

## **M Factory 201**

### [Chapter 201: The headline is gone](#)

Without the order of Director Tang, the workers on the site had already rushed to this place.

The occurrence of vehicle equipment falling into the deep pit or foundation pit, although rare, has been seen by people who have been present in the construction site all the year round, or have heard similar situations.

The construction site is full of mechanical equipment. When such a thing happens, excavators, cranes, and cutting machines often support each other, and the efficiency is faster than that of firefighters.

The current situation is a bit cumbersome. This concrete truck loaded with concrete has been plunged into a four-meter deep foundation pit.

The foundation pit did not reach the bottom of the well.

Even if a crane comes in, it's very difficult to hoist the mixer, which has a full load of over 40 tons and is firmly trapped in the steel mesh.

In less than thirty seconds, more than 30 workers have jumped. They reached into the bench-sized steel mesh and held a handful of concrete to scatter it outside.

The planks that were still coming in were not suitable, and the workers took off their work clothes and stuffed them into the grid.

The workers above were rushing through the wires and tied the cutting machine with ropes.

However, the rope was not pulled yet. The Mechanical Colossus Type I, which was shooting a propaganda film next to them, waved two robotic arms and rushed at the maximum speed.

The whistle rang, the workers on the side, subconsciously gave way to this equipment.

Two enterprising excavator drivers, also driving the excavator, rushed over. The ramp is sixty degrees, and they feel that with the support of the buckets, they may be able to take the cabin out the foundation pit.

As for what to do, they didn't think so much.

The first to stop on the side is the Mechanical Colossus Type I when the crawler is completely stopped, it has been suspended for one meter. Superb driving skills, the workers have erect hair next to the towering.

" crack; snap ; "

The right arm of the Mechanical Colossus Type I is switched into a broken shear, which is then inserted into the four-meter deep foundation pit together.

The two robot arms are supported, and the crawler moves slowly. The arms of the Mechanical Colossus Type I went into the profound pit without any effort.

"it is good!"

This kind of flowing water, The superb skills of the mechanical exhibition competition make it possible for the workers at the excavators, or the ground workers, to clap their palms.

The two tracks of the Mechanical Colossus Type I were pressed directly onto the turning concrete mixer.

"At once, everything, everyone scatters." Ye Qing roared to everyone.

Director Tang, who was digging the concrete by hand, looked up, nearly burst the heart by excitement. Immediately, joined hands and feet and kicked at the workers who were still stunned.

The concrete has been extended to the position of the cab. Fortunately, crevices in the cab have been blocked by workers using their overalls.

After the clearance was completed, the cutting wheel on the left arm suddenly gave off a horrible high-speed rotation.

"Whin-ning"

The air is split, and the cutting wheel is in contact with the reinforcing mesh around the cockpit.

Everyone subconsciously grabbed his ears and blew his hair.

A spark waterfall, bursting at the point of contact. The thick watermelon was cut open instantly, and the fracture was magma-like flaming.

This is the high temperature caused by the intense friction of the metal!

The robotic arm on the right, manipulating the broken shears, attacks the girders of the mixer truck.

The alloy steel girders are cut and broken.

Director Tang and all the workers have been completely petrified. Cover their ears with their hands and even pause for a while.

"What kind of equipment is this?" They are screaming in their hearts, and they are screaming in their thoughts.

Until the whole cab, was lifted by the Mechanical Colossus, Tang was in the air.

Director Tang "Ah!" With a loud voice, the intense tension in the heart was released.

"Good!" "Good!" "Good!"

The thoughts of the nearby workers were also unlocked one by one. They screamed and screamed, and their rough hands clap.

These applauses are connected together, a powerful voice, and the moments that people hear, they can understand how happy they are at this moment.

"Director, what equipment is this? This is a device that is only available in science fiction movies!"

Standing next to Director Tang, a young, dark-skinned worker, he grabbed Tang's arm and shook it like a tractor he could not control himself. He could not restrain his mood at all.

"Science fiction movies are all bragging. Can they make such equipment and make a ghostly sci-fi movie?"

"This is called the mechanical giant. Have you not seen the gleaming nameplate?"

"Is it made in Germany?"

"You are awkward, don't you see the Chinese characters above? This is made in China."

"Director Tang, you will report to the top. We have to set up two hundred of these types of equipment on the construction site. I promise that the South Station will be completed in one month."

"You are playing, I will report in the afternoon." In the eyes of Director Tang, all of them are just the mighty style of the mechanical giants copying the guys to dismantle the cars.

He feels that his own desire for possession is stronger than the man's primitive impulse to women.

"Big Brother, you are going to let me down." The workers on the side were applauding excitedly, and the driver's cab, the unlucky man who drove the mixer into the foundation pit with one foot of the throttle, was not so excited.

With a seat belt fixed, he did not suffer too much damage.

However, his mental damage is not small, especially when he is fixed in the cab through the front of the glass. The gaze can be on the cockpit of the mechanical giant, looking straight at his gaze.

"You have a puppy day, you explain to Laozi, a good straight road, how did you drive the mixer into the pit?" Director Tang wished to take the shoes off and killing him.

The production teams of Zhongyun TV are beating their breasts and stamping their feet one by one.

They are regretting, they are upset!

They also ran with the workers upon the first time of the accident.

This is not because they have forgotten their professional ethics, and don't shoot news material.

But because this mixer falls into the foundation pit, it is not hardware worthy of the news.

There were too many accidents on the construction site. This stuff is going to be the best news, and this car accident is the first to refuse.

But as the rescue is in a state of intense tension, concrete is about to flood into the cab, and the Mechanical Colossus descend from the sky, and the savior will cut the entire head of the car.

The subject matter has become different.

This can be a headline!

People who have seen the mechanical giant?

This kind of rescue efficiency has simply broken through the sky and came to the rescue of the hundreds of people on the construction site. The mechanical giant used only one minute.

The girders are cut like sugar cane producing sparks.

Who has seen this scene?

As long as these video pictures are processed by suspense, the next two diggers are just halfway down, neither down nor up.

The person in charge of the filming work believes that the ratings of cloud TV stations in the next two days will definitely burst.

### [Chapter 202: Water Bungalow](#)

Headline!

Digging deeper into this news can be done as a topic.

Visit the rescued driver and interview the two excavator drivers for the complex mood.

Then interview the driver of the mechanical giant, the manufacturer of the mechanical giant. It is guaranteed that the audience in front of the TV will talk for a few days before and after the meal.

Bringing defeat Xiao He!

The horror efficiency of the mechanical giant made them have no time to go to take the camera equipment.

Without real-time live video, it means that there is no "gunpowder barrel" that detonates the audience's emotions. Even if they did the best of the visit, the audience still couldn't feel the short one minute, so it was thrilling.

The staff at the TV station are going to look for the workers to try their luck and see if they use their mobile phones to record the rescue scene.

In turn, they found a portable HD camera that was focused on the cab.

The user of the camcorder is a beautiful girl with long hair fluttering and skin like snow.

Her name is Baidouer, and she is a new member of Zhongyun TV.

The cameramen looked at each other and turned their heads, and the professional's ability to respond could not keep up with the amateur...

In fact, this can't blame them for their slow response. When the mechanical giant moved, they can't think of what will happen later.

Different from each other, she has confidence in Ye Qing and naturally has confidence in this product.

The mechanical giant was ready to participate in the rescue.

She first thought of shooting the whole scene because it could promote Ye Qing's company products.

The entire rescue scene was filmed very clearly.

Even the wonderful expression on the driver's face and the applause of the workers were recorded.

Her photography level is also professional, and it is exercised when the outdoor food program is broadcast.

" The Mechanical Colossus Type I is ready to go on sale on the 1st of next month, I have heard Ye Qing said about it."

"Now that we have excellent publicity materials, we need to ask for Mr. Ye Qing's opinions. Should we wait until the first Mechanical Colossus supernatural is officially launched for sale before arranging the noon news broadcast?"

.....

After the publicity film was busy, Ye Qing was busy with the installation of scientific and technological products in Pulanda Water Resort.

Originally this kind of thing, Ye Qing can't go.

Whether it's hard work or the company's successive training, the exterior installation staff who are very familiar with mechanical chairs, they can complete the installation work with ten degrees of certainty.

Ye Qing wants to go, even in hot weather, if he goes out for a turn and he sweats all over, he will go there too...

