

## ***Kryptonian 80***

### *Chapter 80 Nothing*

There is no sound in the universe, so you can only see the black hole exploding and thousands of stars shining with astronomical light!

Luther was swept away by a powerful energy shock, but he stood firmly on the spot and felt his power growing rapidly!

"Just released a full energy output, and the result became stronger again..."

Luther was surprised at his current terrifying growth rate. Is this considered opening the limiter?

But that's not enough, he needs to build the most powerful void engine, and then redefine his own genes, so that he can create the strongest Kryptonian in the entire dimension!

"Void particles!"

Rudd set out to capture all the tiniest particle movements of black hole explosions.

These microscopic particles were flooded in large numbers, and they collided with each other, triggering a more powerful energy explosion. Luther held his hands and ignored the bombardment of these energy particles. Even in the microscopic realm, he was invulnerable.

"Strange, no? Just discovered the dark element?"

Luther soon discovered something was wrong. At this time, the black hole's explosion had ended. Essentially, it was impossible for a black hole to explode. It would only evaporate or annihilate. Even these were just human guesses and conjectures.

It is impossible for humans to know what will happen when a real black hole dies.

The evaporation or annihilation of a black hole will produce a reaction that is more exaggerated than a supernova explosion and will not subside so quickly. Even in the field of microscopic particles, various microscopic particles are moving crazily. However, Luther's super brain has calculated and analyzed all microscopic particles. particle.

There were no void particles he wanted, but a large amount of dark elements appeared, which is a substance called void matter.

"What's going on? Can we only use stars to explode black holes? Qi with the same energy level or even more powerful can't be used?"

Luther was puzzled.

It is not impossible. After all, with the strength of Death God Carl and the Big Clock, the most powerful celestial level supercomputer in the known universe, it should not be difficult for Death God Carl to create an energy comparable to the explosion of stars and the explosions of tens of thousands of stars. .

Even if it is simply driven by dark energy, it is not impossible to produce such a huge amount of energy.

Light energy is infinite, and dark energy is also infinite, even more infinite than light energy.

"Gas can also be converted into energy like stars, it's just nuclear fusion."

Luther thought thoughtfully. In the end, he chose to wait patiently. Maybe the void particles have not appeared yet, but they will appear after a while?

His explosion of black holes was quickly discovered by the major super-god civilizations in the known universe.

But any super-divine civilization with celestial supercomputer has the ability to detect the situation of the known universe, let alone such a big change as a black hole explosion.

"The black hole of the Moss galaxy was destroyed by a powerful energy explosion?"

The explosion of the black hole was detected by Carl's big clock.

"Is it the Lieyang civilization?"

Death God Karl guessed, but he has not yet brought up the matter of cooperating with the Lieyang Civilization to blow up the black hole. He is just cooperating to take the Holy Kesha offline.

"No stellar reaction detected."

The big clock gives results instantly.

All stars are intact and are not being driven to explode black holes.

"Detecting void particles."

Karl, the god of death, thought for a while and gave an order to the big clock.

"Detection completed...no void particles detected."

No void particles?

Death God Karl didn't know what was going on for a moment, and after thinking about it, he issued a new command.

"Detect the void quality!"

"Detection completed...The Moss Galaxy has transformed 0.00000...1% of the void matter."

The terrifying mass transformation of a black hole celestial body into void matter, even if it is insignificant, is still a lot of void matter.

The god of death, Karl, then asked the big clock to collect these void matter. Although he didn't know why there were no void particles, the void matter was enough for him to build a large number of new void weapons, void devices, and void engines.

"Black hole explosion?"

Holy Kesha immediately checked the stars near the Moss galaxy and found that these stars were all normal. She checked the known universe with uneasiness and found that there was nothing strange about the stars except that some of them were excessively dim.

And those dim stars have only had their energy extracted, not enough to explode black holes.

"Is it a natural phenomenon?"

Holy Kesha smiled, this must be impossible.

Everything in the known universe is calculated by the celestial supercomputer. This possibility is only possible in the marginal space. There must be no chance in the known universe, and all results are calculated by the celestial supercomputer.

Otherwise it would not be called the known universe.

This is also a very outrageous place in the world of Super Theological Seminary. Ninety-nine percent of the things in the known universe can be calculated clearly and clearly. What cannot be calculated clearly is due to supercomputation interference from other celestial bodies.

"It seems that Karl's grandson is trying to find a replacement for the star?"

He Xi's body is connected to Holy Kesha, and both of them are discussing the truth about the black hole explosion.

"Can't wait?"

Holy Kesha found it very interesting. Could Death Carl not wait for her to go offline, or was he provoking and misleading her?

"The grandson of the God of Death, Karl, probably doesn't have any good intentions, you man woman."

Hexi felt something was wrong.

"Don't worry, old goblin, nothing will happen to me, and nothing will happen to me. Don't you still believe in the scientific and technological achievements you have made over the years?"

Holy Kesha said with a smile.

She has confidence in Hexi's technology, and is also interested in the purpose and plan of the God of Death, Karl. She is even more curious about the thoughts and calculations of her stupid sister and the equally ignorant and arrogant Lieyang Civilization.

Holy Kesha will not be afraid of any challenges and dangers, and must not ignore them. Otherwise, her reputation and the prestige of the angelic civilization will be greatly reduced.

All it took was for her to back off once.

This is why Morgana and Death Karl are so sure that Holy Kesha will definitely step into this plan.

She gave it a chance herself.

"It's good that you know."

He Xi was very proud.

"Old goblin, I can rest assured that you will be in charge of the angelic civilization while I am away."

Holy Kesha suddenly said.

He Xi didn't hear anything, and he didn't intend to tell Holy Kesha that he planned to go to Blue Star.

She wanted to give Morgana and Death Karl a little surprise.

If she suddenly appears then, will Morgana be scared to death by her?

Holy Kesha hung up the dark communication.

"Black hole..."

Holy Kesha looked meaningfully at the results calculated by the sacred knowledge treasure house.

The void quality is much less, probably because it was taken away.

So this is really the work of Carl, the God of Death?

Luther observed microscopic particles and changes in the macroscopic realm for a long time, but found that neither void particles nor hairs were visible.
