

Lord of War 66

Chapter 66: .catalytic

Shaun's back figure, gradually sneaking forward, his footing seems to be heavy and light, and every step is very stable.

Alfred and Cecilia glanced at each other, and they could see the confusion in each other's eyes.

How do they know that Sean knows more about Crypt Ice Spider than anyone in this world. The silver threads near the crypt ice spider lair are actually all ice spider silk, and the ice spider queen uses these spider silks to sense whether there are other creatures entering her territory, and they return according to the spider silk feedback. Trembling, the ice spider queen can even distinguish the general strength of the offending creature.

However, the monster has its own ai, and the player is not without it. As the saying goes, there are policies at the top and countermeasures at the bottom. In the game, a thief player discovered a way to fight against the ice spider silk. This method can even sneak into the core of the crypt ice spider queen's lair without knowing it. Through a series of improvements, this method is naturally no longer limited to thieves players.

Sean, this is the technique used at the moment.

Ice spider silk looks light and thin, but in fact it is very tough, so it is actually very sensitive. If a person walks on it and steps down too hard, it will cause the ice spider silk to tremble, and through the trembling of the ice spider silk, the ice spider queen can naturally find the situation, so the lighter the foot, the more cautious. The less likely it is to be discovered, of course, the way to settle down is a bit particular.

Foot point, the heel must fall first, and the center of gravity can be stabilized before the soles of the feet can then fall flat.

Most people naturally need to be careful when they walk up, but it is not the first time that Sean has visited the ice spider lair, so the speed is naturally not slow.

In a short while, it had disappeared in the eyes of Cecilia and Alfred.

The air freezes instantly.

"I'll go and see." Alfred was silent for a while before finally speaking, and after thinking about it, he changed his words: "Let's go and see."

Cecilia smiled sweetly.

The two set off immediately, but seeing Sean walking so cautiously on the silver-white carpet of ice spider silk, Cecilia and Alfred naturally did not dare to take lightly. But even if the two of them are really talented, they can see the focus of Sean's footsteps at a glance, but this is the first time to try this way of walking, and it is somewhat unaccustomed to it, so it is natural to walk. slow.

Sean didn't know what was going on behind him, his pace was steady and fast, and in an instant he had left Cecilia and Alfred far behind. The dark corridor could not stop Sean's steps. He knew exactly what kind of place the ice spider lair would look like, and he knew more about the value of the ice spider silk on the floor of the ice spider lair. He only hated I am not good at collecting, otherwise it would be a good deal to collect these silver threads on the ground.

In the tunnel, the chill is getting stronger and stronger, as if you are in the southern iceland. Not only the exhaled breath is frosty white, but even the air seems to be frozen here. The white ribbons visible to the naked eye are fluttering in the air, and the touch of the face turns into ice water.

In front of , the silver-blue light gradually intensified, and the dark corridor became a little brighter.

However, as the pace moves forward, the silver-blue light also begins to become like breathing, breathing is bright, and breathing is dark. And what is even more strange is that after entering the place where the light shines, the bone-to-heart chill disappears, as if stepping from the winter into the warm spring, there is a sense of refreshing mind and body. And the stronger the silver-blue light, the stronger this feeling of physical and mental comfort.

However, Sean's face became more and more serious.

Knowing the situation of the ice spider lair in the Crypt, Xiao En naturally knew that the silver-blue light like breathing was actually the fetal movement of a spider egg.

The fetal movement of each spider egg corresponds exactly to the rhythm of a human breath. This is the response of the crypt ice spider young spider that is in the incubation stage to absorb the power of external elements. Moreover, the more spider eggs, the stronger the influence on the elements will be, and the greater the resonance effect will be. Naturally, the silver-blue light emanating from the spider eggs will be stronger.

So in the crypt ice spider lair, the brighter the silver-blue light, the stronger the feeling of physical and mental comfort, which means the more spider eggs in this lair.

Not long after, Xiao En came to the entrance of the tunnel.

I saw it, and the shock in my heart became more vivid.

This is a huge cave comparable to a football field, but it is not formed naturally, but has very obvious artificial traces.

The flat stone platform is divided into four levels like terraced fields. The lower the fourth level platform, the lower the temperature. There are only a few dozen spider eggs placed on the lowest level platform, all of which are immersed in black water. Seeing that the black water did not freeze into ice, Xiao En knew the origin of the black water was not simple. And dozens of spider eggs were placed on the second-level platform, but the light flashing in these spider eggs was uniform and uneven, and some of them were about to dim.

There are even more spider eggs placed on the third level platform. There are hundreds of them. The densely piled scene seems to be enough to make anyone with dense phobia feel a scalp numbness and fear. On the contrary, there are no spider eggs on the fourth-level platform, but there are dozens of ice sculptures, which seem to be frozen by magic. Under such a low temperature environment, if you encounter this kind of attack, I am afraid that these dozens of people are dead. It's fixed, there is absolutely no reason to live again.