Because Ye Qing wants to see what is called capitalist enjoyment, but also by the way for his future luxury housing construction, adding some inspiration.

When driving to Xiaoping Lake, Ye Qing specially set up a casual dress with a beach style.

Xiaoping Lake covers an area of about 1.4 square kilometers. Ye Qing whispers and parks the Lagonda in the parking lot of Xiaoping Lake. Suddenly there is a feeling that he does not want to leave.

The hotter the weather, the hotter the business in the Lake.

Xiaoping Lake is a riverside of the Blue River, it has clean water and a white sandy beach. It is the best place to swim in summer.

Now, in the huge parking lot, there are no less than three hundred and two private cars parked.

Ye Qing got out of the car and buckled a sunshade cap on himself. He found that it was a swimsuit exhibition here.

Many girls, directly in the car, take off their coats, reveal their proud figure, and invisible beautiful swimsuits.

When they pushed the doors one by one and walked happily and laughing towards the beach of Xiaoping Lake, who knows how many men, like Ye Qing, scanned them like radars.

Don't ask Ye Qing how he knows these girls, they went directly in the car to take off their coats.

The beauty here is beautiful, and the scenery is more beautiful!

On the east side of the lake, brown wooden houses stand on the water. Pure wood, with a little original meaning of the water cabin, perfect and Xiaoping Lake scenery into one.

After removing the data glasses, Ye Qing could not see any trace of scientific and technological equipment at all.

Enjoy all the way, walk all the way.

When Ye Qing was walking to the Pulanda Water Resort, a circle of low-walled walls surrounded by beautiful white stones stopped Ye Qing's footsteps.

It is very simple to get in. The government has special people here to take care of the work.

After greeting, the workers went to install the products, and Ye Qing himself picked a wooden water house to visit.

These wooden houses are all made of eucalyptus, with a golden color and irregular longitudinal cracks.

Just as he pushed the hanging louver door similar to the western cowboy bar style, Ye Qing smelled a faint scent in the air.

The natural light fragrance of this wood, in addition to refreshing and refreshing effect, also has an effective deworming effect.

Mosquitoes and flies are the most headaches in summer, but here, don't have any mosquito-repellent mosquito nets, and don't worry about mosquitoes.

Walking into the interior, the style changes abruptly.

The porch is a huge cluster of fiery red corals. The living room is not a pure camphor wood floor imagined by Ye Qing, but a pure white beach.

On one side of the pure white sand beach, there is a spiral staircase entrance, which seems to lead to an unknown mysterious world.

When Ye Qing walked into the spiral staircase with a little confusion, he found that there was an underwater swimming pool made of glass.

The wooden house is above the water surface, the swimming pool is slightly below the water surface, the sun is swaying in the water, and the various landscape fish are naughty and colliding towards the transparent glass.

"My God..." Ye Qing covers his eyes, not to mention that women can't refuse this kind of environment, for they can't refuse it.

It was not easy to resist the impulse to swim. Ye Qing looked around the main bedroom again. As a result, Ye Qing was relaxed and happy.

The top of the main sleeping head is full of adjustable color glass. There are knobs at the head of the bed to adjust the brightness.

Even in the sunny summer, Ye Qing can enjoy the sky while avoiding the trouble of ultraviolet radiation.

The bed is a heart-shaped fluffy bed, and it's very comfortable to lie in because you don't know what's stuffed in it.

Ye Qing passed the data glasses and silently recorded the laser engraved nameplate of the manufacturer at the corner of the glass.

In the future, Ye Qing will also use this kind of adjustable color glass as the roof when he builds his own luxury house.

Living in this kind of environment will make Ye Qing have the illusion of prolonging life.

When Ye Qing finished his visit and was ready to leave, the manager of the resort sincerely invited Ye Qing to stay for a night.

Ye Qing refused, the environment is good but these days at the factory, the assembly of Mechanical Colossus Type I in the production phase, after the 1st of next month, it is not too late to experience again.

The busy time always passes quickly. In the evening, Ye Qing is in the assembly workshop, together with the master artisans, doing the pipeline coordination detection.

Tang Jian, the boss of Jinmei Chemical Company, also began to quietly and busy.

Under Tang Jian's frantic efforts, the layer of 2,000 tons of polyvinyl alcohol dissolved, and mixed with the chemical sewage colloid layer, was finally shoveled up.

These extremely difficult pollutants, as well as the harmful substances left over from the drying up of chemical wastewater, are all piled up in a dock at the mouth of the Blue River.

This dock is used to carry out cargo transit on weekdays, and his master is also not a serious businessman.

A bulk grain carrier with a boom is moored in the dock. More than a dozen workers with disposable gas masks are constantly hoisting the packaged hazardous chemical waste into the cabin.

### [Chapter 203: Private boats on the Blue River](#)

The Blue River is the seaport of Zhongyun City. The largest freighter can take 5,000 tons.

After the freighter enters Tianyun Lake along the Blue River, there are three waterways to choose from, and the farthest can run to more than 500 miles away in Liangjiang City.

The owner of the dock is Hai Chengyu, an old expert in transporting illegal materials through the river.

He has a regular grain transport company under his name. Now the farmers have just harvested wheat for a month. It is a good day to harvest and transport grain.

The river transportation of Zhongyun is not developed. There are all kinds of highways and railways, and there are large harbor terminals. The river transportation will naturally be left out.

Of course, this has something to do with the low carrying capacity of the Blue River.

When the river transportation is neglected, the inspection of the natural river transportation it is also reduced.

The grain handlers in the dock can carry up to 3,000 tons, and now the tanks are filled with harmful chemical pollutants.

The workers covered the entire cabin with plastic ponchos and waited until two o'clock in the middle of the night. The grain transport ship sneaked off the dock.

The speed of grain carriers is very slow, only thirteen knots.

"Captain, don't you send a boat and navigator in the front?"

Looking at the grain carrier leaving, Tang Jian, owner of Jinmei Chemical Company in the dock, whispered his doubts: 'The last time when Huang Jishan Huang took the goods, he would have fallen behind if he hadn't driven ahead to lead the truck.'

"Send the boat to lead in the front?" Hai Chengyu laughed and laughed: "You are too exaggerated by the boss Huang Jishan. I have navigated hundreds of times in the Blue River and never let a navigator in the lead."

"Boss you don't understand. The river transport is no better than land transport. It is often the case that land transport was inspected."

"The river transport is different. Once the ship navigates, it is not an easy task to stop."

"The ship inspection is carried out at the dock, such as mine. When the ship arrives at the dock, the Marine Police will board the ship for inspection."

"Nobody reports, there will be no water police on the road to stop the ship inspection. Because we are a grain transport ship, not a fishing boat that likes to illegally fish, and no a sea sand collecting ship that secretly collects river sand."

Tang Jian is not familiar with Hai Chengyu. Listening to Huang Jinshan's tone of voice so confident, that he has some doubts in his heart and looks down on the pride of this fellow.

"Of course, Mr. Tang, you are a layman, and you don't know the way of our business." Hai Chengyu had sly eyes and smiled smugly, and some laughed proudly: "Although I have no navigator in the lead, I can still keep you safe and sound all the way."

"Because on the shore highway, I had my men driving around the river. Especially at the gate of Tianyun Lake, when there is an inspection, the people on board will be able to receive information."

"Then I can rest assured ~ha-ha!" Tang Jian nodded and handed out a Gao Xiba cigar. Meanwhile, he scolded Hai Chengyu in his heart because the people of the sea are all mud legs.

Hai Chengyu's arrogant attitude made Tang Jian very uncomfortable.

On weekdays, Hai Chengyu, a person like this, did not even have the qualification to eat with him.

Now, because of the shadowy thing, Tang Jian hardened his scalp and found this muddy legs that he would not take care of on weekdays, and had to flatter him three times and even four times.

When Hai Chengyu agreed to help Tang Jian fight, his heart was full of abuse and f\*\*k\*\*g.

An old Sonata traveled leisurely along the Blue River. On the dark Blue River, a grain carrier loaded with cargo was moving forward with a murmur.

It is good to have no police inspections in the Blue River in the past, but these days are different.

It is only three days before the No. 1 Leading Group is stationed in Zhongyun to conduct a comprehensive assessment of the environment for livelihood and the construction of civilization.

The place where the leading group stays is located at Xiaoping Lake Water Resort.

During the three-day evaluation period, Xiaoping Lake was the top priority of this security work.

