

KRYPTONIAN: MAN OF STEEL

Chapter 8 New superpowers!

Kryptonian genes are technically blocked. If other people study them, it is easy to develop Doomsday.

It can even be said that Doomsday is a protective measure for Kryptonian genes. Super-fast evolution speed + immortal body = the embodiment of destruction!

This is enough to destroy all enemies who try to study Kryptonian genes.

You said that Lai Bald can clone... that can only be said to be required by the plot.

Luther is not interested in Marvel's plot. He is thinking about studying himself so that he can break through.

At the very least, if he can obtain Doomsday's ability to adapt to evolution at super speed, he will not be afraid of any enemy.

It's a pity that these Doomsdays are just ordinary Doomsdays, not the truly immortal ancient Doomsday, and they may still be killed.

Through the relationship between the military and the Ministry of Defense controlled by his hypnosis, Luther got a variety of high-tech instruments. Even with the assistance of a super brain and super vision, Luther still needs these instruments, such as operations such as cultivating Kryptonian cells.

In addition, Luther also obtained a large amount of precious knowledge and technical drawings. These things were originally one of the sealed World War II black technology drawings, which belonged to the "theoretical science" that humans have not been able to achieve until now.

"Unfortunately, if I had a Kryptonian spacecraft, I would not have to start from zero like now, but I don't know when I can break through zero and reach 1."

Luther forgot to eat and sleep... He didn't need to eat, just bask in the sun.

He studied Kryptonian genes and cells and learned day and night.

With the help of the super brain, Luther took less than an hour to learn all the knowledge of human genetics, and he also completed the programming learning and created his own artificial intelligence.

"Megatron, how is the sample?"

Luther asked his artificial intelligence.

"BOSS, sample No. 10,000, all reacted normally at present, and there was no abnormality."

Megatron said calmly.

"... Destroy all the samples and cultivate new samples again."

Luther held his forehead, why did it fail? If the reaction was normal, it would be a failure.

What he wants now is to get some Doomsday cells out and study Doomsday cells!

Therefore, normal cells are meaningless to him.

Megatron strictly followed Luther's order and inactivated and completely destroyed all Kryptonian cells.

Kryptonian cells have very strong viability and survival ability. Unless the Kryptonians themselves die mentally, they can be resurrected by just basking in the sun.

But it does not mean that they cannot be completely destroyed. If the power is enough, everything can be destroyed.

Luther sighed and enjoyed the sunshine.

The energy of the cells was also fully filled.

Then Luther frowned, and he awakened new superpowers!

This is not surprising. Even if Luther has awakened all the abilities of the movie version of Superman, it does not mean that he will not awaken other superpowers.

After all, even the universe is different. Who knows what the laws of Kryptonians here are.

The reason why Luther frowned is because it means that uncontrollable variables have appeared.

The Kryptonian rules and all information he is familiar with may be subverted.

"The ability is... crossing?"

Luther widened his eyes, crossing?

Crossing to where?

Is it like the super Kryptonian Hale who travels through time to go back to the past or change the future?

Or is it the kind of travel he knows?

If so, where will he travel to, the DC universe?

Can he come back after traveling?

Luther doesn't know all this, the uncertainty of this superpower is too great.

"It shouldn't be traveling through the world, anyway, my current energy level and magnitude can't support the power of traveling through the world... at least wait until I reach the single universe level and the father level, right?"

Luther scratched his head and thought hard.

However, he was very curious.

He was so curious that he was almost scratching his lungs.

"Let's try it, it's better to figure it out, so as not to keep thinking about it. If so, I can't concentrate on research."

Luther decided.

Just in case, he made himself a battle suit with sufficient sunlight energy built in, not for protection, but to allow him to replenish energy at any time.

What kind of protection does the body of a Kryptonian need?

The best protection is the double protection of the body of steel and the biological force field.

As long as there is sunlight and the energy in the cells is not exhausted, everything will be fine for the Kryptonians!

"Come on, travel through time!"

Luther activated his superpowers, and with the feeling of a blender, he seemed to be stuffed into an extremely narrow passage, and his whole body was crushed. The Kryptonians' powerful steel bodies and biological force fields were as fragile as tofu.

In an open space, a pile of meat paste appeared out of thin air with a "pop" sound and fell to the ground.

After the warm and bright sunlight shone on the meat paste, something strange happened. A skeleton hand bone stretched out from the meat paste!