With only a glance, Sean could already see it.

This is indeed a crypt ice spider's lair, but it is not a lair constructed by the crypt ice spider queen.

It's a artificially excavated crypt ice spider breeding place!

But it can be arranged so as to be almost the same as a real crypt ice spider lair, which is enough to prove the extraordinary means of this person, of course, it is more of the rich financial resources behind it. You know, ice spider silk is not something that is easy to obtain. It is a magic material that can only be collected in the crypt ice spider lair, and this ice spider silk is also very different from ordinary spider silk. Spider silk must be sprayed out by the ice spider before it can be useful. The spider silk sac inside the crypt ice spider directly picked is useless.

Shawn was full of horror. He watched with bated breath, and soon discovered that several humans were walking in this huge cave.

These humans have dark skin, and their skin looks like a rock-like hard texture. They don't carry weapons on their bodies, and they wear very simple clothes. They are even simpler than Alfred's coarse linen. They seem to be just some kind of The animal skin was thrown on the body indiscriminately and it was finished.

Crypt Demon!

Sean recognized the identities of these people at a glance.

According to the official background, the Crypt Demon are the descendants of the people of the Ash Age who were born after hiding in the ground. Perhaps it is because they heard the ancestors talk about the beauty of the surface world, so the Crypt Demon has always been longing to come. On the surface, the humans on the surface do not regard them as races at all, but rather as monsters, so the underground people and the surface people naturally broke out racial conflicts because of this.

At this time, these crypt devils got together and seemed to be discussing something, because the distance was so far, it was naturally impossible for Sean to hear them. However, after a while, these crypt monsters dispersed. They searched for something in the spider eggs on the third-level platform, and then suddenly picked up a few crypt ice spider eggs, as if knocking. Eggs generally smash the fragile shell of the spider eggs, and pour the viscous liquid inside onto the surrounding spider eggs, and the silver-blue light in those spider eggs suddenly becomes brighter.

After all the spider eggs on the third layer were showered, a few people picked up the best and largest spider eggs on the third layer, went to the second layer, and smashed them in the same way. Then I poured the liquid on the second layer of spider eggs that had relatively strong silver-blue light. At the same time, I did not forget to break the spider eggs that were not very strong inside. On the egg.

After finishing this step, several Crypt Demons gathered together again and said something, and saw one of them pick up the two largest ones in the second layer, and then walked to the first layer of the spider eggs soaked in black water. Side, smash it completely. This time, what came out of the spider eggs was no longer a viscous liquid, but black water like ink, and there was a refreshing chill that permeated the spider eggs. In an instant, there were dozens of spider eggs on the floor. A small piece of milky white ice was frozen on the side.

But it didn't take long for the ice to melt, and the dozen or so spider eggs in one layer bloomed with a silver brilliance, but there were strong and weak. The crypt demon observed for a while, and when the light from the spider egg dimmed, he picked out the few spider eggs with the dimmer light just now, and repeated the first steps, repeating this twice. There were only six spider eggs soaked in black water on the first layer.

After all this was done, the crypt demon walked back and gathered with a few others, but this time there was a clear excitement on their faces.

Sean, who watched them finish all of this, was horrified: these Crypt Demons actually wanted to directly catalyze a Crypt Ice Spider Queen!

The birth of the Crypt Ice Spider Queen requires a long and complicated process. Once born, the Crypt Ice Spider Queen can produce about 3,000 eggs a year similar to those of the first layer of high-quality spider eggs. It is equivalent to the third level of Warcraft. And if it doesn't produce this high-grade spider eggs, but the second and third layers of monsters that are similar to the second or first level, the output is even more terrifying.

Moreover, the Crypt Ice Spider Queen is not the pinnacle of the Crypt Ice Spider Clan. If the Crypt Ice Spider Queen can transform into the Crypt Cold Spider Queen, it is even a level six monster, and the spider eggs it lays are not. Crypt ice spiders are crypt cold spiders, but they are all four-level and five-level beasts. And not to mention the Crypt Cold Spiders, only the Crypt Ice Spiders, if they are domesticated by the Crypt Demon, they can be "transferred" into the fearsome ice spider riders in the dungeon world.

That is a standard dungeon special Tier 5 job!

Looking at the tactics of these crypt devils, Sean couldn't help wondering, how could a group of expelled crypt devils get so many ice spider eggs and carry out this kind of catalytic work? Moreover, looking at the appearance of these crypt demon, it is obvious that there is no magician, and the dozens of human ice sculptures on the fourth-level platform are the most obvious magician's handwriting.

Just when Sean had doubts, in a cave on the fourth-level platform, there were two wounded crypt demon protecting a very embarrassed magician and retreated.

When Sean saw the magician at the first glance, he immediately knew who the masterpiece of the Catalytic Ice Spider came from.

Medusa Chamber of Commerce!