The Blue River is also the only estuary of the inland lake Tianyun Lake. Occasionally, sand dredgers will sneak from the sea and navigate into Tianyun Lake to steal high-quality river sand without dechlorination and shelling treatment.

The sea sand is endless, but the sea sand is soaked in seawater all the year round. It contains a lot of salt, which is very easy to cause chloride ion corrosion in the construction project, causing safety hazards.

The collection of sea sand must be dechlorinated, and it is very simple to determine whether it is sea sand.

Look at the presence of tiny shell fragments in the sand to make sure that people who have been to the beach will find that there are countless shell fragments in the beach, which can hardly be completely cleaned even after being washed.

The surface roughness of the river sand is moderate, and it is relatively clean and contains fewer impurities. It is very popular among the owners of the sand mining vessels.

On weekdays, due to the sea sand collecting ship, the number of sneak countercurrents is too small, and there is a special police patrol on the Tianyun Lake.

The Zhongyun City Marine Police knew this situation but did not specifically check the card.

It's different now!

For the inspection on the 1st of next month, one inspection team settled down on the Blue River there are three days before.

If any member of the team has pain in his painful bone, he will not sleep at night and run outside to look at the river bank scenery.

At this time, a sand-collecting vessel suddenly roared, not to smear the face of Zhongyun City?

Unfortunately, this afternoon, Zhongyun Customs and the Transportation Bureau jointly issued a seven-day Notice on the Special Rehabilitation Activities for the Implementation of Illegal Transportation of Water Traffic.

The notice stipulates that it is necessary to crack down on illegal traffic and navigation in the field of water transportation through special rectification, create a safe and orderly water transportation environment, and promote the safe and healthy development of the shipping industry.

For the illegal transport of ships, the transportation department and the maritime administrative agency shall strictly investigate and deal with the illegal problems of inland rivers and coastal vessels through company inspections, on-site inspections, stationed interceptions, and control of vehicles.

The notice was thick, and the Customs Transportation Administration teamed up. All the people worked overtime and distributed to various rivers and coastal patrols.

It is impossible for the Zhongyun government to go public and check the location of the group.

Hai Chengyu and his partners, of course, it is impossible for them to know that Xiaoping Lake in the next few days is the top priority.

And this evening, in the Blue River, there will be two customs smugglers patrolling at night.

The grain transport ship, when it was driven off the dock and drilled into the dark blue river, had already plunged into the iron net composed of the Customs and the Transportation Administration.

Not far below Xiaoping Lake, there is a bridge across the river.

During the golden season of fishing every summer, there will be many fishing enthusiasts on the Blue River, running to the bridge for night fishing.

In the eyes of those fishing veterans, the night is the best time to catch big fish. Much large fish like to crouch in the night.

Standing on the sidewalk on the edge of the bridge, erecting rows of wheeled fishing rods, hanging bait, waiting for the taste of the big fish down the river, many fishing veterans, think that the feeling of waiting for lovers to go to the appointment is still beautiful.

Now in this row of fishermen, a walkie-talkie with no one in mind is mixed in. His wheeled fishing rod was not even baited.

When the grain transport ship passed the bridge, the fishermen who had placed long lines on it had cursed as they lined up.

Calling the transportation department Group: "I saw a grain transport ship here, please take a private boat to check it out."

"Received and upon receipt, the anti-smuggling boat will arrive at your location twenty minutes later."

#### [Chapter 204: Crazy behavior](#)

There are two anti-smuggling boats on the Blue River. One is squatting at the mouth of the sea, and the other is patrolling the river.

These two anti-smuggling boats are special anti-smuggling boats which have undergone a demonic transformation.

The hull of the anti-smuggling boat is made of nickel-titanium memory alloy with sharp impact angle at the front.

Coincidentally, the hull of the anti-smuggling boat came from the hands of Monster Heavy Industry.

The cruiser ran twenty miles away and received the news from the squatting crew.

The anti-smuggling boat made a beautiful turn and ushered in the position of the grain carrier.

On the shore road, an old Sonata was slowly driving.

This is the urban area. From the two sides' car, the two headlights pulled a beautiful LED landscape lights when the anti-smuggling boat slipped from the bottom of Sonata's eyelids.

The driver in the car slammed on the brakes, then pushed the door and ran to the shore, looking like a ghost at the back of the anti-smuggling boat.

Through the interior lights of the anti-smuggling boat, the driver could vaguely see the cabin full of Marines in orange life jackets.

In the middle of the night, the well-dressed Marines stood in the anti-smuggling boat, It is obvious that this is on duty.

When he drove along the river bank, no ship was swaying on the Blue River except for his own grain carrier.

The target of the anti-smuggling vessel is on the horizon.

Taking out his cell phone immediately and call the crew of the grain carrier. When the phone was connected, he lost his voice and shouted: "Quick, turn around and run. On this side of Yongan Road, I saw an anti-smuggling boat heading for you. The boat was full of Marines."

There were only two people in the grain transport ship, and the news of a bolt from the blue sky made them almost rush into the quiet Blue River.

It is because they break the law that they understand the law better than ordinary people.

What is the concept of transporting hazardous chemical waste with grain transport vessels?

This is no longer a problem of illegal transportation. It is naturally impossible to transport harmful chemical waste without purpose.

Once they were stopped, the Marines could find nearly 3,000 tons of harmful chemical waste just by boarding the ship and lifting the rain-proof plastic sheet in the cabin.

This figure is amazingly high.

Are not they the elite spies who have been trained since childhood. Once they fall into the hands of the Marines, they can't wait until the next morning, and they can't shake all the details.

"Are they fast or not? Did you really see that they were anti-smuggling boats?" The sailor at the helm had sweat on his forehead and pinched the mobile phone.

"Fast. It's estimated that he will be there in ten minutes." The driver in charge of the lookout scolded, "I can't fucking recognize the anti-smuggling boat?" Tang Jian has to flash to inform the boss first. "It's up to you to decide whether you can run or not."

"It's over! How can there be anti-smuggling boats patrolling the river?" The man at the helm almost collapsed in the cabin: "Now I'm sure I can't turn around and dodge the anti-smuggling boat. They can reach 50 knots an hour at the fastest speed."

"What shall we do then?" The face of the other crew member was full of fear and confusion: "Shall we jump the boat and run?"

"Run?" The steering officer grinned. "We are all two registered crew members. Where are we going?"

After that, he abandoned the rudder control and walked around like ant in the cabin.

The sweat dripped quickly from his forehead, and he walked back and forth for more than ten seconds. Suddenly, he slapped his thigh.

"Wow! There's a way."

"In front is Xiaoping Lake. We turn in and throw the chemical waste in the cabin into the water."

"Then we say the ship was broken and we anchored it in Xiaoping Lake, and we wait to be repaired."

"There's a boom on the boat. You go and pull all the rain-proof plastic cloth. Start the boom and throw it into the water now."

After dozens of seconds later, the fully-loaded grain carrier, with a full right rudder, sailed in the direction of Xiaoping Lake ahead.

The diesel engine at the stern of the ship roared at its maximum horsepower, and the other man rushed to the open cabin like in a raging fire to catch in flight and tear off the rain-proof plastic sheet like crazy.

Nearly 3,000 tons of chemical waste, 50 tons in a group, with wire rope hanging net neatly tied up in the cabin.

The crew broke out at an incredible speed, pulling the automatic hook, hanging onto the wire mesh, then climbing to the wire mesh and operating the wire mesh.

The motor twirled, and fifty tons of chemical waste was lifted, and then the boom moved to the surface.

"boom!"

The crew dropped the hook of the automatic hook, and 50 tons of chemical waste immediately fell into the Blue River.

The splashing spray drenched him, but in less than thirty seconds, the second group of chemical waste was thrown into the Blue River again.

It has to be said that in the case of madness, people can do many unimaginable mad actions.

They were caught illegally transporting hazardous chemical waste, and deliberately discarding hazardous chemical waste in the water was completely unlawful at one level.

But they would rather make a more crazy move than to be caught.

Because they have transported illegal materials more than once and now fallen into the hands of those people. They are not old enough to dig ginseng, and they are all submersion in the mud until hair.

A few minutes later, the grain carrier sloped into Xiaoping Lake.

As soon as he entered Xiaoping Lake, the crew at the helm turned off the lights on the diesel engine, and the boat then took the anchor machine and forced the deceleration.

