corps has defeated the troops of the 14th Infantry Division of the British Army deployed on the beach, and began to attack the city. The port area is their key target of attack. Admiral Ernst von Busch gave an order that the port area of Port Morien must be taken down, and it must be taken down as intact as possible. This is related to whether the heavy equipment of the German Army can go ashore in the shortest time.

A dozen amphibious tanks are advancing along the road, and the tanks are full of hitchhiking soldiers.

"Good job, shot down another British plane!" The officers and soldiers of the German Marine Corps couldn't help cheering when they saw the German Air Force and Navy showing great power and continuously shooting down the British Air Force fighter planes.

"How could the British be our opponents? They will only be defeated by us like a turkey."

"Okay, stop talking nonsense. The Air Force and Navy's carrier-based aircraft units are buying us time. We must take Morion Port as soon as possible." An officer said.

Although, the losses of the Royal Air Force are far greater than the carrier-based aircraft units of the Luftwaffe and Navy. However, Germany also paid a certain loss. Even, this was originally North America, the home of the British. Maybe the Americans will also join in. However, Germany has been greatly constrained in strength because of its distance from the mainland. But even so, in order to obtain favorable combat conditions for the German Marine Corps, they are still insisting on fighting desperately with the Royal Air Force.

"Sir, don't worry, Port Morion is right in front of us, and we will take it soon. The British have already suffered heavy losses, and it is impossible to stop us. Soon, we will take the The British are torn to pieces." The German marines were full of confidence.

"Report, the air search radar has found that the British have increased their troops, and more than 200 fighter jets are rushing to the battlefield. It is estimated that they will arrive at the battlefield in 20 minutes." An officer reported to Marshal Lütjens.

"Order the aircraft carrier formations to take off a squadron of carrier-based aircraft again. Since the British want to fight us for consumption, let's fight them to death!" Marshal Lütjens said with determination.

Although, all the aircraft carrier formations of the three major fleets of the German Navy add up, and the number of carrier-based aircraft on board is not large. However, they are not afraid to compete with the British for consumption. With Newfoundland already in their hands, they can also get support from the mainland at any time.

The German Navy can send more carrier-based aircraft to the front line through Norway, Iceland and Newfoundland.

Similarly, the German Air Force can also be supplemented in this way.

And, when the German Air Force completes the expansion of the airport on Newfoundland and builds more airports, it will be able to deploy more aircraft here. At that time, the carrier-based aircraft units of the German Air Force and Navy will be able to fully control the air supremacy of this airspace.

When the navy's carrier-based aircraft force sent additional reinforcements, the German Air Force's 1st Aviation Group also sent additional reinforcements. Two battalions of fighter jets took off.

This time, the German side sent more reinforcements than the British side. In addition, the situation on the battlefield was already very unfavorable to the Royal Air Force. So far, the number of fighter planes lost by the Royal Air Force has far exceeded that of the German Air Force and Navy carrier-based aircraft forces.

"Boom boom boom!"

A P-51 fighter was bitten by a German TA-152 fighter, and several cannon shells roared in, instantly disintegrating the P-51 fighter in the air. The pilot was also killed on the spot, and he couldn't even parachute.

"God! Kevin was killed." A pilot of the British Air Force said in horror.

"Idiot, don't worry about this, focus on me. Otherwise, you will be the next to be killed!" The squadron leader cursed.

"Sir, I was bitten by the Germans. They are very fast and maneuverable, and I can't get rid of them!" A British pilot's tone was full of panic.

"Dive down low and see if you can outrun the Germans."

"Idiot, don't dive, the Germans will take advantage of the opportunity to open fire!"

However, the reminder is still a step behind. When the P-51 fighter jets of the British Air Force began to dive, the FW-190 fighter jets of the Luftwaffe immediately launched an attack.

"Da da da!"

The aviation machine gun fired dense bullets, and the bullets punched the P-51 fighter jet with bullet holes all over it. If it was elsewhere, it might not be fatal. But the engine was shot, and it was all over.

P-51 fighter jets dragged billowing smoke and fell to the ground. The pilot did parachute in time, but the fighter plane fell to the ground and became a pile of burning fireballs.

"Shit, **** his new fighter. German, I must shoot down your new fighter!" A British pilot was driving a P-51 fighter, biting a TA-152 fighter tightly. No matter how the TA-152 fighter maneuvered and evaded, it could not be thrown away.

A few minutes later, the TA-152 fighter seemed to give up resistance.

"Haha, German, I'm going to shoot you down soon!" The British pilot laughed excitedly.

However, the bullets that fell from the sky penetrated his glass cockpit, the bullets hit his body, and blood shot out from his body. The strength in his whole body seemed to flow away with the flow of blood.

Soon, he felt that his eyelids were getting heavier and heavier. By the end, the whole eye is closed.

The plane lost control because the pilot was killed, and fell directly to the ground.

"Your Excellency, Marshal, we are still at a disadvantage in the air battle. More and more fighter planes are lost, and the sky on Cape Breton Island is about to be completely occupied by the Germans." An air force general said to Air Force Minister Cyril Neville The Baron Marshal reported.

"I have no choice. The Royal Air Force has sent out all the troops capable of fighting. Except for an air force defending Toronto, Qi Meng has no troops." Baron Cyril Neville looked very helpless.

Although he knew that the losses on the front line were very large, he had no way to send more reinforcements.

"Where are the Americans? Have they dispatched fighter planes to reinforce us?" asked Cyril Baron Neville.

"Your Excellency Marshal, the United States has agreed to send fighter planes to reinforce us. However, no fighter planes have joined the air battle yet." The general replied.