There is two wire mesh on the side of the cabin. Why does the crew still care about the bright resort side of Xiaoping Lake?

The anchor fell into the water, dragged forward by the huge inertia of the grain transport ship, and the muddy sand immediately appeared at the bottom of the lake a few meters deep.

The two wire mesh next to the cabin is operating at maximum power, throwing huge packages into the water from time to time.

The squeaky anchors and the huge heavy objects fell on the lake bottom of Xiaoping Lake.

"Remember!" The steering crew, while automatically lifting the wire hoisting net, said in a deep voice: "Later, they will be found by the anti-smuggling boat, and we can't admit that we lost these things."

"Remember, you can't admit it even if they kill you."

"Boom ~ bang ~ bang ~."

The huge sound of falling water quickly alerted several guards at the edge of the nearby resort.

They carried flashlights, put on clothes and flashed flashlights toward the position of the grain carrier.

"What to do, what to do? Someone found us over there."

"They'll shut up, we have the boss to deal with this later."

With his voice, the last group of hazardous chemical waste was thrown into the clear Xiaoping Lake.

"Toot, toot!"

On the Blue River, an anti-smuggling boat came at a gallop. Under the bright light, the muddy mud brought by the anchor in the river was immediately pointed out to them.

The anti-smuggling boat pulled up an arcing wave and rushed into Xiaoping Lake with muddy water.

"The boat in front, check immediately!"

The majestic high-pitched loudspeaker shouted, quickly shattered the hearts of the two crew members, who looked at each other, all eyes are killing not to admit the crime.

### [Chapter 205: Who Is So Bold?](#)

The two crew members were both excited and frightened.

Nearly 3,000 tons of chemical pollution waste, they took less than 20 minutes to be all thrown into the lake.

This is a feat, and fortunately, there are two mobile cranes on the grain ship.

These two mobile cranes are specially customized hydraulic folding mobile cranes with a load of 35 tons.

It seems that it is not a problem to engage 50 tons.

In the cabin, there are large chemical contaminants wrapped in neat yards. They are packed in kraft paper bags.

Fifty tons of them are packed in a group and are firmly surrounded by wire mesh.

Above the steel mesh pocket is a series of lifting cables. The whole group of heavy objects can be lifted only by hanging the hook.

This is a device designed to transport illegal materials as fast as possible.

They are only responsible for the easiest lifting, then panning, and automatically unhooking and throwing them into the water with a click.

This process is full of rudeness and does not require any aiming and slowing down.

It is directly lost in a short time, and the time required is extremely rare.

After completing the bad work, the two crew members touched the anchor while the patrol boat approached.

They quickly opened the power distribution box and smashed the wires inside.

The anti-smuggling boat came in waves, and six Marines wearing orange life jackets and helmet were standing at the bow of the boat.

After the anti-smuggling boat was stable, six Marines jumped on board.

Their eyes were like the cold winter wind, and they locked two suspicious crew members.

The ship was very doubtful because it turned into the Xiaoping Lake from the normal channel.

Looking at the turbid water surface of Xiaoping Lake and the tight anchor chain, the police officers intuitively felt that the grain transport ship had problems.

The two crew members who had robbed the rest of their lives, let them realize that the problem is probably not small.

Marines wearing glasses walked forward, and the tone was like a gimmick: "Please show the shipping permit, ship's license, operation permit, crew certificate of qualification."

"And I ask you, why did you put the boat in this place?"

"Police officer, we just opened the boat well. Suddenly, the anchor machine did not know what evil winds were sent. The anchor chain was all sprinkled down, the anchor was suspended, and our ship immediately lost control and turned here."

"Really?" The marine's waist was straight and stretched like a javelin, and his eyes were serious and sharp: "What happened on your ship? Did you ship anything?"

"Nothing, We have an empty ship, and we plan to go to Tianyun Lake to collect grain. The sailor at the helm was somewhat bewildered.

After checking the documents, several Marines turned their attention to the cabin and cargo hold.

Two were responsible for the guard, two went to the cabin for inspection, and the other two went down to the cargo hold, using the batons to knock on the cargo hold.

They immediately found something wrong with the knock.

How..... In the cargo hold of the grain transport ship, there is a clear pungent smell in the cargo hold?

Just as they stood on the side of the ship in the wind, they haven't smell it.

Now they jumped into the cargo compartment and immediately felt like they had just transported biological and chemical weapons. Their brains ached.

"What did you ship before from this cargo hold?" Two policemen, looking at the crew with a grinning face, said: "Don't tell me it's grain. Be honest and don't let us collect traces for chemical detection."

"Ah! Fertilizer, the urea fertilizer that was shipped before."

"Call the main station, a suspicious vessel was found along the Xiaoping Lake. Please send the inspection staff to come."

"It's really fertilizer. It's absolutely true, officer." The crew opened a pack of Yellow Crane Tower and sweated hard to give cigarettes to several marines.

"We harvested grain two days ago, and by the way, we helped an old customer After his wheat field was harvested, he planned to plant corn."

"If you don't believe, ask our boss, we are the ship of Huang Jishan Huang Trading Co., Ltd."

In the walkie-talkie, the reply from the reception desk was quickly transmitted.

They said that the staff of the laboratory will arrive immediately, and according to the investigators who had previously been on the bridge, the cargo ship was fully loaded before the grain carrier was opened.

A layer of waterproof plastic cloth was covered, and the ship's water line was also pushed to a minimum.

Just when the police officers realized that the problem might be very serious, a huge water gunner suddenly appeared on the lake next to the grain transport ship.

When the policeman took the cell phone, some blisters just burst in lake water.

After the blisters burst, the water on the lake was immediately dyed blue-brown.

A bit of a pungent smell that floated from the surface of the water.

Just during the time when these policemen were stunned by this smell, the same blisters appeared on the other side of the water.

"Gulup," "Gulup," "Gulup"

Near the grain transport ship, it is like boiling water in a pot.

The huge chemical pollutants that sink into the water are wrapped in the bag, soaked in the bag, and then dissolved, and the volume becomes larger, and the bag is broken.

All the people on the anti-smuggling boat felt a feeling of fear.

The water level of Xiaoping Lake changed, making them want to crack.

Three days before, it was the day when the inspection team was stationed in Zhongyun, and the inspection team stayed at the residence.

Now, a whole ship of chemical pollutants has been thrown away in Xiaoping Lake.

The two crew members also signaled that they had lost their sight; one of them flamed up and wanted to jump into the water.

As a result, he just jumped less than two steps, and he was slammed by the Marines, and his shoulders fell on the hard deck.

A policeman picked up the walkie-talkie and shouted in an inexplicable fear tone: "Headquarters, something big has happened in Xiaoping Lake..."

After twenty minutes...

Xiaoping Lake, originally restored to silence, was thoroughly broken by the speeding and braking of more than forty cars in gallops.

The cars stopped and slid, and the crowds rushing out of the car, panting and running to the water resort, along the solid wood waterway, ran to the water huts.

They either pull out their phones, turn on the flash, or take a flashlight.

The scene in front of them makes them fry.

The entire Xiaoping Lake was all blue-brown, and it also had some pungent smell.

What is even more creepy is that those who have fixed-point feeding, fishes settled ornamental who have been bred in Xiaoping Lake, now all floating on the surface of the water upside down.

Most of these ornamental fish are beautiful koi.

Nine-grain dragon, samovar, golden scorpion, white koi, silver pine leaves, two red.

Now, these colorful ornamental fish are completely annihilated...

"When all is over," the police chief who rushed over, the legs softened into noodles.

Check the team's itinerary, did they have already reported it?

Now there is a very serious pollution incident in Xiaoping Lake, which is simply hitting the face of the cloud.

"There are only five days left, it's almost impossible." The director of the public security bureau holds the wooden railings with one hand and one of the two crew members of the grain's ship under strict supervision.

"Check, give me a look, I have to look at it, who is so bold, can dump a whole ship of chemical pollutants into Xiaoping Lake."

### [Chapter 207: Production is](#)

The beautiful environment will always make people feel comfortable.

Now Ye Qing felt that when he got up and stretched his waist to the sea and blown the sea breeze, he found a kind of enjoyment.

Under the treatment of Ye Qing regardless of cost, the quality of the sea in the entire bay of Longxitan Beach has reached unprecedented new quality water.

Standing on the edge of the dock, Ye Qing looked at the sea under his feet, which was clear as the water of the fountain.

When the sun hits the sea, it gives the illusion that the sea water turns into a crystal jelly.

This kind of water quality can only be felt only in international famous tourist islands such as Saipan, Maldives, Tongsaier, kerkennah, and Bali.

Through the clear water, Ye Qing can even see, a shuttle crab crawling up and down the sand on the bottom of the sea.

"How long has it been? I finally saw a living marine life in Longxitan Beach..."

Ye Qing had mixed feelings, he had thirty years. He finally got a feeling of joy from his life.

After inhaling the sea breeze sober for a few minutes he had a clear head, Ye Qing asked the truck driver to come over and take away the last batch of mechanical props needed by the film crew.

Then Ye Qing continued to devote his time to the production assembly of the workshop of Mechanical Colossus Type I.

Among the mechanical props, the most technically advanced is a versatile maintenance mechanical spider.

In the script, there was a plot in which the actor borrowed a truck and went to the city to sell sweet potatoes. He offended several gangsters, and the truck was smashed.

Then the actor was heartbroken and in the midst of confusion, the heroine came with the all-around maintenance mechanical spider in the spaceship.

The mechanical spider repaired the truck, and the actor also found business opportunities from the spider.

He did not sell the sweet potato and switched to the car repair garage, using the mechanical spider to overhaul his truck.

This eight-legged mechanical spider, directed by Ding Yin, felt that it would be a good idea to make a head-slung head and a two-legged move.

However, the products made by Ye Qing can actually repair all materials.

Although it has no practical value, it requires two people to take the remote control to control the slow-moving mechanical spider.

With patience, it can really replace parts, cut and weld metal.

It doesn't matter if the speed is slow. The director Ding found a solution.

With this perfect mechanical spider, director Ding Yin is more confident. Let the upcoming promotional videos become even more shocking.

A science fiction film without any CG technology is a pseudo-proposition in itself.

Now director Ding cited this as a reality, and the level of the promo is so high that it can be exclaimed that there are really aliens.

In a week, the first promotional film will be released online, not only Ding Yin and Xia Muqing, but even Ye Qing is full of expectations.

Coming to the assembly workshop of Mechanical Colossus Type I, Ye Qing seems to have come to the mechanical empire.

At first glance, the bright yellow paint has a one-armed robot with a heavy outer shell and an arm of up to six meters.

In the assembly shop, a total of four giant laborers are required, and six master artisan was responsible.

Now they have stood firm in their posts and waited for the Mechanical Colossus Type I chassis to be transported from the other end of the assembly line from the underground base through a hanger.

Ye Qing patrolled a circle and then pressed the assembly start button of the assembly shop.

"The system is starting..."

"At the beginning of self-examination..."

On the two single-arm robots with two rows of scales, the work indicator lights up abruptly, and the six cold lights with different colors are lit up.

Subsequently, the one single-arm robot's pace was moved in unison.

The huge stepper motor rotates and reverberates throughout the assembly shop.

Two hundred single-arm robots raise their forearms at the same time.

The forearm is raised to the maximum angle and then rotated one turn.

Then the middle arm is lifted up and followed by the rotation.

The two hundred single-armed robots, like a thousand horses, with neat movements, and loud mechanical sounds, make people excited.

Through this movement of the maximum working angle, the control system can detect whether the single-arm robot has a problem of inconsistent frequency.

After all, there is no eye in the assembly line. It is impossible to judge whether a part has been installed.

Only according to the time calculation, when the time is up, the next processing step will be carried out.

So a robotic arm can't go wrong.

The one-armed robot was self-tested.

In the underground base, a platform of the Mechanical Colossus Type I was lifted out.

The chassis is integrally formed from low-alloy steel when the first chassis enters the slot of the line.

Six single-armed robots immediately kissed them with a low-speed rotating tapping knife.

The chassis needs to tap two hundred and thirty-two screw holes. When the tapping knife taps on the chassis. It is as easy as drilling wood.

Moreover, the entire tapping process does not require the intervention of cutting fluid for cooling lubrication. Even the iron cuts produced by tapping will be collected by magnetic iron collectors.

After the tapping is completed, the workbench of the assembly line advances automatically and enters the installation process of the next powertrain.

Two tons of multiple diesel generator sets were lifted from the rear platform by a single-armed robot with a profiled mount and placed in the chassis of the Titan of the Mechanical Colossus Type I according to predetermined steps.

The other two single-arm robots tighten nuts.

This step requires a skilled master artisan to be responsible for the side because the cable of the diesel generator set is connected to the pipeline and needs to be done manually.

In the process of automated mechanical work, it is often most afraid to join the manual process.

Usually, the manual process is automated and carried out separately. Because the uncertainty of manpower is too great, it may be because of the time of sneezing, all the robotic arms have to be stopped, waiting for him to catch up with time. Or a workman was injured by automatic equipment.

The master artisan is very qualified. He is more reliable than the machinery.

Even if he installs a thousand oil pipes, he can finish it without any problems.

When the power system was installed, and the assembly line led it to the next process, a dazzling performance began.

As many as eight single-arm robots, dancing themselves into windmills, swiftly rotated from behind to take out a piece of the metal baffle, a piece of hydraulic cylinders, bearings, stepper motors, building blocks mounted on the frame of the Mechanical Colossus Type I.

One-arm robot rotates once in a circle for one second. Sometimes two single-arm robots rotate at the same time.

When the platform is automatically fed from behind, when the parts are gripped, the closest distance between them is only one chopstick.

Like if it were an adult, maybe it's because you hit him, he hit you, and you hit each other, which a dog brain.

The machine moves back and forth ten thousand times, and it's impossible to touch it.

Throughout the morning, Ye Qing has soaked in the assembly shop of the Mechanical Colossus Type I.

By noon, the assembly shop became very hot and had to turn on a high-powered exhaust fan, and all the automatic closed glass ventilation.

Twelve Mechanical Colossus Type I models have also put by the assembly line of single-arm robots.

These two hundred single-arm robots have a complete power system and a working platform.

As long as it is sent to the next working area, the auxiliary system is installed, and after painting, the assembly shop can be tested once and sold.

#### [Chapter 206: Friends circle](#)

Half an hour later, the mayor Xia Yuming and the deputy mayor Yan Shunyun arrived.

Near to Xiaoping Lake, all the cars are parked.

Almost all of the EPA's major departments were dispatched.

Water resources environmental inspection vehicles, and industrial chemical pollution testing vehicles are all came.

The staff with the masks looked dignified and took the water from Xiaoping Lake for testing without saying a word.

"There is a serious problem!" Mayor Xia Yuming wears a mask, and his eyebrows are wrinkled like Sichuan inhabitants.

Next to them stood several directors who had received several calls and telegraphs.

Environmental Protection Bureau, Industry and Commerce Bureau, Customs and Transportation Bureau...

These secretaries gathered here. They were angry to punish the perpetrators, and they were faintly whispering together.

This time, all the people and all the personnel in Zhongyun City, gathered as like as in a rope and fought for nearly three months of hard work.

It is likely that this incident of pollution of Lake Xiaoping returns their pains into nothingness.

"I am responsible for this matter because the construction of urban health and civilization has always been my responsibility."

Vice Mayor Wu Shunyun, looking at Xiaoping Lake with searchlights erected, sighed, "Notice on Special Regulation Activities for unlawful transport and navigation of water traffic was issued yesterday, which is my job."

"If we started our work a few days earlier, we may have been able to contain this incident."

"It's not the sole responsibility of anybody, it's all of us." Mayor Xia Yuming rubbed his forehead: "Xiaoping Lake is also one of our famous scenic spots in Zhongyun City, where the city promotional film has taken has also will be designed."

"Now that this has happened, we should not only investigate the responsibility of the personnel involved, as well as the work of stop pollution."

"The time left for us is only three days."

"All our efforts are likely to go down the drain. But since time has given us, we can't afford to say nothing about failure."

"Immediately contact the major universities, relevant laboratories and above in Zhongyun City immediately."

"We must do our best to restore the environment of Xiaoping Lake whether any price. Xiaoping Lake is the characteristic landscape of our Zhongyun. Even without the inspection team, we can't stand the beautiful scenery of Zhongyun, which is wiped out by these chemical pollutants."

Acting first, doing an investigation team composed of the Public Security Bureau and the Environmental Protection Agency.

The two crew members, who saw so many government personnel gathered at Xiaoping Lake, were almost scared of neuropathy.

It wasn't just throwing some chemical pollutants. It could be worse than dropping nuclear bombs.

As for their determination that they did not admit it before, they were fastened with chains, the policemen who fastened their arms by iron handcuff greeted them and flew to Java long ago.

They knew they fell out like the bamboo sticks for the thing that they participated in.

Hai Chengyu, the owner of Hongma Grain Transport Trading Co., Ltd., was first listed as the target. He was the owner of the grain transport ship and the mastermind of transporting these harmful chemical wastes.

With the breakthrough of the trial, another team of people went to find Hai Chengyu for making trouble.

Because of this job, the first introduced was Hai Chengyu, for operate in smuggling.

As for the owner of the chemical pollutants, Tang Jian, the two workers did not know his real name because they saw Tang Jian for the first time.

The two police cars were heading towards the downstream dock, and the people inside the car were fully armed. There was only one thought in their hearts.

— Hai Chengyu, the owner of the grain transport ship, and the chemical trader died!

Nearly three months of hard work, in order to make the city of Zhongyun City a better city, these police officers have not taken a day off for three months.

Now they get the news that there is a lot of chemical pollution waste in Xiaoping Lake, and their efforts in the previous three months are likely to be in vain.

Then the entire Zhongyun City, it is impossible to spare the culprits that caused it all.

When the police arrived at the dock, cut the chain with a broken lock and rushed in. The dock was empty.

There is also a pungent smell similar to Xiaoping Lake in the dock, and there are residual chemical pollutants in the corner.

Hai Chengyu and Tang Jian ran!

When the patrol car sent by Hai Chengyu discovered the anti-smuggling boat, he called the phone to Hai Chengyu's mobile phone.

Hai Chengyu was near the river. When he received the call, he threw the phone into the Blue River next to him.

He did not call at the side of the grain carrier to ask if he was really going to be caught by the water police. His call is proof of his manipulation of transporting illegal materials.

Tang Jian also reminded him in good faith that it was not really nice.

Because he was afraid this guy is unprepared to give him up when he is caught.

Running away from the dock, but Hai Chengyu did not run away from Zhongyun.

He did not know what happened on the other side of Xiaoping Lake. He did not know that Xiaoping Lake had been destroyed. He did not know that Xiaoping Lake would be the place where the inspection team stayed.

In his opinion, the unlawful transportation of such harmful chemical wastes is the suspension of shipping licenses and a large sum of money.

The two crew members, as long as they can resist this wave, can continue to eat here. If the two crew members could not help but pour out what he had done in the past, he would not run anymore.

Hai Chengyu is very confident because he is the old longshoreman, mixed with smuggling transportation by sea. Really not, the entire sea is his escape route.

Compared with Hai Chengyu's self-confidence, Tang Jian was completely panicked.

But now in the middle of the night, he has no way to find out the situation on the Blue River through his own channels.

After the wolverine ran back to the company, he decided to go to the city for two days. If the situation were not serious, he would come back to launch a relationship and see if he could restrain this big thing.

If he knew the current situation of Xiaoping Lake, he would have to travel abroad by swim even if he had not a swimming ring.

The police did not get anything. The other team seized Huang Jishan, who used trucks to smuggle harmful chemical waste.

Huang Jishan was very happy. He shouted that he had been used by Jinmei Chemical's boss. He said that he had always been a good citizen who abided by the law.

As a result, Jinmei Chemical's owner, Tang Jian, found him and tempted him with high returns. He asked him to help transport the working waste.

"I am confused, but I later realized it."

In the interrogation room, Huang Jishan played a poor look: "On the road to transporting a car's chemical waste, my conscience kept blaming me, and my soul was tortured."

"So halfway, I let the driver turn around and return the chemical waste. Go back. Let's not do it, I am willing to close the company, and I will not earn this conscience."

"Harmful chemical waste?"

"No, Tang Jian, this bastard!"

"He told me clearly that it was a non-toxic, obsolete chemical waste. Saying that he contacted the acquisition of the home. We just had to transport it in the present."

The trial continued until 8 pm, Huang Jishan, a weathered hob, does not admit that meat fully shows what it means to kill.

Several policemen took turns to serve him twice, and he was still convinced that he didn't know the things. They were harmful substances.

At this point, many people in Zhongyun City have already been in their respective positions.

Today, the street is still full of rubbish red hats, which would not let them detect abnormalities.

However, the people who planned to go to Xiaoping Lake today were all refused to be outside the warning line.

Xiaoping Lake is not too small, and it is impossible to stop all the people's sights. Someone soon forwarded in the circle of warning line, saying that Xiaoping Lake turned blue-grey overnight and the lake was covered with dead fish.

There is a picture of the truth. Although the dead fish on the Xiaoping Lake have been salvaged, the lake that has changed color, and the isolation belt that has been pulled up urgently, more than a dozen water salvage vessels, fully illustrates the seriousness of Xiaoping Lake.

At this point, Ye Qing just got up.

### [Chapter 208: Xiaoping Lake 1](#)

The auxiliary system installation is semi-automated, with tracked or loaded tires, a panoramic camera, and cockpit handling equipment.

Ye Qing calculated, if the production is full, the current assembly shop can produce up to 20 Mechanical Colossus Type I in one day.

This number is already very great. Building a large machine is not a car. Huaxing Heavy Industry has built 240 of large-scale mining vehicles, and it can build more than 30 vehicles a day.

Producing twenty Mechanical Colossus Type I a day, selling is two hundred million Yuan. Planing off costs and taxes, Ye Qing can make a net profit of 1.4 million Yuan.

After the sales volume was opened, the production capacity could not keep up, and Ye Qing could build more assembly workshops.

Ye Qing was so busy in the factory that there was a group of people who were busier than him in the Xiaoping Lake on the edge of the Blue River.

Mayor Xia Yuming will preside over the work, so he can't stay here all the time. Vice Mayor Wu Shunyun who is mainly responsible for the construction of a city's livelihood civilization, set up a camp and settled down to deal with the pollution incident.

Now on Xiaoping Lake, there are six water-excavation vessels, which are wrapped in chemical waste discarded by the grain transporters.

Those chemical wastes were bundled with steel wire mesh before, and they were waiting for the boat to salvage them one by one.

There are only countless broken pockets in the wire mesh...

Sixty steel wire nets were picked up, and deputy mayor Yan Shunyun almost shot the perpetrators who were arrested and brought to justice.

Who are these people?

The Crowning Renewable Energy Co., Ltd., registered on the business license are a number benefiting for the country.

Under the pretext of transporting grain, some grain companies that transported livelihoods illegally were taken in behind the scenes.

Law enforcement officers rummaged through all the warehouses, and even one grain was not turned over.

There is also the culprit of Jinmei Chemical Company!

Vice Mayor Wu Shunyun knows about this company. The Zhongyun Municipal Government will hold an entrepreneurial tea party after the Spring Festival every year.

Wu Shunyun also talked with their boss Tang Jian.

What we talked about was environmental protection. The boss Tang Jian took a chest and said that there is a first-class chemical sewage treatment tank in the factory. He even wanted to invite the deputy mayor to visit their factory for inspection and guidance.

Now the owner of soup has run away, he ran to Liangjiang City.

The Public Security Bureau sent a team early in the morning to go to Liangjiang City to arrest the guy.

The joint law enforcement officers of the Environmental Protection Bureau of the Industry and Commerce Bureau have also entered the Jinmei Chemical for a comprehensive inventory.

According to the investigation of a morning assault investigation, Jinmei Chemical is not only the producer of this batch of the harmful chemical waste but also secretly built a sewage pipeline in the background to carry out the bad behavior of stealing harmful chemical sewage all the year round.

This news has almost knocked out on the spot the deputy mayor Wu Shunyun.

Where can they steal sewage?

It is definitely still emitted in Zhongyun, and the environmental pollution caused by smuggling all the year round is not bigger than the ten Xiaoping Lakes?

Several company managers and employees were asked in succession. They said that the sewage pipe should have been in a spot to the seaside, but the exact location was not clear.

The Environmental Protection Agency was sent out to sample the seawater within 50 miles of the coastline.

However, the results of the tests made them puzzling, and all the sampled seawater was qualified. Especially on the Longxitan beach, the quality of the sea is so good that it can compete with the Maldives.

For the time being, the EPA has not confirmed the location of the smuggling, and the EPA has expanded the sampling range to conduct a sample test on all water resources of the 50-mile radius of Jinmei Chemical.

At the same time, there is a special person for exploration on the side of the sewage pipe and probes along the pipeline path.

However, these are all measures to mend the dead fish. Now Xiaoping Lake has become a dead lake and a stinky lake.

On the edge of the temporarily closed Xiaoping Lake, almost all experts related to water resources come to Zhongyun City.

According to the test results, the pollutants in Xiaoping Lake do not have volatile energy, and the air smell is not harmful to the human body.

But the water that comes into contact with it, and the creatures in the water, have completely lost the value of salvation.

Even the two old experts in the [Material Chemistry Engineering Laboratory] of Zhongyun University came. They took protective masks and gathered together in the temporary command room to discuss the problems.

"Now I see that only the filtration method is used to filter all the polluted water in Xiaoping Lake."

A technician from the Environmental Protection Agency said:

"It can be filtered with ceramic membrane tubes. I have seen this technology in paper mills. A ceramic membrane tube can filter several tons of sewage in one hour."

"Ceramic membrane tube?" deputy mayor Wu Shunyun raised his head, the voice through the mask is a bit dull: "We have a ceramic membrane tube manufacturer in Zhongyun City, can this thing completely filter out harmful chemical substances in the water?"

"It should be ok..." The technician was unsure: "When I saw the paper mill filtering the sewage, the yellow sewage passed through the ceramic membrane tube and came out like the tap water."

"Then immediately contact the ceramic film manufacturer, I let..."

The deputy mayor, Shun Yun, hasn't finished yet. The old professor at Zhongyun University sighs to the technicians: "Little comrades, ceramic membrane filtration technology is not used by you."

"Ceramic membrane filtration is a part of membrane biofiltration technology. The sewage is treated in the first few stages before the ceramic membrane is used."

"Even so, there is a lot of organic pollutants in the treated sewage, which is something that ceramic membranes can't filter."

"And we are dealing with 3,000 tons of hazardous chemical waste. Do you know how much it will cost if you use ceramic membranes to filter 3,000 tons of pollutants?"

"The amount of water filtered by ceramic membranes should be calculated according to the number of pollutants in the water. There are a few pollutants, and there is no problem in filtering one thousand tons. Filtering here, I estimate that half a ton will be blocked in all the gaps."

"How is that good..." When it was not feasible, the deputy mayor, Shun Yun, was paralyzed.

"It takes a lot of time, whether it is biodegradation or chemical treatment. And after treatment, it can only be regarded as sewage that meets the qualified emission standards."

"I want to restore Xiaoping Lake to its original appearance, only to change the water in the lake."

"..."

The old professor's method is simply not reliable than ceramic membrane technology.

Xiaoping Lake is a river bay of the Blue River. If you want to replace all the water, you can only build an intercepting dam and isolate the two.

When the intercepting dam is built, it is estimated that there will be ice on the Xiaoping Lake to play skiing.

"Everyone, besides these, what else is there?" Vice Mayor Wu Shunyun said: "It doesn't matter whether it is domestic technology or foreign technology. As long as the sewage of Xiaoping Lake can be well managed, even if it costs more, it can be accepted."

"Sewage treatment, looking at the world is a problem. The most critical Xiaoping Lake, more than one chemical pollutant, but dozens of mixed together." Two old professors shook their heads.

"Let's give up Xiaoping Lake and let the inspection team go to the guest house."

### [Chapter 209: Xiaoping Lake 2](#)

Giving up Xiaoping Lake means giving up all hope.

Xiaoping Lake has been reported as a residence plan. If the location is temporarily changed, the person in charge of the team will inevitably ask for the reasons.

Originally, Zhongyun did not have much confidence in whether it can pass the review of urban health and civilization construction.

If this is the case, even if it thought with its toes, it knows that it would be squinting at the inspection team.

"Can't give up!" Vice Mayor Wu Shunyun stood up and took off his mask and showed his firm expression again.

"I can't keep my eyes open and watch all the organs and business people in Zhongyun City and worked hard for three months. In the end, I had no hope, and I would even be severely criticized."

"We have sewage in front of us. It is 1/4 of polluted Xiaoping Lake, not the sky in front of us."

"From now on, we want people to give people equipment. Whether it is membrane filtration, biodegradation, chemical degradation. We fight, even if it is not well managed, at least we have worked hard."

Even spelling, we should find the most reasonable spelling.

Two old professors from the chemical industry helplessly began to work on a plan that was doomed to failure.

At first, is deodorization, the smell of the water surface of Xiaoping Lake is really unbearable.

Two old professors plan to carry out large-scale deodorization by setting up ultraviolet radiation lamps.

There is a lot of ammonia and hydrogen sulfide in the water, which are easy to produce odor.

The two professors have developed inhibitors that are sprinkled into a large number of natural plants to decompose and absorb.

There are also membrane filtration technologies.

The ceramic membrane can indeed filter the sewage. Even if it can't solve all the sewage, it can at least filter out the harmful chemical components in the water.

At noon that day, people from sewage treatment stations, ceramic film manufacturers and stage lighting design studios gathered here with a large number of types of equipment.

Around Xiaoping Lake, there were rows of the large-scale array of lights like in an array of open-air concerts.

The incandescent lamp was replaced with an ultraviolet lamp. Several sewage treatment station workers wearing anti-UV suits were rowing boats and spraying the inhibitors into the water with a nebulizer.

The ceramic membrane filter device was also sent over, this small filter device with a multi-stage filter tube, as soon as it was put into operation, it played a very good effect.

Original blue-brown sewage, When it is pumped into the filtration station by the water pump, it becomes a clear brown like tea when it comes out along the water outlet.

The color changed, and the pungent smell before it was gone.

However, the good weather did not last long, the ceramic membrane filtration station just worked less than two minutes, the water flow at the outlet slowly suffocated, and the pump also followed the whistling noise.

When the workers opened the filter station casing, the entire row of ceramic membrane filters was completely blue.

The ceramic membrane filter is made of milky white, and it has a number of pores with a diameter of several tens of nanometers.

It can physically block many impurities that can be found in the water, in the filter tube.

The higher the impurities in the water, the faster the obstruction will naturally.

The workers took out the filter tube, and the filter tube not only turned into color but also filled with a thick layer of chemical waste, which made people feel sick.

There is a high-pressure flushing car next to it, and the filter tube is washed back under high pressure.

After the pollutants are washed away, the ceramic membrane filter tube can continue to be used.

However, dozens of mobile filtering stations in the field, after less than two minutes of operation, had to be dismantled and cleaned with a high-pressure water gun.

After cleaning, the working time became shorter.

"Renew the filter tube!" Deputy Mayor Wu Shunyun ordered.

On the side of Longxitan Beach, Ye Qing is still in the assembly shop.

The pollution of Xiaoping Lake, Ye Qing did not know for the time being.

The technology equipment of the water resort was completely loaded when it was last time, and many of the friends' circle uploaded.

Ye Qing did not go to see, now the circle of friends is full of advertisements, Ye Qing, who is busy, how can he go to see those advertisements?

In a few days, the Mechanical Colossus Type I is officially on the line, and Ye Qing plans to sell 60 Mechanical Colossus Type I to sell on the same day.

On the line ceremony, Ye Qing is also preparing to do something grand.

The location is set in the exhibition hall of the industrial park, where it is often rented by companies in the park, and some new product launches are held.

At that time, put sixty Mechanical Colossus Type I on big safflower, tied with red silk and satin and put them in two rows with open teeth and claws. Do not be too shocked.

This thing Ye Qing let the employees in the company be responsible for this, Ye Qing only works with ease to engage in production.

In the evening, on the side of the transfer warehouse, he has parked a new type of Mechanical Colossus Type I.

In Longxitan Beach factory, he continues to carry out large-scale production with bright lights.

On the construction sites where the road network has been poured, six giants are working hard and are driving the Mechanical Colossus Type X and I building plants.

When these factories are well built, Ye Qing can start researching the remaining black technology drawings.

A team with searchlights and hand-held detection equipment slowly touched the road around the sea.

They are the enforcement team of the Environmental Protection Bureau. Their task is to find the end of the pollution pipeline of Jinmei Chemical Company.

According to the employees of Jinmei Chemical, their boss Tang Jian has stolen the chemical sewage for many years. And the sewage pipe is likely to be hidden in the sea.

During the day, the EPA has already carried out sampling tests on the other side of the sea.

However, it has not been found that there is large chemical pollution in seawater.

Including sampling all nearby water sources, the same is true.

Even the groundwater was sampled, and the EPA was puzzled. Jinmei Chemical has flowed chemical wastewater for several years, and they are unable to find out the source of this pollution.

So they adopted one of the most stupid and most effective methods. Along the sewage pipeline, use the instrument to detect where the end of the pipeline is?

From six o'clock in the morning, they detected it until nine o'clock in the evening.

Now that the exploration work is finally coming to an end.

Zhongyun City, there are many talented people who come out! A member of the law enforcement team, looking at the road around the sea in front of him, said angrily,

"the truth must be said that the road around the sea has been built for more than ten years, and Jinmei Company has been able to spend the pipeline under the road towards the sea."

"There is definitely a non-excavation pipe rig, secret construction at night, the front is the sea. When we locate the pipeline, we will sail tomorrow morning to test the water quality."

"Where is it here? Black Bronze can't see the sign."

"It should be Longxitan Beach." The famous staff opened the electronic map location on the mobile phone:

"No, the other team in Longxitan Beach has sampled it and heard that the water quality is very good."

"Ghosts know how they sampled. Since Longxitan Beach has been secretly polluted for so many years, the water quality is absolutely polluted."

"I think the sampling team must have driven the boat far away and sampled in the open sea to produce this result."

Several exhausted staff members crossed the Huanhai Avenue indignantly, are ready to check with the testing team early tomorrow morning.

They used a flashlight to locate the pipeline as well as the mine.

When they stepped on the rugged gravel and positioned themselves on the edge of the beach, when the front is a few meters away, they finally breathed a sigh of relief.

"First go back, let the inspection team come over tomorrow, and thoroughly test the seawater again."

The carrying rods that were carried around were inserted next to them, and several staff members hurried to the road, sitting on the side of the road, waiting for the cars in the bureau to pick up them.

### [Chapter 210: Xiaoping Lake 3](#)

Time is the most elusive thing, sometimes as slow as a snail, sometimes as fast as lightning.

On the edge of Xiaoping Lake, Vice Mayor Wu Shunyun wished he could not look up to heaven and shout that heaven has given me ten thousand years.

There are still two days...

Yesterday, Mayor Xia Yuming came twice in person.

At 6:30 this morning, Mayor Xia Yuming came back again before the start of the morning meeting.

When he left this time, his face was a lot older. Because Xiaoping Lake has been fighting for one day and one night.

It just reduces the pungent odor of the lake to an acceptable range.

The Lake water, however, became clearer only in a limited area on edge, mostly blue-brown.

Now, not only their standing is desperate, but also the organs and public institutions of Zhongyun have known this news.

In three months, they took turns to pick up rubbish, sweep the road and rub the railing glass.

Now they know that Xiaoping Lake has been seriously polluted. Although they don't say it on their mouth, everyone in his heart has smashed a fire of evil.

Before the inspection team arrived, it was defeated by a traitor. What the hell is this?

Mayor Xia Yuming said three times at the morning meeting today that a good company in Zhongyun City is called Jinmei Chemical Co., Ltd.

Tang Jian is dead!

According to the news sent back to the police in Sanjiang City, they have initially locked the scope of Tang Jian's hiding.

They are mobilizing the local police to carry out a net-type search. Even if he drills into the mouse hole, he should be taken out.

At the morning meeting, several directors and deputy mayors thought hard and wondered if they could come up with a reason to make them lose.

However, after discussion, they found that there is only one way to go.

That is to tell the situation to the inspection team as it is...

Because there are too many people who know this thing, now is the network society, the news is not the past one hundred and ten. It is thousands, thousands of thousands.

Once the inspection team found Zhongyun City, dare to use lies to blind this inspection. Waiting for them is not just as simple as serious criticism.

"You're right, professors." In the temporary office, Vice Mayor Wu Shunyun has bloodshot eyes in his eyes:

"Maybe by building a dam and changing the water of Xiaoping Lake can we meet our requirements."

"Destiny is not on our side!" The two professors kept sighing:

"If pollution occurs in a closed lake, we can use the rudest method to evacuate the entire lake with a water pump."

"Xiaoping Lake is leaning against the Blue River. Now the pollutants have spread to the Blue River. If the sluice is closed upstream, the water flow will calm down, and the entire blue river will suffer."

"Do your best, wait for the fate!" Vice Mayor Wu Shunyun sighed.

"dong dong dong dong."

A knock at the door was heard in the temporary office built of simple boardrooms, and the secretary let them in.

The door was pushed open. Two EPA staff members dressed in police uniforms and embroidered with environmental supervision on their epaulets walked in cautiously.

"Mayor, you let us check the sewage outlet of the pipeline, and determine it."

"Where?" deputy mayor Wu Shunyun heard the words and sighed.

The second bomb is coming. On hearing the news, Vice Mayor Wu Shunyun even had a broken pot and called the inspection team to stay, and they should not come. Zhongyun gave up the impulse to apply.

If the application can be revoked, Zhongyun City will definitely revoke immediately...

"At Longxitan Beach, we positioned at nine o'clock last night, positioned the pipe outlet and inserted a positioning rod."

Vice Mayor Wu Shunyun remembered this place. Yesterday's test report also said that the water quality of Longxitan is the best of all sampling results.

"Why is the sampling result from the best water quality there?" Vice Mayor Wu Shunyun, who looked at the two staff members with some majesty.

"The work of our sampling team was negligent." Another staff member, some nervous explanations:

"We took a private boat to sample the surrounding waters, but when we arrived at Longxitan Bay, the crew of the anti-smuggling boat said that they would not enter Longxitan Beach."

"They said there were reefs all over there, and we had to take samples from the far sea because we chased a smuggling boat and planted a trail there."

"Now we decided to re-sample and used a rubber boat to cross the sea and test the water in the entire bay."

"That is to say, the bay at Longxitan Beach is the second Xiaoping Lake?" Vice Mayor Wu Shunyun said solemnly, "Come on, let's go together."

Half an hour later, four cars parked on the Huanhai Avenue, six miles away from Longxitan Factory.

Here, the rocks are crowded, and the deputy mayor, Wu Shunyun, and the staff of the Environmental Protection Bureau get off the cars, bypassing the rocky ground and walking to the lonely rod rocking, in front of the positioning pole swaying under the sea breeze.

but.....

The scene in front of them...

It is daytime, and their location is a few meters away from the sea.

However, during this daytime, everyone in the EPA had a cold sweat on his forehead, and look ghostly.

Isn't this a sewage outlet?

But how do they have the feeling of coming to Bali for a holiday?

The fresh sea breeze that blows this, the clusters of sparkling waves on the beach.

If the beach here is not up to date, several EPA personnel would like to move in loungers and parasols, lying here in the sun.

"Are you sure that there is Jinmei Chemical's sewage pipeline under the positioning pole?" Vice Mayor Wu Shunyun's eyes became serious.

"There is a chemical sewage pipeline, and the quality of the sea is much better than the nearby sea. Isn't this a big joke?"

Several staff members who participated in the detection last night kept rubbing their foreheads.

Last night, Black Bronze, they were exhausted, and they had patience and courage to go to the sea.

Now in the daytime, the positioning pole is right here, but why is the sea water beautiful sea water that exists only in the paradise?

It's easy to prove that they have made a mistake. Immediately several staff members dug up with their shovel.

Three minutes later, avoiding the stones and digging sand, they exposed a mottled metal pipe to Vice Mayor Wu Shunyun.

Soon they took the tools from the car again, drills a small hole in the metal pipe.

There is deep blue sewage in the small hole, and the smell of the sewage is exactly the same as that of Xiaoping Lake.

With these, this sewage pipeline is determined to be secretly built by Jinmei Chemical.

Now because of this, a big question arises in everyone's mind.

"Why, why is the sea here so clear?" Vice Mayor Wu Shunyun walked quickly to the beach and picked up a handful of seawater with both hands.

"Ah! What the hell is this?" All the staff of the EPA also followed the run to the beach, staring at the limit and looking at the crystal clear beaches.

This is absolutely impossible. The seawater here can be distinguished by the experience, and it is the top water quality that can be included in key tourism development projects.

What can I say about the chemical sewage pipeline behind me?

"Inspection team. Inspection of the whole bay immediately." Vice Mayor Hu Shunyun rolled up his trousers and headed for the waves, giving orders to them.
